went as proconsul to the island, and after two years of continuous warfare he earned the distinction of a triumph, a sufficient proof of the formidable character of the insurrection. (Eutrop. iv. 25; Ruf. Fest. 4.) This is the last time we hear of any war of importance in Sardinia; but even in the time of Strabo the mountaineers were in the habit of plundering the inhabitants of the more fertile districts, and the Roman praetors in vain endeavoured to check their depredations. (Strab. v. p. 225.)

The administration of the province was entrusted throughout the period of the Republic to a praetor or propraetor. Its general system was the same as that of the other provinces; but Sardinia was in some respects one of the least favoured of all. In the time of Cicero it did not contain a single free or allied city (*civitas foederata*) (Cic. *pro Scour.* § 44): the whole province was regarded as conquered land, and hence the inhabitants in all cases paid the tenth part of their corn in kind, as well as a *stipendium* or annual contribution in money. (Cic. *pro Balb.* 18; Liv. xxiii. 41.) From the great fertility of the island in corn, the former contribution became one of the most important resources of the Roman state, and before the close of the Republic we find Sardinia, Sicily, and Africa alluded to as the "tria frumentaria subsidia reipublicae." (Cic. *pro Leg. Manil.* 12; Varr. *R. R.* ii. Pr. § 3; Valerius Maximus also terms them "benignissimae urbis nostrae nutrices," vii. 6. § 1.) For this reason, as soon as Pompeius was appointed to the command against the pirates, one of his first cares was to protect the coasts of these three provinces. (Cic. *l. c.*) Among the eminent persons who at different times filled the office of praetor or propraetor in Sardinia, may be mentioned the elder Cato in B. C. 198 (Liv. xxxii. 8, 27); Q. Antonius Balbus, who was appointed by Marius to the government of the island, but was defeated and killed by L. Philippus, the legate of Sulla, B. C. 82 (Liv. *Epit.* lxxxvi.); M. Atilius Balbus, the grandfather of Augustus, who was praetor in B. C. 62, and struck a coin with the head of *Sardus Pater*, which is remarkable as the only one belonging to, or connected with, the island [*Biogr. Dict.* Vol. I. p. 455]; and M. Aemilius Scaurus, who was praetor in B. C. 53, and was accused by the Sardinians of oppression and peculation in his government, but was defended by Cicero in an oration of which some fragments are still extant, which throw an important light on the condition and administration of the island. (Cic. *pro Scour.* ed. Orell.; *Ascon. in Scour.*)

In B. C. 46 the island was visited by Caesar on his return from Africa, and the Sulcitani severely punished for the support they had given to Nasidius, the admiral of Pompey. (Hirt. *B. Afr.* 98.) The citizens of Caralis, on the contrary, had shown their zeal in the cause of Caesar by expelling M. Cotta, who had been left by Pompey in charge of the island. (Caes. *B. C.* i. 30.) Sardinia was afterwards occupied by Menodorus, the lieutenant of Sextus Pompeius, and was one of the provinces which was assigned to the latter by the treaty of Misenum, B. C. 39; but it was subsequently betrayed by Menodorus himself into the hands of Octavian. (Dion. Caes. xlviii. 30, 36, 45; Appian, *B. C.* v. 56, 66, 72, 80.) It was probably for some services rendered on one or other of these occasions that the citizens of Caralis were rewarded by obtaining the rights of Roman citizens, a privilege apparently conferred on them by Augustus. ("Caralitani civium Roma-

norum," Plin. iii. 7. s. 13.) This was in the days of Pliny the only privileged town in the island: but a Roman colony had been planted in the extreme N. at a place called Turris Libysonia. (Plin. *l. c.*) Two other colonies were established in the island at a later period (probably under Hadrian), one at Ussellis, on the W. coast, the other at Cornus. (Ptol. iii. 3. § 2; Zumpt, *de Col.* p. 410.)

Under the Roman Empire we hear but little of Sardinia, which continued to be noted chiefly for its abundant supply of corn, and for the extreme unhealthiness of its climate. In addition to the last disadvantage, it suffered severely, as already mentioned, from the perpetual incursions of the wild mountain tribes, whose depredations the Roman governors were unable to repress. (Strab. v. p. 225.) With the view of checking these marauders, it was determined in the reign of Tiberius to establish in the island a body of 4000 Jews and Egyptians, who, it was observed, would be little loss if they should perish from the climate. (Tac. *Ann.* ii. 85.) We have no account of the success of this experiment, but it would seem that all the inhabitants of the island were gradually brought under the Roman government, as at the present day even the wildest mountaineers of the interior speak a dialect of purely Latin origin. (De la Marmora, *Voy. en Sard.* vol. i. pp. 198, 202.) It is clear also from the number of roads given in the Itineraries, as well as from the remains of them still existing, and the ruins of aqueducts and other ancient buildings still extant, that the island must have enjoyed a considerable degree of prosperity under the Roman Empire, and that exertions were repeatedly made for its improvement. At the same time it was frequently chosen as a place of exile for political offenders, and nobles who had given umbrage to the emperors. (Tac. *Ann.* xiv. 62, xvi. 9, 17; Dion. Cass. lvi. 27; Martial, viii. 32.) Its great importance to Rome down to the latest period of the Empire, as one of the principal sources from which the capital was supplied with corn, is attested by many writers, so that when at length it was occupied by the Vandals, it seemed, says a contemporary writer, as if the life-blood of the city had been cut off. (Prudent. *adv. Symach.* ii. 942; *Salvian. de Provid.* vi.)

During the greater part of the Roman Empire Sardinia continued to be united with Corsica into one province: this was one of those assigned to the senate in the division under Augustus (Dion. Cass. liii. 12); it was therefore under the government of a magistrate styled proconsul; but occasionally a special governor was sent thither by the emperor for the repression of the plundering natives. (Id. *lv.* 28; Orell. *Inscr.* 74. 2377.) After the time of Constantine, Sardinia and Corsica formed two separate provinces, and had each its own governor, who bore the title of Praeses, and was dependent on the Vicarius Urbis Romae. (*Not. Dign.* ii. p. 64; Böcking, *ad loc.*; Ruf. Fest. 4.) It was not till A. D. 456 that Sardinia was wrested from the Roman Empire by Genseric, king of the Vandals; and though recovered for a time by Marcellianus, it soon fell again into the hands of the barbarians, to whom it continued subject till the fall of the Vandal monarchy in Africa, when Cyrillus recovered possession of the island for Justinian, A. D. 534. (Procop. *B. V.* i. 6, 10, 11, ii. 5.) It was again conquered by the Gothic king Totila in A. D. 551 (*Id. B. G.* iv. 24), but was recovered by Narses after the death of that monarch, and seems from this period to have

remained a dependency of the Byzantine Empire down to a late period. But in the 8th century, after having suffered severely from the incursions of the Saracens, it passed for the most part into the hands of that people, though the popes continued to assert a nominal sovereignty over the island.

III. TOPOGRAPHY.

The principal physical features of Sardinia have been already described. Of the numerous ranges, or rather groups, of mountains in the island, the only ancient name that has been preserved to us is that of the *INSANI MONTES* (Liv. xxi. 39; Claudian, *B. G.* 513; τὰ Μανώμενα ὄρη, Ptol.), and even of these it is not easy to determine the position with any degree of accuracy: the name was apparently applied to the mountains in the N. and NE. of the island, which seem to have been regarded (though erroneously) as more elevated than those farther S., so that the unhealthiness of the southern part of the island was popularly attributed to the shutting out of the bracing north winds by this range of lofty mountains. (Claudian, *l. c.* 513—515.) From its extent and configuration, Sardinia could not possess any very considerable rivers. The largest were, the *THYRSUS* (Θύρσος, Ptol.: Τίρσο), which rises in the mountains in the NE. of the island, and flows into the *Gulf of Oristano* on the W. coast; the *SACER FLUVIUS* (Ἱερὸς ποταμός, Ptol.), which falls into the same gulf near Neapolis, now called the *R. di Pabillonis*; the *TEMUS* or *TEMUS* (Τέμπος, Ptol.), still called the *Temo*, and falling into the sea near *Bosa*, to the N. of the Thyrsus; the *CAEDRIUS* (Καίδριος, Ptol.), on the E. coast of the island, now the *Fiume di Orosei*; and the *Saeprus* (Σαίπρος, Ptol.), now the *Flumendosa*, in the SE. quarter of the island. No ancient name has been preserved for the *Rio Samassi*, which flows into the *Gulf of Cagliari*, near the city of that name, though it is a more considerable stream than several of those named.

Ptolemy has preserved to us (iii. 3) the names of several of the more important promontories and headlands of the coast of Sardinia; and from its nature and configuration, most of these can be identified with little difficulty. The most northern point of the island, opposite to Corsica, was the promontory of *Errebantium* (Ἐρρεβάντιον ἄκρον, Ptol.), now called the *Punta del Falcone*, or *Lungo Sardo*. The NW. point, forming the western boundary of an extensive bay, now called the *Golfo dell' Asinara*, is the *Gorditanum Prom.* (Γορδίτανον ἄκρον) of Ptolemy: immediately opposite to it lies the *Isola dell' Asinara*, the *HERCULUS INSULA* (Ἡρακλέους νῆσος) of Ptolemy and Pliny, and one of the most considerable of the smaller islands which surround Sardinia. This headland forms the N. extremity of the ridge of mountains called *Monti della Nurra*: the S. end of the same range forms a bold headland, now called *Capo della Caccia*, immediately adjoining which is a deep land-locked bay, the *Nymphaeus Portus* of Ptolemy (Νύμφαυος λιμὴν), now called *Porto Conte*. The *Hermæum Prom.* (Ἑρμαίων ἄκρον) of the same author is evidently the *Capo di Marragiu*, about 12 miles N. of the river *Temo*: the *Coracodes Portus* (Κορακίδης λιμὴν), which he places between that river and *Tharros*, is probably the small bay that is found S. of *Capo Mannu*. The *Prom. Crassum* (Παχέια ἄκρα) must be *Capo Altano*, from whence the coast trends to the SE. as far as the *Capo di Teulada*, the extreme S. point of the whole island, which must be the one called *Cher-*

sonesus by Ptolemy; but his positions for this part of the coast are very inaccurate. Opposite to this SW. corner of the island lay two small islands, one of them, called by Ptolemy the *Island of Hawks* (Ἱερὰκων νῆσος), is the *Isola di S. Pietro*; the other, now known as the *Isola di S. Antioco*, is called by him *Plumbaria Insula* (Μολιβδῶδης νῆσος), while it is named by Pliny *Enosis*. It was joined to the mainland by a narrow strip of sand, and was the site of the celebrated town of *Sulci*, from whence the adjoining bay (now known as the *Golfo di Palmas*) derived the name of *Sulcitanus Portus*. Two other small ports mentioned by Ptolemy between *Cape Teulada* and the site of *Nora* (at *Capo di Pula*), *Bitiae Portus* and *Herculis Portus*, must be the small coves at *Isola Rossa di Teulada* and *Porto Malfattano*. The next headland, named *Cunicularium Prom.* (Κουνικουλάριον ἄκρον, but the reading is doubtful), is the *Punta della Savorra*; and the promontory of *Caralis* must be the headland immediately adjoining the city of that name, now called the *Capo di S. Elia*. Pliny, however, gives the name of *Caralitani Prom.* to the SE. headland of Sardinia, for which (singularly enough) Ptolemy furnishes us with no name. The small island lying off it, called both by him and Pliny *Ficaria*, is a mere rock, now known as the *Isola dei Caroli*. Proceeding along the E. coast of the island, we find the *Salpicius Portus* (Σουλπίκιος λιμὴν), which cannot be identified with certainty, and the *Portus Olbianus* (Ὀλβιανὸς λιμὴν), which is certainly the *Gulf of Terranova*; while towards the NE. extremity of the island are two headlands called *Columbarium* and *Arcti Promontorium*. The latter is still called *Capo dell' Orso*, from its fancied resemblance to the figure of a bear; the former cannot be clearly identified, though it is most probably the *Capo di Ferro*. Opposite this corner of Sardinia lie several small islands, of which the *Isola della Maddalena* is the most considerable, and next to it the *Isola di Caprera*. These are probably the *Phintonia* and *Illa* of Ptolemy, while Pliny terms them *Phintonia* and *Fossa*. The *Cuniculariae Insulae* of Pliny are the small islets N. of these, now called the *Isole dei Budelli*.

The towns of Sardinia were not numerous, and but few of them attained to any importance, at least down to a late period. Hence they are very summarily dismissed by Strabo, who notices only *Caralis* and *Sulci* by name, while Pliny tells us the island contained eighteen "oppida," that is, towns of municipal rank, but enumerates only six, besides the colony of *Turris Libysonis* (Strab. v. p. 22; Plin. iii. 7. s. 13). The only towns which appear to have ever really been places of importance are: *CARALIS*, the capital of the whole island, in ancient as in modern times; *SULCI*, in the extreme SW. of the island, on the *Isola di S. Antioco*; *NORA*, on the coast between *Caralis* and *Sulci* at the *Capo di Pula*; *NEAPOLIS*, on the W. coast, at the mouth of the *Sacer Fluvius*; *THARROS*, on a promontory at the N. extremity of the *Gulf of Oristano*; *CORNUS*, on the W. coast, about 16 miles further N.; *BOSA* (Βῶσα, Ptol. iii. 3. § 7; *Itin. Ant.* p. 83), also on the W. coast, at the mouth of the river *Temus*, still called *Bosa*; *TURRIS LIBYSONIS* (*Porto Torres*), on the N. coast of the island; *TIBULA*, at *Lungo Sardo*, near the extreme N. point or *Cape Errebantium*; and *OLBIA*, on the *Gulf of Terranova*, in the NE. corner of the island. In the interior were: *FORUM TRAJANI* (*Fordungianus*), situated on the river *Thyrsus*

about 18 miles from its mouth; USKELLIS, about 15 miles to the S. of the preceding; VALENTIA, to the SE. of Usellis; and GURULIS VETUS and NOVA, both of which were situated between the rivers Thyrsus and Temus.

Of the minor towns mentioned by Ptolemy or the Itineraries, the following may be noticed: 1. On the W. coast, were Tiliun (Ptol.), which must have been near the *Capo Negretto*: Oasaca or Hosaca (Id.) at *Flumentorgius*, a few miles W. of Neapolis; and Othoca (*Itin. Ant.*) apparently the modern *Oristano*, near the mouth of the river Thyrsus. 2. On the S. coast, Pupulum (Ptol.) may probably be placed at *Massacora*, a few miles N. of Sulci; Bitia (Ptol.) at *S. Isidoro di Teulada*; and Tegula (*Itin. Ant.*) at the *Capo di Teulada*, the extreme S. point of the island. 3. On the E. coast, Feronia (Ptol.) must have been at or near *Pesada*, 25 miles S. of Olbia, and is apparently the same place called in the Itineraries *Portus Lugudonia*. The other small places mentioned in the same Itinerary were probably mere stations or villages. 4. On the N. coast, besides the two considerable towns of Tibula and Turris Libysonia, Ptolemy places two towns, which he calls Juliola (probably the same with the Viniola of the Itinerary, still called *Torre Vignola*) and Plubium, which may probably be fixed at *Castel Sardo*. The small towns of the interior are for the most part very uncertain, the positions given by Ptolemy, as well as the distances in the Itineraries, varying so much as to afford us in reality but little assistance; and of the names given by Ptolemy, Erycinum, Heraseum, Macopeisa, Saralapis or Sarala, and Lessa, not one is mentioned in the Itineraries. The Aquae Leaitanae (Ptol.) are probably the *Aquae di Benetutti* in the upper valley of the Thyrsus; the Aquae Hypeitanae are those of *Fordungianne*, and the Aquae Neapolitanae the *Bagni di Sardara*. There remain considerable ruins of a Roman town at a place called *Castro* on the road from *Terramona* (Olbia) to *Oristano*. These are supposed to mark the site of a place called in the Itineraries *Lugudone*, probably a corruption of *Lugudo* or *Lugudonia*. In the SW. portion of the island, also, between Neapolis and Sulci, are considerable Roman remains at a place called *Antas*, probably the *Metalla* of the Itineraries. (*Itin. Ant.* p. 84.)

The Itineraries give several lines of road through the island of Sardinia. (*Itin. Ant.* pp. 78—85.) One of these proceeded from Tibula, at the N. extremity of the island, which was the usual place of landing from Corsica, along the whole length of the E. coast to Caralis. It did not accurately follow the line of coast, though it seldom departed far from it, but struck somewhat inland from Tibula to Olbia, and from thence with some exceptions followed the line of coast. A more circuitous, but probably more frequented, route was that which led from Tibula to Turris Libysonis, and thence along the W. coast of the island by Bosa, Cornus, and Tharros to Othoca (*Oristano*), from which one branch led direct across the island through the plain of the *Campidano* to Caralis, while another followed nearly the line of the coast by Neapolis to Sulci, and from thence round the southern extremity of the island by Tegula and Nora to Caralis. Besides these, two other cross lines of road through the interior are given: the one from Olbia to Caralis direct, through the mountain country of the interior, and the other crossing the same wild tract from Olbia direct to Othoca. Very few of the stations on these lines of road can be identified, and the

names themselves are otherwise wholly unknown. The reader will find them fully discussed and examined by De la Marmora (*Voy. en Sardaigne*, vol. ii. pp. 418—457), who has thrown much light on this obscure subject; but the results must ever remain in many cases uncertain.

We learn from the geographers that even under the Roman Empire several of the wild tribes in the interior of the island retained their distinctive appellations; but these are very variously given, and were probably subject to much fluctuation. Thus Strabo gives the names of four mountain tribes, whom he calls Parati, Sossinati, Balari and Aconites (Strab. v. p. 225), all of which, with the exception of the Balari, are otherwise entirely unknown. Pliny mentions only three, the Ilienses, Balari, and Corsi, which he calls “celeberrimi in ea populorum” (Plin. iii. 12. s. 17), and which are in fact all three well known names. The existence of the Ilienses under the Empire is also distinctly attested by Pausanias (x. 17. § 7): yet neither their name nor that of the Balari is noticed by Ptolemy, though he gives those of no less than eighteen tribes as existing in his time. These are, beginning at the N. point of the island and proceeding from N. to S.: “the Tibulatii and Corsi, the Coracenses; then the Carenses and Cunusitanæ; next to these the Salcitani and Luquidonenses; then the Aesaronenses; after them the Cornenses (called also Aechlienses); then the Ruacenses; next to whom follow the Celisitani and Corpicenses; after them the Scapitani and Siculenses; next to these the Neapolitani and Valentini, and furthest to the S. the Sulcitani and Noritani.” (Ptol. iii. 3. § 6). Of these the Corsi are otherwise well known [see above, pp. 908, 909]; the four last names, as well as the Tibulatii and Cornenses, are evidently derived from the names of towns, and are probably the inhabitants of districts municipally dependent upon them, rather than tribes in the proper sense of the term. The other names are wholly unknown. After the fall of the Western Empire we find for the first time the name of *Barbaricini* (*Bap̄ap̄ivini*, Procop. B. V. ii. 13) applied to the mountaineers of the interior. This appellation, which appears to be merely a corruption of “*Barbari vicini*,” was retained throughout the middle ages, and is still preserved in the name of *Barbaryia*, given to the wild mountain tract which extends from the neighbourhood of *Cagliari* towards the sources of the *Tirso*. These mountaineers were not converted to Christianity till the close of the sixth century, and even at the present day retain many curious traces of paganism in their customs and superstitious usages. (De la Marmora, vol. i. p. 30.)

IV. NATURAL PRODUCTIONS, ETC.

The chief produce of Sardinia in ancient times was, as already mentioned, its corn, which it produced in large quantities for exportation even before the period of the Roman conquest. Its mountain tracts were also well adapted for pasturage, and the native tribes subsisted mainly on the produce of their flocks and herds (Diod. v. 15), while they clothed themselves with the skins, whence they were sometimes called “*pelliti Sardi*.” The island also possessed mines both of silver and iron, of which the first are said to have been considerable. (Solin. 4. § 4.) They were undoubtedly worked by the Romans, as we learn from existing traces, and from the name of *Metalla* given to a place in the SW. of the island, between Neapolis and Sulci. (*Itin.*

Ant. p. 84; De la Marmora, vol. ii. p. 453.) It had also extensive fisheries, especially of tunny; and of the murex, or shell-fish which produced the purple dye (*Suid.* s. v.). But its most peculiar natural productions were the wild sheep, or moufflon, called by the Greeks *μωσυλόν* (*Ovis Ammon* Linn.), which is still found in large herds in the more unfrequented parts of the island (*Strab.* v. p. 225; *Paus.* x. 17. § 12; *Aelian.* *H. A.* xvi. 34), and a herb, called *Herba Sardoæ*, the bitterness of which was said to produce a kind of convulsive grin on the countenances of those that tasted it, which was generally considered as the origin of the phrase, a Sardonian smile (*risus Sardonius*; *Σαρδώνιος γέλας*, *Paus.* x. 17. § 13; *Suid.* s. v. *Σαρδώνιος*; *Serv. ad Virg. Ecl.* vii. 41; *Solin.* 4. § 4.) But the etymology and origin of this phrase are exceedingly dubious, and the peculiar herb alluded to by the ancients cannot be now identified. The bitterness of the Sardinian honey (*Hor. A. P.* 375), which was supposed to result from the same herb, is, however, a fact still observable at the present day. (*Smyth's Sardinia*, p. 104.) Pausanias mentions that the island was free from wolves, as well as from vipers and other venomous serpents, an advantage that it still enjoys (*Paus.* x. 17. § 12; *Solin.* 4. § 3; De la Marmora, vol. i. pp. 173, 177); but it contained a venomous spider, apparently a kind of tarantula, called *Solifuga*, which was peculiar to the island. (*Solin.* l. c.)

The native population of Sardinia seem to have enjoyed a very evil reputation among the Romans. The harsh expressions of Cicero (*pro Scaur.* 9. §§ 15, 42, &c.) must, indeed, be received with considerable allowance, as it was his object in those passages to depreciate the value of their testimony; but the proverbial expression of "Sardi venales" was generally understood as applying to the worthlessness of the individuals, as well as to the cheapness and abundance of slaves from that country. ("Habes Sardo venales, alium alio nequirem," *Cic. ad Fam.* vii. 24.) The praetors, even in the days of Augustus, seem to have been continually making inroads into the mountain territories for the purpose of carrying off slaves (*Strab.* v. p. 255); but as these mountaineers according to Strabo and Diodorus, lived in caves and holes in the ground, and were unacquainted with agriculture (*Strab.* l. c.; *Diod.* iv. 30), it is no wonder that they did not make useful slaves.

Of the antiquities found in Sardinia, by far the most remarkable are the singular structures called by the inhabitants Nuraghe or Nuragis, which are almost entirely peculiar to the island. They are a

kind of towers, in the form of a truncated cone, strongly built of massive stones, arranged in layers, but not of such massive blocks, or fitted with such skill and care, as those of the Cyclopean structures of Greece or Italy. The interior is occupied with one or more vaulted chambers, the upper cone (where there are two, one over the other, as is frequently the case) being approached by a winding stair or ramp, constructed in the thickness of the walls. In some cases there is a more extensive basement, or solid substruction, containing several lateral chambers, all constructed in the same manner, with rudely pointed vaultings, showing no knowledge of the principle of the arch. The number of these singular structures scattered over the island is prodigious; above 1200 have been noticed and recorded, and in many cases as many as twenty or thirty are found in the same neighbourhood: they are naturally found in very different degrees of preservation, and many varieties of arrangement and construction are observed among them; but their purpose and destination are still unknown. Nor can we determine to what people they are to be ascribed. They are certainly more ancient than either the Roman or Carthaginian dominion in the island, and are evidently the structures alluded to by the author of the treatise de *Mirabilibus*, which he describes as *Σόλας*, or vaulted chambers, the construction of which he ascribes to Iolans. (*Pseud. Arist. de Mirab.* 104.) Diodorus also speaks of great works constructed by Daedalus for Iolans, which must evidently refer to the same class of monuments. (*Diod.* iv. 30.) Both traditions are valuable at least as evidence of their reputed high antiquity; but whether they are to be ascribed to the Phoenicians or to the native inhabitants of the island, is a point on which it is very difficult to form an opinion. They are fully described by De la Marmora in his *Voyage en Sardaigne*, vol. ii. (from which work the annexed figure is taken), and more briefly by Capt. Smyth (*Sardinia*, pp. 4-7) and Valéry (*Voy. en Sardaigne*).

The work of De la Marmora, above cited, contains a most complete and accurate account of all the antiquities of Sardinia, as well as the natural history, physical geography, and present state of the island. Its authority has been generally followed throughout the preceding article, in the determination of ancient names and localities. The works of Captain Smyth (*Present State of Sardinia*, 8vo. London, 1828), Valéry (*Voyage en Corse et en Sardaigne*, 2 vols. 8vo. Paris, 1838), and Tyndale (*Island of Sardinia*, 3 vols. 8vo. London, 1849), though of much interest, are of inferior value. [E. H. B.]

NURAGHE IN SARDINIA.

SARDONES. [SORDONES.]

SARDONYX (Σαρδόνυξ), a mountain or chain of mountains in *Hindustan*, noticed by Ptolemy (vii. 1. §§ 20 and 65). It would seem to have been part of the range now known by the name of the *Vindhya Mountains*. Lassen, in his map, has identified them with the *Pdgapippali Mountains* on the right bank of the Narmada (*Nerbudda*), and Forbiger has supposed them to be the *Sáipura Mountains*, a continuation of the same chain. [V.]

SARDOUM or SARDONIUM MARE (τὸ Σαρδόνιον πέραγος, Strab., Pol., but τὸ Σαρδόνιον πέραγος, Herod. i. 166), was the name given by the ancients to the part of the Mediterranean sea adjoining the island of Sardinia on the W. and S. Like all similar appellations it was used with considerable vagueness and laxity; there being no natural limit to separate it from the other parts of the Mediterranean. Eratosthenes seems to have applied the name to the whole of the sea westward of Sardinia to the coast of Spain (*ap. Plin.* iii. 5. s. 10), so as to include the whole of what was termed by other authors the MARE HISPANUM or BALEARICUM; but this extension does not seem to have been generally adopted. It was, on the other hand, clearly distinguished from the Tyrrhenian sea, which lay to the E. of the two great islands of Sardinia and Corsica, between them and Italy, and from the Libyan sea (Mare Libycum), from which it was separated by the kind of strait formed by the Libyan promontory of Sicily, and the opposite point (Cape Bon) on the coast of Africa. (*Pol.* i. 42; Strab. ii. pp. 105, 122; Agathem. ii. 14; Dionys. Per. 82.) Ptolemy, however, gives the name of the Libyan sea to that immediately to the S. of Sardinia, restricting that of Sardoum Mare to the W., which is certainly opposed to the usage of the other geographers. (*Ptol.* iii. 3. § 1.) Strabo speaks of the Sardinian sea as the deepest part of the Mediterranean; its greatest depth was said by Posidonius to be not less than 1000 fathoms. (*Strab.* ii. pp. 50, 54.) It is in fact quite unfathomable, and the above estimate is obviously a mere guess. [E. H. B.]

SAREPTA (Σαρεπθᾶ), the "Zarephath, a city of Sidon" of the Old Testament (1 *Kings*, xvii. 9, 10; comp. *St. Luke*, iv. 26), apparently at the most extreme north (*Obad.* 20), celebrated in the history of Elijah the prophet. It is said by Josephus to be not far from Tyre and Sidon, lying between the two. (*Ant.* viii. 13. § 2.) Pliny places it between Tyre and Ornthon, on the road to Sidon (*v.* 19. § 17). In the *Itinerarium Hierosolymitanum* the name does not occur, but it is described by a periphrasis and placed viii. m. p. from Sidon (p. 583). The Arabian geographer Sherif Ibn Idris, quoted by Reland, places *Zaraphand* 20 miles from Tyre, 10 from Sidon. (*Palaestina*, p. 985.) It was formerly celebrated for its wine, and is supposed to be intended by Pliny under the name of Tyrian, which he commends with that of Tripolis and Berytus (xiv. 7). Several of the later Latin poets have also sung the praises of the "dulcia Bacchi munera, quae Sarepta ferax, quae Gaza crearet," the quantity of the first syllable being common (*ap. Reland*, p. 986). The place is noticed by modern travellers. Dr. Robinson found "a large village bearing the name of *Säräpend*," five hours north of Tyre, three south of Sidon, near the sea-shore, where is a saint's tomb called *El-Khüdr* (= *St. George*), which he imagined to mark the site of a

Christian chapel mentioned by travellers in the middle ages. (*Bibl. Res.* vol. iii. pp. 412, 413.) [G. W.]

SARGANTHA. [SERGUNTIA.]

SARGARAUSE'NE (Σαργαρουσηνή), a district of Cappadocia, on the east of Commagene and near the frontiers of Pontus, containing, according to Ptolemy (v. 6. § 13), the towns of Phlaria, Sadagena, Gauræna, Sabalassus, Ariarathra, and Maroga. (*Strab.* xii. pp. 534, 537; *Plin.* vi. 3.) [L.S.]

SARGETIA (Σαργερία, *Dion Cass.* lxxviii. 14; Σαργερία, *Tzetz. Chil.* ii. 61; Σαργέρτιος, *Tzetz. Chil.* vi. 53), a river of Dacia, upon which stood the royal palace of Decebalus. This river must be identified with the *Strel* or *Strey*, a tributary of the *Marosch*, since we know that Sarmizegethusa was the residence of Decebalus. [SARMIZEGETHUSA.] (*Ukert*, vol. iii. pt. ii. p. 603.)

SARIPHI MONTES (τὰ Σάρφι ὄρη), a chain of mountains, extending, according to Ptolemy, between Margiana and Ariana, and the watershed of several small streams. They are probably those now called the *Hasdras*. Mannert (*v.* 2. p. 65), has supposed them the same as the Σαρφεῖραι (see *Dion. Perieg.* v. 1099), but this is contrary to all probability. [V.]

SARMA'LIUS (*It. Ant.* p. 203) or SARMA'LIA (Σαρμαλία, *Ptol.* v. 4. § 8), a town in Galatia, on the road from Ancyra to Tavia or Tavium, is supposed by some to be the modern *Karadjelek*. [L.S.]

SARMA'TIA (Σαρματία: *Eth. Σαρματῆραι*), the name of a country in Europe and Asia. For the earlier and Greek forms of the word see SAUROMATAE.

That *S-rm* is the same root as *S-rb*, so that *Sarmatae* and *Serbi*, *Servi*, *Sorabi*, *Srb*, &c., may be, not only the name for the same populations, but also the same name, has been surmised, and that upon not unreasonable grounds. The name seems to have first reached the Greeks through the Scythians of the lower *Dnieper* and *Don*, who applied it to a non-Scythic population. Whether this non-Scythic population used it themselves, and whether it was limited to them by the Scythians, is uncertain. It was a name, too, which the *Getae* used; also one used by some of the Pannonian populations. It was, probably, the one which the Sarmatians themselves used partially, their neighbours generally, just like Galli, Graeci, and many others.

More important than the origin of the name are the questions concerning (1) the area, (2) the population to which it applied. Our chief authority on this point is Ptolemy; Strabo's notices are incidental and fragmentary.

The area given by Strabo to the Galatae and Germani, extends as far as the Borysthenes, or even the *Don*, the Tyrgisæ being the most western of the non-German countries of the south-east, and the Bastarnæ being doubtful,—though, perhaps, German (*vii.* p. 289). Of a few particular nations, such as the Jazyges, Hamaxobii, and Roxolani, a brief notice is given, without, however, any special statement as to their Sarmatian or non-Sarmatian affinities. In Asia, the country of the *Sauromatae* is called the plains of the *Sarmatae*, as opposed to the mountains of Caucasus. The inordinate size given to Germany by Strabo well nigh obliterates, not only Sarmatia, but Scythia in Europe as well.

Pliny's notices are as incidental as Strabo's, and nearly as brief,—the development of Germany east-

wards being also inordinate. He carries it as far as the country of the Bastarnæ.

The Germany of Tacitus is bounded on the east by the Sarmatæ and Daci. The Sarmatæ here are the population of a comparatively small area between the *Danube* and *Theiss*, and on the boundaries of *Hungary*, *Moldavia*, and *Gallicia*. But they are something more. They are the type of a large class widely spread both eastward and northward; a class of equal value with that of the Germani. This, obviously, subtracts something from the vast extent of the Germania of Strabo (which nearly meant Northern Europe); but not enough. The position of the Bastarnæ, Pencini, Venedi, and Finni, is still an open question. [SCYTHIA.]

This prepares us for something more systematic, and it is in Ptolemy that we find it. The SARMATIAE of Ptolemy fall into (1) the EUROPEAN, and (2) the ASIATIC.

I. SARMATIA EUROPAEA.

The western boundary is the *Vistula*; the northern the *Baltic*, as far as the *Venedic* gulf and a tract of unknown country; the southern, the country of the Jazyges Metanastæ and Dacia; the eastern, the isthmus of the *Crimea*, and the *Don*. This gives us parts of *Poland* and *Gallicia*, *Lithuania*, *Estonia*, and *Western Russia*. It includes the Finni (probably a part only), and the Alauni, who are Scythians *eo nomine* ('Αλαῖνοι Σκυθῆαι). It includes the Bastarnæ, the Pencini, and more especially the Venedi. It also includes the simple Jazyges, as opposed to the Jazyges Metanastæ, who form a small section by themselves. All these, with the exception of the Finni, are especially stated to be the *great* nations of Sarmatia (to which add the Roxolani and Hamaxobii), as opposed to the smaller ones.

Of the *greater* nations of Samatia Europææ, the Pencini and Bastarnæ of Ptolemy are placed further north than the Pencini and Bastarnæ of his predecessors. By later writers they are rarely mentioned. [VENEDI.] Neither are the Jazyges, who are the Jazyges Sarmatæ of Strabo. These, along with the Roxolani, lay along the whole side (ὅλην τὴν πλευρὰν) of the Maeotis, say in *Kherson*, *Tauris* and *Ekaterrimoslav*. [ROXOLANI.] Hamaxobii is merely a descriptive term. It probably was applied to some Scythian population. Pliny writes Hamaxobii aut Aorsi, a fact of which further notice is taken below. The Alauni, notwithstanding an 'Αλαῖνον ὄρος, and other complications, can scarcely be other than the Alani of Caucasus; the ἀλχηρρες 'Αλαῖνοι of the *Periegesis* (l. 302) are undoubted Scythians. Nestor, indeed, has a population otherwise unknown, called *Uliczi*, the *csi* being non-radical, which is placed on the *Dniester*. It does not, however, remove the difficulty.

The Pencini were best known as the occupants of one of the islands at the mouth of the Danube. They may also, however, have extended far into *Bessarabia*. So manifold are the changes that a word with Sarmatian or Scythian inflexion can undergo, that it is not improbable that Peucini may be the modern words *Budjack* and *Bess*, in *Bess-arabia*. The following are the *actual* forms which the name of the *Pais-inacks*, exactly in the country of the Peucini, undergoes in the mediaeval and Byzantine writers. Παρ(υ)ακ(τ)ραι, *Pecanatici*, *Pizenaci*, *Pincenates*, *Postinagi*, *Pecenjezi* (in Slavonic), *Petinci*, *Pecinei* (the nearest approach to

Peucini.) Then, in the direction of *Budziak* and *Bessi*, *Behnakijs*, *Petschnakijs*, *Pezina-völir* (in Norse), *Biseni* and *Bessi*, (Zeuss, *Die Deutschen*, &c. s. vv. *Pecinaci* and *Cumani*). The Patzinaks were Scythians, who cannot be shown to be of recent origin in Europe. They may, then, have been the actual descendants of the Peucini; though this is not necessary, for they may have been a foreign people who, on reaching the country of the Peucini, took the name; in such a case being Peucini in the way that an Englishman is a Briton, i. e. not at all. The difference between the Pencini and Bastarnæ was nominal. Perhaps the latter were Moldavian rather than Bessarabian. The Atmoni and Siones of Strabo were Bastarnæ.

The geography of the minor nations is more obscure, the arrangement of Ptolemy being somewhat artificial. He traces them in two parallel columns, from north to south, beginning, in both cases with the country of the Venedi, and taking the eastern bank of the *Vistula* first. The first name on this list is that of the Gythones, south of the Venedi. It is not to be understood by this that the Venedi lay between the Gythones and the Baltic, so as to make the latter an inland people, but simply that the Venedi of the parts about *Memel* lay north of the Gythones of the parts about *Elbing*. Neither can this people be separated from the Guttones and Aestyii, i. e. the populations of the amber country, or *East Prussia*.

The Finni succeed (Γόθωνες εἰνα Φίννοι). It is not likely that these Finns (if Finns of Finland) can have laid due south of *East Prussia*; though not impossible. They were, probably, on the east.

The Bulanes (Sulones?), with the Phrugundiones to the south, and the Avareni at the head of the *Vistula*, bring us to the Dacian frontier. The details here are all conjectural. Zeuss has identified the Bulanes with the Borani of Zoimus, who, along with the Goths, the Carpi, and the Urugundi, attacked the empire under Gallus. In Nestor a population called *Sul-ici* occupies a locality between the *Dnieper* and *Dniester*: but this is too far east. In *Livonia*, Henry the Lett gives prominence to the nation of the *Selonæ*, a likelier identification.

For Bulanes (supposing this to be the truer reading) the word *Polyane* gives us the most plausible signification. Nestor uses it frequently. It is *Pole*, primarily meaning *occupants of plains*. Wherever, then, there were plains they might be *Polyane*; and Nestor actually mentions two divisions of them; the *Lekhs*, or *Poles* of the *Vistula*, and the *Polyane* of the *Dnieper*.

The Phrugundiones of Ptolemy have always been a *crux geographica*. Name for name, they are so like Burgundiones as to have suggested the idea of a migration from *Poland* to *Burgundy*. Then there are the Urugundi and Burgundi of the Byzantine writers (see Zeuss, s. vv. *Borani*, *Urugundi*), with whom the Ptolemaean population is, probably, identical. The writer who is unwilling to assume migrations unnecessarily will ask whether the several Burgundys may not be explained on the principle suggested by the word *Polyane*, i. e. whether the word may not be the name of more than one locality of the same physical conditions. Probably, this is the case. In the German, and also in the Slavonic languages, the word *Fairgumi*, *Fergund*, *Vergunt*, *Virgunda*, *Virgumdia*, and *Virgumnia*, mean *hill-range*, *forest*, *elevated tract*.

Of these there might be any amount,—their occurrence in different and distant parts by no means implying migrations.

The Avareni may be placed in *Gallicia*.

South of them come the Ombrones, and the Anarto-phracti. Are these the Arnartes of Caesar? The Arnartes of Caesar were on the eastern confines of the Hercynian forest (*Bell. Gall. vi. 24. 25*), continuous with the Daci, a fact which, taken along with the physical conditions of the country, gives us *Western Gallicia*, or *Austrian Silesia*, for the Anarto-phracti. Then come the Burgiones, then the Arisætae (compare with *Aorai*), then the Saboki, then the Piengitæ, and then the Bessi, along the *Carpathian Mountains*. *Gallicia*, with parts of *Volhynia*, and *Podolia* give us ample room for these obscure, and otherwise unnamed, populations.

The populations of the second column lie to the east of those just enumerated, beginning again with the Venedi (ὄνδ τοῖς Ὀβενδαῖς καὶ αὐτοῖς). *Vilna*, *Grodno*, with parts of *Minsk*, *Volhynia*, *Podolia*, and *Kiev* give us an area over which we have six names to distribute. Its southern boundary are the Pencilian mountains (*Bukhorinia*?).

(1.) The Galindæ.—These are carried too far east, i. e. if we are right in identifying them with the Galinditæ of the *Galindia* and *Golens* of the middle ages, who are East Prussians on the *Spiriting Lake*.

(2.) The Suderi.—These, again, seem to be the *Sudo-vitæ* (the termination is non-radical in several Prussian names) continuous with the Galinditæ, but to the north-east of them. Their district is called *Sudovia*.

(3.) The Stavani.—Concerning these, we have the startling statement, that they extend as far as the Alauni (μέχρι τῶν Ἀλαυνῶν). Is not Ἀλαυνοί an erroneous name developed out of some form of Γαλινδαί? The extension of either the Stavani to Caucasus, or of the Alauni to *Prussia*, is out of the question.

(4.) The Igylliones.—Zeuss has allowed himself (*s. v. Jazvingi*) to hold that the true form of this word is Ἰγγυγιῶνες, and to identify this with a name that appears in so many forms as to make almost any conjecture excusable, — *Jazvingi*, *Jacvingi*, *Jaczwingi*, *Jecvesin*, *Getwinzila*, *Getvezila*, *Jenvisiones*, *Jentuosi*, *Jacintiones*, *Jatujazi*, *Jatwezi*, or *Getvesia*, and *Gothvezia*, all actual forms. The area of the population, which was one of the most powerful branches of the Lithuanian stock in the 13th century, was part of *Grodno*, *Minsk*, and *Volhynia*, a locality that certainly suits the Igylliones.

(5.) The Costoboci in *Podolia*.

(6.) The Transmontani. — This is a name from the Latin of the Dacians.—perhaps, however, a translation of the common Slavonic *Za-volovskaje*, i. e. *over-the-watershed*. It was applied, perhaps, to the population on the northern frontier of Dacia in general.

The third list, beginning also with the Venedi, follows the line of the Baltic from *Vilna* and *Courland* towards *Finland*, and then strikes inland, eastwards and southwards. Immediately on the Venedic gulf lie the

(1) *Veltæ* (Ὀβελται). Word for word, this is the *Vylti* and *Wilzi* of the middle ages; a form which appears as early as Alfred. It was German, i. e. applied by the Franks to certain Slavonic population. It was also native, its plural being *Wéletabi*. Few

nations stand out more prominently than these *Wilti* of the Carolingian period. They lie, however, to the west of *Prussia*, and indeed of *Pomerania*, from which the *Oder* divided them. In short, they were in *Mecklenburg*, rather than in *Livonia* or *Esthonia*, like the *Veltæ* of Tacitus. Word for word, however, the names are the same. The synonym for these western *Wiltæ* or *Wéletabi* was *Liut-ici* (*Lutici*). This we know from special evidence. A probable synonym for the *Veltæ* of Tacitus was also some form of *Lit-*. This we infer from their locality being part of the present *Lithuania* and *Lett-land*. Add to this that one writer at least (Adam of Bremen) places *Wilzi* in the country of Ptolemy's *Veltæ*. The exact explanation of this double appearance of a pair of names is unknown. It is safe, however, to place the *Veltæ* in *Lett-land*, i. e. in the southern parts of *Livonia*, and probably in parts of *Lithuania Proper* and *Courland*. Constantine Porphyrogeneta mentions them as *Veltini*. North of the *Veltæ* —

(2.) The *Osi* (*Ossii*), probably in the isle of *Oesel*. It should be added, however, the root *res-*, *wes-*, appears frequently in the geography of *Prussia*. *Osilii*, as a name for the occupants of *Oesel*, appears early in mediaeval history.

(3.) The *Carbones*, north of the *Osi*. This is a name of many explanations. It may be the Finn word for *forest* = *Carbo*. It may be the root *Cur-* (or *K-r*), which appears in a great number of Finn words, — *Coralli* (*Karelian*), *Cur-* (in *Cur-land*), *Kur-* (in *Kur-ak*), &c. The forms *Curones* and *Curonia* (*Courland*) approach it, but the locality is south instead of north. It more probably = *Kar-elia*. It almost certainly shows that we have passed from the country of the Slavonians and Lithuanians to that of the Estonians, Ingrians, and Finlanders. Then, to the east, —

(4.) The *Kar-eotæ*. — Here the *Kar-* is the common Finn root as before. Any part of the government of *Novogorod* or *Olonetz* might have supplied the name, the present Finns of both belonging to the *Karelian* division of the name (the *-el-* being non-radical). Then —

(5, 6, 7, 8, 9, 10, 11, &c.) The *Sali*, south of whom the *Agathyræi*, then the *Aorsi* and *Pagyræitæ*, south of whom the *Savari*, and *Berusei* as far as the *Rhipæan* mountains. Then the *Akibi* and *Naski*, south of whom the *Vibiones* and *Idrae*, and south of the *Viliones*, as far as the *Alauni*, the *Sturni*. Between the *Alauni* and *Hamaxobii* the *Karyones* and *Sargatii*. At the bend of the *Tanais* the *Ophlones* and *Tanaitæ*.

There are few points in this list which are fixed. The bend of the *Tanais* (= *Dni*) would place the *Ophlones* in *Ekaterinoslav*. The *Borusci*, if they reached the *Rhipæan* mountains, and if these were the *Uralian* rather than the *Valdai* range, must have extended far beyond both European and Asiatic *Sarmatia*. The *Savari* bear a name very like one in *Nestor* — the *Sjevera*, on the *Desna*, *Sem*, and *Sula*, — a word that may merely mean *northern*. It is a name that reappears in *Caucasus* — *Sabeiri*.

The *Aorsi* may be the *Ersad* (the *d* is inflexional), a branch of the *Mordvins*, occupant at the present time of a tract on the *Oka*. The *Pagyræitæ* may have been the tribes on (*po* = *on*) the *Gerrinus*, such compounds being common in Slavonic, e. g. *Po-labi* (on the Elbe), *Po-morania* (on the sea), &c. The whole geography, however, is indefinite and uncertain.

For *Agathyræi*, see HUNNI. The *Sargatii* are mentioned in Ptolemy.

South of the Tanaitæ came the Osuli (? *Sul-iczi* of Nestor), reaching as far as the Roxolani, i. e. occupying parts of *Cherson* and *Ekaterinoslav*.

Between the Roxolani and Hamaxobii the Rhakalani and Exobugitæ. The statement of Pliny that the Hamaxobii were Aorsi, combined with similarity of name between Aorsi and *Ersad*, will not help us here. The *Ersad* are in the governments of *Penza* and *Tamlov*; the direction of the Hamaxobii is more westward. Rhakalani seems but another form of Roxolani. In *Exo-bug-itæ* the middle syllable may give us the root *Bug*, the modern name of the Hypanis. It has been surmised that this is the case with *Sa-bok-æ*, and *Costo-boc-i*. The locality would suit.

Between the Peucini and Basternæ (this difference between two nations otherwise identified creates a complication) lie the Carpiani, above whom the Givini and Budini.

The Carpi must have been near or on the *Carpathian Mountains*. They appear as a substantive nation in the later history of Rome, in alliance with the Sarmatæ, &c. of the Dacian frontier. We have a *Victoria Carpica Arpi*; Carpiani and *Καρπὸδᾶκαι* (which Zeus renders Carpathian Dacians) are several forms of this name [CARPI]. They, along with the Costoboci, Armadoci, and Astingi, appear as the most important frontagers of Northern Dacia.

Between the Basternæ and Roxolani the Chuni, and under their own mountains (*ὄρη τὰ ὅρια ὅρη*) the Amadoci and Navari, and along the lake (marsh) of Byke the Torekkadæ, and along the Achillean Course (*Ἀχιλλέως δρόμον*) the Tauroscythæ, and south of the Basternæ in the direction of Dacia the Tagri, and south of them the Tyrangetae.

For *Tauroscythæ* and *Tyrangetae*, see s. vv. and SCYTHIA.

Tagri looks like a modified form of *Zagora* (*tramontane*), a common Slavonic geographical name, applicable to many localities.

The Amadoci occupied *ὅρια ὅρη*, or the Mons Amadocus of Ptolemy. There was also a *Λύων Ἀμαδῶν*. This juxtaposition of a mountain and lake (pool, or swamp, or fen) should fix their locality more closely than it does. Their history connects them with the Costoboci. (Zeuss, s. vv. *Costoboci*, *Amadoci*.) The physical conditions, however, come out less clearly than our present topographical knowledge of *Podolia*, *Minsk*, &c. explains. For the Navari see NEURI.

The name Chuni is important. [See HUNNI.]

In *Torek-kad-æ* and *Exo-bug-itæ* we have two elements of an apparent compound that frequently occurs in Scytho-Sarmatian geography—*Tyn-get-æ*, &c., *Costo-bok-i*, *Sa-boc-i*. The geography is quite compatible in the presence of these elements.

RIVERS.—From the Vistula eastwards, the Chronus, the Rhubon, the Turuntus, the Chersinus,—the order of the modern names being the *Pregel*, *Memel*, *Duna*, *Aa*, and *Neva*. For the drainage of the *Black Sea*, see SCYTHIA.

MOUNTAINS.—Peuce, the Montes Amadoci, the Mons Budinus, the Mons Alaunus, the Mons Carpathus, the Venetic mountains, the Rhipæan mountains. None of these are definitely identified. It is difficult to say how Ptolemy named the most important range of so flat a tract as Russia, viz., the *Valdai Mountains*. On the other hand, the names of

his text imply more mountains than really exist. All his mountains were, probably, spurs of the Carpathians, just as in Sarmatia Asiatica they were of Caucasus.

TOWNS.—See SCYTHIA.

II. SARMATIA ASIATICA.

The boundaries are—the Tanais, from its sources to its mouth, European Sarmatia from the sources of the Tanais northwards, the Maeotis and Cimmerian Bosphorus, the Euxine as far as the river Corax, the range of Caucasus, the Caspian as far as the river Soana, the Volga as far as its bend (Scythia being on the east of that river),—and on the north an Unknown Land. Without knowing the point at which this terra incognita begins, it is impossible to give the northern limits of Sarmatia Asiatica. It is included, however, in the governments of *Caucasus*, *Circassia*, *Astrakhan*, *Don Kosaks*, *Saratov*, *Simbirsk*, *Kazan*, *Viatka*, *Kostroma*, *Vladimir* (?), *Nizhni Novogorod*, *Riazan* (?), *Tambov*, and *Penza*; all the governments, in short, on the water system of the *Volga*; a view which makes the watershed between the rivers that empty themselves into the White Sea and the rivers that fall into the Caspian and Euxine a convenient provisional boundary.

For the obscure geography of Asiatic Sarmatia, the bend of the Tanais is our best starting point. To the north of it dwelt the Perierbidi, a great nation; to the south the Iaxamatae, the former in *Don Kosaks*, *Voronezh*, and *Tambov*, *Saratov*, the latter in *Astrakhan*. North of the Perierbidi come the Asæi, the Saurdeni, the Zacatae, the Hippophagi Sarmatae, the Modocæ, the Royal Sarmatians, the Hyperborean Sarmatians, the Unknown Land. In *Kazan* and *Simbirsk* we may place the Chænenides, and on the east of the *Volga* the Phthæirophagi and Materi. The *Νησιῶν χώρα* must be at the mouth of the *Volga*. If so, the order in which the names have been given is from north to south, and the Phthæirophagi are in *Eastern Kazan*, the Materi in *Saratov*.

The remaining populations are all (or nearly all) in the governments of *Caucasus* and *Circassia*, in the northern spurs of the Caucasian range. They are the Siraceni, the Peessii, the Thymeotæ, the Turambæ, the Asturici, the Arichi, the Ziochi, the Conapoeni, the Meteibi, the Agoritæ, the Melanchlaeni, the Sapothraeni, the Scymnitæ, the Amazones, the Sunani, the Sacani, the Orinaei, the Vali, the Servi, the Tusci, the Diduri, the Vodæ, the Olondæ, the Isondæ, the Gerhii. The Achæi, Kerketi, Heniochi, Suanocolchi, and Sarnaræi are truly Caucasian, and belong to the geography of the mountain range rather than the Sarmatian plains and steppes—for such they are in physical geography, and such was the view of Strabo, so far as he noticed Sarmatia at all.

It is difficult to determine the source of Ptolemy's information, difficult to say in what language we are to seek for the meaning of his names. The real populations, as they actually existed, were not very different from those of the Herodotean Scythia; yet the Herodotean names are wanting. These were, probably, Scythian,—the northern populations to which they applied being Ugrian. Are the names native? For the parts due north of Caucasus they may be so; indeed it is possible that the greater number of them may be due to a Caucasian source. At the present time, when we are fairly supplied with

data both as to the names by which the populations of the parts in question designate themselves, as well as those by which they are designated by their neighbours, there are no satisfactory identifications at all. There are some that we may arrive at by a certain amount of assumption; but it is doubtful whether this is legitimate. In the names, for instance, beginning with *sa-* (*Sa-boci*, &c.) we may see the Slavonic for *trans*; in those with *po-* the Slavonic *ad*,—both of which are common in the geographical terminology of the Russians, &c. But these are uncertain, as are the generality of the other coincidences.

In Siberia, for instance, a Samoyed tribe is named *Motor-si*: name for name, this may be *Materi*; whether, however, it denote the same population is another question.

Are the Sarmatiae of Ptolemy natural divisions? Subject to an hypothesis, which will be just stated in the present article, but which will be exhibited in full in SCYTHIA, the Sarmatiae of Ptolemy are objectionable, both for what it contains and what it omits. The whole of Asiatic Sarmatia is, more or less, arbitrary. It seems to be a development of the area of the Herodotean Sauromatae. In the north it comprised Finn or Ugrian, in the south Circassian and Georgian, populations. The Alauni were Scythian, as were several other tribes. It is therefore no ethnological term. Neither are its boundaries natural, if we look at the physical conditions of the country. It was defined upon varying and different principles,—sometimes with a view to physical, sometimes to ethnological, sometimes to political geography. It contains *more* than a natural Sarmatia.

On the other hand, the Vistula was no ethnological line of demarcation. The western half of Poland was Sarmatian, in respect to its climate, surface, and the manners of its inhabitants. The Lygii, however, having been made part of Germania, remained so in the eyes of Ptolemy. That the populations on each side of the *Lower Vistula*, i. e. of *West and East Prussia*, were the same, is certain; it is certain, at least, that they were so at the beginning of the historical period, and all inference leads us to hold that they were so before. The Vistula, however, like the Rhine, was a good natural boundary.

The Jazyges Metanastae were most probably Sarmatian also. Pliny calls them Jazyges Sarmatae (iv. 25); the name Metanastae being generally interpreted *removed*. It is, however, quite as likely to be some native adjunct misunderstood, and adapted to the Greek language.

The other Jazyges (i. e. of the Maecotis) suggested the doctrine of a migration. Yet, if the current interpretation be right, there might be any amount of Jazyges in any part of Sarmatia. It is the Slavonic for language, and, by extension, for the people who speak a language:—"a po Ocie rjeje, gde wtezet' w Wolgu, jazyk swoj Muroma, i Czeremisi swoj jazyk, e Mordwa swoj jazyk;"—translated, "On the Oka river, where it falls into the Volga, a particular people, the Muroma, and the Tsheremis, a peculiar people, and the Mordwins, a peculiar people." (Zeuus, s. v. *Ostfinnen*). Hence it has at least a Slavonic gloss. On the other hand, it has a meaning in the Magyar language, where *Jassag* = *bonoman*, a fact which has induced many scholars to believe that there were Magyars in Hungary before the great Magyar invasion, indeed before the Hun. Be this as it may, the district of the Jazyges Me-

tanastae is called the *Jassag* district at the present moment.

More than one of the Dacian populations were Sarmatian,—the difference between Dacia, the name of the Roman Province, and Sarmatia, the country of an independent and hostile population, being merely political. Indeed, if we look to the distribution of the Sarmatae, their south-eastern limit must have the parts about Tormi. [See SAUROMATAE.] Here, however, they were intrusive.

ETHNOLOGY.—The doctrine upon this point is merely stated in the present notice. It is developed in the article on SCYTHIA. It is to the effect that, in its proper application, *Sarmatian* meant one, many, or all of the north-eastern members of the Slavonic family, probably, with some members of the Lithuanic, included.

HISTORY.—The early Sarmatian history is Scythian as well [SCYTHIA], and it is not until Pannonia becomes a Roman province that the Sarmatian tribes become prominent in history, and, even then, the distribution of the several wars and alliances between the several nations who came under the general denomination is obscure. In doing this there is much that in a notice like the present may be eliminated. The relations of the Greeks and earlier Romans with Sarmatia were with Scythia and the Getae as well, the relations of the latter being with the provincials of Pannonia, with the Marcomanni, and Quadi, &c. Both are neighbours to a tribe of Jazyges.

The great Mithridatic Empire, or, at any rate, the Mithridatic Confederacy, contained Sarmatians *eo nomine*, descendants of the Herodotean Sauromatae. Members of this division it must have been whom the Marcus, the brother of Lucius Lucullus, chastised and drove beyond the Danube, in his march through Moesia. Those, too, it was with whom the Cis-Danubian nations in general were oftenest in contact,—Jazyges, Roxolani, Costoboci, &c., who though (almost certainly) Sarmatian in their ethnological affinities, are not, *eo nomine*, Sarmatian, but, on the contrary, populations with more or less of an independent history of their own. Thirdly, the Sarmatians, who, in conjunction with Getae, Daci, Moesians, Thracians, &c., may have been found in the districts south of the Danube, must be looked upon as intrusive and foreign to the soil on which they are found.

On the other hand, it must be remembered that the Sarmatae *eo nomine* fall into two divisions, divided from each other by the whole extent of the Roman province of Dacia, the area of those of the east being the parts between the Danube and the *Don*, the area of those of the west being the parts between the Danube and *Thaësis*. The relations of the former are with the Scythians, Roxolani, the kings of Pontus, &c., over whom, some years later, M. Crassus triumphed. His actions, however, as well as those of M. Lucullus, so far as they were against the Sarmatae, were only accidental details in the campaigns by which Moesia was reduced. The whole of the Trans-Danubian frontier of Moesia, east of Viminiaecum, was formed by Dacia.

The point at which the Romans and Sarmatians would more especially come in contact was the country about Sirmium, where the three provinces of Pannonia, Illyricum, and Moesia joined, and where the pre-eminent Sarmatian districts of the nations between the Danube and *Thaësis* lay northwards—pre-eminent Sarmatian as opposed to the Dacians,

on one side, and the Quadi, &c., of the *Regnum Vannianum*, on the other. In the general Pannonian and Dalmatian outbreak of A. D. 6, the Sarmatians of these parts took a share (Vell. Pat. ii. 110), as they, doubtlessly, did in the immediately previous war of the Marcomanni, under Maroboduus; the Marcomanni, Quadi, Jazyges, and western Daci, and Sarmatae being generally united, and, to all appearances, the members of a definite confederacy.

The *Regnum Vannianum* gives us the continuation of the history of these populations (A. D. 19—50). It is broken up; *Vannius* (? the *Ban*) himself displaced, and Vangio and Sido, strongly in the interest of Rome, made kings of the parts between the Marus and Cusus (*Moravia*) instead. To the Vannian confederacy (a *Ban-at*) the Sarmatae and Jazyges supply the cavalry, the occupants of the Banat itself the infantry (Tac. *Annal.* xii. 29).

For A. D. 35, we find an interesting notice in Tacitus, which gives definitude to the Sarmatia Asiatica of Ptolemy. It is to the effect that, in a war with Parthia, Pharsmanes entered into an alliance with the Albanians of the coast of the Caspian and the Sarmatae Sceptuchi (? *Bacilæoi*). (Tac. *Ann.* vi. 33.)

A. D. 69. Two pregnant sentences tell us the state of the Sarmatian frontier at the accession of Galba: "Coortae in nos *Sarmatarum* ac Suevorum gentes; nobilitatus cladibus mutuis Dacus" (*Hist.* i. 2). The Suevi (who here mean the Quadi and Marcomanni) and Sarmatae (foot and horse) are united. Dacia is paving the way to its final subjection. The Jazyges seem to fall off from the alliance; inasmuch as they offer their services to Rome, which are refused. The colleague of Sido is now Italicus, equally faithful to Rome. (*Hist.* iii. 5.) In the following year it is Sarmatae and Daci who act together, threatening the fortresses of Moesia and Pannonia (iv. 54).

An invasion of Moesia by the Roxolani took place A. D. 69. This is a detail in the history of the Eastern branch.

The conquest of Dacia now draws near. When this has taken place, the character of the Sarmatian area becomes peculiar. It consists of an independent strip of land between the Roman Province and Quado-Marcomannic kingdom (Banat); its political relations fluctuating. When Tacitus wrote the *Germania*, the Gothini paid tribute to both the Quadi and Sarmatae; a fact which gives us a political difference between the two, and also a line of separation. The text of Tacitus is ambiguous: "Partem tributorum Sarmatae, partem Quadi, ut alienigenis imponunt" (*Germania* 43). Were the Sarmatae and Quadi, or the Quadi alone, of a different family from that of the Gothini? This is doubtful. The difference itself, however, is important.

There were Sarmatians amongst the subjects as well as the allies of Decebalus; their share in the Dacian War (A. D. 106) being details of that event. They were left, however, in possession of a large portion of their country, i. e. the parts between the Vallum Romanum and the frontier of the Suevi, Quadi, or occupants of *Regnum Vannianum*; the relations of this to the Roman and non-Roman areas in its neighbourhood being analogous to that of the Decumates Agri, between the Rhine and Upper Danube.

In the Marcomannic War (under M. Antoninus) the Sarmatae are as prominent as any members of the confederacy: indeed it is probable that some of

the Marcomanni may have been Sarmatae, under another name. This is not only compatible with the undoubtedly German origin of the name Marcomanni (Marchmen), but is a probable interpretation of it. German as was the term, it might be, and very likely was, applied to a non-German population. There were two Marches: one held by Germans for Rome and against the Sarmatians, the other held by the Sarmatians for themselves. The former would be a *March*, the other an *Ukraine*. In the eyes of the Germans, however, the men of the latter would just as much be Marchmen as themselves. What the Germans in the Roman service called a neighbouring population the Romans would call it also. We shall soon hear of certain *Borderers*, *Marchmen*, or men of the *Ukraine*, under the name of Limigantes (a semi-barbarous form from *Limes*); but they will not be, on the strength of their Latin names, Latins. The Solitudines Sarmatarum of the Roman maps was more or less of a Sarmatian March. The Jazyges and Quadi are (as usual) important members of the confederacy.

A. D. 270. Aurelian resigns the province of Dacia to the Barbarians; a fact which withdraws the scene of many a Sarmatian inroad from the field of observations,—the attacks of the Barbarians upon each other being unrecorded. Both before and after this event, however, Sarmatian inroads along the whole line of the Danube, were frequent. Sarmatians, too, as well as Daci (Getae) were comprehended under the general name of Goth in the reigns of Decius, Claudius, &c. Add to this that the name of Vandal is now becoming conspicuous, and that under the name of Vandal history we have a great deal that is Sarmatian.

The most important effect of the cession of Dacia was to do away with the great block of Roman, Romanising, or Romanised territory which lay between the Sarmatians of Pannonia and the Sarmatians of Scythia. It brought the latter within the range of the former, both being, then, the frontagers of Moesia. Add to this the fact of a great change in the nomenclature being effected. The German portion of the Marcomanni (Thevings and Grutungs) has occupied parts of Dacia. The members of this section of the German name would only know the Sarmatae as Vandals. Again, the Hun power is developing itself; so that great material, as well as nominal, changes are in the process of development. Finally, when the point from which the Sarmatae come to be viewed has become Greek and Constantinopolitan, rather than Latin and Roman, the names Slaveni and Servi will take prominence. However, there is a great slaughter of the Sarmatians by Carus, on his way eastwards. Then there is the war, under Constantine, of the Sarmatae of the Border,—the Sarmatae Limigantes,—a Servile War. [See LIMIGANTES.] The authors who tell us of this are the writers of the *Historia Augusta* and Ammianus; after whose time the name is either rarely mentioned, or, if mentioned, mentioned on the authority of older writers. The history is specific to certain divisions of the Sarmatian population. This was, in its several divisions, hostile to Rome, and independent; still, there were Sarmatian conquests, and colonies effected by the transplantation of Sarmatae. One lay so far east as Gaul.

"Arvaque *Sauromatum* nuper metata coloni"
(Auson. *Mosella*)

applies to one of these. There were more of them. The general rule, however, is, that some particular division of the name takes historical prominence, and that the general name of *Sarmatia*, as well as the particular *Sarmatiae* of the parts between Dacia and Pannonia, and those between Scythia and Persia, disappears. [See VANDALI; THAIFALAE.] [R. G. L.]

SARMA'TICA I'NSULA, an island at that mouth of the Danube called Kalonstoma (τὸ καλὸν στόμα). (Plin. iv. 24. s. 24.) [T. H. D.]

SARMA'TICAE PORTAE (αἱ Σαρματικαὶ πόλαι, Ptol. v. 9. §§ 11, 15), a narrow pass of the Caucasus, whence it is also called *Caucasiae Portae*. (Plin. vi. 11. s. 12, 15. s. 15.) From its vicinity to the Caspian sea, it was also called by some of the ancients *Portae Caspiae* (Suet. Nero, 19), *Claustra Caspiarum* (Tac. H. i. 6), and *Via Caspia* (Id. Ann. vi. 33); but Pliny (*l. c.*) notes this as an error; and the proper *Portae Caspiae* were in the Taurus (Forbiger, *Geogr.* vol. ii. p. 47, note 92). The *Sarmaticae Portae* formed the only road between Sarmatia and Iberia. Ptolemy (*l. c.*) distinguishes from this pass another in the same mountain, which he calls αἱ Ἀλβανίαι Πόλαι (*Portae Albaniae*), and places the latter in the same latitude as the former, namely the 47th degree, but makes its longitude 3 degrees more to the E. The *Albaniae Portae* are those on the Alazon, leading over the mountain from *Derbend* to *Berdan*. At both spots there are still traces of long walls 120 feet in height; and on this circumstance seems to have been founded a legend, prevalent in that neighbourhood, of the *Black Sea* and the Caspian having been at one time connected by such a wall. (Forbiger, *Ibid.* p. 55, note 13, b.; comp. Ritter, *Erkunde.* ii. p. 837.) [T. H. D.]

SARMA'TICI MONTES (Σαρματικὰ ὄρη), a range of mountains on the eastern frontier of Germany, mentioned only by Ptolemy (ii. 11. § 6, viii. 10. § 2), according to whom it appears to have extended north of the Danube as far as the sources of the Vistula, and therefore consisted of the mountains in *Moravia* and a part of the *Carpathians*. [L. S.]

SARMA'TICUM MARE (ὁ Σαρματικὸς ὠκεανός, Ptol. vii. 5. §§ 2, 6), a sea in the N. of Europe, washing the coast of Sarmatia, and which must thus have been the *Baltic* (Tac. *Germ.* 45). But sometimes the *Black Sea* is designated by the poets under this name, as by Ovid (*ex Pont.* iv. 10. 38) and by Valerius Flaccus (*Sarmaticus Pontus*, viii. 207.) [T. H. D.]

SARMATINA, a town of Ariana, mentioned by Ammianus (xxiii. 6). It is probably the same as the *Sarmagana* of Ptolemy (vi. 17. § 4), as both he and Ammianus place it next to *Bitaxa*, in the same province. [V.]

SARMIZEGETHUS'SA (Σαρμιζεγόθουσα, Ptol. iii. 8. § 9; Σαρμιζεγόθουσα, Dion Cass. lvi. 9), one of the most considerable towns of Dacia, and the residence of the Dacian kings (βασιλεῖων, Ptol. *l. c.*) It is called *Sarmategete* in the *Tabula Peut.*, and *Sarmazege* by the Geogr. Rav. (iv. 7). It is incontestably the same place as that called τὰ βασιλεῖα Δακῶν by Dion Cassius (lxvii. 10; lxxvii. 8), who places it on the river *Sargetia* (*l. c.* 14); a situation which is also testified by ruins and inscriptions. At a later period a Roman colony was founded here by Trajan, after he had expelled and killed Decebalus king of the Dacians; as is testified by its name of *Colonia Ulpia Trajana Augusta* and may be inferred

from *Ulpian* (*Dig.* 50. tit. 15. l. 1.), from whom we also learn that it possessed the *Jus Italicum*. It was the head-quarters of the *Legio XIII. Gemina* (Dion Cass. lv. 23), and at first probably there was only a Roman encampment here (Id. lvi. 9; Aur. Vict. *Caes.* xiii. 4). Hadrian conferred an aqueduct upon it, as appears from an inscription (Gruter, p. 177. 3; Orelli, No. 812), and that emperor seems to have retained the colony, on account of its numerous Roman inhabitants, when he resolved to abandon the rest of Dacia to the barbarians. From an inscription to Trajan and his sister Marciana, there would appear to have been baths here (Orell. 791). *Sarmizegethusa* occupied the site of the present *Varhely* (called also *Gradiſchte*), on the river *Strel* or *Strey*, about 5 Roman miles from the *Porta Ferrea*, or *Vulcan Pass*. (Comp. *Inscr.* Gruter, p. 272; Orelli, Nos. 831, 3234, 3433, 3441, 3527, 3686, 4552; Zamosc. *Ann.* pp. 40, 74; Marsili, *Dansb.* tab. 24, 55, &c.; Ukert, iii. 2. p. 616, seq.; Zumpt, in *Rhein. Mus.* 1843, p. 253—259.) [T. H. D.]

SARNEIUS (Σάρνειος), a small stream of Hyrcania mentioned by Strabo (x. p. 511), which, after rising in *M. Coronus*, flowed in a westerly direction into the Caspian. Professor Wilson considers that it must be either the *Atrek* or the *Gurgan*. [V.]

SARNIA or **SARMIA**, is named in the *Maritima Itin.* among the islands of the Ocean between *Gallia* and *Britannia*. Supposed to be *Guernsey*. [G. L.]

SARNUS (ὁ Σάρπος; *Sarno*), a river of Campania, flowing into the *Bay of Naples*. It has its sources in the Apennines, above *Nuceria* (*Nocera*), near which city it emerges into the plain, and, after traversing this, falls into the sea a short distance S. of *Pompeii*. Its present mouth is about 2 miles distant from that city, but we know that in ancient times it flowed under the walls of *Pompeii*, and entered the sea close to its gates. [POMPEII.] The change in its course is doubtless owing to the great catastrophe of A. D. 79, which buried *Pompeii* and *Herculaneum*. Virgil speaks of the *Sarnus* as flowing through a plain (*quae rigat aequora Sarnus*, *Aen.* vii. 738); and both *Silius Italicus* and *Statius* allude to it as a placid and sluggish stream. (*Sil. Ital.* viii. 538; *Stat. Sil.* i. 2. 265; *Lucan.* ii. 422.) According to Strabo it was navigable, and served both for the export and import of the produce of the interior to and from *Pompeii*. (Strab. v. p. 247; Plin. iii. 5. s. 9; Ptol. iii. 1. § 7; Suet. *Clar. Rhét.* 4.) *Vibius Sequester* tells us (p. 18) that it derived its name as well as its sources from a mountain called *Sarus*, or *Sarnus*, evidently the same which rises above the modern town of *Sarno*, and is still called *Monte Saro* or *Sarno*. One of the principal sources of the *Sarno* does, in fact, rise at the foot of this mountain, which is joined shortly after by several confluent, the most considerable of these being the one which flows, as above described, from the valley beyond *Nuceria*.

According to a tradition alluded to by Virgil (*l. c.*), the banks of the *Sarnus* and the plain through which it flowed, were inhabited in ancient times by a people called *SARRASTES*, whose name is evidently connected with that of the river. They are represented as a Pelasgic tribe, who settled in this part of Italy, where they founded *Nuceria*, as well as several other cities. (Conon, *ap. Serv. ad Aen. l. c.*; *Sil. Ital.* viii. 537.) But their name seems to have quite disappeared in the historical period; and we find *Nuceria* occupied by the *Alfaterni*, who were an *Oscan* or *Sabellian* race. [NUCERIA.]

No trace is found in ancient authors of a town of the name of Sarnus; but it is mentioned by the Geographer of Ravenna (iv. 32), and seems, therefore, to have grown up soon after the fall of the Roman Empire. [E. H. B.]

SARON. [SHARON.]

SARON. [SARONICUS SINUS.]

SARONICUS SINUS (Σαρωνικός κόλπος, Aeschyl. *Agam.* 317; Strab. viii. pp. 335, 369, 374, 380; Σαρωνικός πόρος, Strab. viii. p. 335; Σαρωνικός πέλαγος, Strab. viii. pp. 335, 369; Σαρωνία θάλασσα, Dionys. Per. 422; also called Σαλαμινιάδος κόλπος, Strab. viii. p. 335: *Gulf of Egina*), a gulf of the Aegean sea, extending from the promontories of Sunium in Attica and Scyllaeum in Troezenia up to the isthmus of Corinth. The length of the gulf, according to Scylax (p. 20, Hudson), is 740 stadia. It washes the coasts of Attica, Megaris, Corinth, Epidaurus and Troezen, and contains the islands of Aegina and Salamis. It was said to have derived its name from Saron, a king of Troezen, who was drowned while hunting in a lagoon upon the Troezenian coast called Phoebea and afterwards Saronis. (Paus. ii. 30 § 7; *Elym.* M. p. 708. 52; Leake, *Morae*, vol. ii. p. 448.) A Troezenian river Saron is also mentioned (Eustath. ad *Dionys. Per.* 422), and likewise a town of the same name. (Steph. B. s. v.) Some derived the name of the gulf from *saroris*, "an oak." (Plin. iv. 5. s. 18.)

SARPE'DON (Σαρπηδών or Σαρπηδωνία ἕκρη), a promontory on the coast of Cilicia, 80 stadia to the west of the mouth of the Calycadnus, and 120 from Seleucia. In the peace between the Romans and Antiochus the Great this promontory and Cape Calycadnus were made the frontier between the kingdom of Syria and the free countries of Asia Minor. (Strab. xiv. p. 670; Ptol. v. 8. § 3; Appian, *Syr.* 39; Pomp. Mela, i. 13; Liv. xxxviii. 38; Plin. v. 22; *Stadiasm. Mar. Magni*, § 163.) It now bears the name of *Lissan-el-Kahpe*. (Leake, *Asia Minor*, p. 203.) [L. S.]

SARPE'DONIUM PROM. (Σαρπηδωνική ἕκρη, Herod. vii. 58), the NW. extremity of the gulf of Melas, and due north of the eastern end of the island of Imbros, now *Cape Paxi*. [J. R.]

SARRASTES. [SARNUS.]

SARRUM, in Gallia, is placed by the Table between Condate (*Cognac*) [CONDAT, No. 5] and Veunna (*Perigueux*). It is supposed to be *Charmans*, but the real distances do not agree with the numbers in the table. [G. L.]

SARS, a river on the W. coast of Hispania Tarraconensis, between the Prom. Nerium and the Minius. (Mela, iii. 1.) Incontestably the modern *Sar*, which does not reach the sea, but falls into the ancient Ulla at Turris Augusti (*Torres de Este*). (Comp. Florez, *Esp. Sagr.* xv. p. 41.) [T. H. D.]

SARSINA (Σαρσίνα, Strab. i. Eth. Sarsinas; *Sarsina*), a city of Umbria, situated in the Apennines, on the left bank of the river Sapis (*Sariv*), about 16 miles above Caesena. It seems to have been in very early times a powerful and important city, as it gave name to the tribe of the Sarsinates (Σαρσινάται, Pol.), who were one of the most considerable of the Umbrian tribes. Indeed some authors speak of them as if they were not included in the Umbrian nation at all, but formed a separate tribe with an independent national character. Thus Polybius, in enumerating the forces of the Italian nations, speaks of the Umbrians and Sarsinates, and Plautus,

in one passage, makes a similar distinction. (Pol. ii. 24; Plant. *Mostell.* iii. 2. 83.) The Fasti Capitolini, also, in recording the conquest of the Sarsinates, speak of the two consuls as triumphing "de Sarsinatibus," without any mention of the Umbrians; but the Epitome of Livy, in relating the same event, classes them generally among the Umbrians. (Livy. *Epit.* xv.; *Fast. Capit.*) The probable conclusion is that they were a tribe of the Umbrian race; but with a separate political organisation. We have no particulars of the war which ended in their subjection, which did not take place till B. C. 266, so that they were one of the last of the Italian states that submitted to the Roman yoke. From this time Sarsina was certainly included in Umbria in the Roman sense of the term, and became an ordinary municipal town, apparently not of much importance. (Strab. v. p. 227; Plin. iii. 14. s. 19.) It derived its chief celebrity from its being the birthplace of the celebrated comic poet Plautus, who was born there about B. C. 254, very shortly after the Roman conquest. (Hieron. *Chron.* ad Ol. 145; Fest. s. v. *Plotus*, p. 238.) Its territory contained extensive mountain pastures, — whence it is called by Silius Italicus "divers lactia" (Sil. Ital. viii. 461), — as well as forests, which abounded in dormice, so much prized by the Romans. (Martial, iii. 58. 35.) Various inscriptions attest the municipal rank of Sarsina under the Roman Empire (Orell. *Inscr.* 4404; Gruter, *Inscr.* p. 522. 8, p. 1095. 2); but its name is not again found in history. In the middle ages it sunk into complete decay, but was revived in the 13th century, and is now a small town of 3000 inhabitants, which retains the ancient site as well as name. [E. H. B.]

SARTA (Σάρτη, Herod. vii. 122; Steph. B. s. v.), a maritime town on the Singitic gulf between Singus and Ampelus Prom; now *Kartaki*. (Leake, *North. Greece*, vol. iii. p. 154.) [E. B. J.]

SARU'ENA (Σαρύενα), a town of Cappadocia, in the district Chamaene or Chamaene, on the north-eastern slope of Mount Argaeus, celebrated for its hot springs (Ptol. v. 6. § 12; *Tab. Peut.*, where it is called Arauena, whence Aquae Arauena; *It. Ant.* p. 202, where its name is Sacoena). It is by some believed to be the modern *Basilian*. [L. S.]

SARUN'ETES, the name of an Alpine people (Plin. iii. 20. s. 24) in the valley near the sources of the Rhine. There seems no reason to doubt the correctness of the name, and it may be preserved in *Sargana*, which is north of *Chur*, and between *Chur* and the *Lake of Constans*. In a passage of Caesar (*B.G.* iv. 10) he mentions the Nantuates as a people in the upper part of the Rhine, above the Helvetii. The name Nantuates [NANTUATES] is corrupt; and it is possible that the name Sarnetes should be in its place. [G. L.]

SARUS (Σάρπος), one of the principal rivers in the south-east of Asia Minor, having its sources in Mount Taurus in Cataonia. It first flows in a south-eastern direction through Cappadocia by the town of Comana; it then passes through Cilicia in a south-western direction, and, after flowing by the town of Adana, empties itself into the Cilician sea, on the south of Tarsus, after dividing itself into several branches. (Liv. xxxiii. 41.) According to Xenophon (*Anab.* i. 4. § 1) its breadth at its mouth was 3 plethra or 300 feet; and Procopius (*de Aedif.* v. 4) says it was a navigable river. (Comp. Strab. xii. p. 535; Ptol. v. 8. § 4; Appian, *Syr.* 4; Plin. vi. 3; Eustath. ad *Dion. Per.* 867, who erroneously calls it

Sinarus.) The modern name of the Sarus is *Sitar* or *Seihon*. [L. S.]

SARXA, a station on the road from Philippi to Heracleia (*Pent. Tab.*), to the N. of the Lake Cercinites, between Strymon and Scotussa. Now *Zibhna*. (Leake, *North. Greece*, vol. iii. p. 227.) [E. B. J.]

SASI'MA (*Σάσιμα*), a town of Cappadocia, 24 Roman miles to the south of Nazianzus; the place contained the first church to which Gregory of Nazianzus was appointed, and he describes it as a most miserable town. (*It. Ant.* p. 144; *It. Hieros.* p. 577; Hierocl. p. 700, with Weeseling's note.) Some look for its site near the modern *Babloma*. [L. S.]

SASO (*Σάσω*, Ptol. iii. 13. § 47; *Σάσω*, Strab. vi. p. 281), a small, rocky island, lying off the coast of Grecian Illyria, N. of the Acroceranian promontory, and possessing a landing-place which served as a station for pirates. (Comp. Polyb. v. 110; Mela, ii. 7; Plin. iii. 26. s. 30; *Itin. Ant.* p. 489.) It is still called *Saseno*, *Sasono*, or *Sassa*. [T. H. D.]

SASPI'RES, or SASPI'RI (*Σάσπειρες*, *Σάσπειροι*, Herod. i. 104, iv. 37, 40, vii. 79; Apoll. Rhod. ii. 397, 1242; Steph. B. s. v.: cf. Amm. Marc. xxii. 8. § 21), a Scythian people, dwelling to the S. of Colchis and N. of Media. According to Herodotus and Stephanus (*ll. cc.*) they were an inland people, but Apollonius places them on the sea-coast. They belonged to the 18th satrapy of the Persian kingdom (Herod. iii. 94), and were armed in the same manner as the Colchians, that is, with wooden helmets, small shields of untanned hide, short lances, and swords (lb. vii. 79). The Persian scholiast on Apollonius derives their name from the abundance of supplies found in their country. The Saspeires appear to have inhabited that district of Georgia lying on the upper course of the river Cyrus, in which *Tiflis* lies, which is still called *Tschin Kartuel*; and as the district contains several other places, the names of which begin with the syllable *Tschin*, Ritter conjectures that the Saspeires were identical with the eastern Iberians, respecting whom the Greeks invented so many fables. (Rennell, *Geogr. of Herod.* p. 503; Ritter, *Erdkunde*, ii. p. 922; Bähr, *ad Herod.* i. 104.) [T. H. D.]

SA'SSULA, a town of Latium, situated in the neighbourhood of Tibur, of which city it was a dependency. It is mentioned only by Livy (vii. 19) among the towns taken from the Tiburtines in B. C. 354, and was probably always a small place. The site has been identified by Gell and Nibby with the ruins of an ancient town, at the foot of the hill of *Siciliano*, between 7 and 8 miles from *Ticoli* (Tibur). The ruins in question, consisting of a line of walls of polygonal construction, surrounding a hill of small extent, unquestionably indicate the site of an ancient town; but as we know that the Tiburtine territory contained several other towns besides Empulum and Sassula, the only two whose names are known to us, the identification of the latter is wholly arbitrary. (Gell, *Top. of Rome*, p. 394; Nibby, *Dintorni*, vol. iii. p. 63.) [E. H. B.]

SATACHTHA (*Σατάχθα*, or *Σατάχθαι*, Ptol. iv. 7. § 17), a place in Aethiopia, on the left bank of the Nile, probably near the present *Korti*, or else somewhat more to the S., near the half-deserted village of *Ambucote*. [T. H. D.]

SAT'ALA (*Σάταλα*), an important town of Armenia Minor, as may be inferred from the numerous routes which branched off from thence to Pontus and Cappadocia. Its distance from Caesarea was 325 miles, and 124 or 135 from Trapezus. The

town was situated in a valley surrounded by mountains, a little to the north of the Euphrates, and was of importance, being the key to the mountain passes leading into Pontus; whence we find that in later times the Legio xv. Apollinaris was stationed there. In the time of Justinian its walls had fallen into decay, but that emperor restored them. (Ptol. i. 15. § 9, v. 7. § 3, viii. 17. § 41; Dion Cass. lxxvii. 18; Procop. *de Aed.* iv. 3; *It. Ant.* pp. 181, 183, 206, 207, 216, 217; *Notit. Imp.*; *Tab. Pent.*) The site of this town has not yet been discovered with certainty, though ruins found in various parts of the country have been identified with it by conjecture. (Tournefort, *Voyages*, Letter 21, c. 2. p. 17; Rennell, *Asia Minor*, ii. p. 219; Cramer, *Asia Minor*, ii. p. 152, foll.) [L. S.]

SATARCHAE, a Scythian people on the E. coast of the Tauric Chersonesus, who dwelt in caves and holes in the ground, and in order to avoid the rigour of winter, even clothed their faces, leaving only two small holes for their eyes. (Mela, ii. 1.) They were unacquainted with the use of gold and silver, and carried on their traffic by means of barter. They are mentioned by Pliny under the name of Scythi Satarchi (iv. 26). According to Ptolemy (iii. 6. § 6) there was a town in the Tauric peninsula called Satarche (*Σατάρχη*), which the scholiast (*ad loc.*) says was subsequently called Matarcha (*Ματάρχα*); but the account of the Satarchae living in caverns seems inconsistent with the idea of their having a town. Yet Valerius Flaccus also mentions a town—or perhaps a district—called Satarche, which, from his expression, “*ditant sua mœltra Satarchen*,” we may conclude to have been rich in herds of cattle. (*Argon.* vi. 145.) The same poet describes the Satarchae as a yellow-haired race. (*Ib.*) [T. H. D.]

SATI'GULA (*Σατίγκυλα*, Diod.: *Εἰς Σατίγκυλας*, Steph. B.; *Saticulanus*, Liv.; but *Saticulus*, Virg.), a town of Samnium, nearly on the frontiers of Campania. It is first mentioned at the outbreak of the First Samnite War (B. C. 343), when the consul Cornelius established his camp there, apparently to watch the movements of the Samnites in that quarter, and from thence subsequently advancing into their territory, was drawn into a defile, where he narrowly escaped the loss of his whole army, but was saved by the courage and ability of Decius. (Liv. vii. 32, 34.) Again, in B. C. 315, during the Second Samnite War, it was besieged by the Roman dictator L. Aemilius, and was considered of sufficient importance to engage a Roman army for nearly a year, when it was taken by Q. Fabius. The Samnites made a vigorous attempt to relieve it, but without effect, and it fell into the hands of the Romans. (Id. ix. 21, 22; Diod. xix. 72.) From this time it continued in their power; and before the close of the war it was one of the places which they determined to occupy with a colony, which was established there in B. C. 313. (Vell. Pat. i. 14; Fest. s. v. *Saticula*, p. 340, M.) Livy does not notice the establishment of a colony there on this occasion, but he afterwards mentions it as one of the “*coloniae Latinae*,” which distinguished themselves in the Second Punic War by their zeal and fidelity. (Liv. xxvii. 10.) It is remarkable, however, that a few years before the name of Saticula is found among the towns that had revolted to Hannibal, and were recovered by Fabius in B. C. 215. (Liv. xxxii. 39.) But it appears that all the MSS. have “*Austicula*” (Alschefski, *ad loc.*); and though this name is otherwise quite unknown, it is certainly not safe to alter

it, when, by so doing, we involve ourselves in a great historical difficulty; for the revolt of one of the Latin colonies is in itself most improbable, and was certainly not an event to be passed over with such slight notice. The territory of Satriculum ("ager Saticulanus") is again noticed during the same war in conjunction with that of Trebula (Liv. xxiii. 14); but from the end of the Second Punic War all trace of it disappears. The name is not found in any of the geographers, and its site is extremely uncertain. But the passages in Livy (ix. 21, 22) seem to point to its being situated not far from Plistia, which may very probably be placed at *Prestia* near *Sta Agata dei Goti*; while the description of the march of Marcellus in B. C. 216, shows clearly that it must have been situated S. of the Volturnus, and probably in the valley at the back of Mount Tifata, between that ridge and the underfalls of Mount Taburnus. It may be added that such a position would be a very natural one for the Roman consul to occupy at the first outbreak of the Samnite wars, from its proximity to Capua. [E. H. B.]

SATION. [DASSARETAE, Vol. I. p. 756, a.]

SATNIOEIS (*Σατνίοεις*: *Tuzla* or *Tusla*), a small river in the southern part of Thracia, having its sources in Mount Ida, and flowing in a western direction between Hamaxitis and Larissa, discharges itself into the Aegean. It owes its celebrity entirely to the Homeric poems. (*Il* vi. 34, xiv. 445, xxi. 87; Strab. xiii. pp. 605, 606, who states that at a later time it was called *Σατνίοεις*.) [L. S.]

SATRAE (*Σάτραι*, Herod. vii. 110—112), a Thracian people who occupied a portion of the range of the Pangaea, between the Nestus and the Strymon. Herodotus states that they were the only Thracian tribe who had always preserved their freedom; a fact for which he accounts by the nature of their country, — a mountainous region, covered with forests and snow — and by their great bravery. They alone of the Thracians did not follow in the train of Xerxes, when marching towards Greece. The Satrae were in possession of an oracle of Dionysus, situated among the loftiest mountain peaks, and the interpreters of which were taken from among the Bessi, — a circumstance which has suggested the conjecture that the Satrae were merely a clan of the Bessi, — a notion which is rendered more probable by the fact that Herodotus is the only ancient writer who mentions them; whereas the Bessi are repeatedly spoken of. We may infer from Pliny's expression, "*Bessorum multa nomina*" (iv. 11. s. 18), that the Bessi were divided into many distinct clans. Herodotus says that to the Satrae belonged the principal part of the gold and silver mines which then existed in the Pangaea. [J. R.]

SATRICUM (*Ἐθ. Σατρικῶς*, Satricanus: *Casale di Conca*), an ancient city of Latium, situated on the frontier of the Volscian territory, between the Alban hills and the sea. This position rendered it a place of importance during the wars between the Romans and Volscians, and it is frequently mentioned in history at that period. It appears to have been originally a Latin city, as Diodorus mentions its name among the reputed colonies of Alba, and Dionysius also includes it in the list of the thirty cities of the Latin League. (Diod. vii. Fr. 3; Dionys. v. 61.) But when it first appears in history it is as a Volscian town, apparently a dependency of Antium. It had, however, been wrested from that people by the Romans at the same time with Corioli, Pollusca, &c.; and hence it is one of

the towns the recovery of which by the Volscians is ascribed to Coriolanus. (Liv. ii. 39.) It seems to have continued in their power from this time till after the Gaulish invasion, as in B. C. 386 it was made the head-quarters of the Volscians and their allies on the outbreak of a war with Rome, and, after their defeat by Camillus, was assaulted and taken by that general. (Id. vi. 7, 8.) It would appear that it must on this occasion have for the first time received a Roman colony, as a few years later (B. C. 381) it is styled a "*colonia populi Romani*." In that year it was attacked by the Volscians in concert with the Praenestines, and, after an obstinate defence, was carried by assault, and the garrison put to the sword. (Id. vi. 22.) It is subsequently mentioned on two occasions as affording shelter to the Volscian armies after their defeat by the Romans (Id. vi. 22, 32); after the last of these (B. C. 377) it was burnt by the Latins, who considered themselves betrayed by their Volscian allies. (Id. 33.) It was not till B. C. 348 that the city was rebuilt by the Antiates, who established a colony there; but two years later it was again taken by the Romans under M. Valerius Corvus. The garrison, to the number of 4000 men, were made prisoners, and the town burnt and destroyed, with the exception of a temple of Mater Matuta. (Id. vii. 27; *Fast. Capit.*) A few years later it was the scene of a victory of the Romans, under C. Plautius, over the Antiates (id. viii. 1), and seems to have been soon after restored, and received a fresh colony, as it was certainly again inhabited at the commencement of the Second Samnite War. In B. C. 320, after the disaster of the Caudine Forks, the Satricans revolted from Rome and declared in favour of the Samnites; but they were soon punished for their defection, their city being taken by the consul Papirius, and the Samnite garrison put to the sword. (Liv. ix. 12, 16; Oros, iii. 15.) From this time it seems to have continued subject to Rome; but its name disappears from history, and it probably sunk rapidly into decay. It is incidentally mentioned during the Second Punic War (B. C. 206) on occasion of a prodigy which occurred in the temple of Mater Matuta, already noticed (Liv. xxviii. 11); but it seems certain that it ceased to exist before the close of the Republic. Cicero indeed alludes incidentally to the name in a manner that shows that the site at least was well known in his time (*ad Q. Fr.* iii. 1. § 4); but Pliny reckons it among the celebrated towns of Latium, of which, in his days, no vestige remained (Plin. iii. 5. s. 9); and none of the other geographers allude to its name. The site, like that of most of the Latin cities which disappeared at an early period, is a matter of much doubt; but several passages in Livy tend to prove that it must have been situated between Antium and Velitrae, and its site has been fixed with much probability by Nibby at the farm or *casale*, now called *Conca*, about half way between *Anso* and *Velletri*. The site is an isolated hill of tufo, of somewhat quadrangular form, and about 2500 feet in circuit, with precipitous sides, and presents portions of the ancient walls, constructed in much the same style as those of Ardea, of irregular square blocks of tufo. The sites of two gates, one on the E. the other to the W., may also be distinctly traced. There is therefore no doubt that the site in question is that of an ancient city, and the position would well accord with the supposition that it is that of Satricum. (Nibby, *Dizionario di Roma*, vol. iii. p. 64, a.) [E. H. B.]

SA'TTALA. [SETAK.]

SATURAE PALUS. [POMPTINAE PALUDES.]

SATURIUM. [TARENTUM.]

SATURNI PROMONTORIUM, a headland in Hispania Tarraconensis, not far from Carthago Nova. (Plin. iii. 3. s. 4.) It must be the same promontory called *Ἰκονοπαλία ἄκρα* by Ptolemy (ii. 6. § 14). Now *Cabo de Palos*. [T. H. D.]

SATURNIA (*Σατούρνια: Saturnia*), an ancient city of Etruria, situated in the valley of the Albinia (*Albegna*), about 24 miles from its mouth. There is no doubt that it was an ancient Etruscan city; and as Pliny tells us that it was previously called Aurinia (iii. 5. s. 8), it is probable that this was its Etruscan name, and that it first received that of Saturnia at the time of the Roman colony. But no mention of it is found in history during the period of Etruscan independence; and there is certainly no ground for the supposition of Müller that it was one of the twelve cities of the Etruscan League. (Müller, *Etrusker*, vol. i. p. 350.) Dionysius indeed mentions it as one of the cities founded by the Pelasgians, and subsequently taken from them by the Tyrrhenians and Etruscans (Dionys. i. 20); but though this is strong evidence for the antiquity of the city, there is no proof that it was ever a place of importance under the Etruscans; and it even seems probable that before the close of their rule, Saturnia had sunk into the condition of a subordinate town, and a mere dependency of Calettra. At least it is remarkable that Livy, in speaking of the establishment of the Roman colony there, says that it was settled "in agro Calettrano." (Liv. xxxix. 55.) The foundation of this colony, which was established in B. C. 183, is the only historical fact recorded to us concerning Saturnia; it was a "colonia civium," and therefore would naturally retain its colonial rank even at a late period. Pliny, however, calls it only an ordinary municipal town, but Ptolemy gives it the rank of a colony, and it is mentioned as such in an inscription of Imperial times. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 49; Gruter. *Inscr.* p. 1093. 8.) It is probable therefore that it received a fresh colony under the Roman Empire, though we have no account of the circumstance. But it seems not to have been a place of any importance, and the existing remains which belong to this period are of little interest.

The modern town of Saturnia, which retains the ancient site as well as name, is but a very poor place; but its mediæval walls are based on those of the ancient city, and the circuit of the latter may be distinctly traced. It occupied the summit of a conical hill, surrounded by steep cliffs, about 2 miles in circuit. Considerable portions of the walls remain in several places: these are constructed of polygonal masonry, resembling that of Cosa, but built of travertine; they are supposed by Micali to belong to the Roman colony, though other writers would assign them to the Pelasgians, the earliest inhabitants of Saturnia. (Micali, *Ant. Pop. Ital.* vol. i. pp. 152, 210; Dennis, *Etruria*, vol. ii. pp. 308—310.) Numerous tombs are also found in the neighbourhood of the town, but which more resemble the cromlechs of northern Europe than the more regular sepulchres of other Etruscan cities. (Dennis, *l. c.* pp. 314—316.) [E. H. B.]

SATYRI MONUMENTUM (*τὸ Σατύρου μνημα*, Strab. xi. p. 494), a monument consisting of a vast mound of earth, erected in a very conspicuous situation on a promontory on the E. side of the Cim-

merian Bosphorus, 90 stadia S. of Achilleum. It was in honour of a king of Bosphorus, whom Dubois de Montpéroux identifies with Satyrus I., who reigned B. C. 407—393. (*Voyage autour du Caucase*, v. p. 48.) The same authority (*ib.* p. 36) identifies the mound with the hill *Koukuoba*. [T. H. D.]

SATYRORUM INSULAE (*Σατύρων νῆσοι*, Ptol. vii. 2. § 30), a group of three Indian islands, lying E. of the Chersonesus Aurea, in the same degree of latitude as its southern point. They were said to be inhabited by a race of men having tails like Satyrs; that is, probably, by apes resembling men. Perhaps the *Anamba* islands. [T. H. D.]

SATYRORUM PROMONTORIUM (*Σατύρων ἄκρον*, Ptol. vii. 3. § 2), a promontory on the coast of Sinae (*China*), forming the southern extremity of the bay Theriades, and placed by Ptolemy directly under the equator. It is probably the present *Cape St. James*. (Forbiger, *Geogr.* ii. p. 477, note 51.) [T. H. D.]

SAVA. [MAPHARITIS.]

SAVARI (*Σάβαροι*, Ptol. iii. 5. § 22), a people in the N. of European Sarmatia, between the rivers Turuntus and Chesinus. Schafarik (*Slav. Alterth.* i. p. 212) identifies them with the *Sjever*, a powerful Slavonian race which dwelt on the rivers *Draua*, *Sem*, and *Sula*, and possessed the towns *Tschernigow* and *Ljubetsch*, both of which are mentioned by Constantine Porphyrogenitus (*de Adm. Imp.* c. 9). The name of the *Sjever* does not occur in history after the year 1024, though their land and castles are frequently mentioned subsequently in Russian annals. (*Ibid.* ii. p. 129.) [T. H. D.]

SAVARIA. [SABARIA.]

SAUCONNA. [ARAE.]

SAVIA (*Σαυία*, Ptol. ii. 6. § 56), a town of the Pelendones in Hispania Tarraconensis, the site of which is undetermined. [T. H. D.]

SAVINCA'TES, a name which occurs in the inscription on the arch of Susa, and is placed next to the Adanates, whom D'Anville supposes to be the same as the Edenates [EDENATES]. His reasons for placing the Savinates about *Embrun* and on the *Durance*, are not satisfactory. He finds a name *Savines* there, and that is all the proof except the assumption of the correctness of the position which he has assigned to the Adanates, and the further assumption that the two people were neighbours. [G. L.]

SAULOE PARTHAYNISA (*Σαυλόη Παρθαινίσσα*), this curiously mixed name which has passed into treatises of geography from the editions of Isidorus in the *Geographi Graeci Minores* of Hudson and Müller, appears to have rested on a bad reading of the Greek text. The amended text of the passage in question is *Παρθωνή σχοίνοι κέ, ἢς αἰλάν* (Isidor. *Statth. Parth.* c. 12), which is probably correct (see *Geog. Graec.* ed. Müller, Paris, 1855) [V.]

SAUNARIA (*Σαυνάρια*), a town of unknown site in Pontus Polemoniacus, is mentioned only by Ptolemy (v. 6. § 10). [L. S.]

SAUNIUM, a little river on the N. coast of Hispania Tarraconensis, in the territory of the Concani and Saleni; now *Saja*. (Mela, iii. 1.) [T. H. D.]

SAVO. [VADA SABBATA.]

SAVO (*Savone*), a small river of Campania, which appears to have formed the boundary between that country and Latium, in the most extended sense of the term. It is a small and sluggish stream ("piger Savo," Stat. *Silo.* iv. 3. 66), flowing into the sea between Sinuessa and the mouth of the Vul-

turnus (Plin. iii. 5. s. 9). and was crossed by the Appian Way, a few miles from its mouth, by a bridge called the Pons Campanus, from its forming the frontier of that country. [E. H. B.]

SAUROMATAE (*Σαυρομάται*), probably the form which the root *Sarmat-* took in the languages from which the information of the Greeks of the parts about Olbiopolis was derived. It is the only form found in Herodotus, who knows nothing of the later name Sarmatae. When this latter term, however, came into use, Sauromatae, especially with the Roman writers, became archaic and poetical, or exotic. This is the case in the line—

"Ultra Sauromatas, fugere hinc libet," &c.

(Juv. Sat. ii. 1),

and elsewhere.

The Greeks of the *Black Sea* would take the name from either the Scythians or the Getae; and it is probably to the language of the latter, that the form belonged. Hence, it is a form of Samartae, taken from one of the eastern dialects of Dacia by the Greeks (possibly having passed through a Scythian medium as well) as opposed to Sarmatae, which is from the western parts of the Dacian area, and adopted by the Romans. Its first and most convenient application is to the Asiatic branch of the Sarmatians. These may be called Sarmatians as well, as they are by Ptolemy. On the contrary, it is rare, even in a Greek author, to apply Sauromatae to the Sarmatians of the Pannonian frontier. The evidence as to the identity of the words is superabundant. Besides the internal probability, there is the statement of Pliny—"Sarmatae, Graecis Sauromatae" (iv. 25).

With the writers of the Augustan age the use of the two forms fluctuates. It is exceptional, however, for a Greek to write Sarmatae, or a Roman Sauromatae. Exceptional, however, as it is, the change is frequent. Diodorus writes Sauromatae (ii. 44), speaking of the Asiatic branch; Strabo writes Sauromatae under the same circumstances; also when following Greek authorities. For the western tribes he writes Sarmatae.

Ovid uses the term that best suits his metre, giving *Sarmatae* the preference, *caeteris paribus*.

"Sarmaticae major Geticaeque frequentia gentes,"
(*Trist.* v. 7. 13.)

"Jam didici Getice Sarmaticaeque loqui,"
(*Ibid.* v. 12. 58.)

"Stridula Sauromates paustra bubulcus agit,"
(*Ibid.* iii. 12. 30.)

The Sauromatae of Herodotus were the occupants of a *Adâis*, a word evidently used in a technical sense, and perhaps the term by which his informants translated the Scythian or Sarmatian equivalents to our word *March*; or it may = *street*. The *Bashkir* country, at the present moment, is divided into four *streets, roads, or ways*, according to the countries to which they lead. The number of these *Adâis* were two; the first being that of the Sauromatae, bounded on the south and west by the Tanais and Maeotis, and extending northwards fifteen days' journey. The country was treeless. The second *Adâis*, that of the Budini, followed. This was a wooded country. There is no necessity for connecting the Budini with Sarmatae, on the strength of their both being occupants of a *Adâis*. All that comes out of the text of Herodotus is, that the

Scythians near Olbiopolis knew of a *Adâis* of the Sauromatae and a *Adâis* of the Budini. The former seems to have been the north-eastern part of the *Don Kosak* country, with a portion of *Saratov* (iv. 21).

When Darius invaded Scythia, the Sauromatae, Geloni, and Budini acted together, and in opposition to the Agathyræi, Neuri, Androphagi, Melanchlaeni, and Tauri; the former agreeing to help the Scythians, the latter to leave them to their fate. This suggests the probability that, politically, the *Adâis* were confederate districts (Herod. iv. 119).

The language of the Sauromatae was *Scythian with solecisms*, a statement which leads to the strange story of the Amazons (iv. 110—116), with whom the Sauromatae were most especially connected (iv. 117). The women amongst them remained unmarried until they had slain an enemy.

The account of Hippocrates is substantially that of Herodotus, except that he especially calls the Sauromatae European and Scythian; though, at the same time, different from other nations. He makes the number, too, of enemies that the virgins must slay before they can marry, three.

For further details, see *SARMATIA*. [R. G. L.]

SAVUS (*Σαδος* or *Σάωος*: *Sace*), a great and navigable tributary of the Danube; it has its sources in the Carnian Alps (Plin. iii. 28; Jornand. *de Reb. Get.* 56), and, flowing in an eastern direction almost parallel with the more northern Dravus, reaches the Danube at Singidunum. A portion of its upper course forms the boundary between Noricum and Pannonia, but the whole of the lower part of the river belongs to the southern part of Pannonia, and some of the most important towns of that country, as Siscia, Servitium, and Sirmium, were situated on its banks. (Strab. iv. p. 207, vii. p. 314; Appian, iii. 22; Ptol. ii. 16. § 1, iii. 9. § 1; Justin, xxxii. 3, 8, 16; Claud. *de Laud. Stilich.* ii. 192.) [L. S.]

SAXA RUBRA (*Prima Porta*), a village and station on the Flaminian Way, 9 miles from Rome. It evidently derived its name from the redness of the tufa rocks, which is still conspicuous in the neighbourhood of *Prima Porta*. The name is written "Ad Rubras" in the Tabula, while Martial calls the place simply "Rubrae;" and this form is found also in the Jerusalem Itinerary. (Martial, iv. 64. 15; *Itin. Hier.* p. 612.) But the proper form of it seems to have been *Saxa Rubra*, which is used both by Livy and Cicero. The former mentions it during the wars of the Romans with the Veientes, in connection with the operations on the Cremera (Liv. ii. 49); and Cicero notices it as a place in the immediate vicinity of Rome, where M. Antonius halted before entering the city. (Cic. *Phil.* ii. 31.) It was there also that Antonius, the general of Vespasian, arrived on his march upon Rome, when he learnt the successes of the Vitellians and the death of Sabinus. (Tac. *Hist.* iii. 79.) At a much later period also (B. C. 32) it was the point to which Maxentius advanced to meet Constantine previous to the battle at the Milvian bridge. (Vict. *Caes.* 40. § 23.) We learn from Martial (l. c.), that a village had grown up on the spot, as would naturally be the case with a station so immediately in the neighbourhood of the city.

On a hill on the right of the Via Flaminia, a little beyond *Prima Porta*, are considerable ruins, which are believed to be those of the villa of Livia, known by the name of "Ad Gallinas," which was

situated 9 miles from Rome, on the Via Flaminia. (Plin. xv. 30. s. 40; Suet. *Galb.* l.) [E. H. B.]

SAXETANUM, a place in Hispania Baetica (*Itin. Ant.* p. 405), called Sex (Σέξ) by Ptolemy (*Itin.* 4. § 7), Hexi by Mela (*Itin.* 6), and by Pliny (*Itin.* 3) Sexti Firmum Julium. It is the Ἑξίτανον ῥώδης of Strabo (*Itin.* p. 156). On the name see Casaubon (*ad Strab.* l. p. 50), and Tzschuck (*ad Melam*, vol. ii. pt. 2. p. 447). It was renowned for its salt-fish. (Strab. iii. p. 156; Athen. iii. p. 121; Plin. xxxii. 11. s. 53; Mart. vii. 78, &c.) Now most probably Motril. (Cf. Florez, *Esp. Sagr.* xii. p. 101.) [T. H. D.]

SA'XONES (Σάξονες; Saxones), a German tribe, which, though it acted a very prominent part about the beginning and during the early part of the middle ages, yet is not even mentioned in ancient history previous to A. D. 287. In that year, we are told by Eutropius (vii. 13; comp. Oros. vii. 25), the Saxons and Franks infested the coasts of Armorica and Belgica, the protection of which was intrusted to Carausius. The fact that Pliny and Tacitus do not mention them in the country in which we afterwards find them, does not prove that they did not exist there in the time of those writers. For the inhabitants of the Cimbrian Chersonesus, where subsequently we find the Saxons, are mentioned by those writers only under the general appellation of the Cimbri, without noticing any special tribes under separate names. Ptolemy (*Itin.* 11. § 11; comp. Steph. B. s. v.) is the first authority describing the habitations of the Saxons, and according to him they occupied the narrow neck of the Cimbrian Chersonesus, between the river Albis (*Elbe*) and Chalusus (*Trave*), that is, the country now called *Holstein*. Their neighbours on the south of the Albis were the Chauci, in the east the Suardones, and in the north the Singulones, Angli, and other smaller tribes of the peninsula. But besides this portion of the continent, the Saxons also occupied three islands, called "Saxon islands," off the coast of *Holstein* (Σαξόνων νήσοι, Ptol. ii. 11. § 31), one of which was no doubt the modern *Helgoland*; the two others must either be supposed to have been swallowed up by the sea, or be identified with the islands of *Dyckland* and *Vieleschovell*, which are nearer the coast than *Helgoland*.

The name Saxones is commonly derived from *Saks* or *Sachs*, a battle-knife, but others connect it with *seax* (earth) or *seat*, according to which Saxons would describe the people as living in fixed seats or habitations, as opposed to the free or wandering Franks. The former, however, is the more probable origin of the name; for the living in fixed habitations was certainly not a characteristic mark of the ancient Saxons.

They appear to have gradually spread along the north-western coast of Germany, and to have gained possession of a large extent of country, which the Ravenna Geographer (*Itin.* 17, 18, 23) calls by the name of Saxonia, but which was certainly not inhabited by Saxons exclusively. In A. D. 371 the Saxons, in one of their usual ravaging excursions on the coasts of Gaul, were surrounded and cut to pieces by the Roman army under Valentinian (Oros. vii. 32; Amm. Marc. xlviii. 2, 5; comp. xvi. 4, xxvii. 8; Zosim. iii. 1, 6); and about the middle of the fifth century a band of Saxons led by Hengist and Horsa crossed over into Britain, which had been completely given up by the Romans, and now fell into the hands of the roving Saxons, who in con-

nection with other German tribes permanently established themselves in Britain, and there developed the great features of their national character. (Beda, *Hist. Eccles.* i. 12). As the Romans never invaded the original country of the Saxons, we know of no towns or places in it, with the exception perhaps of the town of Treva (Τρήβα) mentioned by Ptolemy (*Itin.* 11. § 27). Besides those already mentioned, there are but few passages in ancient writers in which the Saxons are mentioned, such as Marcan, p. 53; Claud. *de Laud. Stil.* ii. 255; Sidon. Apoll. vii. 90. 369. Among modern writers the reader may consult Kufahl, *De Saxonum Origine*, Berlin, 1830, 8vo., and the best works on the early history of England and Germany. [L. S.]

SA'XONUM I'NSULAE. [SAXONES.]
SCAIDA'VA, a town in Moesia Inferior, between Novae and Trimammium. (*Itin. Ant.* p. 222.) It is called Secebea (Σεκεβέδ) by Procopius (*de Aed.* iv. 11). Various identified with *Ratonos* and *Rustschuck*. [T. H. D.]

SCALABIS, a town of Lusitania, on the road from Olisipo to Emerita and Bracara. (*Itin. Ant.* pp. 420, 421.) Pliny (*Itin.* 21. s. 35) calls it a Roman colony, with the surname Præsidium Julium, and the seat of one of the three "conventus iudicii" of Lusitania. It is undoubtedly the same place which Ptolemy (*Itin.* 5. § 7) erroneously calls Σκαλαβίαιος, which is probably a corruption of Σκαλαβίς κολ. (κολωνία). The modern *Santarem*. (Cf. Weesseling, *ad Itin.* l. c.; Isidor. *de Vir.* III. c. 44; Florez, *Esp. Sagr.* xiii. p. 69.) [T. H. D.]

SCALDIS (*Schelde*, *Escaut*) a river in North Gallia. Caesar (*B. G.* vi. 33), the first writer who mentions the Scaldia, says, when he was pursuing Ambiorix, that he determined to go "as far as the Scaldis which flows into the Mosa (*Maas*) and the extremity of the Arduenna" (*Ardennes*). All the MSS. quoted by Schneider (*B. G.* vi. 33) have the reading "Scaldem," "Schaldem," "Scaldim," and other trifling varieties, except one MS. which has "Sambim;" so that, as Schneider concludes, we cannot doubt that Caesar wrote "Scaldis" in this passage. Pliny (*Itin.* 17) describes the Scaldis as the boundary between the Gallic and Germanic nations, and says nothing of its union with the Mosa: "A Scalde ad Sequanam Belgica;" and "a Scaldi incolunt extera Toxandri pluribus nominibus." Some geographers suppose that the Tabada of Ptolemy is the *Schelde*. [TABUDA.]

The passage of Caesar is most easily explained by supposing that he knew nothing of the lower course of the *Schelde*, and only reported what he heard. It is possible that the *Fast Schelde* was once the chief outlet of the *Schelde*, and it may have had some communication with the channels about the islands between the *East Schelde* and the lower course of the Mosa, which communication no longer exists. There is at least no reason for taking, in place of "Scaldim" or "Schaldem," the reading "Sabin" (Σάβιν), from the Greek version of the Commentaries.

The *Schelde* rises in France, in the department of *Aisne*. Below *Antwerp* it enters the sea by two estuaries, the *Hond* or *West Schelde* and the *East Schelde*. [G. L.]

SCAMANDER (Σκάμανδρος; *Menders Su*, or the river of *Bunarbaschi*), a famous little stream in the plain of Troy, which according to Homer (*Il.* xx. 74) was called Xanthus by the gods and Scamander by men; though it probably owed the

name Xanthus to the yellow or brownish colour of its water (comp. *Il.* vi. 4, xxi. 8). Notwithstanding this distinct declaration of the poet that the two names belonged to the same river, Pliny (v. 33) mentions the Xanthus and Scamander as two distinct rivers, and describes the former as flowing into the Portus Achæorum, after having joined the Simoeis. In regard to the colour of the water, it was believed to have even the power of dyeing the wool of sheep which drank of it. (Aristot. *Hist. Anim.* iii. 12; Aelian, *Hist. Anim.* viii. 21; Plin. ii. 106; Vitruv. viii. 3, 14.) Homer (*Il.* xxii. 147, &c.) states that the river had two sources close to the city of Ilium, one sending forth hot water and the other cold, and that near these springs the Trojan women used to wash their clothes. Strabo (xiii. p. 602) remarks that in his time no hot spring existed in those districts; he further asserts that the river had only one source; that this was far away from Troy in Mount Ida; and lastly that the notion of its rising near Troy arose from the circumstance of its flowing for some time under ground and reappearing in the neighbourhood of Ilium. Homer describes the Scamander as a large and deep river (*Il.* xx. 73, xxi. 15, xxii. 148), and states that the Simoeis flowed into the Scamander, which after the junction still retained the name of Scamander (*Il.* v. 774, xxi. 124; comp. Plin. ii. 106; Herod. v. 65; Strab. xiii. p. 595). Although Homer describes the river as large and deep, Herodotus (vii. 42) states that its waters were not sufficient to afford drink to the army of Xerxes. The Scamander after being joined by the Simoeis has still a course of about 20 stadia eastward, before it reaches the sea, on the east of Cape Sigæum, the modern *Kum Kale*. Ptolemy (v. 2, § 3), and apparently Pomp. Mela (i. 18), assign to each river its own mouth, the Simoeis discharging itself into the sea at a point north of the mouth of the Scamander. To account for these discrepancies, it must be assumed that even at that time the physical changes in the aspect of the country arising from the muddy deposits of the Scamander had produced these effects, or else that Ptolemy mistook a canal for the Scamander. Even in the time of Strabo the Scamander reached the sea only at those seasons when it was swollen by rains, and at other times it was lost in marshes and sand. It was from this circumstance, that, even before its junction with the Simoeis, a canal was dug, which flowed in a western direction into the sea, south of Sigæum, so that the two rivers joined each other only at times when their waters were high. Pliny, who calls the Scamander a navigable river, is in all probability thinking of the same canal, which is still navigable for small barges. The point at which the two rivers reach the sea is now greatly changed, for owing to the deposits at the mouth, the coast has made great advances into the sea, and the Portus Achæorum, probably a considerable bay, has altogether disappeared. (Comp. Leake, *Asia Minor*, p. 289, foll., and the various works and treatises on the site and plain of ancient Troy.) [L. S.]

SCAMANDRIA, a small town of Mysia, no doubt situated on the river Scamander in the plain of Troy (Plin. v. 33; Hierocl. p. 662, where it is called Scamandros). Leake (*Asia Minor*, p. 276) conjectures that it stood on a hill rising below *Bunarbaschi*. An inscription referring to this town is preserved in the museum at Paris (Choiseul-Gouffier, *Voyage Pittoresque*, tom. ii. p. 288.) [L. S.]

SCAMBO'NIDAE. [ATHENAE, p. 302, a.]

SCAMPÆ. [ILLYRICUM, Vol. II. p. 36, b.]

SCANDARIUM. [Cos.]

SCANDEIA. [CYTHERA.]

SCANDIA (*Σκandia*) or SCANDINAVIA.

Until about the reign of Augustus the countries north of the Cimbrian Chersonesus were unknown to the ancients, unless we assume with some modern writers that the island of Thule, of which Pytheas of Massilia spoke, was the western part of what is now sometimes called Scandinavia, that is *Sweden* and *Norway*. The first ancient writer who alludes to these parts of Europe, Pomp. Mela, in the reign of Claudius, states (iii. 3) that north of the Albia there was an immense bay, full of large and small islands, between which the sea flowed in narrow channels. No name of any of these islands is mentioned, and Mela only states that they were inhabited by the Hermiones, the northernmost of the German tribes. In another passage (iii. 6) the same geographer speaks of an island in the Sinus Codanus, which, according to the common reading, is called Codanonia, or Candanovia, for which some have emended Scandinavia. This island is described by him as surpassing all others in that sea both in size and fertility. But to say the least it is very doubtful as to whether he alludes to the island afterwards called Scandia or Scandinavia, especially as Mela describes his island as inhabited by the Teutones. The first writer who mentions Scandia and Scandinavia is Pliny, who, in one passage (iv. 27), likewise speaks of the Sinus Codanus and its numerous islands, and adds that the largest of them was called Scandinavia; its size, he continues, is unknown, but it is inhabited by 500 *pagi* of Hellefiones, who regard their island as a distinct part of the world (*alter terrarum orbis*). In another passage (iii. 30) he mentions several islands to the east of Britannia, to one of which he gives the name of Scandia. From the manner in which he speaks in this latter passage we might be inclined to infer that he regarded Scandinavia and Scandia as two different islands; but this appearance may arise from the fact that in each of the passages referred to he followed different authorities, who called the same island by the two names Scandia and Scandinavia. Ptolemy (ii. 11. §§ 33, 34, 35) speaks of a group of four islands on the east of the Cimbrian Chersonesus, which he calls the Scandiae Insulae (*Σκανδιαῖαι νῆσοι*), and of which the largest and most eastern one is called Scandia, extending as far as the mouth of the Vistula. In all these accounts there is the fundamental mistake of regarding Scandinavia as an island, for in reality it is connected on the north-east with the rest of Europe. Pliny speaks of an immense mountain, Sevo, in Scandinavia, which may possibly be *Mount Kjölen*, which divides Sweden from Norway, and a southern branch of which still bears the name of *Seve-Ryggen*. The different tribes mentioned by Ptolemy as inhabiting Scandia are the Chædini (*Χαίδεινοι*), Phavonae (*Φαύοναι*), Phiraesi (*Φιραῖοι*), Gutae (*Γούται*), Dauciones (*Δαυκλώνες*), and Levoni (*Λευώνοι*). At a later time, Jornandes (*de Reb. Get.* p. 81, &c.) enumerates no less than twenty-eight different tribes in Scandinavia. Tacitus does not indeed mention Scandia, but the Sitones and Suiones (whence the modern name *Swedes*) must unquestionably be conceived as the most northern among the German tribes and as inhabiting Scandia (*Germ.* 44, 45). It is well known that according to Jornandes the Goths, and according to Paulus Diaconus (v. 2) the

Longobardi, originally came from Scandinavia. It deserves to be noticed that the southern part of the supposed island of Scandia, the modern Sweden, still bears the name *Scania*, *Scone*, or *Schonen*. Pliny (viii. 16) mentions a peculiar animal called *achlis*, and resembling the *aleis*, which was found only in Scandinavia. For further discussions about the various tribes of Scandinavia, which all the ancients treat as a part of Germania Magna, see Wilhelm, *Germanien*, p. 343, &c.; Zeuss, *Die Deutschen*, &c. pp. 77, 156, &c. [L. S.]

SCANDILA, a small island in the northern part of the Aegæan sea, between Peparethus and Scyros, now *Skandole*. (Plin. iv. 12. s. 23; Mela, ii. 7. § 8.)

SCANDINAVIA. [SCANDIA.]

SCAPTE HYLE (Σκαπτή ἄλη, Plut. *Cim.* 4, *de Exilio*, p. 605; Marcellin. *Vit. Thucyd.* § 19), or the "foss wood," situated on the confines of Macedonia and Thrace, in the auriferous district of Mt. Pangæum, to which Thucydides was exiled, and where he composed his great legacy for all ages—the history of the war in which he had served as general. [E. B. J.]

SCAPTIA (Ἑθ. Σκαπτήριος, Scaptiensis: *Passerano*), an ancient city of Latium, which appears to have ceased to exist at a very early period. Its name is found in Dionysius among the thirty cities of the Latin League (Dionys. v. 61); and it therefore seems probable that it was at that time a considerable, or at all events an independent, town. No mention of it is subsequently found in history, but after the great Latin War it was included in one of the new Roman tribes created on that occasion (B.C. 332), to which it gave the name of Scaptian. (Fest. s. v. *Scaptia*, p. 343; Liv. viii. 17.) No subsequent mention is found of the town, and it is only noticed by Pliny among the "clara oppida" of Latium, which in his time had utterly disappeared (Plin. iii. 5. s. 9). Silius Italicus also alludes to the "Scaptia pube," but in a passage from which no inference can be derived (viii. 395). The Scaptiensis noticed by Suetonius (*Aug.* 40) and elsewhere were the members of the Scaptian tribe. There is no real clue to its position; that derived from the passage of Festus, from which it has been commonly inferred that it was in the neighbourhood of Pedum, being of no value. The words "quam Pedani incolebant," found in all the ordinary editions of that author, are in fact merely a supplement of Ursinus, founded on an inference from Livy (viii. 14, 17), which is by no means conclusive. (See Müller's note.) But supposing that we are justified in placing Scaptia in this neighbourhood, the site suggested by Nibby, on the hill now occupied by a farm or *casale* called *Passerano*, is at least probable enough; the position is a strong one, on the point of one of those narrow ridges with precipitous sides between two ravines, which abound in this part of the *Campagna*. It is about 3 miles NW. of *Galliano*, the presumed site of Pedum; and the existence of an ancient town on the spot is attested by the fragments of ancient walls, the large, roughly-hewn masses of which are found worked up into more recent buildings. Its situation closely resembles that of *Galliano* itself, as well as that of *Zagarolo*, about 3 miles further S. (where there are also indications of ancient habitation); and the identification of any of the three can be little more than conjectural. (Nibby, *Dintorni*, vol. iii. pp. 70, 71.) [E. H. B.]

SCARABANTIA (Σκαρβαντία, Ptol. ii. 15. § 5), a town on the western bank of Lake Pelso in Upper Pannonia, on the road leading from Carnuntum to Sabaria. (Plin. iii. 27; *It. Ant.* pp. 233, 261, 262, 266; *Tab. Peut.*) According to coins and inscriptions found at the place, it was a municipium with the surname of Flavia Augusta. Hence it appears that the reading in Pliny, "Scarabantia Julia," is not correct, and that we must read either Scarabantia Flavia, or Scarabantia et Julia. Its site is now occupied by the town of *Oedenburg*, in Hungarian *Sopron* or *Sopron*. (Comp. Muchar, *Norikum*, i. p. 168; Schönwiesner, *Antiquitates Saboriae*, p. 31; Orelli, *Inscript.* n. 4992.) [L. S.]

SCARBIA, a town in Rhaetia, between Partenum and Veldidena, on the road leading from Augusta Vindelicorum into Italy, occupied the site of the modern *Scharnitz*. (*Tabula Peutingeriana*.) [L. S.]

SCARDONA (Σκαρδωνα, Ptol. ii. 17. § 3; Procop. *B. G.* i. 7, 16, iv. 23; Plin. iii. 26; Geogr. Rav. v. 14; *Σκαρδων*, Strab. vii. p. 315; *Sardona*, *Peut. Tab.*), a town in the territory of the Liburnii on the Tithius, 12 M. P. from where that river meets the sea. From the circumstance of its having been one of the three "conventus" of Dalmatia, it must have been a place of importance, and was used from early times as a dépôt for the goods which were transported by the Titius to the inland Dalmatians. (Strab. *l.c.*) The modern *Scardona* in Illyric *Scardin* or *Scradin*, retains the name of the old city, though it does not occupy the site, which was probably further to the W. (Wilkinson, *Dalmatia*, vol. i. p. 191.) Ptolemy (ii. 17. § 13) has an island of the same name off the Liburnian coast,—perhaps the rocky and curiously-shaped island of *Pago*. [E. B. J.]

SCARDUS, SCODRUS, SCORDUS MONS (τὸ Σκαρδὸν ὄρος, Polyb. xviii. 8; Ptol. ii. 16. § 1), the desolate heights which are mentioned incidentally by Livy (xliii. 20, xlv. 31) as lying in the way from Stymbara to Scodra, and as giving rise to the Orions. They seem to have comprehended the great summits on either side of the Drilo, where its course is from E. to W. (Leake, *Northern Greece* vol. iii. p. 477.) In Kiepert's map (*Europäischen Türkei*) Scardus (*Schar-Dagh*) extends from the *Ljubatrin* to *Shalek*; over this there is a "col" from *Kalkandele* to *Prisdrin* not less than 5000 feet above the level of the sea. According to the nomenclature of Grisebach, Scardus reaches from the *Ljubatrin* at its NE. extremity to the SW. and S. as far as the *Klisoura* of *Derol*; S. of that point Pindus commences in a continuation of the same axis. [E. B. J.]

SCARNIUNGA, a river of Pannonia, mentioned only by Jornandes (*de Reb. Get.* 52), which it is impossible to identify from the vague manner in which it is spoken of. [L. S.]

SCARPHE (Σκαρφή), in Boeotia. [ETRONUS.]

SCARPHE or SCARPEIA (Σκαρφή, Hom.; *Σκαρπεία*, Strab., Paus., Steph. B.: *Ἑθ. Σκαρπέρις*, *Σκαρπαεὶς*), a town of the Locri Epicnemidii, mentioned by Homer. (*Il.* ii. 532.) According to Strabo it was 10 stadia from the sea, 30 stadia from Thronium, and a little less from some other place of which the name is lost, probably Nicaea. (Strab. ix. p. 426.) It appears from Pausanias that it lay on the direct road from Eleateis to Thermopylae by Thronium (viii. 15. § 3), and likewise from Livy, who states that Quintus Flaminus marched from Eleateis by Thronium and

Scarpheia to Heracleia (xxxiii. 3). Hence the town may be placed between the modern villages of 'Andera and Molo. (Leake, *Northern Greece*, vol. ii. p. 178.) Scarpheia is said by Strabo to have been destroyed by an inundation of the sea caused by an earthquake (i. p. 60), but it must have been afterwards rebuilt, as it is mentioned by subsequent writers down to a late period. (Plin. iv. 7. s. 12; Ptol. iii. 15. § 11; Hierocl. p. 643; Geog. Rav. iv. 10; Const. Porphy. *de Them.* ii. 5. p. 51, Bonn.) Scarpheia is also mentioned by Lycophr. 1147; Appian, *Syr.* 19; Paus. ii. 29. § 3, x. 1. § 2.

SCARPO'NA or SCARPONNA, in Gallia, is placed in the Antonine Itin. and in the Table on a road between Tullum (*Toul*) and Divodurum (*Metz*). The two authorities agree in placing it at the distance of x. from Tullum; but the Itin. makes the distance from Scarpona to Divodurum xii., and the Table makes it xiii. The larger number comes nearer to the truth, for the place is *Charpagne*, on the *Mosel*. An inscription has been found at *Charpagne*, which is as follows: "IIIIVIR VIARUM CURAND. Sabell. V. S. P. M. Scarp. Civit. Leuc." Scarpona was in the territory of the Leuci. [LEUCI.] Jovinus, Equitum Magister, defeated the Alemanni near Scarponna in A. D. 366, in the reign of Valentinian and Valens. (Amm. Marc. xxvii. 2; D'Anville, *Notice, &c.*; Ukert, *Gallien*, p. 506.) [G. L.]

SCENAE (Σκηναι). 1. A town of Mesopotamia on a canal from the Euphrates, and on the borders of Babylonia, 18 schoeni from Seleucia, and 25 days' journey from the passage of the Euphrates at Zeugma. (Strab. xvi. p. 748.) It belonged to the peaceful and nomadic tribe of the Scenitae, and therefore, though called by Strabo *ἐπίτολός πόλις*, was probably only a city of tents, as, indeed, its name implies.

2. SCENAE MANDRAE, a place in Middle Egypt, on the right bank of the Nile, between Aphroditopolis and Babylon, a little SE. of Memphis. (Itin. Ant. p. 169.) It had a Roman garrison, and in later times became the see of a Christian bishop. (Not. Imp.; comp. Wesseling, *ad Itin.* l. c.)

3. SCENAE VETERANORUM, a place in Lower Egypt, on an arm of the Nile, and on the road from Heliopolis to Vicus Judaeorum. (Itin. Ant. pp. 163, 169.) It lay SW. of Bubastus. [T. H. D.]

SCENITAE (Σκηνίται), a general name for various Arab tribes in Pliny, often distinguished by some other appellation. Thus, towards the lower part of the Euphrates, beyond the "Attali latrones, Arabum gens," he places the Scenitae (vi. 26), whom he mentions again more fully (c. 28), "Nomadas inde infestatoresque Chaldaeorum Scenitae, ut diximus cludunt, et ipsi vagi, sed a tabernaculis cognominati, quae cilicis metantur, ubi libuit. Deinde Nabataei," &c. Then again below the confluence of the Euphrates and Tigris he places the Nomadas Scenitae on the right bank of the river, the Chaldaei on the left. He speaks also of the Scenitae Sabaei. Strabo also uses the name in the same latitude of application of many various tribes of Arabia, Syria, and Mesopotamia (see Index, s. v.); but Ptolemy assigns them a definite seat near the mountains which stretch along the north of the peninsula, north of the Thaditae (*ad Oaditae*) and Saraceni (vi. 7. § 21); and in this vicinity, towards the Red Sea, it is that Ammianus Marcellinus places the Scenite Arabs, whom posterity called Saraceni (xxiii. 6.) [SARACENI.] The remark of Bochart is therefore borne out by authorities: "Ubi Sce-

nitae Eratosthenes, ibi Saraceni ponunt Procopius et Marciianus. Saraceni nimirum a Scenitis hoc solum differunt, quod Scenitarum nomen est vetustius." (*Geogr. Sacra*. iv. 2. p. 213.) [G. W.]

SCEPSIS (Σκῆψις: *ἔθ. Σκῆψιος*), a town in the SE. of Mysia, on the river Aesepus, 150 stadia to the SE. of Alexandria Troas, and not far from Dicle, one of the highest points of Mount Ida. It was apparently a place of the highest antiquity; for it was believed to have been founded immediately after the time of the Trojan War, and Demetrius, a native of the place, considered it to have been the capital of the dominions of Aeneas. (Strab. xiii. p. 607.) The same author stated that the inhabitants were transferred by Scamandrius, the son of Hector, and Ascanius, the son of Aeneas, to another site, lower down the Aesepus, about 60 stadia from the old place, and that there a new town of the same name was founded. The old town after this was distinguished from the new one by the name of Palaeoscepsis. For two generations the princes of the house of Aeneas maintained themselves in the new town; but the form of government then became an oligarchy. During this period, colonists from Miletus joined the Scepsians, and instituted a democratic form of government. The descendants of the royal family, however, still continued to enjoy the regal title and some other distinctions. (Strab. l. c. comp. xiii. p. 603; xiv. p. 635; Plin. v. 2; Steph. B. s. v.) In the time of Xenophon (*Hell.* iii. 1. § 15), Scepsis belonged to Mania, a Dardanian princess; and after her death it was seized by Meidias, who had married her daughter; but Dercyllidas, who had obtained admission into the town under some pretext, expelled Meidias, and restored the sovereign power to the citizens. After this we hear no more of Scepsis until the time of the Macedonian supremacy, when Antigonus transferred its inhabitants to Alexandria Troas, on account of their constant quarrels with the town of Cebrene in their neighbourhood. Lysimachus afterwards allowed them to return to their ancient home, which at a later time became subject to the kings of Pergamum. (Strab. xiii. p. 597.) This new city became an important seat of learning and philosophy, and is celebrated in the history of the works of Aristotle. Strabo (xiii. p. 608) relates that Neleus of Scepsis, a pupil of Aristotle and friend of Theophrastus, inherited the library of the latter, which also contained that of Aristotle. After Neleus' death the library came into the hands of persons who, not knowing its value, and being unwilling to give them up to the library which the Pergamenian kings were collecting, concealed these literary treasures in a pit, where they were exposed to injury from damp and worms. At length, however, they were rescued from this place and sold to Apellicon of Teos. The books, in a very mutilated condition, were conveyed to Athens, and thence they were carried by Sulla to Rome. It is singular that Scylax (p. 36) enumerates Scepsis among the Aeolian coast-towns; for it is evident from Strabo (comp. Demosth. c. *Aristocr.* p. 671) that it stood at a considerable distance from the sea. The town of Palaeoscepsis seems to have been abandoned entirely, for in Pliny's time (v. 33) not a vestige of it existed, while Scepsis is mentioned by Hierocles (p. 664) and the ecclesiastical notices of bishoprics. In the neighbourhood of Scepsis there existed very productive silver mines. It was the birthplace of Demetrius and Metrodorus. The former, who bestowed much labour on the topography of Troas, spoke of

a district, Corymbæa, near Scepis, of which otherwise nothing is known. Extensive ruins of Scepis are believed to exist on an eminence near the village of *Eskipahi*. These ruins are about 3 miles in circumference, and 8 gates can be traced in its walls. (Forbiger, *Handbuch der Alt. Geogr.* vol. ii. p. 147.) [L. S.]

SCHE'DIA (Σχέδια, Strab. xvii. pp. 800, 803), a large town-like village of Lower Egypt, situated on the great canal which connected Alexandria with the Canopic arm of the Nile, near Andropolis. At Schedia was the general custom-house for goods, ascending or descending the river, and also the station for the splendid vessels in which the prefects visited the upper country: whence it is singular that it is not mentioned by any later writer than Strabo. Mannert (x. pt. i. p. 601) seeks it on the lake of *Aboukir*; whilst Reichardt, from the similarity of the name, takes it to have been the modern *Dejedie*. [T. H. D.]

SCHE'RIA. [CORCYRA.]

SCHINUSSA, a small island in the Aegean sea, one of the Sporades, S. of Naxos. (Plin. iv. 12. s. 68.)

SCHISTE (σχιστή δδός), the name of the road leading from Delphi into Central Greece, was more particularly applied to the spot where the road divided into two, and which was called *τρεῖς κέλευθοι*, reckoning the road to Delphi as one of the three. Of the other two roads, the NE. led to Daulis; the SE. parted into two, one leading to Trachis and Lobadeia, the other to Ambrysus and Stiris. At the spot where the three roads met was the tomb of Lainus and his servant, who were here slain by Oedipus. It must have stood at the entrance of the *Zimenó Deroní*, or opening between the mountains Cirphis and Parnassus, which leads to Delphi. The road from this point becomes very steep and rugged towards Delphi, as Pausanias has described it. (Aes. hyl. *Oed. Tyr.* 733; Eurip. *Phoen.* 38; Paus. ix. 2. § 4, x. 5. § 3; Leake, *Northern Greece*, vol. ii. p. 105.)

SCHOENUS (Σχοινός), the name of several towns, from the reeds or rushes growing in their neighbourhood. 1. (usually Σχοινός), a town in Boeotia, mentioned by Homer (*Il.* ii. 497), and placed by Strabo upon a river of the same name in the territory of Thebes, upon the road to Anthedon, and at the distance of 50 stadia from Thebes. (Strab. ix. p. 408; Eustath. *ad loc.*; Steph. B. s. v.; Nicander, *Theriac.* 887; Plin. iv. 7. s. 12.) This river is probably the stream flowing into the lake of Hylica from the valley of *Moriki*, and which near its mouth is covered with rushes. Nicander is clearly wrong, who makes (l. c.) the Schoenus flow into the lake Copaia. (Ulrichs, *Reisen*, p. 258; Leake, *Northern Greece*, vol. ii. p. 320.) Schoenus was the birthplace of the celebrated Atalanta, the daughter of Schoenus (Paus. viii. 35. § 10); and hence Statius gives to Schoenus the epithet of "Atalantaeus." (Stat. *Theb.* vii. 267.)

2. A town in the centre of Arcadia near Methydrium, which was said to have derived its name from the Boeotian Schoenus. (Paus. viii. 35. § 10; Steph. B. s. v.; Leake, *Peloponnesiaca*, p. 240.)

3. A harbour in the Corinthia. [CORINTHUS, p. 683, a.]

4. A river near Maroneia in Thrace, mentioned only by Mela (ii. 2. § 8).

SCHOENUS, a bay on the west coast of Caria, on the south-east of the Cnidian Chersonesus, and opposite the island of Syme. (Pomp. Mela, i. 16;

Plin. v. 29.) It should be observed, however, that this description of the bay of Schoenus is only conjectural, and based upon the order in which Pliny mentions the places in that locality. [L. S.]

SCIA (Σκία: *Eth. Σκιάς*), a small town in Euboea (Steph. B. s. v. *Σκιάς*), probably in the territory of Eretria, since Pausanias (iv. 2. § 3) mentions Scium as a district belonging to Eretria.

SCIAS. [MEGALOPOLIS, p. 309, b.]

SCIATHIS. [PHEGUS, p. 595, a.]

SCI'ATHUS (Σκιάθος: *Eth. Σκιάθιος: Sciathos*), a small island in the Aegean sea, N. of Euboea, and a little E. of the Magnesian coast of Thessaly, is described by Pliny as 15 miles in circumference (iv. 12. s. 23). It is said to have been originally colonised by Pelasgians from Thrace, who were succeeded by Chalcidians from Euboea. (Scymn. Ch. 584.) It possessed two towns, one of which was also called Sciathus, but the name of the other is unknown. (Scylax, p. 23, Hudson; Strab. ix. p. 436; Ptol. iii. 13. § 47.) It is frequently mentioned in the history of the invasion of Greece by Xerxes, since the Persian and Grecian fleets were stationed near its coasts. (Herod. vii. 176, 179, 182, 183, viii. 7.) It afterwards became one of the subject allies of Athens, but was so insignificant that it had to pay only the small tribute of 200 drachmae yearly. (Franz, *Elem. Epigr.* 52.) The town of Sciathus was destroyed by the last Philip of Macedonia, B. C. 200, to prevent its falling into the hands of Attalus and the Romans. (Liv. xxxi. 28, 45.) In the Mithridatic War it was one of the haunts of pirates. (Appian, *Mithr.* 29.) It was subsequently given by Antony to the Athenians. (Appian, *B. C. v.* 7.) Sciathus was celebrated for its wine (Athen. i. p. 30, f.), and for a species of fish found off its coasts and called *σχορπύς*. (Athen. i. p. 4, c.; Pollux, vi. 63.) The modern town lies in the SE. part of the island, and possesses an excellent harbour. The inhabitants have only been settled here since 1829, previous to which time their town stood in the NE. part of the island upon a rock projecting into the sea, and accessible only upon one side, as more secure against the pirates. Ross says that the new town stands upon the site of the ancient city, but the latter was not the homonymous capital of the island, which occupied the site of the old town in the NE. part of the island, as appears from an inscription found there by Leake. The ancient city in the SE. of the island, upon which the modern town now stands, is probably the second city mentioned by Scylax, but without a name. (Ross, *Wanderungen in Griechenland*, vol. ii. p. 50; Leake, *Northern Greece*, vol. iii. p. 111.)

SCIDRUS (Σκιδρος: *Eth. Σκιδραρός*, Steph. B.: *Sapri*), a Greek city on the coast of Lucania, on the Tyrrhenian sea, between Pyxus (Buxentum) and Latis. It is mentioned only by Herodotus (vi. 21), from whom we learn that it was, as well as Latis, a colony of Sybaris, and was one of the places to which the surviving inhabitants of that city retired, after its destruction by the Crotoniats. It does not appear from his expressions whether these towns were then first founded by the fugitives, or had been previously settled as regular colonies; but the latter supposition is much the more probable. It is singular that no subsequent trace is found of Scidrus; its name is never again mentioned in history, nor alluded to by the geographers, with the exception of Stephanus of Byzantium

(s. v.), who calls it merely a "city of Italy." We have therefore no clue to its position; for even its situation on the Tyrrhenian sea is a mere inference from the manner in which it is mentioned by Herodotus in conjunction with Laüs. But there exist at *Sapri*, on the *Gulf of Policastro*, extensive remains of an ancient city, which are generally considered, and apparently not without reason, as indicating the site of Scidrus. They are said to consist of the remains of a theatre and other public buildings of the ancient walls, and constructions around the port. (Antonini, *Lucania*, part ii. c. 11; Romanelli, vol. i. p. 377.) This last is a remarkable landlocked basin, though of small extent; and it is singular that, even if the town had ceased to exist, no allusion should be found to the existence of this secure port, on a coast almost wholly destitute of natural harbours. But the high mountains which shut it in and debar it from all communication with the interior probably prevented it from ever attaining to any importance. *Sapri* is at the present day a mere fishing village, about 6 miles E. of *Policastro*. [E. H. B.]

SCILLUS (Σκίλλους; *Eth.* Σκιλλούντιος), a town of Triphylia, a district of Elis, situated 20 stadia south of Olympia. In B.C. 572 the Scilluntians assisted Pyrrhus, king of Pisa, in making war upon the Eleians; but they were completely conquered by the latter, and both Pisa and Scillus were razed to the ground. (Paus. v. 6. § 4, vi. 22. § 4.) Scillus remained desolate till about B.C. 392, when the Lacedaemonians, who had a few years previously compelled the Eleians to renounce their supremacy over their dependent cities, colonised Scillus and gave it to Xenophon, then an exile from Athens. Xenophon resided here more than twenty years, but was expelled from it by the Eleians soon after the battle of Leuctra, B.C. 371. He has left us a description of the place, which he says was situated 20 stadia from the Sacred Grove of Zeus, on the road to Olympia from Sparta. It stood upon the river Selinus, which was also the name of the river flowing by the temple of Artemis at Ephesus, and like the latter it abounded in fish and shell-fish. Here Xenophon, from a tenth of the spoils acquired in the Asiatic campaign, dedicated a temple to Artemis, in imitation of the celebrated temple at Ephesus, and instituted a festival to the goddess. Scillus stood amidst woods and meadows, and afforded abundant pasture for cattle; while the neighbouring mountains supplied wild hogs, roebucks, and stags. (Xen. *Anab.* v. 3. §§ 7—13.) When Pausanias visited Scillus five centuries afterwards the temple of Artemis still remained, and a statue of Xenophon, made of Pentelic marble. (Paus. v. 6. § 5, seq.; comp. Strab. viii. pp. 344, 387; Plut. *de Exil.* p. 603.) There are no remains to identify Scillus, but there can be no doubt that it stood in the woody vale, in which is a small village called *Rasa*, and through which flows a river falling into the Alpheius nearly opposite the Cladens. (Leake, *Morea*, vol. ii. p. 213, seq., *Peloponnesiaca*, p. 9; Boblaye, *Recherches*, &c. p. 133; Curtius, *Peloponnesos*, vol. ii. p. 91.)

SCINCOMAGUS (Σκρινόμαγος). This place is first mentioned by Strabo (iv. p. 179), who says, when he is speaking of one of the passes of the Alps, that from Ebrodunum (*Embrun*) on the Gallic side through Brigantium (*Briançon*) and Scincomagus and the pass of the Alps to Ocelum, the limit of the land of Cottius is 99 miles; and at Scincomagus Italy begins: and the distance from

Scincomagus to Ocelum is 27 miles. (See Groekurd's note on the passage, *Transl. Strab.* i. p. 309.) Pliny also (ii. 108) makes Italy extend to the Alps at Scincomagus, and then he gives the breadth of Gallia from Scincomagus to the Pyrenees and Iliberia. (See the notes and emendations in Harduin's edition.) It appears then that Scincomagus was at the foot of the Alps on the Italian side; and if the position of Ocelum were certain, we might probably determine that of Scincomagus, which must be on the line of the passage over the Alps by the *Mont Genève*. It was a great mistake of Bouche and Harduin to suppose that Scincomagus was the same as Segusio or *Susa*. D'Anville guesses that Scincomagus may be a place which he calls "*Chamlat de Signin*," at the entrance of the *Col de Cestrères*, which leads from the valley of *Sézane* (Ceano) into that of *Pro-gelas*. As usual, he relies on the resemblance of the ancient and modern names, which is often useful evidence; for "magus" in Scincomagus is merely a common Gallic name for town. D'Anville also supposes that this position of Scincomagus is confirmed by the site of Ocelum, as he has fixed it. [OCELUM.] But all this is vague. [G. L.]

SCIONE (Σκίωνη, Herod. vii. 123, viii. 128; Thuc. iv. 120—123, 133, v. 32; Strab. vii. p. 330; Pomp. Mela, ii. 2. § 11; Plin. iv. 17: *Eth.* Σκιωναίος, Herod.; Σκιωνεύς, Steph. B. s. v.), the chief town on the isthmus of Pallene in Macedonia. Although it called itself Achaean, like many other colonial towns, in default of any acknowledged mother-city, it traced its origin to warriors returning from Troy. Under concert with Brasidas the Scionaeans proclaimed their revolt from Athens, two days after the truce was sworn, March, B.C. 421. Brasidas, by a speech which appealed to Grecian feeling, wound up the citizens to the highest pitch of enthusiasm. The Athenians, furious at the refusal of the Lacedaemonians to give up this prize, which they had gained after the truce, passed a resolution, under the instigation of Cleon to kill all the grown-up male inhabitants of the place, and strictly besieged the town, which Brasidas was unable to relieve, though he had previously conveyed away the women and children to a place of safety. After a long blockade Scione surrendered to the Athenians, who put all the men of military age to death, and sold the women and children to slavery. The site of this ill-fated city must be sought for between the capes *Paliúri* and *Postidhi*. (Leake, *Northern Greece*, vol. iii. p. 157.) [E. B. J.]

SCIRADIUM. [SALAMIA.]

SCIRI or SCIRRI, a population variously placed by various authors. The first who mentions them is Pliny (iv. 13. s. 27), who fixes them in Euingia, i. e. in the parts to the NE. of the extreme frontier of what he and his contemporaries call Germania, i. e. *East Prussia, Courland, Livonia, Esthonia*, and part of *Finland*, "quidam haec habitari ad Vistulam usque fluvium a Sarmatis, Venedis, Sciris, *Hirris*, tradunt." No other author either mentions the Hirri or places the Sciri thus far northward.

The most interesting notice of them is in the so-called Olbian inscription (Böckh, *Inscr.* no. 2058), wherein they are mentioned as dangerous neighbours to the town of Olbia along with the Galatae, the Thissamatae, the Scythae, and the Sandaratae (Zeuss, *Die Deutschen*, &c., s. v. *Galatae*); and, doubtless, the neighbouring town of Olbia was their true locality.

The evidence of Jornandes makes them Alans ("Sciri et Satagariet ceteri Alanorum," *Reb. Get.* 49), evidence which is important, since Peria, the notary of the Alan king Candax, was the writer's grandfather. They are made by Sidonius (*Carmin.* vii. 322) part of Attila's army, by Jornandes subjects of Odoacer, by Procopius members of the Goth and Alan alliance. They were, almost certainly, a Scythian tribe of *Kherson*, who during the period of the Greek settlements harassed Olbia, and, during the Byzantine period, joined with the other barbarians of the Lower Danube against Rome. Of these, the chief confederates were the Heruli and Turcilingi; with whom they found their way as far west as *Bavaria*. The present country of *Styria* (*Styrmarch*)—the *March* of the Stiri or Sciri, the change from *Sc* to *St* being justified by the Bavarian Count *Von Schiern* in one part of a document of the 10th century being made a *Comes de Stira* in another. Add to this the existence of a *Nemus Scirorum* in *Bavaria*. (See *Zeuss*, s. v. *Sciri*.)

The Sciri of the later writers were probably a portion of the Scythians of the parts between the Danube and *Ison*, under a newer and more specific name. The transplantation into *Styria* along with an inroad of Uldis, king of the Huns, seems to have broken up the name and nation. Sozomenes saw the remnants of them labouring as slaves in the mines of Mount Olympus in Bithynia (ix. 5). [R. G. L.]

SCIRITIS (ἡ Σκιρίτις: *Eth.* Σκιρίτης, fem. Σκιρίτις), a rugged and barren mountainous district, in the north of Laconia, between the upper Eurotas on the west and the Oenus on the east, and extending north of the highest ridge of the mountains, which were the natural boundary between Laconia and Arcadia. The name probably expressed the wild and rugged nature of the country, for the word signified hard and rugged (σκίρος, σκείρος, σκληρός, Hesych.). It was bounded by the Maenaliens on the north, and by the Parrhasians on the west, and was originally part of Arcadia, but was conquered at an early period, and its inhabitants reduced to the condition of Lacedaemonian Perioeci. (Steph. B. s. v. Σκιρος; Thuc. v. 33.) According to Xenophon they were subjected to Sparta even before the time of Lycurgus. (*De Rep. Lac.* c. 12.) They were distinguished above all the other Perioeci for their bravery; and their contingent, called the Σκιρίτης λόχος, 600 in number, usually occupied the extreme left of the Lacedaemonian wing. (Thuc. v. 67, 68.) They were frequently placed in the post of danger, and sometimes remained with the king as a body of reserve. (Xen. *Cyr.* iv. 2. § 1, *Hell.* v. 2. § 24, v. 4. § 52; Diod. xv. 32.) On the first invasion of Laconia by the Thebans the Sciritae, together with the Perioeci of Caryae and Sellasia, revolted from Sparta, in consequence of which their country was subsequently ravaged by the Lacedaemonians. (Xen. *Hell.* vii. 24. § 1.) The only towns in the Sciritis appear to have been SCIRUS and ΟΚΥΜ, called Ium by Xenophon. The latter is the only place in the district mentioned in historical times [ΟΚΥΜ]. Scirus may perhaps have been the same as Scirtonium (Σκιρτόνιον), in the district of Aegyptis. (Paus. viii. 27. § 4; Steph. B. s. v.)

The road from Sparta to Tegea, which is the same as the present road from Sparta to Tripolited, led through the Sciritis. (Leake, *Morea*, vol. iii. p. 28; Boblaye, *Recherches*, &c. p. 75; Ross, *Reisen im Peloponnes*, p. 178; Curtius, *Peloponnesos*, vol. ii. p. 263.)

SCIRO'NIA SAXA. [MEGARA, p. 316, b.]

SCIRRI. [SCIRI.]

SCIRTIA'NA, a station on the Egnatian road, between Brucida (*Presba*) and Castra or Parembolae. The name is no doubt connected with that of the SCIRTONES (Σκιρτόνες), whom Ptolemy (iii. 17. § 8) couples with the Dassaretian Pirustae as Illyrian tribes near Macedonia. [E. B. J.]

SCIRTONES. [SCIRTIANA.]

SCIRTO'NIUM. [SCIRITIS.]

SCIRTUS (Σκιρτος, Procop. *de Aed.* ii. 7), a river of Mesopotamia, a western tributary of the Chaboras (*Chabor*). It flowed from 25 sources, and ran past Edessa. (*Chron. Edess.* in Asseman, *Bibl. Or.* i. p. 388.) Its name, which signifies the skipping or jumping (from σκίρδω), is said to have been derived from its rapid course and its frequent overflows; and its present name of *Doisan* means the same thing. [T. H. D.]

SCIRUM. [ATTICA, p. 326, a.]

SCISSUM. [CISSA.]

SCITTIIUM. [SOTIATEA.]

SCODRA (ἡ Σκόδρα, Ptol. ii. 16. (17.) § 12; Σκόδραι, Hierocl. p. 656; *Eth.* Scodrenses, Liv. xiv. 26), one of the more important towns of Roman Illyricum (*Montenegro*), the capital of the Labates, seated at the southern extremity of the lake Labeat, between two rivers, the Clausula on the E., and the Barbanna on the W. (Liv. xiv. 31), and at a distance of 17 miles from the sea-coast (Plin. iii. 22. s. 26). It was a very strong place, and Gentius, king of the Illyrians, attempted to defend it against the Romans, B. C. 168, but was defeated in a battle under the walls. Pliny erroneously places it on the Drilo (L. c.). At a later period it became the chief city of the province Praevalitana. It is the present *Scutari*, which is also the name of the lake Labeatia. (Wilkinson, *Dalmatia and Montenegro*, vol. i. p. 476.) [T. H. D.]

SCOLLIS (Σκόλλαις), a mountain between Elis and Achaia, now called *Sandameriōtiko*, 3333 feet high, from which the river Larissus rises, that forms the boundary between Achaia and Elis. Strabo describes it as adjacent to Mount Lampeia, which was connected with the range of Erymanthus. (Strab. viii. p. 341.) Strabo also identifies it with the "Olenian Rock" of Homer. (*Il.* ii. 617; Strab. viii. p. 387; Leake, *Morea*, vol. ii. pp. 184, 230; *Peloponnesiaca*, p. 203.)

SCOLOTL. [SCYTHIA.]

SCOLUS (Σκόλος, Thuc. v. 18; Strab. ix. p. 408), a town of Chalcidice near Olynthus, mentioned together with Spartolus, in the treaty between Athens and Sparta in the tenth year of the Peloponnesian War. [E. B. J.]

SCOLUS (Σκόλος: *Eth.* Σκόλιος, Σκολιεύς), a town of Boeotia, mentioned by Homer (*Il.* ii. 497), and described by Strabo as a village of the Parasopia below Cithaeron (ix. p. 408). Pausanias, in his description of the route from Plataea to Thebes, says, that if the traveller were, instead of crossing the Asopus, to follow that river for about 40 stadia, he would arrive at the ruins of Scolus, where there was an unfinished temple of Demeter and Core (ix. 4. § 4). Mardonius in his march from Tanagra to Plataea passed through Scolus. (Herod. ix. 15.) When the Lacedaemonians were preparing to invade Boeotia, B. C. 377, the Thebans threw up an intrenchment in front of Scolus, which probably extended from Mt. Cithaeron to the Asopus. (Xen. *Hell.* v. 4. § 49, *Ageil.* 2.) Strabo says that

Scolus was so disagreeable and rugged (*τραχύς*) that it gave rise to the proverb, "never let us go to Scolus, nor follow any one there" (ix. p. 408). Leake places Scolus just below the projection of Cithaeron, on a little rocky table-height, overlooking the river, where stands a *metókhi* dependent on a convent in the Eleutheris, called St. Meletius. (*Northern Greece*, vol. ii. p. 330.)

SCOMBRA'RIA (*Σκομπρία*, Strab. iii. p. 159), an island on the S. coast of Spain, in front of the bay which formed the harbour of Carthago Nova, and 24 stadia, or 3 miles, distant from the coast. It derived its name from the scombei, tunny-fish, or mackarel, which were found here in great quantities, and from which the Romans prepared their garum. (Plin. xxxi. 8. s. 43.) It was also called *Herculis Insula*. Now *Islote*. [T. H. D.]

SCOMBRASIA. [SATURNI PROM.]

SCOMBRUS, SCOMIUS (*Σκομβρος*, al. *Σκομπος*, Thuc. ii. 96; Aristot. *Meteor.* i. 13; Scopius, Plin. iv. 17: *Eth. Σκομβροι*, Hesych.), an outlying mountain of the chain of Haemus, or that cluster of great summits between *Ghiustendil* and *Sofia*, which sends tributaries to all the great rivers of the N. of European Turkey. As the most central point, and nearly equidistant from the Euxine, the Aegean, the Adriatic, and the Danube, it is probably the Haemus of the traveller's tale in Livy (xl. 21), to which Philip, son of Demetrius, king of Macedonia, made a fruitless excursion with the expectation of beholding from thence at once the Adriatic and the Euxine (*Black Sea*), the Danube and the Alps. (Leake, *Northern Greece*, vol. iii. p. 474.) [E. B. J.]

SCOMIUS. [SCOMBRUS.]

SCOPAS (*Σκώπας*), an eastern tributary of the Sangarius in Galatia, which according to Procopius (*de Aed.* v. 4) joined the Sangarius, 10 miles east of the town of Juliopolis. Pliny (v. 43) calls it Scopias, and according to Procopius this river frequently overflowed the country, which is perhaps alluded to in the Jerusalem Itinerary (p. 574), where a station called Hycronopotamum (l. e. *ὕψων ποταμός*) is mentioned about 13 miles to the east of Juliopolis. The modern name of the river is *Aladan*. (Comp. Leake, *Asia Minor*, p. 79; Eckhel, *Doctr. Num.* iii. p. 101.) [L. S.]

SCOPELUS. [HALONNESUS.]

SCOPI. [SCUPI.]

SCOP'IA (*Σκωρία ἄκρα*), a headland on the west coast of Caria, to the west of Myndus, and opposite the island of Cos. (Ptol. v. 2. § 10.) Strabo (xiv. p. 658) mentions two headlands in the same vicinity, *Astypalsea* and *Zephyrium*, one of which may possibly be the same as Scop'ia. [L. S.]

SCORDISCI (*Σκορδίσκοι*), a powerful Celtic tribe, in the southern part of Lower Pannonia, between the rivers Savus, Dravus, and Danubius. They and the Boii were overpowered by the Dacians. (Strab. vii. pp. 293, 313.) Some call them an Illyrian tribe, because, living on the borders of Illyricum, they were much mixed up with them. They were in the end greatly reduced by their struggles with the Dacians and the Triballi, so that when they came in contact with the Romans they were easily subdued. (Appian, *Illyr.* 3; Liv. xli. 23; Justin, xxiii. 3; Plin. iii. 28; Ptol. ii. 16. § 3.) In Pannonia they seem to have gradually become assimilated to the Pannonians, whence in later times they disappear from history as a distinct nation or tribe. [L. S.]

SCORDISCUS. [SCYDISES.]

SCORDUS MONS. [SCARDUS.]

SCOTANE. [CLEITON, p. 633, a.]

SCOTI. The Scoti were the ancient inhabitants of Hibernia, as appears from notices in some of the Latin writers. (Claudian, *de IV. Cons. Honor.* 33, *de Laud. Stil.* ii. 251; Oros. i. 2.) For several centuries Ireland was considered as the land of the Scoti, and the name of Scoti was equivalent to that of Hibernia. (Isid. *Orig.* xiv. 6; Beda, i. 1, ii. 4; Geogr. Rav. i. 3, v. 32; Alfred the Great, *ap. Oros.* p. 30, &c.) We have no accounts respecting the subdivisions of the Scoti; but perhaps they are to be sought in the names of the Irish counties, as *Munster*, *Leinster*, *Ulster*, *Connaught*. Ammianus mentions the Scoti, in conjunction with the Attacotti, as committing formidable devastations (xxvii. 8. § 4). According to St. Jerome (*adv. Jovin.* v. 2. 201, ed. Mart.) they had their wives in common; a custom which Dion Cassius represents as also prevailing among the kindred race in Caledonia (lxxvi. 12). At a later period the names of Scotia and Scoti vanish entirely from Ireland, and become the appellations of the neighbouring Caledonia and its inhabitants. This was effected through a migration of the Scoti into Caledonia, who settled to the N. of the *Clyde*; but at what time this happened, cannot be ascertained. Beda (i. 1) states that it took place under a leader called Reuda. The new settlement waged war with the surrounding Picts, and even against the Anglo-Saxons, but at first with little success. (Id. i. 24, iv. 36.) Ultimately, however, in the year 839, under king Kenneth, they succeeded in subduing the Picts (Fordun, *Scot. Hist.* ap. Gale, i. 659, seq.); and the whole country N. of *Solway Frith* subsequently obtained the name of *Scotland*. (Comp. Zeuss, *Die Deutschen u. die Nachbarstämme*, p. 568; Gibbon, vol. iii. p. 268, and notes, ed. Smith.) [T. H. D.]

SCOTITAS. [LACONIA, p. 113, b.]

SCOTUSSA (*Pent. Tab.*; *Scotussa*, Plin. iv. 17. s. 18; *Eth. Scotussasi*, Plin. iv. 17. s. 18), a station on the road from *Heracleia Sintica* to Philippi, which passed round the N. of the lake *Cerinites*, answering to the place where the Strymon was crossed just above the lake. (Leake, *Northern Greece*, vol. iii. p. 227.) [E. B. J.]

SCOTUSSA (*Σκοτούσσα* or *Σκοτούσα*; *Eth. Σκοτούσσαίος*), an ancient town of Pelasgiotis in Thessaly, lying between Pherae and Pharsalus, near the frontiers of Phthiotis. *Scotussa* is not mentioned in Homer, but according to some accounts the oracle of Dodona in Epeirus originally came from this place. (Strab. vii. p. 329.) In B. C. 394 the *Scotussaei* joined the other Thessalians in opposing the march of Agesilaus through their country. (Xen. *Hell.* iv. 3. § 3.) In B. C. 367 *Scotussa* was treacherously seized by Alexander, tyrant of the neighbouring town of Pherae. (Diod. xv. 75.) In the territory of *Scotussa* were the hills called *Cynoscephalae*, which are memorable as the scene of two battles, one fought in B. C. 364, between the Thebans and Alexander of Pherae, in which Pelopidas was slain, and the other, of still greater celebrity, fought in B. C. 197, in which the last Philip of Macedonia was defeated by the Roman consul Flamininus. (Plut. *Palop.* 32; Strab. ix. p. 441; Polyb. xviii. 3, seq.; Liv. xxxiii. 6, seq.) In B. C. 191 *Scotussa* surrendered to Antiochus, but was recovered shortly afterwards, along with Pharsalus and Pherae, by the consul Acilius. (Liv. xxvii. 9, 14.) The ruins of *Scotussa* are found at

Suppl. The city was about two or three miles in circumference; but of the walls only a few courses of masonry have been preserved. The acropolis stood at the south-western end of the site, below which, on the east and north, the ground is covered with foundations of buildings, heaps of stones, and fragments of tiles and pottery. (Leake, *Northern Greece*, vol. iv. p. 454, seq.)

SCULTENNA (*Σκούτυνα*, Strab.: *Pasaro*), a river of Gallia Cispadana, and one of the principal of the southern tributaries of the Padus. (Plin. iii. 16. s. 20; P. Diac. *Hist. Lang.* iv. 47.) It crosses the Aemilian Way about 5 miles E. of Mutina (*Modena*), and falls into the *Po* a little below *Bondeno*, being the last of the tributaries of that river which now flow into its main stream. In the lower part of its course it now bears the name of *Pasaro*, but in the upper part, before it leaves the valleys of the Apennines, it is still known as the *Scultenna*. It has its sources in one of the loftiest and most rugged groups of the Apennines, at the foot of the *Monte Cimone*, and from thence flows for many miles through a deep and winding valley, which appears to have been the abode of the Ligurian tribe of the Friniates. The district still bears on old maps the title of *Frigimano*. (Maggi, *Carte d'Italia*, tav. 16.) In B.C. 177 the banks of the Scultenna were the scene of a decisive conflict between the Ligurians and the Roman consul C. Claudius, in which the former were defeated with great slaughter (Liv. xli. 12, 18); but the site of the battle is not more exactly indicated. Strabo speaks of the plains on the banks of the Scultenna, probably in the lower part of its course, as producing wool of the finest quality. (Strab. v. p. 218.) [E. H. B.]

SCUPI (*Σκούποι*, Ptol. iii. 9. § 6, viii. 11. § 5; Hierocl.; Niceph. Bryenn. iv. 18; Geog. Rav. iv. 15; *τὰ Σκούρα*, Anna Comn. ix. p. 253; *Σκούποι*, Procop. de *Aed.* iv. 4; Orelli, *Inscr.* 1790: *Uscubis*), a town which, from its important position at the débouché from the Illyrian into the plains of Paenonia and the Upper Axios, was in all ages the frontier town of Illyricum towards Macedonia. There is no evidence of its ever having been possessed by the kings of Macedonia or Paenonia. Under the Romans it was ascribed to Dardania, as well in the time of Ptolemy as in the fifth century, when it was the capital of the new diocese of Dardania (Marquardt, in Becker's *Röm. Alt.* iii. pt. i. p. 110). The Roman road from Stobi to Naissus passed by Scupi, which was thus brought into connection with the great S.E. route from Viminacium on the Danube to Byzantium. It was probably seldom under the complete authority of Constantinople, though after the memorable victory in which, under its walls, Basil, the "Slayer of the Bulgarians", in the beginning of the eleventh century, avenged the defeat he had suffered from Samuel, king of Bulgaria, twenty-one years before, in the passes of Mt. Haemus, this city surrendered to the Byzantine army (Cedren. p. 694). In the reign of Michael Palaeologus it was wrested from the emperor by the Serbians, and became the residence of the Kral (Cantacuzenus, p. 778). Finally, under Sultan Bayezid, Scupi, or the "Bride of Râmlik," received a colony of Ottoman Turks (*Chakmadriles*, p. 31). (Leake, *Northern Greece*, vol. iii. p. 478.) [E. H. B.]

SCYTHIUM (*Σκυθίον*), a town in the north of Germany, in the territory of the Helvecones, between the Vindus and the Vistula, the exact site of

which is unknown. (Ptol. ii. 11. § 2; *antiquum. Germania*, p. 253.)

SCYDISES (*Σκυδίσες*), a district of mountains in the east of Pontus, which was connected in the north with the *Montes Boas* of the east, and with *Mons Paryadres* in the south-west, while in the south-west it was connected with *Montes taurus*. (Strab. xi. p. 497, xii. p. 546; Ptol. v. § 8, where it is called *Σκυδίσκος*.) Modern travellers identify it with the *Taurus* of (Wien) *Jahrbücher*, vol. cv. p. 21.)

SCYDRA (*Σκύδρα*; *Εὐθ. Σκύδρα*), a town in Emathia in Macedonia, which Ptolemy places between Tyriaea and Mieza. (Steph. B. s. v.; Ptol. ii. 13. § 39; Plin. iv. 10. s. 17.) It is perhaps the same as the station *Scurio* in the *Jerusalem Itinerary* (p. 606), where it is placed between *Edna* and *Pella*, at the distance of 15 miles from *Edna*. (Cramer, *Ancient Greece*, vol. i. p. 238.)

SCYLACE (*Σκυλάκις*), an ancient Pagan town of Mysia, on the coast of the Propontis and of Cyzicus. (Steph. B. s. v.) In this place and the neighbouring Placia, the Pelasgians, according to Herodotus (i. 57), had preserved their ancient language down to his time. Scylax (p. 35) mentions only Placia, but Mela (i. 19) and Ptolemy (v. 13) speak of both as still existing. These towns never to have been of any importance, and had decayed at an early period.

SCYLACIUM or SCYLLETIUM (*Σκυλάκιον*, Steph. B.; *Σκυλάκιον*, Ptol.; *Σκυλάκιον*; *Squillace*), a town on the coast of Brutium, situated on the shores of an inlet bay, to which it gave the name of *Scylla*. (Strab. vi. p. 261.) It is thus known as the *Gulf of Squillace*, which is the coast of Brutium on the E. as deeply as the Gulf of Hipponium or Terina (the *Gulf of St. Peter*) on the W., so that they leave but a narrow isthmus between them. (Strab. l. c. iii. 10. s. 15.) [BRUTTIUM.] According to tradition generally received in ancient times, Brutium was founded by an Athenian colony, a party of followers who had accompanied Menestheus to Trojan War. (Strab. l. c.; Plin. l. c.; Serv. ad iii. 553.) Another tradition was, however, which ascribed its foundation to Ulysses. (Var. xii. 15; Serv. l. c.) But no history can be attached to such statements, and their trace in historical times of Scyllacium being the Greek colony, still less an Athenian one, is not mentioned either by Scylax or Strabo. In enumerating the Greek cities in the part of Italy, there is no allusion to its Athenian origin in Diodorus at the time of the Athenian expedition to Sicily. We learn from Diodorus (xii. 3) that he certainly did not display any friendly feeling towards the Athenians. It appears, indeed, during that period of the Greek colonies to have been in place of inferior consideration, and a mere dependency of Crotona, to which city it continued owing till it was wrested from its power by the elder Dionysius, who assigned it with its territory to the Locrians. (Strab. vi. p. 261.) It is evident that it was a small and unimportant place at the time of the Second Punic War, as no mention is found of its name during the operations of Hannibal in Bruttium, though he appears to have for some time had his head quarters in its immediate neighbourhood, and the place called *Castra Hannibalis* must have been very near to Scyllacium. (Cramer, *Italy*.)

MINERALIS.] In B. c. 124 the Romans, at the instigation of C. Gracchus, sent a colony to Scylacium, which appears to have assumed the name of Minervium or Colonia Minervia. (Vell. Pat. i. 15; Mommsen, in *Berichte der Sächsischen Gesellschaft der Wissenschaften*, 1849, pp. 49—51.) The name is written by Velleius "Scolatium;" and the form "Scolacium" is found also in an inscription of the reign of Antoninus Pius, from which it appears that the place must have received a fresh colony under Nerva. (Orell *Inscr.* 136; Mommsen, *l.c.*) Scylacium appears to have become a considerable town after it received the Roman colony, and continued such throughout the Roman Empire. (Mel. ii. 4. § 8; Plin. iii. 10. s. 15; Ptol. iii. 1. § 11.) Towards the close of this period it was distinguished as the birthplace of Cassiodorus, who has left us a detailed but rhetorical description of the beauty of its situation, and fertility of its territory. (Cassiod. *Var.* xii. 15.)

The modern city of *Squillace* is a poor place, with only about 4000 inhabitants, though retaining its episcopal see. It stands upon a hill about 3 miles from the sea, a position according with the description given by Cassiodorus of the ancient city, but it is probable that this occupied a site nearer the sea, where considerable ruins are said still to exist, though they have not been described by any modern traveller.

THE SCYLLETTICUS SINUS (Σκυλλητικὸς κόλπος), or *Gulf of Squillace*, was always regarded as dangerous to mariners; hence Virgil calls it "navisfragus Scyllæum." (*Æne.* iii. 553.) There is no natural port throughout its whole extent, and it still bears an evil reputation for shipwrecks. The name is found in Aristotle as well as Antiochus of Syracuse, but would seem to have been unknown to Thucydides; at least it is difficult to explain otherwise the peculiar manner in which he speaks of the *Terinaean* gulf, while relating the voyage of Gylippus along the E. coast of Bruttium. (Thuc. vi. 104; Arist. *Pol.* vii. 10; Antioch. *ap. Strab.* vi. p. 254.) [E. H. B.]

SCYLAX (Σκύλαξ), the chief tributary of the Iris in Pontus; it had its sources in the east of Galatia, and flowing in a north-western direction, emptied itself into the Iris near Eupatoria or Magnopolis. (Strab. xii. p. 547.) Its modern name is *Tchoterlek Irmak*. (Hamilton, *Researches*, vol. i. pp. 365, 374.) [L. S.]

SCYLLAE (Tab. Pent.; Geogr. Rav. iv. 6, v. 12), a town of Thrace, on the Euxine, where the long wall, erected by the emperor Anastasius Dicorus for the defence of Constantinople, terminated. This wall commenced at Selymbria, on the Propontis, and was carried across the narrow part of Thrace, at the distance of about 40 miles from Constantinople, its length being 2 days' journey (Procop. *de Aed.* iv. 9; Gibbon, *Decline and Fall*, c. 40.) [J. R.]

SCYLLAEUM (τὸ Σκύλλαϊον; *Scilla*), a promontory, and town or fortress, on the W. coast of Bruttium, about 15 miles N. of Rhegium, and almost exactly at the entrance of the Sicilian strait. The promontory is well described by Strabo (vi. p. 257) as a projecting rocky headland, jutting out boldly into the sea, and united to the mainland by a narrow neck or isthmus, so as to form two small but well sheltered bays, one on each side. There can be no doubt that this rocky promontory was the one which became the subject of so many fables, and which was represented by Homer and other poets as

the abode of the monster Scylla. (Hom. *Od.* xii. 73, &c., 235, &c.; *Biogr. Dict.* art. SCYLLA.) But the dangers of the rock of Scylla were far more fabulous than those of its neighbour Charybdis, and it is difficult to understand how, even in the infancy of navigation, it could have offered any obstacle more formidable than a hundred other headlands whose names are unknown to fame. (Senec. *Ep.* 79; Smyth's *Sicily*, p. 107.) At a later period Anaxilas, the despot of Rhegium, being struck with the natural strength of the position, fortified the rock, and established a naval station there, for the purpose of checking the incursions of the Tyrrhenian pirates. (Strab. vi. p. 257.) In consequence of this a small town grew up on the spot; and hence Pliny speaks of an "oppidum Scyllæum;" but it was probably always a small place, and other writers speak only of the promontory. (Plin. iii. 5. s. 10; Mel. ii. 4. § 8; Ptol. iii. 1. § 9; Steph. Byz. s. v.) At the present day the rock is still occupied by a fort, which is a post of considerable strength, while a small town stretches down the slopes towards the two bays. The distance from the castle to the opposite point of the Sicilian coast, marked by the *Torre del Faro*, is stated by Capt. Smyth at 6047 yards, or rather less than 3½ Eng. miles, but the strait afterwards contracts considerably, so that its width between the *Punta del Pezzo* (Caenys Prom.) and the nearest point of Sicily does not exceed 3971 yards. (Smyth's *Sicily*, p. 108.) [E. H. B.]

SCYLLAEUM (Σκύλλαϊον), a promontory of Troezenia, and the most easterly point of the Peloponnesus, is said to have derived its name from Scylla, the daughter of Nisus, who, after betraying Megara and Nisaea to Minos, was thrown by the latter into the sea, and was washed ashore on this promontory. Scyllæum formed, along with the opposite promontory of Sunium in Attica, the entrance to the Saronic gulf. It is now called *Kavo-Skyli*; but as Pausanias, in the paraplus from Scyllæum to Hermione, names Scyllæum first, and then Bucephala, with three adjacent islands, it is necessary, as Leake has observed, to divide the extremity now known as *Kavo-Skyli* into two parts; the bold round promontory to the N. being the true Scyllæum, and the acute cape a mile to the S. of it Bucephala, since the three islands are adjacent to the latter. (Paus. ii. 34. §§ 7, 8; Scylax, p. 20; Hudson; Strab. viii. p. 373; Thuc. v. 53; Plin. iv. 5. s. 9; Mela, ii. 3; Leake, *Morea*, vol. ii. p. 462; *Peloponnesiaca*, p. 282; Boblaye, *Recherches*, p. 59; Curtius, *Peloponnesos*, vol. ii. p. 452.)

SCYLLETTICUS SINUS. [SCYLACIUM.]

SCYRAS. [LACONIA, p. 114, b.]

SCYROS or SCYRUS (Σκύρος; *Æth.* Σκύριος; *Skyro*), an island in the Aegean sea, and one of the northern Sporades, was so called from its ruggedness. It lay east of Euboea, and contained a town of the same name (Strab. ix. p. 436; Scylax, p. 23; Ptol. iii. 13. § 47), and a river called Cephissus. (Strab. ix. p. 424.) Scyros is frequently mentioned in the stories of the mythical period. Here Thetis concealed her son Achilles in woman's attire among the daughters of Lycomedes, in order to save him from the fate which awaited him under the walls of Troy. (Apollod. iii. 13. § 8; Paus. i. 22. § 6; Strab. ix. p. 436.) It was here also that Pyrrhus, the son of Deidamia by Achilles, was brought up, and was fetched from thence by Ulysses to the Trojan War. (Hom. *Il.* xix. 326, *Od.* xi. 507; Soph. *Phil.* 339, seq.) According to another tradi-

tion Scyros was conquered by Achilles (Hom. *Il.* i. 668; Paus. i. 22. § 6); and this conquest was connected in the Attic legends with the death of Theseus. After Theseus had been driven out of Athens he retired to Scyros, where he was first hospitably received by Lycomedes, but was afterwards treacherously hurled into the sea from one of the rocks in the island. It was to revenge his death that Peleus sent Achilles to conquer the island. (Plut. *Thes.* 35; Paus. i. 22. § 6; Philostr. *Heroic.* 19.) Scyros is said to have been originally inhabited by Pelasgians, Carians, and Dolopians; and we know from Thucydides that the island was still inhabited by Dolopians, when it was conquered by Cimon after the Persian wars. (Nicolaus Damasc. ap. Steph. B. s. v.; Scymn. Ch. 580, seq.; Thuc. i. 98; Diod. xi. 60.) In B. C. 476 an oracle had directed the Athenians to bring home the bones of Theseus; but it was not till B. C. 469 that the island was conquered, and the bones conveyed to Athens, where they were preserved in the Theseium. Cimon expelled the Dolopians from the island, and peopled it with Athenian settlers. (Thuc. Diod. *l. cc.*; Plut. *Thes.* 36, *Cim.* 8; on the date of the conquest of Scyros, which Clinton erroneously places in B. C. 476, see Grote, *History of Greece*, vol. v. p. 409.) From this time Scyros was subject to Athens, and was regarded even at a later period, along with Lemnos and Imbros, as a possession to which the Athenians had special claims. Thus the peace of Antalcidas, which declared the independence of all the Grecian states, nevertheless allowed the Athenians to retain possession of Scyros, Lemnos, and Imbros (Xen. *Hell.* iv. 8. § 15, v. 1. § 31); and though the Macedonians subsequently obtained possession of these islands, the Romans compelled Philip, in the peace concluded in B. C. 196, to restore them to the Athenians. (Liv. xxxiii. 30.) The soil of Scyros was unproductive (Dem. c. *Callip.* p. 1238; Eustath. *ad Hom. Il.* ii. p. 782; Suidas, s. v. ἀρχὴ Σκυρία); but it was celebrated for its breed of goats, and for its quarries of variegated marble. (Strab. ix. p. 437; Athen. i. p. 28, xii. p. 540; Zenob. ii. 18; Plin. xxxvi. 16. s. 26.)

Scyros is divided into two parts by a narrow isthmus, of which the southern half consists of high rugged mountains. The northern half is not so mountainous. The modern town of *St. George*, on the eastern side of the island, stands upon the site of the ancient town. It covers the northern and western sides of a high rocky peak, which to the eastward falls steeply to the sea; and hence Homer correctly describes the ancient city as the lofty Scyros (Σκύρον ἀνείραν, *Il.* i. 664). The Hellenic walls are still traceable in many parts. The city was barely 2 miles in circumference. On the isthmus south of Scyros a deep bay still retains the name of *Achilli* (Ἀχιλλᾶ), which is doubtless the site of the Achilleion, or sanctuary of Achilles, mentioned by Eustathius (*ad Il.* ix. 662). Athens was the divinity chiefly worshipped at Scyros. Her temple stood upon the shore close to the town. (Stat. *Achill.* i. 285, ii. 21.) Tournefort says that he saw some remains of columns and cornices of white marble, close by a forsaken chapel, on the left hand going into the fort of *St. George*; these are probably remains of the temple of Athena. (Tournefort, *Voyage*, vol. i. p. 334, trans.; Leake, *Northern Greece*, vol. iii. p. 106, seq.; Fiedler, *Reise*, vol. ii. p. 66; Ross, *Wanderungen in Griechenland*, vol. ii. p. 32, seq.)

SCYRUS (Σκύρος), a tributary of the Alpheus, in southern Arcadia. [MEGALOPOLIS, p. 309, b.]

SCYTHIA (ἡ Σκυθία, ἡ Σκυθική: *Εὐθ. Σκυθία*, Scythia), the country of the Scythae, a vast area in the eastern half of Northern Europe, and in Western and Central Asia. Its limits varied with the differences of date, place, and opportunities of information on the part of its geographers. Indeed, to a great extent, the history of Scythia is the history of a

Name.—It is obvious that the term came from the Greeks to the Romans; in this respect unlike Sarmatia, Dacia, and others, which, in form at least, are Roman rather than Greek. But whence did the Greeks get it? for it is by no means either significant in their tongue, or a Greek word at all. They took it from one or more of the populations interjacent between themselves and the Scythae; these being Thracians, Sarmatians, and Getae. Probably all three used it; at any rate, it seems to have been used by the neighbours of the Greeks of Olbiopis, and by the Thracians on the frontiers of the Greeks of Macedonia. This is in favour of its having been a term common to all the forms of speech between Macedonia and the Borysthene. *Scyth-*, then, is a Sarmatian, Thracian, and Getic term in respect to its introduction into the Greek language. Was it so in its origin? The presumption as well as the evidence is in favour of its having been so. There is the express evidence of Herodotus (iv. 6) that the population which the Greeks called Scythae called themselves Scoloti. There is the fact that the Persian equivalent to Scythae was Sakae. Thirdly, there is the fact that in the most genuine-looking of the Scythic myths there is no such eponymus as Scythia or Scythes, which would scarcely have been the case had the name been native. *Scyth-*, then, was a word like *German* or *Allemand*, as applied to the *Deutsche*, a word strange to the language of the population designated by it, but not strange to the language of the neighbouring countries. To whom was it applied? To the tribes who called themselves Scoloti.

What was the extent of the term? Did it apply not only to the Scoloti, but to the whole of the class to which the Scoloti belonged? It is safe to say that, at first, at least, there were many congeners of the Scoloti whom no one called Scythae. The number, however, increased as the term became general. Did the name denote any populations of a different family from the Scoloti? Rarely, at first; afterwards, frequently. If the populations designated by their neighbours as Scythae called themselves by some other name, what was that name? Scoloti applied only to a part of them. Had the word *Scyth-* a meaning in any language? If so, what was it, and in what tongues? Both these points will be noticed in the sequel, the questions involved in them being at present premature, though by no means unimportant.

The knowledge of the Scythian family dates from the beginning of Greek literature.

SCYTHIANS OF HESIOD, ETC.—Populations belonging to the Scythian family are noticed by Homer under the names of Abii, Glactophagi, and Hippemolgi, the habit of milking their mares being as definite a characteristic of a Scythian as anything in the way of manners and customs can be. Hesiod gives us Scythae under that name, noting them also as Hippemolgi. The Scythians of Homer and Hesiod are poetical rather than historical nations. They are associated with the Mysi of Bulgaria (not of Asia),

a point upon which Strabo enlarges (vii. 3. §§ 7, 8). They are Hamaxobii (*ἐν ἀρμάσιν ὅλκι' ἔχοντες*), and *ἀγῶνοι*. Aeschylus mentions them as *εὐρώμοι*. The apparent simplicity of their milk-drinking habits got them the credit of being men of mild and innocent appetites with Ephorus (Strab. vii. p. 302), who contrasts them with the cannibal Sarmatae. There was also an apparent confusion arising out of the likeness of *Νόμαδες* to *Νόμοι* (from *νόμος* = law). The Prometheus of Aeschylus is bound to one of the rocks of Caucasus, on the distant border of the earth, and the inaccessible desert of the Scythians.

Such are the Scythae of Aeschylus and Hesiod. The writers of the interval, who knew them as the invaders of Asia, and as historical agents, must have had a very different notion of them. Fragmentary allusions to the evils inflicted during their inroads are to be found in Callinus, Archilochus, &c. The notice of them, however, belongs to the criticism of the historical portion of the account of

TRANS-DANUBIAN SCYTHIANS of HERODOTUS: SCOTI: SCYTHIANS of HIPPOCRATES.—Much of the Herodotean history is simple legend. The strange story of an intermarriage of the females who, whilst their husbands were in Asia, were left behind with the slaves, and of the rebellion therein originating having been put down by the exhibition, on the part of the returning masters, of the whips with which the backs of the rebels had been previously but too familiar, belongs to the Herodotean Scythians (iv. 1—6). So do the myths concerning the origin of the nation, four in number, which may be designated as follows:—

1. *The Account of the Scythians themselves.*—This is to the effect that Targitaus, the son of Zeus by a daughter of the river Borystheneis, was the father of *Leipoxais*, *Arpoxais*, and *Colaxais*. In their reign, there fell from heaven a yoke, an axe (*σάραπισ*), a plough-share, and a cup, all of gold. The two elder failed in taking them up; for they burnt when they approached them. But the younger did not fail; and ruled accordingly. From *Leipoxais* descended the Achaetae (*γῆνορ*); from *Arpoxais* the Catiari and Traspies; from *Colaxais* the Paralatai. The general name for all is "Scototi, whom the Greeks call Scythae." This was exactly 1000 years before the invasion of Darius. The gold was sacred; the country large. It extended so far north that the continual fall of feathers (snow) prevented things from being seen. The number of the kingdoms was three, the greatest of which had charge of the gold. Of this legend, the elements seem partly Scythian, and partly due to the country in which the Scythians settled. The descent from the Borystheneis belongs to this latter class. The story of the sons of Targitaus is found, in its main features, amongst the present Tartars. In *Targitaus* more than one commentator has found the root *Turk*. The threefold division reminds us to the Great, Middle, and Little Hordes of the *Kirghis*; and it must be observed that the words *greatest* and *middle* (*μερίστη* and *μέση*) are found in the Herodotean account. They may be more technical and definite than is generally imagined. In the account there is no Eponymus, no *Scythia*, or even *Scototos*. There is also the statement that the Scythians are the *youngest* of all nations. This they might be, as immigrants.

2. *The Account of the Pontic Greeks.*—This is to the effect that Agathyrus, Gelonus, and Scythos (the *youngest*) were the sons of Hercules and

Echidna, the place where they met being the Hylaea. The son that could draw the bow was to rule. This was Scythos, owing to manoeuvres of his mother. He stayed in the land; the others went out. The *cup* appears here as an emblem of authority.

3. *The Second Greek Account.*—This is historical rather than mythological. The *Massagetae* press the Scythians upon the Cimmerii, the latter flying before them into Asia. This connects the history of the parts about the Bosphorus with Media. The inference from the distribution of the signs of Cimmerian occupancy confirms this account. There were the burial-places of the Cimmerii on the Tyras; there was the Cimmerian Bosphorus, and between them, with Cimmerian walls, Scythia (*ἡ Σκυθική*). This is strong evidence in favour of Scythian extension and Cimmerian preoccupation.

4. *The Account of Aristaeus of Proconnesus.*—This is a speculation rather than either a legend or a piece of history. Aristaeus (Mure, *History of Greek Literature*, vol. ii. 469, seq.) visited the country of the Issedones, north of these lay the Arimaspi; north of the Arimaspi the Monophthalmi; north of the Monophthalmi the Gold-guarding Griffins (*Γρίπες χρυσοφάλακτοι*); and north of these, the Hyperborei. The Hyperborei made no movements; but the Griffins drove the Monophthalmi, the Monophthalmi the Arimaspi, the Arimaspi the Issedones, the Issedones the Scythians, the Scythians the Cimmerians, the Cimmerians having to leave their land; but they, as we learn elsewhere, attack the Medes. (Herod. iv. 5—16). No one had ever been further north than Aristaeus, an unsafe authority. The information of Herodotus himself is chiefly that of the Greeks of the Borystheneis. He mentions, however, conversations with the steward of one of the Scythian kings.

The Emporium of the Borystheneitae was central to the Scythia of the sea-coast. In the direction of the Hypanis, i. e. west and north-west, the order of the population was as follows: the Callipidae and Alazones (*ἑλληγες Σκυθαί*), sowers and consumers of corn; to the north of whom lay the Scythae Aroteres, not only sowers of corn, but sellers of it; to the north of these the Neuri; to the north of the Neuri either a desert or a terra incognita (iv. 17, 18.) The physical geography helps us here. The nearer we approach the most fertile province of *Modern Russia*, *Podolia*, wherein we place the Scythae Aroteres, the more the Scythian character becomes agricultural. The Hellenes Scythae (Callipidae and Alazones) belong more to *Kherson*. That the Hellenes Scythae were either a mixed race, or Scythicised Greeks, is unlikely. The doctrine of the present writer is as follows: seeing that they appear in two localities (viz. the Governments of *Kherson* and *Caucasus*); seeing that in each of these the populations of the later and more historical periods are Alani (Ptolemy's form for those of *Kherson* is Alauni); seeing that even the Alani of *Caucasus* are by one writer at least called *ἄλκηνες Ἀλαῖνοι*; seeing that the root *Alav* might have two plurals, one in *-oi* and one in *-es*, he ends in seeing in the Hellenic Scythians simply certain Scythians of the Alan name. Neither does he doubt about Geloni being the same word,—forms like Chunni and Hunni, Arpi and Carpi being found for these parts. At any rate, the locality for the Callipidae and Alazones suits that of Ptolemy's Alauni, whilst that of the Scythian Greeks and Geloni of *Caucasus* suits that of the Alans of the fourth and fifth centuries.

The Scythian affinities of the Neuri are implied rather than categorically stated; indeed, in another part there is the special statement that the Tyras rises out of a great lake which separates the Scythian and Neuri countries (*τῆς Σκυθίας καὶ τῆς Νευρίδα γῆς*). This, however, must not be made to prove too much; since the Scythians that were continuous with the Neuri were known by no special name, but simply by the descriptive term *Scythae Arotæres*. [EXAMPÆUS; NEURI.] In Siberian geography *Narym* = marsh. Hence *Neuri* may be a Scythian gloss. There may also have been more Neuri than one, e.g. on the *Narym* of the headwaters of the *Dnieper*, i.e. of *Pinsk*. A fact in favour of the Neuri being Scythian is the following. The occupants of *Volhymia*, when its history commences, which is as late as the 13th century, are of the same stock with the Scythians, i.e. Comanian Turks. Not only is there no evidence of their introduction being recent, but the name *Omani* (Lygii Omani) appears about the same parts in Ptolemy.

East of the Borysthènes the Agricultural Scythae occupy the country as far as the Panticapes, 3 days distant. Northwards they extend 11 days up the Borysthènes, where they are succeeded by a desert; the desert by the Androphagi, a nation peculiar and by no means Scythian (c. 19). Above the Androphagi is a desert.

The bend of the *Dnieper* complicates the geography here. It is safe, however, to make *Ekaterrinoslav* the chief Georgic area, and to add to it parts of *Kiev*, *Kherson*, and *Poltava*, the agricultural conditions increasing as we move northwards. The two deserts (*ἐρήμοι*) command notice. The first is, probably, a March or political frontier, such as the old Suevi used to have between themselves and neighbours; at least, there is nothing in the conditions of the soil to make it a natural one. It is described as *ἐρήμος ἐπὶ πᾶσι*. The other is *ἐρήμος ἀλγέως*, — a distinction, apparently, of some value. To be natural, however, it must be interpreted *forest* rather than *steppe*. *Kursk* and *Tchernigov* give us the area of the Androphagi; *Kursk* having a slight amount of separate evidence in favour of its having been "by no means Scythian" (c. 18).

The *Hylææ*, or wooded district of the *Lower Dnieper*, seems to have been common ground to the Scythae Georgi and Scythae Nomades; or, perhaps it was uninhabited. The latter extend 14 days eastward, i.e. over Taurida, part of *Ekaterrinoslav*, and *Don Kosaks*, to the Gerrhus.

The Palaces (*τὰ καλεόμενα βασιλῆα*) succeed; their occupants being the Royal Scythians, the best and most numerous of the name, who look upon the others as their slaves. They extend, southwards, into the *Crimea* (*τῆς Ταυριχῆς*), and eastwards, as far as the ditch dug by the offspring of the blind slaves (the statement that the Scythians blinded their slaves on account of the milk being one of the elements of the strange Servile legend previously noticed), and the *Mæotic* Emporium called *Krenni*. Some touch the Tanais.

North of the Royal Scythians lie the Melanchlaeni (a probable translation of *Karakalpak* = black bonnet), a different nation and not Scythian (c. 20), with marshes, and either a desert or a terra incognita above them. This distinction is, almost certainly, real. At the present moment a population, to all appearances aboriginal, and neither Slavonic nor Scythian (but Ugrian or Finn), occupies parts of

Penza and *Tambov* having, originally, extended both further west and further south. To the north the forest districts attain their maximum development. [MELANCHLAENI.] The Royal Scythians may have occupied parts of *Voronezh*.

East of the Tanais it was no longer Scythia, but the *Adiæ* of the *Sauromatæ*. [See SAUROMATÆ; BUDINI; GELONI; THYSSAGETÆ; IURCÆ.] The want of definite boundaries makes it difficult to say where the Iurcæ end. Beyond them to the east lay other Scythians, who, having revolted from the Royal, settled there. Up to their districts the soil was level and deep, beyond it rough and stony, with mountains beyond. These are occupied by a nation of Bald-heads, flat-nosed and bearded, Scythians in dress, peculiar in language, collectors of a substance called *ἀργύριον* from a tree called *ταρσίριον* (c. 23). Their flocks and herds are few; their manners so simple that no one injures them, &c. [ARGUTIANI; ISSEDONES; HYPERBORICI; ARIMASPI.] In the parts about the mountains of the Arrippei trade was carried on by means of seven interpreters. Let this be the caravan trade of *Orenburg*, near its terminus on the *Volga*, and we shall find that seven is about the number of languages that could at the present moment be brought together at a fair in the centre of *Orenburg*. For the modern Russian takes the language of the *Sauromatæ*; for the Scythian that of the modern Tartars. To these we can add four Ugrian forms of speech, — the *Tshuwash*, the *Mordwin*, the *Tsheremiss*, and the *Voïak*, with the two forms of speech akin to the *Ostiak* and *Permian* to choose the fifth from. The *Tshuwash* of *Kasam* and the *Bashkirs* of *Orenburg* have mixed characters at the present time, — Turk and Ugrian.

RIVERS. — The chief river of the Herodotean Scythia was the *Ister* [DANUBIUS], with its five mouths; and then the *Tyras* [*Dniester*], the *Hypanis* [*Dog*] the Borysthènes [*Dnieper*], the *Panticapes* [see s.v.], the *Hypacryris* [see CARCINA], the *Gerrhus* [see s.v.], and the *Tauis* [*Don*], the feeders of the *Ister* (i.e. the rivers of the present Danubian Principality) being the *Porata* (Scythic, in Greek *Puretas*), the *Tiarantos*, the *Araros*, the *Naparis*, and the *Ordessus* (cc. 47, 48). To these add, from the country of the *Agathyræ*, the *Maris* (c. 49), or modern *Maros* of *Transylvania*. The difference between the ancient and modern names of rivers is nowhere greater than here, — the *Maros* being the only name now in use which represents the original one; unless we choose to hold that word for word, *Aluta* = *Araros*. Word for word, indeed, *Naparis* is *Dniester*; but then the rivers are different. This creates a grave difficulty in the determination of the language to which the names of the Scythian rivers should be referred. Yet the question is important, inasmuch as, in the names, as they come down to us, we have so many glosses of some language or other. Upon the whole, however, the circumstances under which they reached Herodotus suggest the notion that they are Scythian: e.g. the express statement that *Porata* is a Scythian form. Again; *Hypanis* is, word for word, *Kuban*, — a word of which the appearance in both Asia and Europe is best explained by supposing it to be Scythian. On the other hand, they are as little significant in the language which, amongst those at present existing, best explains the undoubted Scythian glosses, as they are in the Slavonic, Latin, or Greek.

The physical geography of Herodotean Scythia was a steppe, with occasional districts (chiefly along

the courses of the rivers and at their head-waters) of a more practicable character.

MOUNTAINS.—These were the eastern continuation of the Carpathians, and the hills of the Crimea or Tauris. These were but imperfectly known to Herodotus.

LAKES. [See EXAMPÆUS and BUCE.]

TOWNS, exclusively Greek colonies. [See OLBIOPOLES; PANTICAPÆUM.]

Beyond the Sauromatæ (s. v.) lay "other Scythians, who, having revolted from the Royal, reached this country," i. e. some part of *Orenburg* (c. 22).

Thirdly, there were the SACÆ, whom we may call the Scythians of the Persian frontier. Their occupancy was the parts conterminous with Bactria, and it was under Darius, the son of Hystaspes, that they, along with the Bactrians, joined in the invasion of Greece. Their dress was other than Bactrian, consisting of a pointed turban, a bonnet, leggings, native bows, daggers, and the axe called *σάρις*—a word which is probably technical. There were Scythæ Amyrgii, truly, however, Scythæ, inasmuch as the Persians called all the Scythians by the name SACÆ. Under the reign of Cyrus they were independent. Under Darius, they, along with the Caspii, formed the 15th satrapy (iii. 93). This connects them with their frontagers on the west, rather than the east.

There is no difficulty, however, in fixing them. From *Asterabad* to *Balk* they extended along the northern frontier of Persia, in the area, and probably as the ancestors, of the present Turcomans and Uzbeks. The name Amyrgii will be noticed in the sequel.

The Sacæ, if not separated from the "other Scythians" by the greater part of *Independent Tartary*, were, at any rate, a population that presented itself to the informants of Herodotus under a different aspect. The Sacæ were what the Persians found on their northern frontier. The eastern Scythæ were the Scythians beyond the Sauromatæ, as they appeared to the occupants of the parts about the Tanais.

It is not difficult to see the effect of these three points of view upon future geographers. With Scythians in *Transylvania*, Scythians in *Orenburg*, with Scythians (even though called Sacæ) in *Khorasan* and *Turcomania*, and with a terra incognita between, the name cannot but fail to take upon itself an inordinate amount of generality. The three isolated areas will be connected; and the historical or ethnological unity will give way to a geographical. At present, however, there is a true unity over the whole of Scythia in the way both of

PHYSIOGNOMY AND MANNERS.—The physical conformation of the Scythians is not only mentioned incidentally by Herodotus, but in a more special manner by Hippocrates: "The Scythian γένος is widely different from the rest of mankind, and is like to nothing but itself, even as is the Aegyptian. Their bodies are thick and fleshy, and their limbs loose, without tone, and their bellies the smoothest (?), softest (?), moistest (?) (*κοιλιαὶ ὑγρόταται*) of all bellies as to their lower parts (*παστὴν κοιλίαν αὐ κατὰ*); for it is not possible for the belly to be dried in such a country, both from the soil and climate, but on account of the fat and the smoothness of their flesh, they are all like each other, the men like the men, the women like the women." (Hippocr. *de Aere*, &c. pp. 291, 292.)

Coming as this notice does from a physician, it has commanded considerable attention; it has, however, no pretensions to be called a description, though this has often been done. In the hands of later writers its leading features become exaggerated, until at length the description of a Scythian becomes an absolute caricature. We may see this by reference to Ammianus Marcellinus and Jornandes, in their accounts of the Huns. The real fact inferred from the text of Hippocrates is, that the Scythians had a peculiar physiognomy, a physiognomy which the modern ethnologist finds in the population of Northern and Central Asia, as opposed to those of Persia, Caucasus, Western and Southern Europe.

Their general *habits* were essentially nomadic, pastoral, and migratory; the commonest epithets or descriptive appellations being Ἀμαζόβοι, Φερόκοι, Ἰστροφόροι, and the like.

Concerning their RELIGION, we have something more than a mere cursory notice (iv. 59). (i.) Tabiti (Ταβίτι): This was the Scythian name for the nearest equivalent to the Greek *Hestia* (*Vesta*), the divinity whom they most especially worshipped. (ii.) Papæus: "Most properly, in my mind, is Zeus thus called." So writes Herodotus, thinking of the ideas engendered by such exclamations as Πάπας. (iii.) Apia: This is the name for earth: as (iv.) Oestoyrus (*Οἰρόσυρος*) is for Apollo, and (v.) Artimpassa for Aphrodite, and (vi.) Thamimasada for Poseidon, the God of the Royal Scythians most especially. To Oestoyrus we have the following remarkable inscription (*Gud. Inscript. Antig.* p. 56. 2; see Zeus, s. v. *Skythen*): ΘΕΑ. ΣΕΛΟΙΤΟΞΕΤΡΑ (? ΣΕΛΗΝΗ) ΚΑΙ ΑΠΟΛΛΩΝΟ. ΟΙΤΟΞΕΤΡΟ. ΜΙΘΡΑ. Μ. ΟΥΑΠΙΟΞ. ΠΑΟΚΑΜΟΞ. ΝΕΓΚΟΡΟΞ. ΑΝΕΘ (ἦκε). Here the connection is with the Persian god Mithras.

The Scoloti sacrificed to all their gods, but to Mars the most especially; for, besides the deities which have been mentioned under their several Scythian names, Mars and Heracles were objects of particular adoration. The Scythian Venus, too, was the Ἀρροβήνη οὐρανίη. To Ares, however, they sacrificed most especially and most generally; for there was a place of worship to him in every νέμος (mark the use of this word, which is applied to the divisions of the Persian empire as well), where horses, sheep, and captives were sacrificed, and where the emblem of the god was an iron sword,—even as it was with the Alani of Ammianus and the Huns of Priscus.

Human beings were sacrificed, but no swine. Neither were swine eaten, nor were they tolerated in the country. This is noticed, because in many of the nations of Northern Asia, e. g. the Wotiahs and others, the hog, even now, is held in abomination, and that by Pagan tribes untinctured with Mahometanism.

Notwithstanding the praises of the earlier poets, the wars of the "just and illustrious" Scythians were of a piece with the worship of their war-god. They scalped their enemies, and they used their skulls as drinking cups (cc. 64—65). Once a year the monarch of each nome filled a vast vat with wine and apportioned it to the warriors who had killed most enemies during the year. Those whose hands were unstained got none, and were disgraced; those who had killed many took a double allowance (c. 66).

Their soothsayers, amongst other superstitions, practised rhabdomancy, amongst whom the *Enares*

(ἀσπρίγγοι) are the most famous. They got their art from Aphrodite, as they got their ailment. During the Scythian invasion of Asia, a portion of the conquerors plundered the temple of the Aphrodite Urania in Ascalon, for which sacrilege they and their children were afflicted with θήλεια νόσος, the names of the sufferers being Ἐνδραες (i. 103, 106). The nature of this θήλεια νόσος has yet to be satisfactorily explained.

The sacerdotal and regal relations are curious. When the king ails he calls his priests, who tell him that his ailment comes from some one having sworn himself in the greatest oath a Scythian can take. This is "by the hearth of the king." Take it falsely, and the king will sicken. Upon sickening, however, he sends for the offender, whom the priests have indicated. The charge is denied. Other priests are sent for. If their vaticinations confirm the earlier ones, death and confiscation are the fate of the perjurer. Otherwise, a third set is called. If these agree in the condemnation of the first, a load of faggots, drawn by bullocks, is brought in, the lying priests have their hands bound behind them, the faggots are set a-light to, the beasts are goaded into a gallop, the flames catch the wind, the men are burnt to death, and the bullocks scorched, singed, or burnt to death also. The sons of the offending perjurer are killed, his daughters left unhurt.

Their oaths were made over a mixture of wine and blood. The swearers to them punctured themselves, let their blood fall into a vat of wine, drank the mixture, and dipped in it their daggers, arrows, javelin, and σάγαρις.

The ferocity exhibited in their burials was of the same kind. The tombs of the kings were on the Gerrhus. Thither they were brought to be buried, wherever they might die. They were entombed with sacrifices both of beasts and men, Hippothusia, Antliroptysis, and Sutte — all these characterised the funeral rites of the Scythians δικαιοτάτοι ἀνθρώπων.

LANGUAGE.—The specimens of this fall into two divisions, the Proper and the Common Names. The former are the names of geographical localities and individuals. In one way or the other, they are numerous; at least they appear so at first. But we rarely are sure that the fact itself coincides with the first presumptions. The names of the rivers have been noticed. Of those of the gods, none have been definitely traced to any known language in respect to their meaning. Neither have they been traced to any known mythology as Proper Names. Next come the names of certain kings and other historical individuals, none of which have given any very satisfactory place for the old Scythian.

With the Common Names (and under the class of Common Names we may place such Proper Names as are capable of being translated) the results improve, though only slightly. Of these terms the chief are the following:—

(i.) Ἐξαυραῖος = *Sacred Ways* = "Ἰπαι" Ὀδοί, the name of a well-head. [See s. v.] (ii.) Οὐλύπαρα = ἀνδροκτόνοι = *Men-killers*, a name applied by the Scythians to the Amazons. Here οὐλύ = *man*, παρα = *kill* (iv. 110). (iii.) Τεμερίνδα = *Mater Maris*, applied to the Euxine. This is not from Herodotus, but from Pliny (vi. 7). (iv.) Ἀριμασπί = Μενόρφαλοι, = *one-eyed* = ἑμίνα = *one*, σπον = *eye*. (Herod. iv. 27.) These will be considered under the head of *Ethnology*.

HISTORY.—The Herodotean view of the Scythians is incomplete without a notice of the historical portion of his account; not that the two parts are, by any means, on the same level in the way of trustworthy information. The geography and descriptions are from contemporary sources. The history is more or less traditional. Taking it, however, as we find it, it falls into two divisions:—1, The Invasion of Asia by the Scythians; and 2, The Invasion of Scythia by Darius.

1. *Invasion of Asia by the Scythians*.—In the reigns of Cyaxares king of Media and of Sadyattes king of Lydia, the Scythians invade Asia, bodily and directly. They had previously invaded the country of the Cimmerians, whom they had driven from their own districts on the Maeotis, and who were thus thrown southwards. The Scythians pressed the Cimmerians, the Massagetae the Scythians. Chains of cause and effect of this kind are much loved by historians. It is only, however, in the obscure portions of history that they can pass unchallenged. The Cimmerians take Sais during the last years of the reign of Ardyas (B. C. 629.) They are expelled by Alyattes, his son. (Herod. i. 15, 16.) It seems that the Cimmerians were followed up by their ejectors; inasmuch as five years afterwards (B. C. 624) the Scythians themselves are in Media; Cyaxares, who was engaged upon the siege of Nineveh (Ninus), being called back to oppose them. He is defeated; and the Scythians occupy Asia for 28 years, Cyaxares surviving their departure. From Media they direct their course towards Egypt; from the invasion of which they are diverted by Psammitichus. Their attack upon the temple of the Venus Urania, in Ascalon, during their passage through Palestine, along with its mysterious sequel, has been already noticed. The king who led them was named Madyes. (Herod. i. 103, seq.) They were ejected B. C. 596.

There was a band of Scythians, however, in Media, in the reign of Croesus, B. C. 585, the account of which is as follows. Cyaxares, still reigning, receives a company (ἐξή) of Scythians, as suppliants, who escape (ὑπεκτάθη) from Lydia into Media. He treats them well, and sends his son to them to learn the use of the bow, along with the Scythian language, until he finds that their habits of hunting and robbing are intolerable. This, along with a particular act of atrocity, determines Cyaxares to eject them. They fly back to Alyattes, who refuses to give them up. But Alyattes dies, and the quarrel is entailed upon his son, Croesus. The battle that it led to was fought May 28, B. C. 585, when the eclipse predicted by Thales interrupted it.

The Scythian invasion might easily be known in its general features to both the Greeks of Asia and the Jews; and, accordingly, we find sufficient allusions to an invasion of northern barbarians, both in the Scriptures and in the fragments of the early Greek poets, to justify us in treating it as a real fact, however destitute of confirmation some of the Herodotean details may have been. (See *Mur's Critical History*, &c. vol. iii. p. 133, seq.) Though further removed from his time than

2. *Invasion of Scythia by Darius*.—It is, probably, a more accurate piece of history. Darius invades Scythia for the sake of inflicting a chastisement for the previous invasion of Asia. This had been followed, not by any settlement of the Scythians elsewhere, but by a return home. The strange

story of the Servile War of Whips belongs to this period.

When the approach of Darius becomes threatening, the Geloni, Budini, and Sauromatae join with the Scythians in resisting it; the Agathyrsi, Neuri, Androphagi, Melanchlaeni, and Tauri reserving themselves for the defence of their own territory if attacked (iv. 119). To the three constituents of the confederacy there are three kings, Scopasis, Ianthyrsus, and Taxacis, each with an allotted district to defend. This was done by destroying the grass and tillage, driving off the flocks and herds, and *corrupting* (we can scarcely translate *συγχοῦ* by *poisoning*) the wells. The points whereon attack was anticipated were the frontiers of the *Danube* and the *Don*. These they laid waste, having sent their own wives and children northwards. The first brunt of the war fell upon the Budini, whose Wooden City was burnt. Darius then moved southward and westward, pressing the other two divisions upon the countries of the Melanchlaeni, Neuri, and Agathyrsi. The latter warn the Medes against encroaching on the frontier. Idanthyrsus answers enigmatically to a defiance of Darius. Scopasis tammers with the Ionians who have the custody of the bridge over the Danube. The Medes suffer from dearth, and determine to retreat across the Danube. The Scythians reach the passage before them, and require the Ionians to give it up. And now appears, for the first time, the great name of Miltiades, who is one of the commanders of the guard of the bridge. He advises that the Scythians should be conciliated, Darius weakened. A half-measure is adopted, by which the Scythians are taught to distrust the Ionians, and the Medes escape into Thrace—so ending the Scythian invasion of Darius. (Herod. iv. 120—142.)

Criticism of the Herodotean Accounts.—The notices of Herodotus upon the Scythae, though full, are excursive rather than systematic. Part of their history appears as Lydian, part as Scythian Proper. There is much legend in his accounts; but the chief obscurities are in the geography. Even here the details are irregular. One notice arises out of the name Scythae, another out of the geography of their rivers, a third out of the sketch of Tauris. [See TAURIS and TAURUSCYTHAE.] In this we hear that Scythia is bounded first by the Agathyrsi, next by the Neuri, then by the Androphagi, and lastly by the Melanchlaeni. The area is four-cornered; the longest sides being the prolongations along the coast and towards the interior. From the Ister to the Borysthenes is 10 days; 10 days more to the Maeotis; from the coast to the Melanchlaeni, 20 days;—200 stadia to each day's journey. If this measurement be exact, it would bring *Tula*, *Tambov*, *Riazan*, &c., within the Scythian area,—which is going too far. The days' journeys inland were probably shorter than those along the coast.

The Agathyrsi were in *Transylvania*, on the *Maros*. The evidence, or want of evidence, as far as the text of Herodotus goes, is the same as it is with the Neuri. Their frontagers were known as Scythae Arotetes, i. e., the generic name was with them specific. Hence any Scythians whatever with a specific name must have been contrasted with them; and this seems to have been the case with the Agathyrsi. [HUNN, p. 1097.] Assuming, however, the Agathyrsi to have been Scythian, and to have lain on the *Maros*, we carry the Herodotean Scythae as far west as the *Theiss*; nor can we ex-

clude them from any part of *Wallachia* and *Moldavia*. Yet these are only known to Herodotus as the country of the SIGYNNES. The frontier, then, between the Scythae and Getae is difficult to draw. Herodotus has no Getae, *eo nomine*, north of the Danube: yet such there must have been. Upon the whole, we may look upon the Danubian Principalities as a tract scarcely known to Herodotus, and make it Scythian, or Getic, or mixed, according to the evidence of other writers, as applicable at the time under consideration. It was probably Getic in the East, Sarmatian in the West, and Scythian in respect to certain districts occupied by intrusive populations.

Thucydides mentions the Getae and Scythians but once (ii. 96), and that together. The great alliance that Sitalces, king of Thrace, effects against Perdiccas of Macedon includes the Getae beyond Mount Haemus, and, in the direction of the Euxine sea, the Getae who were conterminous (*συνοικοῦ*) with the Scythians, and whose armour was Scythian (*δυσκροτοί*). They were each archers and horsemen (*ἰπποτοξόται*); whereas the Dii and the mountaineers of Rhodope wore daggers. According to Ovid (*Trist.* v. 7. 19), the occupants of the level country do so too:—

“Dextera non segnis fixo dare vulnera cultro,
Quem vinctum lateri barbara omnis habet.”

THE SCYTHIANS OF THE MACEDONIAN PERIOD. —Passing over the notices of Xenophon, which apply to Thrace Proper rather than to the parts north of Mount Haemus, and which tell us nothing concerning the countries beyond the Danube,—passing, also, over the notices of a war in which Philip king of Macedon was engaged against Atheas, and in which he crossed Mount Haemus into the country of the Triballi, where he received a wound,—we come to the passage of the Danube by Alexander. In the face of an enemy, and without a bridge, did the future conqueror of Persia cross the river, defeat the Getae on its northern bank, destroy a town, and return. (Arrian, *Anab.* i. 2—7.) This was an invasion of Scythia in a geographical sense only; still it was a passage of the Danube. The Getae of Alexander may have been descendants of the Sigynnes of Herodotus. They were not, *eo nomine*, Scythians.

When Alexander was on the Danube the famous embassy of the Galatae reached him. They had heard of his fame, and came to visit him. They were men of enormous stature, and feared only that the heavens should fall. This disappointed Alexander, who expected that they would fear him. Much has been written concerning the embassy as if it came from Gaul. Yet this is by no means necessary. Wherever there is a *Halix* or *Galax* in modern geography, there may have been a *Galat*-ian locality in ancient; just as, wherever there is a *Kerman* or *Carman*-ia, there may have been a German one, and that without any connection with the Galli or Germani of the West. The roots *G-l-t* and *K-r-m-n*, are simply significant geographical terms in the Sarmatian and Turk tongues—tongues to which the Getic and Scythian may most probably be referred.

Such is the present writer's opinion respecting the origin of the statements that carry certain Galatae as far as the Lower Danube, and make the Basternae, and even the occupants of the Tanais, Germans—not to mention the Caramanians of Asia Minor and Carmanians of Persia. In the present

any wholesale change can be proved, or even reasonably supposed. Who can be shown to have eliminated any definite Scythian population from any definite Scythian occupancy? With the Greeks and Romans the negative evidence is nearly conclusive to the fact that no such elimination ever took place. That the Barbarians might have displaced each other is admitted; but there is no trustworthy evidence to their having done so in any single instance. All opinions in favour of such changes rest upon either the loose statements of insufficiently-informed writers, or the supposed necessity of accounting for the appearance and change of certain names by means of certain appearance and changes of population.

The bearings of this will appear in the notice of the Ethnology of Scythia. They appear also under HUNNI.

Of the SACAE, *eo nomine*, the history is obscure. In one sense, indeed, it is a nonentity. There is no classical historian of the Sacae. How far the ethnologist can infer them is a question which will be treated in the sequel.

Of the history of the populations akin to the Sacae, the details are important; but then it is a history of the Massagetae, Parthi, &c., a history full of critical preliminaries and points of inference rather than testimony.

The Scythia of all the authors between Herodotus and Ptolemy means merely the country of the Scythae, the Scythae being such northern nations as, without being, *eo nomine*, Sarmatians, were Hamaxobii and Hippemolgi; their habits of milking their mares and travelling in tented wagons being their most genuine characteristic. These it was which determined the views of even Strabo, whose extension of Germania and Galatia (already noticed) left him no room for a Scythia or even a Sarmatia; Sarmatia, which is to Ptolemy as Germania was to Strabo: for the Sarmatia of Ptolemy leaves no room in Europe for a Scythia; indeed, it cuts deeply into Asiatic Scythia, the only

SCYTHIA OF PTOLEMY.—The Scythia of Ptolemy is exclusively Asiatic, falling into, 1. The Scythia within the Imaus. 2. The Scythia beyond the Imaus.

This is a geographical division, not an ethnological one. Scythae Alauni are especially recognised as a population of European Sarmatia.

As Ptolemy's Sarmatia seems to have been formed out of an extension of the area of the Herodotean Sauromatae, his Scythia seems to have grown out of the eastern Scythae of the Herodotean Scythia, i. e. the Scythae of Orenburg. It did not grow out of the country of the Sacae, inasmuch as they are mentioned separately; even as the Jazyges of the *Thesis* were separated from the Sarmatians. The continuator, however, of the Herodotean account must make the Sacae Scythians. They may be disposed of first.

THE SACAE OF PTOLEMY were bounded by the Sogdians on the west, the Scythians on the north, and the Seres on the east. They were nomads, without towns, and resident in woods and caves. The mountain-range of the Comedi (*ἡ Κομηδίων ὄρεσις*) was in their country; so was the Stone Tower (*Ἄλφειος Πύργος*). The populations were: 1. The Caratae and Comari along the Jaxartes. 2. The Comedae, on the Comedian mountain. 3. The Massagetae along the range of the Ascatancae (*Ἀσκατάνκα*). 4. In the interjacent country, the

Grynaei Scythae; and, 6, the Toornae; south of whom, along the Imaus, 7, the Byltae. (Ptol. vi. 13.)

SCYTHIA INTRA IMAUM.—Bounded on the S. and E. by Sogdiana, Margiana, and the Sacae; on the W. by the Caspian and Sarmatia Asiatica; on the N. by a terra incognita; and on the E. by the northern prolongation of the Imaus. (Ptol. vi. 14.)

Rivers.—The Rhyrmus, the Daix, the Jaxartes, the Iastus, and the Polytimetus.

Mountains.—The eastern part of the Montes Hyperborei, the Montes Alani (observe the reappearance of this name), the Montes Rhyrmici, the Mons Norosus, the MM. Aspisii, Tapyri, Syebi, Anarei,—all W. of the Imaus.

Populations.—The Alani Scythae (on the confines of the terra incognita), the Suabeni, the Alanorsi, S. of whom the Saetiani, and Massaei, and Syebi; and (along the Imaus) the Tectosaces and (on the eastern head-waters of the Rha) the Rhoboci, S. of whom the Asmani; and then the Paniardi, S. of whom, along the river, the district called Canodispas, S. of which the Coraxi; then the Orgasi, after whom, as far as the sea (i. e. the Caspian, in this chapter called Hyrcanian), the Erymni, with the Asiotae on the E. of them, succeeded by the Aorsi; after whom the Jaxartae, a great nation along the river of the same name; then S. of the Saetiani, the Mologeni and Samnitae, as far as the MM. Rhyrmici. Then, S. of the Massaei and MM. Alani, the Zaratae and Sasones; and further W. and as far as the MM. Rhyrmici, the Tybiacae, succeeded by the Tabieni, S. of the Zaratae, and the Iastae and Machaetegi along the Mons Norosus; S. of whom the Norosbes and Norossi, and the Cachagae Scythae along the Jaxartae. On the W. of the MM. Aspisii, the Aspisii Scythae; on the E. the Galactophagi Scythae; E. of the MM. Tapyri and the Suebi, the Tapurei; and above the MM. Anarei and the Mons Ascatancae, the Scythae Anarei, and the Ascatancae and Ariacae along the Jaxartes, S. of whom the Namastae; then the Sagaraucae, and, along the Oxus, the Rhibii, with their town Davaba.

SCYTHIA EXTRA IMAUM was bounded by Scythia intra Imaum, the Sacae, the Terra Incognita, and the Seres. It contained the western part of MM. Auxacii, Casii, and Emodi, with the source of the river Oechardus. (Ptol. vi. 15.)

Its Populations were the Abii Scythae, the Hippophagi Scythae, the Chatae Scythae, the Charaunaei Scythae; the designation Scythae being applied to each.

Districts.—The Auxacitis, the Casia (*ἡ Κασία χώρα*), the Achasa (*ἡ Ἀχάσα χώρα*).

Towns.—Auxacia, Issodon, Scythica, Chaurana, Soeta.

The remarks that applied to the Sarmatia Asiatica of Ptolemy apply here. Few names can be safely identified. Neither is it safe to say through what languages the information came. Some words suggest a Persian, some a Turk source, some are Mongol. Then the geography is obscure. That the range of *Pamer* was unduly prolonged northwards is evident [IMAUS]; this being an error of the geographer. The courses, however, of the Oxus and Jaxartes may themselves have changed.

The prolongation of the *Pamer* range being carried in a northern and north-eastern direction, so as to include not only the drainages of the Oxus and Jaxartes, but that of the *Balkash Lake* as well, gives us the line of the Imaus; the terra incognita to the

N. being supposed to begin with the watershed of the *Irtish*, *Obi*, and other rivers falling into the Arctic Ocean. Within the limits thus described we may place the *Nor-obi* and *Nor-ossi*, on the eastern edge, i. e. in the parts where at the present moment the lakes distinguished by the name *Nor* occur. It should be added, however, that the syllable is generally final, as in *Koko-nor*, &c. Still it is a prominent element in compound names, and indicates Mongol occupancy. The *Byltae* may be placed in *Bulti-stan*, i. e. the country of the *Bulti* = *Little Tibet*, the gloss being Persian.

In *Ascatancas* (the Greek spelling is the more convenient *Ασκα-τάνκας*), we have the Turkish *-tagh* = *mountain* just as it actually occurs in numberless compounds.

Karait is a name of common application, chiefly to members of the Mongol family.

Mass-agetæ is a term full of difficulty. Can it have arisen out of the common name *Mus-tag*?

In *Scythia extra Imaum*, the *Casia* and *Achassa* (*Χάσα*) may be made one and identified with the *Cassii* of Pliny. The most reasonable explanations of these names is to be found in the suggestion of Major Cunningham's valuable work on *Ladak* (p. 4), where the *Achassa* *Regio* = *Ladakh*, and the *Chatae*, and *Chauronse Scythæ* = *Chang-thang* and *Khor* respectively.

Roughly speaking, we may say that the country of the *Sacæ* was formed by an irregular tract of land on the head-waters of the *Oxus* and the watershed between it and the *Jaxartes*, a tract which included a portion of the drainage of the *Indus*. It is only a portion of this that could give the recognised conditions of *Scythian* life, viz. *steppes* and *pasturages*. These might be founded on the great table land of *Pamer*, but not in the mountain districts. These, however, were necessary for "residences in woods and caves"; at the same time, the population that occupied them might be pastoral rather than agricultural. Still they would not be of the *Scythian* type. Nor is it likely that the *Sacæ* of Ptolemy were so. They were not, indeed, the *Sacæ* of Herodotus, except in part, i. e. on the desert of the Persian frontier. They were rather the mountaineers of *Kaferistan*, *Wakhan*, *Shugman*, *Roshan*, *Astor*, *Huns-Nagor*, and *Little Tibet*, partly Persian, partly *Bhot* (or *Tibetan*), in respect to their ethnology.

The *Scythians* beyond the *Imaus*.—These must be divided between *Ladakh*, *Tibet*, *Chinese Tartary*, and *Mongolia* in respect to their geography. Physically they come within the conditions of a *Scythian* occupancy; except where they are true mountaineers. Ethnologically they may be distributed between the *Mongol*, *Bhot*, and *Turk* families—the *Turks* being those of *Chinese Tartary*.

The *Turcoman* districts of the *Oxus*, *Khiva*, the *Kirghiz* country, *Ferghana*, *Tashkend*, with the parts about the *Balkash*, give us the *Scythia* within the *Imaus*. It coincides chiefly with *Independent Tartary*, with the addition of a small portion of *Mongolia* and southern *Siberia*. Its conditions are generally *Scythian*. In the upper part, however, of the *Jaxartes*, the districts are agricultural at present; nine-tenths of this area is *Turk*, part of the population being *Nomades*, part industrial and agricultural.

THE SCYTHIA OF THE BYZANTINE AUTHORS.—This means not only *Huns*, *Avars*, *Alans*, and *Sarmatians*, but even *Germans*, *Goths*, and *Vandals*.

It is used, however, but rarely. It really existed only in books of geography. Every division of the *Scythian* name was known under its specific designation.

ETHNOLOGY.—If any name of antiquity be an ethnological, rather than a geographical, term, that name is *Scythia*. Ptolemy alone applies it to an area, irrespective of the races of its occupants. With every earlier writer it means a number of populations connected by certain ethnological characteristics. These were physical and moral—physical, as when Hippocrates describes the *Scythian* physiognomy; moral, as when their nomadic habits, as *Hamaxobii* and *Hippemolgi*, are put forward as distinctive. Of language as a test less notice is taken; though (by Herodotus at least) it is by no means overlooked. The division between *Scythian* and non-*Scythian* is always kept in view by him. Of the non-*Scythic* populations, the *Sauromatæ* were one; hence the ethnology of *Scythia* involves that of *Sarmatia*, both being here treated together.

In respect to them, there is no little discrepancy of opinion amongst modern investigators. The first question respecting them, however, has been answered unanimously.

Are they represented by any of the existing divisions of mankind, or are they extinct? It is not likely that such vast families as each is admitted to have been has died out. Assuming, then, the present existence of the congeners of both the *Sarmatæ* and the *Scythæ*, in what family or class are they to be found? The *Scythæ* were of the *Turk*, the *Sarmatæ* of the *Slavono-Lithuanic* stock.

The evidence of this, along with an exposition of the chief differences of opinion, will now be given, *Scythia* being dealt with first. Premising that *Turk* means all the populations whose language is akin to that of the *Ottomans* of *Constantinople*, and that it comprises the *Turcomans*, the *Independent Tartars*, the *Uzbeks*, the *Turks* of *Chinese Tartary*, and even the *Yakuts* of the *Lena*, along with several other tribes of less importance, we may examine the *a priori* probabilities of the *Scythæ* having been, in this extended sense, *Turks*.

The *situs* of the nations of South-western *Asia*, &c., at the beginning of the proper historical period, is a presumption in favour of their being so. Of these the best to begin with are the *Cumanians* (12th century) of *Volhynia*. That they were *Turk* we know from special statements, and from samples of their language compared with that of the *Kirghis* of *Independent Tartary*. There is no proof of their being new comers, however much the doctrine of their recent emigration may have been gratuitously assumed. The *Uzes* were what the *Cumanians* were; and before the *Uzes*, the *Patzinaks* (10th century) of *Bessarabia* and the *Danubian Principalities* were what the *Uzes* were. Earlier than the *Patzinaks*, the *Chazars* ruled in *Kherson* and *Taurida* (7th and 8th centuries) like the *Patzinaks*, in the same category with definitely known *Cumanians* and *Uzes*. These four populations are all described by writers who knew the true *Turks* accurately, and, knowing them, may be relied on. This knowledge, however, dates only from the reign of *Justinian* [TURCAE]. From the reign, then, of *Justinian* to the 10th century (the date of the break-up of the *Cumanians*), the *Herodotean Scythia* was *Turk*—*Turk* without evidence of the occupation being recent.

The *Avars* precede the *Chazars*, the *Huns* the

Avars, the Alani the Huns. [HUNNI; AVARES]. The migrations that make the latter, at least, recent occupants being entirely hypothetical. The evidence of the Huns being in the same category as the Avares, and the Avares being Turk, is conclusive. The same applies to the Alani—a population which brings us to the period of the later classics.

The conditions of a population which should, at one and the same time, front Persia and send an offset round the Caspian into Southern Russia, &c., are best satisfied by the present exclusively Turk area of Independent Tartary.

Passing from the presumptuous to the special evidence, we find that the few facts of which we are in possession all point in the same direction.

Physical Appearance.—This is that of the *Kirghiz* and *Uzbeks* exactly, though not that of the Ottomans of *Rumelia*, who are of mixed blood. Allowing for the change effected by Mahomet, the same remark applies to their

Manners, which are those of the *Kirghiz* and *Turcomans*.

Language.—The Scythian glosses have not been satisfactorily explained, i. e. *Temerinda*, *Arimaspi*, and *Exampaeus* have yet to receive a derivation that any one but the inventor of it will admit. The *oior-*, however, in *Oior-pata* is exactly the *er*, *aer*, = *man*, &c., a term found through all the Turk dialects. It should be added, however, that it is Latin and Celtic as well (*vir*, *fear*, *gwr*). Still it is Turk, and that unequivocally.

The evidence, then, of the Scythae being Turk consists in a series of small particulars agreeing with the *a priori* probabilities rather than in any definite point of evidence. Add to this the fact that no other class gives us the same result with an equally small amount of hypothesis in the way of migration and change. This will be seen in a review of the opposite doctrines, all of which imply an unnecessary amount of unproven changes.

The Mongol Hypothesis.—This is Niebuhr's, developed in his *Researches into the History of the Scythians*, &c.; and also Neumann's, in his *Hellenen im Skythenlande*. It accounts for the manners and physiognomy, as well as the present doctrine; but not for anything else. It violates the rule against the unnecessary multiplication of causes, by bringing from a distant area, like Mongolia, what lies nearer, i. e. in Tartary. With Niebuhr the doctrine of fresh migrations to account for the Turks of the Byzantine period, and of the extirpation of the older Scythians, takes its *maximum* development, the least allowance being made for changes of name. "This" (the time of *Lysimachus*) "is the last mention of the Scythian nation in the region of the Ister; and, at this time, there could only be a remnant of it in Budzack" (p. 63).

The Finn Hypothesis.—This is got at by making the Scythians what the Huns were, and the Huns what the Magyars were—the Magyars being Finn. It arises out of a wrong notion of the name, *Hungary*, and fails to account for the difference between the Scythians and the nations to their north.

The Circassian Hypothesis.—This assumes an extension of the more limited area of the northern occupants of Caucasus in the direction of *Russia* and *Hungary*. Such an extension is, in itself, probable. It fails, however, to explain any one fact in the descriptions of Scythia, though valid for some of the older populations.

The Indo-European Hypothesis.—This doctrine takes many forms, and rests on many bases. The

-get- in words like *Massa-get-ae*, &c., is supposed to = *Goth* = *German*. Then there are certain names which are Scythian and Persian, the Persian being Indo-European. In the extreme form of this hypothesis the *Sacae* = *Saxons*, and the *Yuche* of the Chinese authors = *Goths*.

If the Scythians were intruders from Independent Tartary, whom did they displace? Not the Sarmatians, who were themselves intruders. The earlier occupants were in *part* congeners of the Northern Caucasians. They were chiefly, however, Ugrians or Finns; congeners of the Mordvins, Tsheremess, and Tshuwashes of *Penza*, *Sarator*, *Kazan*, &c.; Dacia, Thrace, and Sarmatia being the original occupancies of the Sarmatae.

If so, the ethnographical history of the Herodotean Scythia runs thus:—there was an original occupancy of Ugrians; there was an intrusion from the NE. by the Scythians of Independent Tartary, and there was intrusion from the SW. by the Sarmatians of Dacia. The duration of the Scythian or Turk occupancy was from the times anterior to Herodotus to the extinction of the Cumanians in the 14th century. Of internal changes there was plenty; but of any second migration from Asia (with the exception of that of the Avares) there is no evidence.

Such is the history of the Scythae.

The *Sacae* were, perhaps, less exclusively Turk, though Turk in the main. Some of them were, probably, Mongols. The *Sacae Amyrgii* may have been Ugrians; the researches of Norris upon the second of the arrow-headed alphabets having led him to the opinion that there was at least one invasion of Persia analogous to the Magyar invasion of Hungary, i. e. effected by members of the Ugrian stock, probably from *Orenburg* or *Kazan*. With them the root *m-rd* = *man*. History gives us no time when the Turks of the Persian frontier, the *Sacae*, were not pressing southwards. *Sacastene* (= *Segestani*) was one of their occupancies; *Carmania* probably another. The Parthians were of the Scythian stock; and it is difficult to believe that, word for word, Persia is not the same as Parthia. The history, however, of the Turk stock is one thing; the history of the Scythian name another. It is submitted, however, that the two should be connected. This being done, the doctrine of the recent diffusion of the Turks is a doctrine that applies to the name only. There were Turk invasions of Hungary, Turk invasions of Persia, Turk invasions of China, Assyria, Asia Minor, and even north-eastern Africa, from the earliest period of history. And there were Sarmatian invasions in the opposite direction, invasions which have ended in making Scythia Slavonic, and which (in the mind of the present writer) began by making parts of Asia Median. Lest this be taken for an exaggeration of the Turk influence in the world's history, let it be remembered that it is only a question of *date*, and that the present view only claims for the Turk conquests the place in the ante-historical that they are *known* to have had in the historical period. With the exception of the Mongol invasions of the 13th century and the Magyar occupancy of Hungary, every conquest in Southern Asia and Europe, from the North, has been effected by members of the stock under notice. [See SARMATIA; VENEDI; FENNI; SITONES; TURCAE.] [R. G. L.]

SCYTHINI (Σκυθῖνοι, Xen. *Anab.* iv. 7. § 18; Σκυθῖνοι, Diod. xiv. 29; Σκυθῖνοι, Steph. B. s. v.), an Asiatic people dwelling on the borders of Armenia, between the rivers Harpasus on the E. and

Asparagus on the W., and bounded by the mountains of the Chalybes on the S. The Ten Thousand Greeks, in their retreat under Xenophon, were compelled to march four days through their territory. Rennell (*Geogr. of Herod.* p. 243) seeks them in the province of Kars (comp. Ritter, *Erdrkunde*, vol. i. p. 764).

[T. H. D.]

SCYTHOPOLIS. [BETHSAN].

SCYTHOTAURI. [TAUROSCYTHAE.]

SEBAGENA (*Σελάγνα*, or, as others read, *Ἐλαίγνα*), a town in Cappadocia, of uncertain site. (Ptol. v. 6. § 15.)

[L. S.]

SEBASTE (*Σελαστή*). 1. A town in a small island off the coast of Cilicia, built by Archelaus king of Cappadocia, to whom the Romans had given Cilicia Aspera. (Strab. xiv. p. 671.) It seems to have received its name Sebaste in honour of Augustus; for, until his time, both the island and the town were called Eleusa, Elaenusa, or Elaenusa (Joseph. *Ant.* xvi. 4. § 6, *Bell.* i. 23. § 4; comp. Ptol. v. 8. § 4; Hierocl. p. 704; *Stadiasm. Mar. Meg.* § 172, where it is called *Ἐλεούς*; Steph. B. a. v. *Σελαστή* and *Ἐλαούσσα*), a name which Püny (v. 22) still applies to the town, though he erroneously places it in the interior of Caria. Stephanus, in one of the passages above referred to, calls Sebaste or Elaenusa an island, and in the other a peninsula, which may be accounted for by the fact that the narrow channel between the island and the mainland was at an early period filled up with sand, as it is at the present, — for the place no longer exists as an island. Sebaste was situated between Corycus and the mouth of the river Lamus, from which it was only a few miles distant. Some interesting remains of the town of Sebaste still exist on the peninsula near *Ayash*, consisting of a temple of the composite order, which appears to have been overthrown by an earthquake, a theatre, and three aqueducts, one of which conveyed water into the town from a considerable distance. (Comp. Beaufort, *Arménie*, p. 250, *fol.*; Leake, *Asia Minor*, p. 213.)

2. A town in Phrygia Pacatiana, between Alyda and Eumenia, is noticed only by Hierocles, (p. 667) and in the Acts of the Council of Constantinople (ii. p. 674); but its site has been identified with that of the modern *Seydler*, where inscriptions and coins of the town have been found. The ancient name of the place is still preserved in that of the neighbouring stream, *Sebasti Su*. (Comp. Hamilton's *Asiatic Researches*, i. p. 121, *fol.*; Arundell, *Discoveries*, i. p. 196, who erroneously takes the remains at *Seydler* for those of the ancient Encarpia.)

3. *CARISTIA*. Vol. I. p. 462.]

[L. S.]

SEBASTE. [SAMARIA.]

SEBASTEIA (*Σελαστή*), a town in the south of Pontus, on the north bank of the Upper Halys. As it was near the frontier, Püny (vi. 3) regards it as not belonging to Pontus, but to Colchæ in Cappadocia. (Ptol. v. 6. § 10; Hierocl. p. 702; *It. Ant.* pp. 204, 205.) The town existed as a small place before the domination of the Romans in those parts, but its ancient name is unknown. Pompey increased the town, and gave it the name of Megalopolis (Strab. xii. p. 567). The name Sebastia must have been given to it before the time of Püny, he being the first to use it. During the imperial period it appears to have risen to considerable importance, so that in the lower division of the Empire it was made the capital of Armenia Minor. The identity of Sebastia with the modern *Sams* is established partly by the resemblance of the names, and partly by the agreement

of the site of *Sams* with the description of *Cappadocia* of Nysea, who states that the town was situated in the valley of the Halys. A small cone, never, flowed through the town, and fell into a neighbouring lake, which communicated with the Halys (*Orat. I. in XL Mart.* p. 501, *Orat. II. p. 502*; comp. Basil. M. *Epist.* viii.). In the time of the Byzantine empire Sebasteia is mentioned as a large and flourishing town of Cappadocia (Niceph. *Ann.* p. 74; Ducas, p. 31); while Stephanus B. (a. v.) and some ecclesiastical writers refer it to Armenia. (Socin. *Est. Eccl.* iv. 24; Theodoret. *Hist. Eccl.* i. 34.) In the Itinerary its name appears in the form of *Sebas*, and in *Abulfeida* it is actually written *Sebas*. The emperor Justinian restored its decayed walls (Procop. *de Aed.* iii. 4.) The town of *Sams* is still large and populous, and in its vicinity some, though not very important, remains of antiquity exist. (Fontanier, *Voyages en Orient*, i. p. 179, *fol.*) [L. S.]

SEBASTOPOLIS (*Σελαστοπόλις*). A town in Pontus Cappadocius (Ptol. v. 6. § 7) that, according to the Antonine Itinerary (p. 265) was situated on a route leading from TAVNA to Sebaste, and was connected by a road with Caesarea (p. 264). Pliny (vi. 3) places it in the district of Colchæ, and agrees with other authorities in describing it as a small town. (Hierocl. p. 703; Novell. 31; Ducas. Nyssen. in *Macrina*, p. 202.) The site of this place is still uncertain, some identifying the town with Cabira, which is impossible, unless we assume Sebasteopolis to be the same town as Sebaste, and others believing that it occupied the site of the modern *Turkhal* or *Turkhal*.

2. A town in Pontus, of unknown site (Ptol. v. 6. § 9), though, from the place it occupies in the Itinerary, it must have been situated in the south of Themiscyra.

3. About Sebastopolis on the east coast of the Euxine see DIOSCURIAS, and about that in Bithynia see MYRINA.

[L. S.]

SEBASTOPOLIS (Hierocl. p. 638) a town in the interior of Thracia, near Philippopolis. [L. S.]

SEBATUM, a town situated either in the north-western part of Noricum, or in the east of Bæcia, on the road from Aemona to Veldidra (*It. Ant.* p. 280), seems to be the modern *Sabla*. (Comp. Muchar, *Noricum*, i. p. 250.) [L. S.]

SEBENDUNUM (*Σελένδων*, Ptol. ii. 6. § 23) a town of the Castellani in Hispania Tarraconensis. There is a coin of it in Sestini (p. 164). [L. S.]

SEBENNYTUS (*Σελέννυτος*, Ptol. ii. 6. § 24; Steph. B. a. v.; cf. *Σελέννυτος* *τοῦτος*, Strab. vii. p. 802; *Etia. Σελέννυτος*), the chief town of the Sebennytic nome in the Egyptian Delta, situated at the Sebenmytic arm of the Nile, nearly due E. of Sais, in lat. 31° N. The modern limit of the nome, where some ruins have been discovered, occupies a portion of its site. Sebennytic was anciently a place of some importance, and standing on a peninsula, between a lake (*Ἰαβύς* *Σελέννυτος* *Βελίος*) and the Nile, was favourably situated for trade and intercourse with Lower Egypt and Ethiopia. The neglect of the canals, however, and the elevation of the alluvial soil have nearly obliterated its site. (Champollion, *l'Egypte*, vol. ii. p. 120, *seq.*) [W. B. D.]

SEBETHUS (*Fiume della Modigliana*), a small river of Campania, flowing into the Bay of Naples immediately to the E. of the city of Neapolis. It is alluded to by several ancient writers in connection with that city (Stat. *Silv.* i. 2. 363; Colum. i. 126).

Vib. Sequest. p. 18), and is generally considered to be the same with the stream which now falls into the sea a little to the E. of *Naples*, and is commonly called the *Fiume della Maddalena*. This rivulet, which rises in a fountain or basin called *La Bolla*, about 5 miles from *Naples*, is now a very trifling stream, but may have been more considerable in ancient times. The expressions of poets, however, are not to be taken literally, and none of the geographers deem the Sebethus worthy of mention. Virgil, however, alludes to a nymph Sebethis, and an inscription attests the local worship of the river-god, who had a chapel (aedicula) erected to him at Neapolis. (Gruter, *Inscr.* p. 94. 9.) [E. H. B.]

SEBINUS LACUS (*Lago d' Iseo*), a large lake in the N. of Italy, at the foot of the Alps, formed by the waters of the river Ollius (*Oglio*), which after flowing through the land of the Camuni (the *Val Camonica*), are arrested at their exit from the mountains and form the extensive lake in question. It is not less than 18 miles in length by 2 or 3 in breadth, so that it is inferior in magnitude only to the three great lakes of Northern Italy; but its name is mentioned only by Pliny (ii. 103. s. 106, iii. 19. s. 23), and seems to have been little known in antiquity, as indeed is the case with the *Lago d' Iseo* at the present day. It is probable that it derived its name from a town called Sebum, on the site of the modern *Iseo*, at its SE. extremity, but no mention of this name is found in ancient writers. (Cluver, *Ital.* p. 412.) [E. H. B.]

SEBRIDAE (Σεβρίδαι, Ptol. iv. 7. § 33), or SOBORIDAE (Σοβορίδαι, Ptol. iv. 7. § 29), an Aethiopian race, situated between the Astaboras (*Tacazze*) and the Red Sea. They probably correspond with the modern *Samhar*, or the people of the "maritime tract." There is some likelihood that the Sembridae, Sebridae, and Soboridae are but various names, or corrupted forms of the name of one tribe of Aethiopians dwelling between the upper arms of the Nile and the Red Sea. [W. B. D.]

SEBURRI (Σεβούρροι and Σεούρροι, Ptol. ii. 6. § 27), a people in the NW. of Hispania Tarraconensis, on both banks of the Minius, probably a subdivision of the Callaici Bracarii. [T. H. D.]

SECELA or SECELLA. [ΖΙΚΛΑΓ.]

SECERRAE, called by the Geogr. Rav. (iv. 42) and in a Cod. Paris. of the *Itin. Ant.* (p. 398) SETERRAE, a town of the Lacetani in Hispania Tarraconensis, on the road from the Summum Pyrenaicum and Juncaria to Tarraco. Various identified with *S. Pere de Secada*, *Arbuscia*, and *San Seloni* (properly *Santa Colonia Sejerra*). The last identification seems the most probable. [T. H. D.]

SE'CIA (*Secchia*), a river of Gallia Cispadana, one of the southern tributaries of the Padus, which crosses the Via Aemilia a few miles W. of *Modena*. It is evidently the same stream which is called by Pliny the Gabellus; but the name of Secia, corresponding to its modern appellation of *Secchia*, is found in the Jerusalem Itinerary, which marks a station called Pons Secies, at a distance of 5 miles from Mutina. (*Itin. Hier.* p. 606.) The same bridge is called in an inscription which records its restoration by Valerian, in A. D. 259, Pons Seculae. (Murat. *Inscr.* p. 460. 5; Orell. *Inscr.* 1002.) The *Secchia* is a considerable stream, having the character, like most of its neighbours, of a mountain torrent. [E. H. B.]

SECOANUS (Σηκοανός, Steph. s. v.), a river of the Massaliots, according to one reading, but accord-

ing to another reading, a city of the Massaliots, "from which comes the ethnic name Sequani, as Artemidorus says in his first book." Nothing can be made of this fragment further than this; the name Sequanus belonged both to the basin of the Rhone and of the Seine. [G. L.]

SECOR or SICOR (Σηκόρ ἢ Σικόρ λιμὴν), a port which Ptolemy (ii. 7. § 2) places on the west coast of Gallia, between the Pectonium or Pictonium Promontorium and the mouth of the Ligeris (*Loire*). The name also occurs in Marcianus. The latitudes of Ptolemy cannot be trusted, and we have no other means of fixing the place except by a guess. Accordingly D'Anville supposes that Secor may be the port of the *Sables d'Olonne*; and other conjectures have been made. [G. L.]

SECURISCA (Σεκουρίσκα, Procop. *de Aed.* iv. 7. p. 292, ed. Bonn.), a town in Moesia Inferior, lying S. of the Danube, between Oescus and Novae. (*Itin. Ant.* p. 221; comp. Geogr. Rav. iv. 7; Theophyl. vii. 2.) Various identified with *Soheguri*, *Sistov*, and *Tchercezan*. [T. H. D.]

SEDELAUCUS. [ΣΙΔΟΛΟΥΣ.]

SEDETANI. [EDETANI.]

SEDIBONIA'ES, are placed by Pliny in Aquitania (iv. c. 19). He says, "Aquitani, unde nomen provinciae, Sediboniatas. Mox in oppidum contributi Convenae, Begerri." The Begerri are the Bigerriones of Caesar. [BIGERRIONES.] We have no means of judging of the position of the Sediboniatas except from what Pliny says, who seems to place them near the Bigerriones and Convenae. [CONVENAE.] [G. L.]

SEDUNI, a people in the valley of the Upper Rhone, whom Caesar (*B. G.* iii. 1, 7) mentions: "Nantuates Sedunos Veragrosque." They are also mentioned in the trophy of the Alps (Plin. iii. 20) in the same order. They are east of the Veragri, and in the *Valais*. Their chief town had the same name as the people. The French call it *Sion*, and the Germans name it *Sitten*, which is the ancient name, for it was called Sedunum in the middle ages. An inscription has been found at *Sion*: "Civitas Sedunorum Patrono." *Sitten* is on the right bank of the Rhone, and crossed by a stream called *Sionne*. The town-hall is said to contain several Roman inscriptions. [NANTUATES; OCTODURUS.] [G. L.]

SEDUSII, a German tribe mentioned by Caesar (*B. G.* i. 51) as serving under Ariovistus; but as no particulars are stated about them, and as they are not spoken of by any subsequent writer, it is impossible to say to what part of Germany they belonged. Some regard them as the same as the Edusones mentioned by Tacitus (*Germ.* 40), and others identify them with the Phundusi whom Ptolemy (ii. 11. § 12) places in the Cimbric Chersonesus; but both conjectures are mere fancies, based on nothing but a faint resemblance of names. [L. S.]

SEGALLAUNI (Σεγαλλανοί, Ptol. ii. 10. § 11). Ptolemy places them west of the Allobroges, and he names as their town Valentia Colonia (*Valence*), near the Rhone. Pliny (iii. 4) names them Segovellauni, and places them between the Vocontii and the Allobroges; but he makes Valentia a town of the Cavares. [CAVARES.] [G. L.]

SEGASAMUNCLUM (Σεγισαμόγκυλον, Ptol. ii. 6. § 53), a town of the Autrigones in Hispania Tarraconensis. (*Itin. Ant.* p. 394.) Various identified with *S. Maria de Ribaredonda*, *Cameno*, and *Balluercale*. [T. H. D.]

SE'GEDA AUGURINA, an important town of Hispania Baetica, between the Baetis and the coast. (Plin. iii. 1. s. 3.) Commonly supposed to be *S. Iago della Higüera* near Jaen. [T. H. D.]

SEGELOCUM (*Itin. Ant.* p. 475, called also *AGLOECUM*, *It.* p. 478), a town in Britannia Romana, on the road from Lindum to Eboracum, according to Camden (p. 582) *Littleborough* in *Nottinghamshire*. [T. H. D.]

SEGESAMA (*Σεγερμα*, Strab. iii. p. 162), or SEGESAMO and SEGISAMO (*Itin. Ant.* pp. 394, 449, 454; Orell. *Inscr.* no. 4719), and SEGISAMONENSES of the inhabitants (Plin. iii. 3. s. 4), a town of the Murbogi or Turnodigi in Hispania Tarraconensis, on the road from Tarraco to Asturica, now called *Sasamo*, to the W. of *Brievaca*. (Florez, *Esp. Sagr.* vi. p. 419, xv. p. 59.) [T. H. D.]

SEGESSERA, in Gallia, is placed in the Table between Corbilibum (*Corbeil*) and Andomatunum (*Langres*), and the distance of Segessera from each place is marked xxi. The site of Segessera is not certain. Some fix it at a place named *Suzannecourt*. [CORBILIBUM.] [G. L.]

SEGESTA (*Σεγιστα*; *Eth.* *Σεγισταῖος*, Segestanus; Ru. near *Calatufimi*), a city of Sicily in the NW. part of the island, about 6 miles distant from the sea, and 34 W. of Panormus. Its name is always written by the Attic and other contemporary Greek writers ΕΓΕΣΤΑ (*Εγιστα*; *Eth.* *Εγισταῖος*, Thuc. &c.), and it has hence been frequently asserted that it was first changed to Segesta by the Romans, for the purpose of avoiding the ill omen of the name of Egesta in Latin. (Fest. *s.v.* *Segesta*, p. 340.) This story is, however, disproved by its coins, which prove that considerably before the time of Thucydides it was called by the inhabitants themselves *Segesta*, though this form seems to have been softened by the Greeks into *Egesta*. The origin and foundation of Segesta is extremely obscure. The tradition current among the Greeks and adopted by Thucydides (Thuc. vi. 2; Dionys. i. 52; Strab. xiii. p. 608), ascribed its foundation to a band of Trojan settlers, fugitives from the destruction of their city; and this tradition was readily welcomed by the Romans, who in consequence claimed a kindred origin with the Segestans. Thucydides seems to have considered the Elymi, a barbarian tribe in the neighbourhood of Eryx and Segesta, as descended from the Trojans in question; but another account represents the Elymi as a distinct people, already existing in this part of Sicily when the Trojans arrived there and founded the two cities. [ELYMI.] A different story seems also to have been current, according to which Segesta owed its origin to a band of Phocians, who had been among the followers of Philoctetes; and, as usual, later writers sought to reconcile the two accounts. (Strab. vi. p. 272; Thuc. *l.c.*) Another version of the Trojan story, which would seem to have been that adopted by the inhabitants themselves, ascribed the foundation of the city to Egestus or Aegestus (the Acestes of Virgil), who was said to be the offspring of a Trojan damsel named Segesta by the river god Crimisus. (Serv. *ad Aen.* i. 550, v. 30.) We are told also that the names of Simois and Scamander were given by the Trojan colonists to two small streams which flowed beneath the town (Strab. xiii. p. 608); and the latter name is mentioned by Diodorus as one still in use at a much later period. (Diod. xx. 71.)

It is certain that we cannot receive the statement of the Trojan origin of Segesta as historical; but what-

ever be the origin of the tradition, there seems no doubt on the one hand that the city was occupied by a people distinct from the Sicanius, the native race of this part of Sicily, and on the other that it was not a Greek colony. Thucydides, in enumerating the allies of the Athenians at the time of the Peloponnesian War, distinctly calls the Segestans barbarians; and the history of the Greek colonies in Sicily was evidently recorded with sufficient care and accuracy for us to rely upon his authority when he pronounces any people to be non-Hellenic. (Thuc. vii. 57.) At the same time they appear to have been, from a very early period, in close connection with the Greek cities of Sicily, and entering into relations both of hostility and alliance with the Hellenic states, wholly different from the other barbarians in the island. The early influence of Greek civilisation is shown also by their coins, which are inscribed with Greek characters, and bear the unquestionable impress of Greek art.

The first historical notice of the Segestans transmitted to us represents them as already engaged (as early as B. C. 580) in hostilities with the Selinuntines, which would appear to prove that both cities had already extended their territories so far as to come into contact with each other. By the timely assistance of a body of Cnidian and Rhodian emigrants under Pentathlus, the Segestans at this time obtained the advantage over their adversaries. (Diod. v. 9.) A more obscure statement of Diodorus relates that again in B. C. 454, the Segestans were engaged in hostilities with the *Lilybaeans* for the possession of the territory on the river *Mazarus*. (Id. xi. 86.) The name of the *Lilybaeans* is here certainly erroneous, as no town of that name existed till long afterwards [*LILYBAEUM*]; but we know not what people is really meant, though the presumption is that it is the Selinuntines, with whom the Segestans seem to have been engaged in almost perpetual disputes. It was doubtless with a view to strengthen themselves against these neighbours that the Segestans took advantage of the first Athenian expedition to Sicily under Laches (B. C. 426), and concluded a treaty of alliance with Athens. (Thuc. vi. 6.) This, however, seems to have led to no result, and shortly after, hostilities having again broken out, the Selinuntines called in the aid of the Syracusans, with whose assistance they obtained great advantages, and were able to press Segesta closely both by land and sea. In this extremity the Segestans, having in vain applied for assistance to Agrigentum, and even to Carthage, again had recourse to the Athenians, who were, without much difficulty, persuaded to espouse their cause, and send a fleet to Sicily, B. C. 416. (Thuc. vi. 6; Diod. xii. 82.) It is said that this result was in part attained by fraud, the Segestans having deceived the Athenian envoys by a fallacious display of wealth, and led them to conceive a greatly exaggerated notion of their resources. They, however, actually furnished 60 talents in ready money, and 30 more after the arrival of the Athenian armament. (Thuc. vi. 8, 46; Diod. xii. 83, xiii. 6.)

But though the relief of Segesta was thus the original object of the great Athenian expedition to Sicily, that city bears little part in the subsequent operations of the war. Nicias, indeed, on arriving in the island, proposed to proceed at once to Selinus, and compel that people to submission by the display of their formidable armament. But this advice was overruled: the Athenians turned their

arms against Syracuse, and the contest between Segesta and Selinus was almost forgotten in the more important struggle between those two great powers. In the summer of B. C. 415 an Athenian fleet, proceeding along the coast, took the small town of Hyccara, on the coast, near Segesta, and made it over to the Segestans. (Thuc. vi. 62; Diod. xiii. 6.) The latter people are again mentioned on more than one occasion as sending auxiliary troops to assist their Athenian allies (Thuc. vii. 57; Diod. xiii. 7); but no other notice occurs of them. The final defeat of the Athenians left the Segestans again exposed to the attacks of their neighbours the Selinuntines; and feeling themselves unable to cope with them, they again had recourse to the Carthaginians, who determined to espouse their cause, and sent them, in the first instance, an auxiliary force of 5000 Africans and 800 Campanian mercenaries, which sufficed to ensure them the victory over their rivals, B. C. 410. (Diod. xiii. 43, 44.) But this was followed the next year by a vast armament under Hannibal, who landed at Lilybæum, and, proceeding direct to Selinus, took and destroyed the city. (*Ib.* 54—58.) This was followed by the destruction of Himera; and the Carthaginian power now became firmly established in the western portion of Sicily. Segesta, surrounded on all sides by this formidable neighbour, naturally fell gradually into the position of a dependent ally of Carthage. It was one of the few cities that remained faithful to this alliance even in B. C. 397, when the great expedition of Dionysius to the W. of Sicily and the siege of Motya seemed altogether to shake the power of Carthage. Dionysius in consequence laid siege to Segesta, and pressed it with the utmost vigour, especially after the fall of Motya; but the city was able to defy his efforts, until the landing of Himilco with a formidable Carthaginian force changed the aspect of affairs, and compelled Dionysius to raise the siege. (*Ib.* xiv. 48, 53—55.) From this time we hear little more of Segesta till the time of Agathocles, under whom it suffered a great calamity. The despot having landed in the W. of Sicily on his return from Africa (B. C. 307), and being received into the city as a friend and ally, suddenly turned upon the inhabitants on a pretence of disaffection, and put the whole of the citizens (said to amount to 10,000 in number) to the sword, plundered their wealth, and sold the women and children into slavery. He then changed the name of the city to Dicæopolis, and assigned it as a residence to the fugitives and deserters that had gathered around him. (Diod. xx. 71.)

It is probable that Segesta never altogether recovered this blow; but it soon resumed its original name, and again appears in history as an independent city. Thus it is mentioned in B. C. 276, as one of the cities which joined Pyrrhus during his expedition into the W. of Sicily. (Diod. xxii. 10, *Exc. H.* p. 498.) It, however, soon after fell again under the power of the Carthaginians; and it was probably on this occasion that the city was taken and plundered by them, as alluded to by Cicero (*Verr.* iv. 33); a circumstance of which we have no other account. It continued subject to, or at least dependent on that people, till the First Punic War. In the first year of that war (B. C. 264) it was attacked by the consul Appius Claudius, but without success (Diod. xxiii. 3, p. 501); but shortly after the inhabitants put the Carthaginian garrison to the sword, and declared for the alliance of Rome. (*Ib.* 5, p. 502; Zonar. viii. 9.) They were in con-

sequence besieged by a Carthaginian force, and were at one time reduced to great straits, but were relieved by the arrival of Duilius, after his naval victory, B. C. 260. (Pol. i. 24.) Segesta seems to have been one of the first of the Sicilian cities to set the example of defection from Carthage; on which account, as well as of their pretended Trojan descent, the inhabitants were treated with great distinction by the Romans. They were exempted from all public burdens, and even as late as the time of Cicero continued to be "sine foedere immunes ac liberi." (*Cic. Verr.* iii. 6, iv. 33.) After the destruction of Carthage, Scipio Africanus restored to the Segestans a statue of Diana which had been carried off by the Carthaginians, probably when they obtained possession of the city after the departure of Pyrrhus. (*Cic. Verr.* iv. 33.) During the Servile War also, in B. C. 102, the territory of Segesta is again mentioned as one of those where the insurrection broke out with the greatest fury. (Diod. xxvi. 5, *Exc. Phot.* p. 534.) But with the exception of these incidental notices we hear little of it under the Roman government. It seems to have been still a considerable town in the time of Cicero, and had a port or emporium of its own on the bay about 6 miles distant (*τὸ τῶν Αἰγυρτίων ἐμπόριον*, Strab. vi. pp. 266, 272; *Σεγαστῶν ἐμπόριον*, Ptol. iii. 4, § 4). This emporium seems to have grown up in the days of Strabo to be a more important place than Segesta itself: but the continued existence of the ancient city is attested both by Pliny and Ptolemy; and we learn from the former that the inhabitants, though they no longer retained their position of nominal independence, enjoyed the privileges of the Latin citizenship. (Strab. l. c.; Plin. iii. 8, s. 14; Ptol. iii. 4, § 15.) It seems, however, to have been a decaying place, and no trace of it is subsequently found in history. The site is said to have been finally abandoned, in consequence of the ravages of the Saracens, in A. D. 900 (Amico, *ad Fazell. Sic.* vii. 4, not. 9), and is now wholly desolate; but the town of *Castell' a Mare*, about 6 miles distant, occupies nearly, if not precisely, the same site as the ancient emporium or port of Segesta.

The site of the ancient city is still marked by the ruins of a temple and theatre, the former of which is one of the most perfect and striking ruins in Sicily. It stands on a hill, about 3 miles NW. of *Calatafini*, in a very barren and open situation. It is of the Doric order, with six columns in front and fourteen on each side (all, except one, quite perfect, and that only damaged), forming a parallelogram of 162 feet by 66. From the columns not being fluted, they have rather a heavy aspect; but if due allowance be made for this circumstance, the architecture is on the whole a light order of Doric; and it is probable, therefore, that the temple is not of very early date. From the absence of fluting, as well as other details of the architecture, there can be no doubt that it never was finished,—the work probably being interrupted by some political catastrophe. This temple appears to have stood, as was often the case, outside the walls of the city, at a short distance to the W. of it. The latter occupied the summit of a hill of small extent, at the foot of which flows, in a deep valley or ravine, the torrent now called the *Fiume Gaggera*, a confluent of the *Fiume di S. Bartolomeo*, which flows about 5 miles E. of Segesta. The latter is probably the ancient *Crimæus* [CRIMÆUS], celebrated for the great victory of Timoleon over the Carthaginians, while the *Gaggera* must probably be the stream called by Diodorus (xx. 71) the *Scamander*

Two other streams are mentioned by Aelian (*V. H.* ii. 33) in connection with Segesta, the Telmessus and the Porpax; but we are wholly at a loss to determine them. Some vestiges of the ancient walls may still be traced; but almost the only ruins which remain within the circuit of the ancient city are those of the theatre. These have been lately cleared out, and exhibit the *praecinctio* and sixteen rows of seats, great part in good preservation. The general form and arrangement are purely Greek; and the building rests at the back on the steep rocky slope of the hill, out of which a considerable part of it has been excavated. It is turned towards the N. and commands a fine view of the broad bay of *Castell 'a Mare*. (For a more detailed account of the antiquities of Segesta, see Swinburne's *Travels*, vol. ii. pp. 231—235; Smyth's *Sicily*, pp. 67, 68; and especially *Serra di Falco*, *Antichità della Sicilia*, vol. i. pt. ii.) Ancient writers mention the existence in the territory of Segesta of thermal springs or waters, which seem to have enjoyed considerable reputation (*τὰ Σεπυὰ ἑστέρα Ἀγχεστῆα*, Strab. vi. p. 275; *Σεπυὰ Λουτρὰ τὰ Ἐγχεστῆα*, Diod. iv. 23). These are apparently the sulphureous springs at a spot called *Calametti*, about a mile to the N. of the site of the ancient city. (Fazell. *Sic.* vii. 4.) They are mentioned in the Itinerary as "Aquae Segestanae sive Pincianae" (*Itin. Ant.* p. 91); but the origin of the latter name is wholly unknown.

The coins of Segesta have the figure of a dog on the reverse, which evidently alludes to the fable of the river-god Crimisus, the mythical parent of Aegestus, having assumed that form. (Serr. *ad Aen.* i. 550, v. 30; Eckhel, vol. i. 234.) The older coins (as already observed) uniformly write the name ΣΕΓΕΣΤΑ, as on the one annexed: those of later date, which are ofopper only, bear the legend ΕΓΕΣΤΑΙΩΝ (Eckhel, *l. c.* p. 236). [E. H. B.]

COIN OF SEGESTA.

SEGESTA (*Sestri*), a town on the coast of Liguria, mentioned by Pliny, in describing the coast of that country from Genua to the Macra. (Plin. iii. 5. s. 7.) He calls it Segesta Tigulliorum; so that it seems to have belonged to a tribe of the name of the Tigullii, and a town named Tigullia is mentioned by him just before. Segesta is commonly identified with *Sestri* (called *Sestri di Levante* to distinguish it from another place of the name), a considerable town about 30 miles from Genoa, while Tigullia is probably represented by *Tregoso*, a village about 2 miles further inland, where there are considerable Roman remains. Some of the MSS. of Pliny, indeed, have "Tigullia intus, et Segesta Tigulliorum," which would seem to point clearly to this position of the two places. (Sillig, *ad loc.*) It is probable, also, that the Tegulata of the Itineraries (*Itin. Ant.* p. 293) is identical with the Tigullia of Pliny. [E. H. B.]

SEGESTA, or SEGESTICA. [SISICIA.]

SEGIDA (Σήγδα, Strabo iii. p. 162). 1. A

town of the Arevaci in Hispania Tarraconensis. According to Appian, who calls it Σεγίδην (vi. 44), it belonged to the tribe of the Belli, and was 40 stadia in circumference. Stephanus B. (s. v.) calls it Σεγίδην, and makes it a town of the Celtiberians, of whom indeed the Arevaci and Belli were only subordinate tribes. Segida was the occasion of the first Celtiberian War (Appian, *l. c.*), and was probably the same place called Segestica by Livy (xxxiv. 17).

2. A town of Hispania Baetica, with the surname Restituta Julia. (Plin. iii. 1. s. 3.) [T. H. D.]

SEGISA (Σήγισα, Ptol. ii. 6. § 61), a town of the Bastitani in Hispania Tarraconensis, perhaps the modern *Sehgin*. [T. H. D.]

SEGI'SAMA and SEGISAMA JU'LLA (Σήγισαμα 'Ιουλλᾶ, Ptol. ii. 6. § 50), a town of Hispania Tarraconensis. We find the inhabitants mentioned by Pliny as Segisamajulienses (iii. 3. s. 4). Ptolemy ascribes the town to the Vaccae, but Pliny to the Turmodigi, whence we may probably conclude that it lay on the borders of both those tribes. The latter author expressly distinguishes it from Segisamo. [T. H. D.]

SEGISAMO. [SEGESAMA.]

SEGISAMUNCLUM. [SEGASAMUNCLUM.]

SEGNI, a German tribe in Belgium, mentioned by Caesar (*B. G.* vi. 32) with the Condrosi, and placed between the Eburones and the Treviri. In *B. G.* ii. 4 Caesar speaks of the Condrosi, Eburones, Caernesi, and Paemani, "qui uno nomine Germani appellantur;" but he does not name the Segni in that passage. There is still a place named *Snei* or *Signei* near Condros, on the borders of Namur; and this may indicate the position of the Segni. [G. L.]

SEGOBODIUM, in Gallia, placed in the Table on a road from Andomatunum (*Langres*) to Vesontio (*Besançon*). The *Itin.* gives the same road, but omits Segobodium. D'Anville supposes Segobodium to be *Seveux*, which is on the *Saône*, and in the direction between *Besançon* and *Langres*. [G. L.]

SEGOBRIG'A (Σεγόβριγ'α, Ptol. ii. 6. § 58).

1. The capital of the Celtiberi in Hispania Tarraconensis. (Plin. iii. 3. s. 4.) It lay SW. of Caesar-Augusta, and in the jurisdiction of Carthago Nova. (Plin. *l. c.*) The surrounding district was celebrated for its tale or selenite. (Id. xxxvi. 22. s. 45.) It must have been in the neighbourhood of *Priego*, where, near *Pennaescrite*, considerable ruins are still to be found. (Flores, *Esp. Sagr.* vii. p. 61.) For coins see Sestini, i. p. 193. (Cf. Strab. iii. p. 162; Front. *Strat.* iii. 10. 6.)

2. A town of the Edetani in Hispania Tarraconensis, known only from inscriptions and coins, the modern *Segorbe*. (Flores, *Esp. Sagr.* v. p. 21, viii. p. 97, and *Med.* pp. 573, 650; Mionnet, i. p. 50, and Supp. i. p. 102.) [T. H. D.]

COIN OF SEGOBRIGA.

SEGOBRIGIL [MASSILIA, p. 290.]

SEGODUNUM (Σεγόδουνον). Ptolemy (ii. 7. § 21) calls Segodunum the chief town of the Ruteni [RUTENI], a Gallic people west of the Rhone, in the Aquitania of Ptolemy. In some editions of Ptolemy the reading is Segodunum or Etodunum. In the Table the name is Segodum, which is probably a corrupt form; and it has the mark of a chief town. It was afterwards called Civitas Rutenorum, whence the modern name *Rodez*, on the *Aceyron*, in the department of *Aceyron*, of which it is the chief town. [G. L.]

SEGODUNUM (Σεγόδουνον), a town of southern Germany, probably in the country of the Hermunduri, is, according to some, the modern *Würzburg*. (Ptol. ii. 11. § 29; comp. Wilhelm, *Germanien*, p. 209.) [L. S.]

SEGONTIA. 1. A town of the Celtiberi in Hispania Tarraconensis, 16 miles from Caesaraugusta. (*Itin. Ant.* pp. 437, 439.) Most probably identical with the Seguntia of Livy (xxxiv. 19). The modern *Rueda*, according to Lapie.

2. (Σεγοντία Παδοῦκα, Ptol. ii. 6. § 66), a town of the Barduli in Hispania Tarraconensis. [T. H. D.]

SEGONTIACI, a people in the S. part of Britannia, in *Hampshire*. (Camden, pp. 84, 146; *Caes. B. G. v.* 21; Orelli, *Inscr.* 2013.) [T. H. D.]

SEGONTIUM, a city in the NW. part of Britannia Secunda, whence there was a road to Deva. (*Itin. Ant.* p. 482.) It is the modern *Carnarvon*, the little river by which is still called *Segont*. (Camden, p. 798.) It is called Seguntio by the Geogr. Rav. (v. 31). [T. H. D.]

SEGORA, in Gallia, appears in the Table on a road from Portus Namnetum (*Nantes*) to Limunum, or Limonum (*Poitiers*). D'Anville supposes that Segora is *Bressuire*, which is on the road from *Nantes* to *Poitiers*. [G. L.]

SEGOSA, in Gallia, is placed by the Antonine Itin. on a road from Aquae Tarbellicae (*Dax*) to Burdigala (*Bordeaux*). The first station from Aquae Tarbellicae is Mosconum, or Mostonium, the site of which is unknown. The next is Segosa, which D'Anville fixes at a place named *Escousseé* or *Es-coursé*. But he observes that the distance, 28 Gallic leagues, between Aquae and Segosa is less than the distance in the Itin. [G. L.]

SEGOVELLAUNI. [SEGALLAUNI.]

SEGOVIA (Σεγοῦβια, Ptol. ii. 6. § 56). 1. A town of the Arevaci in Hispania Tarraconensis, on the road from Emerita to Caesaraugusta. (*Itin. Ant.* p. 435; Plin. iii. 3. s. 4; Flor. iii. 22.) It still exists under the ancient name. For coins see Florez (*Med.* ii. p. 577), Mionnet (i. p. 51, and Suppl. i. p. 104), and Sestini (p. 196).

2. A town of Hispania Baetica, on the river Siliense. (Hirt. *B. A.* 57.) In the neighbourhood of Secili or the modern *Perabad*. [T. H. D.]

SEGUSIANI (Σεγούσιανοί or Σεγούσιανοί), a Gallic people. When Caesar (B. C. 58) was leading against the Helvetii the troops which he had raised in North Italy, he crossed the Alps and reached the territory of the Allobroges. From the territory of the Allobroges he crossed the Rhone into the country of the Segusiani: "Hi sunt extra Provinciam trans Rhodanum primi." (*B. G. i.* 10.) He therefore places them in the angle between the *Rhone* and the *Saône*, for he was following the Helvetii, who had not yet crossed the *Saône*. In another place (vii. 64) he speaks of the Aedui and Segusiani as bordering on the Provincia, and the Segusiani were dependents of the Aedui (vii. 75). Strabo (iv. p. 186) places the

Segusiani between the Rhodanus and the Dubis (*Doubs*), on which D'Anville remarks that he ought to have placed them between the Rhone and the *Loire*. But part of the Segusiani at least were west of the Rhone in Caesar's time, as he plainly tells us, and therefore some of them were between the Rhone and the *Doubs*, though this is a very inaccurate way of fixing their position, for the *Doubs* ran through the territory of the Sequani. Lugdunum was in the country of the Segusiani. [LUGDUNUM.] Pliny gives to the Segusiani the name of Liberi (iv. 18).

In Cicero's oration *Pro P. Quintio* (c. 25), a Gallic people named Sebaguinos, Sebaginnos, with several other variations, is mentioned. The reading "Sebsiaunos" is a correction of Lambinus. Baister (Orelli's Cicero, 2nd ed.) has written "Segusianos" in this passage of Cicero on his own authority; but there is no name Segusiani in Gallia. It is probable that the true reading is "Segusianos." Ptolemy (ii. 8. § 14) names Rodumna (*Roanne*) and Forum Segusianorum as the towns of the Segusiani, which shows that the Segusiani in his time extended to the *Loire* [RODUMNA]; and the greater part of their territory was probably west of the *Rhone* and *Saône*. Mionnet, quoted by Ukert (*Gallien*, p. 320), has a medal which he supposes to belong to the Segusiani. [G. L.]

SEGUSIO (Σεγούσιον: *Eth.* Σεγούσιον, Segusinus: *Susa*), a city of Gallia Transpadana, situated at the foot of the Cottian Alps, in the valley of the Duria (*Dora Riparia*), at the distance of 35 miles from Augusta Taurinorum (*Turin*). It was the capital of the Gaulish king or chieftain Cottius, from whom the Alpes Cottiae derived their name, and who became, in the reign of Augustus, a tributary or dependent ally of the Roman Empire. Hence, when the other Alpine tribes were reduced to subjection by Augustus, Cottius retained the government of his territories, with the title of Praefectus, and was able to transmit them to his son, M. Julius Cottius, upon whom the emperor Claudius even conferred the title of king. It was not till after the death of the younger Cottius, in the reign of Nero, that this district was incorporated into the Roman Empire, and Segusio became a Roman municipal town. (Strab. iv. pp. 179, 204; Plin. iii. 20. s. 24; Amm. Marc. xv. 10.)

It was probably from an early period the chief town in this part of the Alps and the capital of the surrounding district. It is situated just at the junction of the route leading from the *Mont Genève* down the valley of the *Dora* with that which crosses the *Mont Cenis*; both these passages were among the natural passes of the Alps, and were doubtless in use from a very early period, though the latter seems to have been unaccountably neglected by the Romans. The road also that was in most frequent use in the latter ages of the Republic and the early days of the Empire to arrive at the pass of the Cottian Alps or *Mont Genève*, was not that by Segusio up the valley of the Duria, but one which ascended the valley of *Fenestrelles* to Ocellum (*Uzseau*), and from thence crossed the *Col de Seestrières* to Scingomagus (at or near *Cesanne*), at the foot of the actual pass of the *Genève*. This was the route taken by Caesar in B. C. 58, and appears to have still been the one most usual in the days of Strabo (*Caes. B. G. i.* 10; Strab. iv. p. 179); but at a later period the road by Segusio seems to have come into general use, and is that given in the Itineraries. (*Itin. Ant.* pp. 341,

357.) Of Segusio as a municipal town we hear little; but it is mentioned as such both by Pliny and Ptolemy, and its continued existence is proved by inscriptions as well as the Itineraries; and we learn that it continued to be a considerable town, and a military post of importance, as commanding the passes of the Alps, until long after the fall of the Western Empire. (Plin. iii. 17. s. 21; Ptol. iii. 1. § 40; Gruter, *Inscr.* p. 111. 1; Orell. *Inscr.* 1690, 3803; *Amm. Marc.* xv. 10; *Itin. Hier.* p. 556; P. *Disc. Hist. Lang.* iii. 8; Greg. *Tur.* iv. 39.)

Ammianus tells us that the tomb of Cottius was still visible at Segusio in his time, and was the object of much honour and veneration among the inhabitants (*Amm. l. c.*). A triumphal arch erected by him in honour of Augustus is still extant at *Susa*; it enumerates the names of the "Civitates" which were subject to his rule, and which were fourteen in number, though Pliny speaks of the "Cottianae civitates xii." (Plin. iii. 20. s. 24; Orell. *Inscr.* 626.) All these are, however, mere obscure mountain tribes, and the names of most of them entirely unknown. His dominions extended, according to Strabo, across the mountains as far as Ebrodunum in the land of the Caturiges (Strab. iv. p. 179); and this is confirmed by the inscription which enumerates the Caturiges and Medulli among the tribes subject to his authority. These are probably the two omitted by Pliny. Oculum, in the valley of the *Clusone*, was comprised in the territory of Cottius, while its limit towards the Taurini was marked by the station Ad Fines, placed by the Itineraries on the road to Augusta Taurinorum. But the distances given in the Itineraries are incorrect, and at variance with one another. Ad Fines may probably be placed at or near *Avigliana*, 15 miles from *Turin*, and 20 from *Susa*. The mountain tribes called by Pliny the "Cottianae civitates," when united with the Roman government, at first received only the Latin franchise (Plin. *l. c.*); but as Segusio became a Roman municipium, it must have received the full franchise. [E. H. B.]

SEGUSTERO, a name which occurs in the Antonine Itin. and in the Table, is a town of Gallia Narbonensis, and the name is preserved in *Sisteron*, the chief town of an arrondissement in the department of *Basses Alpes*, on the right bank of the *Durance*. Roman remains have been found at *Sisteron*. The name in the Notit. Prov. Galliae is Civitas Segestriorum. It was afterwards called Segesterium, and Sistericum, whence the modern name comes. (D'Anville, *Notice, &c.*) [G. L.]

SEIR, M. (Σηρ, LXX. Σείρα, Σήρπον, Joseph). "The land of Seir" is equivalent to "the country of Edom." (*Gen.* xxxii. 3.) Mount Seir was the dwelling of Esau and his posterity (xxxvi. 8, 9; *Deut.* ii. 4, 5), in the possession of which they were not to be disturbed. (*Josh.* xxiv. 4.) Its general situation is defined in *Deuteronomy* (i. 2) between Horeb and Kadesh Barnea. The district must have been extensive, for in their retrograde movement from Kadesh, which was in Seir (i. 44), the Israelites compassed Mount Seir many days (ii. 1, 3). The original inhabitants of Mount Seir were the Horims; "but the children of Esau succeeded them, when they had destroyed them from before them, and dwelt in their stead" (ii. 12, 22; comp. *Gen.* xiv. 6). It obviously derived its name from "Seir the Horite" (xxxvi. 20, 21), and not, as Josephus erroneously supposes, from the Hebrew שִׁירָה = hirsutus. (*Ant.* i. 20. § 3.) The range bordering *Wady Araba* is marked *M. Shehr* in some modern maps,

but without sufficient authority for the name. Dr. Wilson confines the name to the eastern side of the *Araba*, from a little north of Petra to the *Gulf of Akabah*, which range he names *Jebel-es-Sherah* (*Lands of the Bible*, vol. i. pp. 289, 290, 337, 340); but since Kadesh was in Seir, it is obvious that this name must have extended much more widely, and on both sides the *Araba*. Mr. Rowlands heard the name *Es-Serr* given to an elevated plain to the east of Kadesh, which must, he thinks, be the Seir alluded to in *Deut.* i. 44, where the Israelites were chased before the Amalekites. (*Williams's Holy City*, vol. i. appendix, p. 465.) [G. W.]

SEIRAE. [PSOPHIS.]

SELACHUSA, an island lying off the Argolic promontory of Speiraëum, mentioned only by Pliny (iv. 12. s. 57).

SELAH. [PETRA.]

SELAMBINA (Σηλαμβίνα, Ptol. ii. 4. § 7), a town on the coast of Hispania Baetica between Sex and Abdera. (Plin. iii. 1. s. 3.) Florez (*Exp. Sagr.* xii. pp. 3, 6) identifies it with *Calabreña*, but, according to Ukert (ii. p. i. p. 351), it is to be sought in the neighbourhood of *Sorbtian*. [T. H. D.]

SELAS. [MESSENA, p. 342, b.]

SELASIA. [SELLASIA.]

SELEMNUS. [ACHALA, p. 13, b. No. 10.]

SELENTIS or SELENITIS (Σελεντίς or Σελενίτις) a district in the south-west part of Cilicia, extending along the coast, but also some distance in the interior; it derived its name from the town of Selinus. (Ptol. v. 8. §§ 2, 5.) [L. S.]

SELENU'SIAE (Σεληνουσία) or SELENNUTES two lakes formed by the sea, north of the mouth of the Caystrus, and not far from the temple of the Ephesian Artemis. These two lakes, which communicated with each other, were extremely rich in fish, and formed part of the revenue of the temple of Artemis, though they were on several occasions wrested from it. (Strab. xiv. p. 642; Plin. v. 31.) The name of the lakes, derived from Selene, the moon-goddess, or Artemis, probably arose from their connection with the great goddess of Ephesus. (Comp. Chaudier's *Travels in Asia Minor*, vol. i. p. 162.) [L. S.]

SELEUCEIA or SELEUCIA, two towns in Syria.

1. AD BELUM (Σελεύκεια πρὸς Βήλαρ), sometimes called SELEUCOBELUS, situated in the district of Cassiotis, placed by Ptolemy in long. 69° 30', lat. 34° 45'. The Belus was a tributary of the Orontes, running into it from the W., and since, as Pococke remarks, Seleucia was exactly in the same latitude as Paltos, it must have been due E. of it. Now *Boldo*, the ancient Paltos, lies two hours S. of *Jebileh*, ancient Gahala, on the coast. Seleucia ad Belum must be looked for 1° 10' to the E., according to Ptolemy's reckoning, who places Paltos in long. 63° 20', lat. 34° 45'. Modern conjecture has identified it with *Shogh* and *Diwritgi*, which is placed 30 miles E. of Antioch. (Ptol. v. 15. § 16; Pococke, *Syria*, vol. ii. p. 199.) Pliny mentions it with another not elsewhere recognised, in the interior of Syria: "Seleucias praeter jam dictam (i. e. Pieria), duas, quae ad Euphratem, et quae ad Belum vocantur" (v. 23. § 19).

2. PIERIA (Σελεύκεια Πιερία; *Eth.* Σελευκιάς), a maritime city of Syria, placed by Ptolemy in long. 68° 36', lat. 35° 26', between Rhossus and the mouths of the Orontes. Its ancient name, according to Strabo, was "Rivers of Water" ("Ῥεῖς ποταμοί"), a strong city, called Free by Pompey (Strab. xvi. 2. § 8). Its position is fully described by Polybius.

It was situated on the sea between Cilicia and Phœnicie, over against a large mountain called Coryphaeum, the base of which was washed on its W. side by the sea, towards the E. it dominated the districts of Antioch and Seleucia. Seleucia lay on the S. of this mountain, separated from it by a deep and rugged valley. The city extended to the sea through broken ground, but was surrounded for the most part by precipitous and abrupt rocks. On the side towards the sea lay the factory (*τὸ ἐμπορεῖον*) and suburb, on the level ground, strongly fortified. The whole hollow (*κίτρος*) of the city was likewise strongly fortified with fine walls, and temples, and buildings. It had one approach on the sea side, by an artificial road in steps (*καλιμακωτήρ*), distributed into frequent and continuous slopes (cuttings?—*ἐγκλίμασι*) and curves (tunnels?—*σκαυήμασι*). The *embouchure* of the Orontes was not far distant—40 stadia, according to Strabo (xvi. p. 750). It was built by Seleucus Nicator (died B. C. 280), and was of great importance, in a military view, during the wars between the Seleucidae and the Ptolemies. It was taken by Ptolemy Evergetes on his expedition into Syria, and held by an Egyptian garrison until the time of Antiochus the Great, who, at the instigation of Apollonphanes, a Seleucian, resolved to recover it from Ptolemy Philopator (cir. B. C. 220), in order to remove the disgrace of an Egyptian garrison in the heart of Syria, and to obviate the danger which it threatened to his operations in Coele-Syria, being, as it was, a principal city, and well nigh, so to speak, the proper home of the Syrian power. Having sent the fleet against it, under the admiral Diognetus, he himself marched with his army from Apameia, and encamped near the Hippodrome, 5 stadia from the city. Having in vain attempted to win it by bribery, he divided his forces into three parts, of which one under Zenxis made the assault near the gate of Antioch, a second under Hermogenes near the temple of the Dioscuri, the third under Arlys and Diognetus by the arsenal and suburb, which was first carried, whereupon the garrison capitulated (Polyb. v. 58—60). It was afterwards a place of arms in the further prosecution of the war against Ptolemy (66). The Mount Coryphaeum of Polybius is the Pieria of Ptolemy and Strabo, from which the town derived its distinguishing appellation. Strabo mentions, from Posidonius, that a kind of asphaltic soil was quarried in this place, which, when spread over the roots of the vine, acted as a preservative against blight (vii. p. 316.) He calls it the first city of the Syrians, from Cilicia, and states its distance from Soli, in a straight course, a little less than 1000 stadia (xiv. p. 676). It was one of the four cities of the Tetrapolis, which was a synonym for the district of Seleucia, the others being Antioch, Apameia, and Laodiceia, which were called sister cities, being all founded by Seleucus Nicator, and called by the names respectively of himself, his father, his wife, and his mother-in-law; that bearing his father's name being the largest, that bearing his own, the strongest. (Strab. xvi. p. 749.) The auguries attending its foundation are mentioned by John Malalas (*Chronographia*, lib. viii. p. 254). It became the port of Antioch, and there it was that St. Paul and Barnabas embarked for Cyprus, on their first mission to Asia Minor (*Acts*, xiii. 4), the Orontes never having been navigable even as far as Antioch for any but vessels of light draught. Pliny calls it "Seleucia libera Pieria," and describes it as situated on a promontory (v. 21) clxxv. M. P. distant from Zeugma on the Euphrates '12). He de-

signates the Coryphaeum of Polybius, the Pieria of Strabo, Mount Cassius, a name also extended by Strabo to the mountains about Seleucia, where he speaks of the Antiocheans celebrating a feast to Triptolemus as a demigod, in Mount Cassius around Seleucia (xvi. p. 750). The ruins of the site have been fully explored and described in modern times, first by Pococke (*Observations on Syria*, chap. xxii. p. 182, &c.), who identified many points noticed by Polybius, and subsequently by Col. Chesney (*Journal of the R. Geog. Society*, vol. viii. p. 228, &c.). The mountain range noticed by Polybius is now called *Jebel Musa*; and the hill on which the city stood appears to be the "low mountain, called *Bin-Kilseh*," or the 1000 churches. Part of the site of the town was occupied, according to Pococke, by the village of *Kapse*, situated about a mile from the sea. The masonry of the once magnificent port of Seleucia is still in so good a state that it merely requires trifling repairs in some places, and to be cleaned out; a project contemplated, but not executed, by one Ali Pasha, when governor of Aleppo. The plan of the port, with its walls and basins, its piers, floodgates, and defences, can be distinctly traced. The walls of the suburb, with its agora, the double line of defence of the inner city, comprehending in their circumference about 4 miles, which is filled with ruins of houses; its castellated citadel on the summit of the hill, the gate of Antioch on the SE. of the site, with its pilasters and towers, near which is a double row of marble columns; large remains of two temples, one of which was of the Corinthian order; the amphitheatre, near which Antiochus encamped, before his assault upon the city, with twenty-four tiers of benches still to be traced; the numerous rocky excavations of the necropolis, with the sarcophagi, always of good workmanship, now broken and scattered about in all directions, all attest the ancient importance of the city, and the fidelity of the historian who has described it. Most remarkable of all in this view is the important engineering work, to which Polybius alludes as the only communication between the city and sea, fully described by Col. Chesney, as the most striking of the interesting remains of Seleucia. It is a very extensive excavation, cut through the solid rock from the NE. extremity of the town almost to the sea, part of which is a deep hollow way, and the remainder regular tunnels, between 20 and 30 feet wide, and as many high, executed with great skill and considerable labour. From its eastern to its western extremity is a total length of 1088 yards, the greater part of which is traversed by an aqueduct carried along the face of the rock, considerably above the level of the road. Its termination is rough and very imperfect, about 30 feet above the level of the sea; and while the bottom of the rest of the excavation is tolerably regular, in this portion it is impeded by large masses of rock lying across it at intervals: which would imply either that it was never completed, or that it was finished in this part with masonry, which may have been carried off for building purposes. It is, perhaps, in this part that the stairs mentioned by Polybius may have been situated, in order to form a communication with the sea. There can be no doubt whatever that this excavation is the passage mentioned by him as the sole communication between the city and the sea; and it is strange that any question should have arisen concerning its design. A rough plan of the site is given by Pococke (p. 183); but a much more

carefully executed plan, with drawings and sections of the tunnels, &c., has lately been published by Captain Allen, who surveyed the site of the harbour, but not of the town, in 1850. (*The Dead Sea, &c.*, Map at end of vol. i., and vol. ii. pp. 208—230.) [G. W.]

COIN OF SELEUCEIA IN SYRIA.

SELEUCEIA or **SELEUCIA** (Σελεύκεια). 1. A town near the northern frontier of Pisidia, surnamed Sidera (ἡ Σιδερά, Ptol. v. 5. § 4; Hierocl. p. 673), probably on account of iron-works in its vicinity. There are some coins of this place with the image of the Asiatic divinity Men, who was worshipped at Antioch, and bearing the inscription ΚΛΑΥΔΙΟΥ ΣΕΛΕΥΚΕΩΝ, which might lead to the idea that the place was restored by the emperor Claudius. (Sestini, *Mon. Vet.* p. 96.) Its site is now occupied by the town of *Ejerdür*.

2. A town in Pamphylia between Side and the mouth of the river Eurymedon, at a distance of 80 stadia from Side, and at some distance from the sea. (*Stadiasm. Mar. Mag.* § 216.)

3. An important town of Cilicia, in a fertile plain on the western bank of the Calycadnus, a few miles above its mouth, was founded by Seleucus I., surnamed Nicator. A town or towns, however, had previously existed on the spot under the names of Olbia and Hyria, and Seleucus seems to have only extended and united them in one town under the name Seleucia. The inhabitants of the neighbouring Holmi were at the same time transferred to the new town, which was well built, and in a style very different from that of other Cilician and Pamphylian cities. (Steph. B. s. v.; Strab. xiv. p. 670.) In situation, climate, and the richness of its productions, it rivalled the neighbouring Tarsus, and it was much frequented on account of the annual celebration of the Olympia, and on account of the oracle of Apollo. (Zosim. i. 57; Basil. *Vita S. Theclae*, i. p. 275, *Orat.* xxvii. p. 148.) Pliny (v. 27) states that it was surnamed Tracheotis; and some ecclesiastical historians, speaking of a council held there, call the town simply Trachea (Sozom. iv. 16; Socrat. ii. 39; comp. Ptol. v. 8. § 5; Amm. Marc. xiv. 25; Oros. vii. 12.) The town still exists under the name of *Selefsch*, and its ancient remains are scattered over a large extent of ground on the west side of the Calycadnus. The chief remains are those of a theatre, in the front of which there are considerable ruins, with porticoes and other large buildings: farther on are the ruins of a temple, which had been converted into a Christian church, and several large Corinthian columns. Ancient Seleucia, which appears to have remained a free city ever since the time of Augustus, remained in the same condition even after a great portion of Cilicia was given to Archelaus of Cappadocia, whence both imperial and autonomous coins of the place are found. Seleucia was the birthplace of several men of eminence, such as the peripatetic Athenaeus and Xenarchus, who flourished in the

reign of Augustus, and the sophist Alexander, who taught at Antioch, and was private secretary to the emperor M. Aurelius (Philostr. *Vit. Soph.* ii. 5.) According to some authorities, lastly, the emperor Trajan died at Seleucia (Eutrop. viii. 2, 16; Oros. l. c.), though others state that he died at Selinus.

COIN OF SELEUCEIA IN CILICIA.

4. Seleucia in Caria [TRALLIS.] [L. S.]

SELEUCEIA or **SELEUCIA** (Σελεύκεια, Polyb. v. 48; Strab. xi. p. 521; Ptol. v. 18. § 8), a large city near the right bank of the Tigris, which, to distinguish it from several other towns of the same name, is generally known in history by the title of Σελεύκεια ἐπὶ τῇ Τύγγῃ. (Strab. xvi. p. 738; Appian, *Syr.* 57.) It was built by Seleucus Nicator (Strab. l. c.; Plin. vi. 26. s. 30; Tacit. *Ann.* vi. 42; Joseph. *Ant. Jud.* xviii. 9. § 8; Amm. Marc. xxiii. 20), and appears to have been placed near the junction with the Tigris, of the great dyke which was carried across Mesopotamia from the Euphrates to the Tigris, and which bore the name of *Nahar Malcha* (the royal river). (Plin. l. c., and Isid. Char. p. 5.) Ptolemy states that the artificial river divided it into two parts (v. 18. § 8). On the other hand, Theophylact states that both rivers, the Tigris and Euphrates, surrounded it like a rampart—by the latter, in all probability, meaning the *Nahar Malcha* (v. 6). It was situated about 40 miles NE. of Babylon (according to Strabo, 300 stadia, and to the Tab. Peutinger., 44 M.P.). In form, its original structure is said to have resembled an eagle with its wings outspread. (Plin. l. c.) It was mainly constructed of materials brought from Babylon, and was one principal cause of the ruin of the elder city, as Ctesiphon was (some centuries later) of Seleucia itself. (Strab. xvi. p. 738.) It was placed in a district of great fertility, and is said, in its best days, to have had a population of 600,000 persons. (Plin. l. c.) Strabo adds, that it was even larger than Antiocheia Syriae,—at his time probably the greatest commercial entrepôt in the East, with the exception of Alexandria (xvi. p. 750). Even so late as the period of its destruction its population is still stated to have amounted to half a million. (Eutrop. v. 8; comp. Oros. viii. 5.) To its commercial importance it doubtless owed the free character of its local government, which appears to have been administered by means of a senate of 300 citizens. Polybius states that, on the overthrow of Molon, the Median rebels Antiochus and Hermeias descended on Seleucia, which had been previously taken by Molon, and, after punishing the people by torture and the infliction of a heavy fine, exiled the local magistracy, who were called *Adexianae*. (*Ἀδερύδαι*, Polyb. v. 54.) Their love of freedom and of independent government was, however, of longer duration. (Plin. l. c.; Tacit. *Ann.* vi. 42.)

Seleucia owed its ruin to the wars of the Romans with the Parthians and other eastern nations. It is first noticed in that between Crassus and Orodes (Dion Cass. xl. 20); but it would seem

that Crassus did not himself reach Seleuceia. On the advance of Trajan from Asia Minor, Seleuceia was taken by Erucius Clarus and Julius Alexander, and partially burnt to the ground (Dion Cass. lxxiii. 30); and a few years later it was still more completely destroyed by Cassius, the general of Lucius Verus, during the war with Volucius. (Dion Cass. lxxi. 2; Eutrop. v. 8; Capitol. Verus, c. 8.) When Severus, during the Parthian War, descended the Euphrates, he appears to have found Seleuceia and Babylon equally abandoned and desolate. (Dion Cass. lxxv. 9.) Still later, in his expedition to the East, Julian found the whole country round Seleuceia one vast marsh full of wild game, which his soldiers hunted. (Amm. Marc. xxiv. 5.) It would seem from the indistinct notices of some authors, that Seleuceia once bore the name of Coche. [COCHÉ.]

[V.]
SELEUCIS (Σελυκίς), a district of Syria, mentioned by Ptolemy, as containing the cities of Gephura, Gindarus, and Imma (v. 15. § 15). Strabo calls it the best of all the districts: it was also called Tetrapolis, on account of its four most important cities, for it had many. These four were, Antioch, Seleuceia in Pieria, Apameia, and Laodiceia (xvi. p. 749). It also comprehended, according to Strabo, four satrapies; and it is clear that he uses the name in a much wider sense than Ptolemy, who places the four cities of the tetrapolis of Strabo's Seleucia in so many separate districts; Antioch in Cassiotis, Apameia in Apamene, Laodiceia in Laodicene, while he only implies, but does not state, that Seleucia lies in Seleucia. [G. W.]

SELGE (Σίλγη: *Eth. Σελγέυς*), an important city in Pisidia, on the southern slope of Mount Taurus, at the part where the river Eurymedon forces its way through the mountains towards the south. The town was believed to be a Greek colony, for Strabo (xii. p. 520) states that it was founded by Lacedaemonians, but adds the somewhat unintelligible remark that previously it had been founded by Calchas (Comp. Polyb. v. 76; Steph. B. s. v.; Dion. Per. 858). The acropolis of Selge bore the name of Caebedium (Καεβέδιον; Polyb. l. c.). The district in which the town was situated was extremely fertile, producing abundance of oil and wine, but the town itself was difficult of access, being surrounded by precipices and beds of torrents flowing towards the Eurymedon and Cestrus, and requiring bridges to make them passable. In consequence of its excellent laws and political constitution, Selge rose to the rank of the most powerful and populous city of Pisidia, and at one time was able to send an army of 20,000 men into the field. Owing to these circumstances, and the valour of its inhabitants, for which they were regarded as worthy kinsmen of the Lacedaemonians, the Selgians were never subject to any foreign power, but remained in the enjoyment of their own freedom and independence. When Alexander the Great passed through Pisidia, the Selgians sent an embassy to him and gained his favour and friendship. (Arrian, *Anab.* i. 28.) At that time they were at war with the Telmessians. At the period when Achaëus had made himself master of Western Asia, the Selgians were at war with Pednelissus, which was besieged by them; and Achaëus, on the invitation of Pednelissus, sent a large force against Selge. After a long and vigorous siege, the Selgians, being betrayed and despairing of resisting Achaëus any longer, sent deputies to sue for peace, which was granted to them on the fol-

lowing terms: they agreed to pay immediately 400 talents, to restore the prisoners of Pednelissus, and after a time to pay 300 talents in addition. (Polyb. v. 72—77.) We now have for a long time no particulars about the history of Selge: in the fifth century of our era Zosimus (v. 15) calls it indeed a little town, but it was still strong enough to repel a body of Goths. It is strange that Pliny does not notice Selge, for we know from its coins that it was still a flourishing town in the time of Hadrian; and it is also mentioned in Ptolemy (v. 5. § 8) and Hierocles (p. 681). Independently of wine and oil, the country about Selge was rich in timber, and a variety of trees, among which the storax was much valued from its yielding a strong perfume. Selge was also celebrated for an ointment prepared from the iris root. (Strab. l. c.; Plin. xii. 55, xxi. 19; comp. Liv. xxxv. 13.) Sir C. Fellows (*Asia Minor*, p. 171, foll.) thinks that he has discovered the ruins of Selge about 10 miles to the north-east of the village of *Boçjak*. They are seen on a lofty promontory "now presenting magnificent wrecks of grandeur." "I rode," says Sir Charles, "at least 3 miles through a part of the city, which was one pile of temples, theatres, and buildings, vying with each other in splendour. . . . The material of these ruins had suffered much from the exposure to the elements, being grey with a lichen which has eaten into the marble, and entirely destroyed the surface and inscriptions; but the scale, the simple grandeur, and the uniform beauty of style bespoke its date to be the early Greek. The sculptured cornices frequently contain groups of figures fighting, wearing helmets and body-armour, with shields and long spears; from the ill-proportioned figures and general appearance, they must rank in date with the Aegina marbles. The ruins are so thickly strewn, that little cultivation is practicable; but in the areas of theatres, cellas of temples, and any space where a plough can be used, the wheat is springing up. The general style of the temples is Corinthian, but not so florid as in less ancient towns. The tombs are scattered for a mile from the town, and are of many kinds, some cut in chambers in face of the rock, others sarcophagi of the heaviest form; they have had inscriptions, and the ornaments are almost all martial; several seats remain among the tombs. I can scarcely guess the number of temples or columned buildings in the town, but I certainly traced fifty or sixty. . . . Although apparently unnecessary for defence, the town has had strong walls, partly built with large stones in the Cyclopean mode. . . . I never conceived so high an idea of the works of the ancients as from my visit to this place, standing as it does in a situation, as it were, above the world." It is to be regretted that it was impossible by means of inscriptions or coins to identify this place with the ancient Selge more satisfactorily. (Comp. Von Hammer, in the *Wiener Jahrbücher*, vol. cxi. p. 92.) [L. S.]

COIN OF SELGE.

SELGOVAE (Σελγοῦσαι, Ptol. ii. 3. § 8), a people on the SW. coast of Britannia Barbara, in the E. part of *Galloway* and in *Dumfries-shire*. Camden (p. 1194) derives the name of *Solway* from them. [T. H. D.]

SELINUS (Σελινούς). 1. A village in the north of Laconia, described by Pausanias as 20 stadia from Geronthrae; but as Pausanias seems not to have visited this part of Laconia, the distances may not be correct. Leake, therefore, places Selinus at the village of *Kosmas*, which lies further north of Geronthrae than 20 stadia, but where there are remains of ancient tombs. (Paus. iii. 22. § 8; Leake, *Peloponnesiaca*, p. 363; Boblaye, *Recherches*, &c. p. 97; Curtius, *Peloponnesos*, vol. ii. p. 304.)

2. A river in the Triphylian Elis, near Scillus. [SCILLUS.]

3. A river in Achaia. [ACHAIA. p. 13. b. No. 6.]

SELINUS (Σελινός; *Ἑθ. Σελινούτιος*, Selinuntius: Ru. at *Torre dei Pulci*), one of the most important of the Greek colonies in Sicily, situated on the SW. coast of that island, at the mouth of the small river of the same name, and 4 miles W. of that of the *Hypsas* (*Belici*). It was founded, as we learn from Thucydides, by a colony from the Sicilian city of Megara, or Megara Hyblaea, under the conduct of a leader named Pammilus, about 100 years after the settlement of that city, with the addition of a fresh body of colonists from the parent city of Megara in Greece. (Thuc. vi. 4. vii. 57; Scymn. Ch. 292; Strab. vi. p. 272.) The date of its foundation cannot be precisely fixed, as Thucydides indicates it only by reference to that of the Sicilian Megara, which is itself not accurately known, but it may be placed about B. C. 628. Diodorus indeed would place it 22 years earlier, or B. C. 650, and Hieronymus still further back, B. C. 654; but the date given by Thucydides, which is probably entitled to the most confidence, is incompatible with this earlier epoch. (Thuc. vi. 4; Diod. xiii. 59; Hieron. *Chron.* ad ann. 1362; Clinton, *Fast. Hell.* vol. i. p. 208.) The name is supposed to have been derived from the quantities of wild parsley (*σελινός*) which grew on the spot; and for the same reason a leaf of this parsley was adopted as the symbol of their coins.

Selinus was the most westerly of the Greek colonies in Sicily, and for this reason was early brought into contact and collision with the Carthaginians and the barbarians in the W. and NW. of the island. The former people, however, do not at first seem to have offered any obstacle to their progress; but as early as B. C. 580 we find the Selinuntines engaged in hostilities with the people of Segesta (a non-Hellenic city), whose territory bordered on their own. (Diod. v. 9.) The arrival of a body of emigrants from Rhodes and Cnidus who subsequently founded Lipara, and who lent their assistance to the Segestans, for a time secured the victory to that people; but disputes and hostilities seem to have been of frequent occurrence between the two cities, and it is probable that in B. C. 454, when Diodorus speaks of the Segestans as being at war with the *Lilybaeans* (xi. 86), that the Selinuntines are the people really meant. [LILYBAEUM.] The river Mazarus, which at that time appears to have formed the boundary between the two states, was only about 15 miles W. of Selinus; and it is certain that at a somewhat later period the territory of Selinus extended to its banks, and that that city had a fort

and emporium at its mouth. (Diod. xiii. 54.) On the other side its territory certainly extended as far as the *Halycus* or *Saleo*, at the mouth of which it had founded the colony of Minoa, or Heracleia, as it was afterwards termed. (Herod. v. 46.) It is evident, therefore, that Selinus had early attained a great power and prosperity; but we have very little information as to its history. We learn, however, that, like most of the Sicilian cities, it had passed from an oligarchy to a despotism, and about B. C. 510 was subject to a despot named Peithagoras, from whom the citizens were freed by the assistance of the Spartan Euryleon, one of the companions of Dorieus; and thereupon Euryleon himself, for a short time, seized on the vacant sovereignty, but was speedily overthrown and put to death by the Selinuntines. (Herod. v. 46.) We are ignorant of the causes which led the Selinuntines to abandon the cause of the other Greeks, and take part with the Carthaginians during the great expedition of Hamilcar, B. C. 480; but we learn that they had even promised to send a contingent to the Carthaginian army, which, however did not arrive till after its defeat. (Diod. xi. 21, xiii. 55.) The Selinuntines are next mentioned in B. C. 466, as co-operating with the other free cities of Sicily in assisting the Syracusans to expel Thrasybulus (Id. xi. 68); and there is every reason to suppose that they fully shared in the prosperity of the half century that followed, a period of tranquillity and opulence for most of the Greek cities in Sicily. Thucydides speaks of Selinus just before the Athenian expedition as a powerful and wealthy city, possessing great resources for war both by land and sea, and having large stores of wealth accumulated in its temples. (Thuc. vi. 20.) Diodorus also represents it at the time of the Carthaginian invasion, as having enjoyed a long period of tranquillity, and possessing a numerous population. (Diod. xiii. 55.)

In B. C. 416, a renewal of the old disputes between Selinus and Segesta became the occasion of the great Athenian expedition to Sicily. The Selinuntines were the first to call in the powerful aid of Syracuse, and thus for a time obtained the complete advantage over their enemies, whom they were able to blockade both by sea and land; but in this extremity the Segestans had recourse to the assistance of Athens. (Thuc. vi. 6; Diod. xii. 82.) Though the Athenians do not appear to have taken any measures for the immediate relief of Segesta, it is probable that the Selinuntines and Syracusans withdrew their forces at once, as we hear no more of their operations against Segesta. Nor does Selinus bear any important part in the war of which it was the immediate occasion. Nicias indeed proposed, when the expedition first arrived in Sicily (B. C. 413), that they should proceed at once to Selinus and compel that city to submit on moderate terms (Thuc. vi. 47); but this advice being overruled, the efforts of the armament were directed against Syracuse, and the Selinuntines in consequence bore but a secondary part in the subsequent operations. They are, however, mentioned on several occasions as furnishing auxiliaries to the Syracusans; and it was at Selinus that the large Peloponnesian force sent to the support of Gylippus landed in the spring of 413, having been driven over to the coast of Africa by a tempest. (Thuc. vii. 50, 58; Diod. xiii. 12.)

The defeat of the Athenian armament left the Segestans apparently at the mercy of their rivals; they in vain attempted to disarm the hostility of the

Selinuntines by ceding without further contest the frontier district which had been the original subject of dispute. But the Selinuntines were not satisfied with this concession, and continued to press them with fresh aggressions, for protection against which they sought assistance from Carthage. This was, after some hesitation, accorded them, and a small force sent over at once, with the assistance of which the Segestans were able to defeat the Selinuntines in a battle. (Diod. xiii. 43, 44.) But not content with this, the Carthaginians in the following spring (B. C. 409) sent over a vast army amounting, according to the lowest estimate, to 100,000 men, with which Hannibal (the grandson of Hamilcar that was killed at Himera) landed at Lilybaeum, and from thence marched direct to Selinus. The Selinuntines were wholly unprepared to resist such a force; so little indeed had they expected it that the fortifications of their city were in many places out of repair, and the auxiliary force which had been promised by Syracuse as well as by Agrigentum and Gela, was not yet ready, and did not arrive in time. The Selinuntines, indeed, defended themselves with the courage of despair, and even after the walls were carried, continued the contest from house to house; but the overwhelming numbers of the enemy rendered all resistance hopeless; and after a siege of only ten days the city was taken, and the greater part of the defenders put to the sword. Of the citizens of Selinus we are told that 16,000 were slain, 5000 made prisoners, and 2600 under the command of Empedion escaped to Agrigentum. (Diod. xiii. 54—59.) Shortly after Hannibal destroyed the walls of the city, but gave permission to the surviving inhabitants to return and occupy it, as tributaries of Carthage, an arrangement which was confirmed by the treaty subsequently concluded between Dionysius and the Carthaginians, in B. C. 405. (Id. xiii. 59, 114.) In the interval a considerable number of the survivors and fugitives had been brought together by Hermocrates, and established within its walls. (Id. 63.)

There can be no doubt that a considerable part of the citizens of Selinus availed themselves of this permission, and that the city continued to subsist under the Carthaginian dominion; but a fatal blow had been given to its prosperity, which it undoubtedly never recovered. The Selinuntines are again mentioned in B. C. 397 as declaring in favour of Dionysius during his war with Carthage (Diod. xiv. 47); but both the city and territory were again given up to the Carthaginians by the peace of 383 (Id. xv. 17); and though Dionysius recovered possession of it by arms shortly before his death (Id. xv. 73), it is probable that it soon again lapsed under the dominion of Carthage. The Halycus, which was established as the eastern boundary of the Carthaginian dominion in Sicily by the treaty of 383, seems to have generally continued to be so recognised, notwithstanding temporary interruptions; and was again fixed as their limit by the treaty with Agathocles in B. C. 314. (Id. xix. 71.) This last treaty expressly stipulated that Selinus, as well as Heracleia and Himera, should continue subject to Carthage, *as before*. In B. C. 276, however, during the expedition of Pyrrhus to Sicily, the Selinuntines voluntarily submitted to that monarch, after the capture of Heracleia. (Id. xxii. 10. *Exc. H.* p. 498.) During the First Punic War we again find Selinus subject to Carthage, and

its territory was repeatedly the theatre of military operations between the contending powers. (Id. xxiii. 1, 21; Pol. i. 39.) But before the close of the war (about B. C. 250), when the Carthaginians were beginning to contract their operations, and confine themselves to the defence of as few points as possible, they removed all the inhabitants of Selinus to Lilybaeum and destroyed the city. (Diod. xxiv. 1. *Exc. H.* p. 506.)

It seems certain that it was never rebuilt. Pliny indeed, mentions its name ("Selinus oppidum," iii. 8. s. 14), as if it was still existing as a town in his time, but Strabo distinctly classes it with the cities which were wholly extinct; and Ptolemy, though he mentions the river Selinus, has no notice of a town of the name. (Strab. vi. p. 272; Ptol. iii. 4. § 5.) The THERMAE SELINUNTIAE, which derived their name from the ancient city, and seem to have been much frequented in the time of the Romans, were situated at a considerable distance from Selinus, being undoubtedly the same as those now existing at *Sciaccia*; they are sulphureous springs, still much valued for their medical properties, and dedicated, like most thermal waters in Sicily, to *St. Calogero*. At a later period they were called the *Aquae Labodes* or *Larodes*, under which name they appear in the Itineraries. (*Itin. Ant.* p. 89; *Tab. Peut.*) They are there placed 40 miles W. of Agrigentum, and 46 from Lilybaeum; distances which agree well with the position of *Sciaccia*. This is distant about 20 miles to the E. of the ruins of Selinus.

The site of the ancient city is now wholly desolate, with the exception of a solitary guardhouse, and the ground is for the most part thickly overgrown with shrubs and low brushwood; but the remains of the walls can be distinctly traced throughout a great part of their circuit. They occupied the summit of a low hill, directly abutting on the sea, and bounded on the W. by the marshy valley through which flows the river *Maduni*, the ancient Selinus; on the E. by a smaller valley or depression, also traversed by a small marshy stream, which separates it from a hill of similar character, where the remains of the principal temples are still visible. The space enclosed by the existing walls is of small extent, so that it is probable the city in the days of its greatness must have covered a considerable area without them; and it has been supposed by some writers that the present line of walls is that erected by Hermocrates when he restored the city after its destruction by the Carthaginians. (Diod. xiii. 63.) No trace is, however, found of a more extensive circuit, though the remains of two lines of wall, evidently connected with the port, are found in the small valley E. of the city. Within the area surrounded by the walls are the remains of three temples, all of the Doric order, and of an ancient style; none of them are standing, but the foundations of them all remain, together with numerous portions of columns and other architectural fragments, sufficient to enable us to restore the plan and design of all three without difficulty. The largest of them (marked C. on the plan) is 230 feet long by 85 feet broad, and has 6 columns in front and 18 in length, a very unusual proportion. All these are hexastyle and peripteral. Besides these three temples there is a small temple or *Aedicula* (marked B.), of a different plan, but also of the Doric order. No other remains of buildings, beyond mere fragments and foundations, can be traced within the

walls; but the outlines of two large edifices, built of squared stones and in a massive style, are distinctly traceable outside the walls, near the NE. and

NW. angles of the city, though we have no clue to their nature or purpose.

But much the most remarkable of the ruins at

PLAN OF SELINUS.

A C D. Temples within the city.
B. Small temple or aedicula in the city.
E F G. Great temples without the city.

H M. Remains of edifices outside the walls.
N. River Selinus, now the *Madiant*.

Selinus are those of three temples on the hill to the E., which do not appear to have been included in the city, but, as was often the case, were built on this neighbouring eminence, so as to front the city itself. All these temples are considerably larger than any of the three above described; and the most northerly of them is one of the largest of which we have any remains. It had 8 columns in front and 17 in the sides, and was of the kind called pseudo-dipteral. Its length was 359 feet, and its breadth 162, so that it was actually longer than the great temple of Jupiter Olympius at Agrigentum, though not equal to it in breadth. From the columns being only partially fluted, as well as from other signs, it is clear that it never was completed; but all the more important parts of the structure were finished, and it must have certainly been one of the most imposing fabrics in antiquity. Only three of the columns are now standing, and these imperfect; but the whole area is filled up with a heap of fallen masses, portions of columns, capitals, &c., and other huge architectural fragments, all of the most massive character, and forming, as observed by Swinburne, "one of the most gigantic and sublime ruins imaginable." The two other temples are also prostrate, but the ruins have fallen with such regularity that the portions of almost every column lie on the ground as they have fallen; and it is not only easy to restore the plan and design of the two edifices, but it appears as if they could be rebuilt with little difficulty. These temples, though greatly inferior to their gigantic neighbour, were still larger than that at Segesta, and even exceed the great temple of Neptune at Paestum; so that the three, when standing, must have presented a spectacle unrivalled in antiquity. All these buildings may be safely referred to a period anterior to

the Carthaginian conquest (B.C. 409), though the three temples last described appear to have been all of them of later date than those within the walls of the city. This is proved, among other circumstances, by the sculptured metopes, several of which have been discovered and extricated from among the fallen fragments. Of these sculptures, those which belonged to the temples within the walls, present a very peculiar and archaic style of art, and are universally recognised as among the earliest extant specimens of Greek sculpture. (They are figured by Müller, *Denkmäler*, pl. 4, 5, as well as in many other works, and casts of them are in the British Museum.) Those, on the contrary, which have been found among the ruins of the temple marked E. on the opposite hill, are of a later and more advanced style, though still retaining considerable remains of the stiffness of the earliest art. Besides the interest attached to these Selinuntine metopes from their important bearing on the history of Greek sculpture, the remains of these temples are of value as affording the most unequivocal testimony to the use of painting, both for the architectural decoration of the temples, and as applied to the sculptures with which they were adorned. A very full and detailed account of the ruins at Selinus is given in the Duke of Serra di Falco's *Antichità Siciliane*, vol. ii., from which the preceding plan is derived. A more general description of them will be found in Swinburne's *Travels*, vol. ii. pp. 242—245; Smyth's *Sicily*, pp. 219—221; and other works on Sicily in general.

The coins of Selinus are numerous and various. The earliest, as already mentioned, bear merely the figure of a parsley-leaf on the obverse. Those of somewhat later date (including the one figured below) represent a figure sacrificing on an altar,

which was consecrated to Aesculapius, as indicated by the cock which stands below it. The subject of this type evidently refers to a story related by Diogenes Laertius (viii. 2. § 11) that the Selinuntines were afflicted with a pestilence from the marshy character of the lands adjoining the neighbouring river, but that this was cured by works of drainage, suggested by Empedocles. The figure standing on the coin is the river-god Selinus, which was thus made conducive to the salubrity of the city. [E. H. B.]

COIN OF SELINUS

SELINUS (Σελινός; *Eth.* Σελινόβριος or Σελινόβριος; *Selenti*), a port-town on the west coast of Cilicia, at the mouth of a small river of the same name, which is now called *Selenti*. (Scylax, p. 40; Liv. xxxiii. 20; Strab. xiv. p. 682; Ptol. v. 8. § 2, viii. 17. § 42; Plin. v. 22.) This town is memorable in history as the place where, in A. D. 117, the emperor Trajan is said by some authors to have died (Dion Cass. lxxviii. 33). After this event the place for a time bore the name of Trajanopolis; but its bishops afterwards are called bishops of Selinus. (Hierocl. p. 709.) Basil of Seleucia (*Vita S. Theclae*, ii. 17) describes the place as reduced to a state of insignificance in his time, though it had once been a great commercial town. (Comp. *Stadiasm. Mar. Mag.* §§ 203, 204; Lucan, viii. 260; *Chron. Paschale*, p. 253.) Selinus was situated on a precipitous rock, surrounded on almost every side by the sea, by which position it was rendered almost impregnable. The whole of the rock, however, was not included in the ancient line of fortifications; inside the walls there still are many traces of houses, but on the outside, and between the foot of the hill and the river, the remains of some large buildings are yet standing, which appear to be a mausoleum, an agora, a theatre, an aqueduct, and some tombs (Beaufort, *Karamania*, p. 186, foll.)

Respecting the small river Selinus, flowing by Pergamum, see *PERGAMUM*, p. 575. [L. S.]

SELLASIA (Σελλασία, Xen. Polyb. Diad.; Σελασία, Steph. B., Hesych. s. v.; the latter is perhaps the correct form, and may come from *σέλας*; the name is connected by Hesychius with Artemis Selasia; *Eth.* Σελλασίεύς, Σελασιεύς), a town of Laconia, situated in the valley of the Oenus, on the road leading from Tegea and Argos, and one of the bulwarks of Sparta against an invading army. Its distance from Sparta is nowhere mentioned; but from the description which Polybius gives of the celebrated battle fought in its neighbourhood between Antigonus and Cleomenes, it is probable that the plain of *Krevati* was the site of the battle. We learn from Polybius that this battle took place in a narrow opening of the vale of the Oenus, between two hills named Evas and Olympus, and that the river Gorgylus flowed across the plain into the Evenus. South of the *Khan of*

Krevati is a small plain, the only one in the valley of the Oenus, about ten minutes in width and a quarter of an hour in length, at the end of which the rocks again approach so close as barely to leave room for the passage of the river. The mountain, which bounds this plain on the east, is Olympus, a continuation of the mountain of *Vresthena*; it rises very steep on the left bank of the Oenus. The mountain on the western side is Evas, now *Tírlaes*, which, though not so steep, is still inaccessible to cavalry. Towards the north the plain is shut in by a mountain, over which the road leads to Tegea, and towards the south by a still higher mountain. The Oenus, which flows near the eastern edge of the plain, can be crossed at any point without difficulty. It receives on its right side a small brook, the Gorgylus, which descends from a ravine on the northern side of Mt. Evas. On the summit of the hill, more than 2800 feet above the sea, which shuts in the plain on the south, and over which the road leads to Sparta, are the ruins of Sellasia, described below.

The battle of Sellasia, of which Polybius gives a detailed account, requires a few words of explanation. In B. C. 221, Cleomenes, the Spartan king, expecting that Antigonus, the Macedonian king, and the Achaeans, would invade Laconia, fortified the other passes which led into the country, and took up his own position with the main body of his forces in the plain of Sellasia, since the roads to Sparta from Argos and Tegea united at this point. His army amounted to 20,000 men, and consisted of Lacedaemonians, Perioeci, allies, and mercenaries. His left wing, containing the Perioeci and allies, was stationed on Mt. Evas under the command of his brother Eucleidas; his right wing, consisting of the Lacedaemonians and mercenaries, encamped upon Mt. Olympus under his own command; while his cavalry and a part of the mercenaries occupied the small plain between the hills. The whole line was protected by a ditch and a palisade. Antigonus marched into Laconia from Argos with an army of 30,000 men, but found Cleomenes so strongly intrenched in this position, that he did not venture to attack him, but encamped behind the small stream Gorgylus. At length, after several days' hesitation, both sides determined to join battle. Antigonus placed 5000 Macedonian peltasts, with the greater part of his auxiliary troops, on his right wing to oppose Eucleidas; his cavalry with 1000 Achaeans and the same number of Megalopolitans in the small plain; while he himself with the Macedonian phalanx and 3000 mercenaries occupied the left wing, in order to attack Cleomenes and the Lacedaemonians on Mt. Olympus. The battle began on the side of Mt. Evas. Eucleidas committed the error of awaiting the attack of the enemy upon the brow of the hill, instead of availing himself of his superior position to charge down upon them; but while they were climbing the hill they were attacked upon the rear by some light troops of Cleomenes, who were stationed in the centre with the Lacedaemonian cavalry. At this critical moment, Philopoemen, who was in the centre with the Megalopolitan horse, diverted the attack of the light infantry by charging without orders the Lacedaemonian centre. The right wing of the Macedonians then renewed their attack, defeated the left wing of the Lacedaemonians, and drove them over the steep precipices on the opposite side of Mt. Evas. Cleomenes, perceiving that the only hope of retrieving the day was by the defeat

of the Macedonians opposed to him, led his men out of the intrenchments and charged the Macedonian phalanx. The Lacedaemonians fought with great bravery; but after many vain attempts to break through the impenetrable mass of the phalanx, they were entirely defeated, and of 6000 men only 200 are said to have escaped from the field of battle. Cleomenes, perceiving all was lost, escaped with a

few horsemen to Sparta, and from thence proceeded to Gythium, where he embarked for Aegypt. Antigonus, thus master of the passes, marched directly to Sellasia, which he plundered and destroyed, and then to Sparta, which submitted to him after a slight resistance. (Polyb. ii. 65—70; Plut. *Cleom.* 27, 28, *Philop.* 6; Paus. ii. 9. § 2, iii. 10. § 7, iv. 29. § 9, vii. 7. § 4, viii. 49. § 5.)

PLAN OF THE BATTLE OF SELLASIA.

a a a. Troops of Cleomenes.
b b b. Troops of Antigonus.
A A. Road to Tegea.

B B. Road to Argos.
C C. Road to Megalopolis.
D D. Road to Sparta.

In the preceding account of the battle we have followed the excellent description of Ross. (*Reisen im Peloponnes*, p. 181.) The French Commission had previously supposed the plain of *Krevatá* to be the site of the battle of Sellasia (Boblaye, *Recherches*, &c. p. 73); and the same opinion has been adopted by Curtius. (*Peloponnesos*, vol. ii. p. 260.) Leake, however, places Sellasia to the SE., near the monastery of the Forty Saints (*Ἄγιοι Σαράντα*), and supposes the battle to have been fought in the pass to the eastward of the monastery. The ruins near the *Khan* of *Krevatá* he maintains to be those of Caryae. (Leake, *Morea*, vol. ii. p. 529, *Peloponnesia*, p. 341, seq.) But Ross informs us that in the narrow pass NE. of the monastery of the Forty Saints there is barely room for a loaded mule to pass; and we know moreover that Sellasia was

situated on the high road from Sparta to Tegea and Argos, which must have led through the plain of *Krevatá*. (*κατὰ τὴν Λεωφόρον*, Paus. iii. 10. § 7; Plut. *Cleom.* 23; Xen. *Hell.* vi. 5. § 27; Diod. xv. 64; Liv. xxxiv. 28.)

On leaving the plain of *Krevatá*, the road southwards ascends the mountain, and at the distance of a quarter of an hour leaves a small ruin on the left, called by the peasants *Palaeogála* (*ἡ Παλαιογούλα*). The remains of the walls are Hellenic, but they are of very small extent, and the place was probably either a dependency of Sellasia or one to which the inhabitants of the latter fled for refuge at one of the periods when their city was destroyed.

The ruins of Sellasia lie $1\frac{1}{4}$ miles beyond *Palaeogála* upon the summit of the mountain. The city was about $1\frac{1}{4}$ miles in circumference, as appears

from the foundations of the walls. The latter were from 10 to 11 feet thick, and consist of irregular but very small stones. The northern and smaller half of the city was separated by a wall from the southern half, which was on lower ground.

From its position Sellasia was always exposed to the attacks of an invading army. On the first invasion of Laconia by the Thebans in B.C. 369, Sellasia was plundered and burnt (*Xen. Hell.* vi. 5. § 27); and because the inhabitants at that time, together with several others of the Perioeci, went over to the enemy, the town was again taken and destroyed four years later by the Lacedaemonians themselves, assisted by some auxiliaries sent by the younger Dionysius. (*Xen. Hell.* vii. 4. § 12.) It suffered the same fate a third time after the defeat of Cleomenes, as has been already related. It appears to have been never rebuilt, and was in ruins in the time of Pausanias (iii. 10. § 7).

SELLEIS (Σελλήεις). 1. A river in Elis, mentioned by Homer, upon which Ephyra stood. [*EPHYRA*, No. 2.]

2. A river in Sicyonia, upon which Strabo also places a town Ephyra. [*EPHYRA*, No. 3.]

SELLETAE (Plin. iv. 11. s. 18, init.), a people of Thrace, whose country was called **SELLETICA** (Σελλητική, Ptol. iii. 11. § 8). It was north of the Haemus, between that range of mountains and the Panyssus. [J. R.]

SELLETICA. [**SELLETAE**.]

SELLI or **HELLI**, an ancient tribe in Epeirus, in whose country, called Hellopia, the oracle of Dodona was situated. [*DODONA*, p. 782, a.]

SELLIUM (Σέλιον, Ptol. ii. 5. § 7), a place in Lusitania, lying N. of Scalabis (*Itin. Ant.* p. 421). Identified with *Ceice* or *Seijo*. [T. H. D.]

SELLUS, according to Avienus (*Ora Marit.* 507) a high mountain in Hispania Tarraconensis, on which the city of Lebedontia once stood. Ukert (ii. pt. i. p. 484) identifies it with *C. Salona*. [T. H. D.]

SELYMBRIA (Σηλυβρία, Herod. vi. 33; Σηλυβρία, Xen. *Anab.* vii. 2. § 15, &c.; Strab. vii. p. 319; Ptol. iii. 11. § 6; Σηλυβρία, Dem. *de Rhod. lib.* p. 198, Reiske), a Thracian town on the Propontis, 22 miles east from Perinthus, and 44 miles west from Constantinople (*Itin. Hier.* p. 570, where it is called Salamembra), near the southern end of the wall, built by Anastasius Dicorus for the protection of his capital. (Procop. *de Aed.* iv. 9; see **SCYL-LAE**).

According to Strabo (l. c.), its name signifies "the town of Selys," from which it has been inferred that Selys was the name of its founder, or of the leader of the colony from Megara, which founded it at an earlier period than the establishment of Byzantium, another colony of the same Grecian state. (Scymn. 714.) In honour of Eudoxia, the wife of the emperor Arcadius, its name was changed to Eudoxiupolis (Hierocl. p. 632), which it bore for a considerable time; but its modern name, *Silivri*, shows that it subsequently resumed its original designation.

Respecting the history of Selymbria, only detached and fragmentary notices occur in the Greek writers. In Latin authors, it is merely named (Mela, ii. 2. § 6; Plin. iv. 11. s. 18, xxix. 1. s. 1; in the latter passage it is said to have been the birthplace of Prodicus, a disciple of Hippocrates). It was here that Xenophon met Medosades, the envoy of Seuthes (*Anab.* vii. 2. § 28), whose forces afterwards encamped in its neighbourhood (*ib.* 5. § 15). When

Alcibiades was commanding for the Athenians in the Propontis (B.C. 410), the people of Selymbria refused to admit his army into the town, but gave him money, probably in order to induce him to abstain from forcing an entrance. (*Xen. Hell.* i. 1. § 21.) Some time after this, however, he gained possession of the place through the treachery of some of the townspeople, and, having levied a contribution upon its inhabitants, left a garrison in it. (*ib.* 3. § 10; Plut. *Alcib.* 30.) Selymbria is mentioned by Demosthenes (l. c.) in B.C. 351, as in alliance with the Athenians; and it was no doubt at that time a member of the Byzantine confederacy. According to a letter of Philip, quoted in the oration *de Corona* (p. 251, R.), it was blockaded by him about B.C. 343; but Professor Newman considers that this mention of Selymbria is one of the numerous proofs that the documents inserted in that speech are not authentic. (*Class. Mus.* vol. i. pp. 153, 154.) [J. R.]

SEMACHIDAE. [*ATTICA*, p. 330, b.]

SEMA'NA SILVA (Σημανά or Σημανοῖς βλάν), one of the mountain forests of ancient Germany, on the south of Mons Melibocus (Ptol. ii. 1. § 7), is perhaps only a part of the *Harz* mountain or of the *Thüringer Wald*. (Zeuss, *Die Deutschen*, p. 8; Wilhelm, *Germanien*, p. 38, &c.) [L. S.]

SEMANTHINI (Σημανθῖνοι, Ptol. vii. 3. § 4), a people dwelling in the land of the Sinae E. of the Semanthine mountains, which derived their name from them. [T. H. D.]

SEMANTHINI MONTES (τὰ Σημανθῖνα ὄρη, Ptol. vii. 2. § 8), a mountain chain in the country of the Sinae (*China*), which, according to Ptolemy, extended from the sources of the Asphthra in a NW. direction as far as those of the Serus. It is probably the chain which separates the Chinese province of *Yunnan* from the districts of *Mien* and *Laot-schua*. [T. H. D.]

SEMBRITAE (Σεμβρίται, Strab. xvi. pp. 770—786; **SEMBRERITAE**, Plin. vi. 30. s. 35), a people inhabiting the district of Teneis in Aethiopia, although they seem to have been of Aegyptian origin. The first mention of the Sembridae occurs in Eratosthenes (*ap. Strab.* xvii. p. 786), who says that they occupied an island above Meroë; that their name implies "immigrants;" that they descended from the Aegyptian war-caste, who, in the reign of Psammitichus (B.C. 658), abandoned their native land; and that they were governed by a queen, although they were also dependent on the sovereigns of Meroë. Artemidorus, also quoted by Strabo (xvi. p. 770), says, on the contrary, that they were the ruling order in Meroë; these accounts, however, may be reconciled by the supposition that Eratosthenes and Artemidorus described them at different periods. If the Sembridae were the Aegyptian refugees, they were also the Automoloi (Ἀσμάχοι) noticed by Herodotus (ii. 30). Pliny (l. c.) speaks of four islands of the Sembridae, each containing one or more towns. These were therefore not islands in the Nile, or in any of its principal tributaries, the Astapus, or Astaboras, but tracts between rivers, mesopotamian districts like Meroë itself, which in the language of Nubia are still denominated "islands." The capital of the Sembridae was, according to Pliny, Sembobis. It stood on the left bank of the river, 20 days' journey above Meroë. Pliny names also, among other of their principal towns, Sai in Arabia,—i. e. on the right bank of the Nile, for he assumes that river as the boundary between Lybia and Arabia,—Eoar or

Sape (Sobak), on the left bank, 17 days' journey above Meroë, and Daron again on the Arabian side.

Without being able to define the position of this tribe, or to state their relations to the Ethiopians of Meroë, we shall perhaps not err in placing them on the Blue Nile [ASTAPUS], and in the neighbourhood of Axume. The geographers (Heeren, &c.) who describe the Sembridae as dwelling near the White Nile, have forgotten both their vicinity to Arabia—i. e. the eastern portion of Meroë—and the character of the regions which the Astapus and Astaboras respectively water. The White Nile flows through lagoons and morasses unsuited for towns and permanent settlements; while the Blue Nile has always had on its banks a numerous population, dwelling in large villages and towns. Along the Blue Nile ran the principal highways of the trade of Aegypt with Southern Aethiopia, while the White Nile led off to the uncivilised and scattered tribes of the Libyans. The Sembridae, if seated on the latter river, would probably have eluded observation altogether; whereas on the former they would be as well known to the caravans and their guides as any other of the Aethiopian races. Moreover, the mesopotamian districts suited to towns lie to the east of Aethiopia Proper, and would afford a secure retreat to the refugees from Aegypt in search of a new habitation. (See Cooley's *Claudius Ptolemy and the Nile*, pp. 7—27.) The present *Sennaar* corresponds nearly with the territory of the Sembridae. [W.B.D.]

SEMIRAMIDIS MONS (Σειραμιδὸς ὄρος), a remarkable circular mountain on the N. side of the Persian gulf, and the eastern limit of Caramania. It is noticed both by Arrian (*Peripl. M. E.* p. 20, ed. Huds.) and by Marcian (*Peripl. M. E.* c. 27, ed. Müller, 1855), who states that it was opposite to Mt. Pasabo, in Arabia, and that these two mountains, with their promontories, form the straits at the entrance of the gulf of Persia. Ptolemy speaks of it, and states that it was also called Strongylus, probably from its form (vi. 8. § 11). Its modern name appears to be *Elbowra*. (Vincent, *Voyage of Nearchus*, i. p. 319—321.) [V.]

SEMNONES (Σέμνονες or Σένωνες), or perhaps more correctly Sennones, are described as the most ancient and illustrious among the Suevi in the north of Germany. They dwelt between the Albis and Viadus, being surrounded on the west by the Cherusci, on the south by the Silingi, on the east by the Manimi and Burgundiones, and on the north-west by the Longobardi. (Tac. *Germ.* 39; Ptol. ii. 11. §§ 15, 17; Vell. Pat. ii. 106.) Their country accordingly extended from the hills of *Luætia* in the south, as far as *Potadam* in the north, and in it they formed 100 communities (*pagi*), which gave them such strength that they regarded themselves as the head of the Suevi. Their country contained an ancient forest (Semnonum Silva), hallowed by awful superstition and sacrificial rites; at stated seasons deputies from all the kindred tribes met in it, and commenced their proceedings with a human sacrifice. No one, moreover, was allowed to enter this forest except he was bound in chains, a mark of humiliation in the presence of the god; and if any one stumbled he was not permitted to rise, but had to crawl along. As to the history of the Semnones, we learn from Tacitus (*Ann.* ii. 45) and Strabo (vii. p. 290) that in the time of Augustus they were united with the Marcomanni under Maroboduus. In the Monn-mentum Ancyranum the Semnones are mentioned

among the German tribes which sought the friendship of the emperor and the Romans. They appear to have been governed by kings, one of whom bore the name of Masyua, and reigned in the time of Domitian. (Dion Cass. lxxvii. 5, comp. lxxi. 20.) After the reign of M. Aurelius they are no longer mentioned in history, from which circumstance some have unnecessarily inferred that the Semnones were not a distinct tribe, but only a general name for several kindred tribes. As to the Silva Semnonum, it is generally supposed to have existed near *Fisterwalde* or *Sonnenwalde*, between the rivers *Elster* and *Spree*, where three large places have been discovered, which were evidently intended as a sort of altara. (Krusse, *Deutsche Alterth.* vol. ii. part 2, p. 132; Zeuss, *Die Deutschen*, p. 130.) [L.S.]

SENA (Σήνα, Pol.: Σήνα, Strab.: *Ek. Senensu*), called also for distinction's sake *SENA GALLICA* (Σενανγῶν, Ptol.: *Sinagaglia*), a city of Umbria, but situated in the district known as the Gallus Ager, on the coast of the Adriatic, at the mouth of a small river of the same name. The district in which it was situated had previously belonged to the Galli Senones, and there can be no doubt that both the river and town derived their name from that of this people. (Sil. Ital. viii. 453; Pol. ii. 19.) It is therefore probable that there was a Gaulish town of the name before the Roman conquest, but we have no account of it until the establishment of a Roman colony there, which seems to have taken place immediately after the final subjection of the Senones in B. C. 289. (Pol. ii. 19; Liv. *Epit.* xi.) The colony must have been a "colonia civium," as its name is not mentioned by Livy among the Latin colonies in the Second Punic War. It was at Sena that the two consuls Livius and Nero united their forces before the battle of the Metaurus, B. C. 207 (Liv. xxvii. 46; Appian, *Annib.* 52; Vict. *Vir.* III. 48), on which account that battle is described by some authors as being fought "ad Senam," and even Cicero alludes to it as the "Senense praelium." (Cic. *Brut.* 18; Eutrop. iii. 18; Oros. iv. 18.) Its name is not again mentioned in history till the Civil Wars between Marius and Sulla, when it was taken and plundered by Pompeius, the lieutenant of Sulla, B. C. 82. (Appian, *B. C.* i. 88.) It seems to have always continued to be a flourishing and considerable town, and under the Triumvirate received a fresh accession of colonists. (Liv. *Col.* pp. 226, 258.) Its name is mentioned by all the geographers, as well as in the Itineraries. It was situated on the line of road which led along the coast from Ancona to Fanum Fortunae, where it joined the Flaminian Way, properly so called. (Strab. v. p. 227; Plin. iii. 14. s. 19; Ptol. iii. 1. § 22; *Itin. Ant.* pp. 100, 316; *Tab. Peut.*) The name was early corrupted from Sena Gallica into the contracted form Senogallia, which is already found in Pliny, and appears also in the Itineraries. The Geographer of Ravenna has Senegallia, thus approaching still more closely to the modern form of *Sinagaglia*. The city is mentioned as still in existence during the Gothic Wars, after the fall of the Western Empire, and again under the Lombards (Procop. *B. G.* iv. 23; P. *Diac. Hist. Lang.* ii. 22); it was for some time also one of the cities of the Pentapolis under the exarchs of Ravenna, but fell into decay in the middle ages, and is alluded to by Dante in the 14th century as verging rapidly to extinction. (Dante, *Par.* xvi. 75.) It, however, revived again, and is now a flourishing town, with a considerable trade, but has no ancient remains.

The river Sena, alluded to by Silius Italicus and Lucan, must be the small stream now called the *Nevola* or *Nigola*, which falls into the sea at *Sinigiaglia*. (Sil. Ital. viii. 453; Lucan, ii. 407.) [E. H. B.]

SENA (*Σαίνα*, Ptol.: *Ἑθ. Senensis: Siena*), a city of Etruria, sometimes called *SENA JULIA*, to distinguish it from the city of the same name on the Adriatic. It was situated nearly in the heart of Etruria, about 28 miles E. of Volaterrae and 40 S. of Florentia. There is no reason whatever to suppose that there was an Etruscan city on the site, and no allusion to its existence occurs before the establishment of the Roman colony. Even the date of this is not accurately known; but it is probable from the epithet of Julia that it was founded either by Caesar himself or by the Triumvirate in his honour. It is singular that its name is not found in the Liber Coloniarum; but its colonial rank is attested by Pliny, who calls it "colonia Senensis," as well as by Tacitus. (Plin. iii. 5. s. 8; Tac. Hist. iv. 45.) It is subsequently mentioned by Ptolemy, as well as in the Tabula, which places it on a line of road from Florentia to Clusium. (Ptol. iii. 1. § 49; Tab. Peut.) But it seems never to have been a place of much importance in ancient times, and it was not till the middle ages that it rose to be one of the first cities of Tuscany. It has no remains of antiquity. (Dennis's *Etruria*, vol. ii. p. 135.) [E. H. B.]

SENA INSULA, in Gallia. On this island, which was opposite to the coast of the Osisimii, was an oracle of a Gallic goddess. Nine virgins named Gallicenae (Barrigenae, ed. L. Vossius) had the care of the oracle. They could raise storms by their verses, change themselves into beasts, heal diseases, and foretell the future, but they were only propitious to seamen who came to consult them. (Mela, iii. 6.) This is the island of *Sein*, incorrectly called on the maps *Ile des Saints*, which is at the entrance of the bay of *Douvarnenez*, and separated from a point of land on the coast of Brittany (*Pointe Ras*) by a narrow channel. D'Anville supposes that this may be the island which Strabo places opposite the mouth of the *Loire*. This island was inhabited only by women who were possessed by Dionysus. They allowed no man to enter their island; but so far from keeping their virginity, they used to visit the men on the mainland. These two stories are very different. Strabo names his island that of the Narnites, as Groskurd (*Strab. Transl.* i. p. 198) has it; but the name is Samnites in the common texts of Strabo. This seems to be the same island that Dionysius speaks of (*Perieg.* 571) as being visited by the women of the Amnitiæ for the purpose of performing the rites of Bacchus. D'Anville further thinks that Pliny (iv. 16) may be speaking of Sena when he mentions after the islands which are near to Britain, Siambis, or Amnis, as some MSS. have it, and Axantos, which is evidently Uxantis or *Ouesant*. Sina, as the Maritime Itin. names it, is mentioned there with Uxantis. [G. L.]

SENIA (*Σενία*, Ptol. ii. 16. (17.) § 2), a Roman colony on the coast of Liburnia ("Colonia Senensis," Tac. H. iv. 45), and on the road from Aquileia to Siscia. (*Itin. Ant.* p. 273.) It had a harbour. (Comp. Plin. iii. 21. s. 25; Geogr. Rav. iv. 31; Tab. Peut.) Various identified with *Zeng* or *Senga*. [T. H. D.]

SENOMAGUS, in Gallia Narbonensis, is mentioned in the Table, and placed north of Avenio (*Avignon*), on a road along the east side of the

Rhona. Some geographers guess that it may be near the *Pont St. Esprit*. [G. L.]

SENONES (*Σένωνες*, *Σένωνες*, Steph. B. s. v.). Polybius (ii. 17) names the Italian Senones, *Σένωνες*. The Roman poets make the penultima short:—

"Ut Braccatorum pueri Senonumque minores."
(Juv. viii. 234.)

An absurd explanation of the name is quoted by Festus (s. v. *Senones*) and by Servius (*ad Aen.* viii. 656).

The Senones were one of the great Celtic nations who bordered on the Belgas. (Caes. B. G. ii. 2.) They were north-west of the Aedui and bordered on them. Their capital was Agedincum (*Sens*), on the right bank of the *Yonne*, which is a branch of the *Seine*. (Ptol. ii. 8. § 12.) The Senones are in the Lugdunensis of Ptolemy and Pliny. Besides Agedincum there were in the country of the Senones, Autissiodurum (*Auxerre*) and Melodunum (*Melun*) on the *Seine* not far from Paris, which shows that their territory extended from the neighbourhood of Paris along the *Seine* and along the *Yonne* to the borders of the small nation of the Mandubii [*MANDUBII*], whose town was Alesia, and to the borders of the Lingones. The railroad from Paris to Dijon, which passes near Melun, Fontainebleau, Sens, Joigny, St. Florentin, Tonnerre on the *Armançon*, a branch of the *Yonne*, runs through the country of the Senones. Between St. Florentin and Flogny, which is about half-way between St. Florentin and Tonnerre, extends a vast plain, level as the sea, fertile, and in summer covered with wheat. A large part of the territory of the Senones is a fertile country. It seems to have comprehended the dioceses of Sens and Auxerre. Besides Melodunum and Agedincum, Caesar mentions Vellaunodunum as a town of the Senones (vii. 11), on the side towards the Carnutes.

The Senones were at first well disposed to Caesar (B. G. ii. 2), probably through fear of their neighbours, the Belgas and the German people north of the *Marne*. Caesar had given them Cavarinus for a king, but the Senones expelled him (v. 54); and when the Roman proconsul ordered the senate of the Senones to come to him, they refused. In the spring of B. C. 53 Caesar summoned the states of Gallia to a meeting, but the Senones, Carnutes, and Treveri would not come (vi. 3), upon which he transferred the meeting of the states to Lutetia Parisiorum. He says that the Parisii bordered on the Senones, and "within the memory of their fathers they had united their state with that of the Senones;" but he does not explain the nature of this union. He marched from Lutetia (Paris) into the country of the Senones, which presents no difficulties for an army. The Senones yielded in spite of Acco, who was the leader in the revolt; and Caesar took with him Cavarinus and the cavalry of the Senones, in which force it is probable that they were strong, as their country is well adapted for grazing and corn. At the close of the year Caesar whipped Acco to death, and quartered six of his legions at Sens for the winter (vi. 44). In B. C. 52 the Senones sent 12,000 men with the rest of the Gallic forces to attack Caesar before Alesia (vii. 75). The Senones seem to have given Caesar no more trouble; but in B. C. 51 Drappes, a Senon, at the head of a number of desperate men, was threatening the Provincia. Drappes was caught and starved himself to death. (B. G. viii. 30, 44.) [G. L.]

SENONES (*Σένωνες*), a nation of Gaulish origin, which was settled in Italy, on the coast of the Adriatic, extending from the river Aesis (*Erimo*),

a few miles N. of Ancona, to the Utis (*Montone*). (Liv. v. 35.) The history of their migration from Transalpine Gaul, their settlement in Italy, and their wars with the Romans, which ended in the extermination of the whole nation, are fully related under the article *GALLIA CISALPINA* (pp. 936—938). After the conquest of the Senones, and their expulsion from their lands on the Adriatic, two colonies were founded in their territory, the one at Sena, the other at Ariminum; and at a later period the remainder of their lands was portioned out among the Roman citizens by an agrarian law of the tribune C. Flaminius. This district, which still retained the name of the "Gallicus ager," was afterwards considered as a part of Umbria, and included for all administrative purposes under that appellation. Its topography will therefore be most conveniently given in the article *UMBRIA*. [E. H. B.]

SENTICE (*Σεντική*, Ptol. ii. 6. § 50), a town of the Vaccæi in Hispania Tarraconensis, variously identified with *Los Santos*, *Zamora*, *Calendilla de Mandages*, and *Zarzosa*. [T. H. D.]

SENTIDES (*Σεντίδες*, Ptol. iv. 5. § 21), a people in the S. of Marmarica. [T. H. D.]

SENTII (*Σεντίαι*), a people of Gallia Narbonensis (Ptol. ii. 10. § 19), whose town Ptolemy names *Dinia*, which is *Digne*. [*DINIA*.] [G. L.]

SENTINUM (*Σεντινον*: *Ἑθ. Σεντινάρης*, *Sentinus*—*itis*: *Sentino*), a city of Umbria, on the E. slope of the Apennines, but near the central ridge of those mountains, and not far from the sources of the *Aesis* (*Esimo*). It is celebrated in history as the scene of a great battle fought in the Third Samnite War, B. C. 295, when the allied forces of the Samnites and Gauls were defeated by the Roman consul Q. Fabius. Gellius Egnatius, the Samnite general, was slain in the battle; while the Roman consul P. Decius followed the example of his father, and devoted himself for the safety of the Roman army. (Liv. x. 27—30; Pol. ii. 19.) The scene of this decisive victory, one of the most memorable in the Roman annals, is placed by Livy "in Sentinati agro;" but we have no more precise clue to its position, nor do the details of the battle give us any assistance. Sentinum itself seems to have been a strong town, as in the Perusine War it was besieged by Octavian himself without success; though it was afterwards taken by surprise by his lieutenant, Salvidienus Rufus, by whom it was plundered and burnt to the ground. (Dion Cass. xlviii. 13.) It was subsequently revived, by receiving a body of colonists, under the Triumvirate (*Liv. Col. p. 258*), but did not obtain the title of a Colonia, and continued under the Roman Empire to be a town of municipal rank. (Plin. iii. 14. s. 19; Strab. v. p. 227; Ptol. iii. 1. § 53; Orell. *Inscr.* 3861, 4949.) Its site is marked by the village still called *Sentino*, on the river of the same name (a small stream falling into the *Esimo*), a few miles below the modern town of *Sasso Ferrato*. [E. H. B.]

SENUS (*Σένος* or *Σαῦρος*, Ptol. vii. 3. § 2), a river in the land of the *Sinaei* (*China*) which ran into the Sinus Magnus between the *South-horn Cape* (*Νότιον κέρας*), S. of *Ambastus*, and *Rabana*. Probably the modern *Saigon* or *Saung*. (Comp. *Forbiger, Geogr.* ii. p. 478.) [T. H. D.]

SENUS (*Σένος*, Ptol. ii. 2. § 4), a river on the W. coast of Hibernia, in the territory of the *Auteri*. Camden identifies it with the *Shannon*. [T. H. D.]

SEPELACI, a town of the *Edetani* in Hispania Tarraconensis (*Ilin. Ant.* p. 400), identified with *Burriana*, *Onda*, or *Castellón de la Plana*. [T. H. D.]

SEPIA. [*Πηκεύς*, p. 595, a.]

SEPIAS (*Σηπιάς*), a promontory of Magnesia, opposite the island of Sciathos, and forming the SE. extremity of Thessaly. It is now called *C. St. George*. It is celebrated in mythology as the spot where Peleus laid in wait for Thetis, and from whence he carried off the goddess (Eurip. *Androm.* 1266), and in history as the scene of the great shipwreck of the fleet of Xerxes. (Herod. vii. 113, 188; Strab. ix. p. 443; Apoll. Rhod. i. 580; Ptol. iii. 13. § 16; Plin. iv. 9. s. 16; Mela, ii. 3; Leake, *Northern Greece*, vol. iv. p. 382.)

SEPONTIA PARAMICA (*Σεποντία Παράμικα*, Ptol. ii. 6. § 50), a town of the Vaccæi in Hispania Tarraconensis lying to the W. of *Lacobriga* (or the modern *Lobera*). [T. H. D.]

SEPPHORIS (*Σεφφώρις*, al. *Σεφφώρις*: *Ἑθ. Σεφφωρίτης*), a town of Upper Galilee, not mentioned under this name in Scripture, but frequently by Josephus. It was garrisoned by Antigonus, in his war with Herod the Great, until the latter took it, early in his Galilean campaign (*Ant.* xiv. 15. § 4.) It seems to have been a place of arms, and to have been occasionally the royal residence, for in the troubles which arose in the country during the presidency of Varus, the robber-chief Judas, son of Ezekias, seized the palace of Sepphoris, and carried off the arms and treasure which it contained (xvii. 12. § 5). It was subsequently taken and burned by Varus (§ 9). Herod the tetrarch (*Antipas*) afterwards rebuilt and fortified it, and made it the glory of all Galilee, and gave it independence (xviii. 2. § 1); although, according to the statement of Justus the son of Pistus, he still maintained the superiority of his newly founded city Tiberias; and it was not until Nero had assigned Tiberias to Agrippa the Younger that Sepphoris established its supremacy, and became the royal residence and depository of the archives. It is termed the strongest city of Galilee, and was early taken by Gallus, the general of Cestius. (*B. J.* ii. 18. § 11.) It maintained its allegiance to the Romans after the general revolt of Galilee (*Jh.* iii. 2. § 4, 4. § 1), but did not break with the Jewish leaders. (*Vita*, 8, 9.) Its early importance as a Jewish town, attested by the fact that it was one of the five cities in which district sanhedrims were instituted by Gabinius (*B. J.* i. 8. § 5), was further confirmed by the destruction of Jerusalem, after which catastrophe it became for some years the seat of the Great Sanhedrim, until it was transferred to Tiberias. (Robinson, *Bibl. Res.* vol. iii. p. 202.) It was subsequently called *Diocaesarea*, which is its more common appellation in the ecclesiastical annals; while Euphanis and S. Jerome recognise both names. A revolt of the Jewish inhabitants, in the reign of Constantius (*A. D.* 339), led to the destruction of the city by Constantius Gallus Caesar. (Socrates, *H. E.* ii. 33; Sozomen, *H. E.* iv. 7.) This town, once the most considerable city of Galilee, was situated according to S. Jerome 10 miles west of Mount Tabor. (*Onomast. s. v. Σεβώρι*; Procopius *Gazaens, Comment. in Lib. Judicum*.) It was much celebrated in the history of the Crusaders, for its fountain—a favourite camping place of the Christians. It is still represented by a poor village bearing the name *Sephurieh*, distant about 5 miles to the north of Nazareth, retaining no vestiges of its former greatness, but conspicuous with a ruined tower and church, both of the middle ages; the latter professing to mark the site of the birthplace

of the Virgin Mary, assigned by a late tradition to this locality. It became the see of a suffragan bishop, under the metropolitan of Scythopolis (Le Quien, *Oriens Christianus*, vol. iii. pp. 713, 714), and there are coins still extant of the reigns of Domitian, Trajan, &c. (Reland, *Palæstina*, pp. 199—1003; Eckhel, *Doct. Vet. Num.* vol. iii. pp. 425, 426.) [G. W.]

SEPTEM AQUAE. [REATE.]

SEPTEM ARAE, a place in Lusitania (*Itin. Ant.* pp. 419, 420). Various identified with *Code-sara* and *Arronches*. [T. H. D.]

SEPTEM FRATRES (Ἑπτὰ δέσφοι ὄρος, *Ptol.* iv. 1. § 5), a group of mountains in the northernmost part of Mauritania Tingitana, connected by a tongue of land with the promontory of Abyla (now *Ximiera* near *Ceuta*), and thus on the narrowest part of the Fretum Gaditanum (*Plin.* v. 1. a. 1; *Solin.* c. 28; *Strab.* xvii. p. 827.) One of these mountains, now called the *Ape Mountains* (Graberg Von Hemsö, *Empire of Morocco*, Germ. Tr. p. 24), bore, according to *Strabo* (l.c.) the name of the Elephant (Ἐλέφας), probably from the number of elephants which were to be found there. (*Plin.* l.c.; *Mart.* Cap. vi. p. 216.) The Geogr. Rav. (iii. 11) also mentions in this neighbourhood a town called *Septem Fratres*, which is perhaps the same place mentioned in the *Itin. Ant.* (p. 9) as a station between *Tingis* and *Abyla*. *Procopius* also (*B. Vand.* i. 1; comp. ii. 5, and *de Aed.* vi. 7) mentions here a castle or fortress called *Σέρρον*; and *Isidore* (*Orig.* xv. 1) a castle and town called *Septa*, perhaps the modern *Ceuta*. (*Comp. Mela*, i. 5. § 5, et ibi *Tzschucke*.) [T. H. D.]

SEPTEM MARIA (Ἑπτὰ πελάγη), was the name commonly given to the extensive lagoons at the mouth of the *Padus*, and the adjoining rivers, and which extend along a considerable part of the shores of the *Adriatic* from the mouths of the *Padus* to *Altinum*. *Pliny* indeed seems to use the term in a more restricted sense, as he speaks of "Atrianorum paludes, quae Septem Maria appellantur" (iii. 16. s. 20); but the *Itinerary* distinctly applies the name to the whole extent of the lagoons from *Ravenna* to *Altinum* (*Itin. Ant.* p. 126); and *Herodian*, who notices them particularly (viii. 7), clearly uses the term in the same sense. [E. H. B.]

SEPTEM PAGI (Ἑπτὰ Πάγοι), was the name given to a district close to *Rome*, but on the right bank of the *Tiber*, which according to tradition had originally formed part of the territory of the *Veientes*, but was ceded by them to the *Romans* as early as the reign of *Romulus*. (*Dionys.* ii. 55; *Plut. Rom.* 25.) According to the authorities followed by *Dionysius* it was again surrendered to the *Etruscans* by the treaty concluded with *Porcena*, but was shortly after restored by that monarch to the *Romans*. (*Dionys.* v. 31, 36.) *Livy* mentions the same circumstances, but without giving the name of the district. (*Liv.* ii. 13, 15.) It is evident, however, that this was a well-known appellation, but we are unable to fix its boundaries more definitely. [E. H. B.]

SEPTEMPEDA (Σεπτέμπεδα, *Strab.*, *Ptol.* *Éth.* *Septempedanus*: *San Severino*), a town of *Picenum*, in the upper valley of the *Potentia*, 9 miles above *Treia*. It is mentioned by all the geographers, and the "ager Septempedanus" is noticed in the *Liber Coloniarum*. (*Plin.* iii. 13. s. 18; *Strab.* v. p. 241; *Ptol.* iii. 1. § 52; *Líb. Col.* p. 258.) *Pliny* assigns it the rank of a municipal town, and this is confirmed by inscriptions, one of which is of the age of *Aurelian*.

(*Orell. Inscr.* 1026; *Gruter, Inscr.* p. 308. 3.) It is placed by the *Itinerary* of *Antoninus* on that branch of the *Flaminian Way* which, quitting the main high road at *Nuceria*, crossed the *Apennines* to *Prolaenum* and thence descended the valley of the *Potentia* by *Septempeda* and *Treia* to *Auximum* and *Ancona*. (*Itin. Ant.* p. 312.) It early became an episcopal see, and derives its modern name of *San Severino* from one of its bishops who flourished in the middle ages. It still retains its rank as an episcopal city, and is the capital of the surrounding city, though it has not more than 3000 inhabitants. (*Rampoldi, Diction. Corogr.* vol. iii. p. 837.) [E. H. B.]

SEPTIMANCA, a town of the *Vaccae* in *Hispania Tarraconensis* (*Itin. Ant.* p. 435). Now *Simancas*. [T. H. D.]

SEFULCHRUM EURIPIDIS (Amm. Marc. xxvii. 4. § 8; comp. *Gell.* xv. 20; *Plut. Lycurg.* 36; *Vitruv.* viii. 3; *Plin.* xxxi. 19; *Itin. Hierosol.*), the remarkable monument erected to *Euripides* in *Macedonia*, at the narrow gorge of *Anlon* or *Arethusa* (*Βασίλκια* or *Rumili Bighazi*), where the mountains close upon the road. The ancients (*Vitruvius*, l.c.; *Plin.* l.c.) placed it at the confluence of two streams, of which the water of one was poisonous, the other so sweet and health-giving that travellers were wont to halt and take their meals by its currents. In the *Jerusalem Itinerary*, a document as late as the 13th century, it occurs as a station between *Pennana* and *Apollonia*. (*Comp. Clarke's Travels*, vol. viii. pp. 9—13.) [E. B. J.]

SEQUANA (Σηκουάνας, *Σηκουάνας*, *Ptol.* ii. 8. § 2), the *Seine*, one of the large rivers of *Gallia*. The *Seine* rises in the highlands south of *Langres*, but in the department of *Côte d'Or*, and flows in a northwest direction past *Châtillon-sur-Seine*, *Troyes*, *Melun*, *Paris*, *Mantes*, *Elboeuf*, *Rouen*, and *Le Havre*. It enters the *Atlantic* below *Le Havre*. The course of the *Seine* is about 470 miles, and the area of its basin is about 26,000 English square miles, which is only one half of the area of the basin of the *Loire*. The chief branches of the *Seine* which join it on the right bank are the *Aube*, the *Marne*, and the *Oise*; on the left bank, the *Yonne*, the *Loing*, and the *Eure*. None of the hills which bound the basin of the *Seine*, or are contained within it, have a great elevation, and a large part of the country included within this basin is level.

Caesar (*B. G.* i. 1) makes the *Sequana* and the *Matrona* (*Marne*) the boundary between the *Celtae* and the *Belgae*. *Strabo* (iv. p. 192) says that the *Sequana* rises in the *Alps*, a statement which we must not altogether impute to an erroneous notion of the position of the river's source, though his knowledge of *Gallia* was in many respects inaccurate, but to the fact that he extended the name of *Alps* far beyond the proper limits of those mountains. But his inaccuracy is proved by his saying that the *Sequana* flows parallel to the *Rhine*, and through the country of the *Sequani*. He is more correct in fixing its outlet in the country of the *Caleti* and the *Lexovii*. The *Seine* was navigated in the time of *Strabo* and much earlier. [*GALLIA TRANSALPINA*, Vol. I.]

The *Matrona*, as *Ansonius* names it (*Mosella*, v. 462),—

"Matrona non Gallos Belgasque intersita fines,"—joins the *Seine* a few miles above *Paris*; it is the largest of the affluents of the *Seine*.

Ammianus Marcellinus (xv. 11) says that the

united streams of the Sequana and Matrona entered the sea near Castra Constantia (*Contances*), which is a great mistake. In the cosmography of Aethicus the Sequana is named Geon or Geobonna. [G. L.]

SE'QUANI (Σηκουανοί), a Celtic nation in the upper valley of the Arar or *Saône*. Lucan (i. 425) follows the quantity of the Greek form:—

"Optima gens flexis in gyrum Sequana fraenis."

Caesar fixes the position of the Sequani. Their territory extended to the Rhine. (*B. G. i. 1.*) The Jura separated them on the east from the Helvetii; and the narrow pass between the Jura and the Rhone at *Fort l'Ecluse* was in the possession of the Sequani (*B. G. i. 6, 8*). The southern boundary of their territory from *Fort l'Ecluse* was the *Rhone*; but they did not possess all the country in the angle between the *Rhone* and the *Saône*, for part of it was held by the Allobroges (*B. G. i. 12*), and part by the Segusiani (*B. G. i. 10*) and by the Ambarri, who were dependent on the Aedui (*B. G. i. 11*). When Caesar describes the march of the Helvetii from *Fort l'Ecluse* to the *Saône*, he says that the Helvetii first passed through the territory of the Sequani, and then entered the territory of the Aedui, which they plundered. But they had not yet reached the *Saône*, as Caesar's narrative shows, and it is clear from this passage (*B. G. i. 11*) and those already cited, that a large tract of country between the *Rhone* and *Saône* did not belong to the Sequani, for the line of march of the Helvetii from *Fort l'Ecluse* to the *Saône* would probably bring them to the *Saône* at a point not much lower down than *Mâcon*. The western boundary of the Sequani was the Arar, also called the *Sanconna*, a name which appears to be the same as the name of the Sequani. Their neighbours on the west side of the *Saône* were the Aedui, with whom the Sequani had disputes about the river tolls (Strab. iv. p. 192). On the north their neighbours were the Leuci and Lingones. Strabo (iv. p. 186) describes the Arar and Dubis (*Doubs*) as flowing through the country of the Sequani. D'Anville has an argument to show that the part of the dioceses of *Châlons-sur-Saône* and *Mâcon* which is east of the *Saône* belonged to the old territory of the Sequani, which may be true; but the towns *Matisco* (*Mâcon*) and *Cabillonum* (*Châlons*) were on the west side of the *Saône* and in the territory of the Aedui (*B. G. vii. 90*).

In another passage besides that already referred to, Caesar shows that the Sequani extended to the Rhine, for in describing the course of this river from south to north, he says that it passes by the territory of the Helvetii, Sequani, Mediomatrici and Tribocci. (*B. G. iv. 10*.)

The Sequani belonged to the division of Belgica under the Empire (Plin. iv. 17; Ptol. ii. 9. § 21). The territory of the Sequani contained much good land, some of the best in Gallia. Their chief town was Vesontio (*Besançon*) on the *Doubs*, and they had other towns also. They fed hogs, and their hams and bacon were exported to Rome as Strabo (iv. p. 192) says; and Varro (*de R.R. ii. 4*) may mean to say the same, when he speaks of Gallic bacon.

The Sequani had kings, sometimes at least; for Gallic kings were not perpetual. (*B. G. i. 3.*) Before Caesar went into Gallia, the Arverni and Aedui had been the two most powerful peoples. The Sequani were in league with the Arverni, who occupied the centre of all Gallia, but hostile to their neighbours the Aedui. To maintain themselves against the

Aedui, the Arverni and Sequani hired Germans to come over the Rhine. The Germans came in great numbers, and in Caesar's time it was computed that there were 120,000 of them in Gallia. This is the first historical notice of a permanent settlement of Germans in these parts. The Sequani with the assistance of their allies defeated and humbled the Aedui, but they gained nothing by this victory. Ariovistus, the king of these German mercenaries, took from the Sequani a third part of their lands, and was threatening to take a second third, when Caesar drove the Germans into the Rhine, after defeating them near that river. If the Germans were all destroyed or driven away from the territory of the Sequani by Caesar, they came again, for the country on the west bank of the Rhine, which belonged to the Sequani, the *Upper Alsace*, has been German for many centuries.

In B. c. 52, the Sequani were among the nations who sent their contingent to attack Caesar before Alesia. [G. L.]

SERA (Σηρα, Ptol. i. 11. § 1, 17, § 5, vi. 13. § 1, 16. § 8, viii. 24. § 8), the capital of the country of Serica, and one of the chief commercial towns of the Seres. It was the remotest point of Eastern Asia with which the ancients had any commerce, or of which they possessed any knowledge. It was situated on the mountain *Ottorocorras* at the eastern source of the *Bautisus*. Mannert (iv. p. 501) identifies it either with *Singien* in the province of *Schensi*, or with *Honan* on the *Hoang-ho*; but according to Heeren (*Ideen*, i. 2. p. 668) it is *Pekin* itself. [T. H. D.]

SERACA (Σερδκα, Ptol. v. 9. § 28), a town in the S. of Asiatic Sarmatia. [T. H. D.]

SERANUSA, perhaps more correctly *Seramnusa*, a town of the interior of Pontus Polemoniacus, on the south-east of Comana Pontica. (*Tab. Peut.*; Ptol. v. 6. § 9, where it is written Σέρμουσα or Σέρμουσα.) [L. S.]

SERAPIUM (*It. Anton.* p. 170; *Serapim, Tab. Peut.*), a large village seated near the junction of the canal of the Ptolemies with the Bitter Lakes, east of the Delta. Serapium was 18 miles distant from Heropolis and 50 from Clysma, at the top of the Sinus Heroopolites. Its temple of Serapis, and its position on the canal that connected the Nile with the Red Sea, rendered it a place of considerable traffic. It was probably founded, or at least enlarged, by the Ptolemies after Philadelphus (B. c. 274) had extended the canal to the Bitter Lakes. [W. B. D.]

SERBES (Σέρβητος ἐκβολαί, Ptol. iv. 2. § 7), a small river on the N. coast of Mauritania, which fell into the sea to the W. of Rusuccurum; either the present *Massafran*, or, more probably, the *Isser*. [T. H. D.]

SERBI or SIRBI (Σέρβη or Σίρβη, Ptol. v. 9. § 21), a people in Asiatic Sarmatia, according to Ptolemy (L. c.) between the Ceraunian mountains and the river Rha, above the Diduri and below the Vali. Pliny, however (vi. 7. s. 7), places them on the E. shore of the Maeotis, between the Vali and the Arrechi. (Comp. Schaffarik, *Slav. Alterth.* i. p. 165.) [T. H. D.]

SERBO'NIS LACUS. [SIRBONIS LACTUS.]

SE'RDICA or SA'RDICA (Σαρδική, Ptol. iii. 11. § 12) (the first of these forms is the more usual with the Romans, the latter with the Greeks), a considerable town of Upper Moesia, which in earlier times was regarded as belonging to Thrace (Ptol. L. c.), but which in the third century was attributed

to Dacia Inferior, and made its capital. (Theodoret. *Hist. Eccl.* ii. 4.) It lay in a fruitful plain, at the spot where the sources of the Oescus united, and on the high-road from Naissus to Philippopolis, between Meldia and Burburaca. (*Itin. Ant.* p. 135; *Itin. Hierosol.* p. 567.) From the time of Aurelian it bore on its coins the surname of Ulpia; probably because, when Dacia was relinquished, the name of that Dacian town was transferred to it, and its inhabitants, perhaps, located there. The emperor Maximian was born in its neighbourhood. (Eutrop. ix. 14, 22.) It was destroyed by Attila (Priscus, *de Legat.* p. 49), but shortly afterwards restored. In the middle ages it occurs under the name of Triaditza (Τριάδιτσα, Niceph. *Chron. Ann. Ia. Angel.* iii. p. 214; *Aposp. Geogr.* in Hudson, iv. p. 43), which was perhaps its original Thracian appellation, and which is still retained in the dialect of the inhabitants. (See Wesseling, *ad Itin. Ant. l. c.*) Its extensive ruins lie to the S. of Sophia. (Comp. Procop. *de Aed.* iv. l. p. 267, 4. p. 282; Hierocl. p. 654; Amm. Marc. xxxi. 16; Gruter, *Inscr.* p. 540. 2; Orelli, nos. 3548, 5013.) The Geogr. Rav. (iv. 7) incorrectly writes the name Serica, since it was derived from the Thracian tribe of the Serdi. It is called by Athanasius (*Apol. contra Arianos*, p. 154) Σαρδιὸν πόλις. [T. H. D.]

SERENA, a town in Lower Pannonia, on the south bank of the Danube, on the road from Poetovium to Mursa. (*It. Hieros.* p. 562; Geogr. Rav. iv. 19, where it is called Serenis; *Tab. Peut.*, where its name is Serona.) It is thought to have occupied the site of the modern *Moslavina*. [L. S.]

SERES. [SERICA.]

SERETIUM (Σερτίον, Dion Cass. lvi. 12), a fortified town of Dalmatia, which with Rhaetimus was captured by Germanicus in the campaign of A. D. 7. [E. B. J.]

SERGU'NTIA (Σεργουρία, Strab. iii. p. 162), a small town of the Arvaci on the Duris, in Hispania Tarraconensis. Ukert (ii. pt. i. p. 455) takes it to have been the Σάργανθα of Stephanus B. (s. v.). [T. H. D.]

SER'IA (Σέρια, Ptol. ii. 4. § 12), a town of the Turdetani in Hispania Baetica, with the surname of Fama Julia. (Plin. iii. 1. s. 3.) It lay E. of the mouth of the Anas, and N. of the Baetis. [T. H. D.]

SERIA'NE, a city of Syria mentioned in the Itinerary of Antoninus as xviii. M. P. distant from Androm, which was xxvii. M. P. from Calcia, cxxxviii. M. P. from Dolicha, now *Doluc*. (*Itin. Ant.* pp. 194, 195.) Mannert thinks that it corresponds in situation with the Chalybon (Χαλυβών) of Ptolemy (v. 15. § 17), which gave its name to a district of Syria Chalybonitis. It is certainly identical with the modern *Siría*, 2 long days SE. of *Aleppo*, in the desert, the ruins of which were discovered and described by Pietro della Valle. (Mannert, *Geographie*, part vi. vol. i. p. 411.) [G. W.]

SER'ICA (ἡ Σηρική, Ptol. vi. 16. §§ 1, 3 4, 6, vii. 2. § 1, 3. § 1, 5. § 1, viii. 24. §§ 1, 5, 27. § 2. &c.), a tract of country in the E. part of Asia, inhabited by the people called Seres. According to the description of Ptolemy, it was bounded on the W. by Scythia extra Imaum, on the NE. by an unknown land, on the E. by the Sinæ, and on the S. by India. Pliny on the contrary (vi. 13. s. 15) seems to extend it on the E. as far as the coast of Asia, as he mentions an Oceanus Sericus, and in another place (*Ib.* 17. s. 20) speaks of a promontory and bay. Modern opinions vary respecting its site; but

the best geographers, as Rennell, D'Anville, and Heeren, concur in placing it at the NW. angle of the present empire of *China*. (See Yates, *Textrinum Antig.* p. 232, note.) The name of Serica, as a country, was not known before the first century of our era, though there are earlier accounts of the people called Seres. It seems highly improbable, however, that they were known to Hecataeus, and the passage on which that assumption is founded occurs only in one MS. of Photius. They are first mentioned by Ctesias (p. 371, n. 22, ed. Bähr); but according to Mela (iii. 7) they were in his time known to all the world by means of their commerce. On the northern borders of their territories were the more eastern skirts of the mountains Annibi and Auxacii (the *Altai*), which stretched as far as here from Scythia. In the interior of the country were the Montes Asmiræi, the western part of the *Da-Uri* chain; and towards the southern borders the Casii Montes (now *Khara*, in the desert of *Gobi*), together with a southern branch called Thagurus, which trended towards the river Bautisus (*Hoang-ho*.) On the farther side of that river lay the Ottoeroorras, the most eastern branch of the Emodi mountains, called by Ptolemy (vi. 16. § 5) τὰ Ἐμποδὸν ὄρη. Among the rivers of the country, the same author (*Ib.* § 3) names, in its northern part, the Oechardes (probably the *Selenga*), and, in the S., the Bautes or Bautisus (*Hoang-ho*), which flowed towards the land of the Sinæ. Pliny, however (*l. c.*), mentions several other rivers, which seem to have been coast ones, as the Psitaras, Cambari, Lamos, and Atianus, as well as the promontory of Chryse and the bay of Cynaba. Serica enjoyed a serene and excellent climate, and possessed an abundance of cattle, trees, and fruits of all kinds (Amm. Marc. xxxiii. 6. § 64; Plin. *l. c.*). Its chief product, however, was silk, with which the inhabitants carried on a very profitable and most extensive commerce (Strab. xv. p. 693; Arist. *Hist. Nat.* v. 19; Virg. *Georg.* ii. 121; Plin. and Amm. *l. cc. &c.*). Pliny records (xi. 22. s. 26), that a Greek woman of Cos, named Pamphila, first invented the expedient of splitting these substantial silken stuffs, and of manufacturing those very fine and veil-like dresses which became so celebrated under the name of Coae vestes. Both Serica and its inhabitants are thought to have derived their name from their staple product, since, as we learn from Hesychius (s. v. Σήρες), the insect, from the web of which the brilliant stuff called holosericon was prepared, was named Ser (Σήρ). (Comp. Klaproth, *Sur les Noms de la Chine* in the *Mém. rel. à l'Asie*, iii. p. 264; and *Tableaux Hist. de l'Asie*, pp. 57 and 68.) It has been doubted, however, from the apparent improbability that any people should call themselves Seres, or silkworms, whether the name of Seres was ever really borne by any nation; and it has been conjectured that it was merely a mercantile appellation by which the natives of the silk district were known. (Latham, in *Class. Mus.* vol. iii. p. 43, seq.) Lassen (*Ind. Alt.* i. p. 321) has produced from the *Mahabharata*, ii. 50, as the real names of the Seres, those of Caka, Tukhara, and Kanka, who are represented as bringing just the same goods to market as are ascribed by Pliny (xxxiv. 14. s. 41) to the Seres, namely, wool, skins, and silk. Yet, though it may be allowed to be improbable that a people should have called themselves "Silkworms," yet it seems hardly less so that such an appellation should have been given them by foreigners, and that they should have been known by it and no other for a

period of several centuries. On the other hand, may it not be possible that the product was called after the people, instead of the people after the product? We are not without examples of an analogous procedure; as, for instance, the name of the phasis, or pheasant, from the river Phasis; of our own word *currants*, anciently and properly *Corinths*, from the place whence that small species of grape was originally brought, &c. However this may be, we may refer the reader who is desirous of a further account of the origin and manufacture of silk, to an excellent dissertation in the *Texterium Antiquarium* of Mr. Yates (part i. p. 160, seq.), where he will find all the passages in ancient authors that bear upon the subject carefully collected and discussed.

Besides its staple article, Serica also produced a vast quantity of precious stones of every kind (*Expos. tot. Mundi*, ap. Hudson, iii. p. 1, seq.), as well as iron, which was esteemed of a better quality even than the Parthian (Plin. l. c.) and skins (*Per. M. Erythr.* p. 22; Amm. l. c.).

According to Pausanias (vi. 22. § 2) the Seres were a mixture of Scythians and Indians. They are mentioned by Strabo (xv. p. 701), but only in a cursory manner. It appears from Mela (iii. 7) and from Pliny (vi. 17. s. 24), compared with Eustathius (*ad Dionys. Per.* v. 753, seq.), and Ammianus Marcellinus (l. c.), that they were a just and gentle people, loving tranquillity and comfort. Although addicted to commerce, they were completely isolated from the rest of the world, and carefully avoided all intercourse with strangers. From these habits, they were obliged to carry on their commercial transactions in a very singular manner. They inscribed the prices of their goods upon the bales in which they were packed, and then deposited them in a solitary building called the Stone Tower; perhaps the same place mentioned by Ptolemy (vi. 15. § 3) under the name of Hormeterion, situated in a valley on the upper course of the Jaxartes, and in the Scythian district of Casia. The Scythian merchants then approached, and having deposited what they deemed a just price for the goods, retired. After their departure, the Seres examined the sum deposited, and if they thought it sufficient took it away, leaving the goods; but if not enough was found, they removed the latter instead of the money. In the description of this mode of traffic we still recognise the characteristics of the modern Chinese. The Parthians also traded with the Seres, and it was probably through the former that the Romans at a later period procured most of their silk stuffs; though the Parthians passed them off as Assyrian goods, which seems to have been believed by the Romans (Plin. xi. 22. s. 25). After the overthrow of the Parthian empire by the Persians, the silk trade naturally fell into the hands of the latter. (Vopisc. *Aurel.* c. 45; Procop. *B. Pers.* i. 20, &c.) With regard to their persons, the Seres are described as being of unusual size, with blue eyes, red hair, and a rough voice (Plin. vi. 22. s. 24), almost totally unacquainted with diseases and bodily infirmities (*Expos. tot. Mundi*, l. c.), and consequently reaching a very great age (Ctes. l. c.; Strab. xv. p. 701; Lucian, *Macroch.* 5). They were armed with bows and arrows (Hor. *Od.* i. 29. 9; Charic. vi. 3). Ptolemy (l. cc.) enumerates several distinct tribes of them, as the Annibi, in the extreme N., on the mountains named after them; the Zizyges, between them and the Auxacian mountains; the Dammae, to the S. of these; and still further S.

down to the river Oechardes, the Piasæ; the Oechardæ, who dwelt about the river of the same name; and the Garenæi and Nabannæ, to the E. of the Annibi. To the S. of these again was the district of Asmiræa, near the mountains of the same name, and still further in the same direction the Issedones; to the E. of whom were the Throani. To the S. of the Issedones were the Asparacæ, and S. of the Throani the Ethaguri. Lastly, on the extreme southern borders were seated the Batæ and the Ottorocoræ,—the latter, who must doubtless be the same people called by Pliny Attacori, on the like-named mountain. To the southern district must also be ascribed the Sesatæ mentioned in Arrian's *Periplus M. Erythr.* (p. 37), small men with broad foreheads and flat noses, and, from the description of them, evidently a Mongol race. They migrated yearly with their wives and children to the borders of the Sinæ, in order to celebrate their festivals there; and when they had returned to the interior of their country, the reeds which they left behind them, and which had served them for straw, were carefully gathered up by the Sinæ, in order to prepare from it the Malabathron, a species of ointment which they sold in India. (Comp. Ritter, *Erkenntnis*, ii. p. 179, v. p. 443, 2nd ed.; Bohlen, *das Alte Indien*, ii. p. 173; Heeren's, *Ideen*, i. 2. p. 494.) According to Ammianus (l. c.) the towns of Serica were few in number, but large and wealthy. Ptolemy, in the places cited at the head of this article, names fifteen of them, of which the most important seem to have been, Sera, the capital of the nation; Issedon; Throana, on the E. declivity of the Asmiræi mountains, and on the easternmost source of the Oechardes; Asmiræa, on the same stream, but somewhat to the NW. of the preceding town; Aspacara, on the left bank of the Bantius, not far from its most western source; and Ottorocorra. [T. H. D.]

SERIMUM (Σέριμνος, Ptol. iii. 5. § 28), a town on the Borystheus, in the interior of European Sarmatia. [T. H. D.]

SERIPHOS or SERIPHUS (Σέριφος: *Ἐκ Σέριφου: Serpho*), an island in the Aegean sea, and one of the Cyclades, lying between Cythnos and Siphnos. According to Pliny (iv. 12. s. 22) it is 12 miles in circumference. It possessed a town of the same name, with a harbour. (Scylax, p. 23; Ptol. iii. 15. § 31.) It is celebrated in mythology as the place where Danaë and Perseus were driven to shore in the chest in which they had been exposed by Acrisius, where Perseus was brought up, and where he afterwards turned the inhabitants into stone with the Gorgon's head. (Apollod. ii. 4. § 3; Pind. *Pyth.* x. 72, xii. 18; Strab. x. p. 487; Or. *Met.* v. 242.) Seriphos was colonised by Ionians from Athens, and it was one of the few islands which refused submission to Xerxes. (Herod. viii. 46, 48.) By subsequent writers Seriphos is almost always mentioned with contempt on account of its poverty and insignificance (Aristoph. *Acharn.* 543; Plat. *Rep.* i. p. 329; Plut. *de Exil.* 7. p. 602; Cic. *de Nat. Deor.* i. 31, *de Senect.* 3); and it was for this reason employed by the Roman emperors as a place of banishment for state criminals. (Tac. *Ann.* ii. 85, iv. 21; Juv. vi. 564, x. 170; Senec. *ad Consol.* 6.) It is curious that the ancient writers make no mention of the iron and copper mines of Seriphos, which were, however, worked in antiquity, as is evident from existing traces, and which, one might have supposed, would have bestowed some prosperity upon the island.

But though the ancient writers are silent about the mines, they are careful to relate that the frogs of Seriphos differ from the rest of their fraternity by being dumb. (Plin. viii. 58. s. 83; Arist. *Mir. Ausc.* 70; Aelian, *Hist. An.* iii. 37; Suidas, s. v. *Βάτραχος ἐκ Σερίφου*.) The modern town stands upon the site of the ancient city, on the eastern side of the island, and contains upwards of 2000 inhabitants. It is built upon a steep rock, about 800 feet above the sea. There are only a few remains of the ancient city. (Ross, *Reisen auf den Griech. Inseln*, vol. i. p. 134, seq.; Fiedler, *Reise, &c.* vol. ii. p. 106, seq.)

COIN OF SERIPHOS.

SERMO, a town of the Celtiberi in Hispania Tarraconensis. (*Itin. Ant.* p. 447.) Various identified with *Muel* and *Mezalocho*. [T. H. D.]

SERMYLE (Σερμύλη, Herod. vii. 122; Thuc. v. 18; Σερμυλία, Scyl. p. 26; Hecataeus, *op. Steph. B. s. v.*; Böckh, *Inscr. Graec.* vol. i. p. 304; *Eth. Σερμύλιοι*), a town of Chalcidice, between Galepsus and Mecyberna, which gave its name to the Toronaic gulf, which was also called SERMYLICUS SINUS (κόλπος Σερμυλικός, Scyl. l. c.). The modern *Ormylia*, between *Molyro* and *Derna*, is identified from its name, which differs little from the ancient form, with the site of Sermyle. (Leake, *Northern Greece*, vol. iii. p. 155.) [E. B. J.]

SERMYLICUS SINUS. [SERMYLE.]

SEROTA, a town on the frontier between Upper and Lower Pannonia, on the right bank of the river Dravus. (*It. Ant.* p. 130; *It. Hieros.* p. 562; Geog. Rav. iv. 19, where it is called *Sirore*, while the Table calls it *Sirota*.) It is possible that this town may have belonged to the tribe of the Serretes mentioned by Pliny (iii. 28) as inhabiting a part of Pannonia. The town of Serota is commonly identified with the modern *Verőcze* or *Verovits*. [L. S.]

SERPA, a place in Hispania Baetica, on the Anas, and in the territory of the Turdetani. (*Itin. Ant.* p. 426.) It still bears its ancient name. See Resendi *Ant. Lusit.* p. 194. [T. H. D.]

SERRAEPOLIS (Σερραῖα πόλις κάμη, Ptol. v. 6. § 4), a village on the coast of Cilicia, lying between Mallus and Aegae (*Ayaz*).

SERRAPILLI, a tribe mentioned by Pliny (iii. 28), as dwelling on the river Dravus in Pannonia. The resemblance of name has induced some geographers to assume that they dwelt about the modern town of *Pilich*; but this is a mere conjecture. [L. S.]

SERRETES. [SEROTA.]

SERRHAE. [SIRIS.]

SERRHEUM or SERRHIUM (Σέρριον, Dem. p. 85, R.; Σέρρειον, Herod. vii. 59; Steph. B. s. v.), a promontory and town on the southern coast of Thrace, now *Cape Makri*. It lay to the west of Maroneia, and opposite to the island of Samothrace. It is repeatedly mentioned by Demosthenes (pp. 85, 114, 133, R), as having been taken by Philip, contrary to his engagements with the Athenians; and Livy (xxi. 16) states that it was one of the Thracian towns captured by Philip V. in the

year B. C. 200. (Plin. iv. 11. s. 18; Mela, ii. 2.) According to Stephanus Byz. (l. c.) a town on the island of Samothrace bore the same name. [J. R.]

SERRI, a people of the Asiatic Sarmatia, on the Euxine. (Plin. vi. 5. s. 5.) Mela (i. 19) places them between the Melanchlaeni and Siraces. [T. H. D.]

SERRIUM. [SERRHEUM.]

SERVIODURUM, a town in the north-east of Vindelicia on the Danube, on the road from Reginum to Boiodurum, near Augustana Castra. (*Tab. Peut.*; *Not. Imp.*) It must have occupied the site of the modern *Straubing*, or some place in the neighbourhood, such as *Azelburg*, where ancient remains still exist. [L. S.]

SERVITIUM, a town in the southern part of Upper Pannonia, on the river Dravus, on the road from Siscia to Sirmium. (*It. Ant.* p. 268; Geog. Rav. iv. 19, where it is called *Serbetium*; *Tab. Peut.*) Its site has been identified with several modern places; but the most probable conjecture is that it occupied the place of the modern *Sieverovci*, the point at which the roads leading from Sirmium and Siscia to Salona met. [L. S.]

SESAMUS (Σησαμός), a small river on the coast of Paphlagonia, flowing into the Euxine near the town of Amastria, whence in later times the river itself was called Amastria. (Anonym. *Periopl. P. E.* p. 5; Marcian. p. 71; AMASTRIA.) [L. S.]

SESARETHUS. [TAULANTIL.]

SESATAE. [SERICA.]

SESECRENÆ (Σησεκρενῆαι νῆσοι, Arrian, *Periopl. M. Erythr.* p. 30), a group of islands opposite to the S. coast of India intra Gangem, and probably in the Sinus Colchicus—where Ptolemy (vii. 1. § 10) places a town with the somewhat similar name of *Σωλοκουρα*. It must have been in the neighbourhood of Taprobane, since the Periplus mentions the *Αφγιδίων νήσος* as close to the Sesecrienae, whilst Ptolemy (vii. 4. § 11) places the same island amongst a number of others lying before Taprobane, many of which must undoubtedly have belonged to the Sesecrienae. [T. H. D.]

SESSITES (Sesia), a river of Gallia Transpadana, and one of the most important of the northern tributaries of the Padus. It flows beneath the walls of Vercellae (*Vercelli*), and joins the Padus about 16 miles below that city. Its name is noticed only by Pliny (iii. 16. s. 20) and the Geographer of Ravenna (iv. 36), who writes the name Sisisus. [E. H. B.]

SESTIANÆ ARAE (called by Ptolemy Σηστιῶν Βασιλῶν ἕκρον, ii. 5. § 3), the W. promontory of the N. coast of Gallacia in Hispania Tarraconensis. It had three altars dedicated to Augustus, whence its name. (Plin. iv. 20. s. 34; Mela, iii. 1.) It is the present *Cabo Villano* (Flores, *Esp. Sagr.* xx. p. 44; Sestini, *Med. Isp.* p. 103.) [T. H. D.]

SESTIARIA PROM. (Σηστιάρια ἕκρη, Ptol. iv. 1. § 7), a headland on the N. coast of Mauritania Tingitana, between capes Russadir and Abyla. It is probably the same that is called Cannarum Promontorium in the *Itin. Ant.* (p. 11), lying at a distance of 50 miles from Russadir, or the present *Cabo Quilates*. [T. H. D.]

SESTINUM (*Eth. Sestinas: Sestino*), a town in the interior of Umbria, mentioned only by Pliny, who enumerates the Sestimates among the towns of that region (Plin. iii. 14. s. 19; Gruter, *Inscr.* p. 108. 7), but which still retains its ancient name. It is situated among the Apennines, at the source of the river *Foglia* (Pisaurs). [E. H. B.]

SESTUS (Σήστος; *Εὐθ. Σήστιος*), the principal town of the Thracian Chersonesus, and opposite to Abydos, its distance from which is variously stated by ancient writers, probably because their measurements were made in different ways; some speaking of the mere breadth of the Hellespont where it is narrowest; others of the distance from one city to the other; which, again, might be reckoned either as an imaginary straight line, or as the space traversed by a vessel in crossing from either side to the other, and this, owing to the current, depended to some extent upon which shore was the starting point. Strabo (xiii. p. 591) states that the strait is 7 stadia across near Abydos; but that from the harbour of Abydos to that of Sestus, the distance is 30 stadia.* (On this point the following references may be consulted: Herod. vii. 34; Xen. *Hell.* iv. 8. 5; Polyb. xvi. 29; Scyl. p. 28; Plin. iv. 11. s. 18. Ukert (iii. 2. § 137, note 41) has collected the various statements made by the moderns respecting this subject.)

Owing to its position, Sestus was for a long period the usual point of departure for those crossing over from Europe to Asia; but subsequently the Romans selected Callipolis as the harbour for that purpose, and thus, no doubt, hastened the decay of Sestus, which, though never a very large town, was in earlier times a place of great importance. According to Theopompus (*ap. Strab.* l. c.), it was a well-fortified town, and connected with its port by a wall 200 feet in length (*πέπελοι διπλόθυροι*). Dercyllidas, also, in a speech attributed to him by Xenophon (*Hell.* iv. 8. § 5), describes it as extremely strong.

Sestus derives its chief celebrity from two circumstances,—the one poetical the other historical. The former is its connection with the romantic story of Hero and Leander, too well known to render it necessary to do more than merely refer to it in this place (*Or. Her.* xviii. 127; *Stat. Silv.* l. 3. 27, &c.); the latter is the formation (B. C. 480) of the bridge of boats across the Hellespont, for the passage of the army of Xerxes into Europe; the western end of which bridge was a little to the south of Sestus (Herod. vii. 33). After the battle of Mycale, the Athenians seized the opportunity of recovering the Chersonesus, and with that object laid siege to Sestus, into which a great many Persians had hastily retired on their approach, and which was very insufficiently prepared for defence. Notwithstanding this, the garrison held out bravely during many months; and it was not till the spring of B. C. 478 that it was so much reduced by famine as to have become mutinous. The governor, Artayctes, and other Persians, then fled from the town in the night; and on this being discovered, the inhabitants opened their gates to the Athenians. (Herod. ix. 115, seq.; Thuc. i. 89.) It remained in their possession till after the battle of Aegospotami, and used to be called by them the corn-chest of the Piræus, from its giving them the command of the trade of the Euxine. (Arist. *Rhet.* iii. 10. § 7.) At the close

of the Peloponnesian War (B. C. 404), Sestus, with most of the other possessions of Athens in the same quarter, fell into the hands of the Lacedæmonians and their Persian allies. During the war which soon afterwards broke out between Sparta and Persia, Sestus adhered to the former, and refused to obey the command of Pharnabazus to expel the Lacedæmonian garrison; in consequence of which it was blockaded by Conon (B. C. 394), but without much result, as it appears. (Xen. *Hell.* iv. 8. § 6.) Some time after this, probably in consequence of the peace of Antalcidas (B. C. 387), Sestus regained its independence, though only for a time, and perhaps in name merely; for on the next occasion when it is mentioned, it is as belonging to the Persian satrap, Ariobarzanes, from whom Cotys, a Thracian king, was endeavouring to take it by arms (B. C. 362?). He was, however, compelled to raise the siege, probably by the united forces of Timotheus and Agésilas (Xen. *Agés.* ii. 26; *Nep. Timoth.* 1); the latter authority states that Ariobarzanes, in return for the services of Timotheus in this war, gave Sestus and another town to the Athenians*, from whom it is said to have soon afterwards revolted, when it submitted to Cotys. But his successor, Cersobleptes, surrendered the whole Chersonesus, including Sestus, to the Athenians (B. C. 357), who, on the continued refusal of Sestus to yield to them, sent Chares, in B. C. 353, to reduce it to obedience. After a short resistance it was taken by assault, and all the male inhabitants capable of bearing arms were, by Chares' orders, barbarously massacred. (Diod. xvi. 34.)

After this time we have little information respecting Sestus. It appears to have fallen under the power of the Macedonians, and the army of Alexander the Great assembled there (B. C. 334), to be conveyed from its harbour in a Grecian fleet, from Europe to the shores of Asia. By the terms of the peace concluded (B. C. 197) between the Romans and Philip, the latter was required to withdraw his garrisons from many places both in Europe and in Asia; and on the demand of the Rhodians, actuated no doubt by a desire for free trade with the Euxine, Sestus was included in the number. (Liv. xxxii. 33.) During the war with Antiochus, the Romans were about to lay siege to the town (B. C. 190); but it at once surrendered. (Liv. xxxvii. 9.) Strabo mentions Sestus as a place of some commercial importance in his time; but history is silent respecting its subsequent destinies. According to D'Anville its site is occupied by a ruined place called *Zemenic*; but more recent authorities name it *Jalowa* (Mannert, vii. p. 193). (Herod. iv. 143; Thuc. viii. 62; Polyb. iv. 44; Diod. xi. 37; Arrian, *Anab.* i. 11. §§ 5, 6; Ptol. iii. 12. § 4, viii. 11. § 10; Steph. B. s. v.; Scymn. 708; Lucan. ii. 674.) [J. E.]

SESUVII [ESSUI].

SETABIS. [SAETABIS.]

SETAE, SETTAE, or SAETTAE (Σέται, Σέτται, or Ζαίτται), a town in Lydia, near the sources of the river Hermus, which is not mentioned by any of the earlier writers. (Hierocl. p. 669; Ptol. v. 2. § 21; *Concil. Constant.* iii. p. 502; *Concil. Nicæan.*

* Lord Byron, in a note referring to his feat of swimming across from Sestus to Abydos, says:—"The whole distance from the place whence we started to our landing on the other side, including the length we were carried by the current, was computed by those on board the frigate at upwards of 4 English miles, though the actual breadth is barely one." This corresponds remarkably well with the measurements given by Strabo, as above.

* There is much obscurity in this part of Grecian history, and the statement of Nepos has been considered inconsistent with several passages in Greek authorities, who are undoubtedly of incomparably greater weight than the unknown compiler of the biographical notices which pass under the name of Nepos. (See *Dict. Biogr.* Vol. III. p. 1146, a.)

ii. p. 591; comp. Sestini, *Geog. Num.* p. 55.) It is commonly supposed to have occupied the site of the modern *Sidas Kaleh*. [L.S.]

SETANTII (*Σετάντιοι*, Ptol. ii. 3. § 2), a tribe probably belonging to the Brigantes on the W. coast of Britannia Romana, and possessing a harbour (*Σετάντιον λιμήν*, Ptol. l. c.), commonly thought to have been at the mouth of the river *Ribble*. Reichard, however, places it on the S. coast of the *Solway Frith*, while Camden (p. 793) would read, with one of the MSS. of Ptolemy, "*Segontiorum Portus*," and seeks it near *Caernarvon*. [T. H. D.]

SETANTIORUM PORTUS. [SETANTIL.]

SETELA (*Σετλία* or *Σετλία ελαιοῦς*, Ptol. ii. 3. § 2), an estuary on the W. coast of Britannia Romana, opposite the isle of *Mona*, into which the *Dee* discharges itself. [T. H. D.]

SETELSIS (*Σετελσίς* or *Σελενσίς*, Ptol. ii. 6. § 72), a town of the Jacetani in Hispania Tarraconensis, now *Solsona*. See a coin in Sestini, p. 189. [T. H. D.]

SETHERIES, a river of Asiatic Sarmatia, on the E. coast of the Pontus Euxinus, and in the territory of the Sindi. (Plin. vi. 5. s. 5.) [T. H. D.]

SETIA (*Σητρία*; *Eth.* *Setinus*; *Sezze*), an ancient city of Latium, situated on the S. slope of the Volscian mountains, between Norba and Privernum, looking over the Pontine Marshes. It is probable that it was originally a Latin city, as its name is found in the list given by Dionysius of the thirty cities of the Latin League. (Dionys. v. 61.) But it must have fallen into the hands of the Volscians, at the time their power was at its height. No mention of it is, however, found during the wars of the Romans with that people until after the Gaulish invasion, when a Roman colony was established there in B. C. 392, and recruited with an additional body of colonists a few years afterwards. (Vell. Pat. i. 14; Liv. vi. 30.) At this time Setia must have been the most advanced point of the Roman dominion in this direction, and immediately adjoined the territory of the Privernates, who were still an independent and powerful people. [PRIVERNUM.] This exposed the new colonists to the incursions of that people, who, in B. C. 342, laid waste their territory, as well as that of Norba. (Liv. vii. 42, viii. 1.) The Privernates were, however, severely punished for this aggression, and from this time the Setini seem to have enjoyed tranquillity. But it is remarkable that a few years later L. Annius of Setia appears as one of the leaders of the Latins in their great war against Rome, B. C. 340. (Liv. viii. 3.) Setia was a Colonia Latina, and was one of those which, during the pressure of the Second Punic War (B. C. 209), declared its inability to furnish any further supplies either of men or money. (Liv. xxvii. 9.) It was, at a later period of the war, severely punished for this by the imposition of much heavier contributions. (Id. xxix. 15.) From its strong and somewhat secluded position, Setia was selected as the place where the Carthaginian hostages, given at the close of the war, were detained in custody, and in B. C. 198 became in consequence the scene of a very dangerous conspiracy among the slaves of that and the adjoining districts, which was suppressed by the energy of the praetor L. Cornelius Merula. (Id. xxxii. 26.) From this time we hear no more of Setia till the Civil Wars of Marius and Sulla, when it was taken by the latter after a regular siege, B. C. 82. (Appian, *B. C.* i. 87.) It appears therefore to have been at this

period a strong fortress, an advantage which it owed to its position on a hill as well as to its fortifications, the remains of which are still visible. Under the Empire Setia seems to have continued to be a flourishing municipal town, but was chiefly celebrated for its wine, which in the days of Martial and Juvenal seems to have been esteemed one of the choicest and most valuable kinds: according to Pliny it was Augustus who first brought it into vogue. (Plin. xiv. 6. s. 8; Martial, x. 36. 6, xiii. 112; Juv. x. 27; Strab. v. pp. 234, 237; Sil. Ital. viii. 379.) We learn from the Liber Coloniarum that Setia received a colony under the Triumvirate; and it is probable that it subsequently bore the title of a Colonia, though it is not mentioned as such by Pliny. (Plin. iii. 5. s. 9; *Lib. Colon.* p. 237; Orell. *Inscr.* 2246; Zumpt, *de Colon.* p. 338.)

The position of Setia on a lofty hill, looking down upon the Pontine Marshes and the Appian Way, is alluded to by several writers (Strab. v. p. 237; Martial, x. 74. 11, xiii. 112), among others in a fragment of Lucilius (*op. A. Gell.* xvi. 9), in whose time it is probable that the highroad, of the extreme hilliness of which he complains, passed by Setia itself. It was, however, about 5 miles distant from the Appian Way, on the left hand. There can be no doubt that the modern town of *Sezze* occupies the same site with the ancient one, as extensive remains of its walls are still visible. They are constructed of large polygonal or rudely squared blocks of limestone, in the same style as those of Norba and Cora. The substructions of several edifices (probably temples) of a similar style of construction, also remain, as well as so considerable ruins of an amphitheatre. (Westphal, *Röm. Kamp.* p. 53; Dodwell's *Pelaegeic Remains*, pp. 115—120.) [E. H. B.]

SE'TIA (*Σέτρία*, Ptol. ii. 4. § 9). 1. A town of the Turduli in Hispania Baetica, between the Baetis and Mount Ilipula.

2. A town of the Vascones in Hispania Tarraconensis. (Ptol. ii. 6. § 67.) [T. H. D.]

SE'TIDA (*Σέτιδα*, Ptol. ii. 4. § 12), a town of the Turdetani in the W. of Hispania Baetica. [T. H. D.]

SETIDA'VA (*Σετιδάβα*), a town in the north-east of ancient Germany, on the north of the sources of the Vistula, so that it belonged either to the Omani or to the Burgundiones. (Ptol. ii. 11. § 28.) Its exact site is not known, though it is commonly assumed to have occupied the place of the modern *Zydowo* on the south of *Gnesen*. (Wilhelm, *Germanien*, p. 253.) [L.S.]

SETISACUM (*Σετισάκων*, Ptol. ii. 6. § 52), a town of the Murbogi in the N. of Hispania Tarraconensis. [T. H. D.]

SETIUS MONS or PROM. [BLASCON; FECTI JUGUM.]

SETOTRIALLACTA (*Σετοτριλλάκτα*, Ptol. ii. 6. § 56), a town of the Arevaci in Hispania Tarraconensis. [T. H. D.]

SETO'VIA (*Σετοῦβια*, Appian, *Illyr.* 27), a town of Dalmatia, situated in a well-wooded valley, which was besieged by Octavius in the campaign of B. C. 34. It has been identified with *Sign*, situated in the rich valley of the *Cettina*, and bounded by mountains to the right and left. [E. H. J.]

SETUACOTUM (*Σετουάκτων*, or *Σετουάκτων*), a town in the south of Germany between the upper part of the Danube and the Silva Gabreta, perhaps belonging to the territory of the Narisci (Ptol. ii. 11. § 30); but its site is quite unknown. [L.S.]

SETUIA (*Σετούια*), a town of the Quadi, in the south-east of Germany, apparently near the sources of the river Aucha, a tributary of the Danube, in the Carpathian mountains. (Ptol. ii. 11. § 29.) Its identification is only matter of conjecture. [L.S.]

SEVACES (*Σεβάκες*), a tribe in the western part of Noricum, is mentioned only by Ptolemy (ii. 14. § 2.) [L.S.]

SEVERI MURUS. [VALLUM.]

SEVERUS MONS, a mountain of Central Italy mentioned only by Virgil (*Aen.* vii. 713), who places it among the Sabines, and associates it with the Mons Tetrica. It therefore evidently belonged to the lofty central ranges of the Apennines, in that part of Italy, but cannot be identified with more accuracy. [APEXINUS.] [E. H. B.]

SEUMARA or SEUSAMORA (*Σεύμαρα* and *Σευσαμόρα*, Strab. xi. p. 501), a town in the Caucasian Iberia. [T. H. D.]

SEVO, a lofty mountain in the extreme north of ancient Germany, in the island of Scandia, in the territory of the Ingaevones. It was believed to equal in extent and magnitude the Ripaei Montes. (Plin. iv. 27; Solin. 20.) There can be no doubt that this mountain is the same as *Mount Kjölen* which at present separates *Sweden* from *Norway*, and the southern branch of which still bears the name of *Seve-Ryggen*. [SCANDIA.] [L. S.]

SEUREL [SEBUREL.]

SEX. [SAXETANUM.]

SEXANTAPRISTA (*Ἑξατάπριστα*, Procop. *de Aed.* iv. 11. p. 307), a town of Moesia Inferior, on the Danube, on the great high-road between Trimammium and Tigra. (*Itin. Ant.* p. 222.) According to the Notit. Imp. (where it is called *Sexazintaprista*), the 5th cohort of the 1st Legio Ital., together with a squadron of cavalry, lay in garrison here. Some identify it with *Rustschuk*, whilst others place it further to the E., near *Lipnik*. [T. H. D.]

SEXTANTIO, in Gallia Narbonensis. The true name of this place is preserved in an inscription found at Nemausus (*Nîmes*), and published by Ménard. The name is written *Sextatio* in the Antonine Itin.; and *Sostantio* in the Jerusalem Itin. The remains of Sextantio are supposed to be those which are about 3 miles north of *Montpellier*, on the banks of the *Ledus* (*Lez*). [G. L.]

SHAALABBIN (*Σαλαβίν*, LXX.), a city of the tribe of Dan (*Josh.* xix. 42) joined with Ajalon (*Σαλαβίν*), and mentioned in the LXX. (not in the Hebrew) as one of the cities in which the Amorites continued to dwell, after the occupation of Canaan by the Israelites (xix. 48). This last fact identifies it with the *Shaalabim* (LXX. *Θαλαβίμ*) of the book of Judges (i. 35), which is also joined with Ajalon, and of which the same fact is related. It is there placed in Mount Heres. Eusebius mentions a village named *Salaba* (*Σαλαβιά*), in the borders of *Seotace* (*Θωσάκω*, s. r.), which could not be in Dan; but St. Jerome (*Comment. in Ezech.* xlviii.) mentions three towns in the tribe of Dan, Ailon, Selebi and Emmaus. It is joined with Makas and Beth-shemesh in 1 *Kings* iv. 9, which also indicates a situation in or near the plain of Sharon. In Mr. Smith's list of places in the district of *Ramleh*, is a village named *Seibit*, containing all the radicals of the Scripture name, and probably identical with *Selebi* of Josephus, as the modern *Yalo* is with *Ajalon* and *Emmaus* with *Emmaus*. Its place is not definitely fixed. (Robinson, *Bibl. Res.* vol. iii. 2nd appendix, p. 120.) [G. W.]

SHALISHA (LXX. *Ἀλεξ. Σαλίσσα* for *Σαλα*, a district of Palestine, in or near *Mount Lybion* (*Sam.* ix. 4), in which was probably found *Reh* Shalisha. [BAAL SHALISHA.]

SHARON (*Σαρόν*: *Ἑβ.* *Σαρόν*), the great western plain of Palestine, famous for its fertility, mentioned by the prophet Isaiah with "the glory of Lebanon, and the valley of Carmel and Sharon." (*Isaiah* lv. 12) The rose of Sharon" is used proverbially in the *Psalm* (ii. 1.) It is remarkable that the name does not occur in either of these passages in the LXX. In the latter is translated by *ἑσπερίων* ἰσχυρῶν, which appellative Symmachus translated by the former passage, while Theodotion and Aquila use the proper name. Its richness as a pasture-land is intimated in 1 *Chronicles* (xvii. 29), where it is said that "Shitrai the Sharonite" was owner of "herds that fed in Sharon." It divides down its name from a village mentioned only in the Hebrew Testament (*Acts*, ix. 35) in connection with Lybion in a manner that intimates its vicinity to the town. Its site has not been recovered in many times, but it occurred to the writer, so late as that it may possibly be represented by the *Bay of Butus* (= Peter), on the north of the road between Lydda and Bethoron, and may have changed its name in honour of the Apostle, and in commemoration of the miracle wrought by him. St. Jerome in his commentaries limits the name to the district about Joppa, Lydda, and Jamnia (*ad Isa.* lviii. 12). Eusebius calls the district *Saronas* (*Σαρόνας*), and extends it from Joppa to Caesarea (*de Palest.*), while other writers reckon to it the whole of the coast north of Caesarea, as far as Carmel. (*See mast. sub voce.*) The width of the plain at Jaffa is little less than 18 miles, and the fertility of its soil is still attested by the numerous flowers with which it is carpeted in the spring—roses, lilies, tulips, narcissus, anemones, acacias, and a thousand others, no less than by the abundant vegetation and increase where the land is cultivated as garden or corn land. (Ritter, *Palaestina* &c. vol. iii. part i. pp. 25, 586—588.) Eusebius shows that the classical name for this district was *δρυμὸς*, which Strabo joins with *Γαζα*, as then in the power of the pirates who had Joppa for their port (xvi. 2. § 28, p. 759). Eusebius suggests an ingenious account of this *δρυμὸς*, which appears also in Josephus (who does not call the Scripture name) in connection with Carmel in a manner that clearly points to the district described by Strabo under the same name. In one passage the name is used in the plural (*δρυμὸς δὲ τὸ πᾶν καλεῖται*, *Ant.* xiv. 13. § 3); in the parallel passage it is singular (*ἐστὶ τὸ καλεῖσθαι δρυμὸν*, *Bell. Jud.* i. 13. § 2). Now *δρυμὸς*, according to ancient etymologists, signified any kind of wood, and, as Ritter remarks, the traces of the forest of Sharon are still to be discovered in the *valley of Carmel*; but according to Pliny the *Saron* derived its name from an oak grove, "in antiqua appellante quercum." (*H.N.* vi. 12.) The very probable conjecture of Eusebius is that *δρυμὸς* is simply a translation of *Saronas*, for according to the *Etymologicum* *δρυμὸς* is *ἡ κοιλία δρυὸς* (*ad voc. Σαρόνας*).

2. Eusebius and St. Jerome regard the *Saron* as the Sharon, to which they apply the prophecy (*xxxiii.* 9), "Sharon is like a wilderness" (*ἐγέρω δὲ Σάρον*, LXX.), which they refer to

country between Tabor and the sea of Tiberias (*Onomast. s. v.*) But as the name is here introduced in connection with Lebanon and Carmel,—Bashan being also introduced,—and as no other notice of a Galilaean Sharon is to be met with, it seems more reasonable to refer the notice in Isaiah to the plain of Sharon on the west coast.

3. There was certainly another Sharon beyond Jordan, apparently near the region of Gilead, for the children of Abihail, of the tribe of Gad, are said to have "dwelt in Gilead in Bashan, and in her towns, and in all the suburbs of Sharon" (1 *Chron. v. 16*); and it is possible that "the herds that fed in Sharon," under charge of David's chief herdsman, Shitrai the Sharonite, may have pastured in this trans-Jordanic district, not in the plain of the Mediterranean. Reland indeed maintains that the mention of the suburbs of Sharon in connection with the Gadites, is no proof of the existence of a trans-Jordanic Sharon, for that, as the tribe of Gad was specially addicted to pastoral pursuits, they may have pastured their flocks in the suburbs of the towns of other and distant tribes. But this hypothesis seems much more forced than the very natural theory of a second Sharon in the tribe of Gad properly so called. (*Palæstina*, pp. 370, 371, 988.) [G. W.]

SHAVEH (LXX. *ἡ κοιλὴ τοῦ Σαβῶ*, Alex. *ἡ Σαβή*). "The valley of Shaveh, which is the king's dale," where Melchizedek met Abraham returning from the slaughter of the kings. (*Gen. xiv. 17*.) The learned are not agreed concerning the city of Melchizedek. They who regard his Salem as identical with Jerusalem, naturally identify "the king's dale," equivalent to "the valley of Shaveh," with "the king's dale" where Absalom erected his monument (2 *Sam. xviii. 18*), and place it in the vicinity of "the king's gardens," in the valley of the Kedron, where tradition points out "Absalom's hand" or place. [JERUSALEM, Vol. II. p. 17, a. and p. 23, b.] [G. W.]

SHAVEH KIRJATHAIM (translated by the LXX. *Σαβή ἡ πόλις*), the original seat of that very ancient people the Emims, where they were smitten by Chedorlaomer, king of Elam. (*Gen. xiv. 5*.) It no doubt passed with the other possessions of the Emims to the Moabites (*Deut. ii. 9—11*), and is probably identical with the Kiriathaim (LXX. *Καριαθαίμ*) of Jeremiah (xlviii. 23) and Ezekiel (xv. 9). [G. W.]

SHEBA. [SABAKA.]

SHECHEM. [NEAPOLIS II.]

SHILOH. [SILO.]

SHITTIM (LXX. *Σαρτίμ* al. *Σαρτίμ*), the last station of the Israelites before crossing the Jordan, described to be by Jordan in the plains of Moab. Abel-shittim was at one extremity of their vast encampment, as Beth-Jesimoth was at the other. (*Numb. xxv. 1, xxxiii. 49*.) It was from thence that Joshua sent the spies to reconnoitre Jericho (*Josh. ii. 1*), and from thence that they marched to their miraculous passage of the Jordan (iii. 1). In Micah (vi. 5) it is mentioned in connection with Gilgal, being the last encampment on the east of Jordan, as Gilgal was the first on the west. Here the LXX. render *ἀπὸ τῶν σελήων ἐπὶ τοῦ Γαλγὰ*. [G. W.]

SHUNEM (LXX. *Σουνὴ*; Eth. *Σουανίτης*, *Σουανίτης*), a village of Palestine celebrated as the birthplace of Abishag (1 *Kings, i. 3*), and for the miracle of Eliaba. (2 *Kings, iv.*) It was situated in Issachar (*Josh. xix. 18*; LXX. *Σουνίμ*), near Gilboa, to the north; for when Saul and the Is-

raelites were encamped in Gilboa, the Philistines pitched in Shunem, so that he had to pass through their lines to come to Endor. (1 *Sam. xxviii. 4*.) Eusebius mentions a village named Sanim, in the borders of Sebaste, in the district of Acrabattene, which cannot be identical with this. But the Subem (*Σουβήμ*) of the same author, which he places v. M. P. south of Mount Tabor, corresponds very well with the site of the modern village of *Sôlam*, which still marks the site of ancient Shunem. It is a miserable village, situated above the plain of Esdraelon, on the road between *Jenîn* and Nazareth, about 1½ hour north of *Zer'ên*, ancient Jezreel, on the steep slope of the western spur of Little Hermon (*Ed-Dûhy*). [G. W.]

SHUR (*Σούρ*, LXX.), a place repeatedly mentioned to describe the western extremity of the borders of the posterity of Ishmael (*Gen. xxv. 18*), of the Amalekites only (1 *Sam. xv. 7*), of the Geshurites, Gezrites, and Amalekites (xxvii. 8), in all which passages it is placed "over against," "before," and on the way to Egypt. Hagar's well, afterwards called Beer-lahai-roi, between Kadesh and Bered, was "in the way to Shur." (*Gen. xvi. 7, 14*.) The name is still found in the south of Palestine. "*Moulahh*" (= Beer-lahai-roi) lies on the great road from Beersheba to Shur, or *Jebel-es-Sur*, which is its present name,—a grand chain of mountains running north and south, a little east of the longitude of *Suez*, lying, as Shur did, before Egypt. (*Gen. xvi. 7*.) It lies at the south-west extremity of the plain of Paran, as Kadesh does at its utmost north-east extremity. (Rowlands, in Williams's *Holy City*, vol. i. appendix No. 1. pp. 465, 466.) [G. W.]

SHUSHAN. [SUSA.]

SIAGUL (*Σιαγούλ*, Ptol. iv. 3. § 9, (the most easterly town of Zeugitana, only 3 miles from the coast, and to which Putput served as a harbour. Shaw (*Travels*, ch. 2) identifies it with some ruins at the village of *Kassir-Assie*, from two inscriptions which he found there, with the words *Civ Siagitana*; but which he must have read incorrectly, since the town would have been called *Siaglutiana*. According to Maffei (*Mus. Veron.* p. 457. 2) there is also an inscription with the words *Civ Siagitana* near *Turus* in Africa; which Orelli (i. p. 334) refers either to Sigus in Numidia or to Sign in Mauritania Caesariensis. [T. H. D.]

SIANTICUM. [SANTICUM.]

SIARUM, a town of Hispania Baetica, SE. of Hispalis. Now *Saracatin*, in the territory of *Utrera*. (Plin. iii. l. s. 3; Gruter, *Inscr.* p. 803; Florez, *Med.* ii. p. 571, iii. p. 117, *Esp. Sagr.* ix. p. 112, &c.) [T. H. D.]

SIATA, an island on the Gallic coast, which is mentioned in the Maritime Itin. after Vindilis, or *Belle Isle*. D'Anville conjectures Siata to be the *Ile de Houat*, which is off the coast of the department of *Morbihan*, and between *Belle Isle* and the mainland. [G. L.]

SIATUTANDA (*Σιατούτανδα*), is mentioned by Ptolemy (ii. 11. § 27) as a town of Germany; but had probably no existence at all, the geographer imagining that in the words of Tacitus (*Ann.* iv. 73), "ad sua tutanda digressis rebellibus" the name of some town was contained. Notwithstanding this evident origin of the name, some modern geographers still persist in assuming a town Siatutanda. [L. S.]

S'BAE (*Σίβαι*, Arrian, *Ind.* c. 5; Diod. xvii. 96; Strab. xv. p. 688), a nation of the *Panjab*, below

the junction of the Hydaspes and Acesines, encountered by Alexander in his attempt to invade India. They are described as a rude, warlike people, armed only with clubs for defensive weapons. The Greeks noticed this use of the club, and that the people were in the habit of branding the representation of a club on the backs of their cattle, and that they were clothed in the skins of wild animals. From these facts they inferred that they must be descendants of Hercules. There can be doubt that they are the same race as are called Sobii in Curtius (ix. 4. § 2). A tribe of similar character, called *Siapul* or *Siapuch*, still exists in that country, who use the club, and wear the skins of goats for clothing. (Ritter, vii. p. 279, v. p. 467; Bohlen, *Alte-Indien*, i. p. 208.) It is possible that they have derived their name from the god *Siva*. [V.]

SIBARIA, a town of the Vettones in Hispania Tarraconensis, N. of Salmantica, and on the road from Emerita to Caesaraugusta. (*Itin. Ant.* p. 434.) Various identified with *Santis*, *Fuente de Saburra*, *Peñasende*, and *Zamocina*. [T. H. D.]

SIBDA (Σίδα; *Eth.* Σιδάρις, Σιδάρης), a place in Caria, and one of the six towns which were given by Alexander the Great to Ada, a daughter of king Hecatomnus of Halicarnassus, and thus became subject to Halicarnassus. (Steph. B. s. v.; Plin. v. 29.) Its exact site cannot be ascertained. [L. S.]

SIBERE'NA (Σιβερίη; *Sia Severina*), a town of Bruttium situated in the mountains about 15 miles NW. of Crotona. The name is mentioned only by Stephanus of Byzantium (s. v.), who calls it an Oenotrian city, but it is probable that it is the same place which is now called *Santa Severina*, an appellation that is already noticed by Constantine Porphyrogenitus in the tenth century. It was at that time apparently a place of importance, but is now much decayed. (Const. Porph. *de Adm. Imp.* ii. 10; Holsten. *Obs. in Steph. Byz.* s. v.) [E. H. B.]

SIBERIS (Σίβηρις), a river of Galatia, a tributary of the Sangarius; it flowed in a south-western direction, and joined the main river near the little town of Syceon, not far from Juliopolis. (Procop. *de Aed.* v. 4.) Procopius also mentions that this river frequently overflowed its banks, a fact which is perhaps alluded to in the name of a station called Hycron Potamon, about 13 miles east of Juliopolis (*It. Hieros.* p. 574); though it is possible also that the name may be misspelt for Hieron Potamon, which is only another name for the Hieras of Pliny (v. 43), and unquestionably identical with the Siberis which now bears the name of *Kirmir*. [L. S.]

SIBUZATES, an Aquitanian people, who submitted to P. Crassus, Caesar's legatus in B. C. 56. (*B. G.* iii. 27.) There are many varieties in the manuscript readings of this name. It is merely by conjecture founded on resemblance of name, that they have been placed about *Soubusse* or *Sobusse*, on the *Adour*, between *Aquae Tarbellicae* (*Dax*) and *Bayonne*. [G. L.]

SIBYLLATES, one of the Aquitanian tribes mentioned by Pliny (iv. 19). D'Anville conjectures that the name is preserved in that of the Vallis Subola, mentioned by Fredegaricus. He argues that they cannot be the same people as the Sibuzates who submitted to P. Crassus, because Caesar speaks of a few of the remotest Aquitanian tribes which did not submit to the Roman general, trusting to the approaching winter season (*B. G.* iii. 27); from which remark we may infer that these remotest tribes were in the valleys of the Pyrenees. "The people of the

valley of *Soule* might derive this advantage from their situation, which is shut in between *Low Noarre* and the high part of *Béarn*." (D'Anville.) [G. L.]

SIBYRTUS. [SYBRITA.]

SICAMBRI, **SYCAMRRI**, **SYGAMBRI**, **SUGAMBRI**, or **SUCAMBRI** (Σικαμβροί, Σοικαμβροί, or Σούκαμβροί), a powerful German tribe, occupying in the time of Caesar the eastern bank of the Rhine, and extending from the *Sieg* to the *Lippe*. It is generally assumed that this tribe derived its name from the little river *Sieg*, which falls into the Rhine a little below *Bonn*, and during the middle ages was called *Sega*, *Segaha*, but is not mentioned by any ancient writer; this assumption, however, is at least only a probable conjecture, though it must be admitted that in the time of Caesar they inhabited the country north and south of the *Sieg*, and to the north of the *Ubii*. (Caes. *B. G.* iv. 16, foll. vi. 35; Strab. vii. pp. 290, 291; Dion Cass. xxxix. 48, xl. 32, liv. 20, 32, 33, 36.) When the *Usipetes* and *Tencteri* were defeated by Caesar, the remnants of these tribes took refuge in the country of the *Sicambri*, who took them under their protection. Caesar then demanded their surrender; and this being refused, he built his famous bridge across the Rhine to strike terror into the Germans. The *Sicambri*, however, did not wait for his arrival, but, on the advice of the *Usipetes* and *Tencteri*, quitted their own country and withdrew into forests and uninhabited districts, whither Caesar neither would nor could follow them. A few years later, B. C. 51, during the war against the *Eburones*, we find *Sicambri* fighting against the army of Caesar on the left bank of the Rhine, and nearly defeating the Romans; Caesar's arrival, who had been in another part of Gaul, alone saved his legions. The *Sicambri* were then obliged to return across the Rhine. In B. C. 16 the *Sicambri*, with the *Usipetes* and *Tencteri*, again invaded Gallia Belgica, and M. Lollius, who had provoked the barbarians, sustained a serious defeat. A similar attack which was made a few years later, was repelled by Drusus, who pursued the Germans into their own country. After the withdrawal of the Romans, the *Sicambri* formed a confederation among their countrymen against the common enemy, and as the *Chatti* who had received the country of the *Ubii* on the right bank of the Rhine, refused to join them, the *Sicambri* made war upon them; and as they left their own territory unprotected, Drusus penetrated through it into the interior of Germany. After the death of Drusus, Tiberius undertook the completion of his plans against Germany. None of the tribes offered a more vigorous resistance than the *Sicambri*; but in the end they were obliged to submit, and 40,000 *Sicambri* and *Saevi* were transplanted into Gaul, where as subjects of Rome they received settlements between the lower course of the *Meuse* and the Rhine. In that country they subsequently formed an important part of the nation or confederacy of the Franks. Those *Sicambri* who were not transplanted into Gaul seem to have withdrawn into the hills of *Mons Retico*, and for a long time they are not mentioned in history; they reappear in the time of Ptolemy (ii. 11. § 8), when they are spoken of as neighbours of the *Bructeri Minores*. The *Sicambri* are described as bold, brave, and cruel, and we hear nothing of towns in their country; they seem in fact to have lived in villages and isolated farms. (Caes. *B. G.* iv. 19; comp. Tac. *Ann.* ii. 26, iv. 47, xii. 39; Suet. *Aug.* 21, *Tib.* 9; Eutrop. vii. 9; Oros. vi. 21; Horat. *Carm.* iv. 2. 36. 14

51; Or. *Amor.* i. 14. 49; Venant. *Fort. de Charib. Rege.* vi. 4; Gregor. *Turon.* ii. 31; Procop. *Bell. Goth.* i. 12; Lydus, *de Magistr.* i. 50, iii. 36; Zeuss, *Die Deutschen*, p. 83, foll.; Wilhelm, *Germanien*, p. 142, foll.] [L. S.]

SICANA. [SICULI.]

SICCA VENERIA (Σικκα or Σικκα Οὐνερα, Ptol. iv. 3. § 30, viii. 2. § 9), a considerable town of Numidia on the river Bagradas, and on the road from Carthago to Hippo Regius, and from Musti to Cirta. (*Itin. Ant.* pp. 41, 45.) It was built on a hill, and, according to Pliny (v. 3. s. 2), was a Roman colony. We learn from Valerius Maximus (ii. 6. § 15) that it derived its surname from a temple of Venus which existed there, in which, agreeably to a Phœnician custom, the maidens of the town, including even those of good family, publicly prostituted themselves, in order to collect a marriage portion; a circumstance which shows that the town was originally a Phœnician settlement, devoted to the worship of Astarte. (Comp. *Sall. Jug.* 56; Polyb. i. 66, 67.) Shaw (*Travels*, p. 87) takes it to be the modern *Keff*, where a statue of Venus has been found, and an inscription, with the words *Ordo Siccensium*. (Comp. *Donati, Suppl. Thes. Murat.* ii. pp. 266. 6; *Orelli, Inscr. no.* 3733.) [T. H. D.]

SICELLA. [ZIKLAG.]

SICHEM. [NEAPOLIS II.]

SICILIA (Σικελία; *Eth.* Σικελιώτης, Siciliensis; *Sicily*), one of the largest and most important islands in the Mediterranean. It was indeed generally reckoned the largest of all; though some ancient writers considered Sardinia as exceeding it in size, a view which, according to the researches of modern geographers, turns out to be correct. [SARDINIA.]

I. GENERAL DESCRIPTION.

The general form of Sicily is that of a triangle, having its shortest side or base turned to the E., and separated at its NE. angle from the adjoining coast of Italy only by a narrow strait, called in ancient times the *FRETUM SICULUM* or Sicilian Strait, but now more commonly known as the *Straits of Messina*. It was generally believed in antiquity that Sicily had once been joined to the continent of Italy, and severed from it by some natural convulsion. (Strab. vi. p. 258; Plin. iii. 8. s. 14; Virg. *Aen.* iii. 414.) But though this is probably true in a geological sense, it is certain that the separation must have taken place at a very early period, not only long before the historical age, but before the first dawn of tradition. On the other side, the W. extremity of Sicily stretches out far towards the coast of Africa, so that the westernmost point of the island, the headland of Lilybaeum, is separated only by an interval of 80 geogr. miles from the Hermæan Promontory, or *Cape Bon* in Africa.

The general triangular form of Sicily was early recognised, and is described by all the ancient geographers. The three promontories that may be considered as forming the angles of the triangle, viz. Cape Pelorus to the NE., Cape Pachynus to the SE., and Lilybaeum on the W., were also generally known and received (Pol. i. 42; Strab. vi. pp. 265, 266; Plin. iii. 8. s. 14; Ptol. iii. 4; Mel. ii. 714). Its dimensions are variously given: Strabo, on the authority of Posidonius, estimates the side from Pelorus to Lilybaeum, which he reckons the longest, at 1700 stadia (or 170 geogr. miles); and that from Pachynus to Pelorus, the shortest of the three, at 1130 stadia. Pliny on the contrary reckons 186

Roman miles (149 geogr.) from Pelorus to Pachynus, 200 M.P. (160 geogr. miles) from Pachynus to Lilybaeum, and 170 M.P. (136 geogr.) from Lilybaeum to Pelorus: thus making the northern side the shortest instead of the longest. But Strabo's views of the proportion of the three sides are entirely correct; and his distances but little exceed the truth, if some allowance be made for the windings of the coast. Later geographers, from the time of Ptolemy onwards, erroneously conceived the position of Sicily as tending a great deal more to the SW. than it really does, at the same time that they gave it a much more regular triangular form; and this error was perpetuated by modern geographers down to the time of D'Anville, and was indeed not altogether removed till the publication of the valuable coast survey of the island by Captain Smyth. (See the map published by Magini in 1620, and that of D'Anville in his *Analyses Géographiques de l'Italie*, Paris 1744.)

A considerable part of Sicily is of a mountainous character. A range of mountains, which are geologically of the same character as those in the southern portion of Bruttium (the group of *Aspromonte*), and may be considered almost as a continuation of the same chain, interrupted only by the intervening strait, rises near Cape Pelorus, and extends at first in a SW. direction to the neighbourhood of *Taormina* (Tauromenium) from whence it turns nearly due W. and continues to hold this course, running parallel with the N. coast of the island till it rises into the elevated group of the *Monte Madonna*, a little to the S. of *Cefalù* (Cephaloedium.) From thence it breaks up into more irregular masses of limestone mountains, which form the central nucleus of the W. portion of the island, while their arms extending down to the sea encircle the *Bay of Palermo*, as well as the more extensive *Gulf of Castellamare*, with bold and almost isolated headlands. The detached mass of MOUNT ERYX (*Monte di S. Giuliano*) rises near *Trapani* almost at the W. extremity of the island, but with this exception the W. and SW. coast round to *Sciacca*, 20 miles beyond the site of Selinus, is comparatively low and shelving, and presents no bold features. Another range or mass of mountains branches off from that of the *Monte Madonna* near *Polizzi*, and trends in a SE. direction through the heart of the island, forming the huge hills, rather than mountains, on one of which Enna was built, and which extend from thence to the neighbourhood of *Piazza* and *Aidone*. The whole of the SE. corner of the island is occupied by a mass of limestone hills, never rising to the dignity nor assuming the forms of mountains, but forming a kind of table-land, with a general but very gradual slope towards the S. and SE.; broken up, however, when viewed in detail, into very irregular masses, being traversed by deep valleys and ravines, and presenting steep escarpments of limestone rock, so as to constitute a rugged and difficult country.

None of the mountains above described attain to any great elevation. The loftiest group, that of the *Monte Madonna*, does not exceed 3765 feet, while the average height of the range which extends from thence to Cape Pelorus, is little, if at all, above 3000 feet high. *Monte S. Giuliano*, the ancient Eryx, erroneously considered in ancient times as the highest mountain in Sicily after Aetna [ERYX], is in reality only 2184 feet in height (Smyth's *Sicily*, p. 242). The ancient appellations given to these

mountains seem to have been somewhat vague and fluctuating; but we may assign the name of *NAPTUNIUS Mons* to the chain which rises at Cape Pelorus, and extends from thence to the neighbourhood of Tauromenium; while that of *Mons NERODUS* seems to have been applied in a more general sense to the whole northerly range extending from near Tauromenium to the neighbourhood of Panormus; and the *HERAKI Montes* of Diodorus can be no others than a part of the same range. (See the respective articles.) But incomparably the most important of the mountains of Sicily, and the most striking physical feature of the whole island, is the great volcanic mountain of *ÆTNA*, which rises on the E. coast of the island, and attains an elevation of 10,874 feet, while its base is not less than 90 miles in circumference. It is wholly detached from the mountains and hills which surround it, being bounded on the N. by the river *Acesines* or *Alcantara*, and the valley through which it flows, and on the W. and S. by the *Symæthus*, while on the E. its streams of lava descend completely into the sea, and constitute the line of coast for a distance of near 30 miles. The rivers already mentioned constitute (with trifling exceptions) the limits of the volcanic district of *Ætina*, but volcanic formations of older date, including beds of lava, scoriae, &c., are scattered over a considerable extent of the S.E. portion of the island, extending from the neighbourhood of *Palagonia* to that of *Palazzolo*, and even to *Syracuse*. These indeed belong to a much more ancient epoch of volcanic action, and can never have been in operation since the existence of man upon the island. The extensive action of volcanic fires upon Sicily was, however, observed by the ancients, and is noticed by several writers. The apparent connection between *Ætina* and the volcanoes of the *Æolian Islands* is mentioned by *Strabo*, and the same author justly appeals to the craters of the *Pælicæ*, and to the numerous thermal springs throughout the island, as proofs that the subterranean agencies were widely diffused beneath its surface (*Strab. vi. pp. 274, 275*).

Few countries in Europe surpass Sicily in general productiveness and fertility. Its advantages in this respect are extolled by many ancient writers. *Strabo* tells us (*vi. p. 273*) that it was not inferior to Italy in any kind of produce, and even surpassed it in many. It was generally believed to be the native country of wheat (*Diod. v. 2*), and it is certain that it was not surpassed by any country either in the abundance or quality of this production. It was equally celebrated for the excellence of its honey and its saffron, both of which were extensively exported to Rome; as well as for its sheep and cattle, and excellent breeds of horses, among which those of *Agrirentum* seem to have been the most celebrated (*Strab. l. c.*; *Sil. Ital. xiv. 23*; *Virg. Æn. iii. 704*). There were indeed no extensive plains, like those of Campania or Cisalpine Gaul; the largest being that now called the *Piano di Catania*, extending along the banks of the *Symæthus*, and known in ancient times as the *LEONTINUS* or *LAESTRIGONIUS CAMPUS*. But the whole island was intersected by numerous streams, and beautiful valleys; and though a considerable part of its surface (as already observed) was occupied either by mountains or rocky hills, the slopes and underfalls of these abounded in scenery of the most charming description, and were adapted for the growth of vines, olives, and fruits of every description.

The climate of Sicily may be considered as intermediate between those of Southern Italy and Africa. The northern part of the island, indeed, closely resembles the portion of Italy with which it is more immediately in contact; but the southern and south-western parts present strong indications of their more southerly latitude, and have a parched and arid appearance (at least to the eyes of northern travellers), except in winter and spring. The abundance also of the dwarf palm (*Chamaerops humilis* Linn.), a plant unknown to other parts of Europe, tends to give a peculiar aspect to these districts of Sicily. The climate of the island in general was certainly not considered unhealthy in ancient times; and though at the present day many districts of it suffer severely from malaria, there is good reason to believe that this would be greatly diminished by an increased population and more extensive cultivation. It is remarkable, indeed, in Sicily, as in the south of Italy, that frequently the very sites which are now considered the most unhealthy were in ancient times occupied by flourishing and populous cities. In many cases the malaria is undoubtedly owing to local causes, which might be readily obviated by draining marshes or affording a free outlet to stagnant waters.

II. HISTORY.

The accounts of the early population of Sicily are more rational and consistent than is generally the case with such traditions. Its name was obviously derived from that of the people who continued in historical times to be its chief inhabitants, the *SICULI* or *SICELS* (*Σικελῶς*); and the tradition universally received represented these as crossing over from the mainland, where they had formerly dwelt, in the extreme southern portion of Italy. The traditions and notices of this people in other parts of Italy, and of their previous wanderings and migrations, are, indeed, extremely obscure, and will be discussed elsewhere [*SICULI*]; but the fact that they were at one time settled in the *Bruttian peninsula*, and from thence passed over into Sicily, may be safely received as historical. There is every probability also that they were not a people distinct in their origin from the races whom we subsequently find in that part of Italy, but were closely connected with the *Oenotrians* and their kindred tribes. Indeed, the names of *Σικελῶς* and *Ἰταλῶς* are considered by many philologists as of common origin. There seems, therefore, little doubt that the *Sicels*, or *Siculi*, may be regarded as one of the branches of the great *Pelasgic* race, which we find in the earliest times occupying the southern portion of Italy; and this kindred origin will account for the facility with which we find the *Sicels* subsequently adopting the language and civilisation of the Greek colonists in the island, at the same time that there remain abundant traces of their common descent with the people of Italy.

But the *Sicels*, who occupied in the historical period the greater part of the interior of the island, were not, according to the Greek writers, its earliest inhabitants. *Thucydides* indeed assigns their immigration to a period only three centuries before the settlement of the first Greek colonies (*Thuc. vi. 2*); and *Diodorus*, without assigning any date, agrees in representing them as the latest comers among the native population of the island (*Diod. v. 6*). The first notices of Sicily allude to the existence of races of gigantic men, of savage manners, under the

names of Laestrygonæ and Cyclopes; but these fabulous tales, preserved only by the early poets in a manner that renders it impossible to separate truth from falsehood, are justly discarded by Thucydides as unworthy of serious consideration (Thuc. vi. 2). It may suffice to remark, that Homer (of course, the earliest authority on the subject) says nothing *directly* to prove that he conceived either the Cyclopes or Laestrygonæ as dwelling in Sicily; and this is in both cases a mere inference of later writers, or of some tradition now unknown to us. Homer indeed, in one passage, mentions (but not in connection with either of these savage races), "the island of Thrinakia" (*Odys.* xii. 127), and this was generally identified with Sicily, though there is certainly nothing in the *Odyssey* that would naturally lead to such a conclusion. But it was a tradition generally received that Sicily had previously been called *TRINACRIA*, from its triangular form and the three promontories that formed its extremities (Thuc. vi. 2; *Diod.* v. 2; *Strab.* vi. p. 265), and this name was connected with the Homeric Thrinakia. It is obvious that such a name could only have been given by Greek navigators, and argues a considerable amount of acquaintance with the configuration of its shores. It could not, therefore, have been (as supposed even by Thucydides) the original or native name of the island, nor could it have been in use even among the Greeks at a very early period. But we cannot discard the general testimony of ancient writers, that this was the earliest appellation by which Sicily was known to the *Greeks*.

Another people whom Thucydides, apparently with good reason, regards as more ancient than the Sicels, were the *SICANI*, whom we find in historical times occupying the western and north-western parts of the island, whither, according to their own tradition, they had been driven by the invading Sicels, when these crossed the straits, though another tradition ascribed their removal to the terror and devastation caused by the eruptions of Aetna (Thuc. vi. 2; *Diod.* v. 6). The Sicanians claimed the honour of being autochthons, or the original inhabitants of the island, and this view was followed by Timæus; but Thucydides, as well as Philistus, adopted another tradition, according to which they were of Iberian extraction (Thuc. l. c.; *Diod.* l. c.). What the arguments were which he regards as conclusive, we are unfortunately wholly ignorant; but the view is in itself probable enough, and notwithstanding the close resemblance of name, it is certain that throughout the historical period the Sicani and Siculi are uniformly treated as distinct races. Hence it is improbable that they were merely tribes of a kindred origin, as we should otherwise have been led to infer from the fact that the two names are evidently only two forms of the same appellation.

A third race which is found in Sicily within the historical period, and which is regarded by ancient writers as distinct from the two preceding ones, is that of *ELYMI*, who inhabited the extreme north-western corner of the island, about Eryx and Segesta. Tradition ascribed to them a Trojan origin (Thuc. vi. 2; *Dionys.* i. 52), and though this story is probably worth no more than the numerous similar tales of Trojan settlements on the coast of Italy, there must probably have been some foundation for regarding them as a distinct people from their neighbours, the Sicani. Both Thucydides and Scylax specially mention them as such (Thuc. l. c.; *Scyl.* p. 4. § 13): but at a later period, they seem to

have gradually disappeared or been merged into the surrounding tribes, and their name is not again found in history.

Such were the indigenous races by which Sicily was peopled when its coasts were first visited, and colonies established there, by the Phoenicians and the Greeks. Of the colonies of the former people we have little information, but we are told in general by Thucydides that they occupied numerous points around the coasts of the island, establishing themselves in preference, as was their wont, on projecting headlands or small islands adjoining the shore. (Thuc. vi. 2). But these settlements were apparently, for the most part, mere trading stations, and as the Greeks came to establish themselves permanently and in still increasing numbers in Sicily, the Phoenicians gradually withdrew to the NW. corner of the island, where they retained three permanent settlements, Motya, Panormus, and Soloeis or Soluntum. Here they were supported by the alliance of the neighbouring Elymi, and had also the advantage of the proximity of Carthage, upon which they all became eventually dependent. (Thuc. l. c.)

The settlement of the Greek colonies in Sicily began about the middle of the eighth century B. C., and was continued for above a century and a half. Their dates and origin are known to us with much more certainty than those which took place during the corresponding period in the south of Italy. The earliest were established on the E. coast of the island, where the Chalcidic colony of *NAXOS* was founded in B. C. 735, and that of *SYRACUSE* the following year (B. C. 734), by a body of Corinthian settlers under Archias. Thus the division between the Chalcidic and Doric colonies in Sicily, which bears so prominent a part in their political history, became marked from the very outset. The Chalcidians were the first to extend their settlements, having founded within a few years of the parent colony (about B. C. 730) the two cities of *LEONTINI* and *CATANÀ*, both of them destined to bear an important part in the affairs of Sicily. About the same time, or shortly after (probably about B. C. 728), a fresh body of colonists from Megara founded the city of the same name, called, for distinction's sake, *MEGARA HYBLÆA*, on the E. coast, between Syracuse and Catana. The first colony on the S. coast of the island was that of *GELA*, founded in B. C. 690, by a body of emigrants from Rhodes and Crete; it was, therefore, a Doric colony. On the other hand, the Chalcidians founded, at what precise period we know not, the colony of *ZANCLE* (afterwards called *MESSANA*), in a position of the utmost importance, as commanding the Sicilian Straits. The rapid rise and prosperity of these first settlements are shown by their having become in their turn the parents of other cities, which soon vied with them, and, in some cases, surpassed them in importance. Thus we find Syracuse extending its power by establishing in succession the colonies of *ACRAE* in B. C. 664, *CASIMENÆ* in B. C. 644, and *CAMARINA* in B. C. 599. Of these, the last alone rose to be a flourishing city and the rival of the neighbouring Gela. The latter city in its turn founded the colony of *AGRIGENTUM*, in B. C. 580, which, though one of the latest of the Greek colonies in the island, was destined to become one of the most powerful and flourishing of them all. Still further to the W., the colony of *SELINUS*, planted as early as B. C. 628, by a body of settlers from the Hyblæan Megara, reinforced with emigrants from the parent city in Greece, rose to a state of power

and prosperity far surpassing that of either of its mother cities. Selinus was the most westerly of the Greek colonies, and immediately bordered on the territory of the Elymi and the Phœnician or Carthaginian settlements. On the N. coast of the island, the only independent Greek colony was HIMERÆ, founded about B. C. 648 by the Zancleans; MYLÆ, another colony of the same people, having apparently continued, from its proximity, to be a mere dependency of Zancle. To the above list of Greek colonies must be added CALLIPOLIS and EUBOEÆ, both of them colonies of Naxos, but which never seem to have attained to consideration, and disappear from history at an early period.*

Our accounts of the early history of these numerous Greek colonies in Sicily are unfortunately very scanty and fragmentary. We learn indeed in general terms that they rose to considerable power and importance, and enjoyed a high degree of wealth and prosperity, owing as well to the fertility and natural advantages of the island, as to their foreign commerce. It is evident also that at an early period they extended their dominion over a considerable part of the adjoining country, so that each city had its district or territory, often of considerable extent, and comprising a subject population of native origin. At the same time the Sicels of the interior, in the central and northern parts of the island, and the Sicani and Elymi in the W., maintained their independence, though they seem to have given but little trouble to their Greek neighbours. During the sixth century B. C. the two most powerful cities in the island appear to have been Agrigentum and Gela, Syracuse not having yet attained to that predominance which it subsequently enjoyed. Agrigentum, though one of the latest of the Greek colonies in Sicily, seems to have risen rapidly to prosperity, and under the able, though tyrannical government of the despot Phalaris (B. C. 570—554) became apparently for a time the most powerful city in the island. But we know very little about his real history, and with the exception of a few scattered and isolated notices we have hardly any account of the affairs of the Greek cities before B. C. 500. At or before that period we find that a political change had taken place in most of these communities, and that their governments, which had originally been oligarchical, had passed into the hands of despots or tyrants, who ruled with uncontrolled power. Such were Panætiæ at Leontini, Cleander at Gela, Terillus at Himera, and Scythes at Zancle (Arist. *Pol.* v. 12; Herod. vi. 23, vii. 154). Of these Cleander seems to have been the most able, and laid the foundation of a power which enabled his brother and successor Hippocrates to extend his dominion over a great part of the island. Callipolis, Leontini, Naxos, Zancle, and Camarina successively fell under the arms of Hippocrates, and Syracuse itself only escaped subjection by the intervention of the Corinthians (Herod. vii. 154). But what Hippocrates had failed to effect was accomplished by Gelon, who succeeded him as despot of Gela, and by interposing in the civil dissensions of the Syracusans ultimately succeeded in making

himself master of that city also, B. C. 485. From this time Gelon neglected his former government of Gela, and directed all his efforts to the aggrandizement of his new acquisition. He destroyed Camarina, and removed all the inhabitants to Syracuse, together with a large part of those of Gela itself, and all the principal citizens of Megara Hyblæa and Euboea (Herod. vii. 156).

Syracuse was thus raised to the rank of the first city in Sicily, which it retained for many centuries afterwards. A few years before (B. C. 488), Theron had established himself in the possession of the sovereign power at Agrigentum, and subsequently extended his dominion over Himera also, from whence he expelled Terillus, B. C. 481. About the same time also Anaxilaus, despot of Rhegium, on the other side of the straits, had established a footing in Sicily, where he became master of Zancle, to which he gave the name of Messana, by which it was ever afterwards known [MESSANA]. All three rulers appear to have been men of ability and enlightened and liberal views, and the cities under their immediate government apparently made great progress in power and prosperity. Gelon especially undoubtedly possessed at this period an amount of power of which no other Greek state could boast, as was sufficiently shown by the embassy sent to him from Sparta and Athens to invoke his assistance against the threatened invasion of Xerxes (Herod. vii. 145, 157). But his attention was called off to a danger more immediately at hand. Terillus, the expelled despot of Himera, had called in the assistance of the Carthaginians, and that people sent a vast fleet and army under a general named Hamilcar, who laid siege to Himera, B. C. 480. Theron, however, was able to maintain possession of that city until the arrival of Gelon with an army of 50,000 foot and 5000 horse to his relief, with which, though vastly inferior to the Carthaginian forces, he attacked and totally defeated the army of Hamilcar. This great victory, which was contemporaneous with the battle of Salamis, raised Gelon to the highest pitch of reputation, and became not less celebrated among the Sicilian Greeks than those of Salamis and Plataea among their continental brethren. The vast number of prisoners taken at Himera and distributed as slaves among the cities of Sicily added greatly to their wealth and resources, and the opportunity was taken by many of them to erect great public works, which continued to adorn them down to a late period (Diod. xi. 25).

Gelon did not long survive his great victory at Himera: but he transmitted his power unimpaired to his brother Hieron. The latter, indeed, though greatly inferior to Gelon in character, was in some respects even superior to him in power: and the great naval victory by which he relieved the Cumæans in Italy from the attacks of the Carthaginians and Tyrrhenians (B. C. 474) earned him a well-merited reputation throughout the Grecian world. At the same time the rule of Hieron was extremely oppressive to the Chalcidic cities of Sicily, the power of which he broke by expelling all the citizens of Naxos and Catana, whom he compelled to remove to Leontini, while he re-peopled Catana with a large body of new inhabitants, at the same time that he changed its name to Aetna. Theron had continued to reign at Agrigentum until his death in B. C. 472, but his son Thrasydaus, who succeeded him, quickly incurred the enmity of the citizens, who were enabled by the assistance of Hieron to expel him,

* The above summary of the progress of Greek colonisation in Sicily is taken almost wholly from Thucydides (vi. 3—5). See, however, Scymnus Chius (270—299) and Strabo (vi. pp. 267—272). The dates are fully discussed by Clinton (*Fasti Hellenici*, vol. i.).

and were thus restored to at least nominal freedom. A similar revolution occurred a few years later at Syracuse, where, on the death of Hieron (B. C. 467), the power passed into the hands of Thrasybulus, whose violent and tyrannical proceedings quickly excited an insurrection among the Syracusans. This became the signal for a general revolt of all the cities of Sicily, who united their forces with those of the Syracusans, and succeeded in expelling Thrasybulus from his strongholds of Ortygia and Achradina (Diod. xi. 67, 68), and thus driving him from Sicily.

The fall of the Gelonian dynasty at Syracuse (B. C. 466) became for a time the occasion of violent internal dissensions in most of the Sicilian cities, which in many cases broke out into actual warfare. But after a few years these were terminated by a general congress and compromise, B. C. 461; the exiles were allowed to return to their respective cities: Camarina, which had been destroyed by Gelon, was reoccupied and became once more a flourishing city; while Catana was restored to its original Chalcidic citizens, and resumed its ancient name (Diod. xi. 76). The tranquillity thus re-established was of unusual permanence and duration; and the half century that followed was a period of the greatest prosperity for all the Greek cities in the island, and was doubtless that when they attained (with the exception of Syracuse) their highest degree of opulence and power. This is distinctly stated by Diodorus (*l. c.*) and is remarkably confirmed by the still existing monuments,—all the greatest architectural works being referable to this period. Of the form of government established in the Sicilian cities at this time we have little information, but it seems certain that a democratic constitution was in almost all instances substituted for the original oligarchies.

But prosperous as this period (B. C. 461—409) undoubtedly was, it was by no means one of unbroken tranquillity. It was disturbed in the first instance by the ambitious schemes of Ducetius, a Sicilian chief, who endeavoured to organise all the Sicels of the interior into one confederacy, which should be able to make head against the Greek cities. He at the same time founded a new city, to which he gave the name of Palice, near the sacred fountain of the Palici. But these attempts of Ducetius, remarkable as the only instance in the whole history of the island in which we find the Sicels attempting to establish a political power of their own, were frustrated by his defeat and banishment by the Syracusans in B. C. 451; and though he once more returned to Sicily and endeavoured to establish himself on the N. coast of the island, his projects were interrupted by his death, B. C. 445. (Diod. xi. 88, 90—92, xii. 8, 29.) He found no successor; and the Sicels of the interior ceased to be formidable to the Greek cities. Many of their towns were actually reduced to subjection by the Syracusans, while others retained their independent position; but the operation of Hellenic influences was gradually diffusing itself throughout the whole island.

The next important event in the history of Sicily is the great Athenian expedition in B. C. 415. Already, at an earlier period, soon after the outbreak of the Peloponnesian War, the Athenians had interfered in the affairs of Sicily, and, in B. C. 427, had sent a squadron under Laches and Charades to support the Ionic or Chalcidic cities in the island,

which were threatened by their more powerful Dorian neighbours. But the operations of these commanders, as well as of Eurymedon and Sophocles, who followed them in B. C. 425 with a large force, were of an unimportant character, and in B. C. 424 a general pacification of the Greek cities in Sicily was brought about by a congress held at Gela (Thuc. iv. 58, 65). But the peace thus concluded did not remain long unbroken. The Syracusans took advantage of the intestine dissensions at Leontini to expel the democratic party from that city: while the Selinuntines were engaged in war with their non-Hellenic neighbours the Segestans, whom they pressed so hard that the latter were forced to apply for assistance to Athens. The Leontine exiles also sued for aid in the same quarter, and the Athenians, who were at this time at the height of their power, sent out an expedition on the largest scale, nominally for the protection of their allies in Sicily, but in reality, as Thucydides observes, in hopes of making themselves masters of the whole island (Thuc. vi. 6). It is impossible here to relate in detail the proceedings of that celebrated expedition, which will be more fully noticed in the article SYRACUSAE, and are admirably related in Grote's History of Greece, vol. viii. ch. 58—60. Its failure may be attributed in great measure to the delays and inactivity of Nicias, who lingered at Catana, instead of proceeding at once to besiege Syracuse itself, and thus gave the Syracusans time to strengthen and enlarge their fortifications, at the same time that they revived the courage of their allies. The siege of Syracuse was not actually commenced till the spring of 414 B. C., and it was continued till the month of September, 413 B. C., with the most unremitting exertions on both sides. The Syracusans were supported by the chief Dorian cities in the island, with the exception of Agrigentum, which stood aloof from the contest, as well as by a portion of the Sicel tribes: but the greater part of those barbarians, as well as the Chalcidic cities of Naxos and Catana and the Segestans, furnished assistance to the Athenians (Thuc. vii. 57, 58).

The total defeat of the Athenian armament (by far the most formidable that had been seen in Sicily since that of the Carthaginians under Hamilcar), seemed to give an irresistible predominance to the Dorian cities in the island, and to Syracuse especially. But it was not long before they again found themselves threatened by a still more powerful invader. The Selinuntines immediately took advantage of the failure of the Athenians to renew their attacks upon their neighbours of Segesta, and the latter, feeling their inability to cope with them, now applied for protection to Carthage. It is remarkable that we hear nothing of Carthaginian intervention in the affairs of Sicily from the time of the battle of Himera until this occasion, and they seem to have abandoned all ambitious projects connected with the island, though they still maintained a footing there by means of their subject or dependent towns of Panormus, Motya, and Soluntum. But they now determined to avail themselves of the opportunity offered them, and sent an armament to Sicily, which seemed like that of the Athenians, calculated not so much for the relief of Segesta as for the conquest of the whole island. Hannibal, the grandson of Hamilcar who had been slain at Himera, landed at Lilybaeum, in B. C. 409, with an army estimated at 100,000 men, and marching straight upon Selinus, laid siege at once to the city. Selinus was at this

time, next to Agrigentum and Syracense, probably the most flourishing city in Sicily, but it was wholly unprepared for defence, and was taken after a siege of only a few days, the inhabitants put to the sword or made prisoners, and the walls and public buildings razed to the ground (Diod. xiii. 54—58). From thence Hannibal turned his arms against Himera, which was able to protract its resistance somewhat longer, but eventually fell also into his power, when in order to avenge himself for his grandfather's defeat, he put the whole male population to the sword, and so utterly destroyed the city that it was never again inhabited (Id. xiii. 59—62).

After these exploits Hannibal returned to Carthage with his fleet and army. But his successes had now awakened the ambition of the Carthaginian people, who determined upon a second invasion of Sicily, and in B. C. 406 sent thither an army still larger than the preceding, under the command of Hannibal. Agrigentum, at this time at the very highest point of its power and opulence, was on this occasion the first object of the Carthaginian arms, and though the citizens had made every preparation for defence, and in fact were enabled to prolong their resistance for a period of eight months they were at length compelled by famine to surrender. The greater part of the inhabitants evacuated the city, which shared the fate of Selinus and Himera (Diod. xiii. 81, 91).

Three of the principal Greek cities in Sicily had thus already fallen, and in the spring of B. C. 405, Himilco, who had succeeded Hannibal in the command, advanced to the attack of Gela. Meanwhile the power of Syracuse, upon which the other cities had in a great degree relied for their protection, had been in great measure paralysed by internal dissensions: and Dionysius now availed himself of these to raise himself to the possession of despotic power. But his first operations were not more successful than those of the generals he replaced, and after an ineffectual attempt to relieve Gela, he abandoned both that city and Camarina to their fate, the inhabitants of both emigrating to Leontini. Dionysius was able to fortify himself in the supreme power at Syracuse, and hastened to conclude peace with Himilco upon terms which left the Carthaginians undisputed masters of nearly half of Sicily. In addition to their former possessions, Selinus, Himera, and Agrigentum were to be subject to Carthage, while the inhabitants of Gela and Camarina were to be allowed to return to their native cities on condition of becoming tributary to Carthage (Diod. xiii. 114.).

From this time Dionysius reigned with undisputed authority at Syracuse for a period of 38 years (B. C. 405—367), and was able at his death to transmit his power unimpaired to his son. But though he raised Syracuse to a state of great power and prosperity, and extended his dominion over a large part of Sicily, as well as of the adjoining part of Italy, his reign was marked by great and sudden changes of fortune. Though he had dexterously availed himself of the Carthaginian invasion to establish his power at Syracuse, he had no sooner consolidated his own authority than he began to turn his thoughts to the expulsion of the Carthaginians from the island. His arms were, however, directed in the first instance against the Chalcidic cities of Sicily, Naxos, Catana, and Leontini, all of which successively fell into his power, while he extended his dominions over a great part of the Sicel

communities of the interior. It was at length effected these conquests, as well as the preparations for war, by enlarging and strengthening the fortifications of Syracuse and building a numerous fleet, that he proceeded to attack Carthage (B. C. 397). His first success was sudden: almost all the cities that had been added to the Carthaginian dominion found his favour, and he carried his victorious arms to the extreme W. point of Sicily, where Hippocrates, the chief strongholds of the Carthaginians, fell into his hands after a long siege. But towards (B. C. 396) the state of affairs changed, and who landed in Sicily with a large army, recovered Motya and other towns that had been taken by Dionysius, but advanced along the coast of the island to Messina, which he assaulted and utterly destroyed. Dionysius was compelled to shut himself up within the walls of Syracuse, where he was closely besieged, but a sudden pestilence that broke out in the Carthaginian camp reduced them to such straits that Himilco was glad to conclude a capitulation and retire to Africa (Diod. xiv. 1—76). Hostilities with Carthage were renewed B. C. 393, but with no very decisive result; the peace concluded in the following year (B. C. 392) seems to have left matters in much the same state as before. In B. C. 383 war again broke out between Dionysius and the Carthaginians; the two great battles, with alternate success on either side, a fresh treaty was concluded by which the river Halycus was established as the boundary between the two powers. The first treaty, though often infringed, continued to bear the force of several successive treaties, and may be considered as forming from henceforth the permanent demarcation between the Carthaginian and the Sicilian power in Sicily (Diod. xv. 17).

(For a more detailed account of the reign of Dionysius and his wars with the Carthaginians, see the article DIONYSIUS in the *Biogr. Diet. Vindob.*) The same events are fully narrated by Herodotus vol. x. ch. 81, 82, and vol. xi. ch. 58.)

Several important towns in Sicily derive their origin from the reign of the elder Dionysius, and revolutions which then took place in the island. Among these were TAUROMENIUM, which was the place and not far from the straits of Messina, Naxos, which had been finally destroyed by Dionysius; TYNDARIS, founded by the Syracusans on the N. coast of the island, with a large part principally of Messenian origin; ALABURGA, the same part of Sicily, founded by the Sicel Archonides; and LILYBAEUM, which grew up joining the port and promontory of that name, 6 miles S. of Motya, the place of which was one of the principal Carthaginian ports and strongholds in the island.

The power of Syracuse over the whole of the eastern half of Sicily appeared to be consolidated by the elder Dionysius, but was broken up by the feeble and incompetent reign of his son. Only ten years after the death of his father (B. C. 357), Dien landed in Sicily at the head of only a few hundred mercenary troops, the standard of revolt; all the dependent cities of Syracuse soon flocked around it, and were welcomed into the city itself by the natives and the citizens. Dionysius himself was driven from the island, but the island-citadel of Ortigia was

his garrison, and still secured him a footing in Sicily. It was not till after a long blockade that his son Apollocrates was compelled to surrender it into the hands of Dion, who thus became master of Syracuse, B. C. 356. But the success of Dion was far from restoring liberty to Sicily, or even to the Syracusans: the despotic proceedings of Dion excited universal discontent, and he was at length assassinated by Callippus, one of his own officers, B. C. 353. The period that followed was one of great confusion, but with which we are very imperfectly acquainted. Successive revolutions occurred at Syracuse, during which the younger Dionysius found means to effect his return, and became once more master of Ortygia. But the rest of the city was still held by a leader named Hicetas, who called in the assistance of the Carthaginians. Ortygia was now besieged both by sea and land by a Carthaginian fleet and army. It was in this state of things that a party at Syracuse, equally opposed to Hicetas and Dionysius, had recourse to the parent city of Corinth, and a small force of 1200 soldiers was sent to their assistance under Timoleon, B. C. 344. His successes were rapid and brilliant; and within less than two months from his landing in Sicily, he found himself unexpectedly in the possession of Ortygia, which was voluntarily surrendered to him by Dionysius. Hicetas and the Carthaginians were, however, still masters of the rest of the city; but mistrust and disunion enfeebled their defence: the Carthaginian general Magon suddenly withdrew his forces, and Timoleon easily wrested the city from the hands of Hicetas, B. C. 343.

Syracuse was now restored to liberty and a democratic form of government; and the same change was quickly extended to the other Greek cities of Sicily. These had thrown off the yoke of Syracuse during the disturbed period through which they had recently passed, but had, with few exceptions, fallen into the hands of local despots, who had established themselves in the possession of absolute power. Such were, Hicetas himself at Leontini, Mamercus at Catana, and Hippon at Messana, while minor despots, also of Greek origin, had obtained in like manner the chief power in the Sicilian cities of Apollonia, Centuripa and Agrigium. Timoleon now turned his arms in succession against all these petty rulers, and overthrew them one after another, restoring the city in each case to the possession of independent and free self-government. Meanwhile the Greeks had been threatened with a more general danger from a fresh Carthaginian invasion; but the total defeat of their generals Hasdrubal and Hamilcar at the river Crimisus (B. C. 340), one of the most brilliant and decisive victories ever gained by the Greeks over the Carthaginians, put an end to all fears from that quarter: and the peace that followed once more established the Halycus as the boundary between the two nations (Diod. xv. 17).

The restoration of the Sicilian Greeks to liberty by Timoleon, was followed by a period of great prosperity. Many of the cities had suffered severely, either from the exactions of their despotic rulers, or from the troubles and revolutions that had taken place, but these were now recruited with fresh colonists from Corinth, and other cities of Greece, who poured into the island in vast numbers; the exiles were everywhere restored, and a fresh impulse seemed to be given to the development of Hellenic influences in the island. Unfortunately this period of reviving prosperity was of short duration. Only

twenty three years after the battle of the Crimisus, a despotism was again established at Syracuse by Agathocles (B. C. 317), an adventurer who raised himself to power by very much the same means as the elder Dionysius, whom he resembled in energy and ability, while he even surpassed him in sanguinary and unsparing severity. The reign of Agathocles (B. C. 317-289) was undoubtedly a period that exercised the most disastrous influence over Sicily; it was occupied in great part with internal dissensions and civil wars, as well as by long continued struggles between the Greeks and Carthaginians. Like Dionysius, Agathocles had, in the first instance, made use of Carthaginian support, to establish himself in the possession of despotic power, but as he gradually extended his aggressions, and reduced one Greek city after another under his authority, he in his turn came into fresh collision with Carthage. In B. C. 310, he was defeated at the river Himera, near the hill of Ecnomus, by the Carthaginian general Hamilcar, in so decisive a battle that it seemed to extinguish all his hopes: his allies and dependent cities quickly threw off his yoke, and Syracuse itself was once more blockaded by a Carthaginian fleet. In this extremity Agathocles adopted the daring resolution of transporting his army to Africa, and carrying on the war at the very gates of Carthage. During his absence (which was protracted for nearly four years, B. C. 310-307) Hamilcar had brought a large part of Sicily under the dominion of Carthage, but was foiled in all his attempts upon Syracuse, and at length was himself taken prisoner in a night attack, and put to death. The Agrigentines, whose name had been scarcely mentioned for a long period, but whose city appears to have been revived under Timoleon, and now again appears as one of the most considerable in Sicily, made a fruitless attempt to raise the banner of freedom and independence, while the Syracusan exile Deinocrates, at the head of a large army of exiles and mercenaries, maintained a sort of independent position, aloof from all parties. But Agathocles, on his return from Africa, concluded peace with Carthage, and entered into a compromise with Deinocrates, while he established his own power at Syracuse by a fearful massacre of all that were opposed to him. For the last twelve years of his reign (B. C. 301-289), his dominion seems to have been firmly established over Syracuse and a great part of Sicily, so that he was at liberty to follow out his ambitious schemes in the south of Italy and elsewhere.

After the death of Agathocles (B. C. 289), Sicily seems to have fallen into a state of great confusion; Syracuse apparently still retained its predominant position among the Greek cities, under a despot named Hicetas; but Agrigentum, which had also fallen into the hands of a despot named Phintias, was raised to a position that almost enabled it to dispute the supremacy. Phintias extended his dominion over several other cities, and having made himself master of Gela, utterly destroyed it, in order to found and people a new city at the mouth of the river Himera, to which he gave the name of Phintias. This was the last Greek city founded in Sicily. Meanwhile the Carthaginians were becoming more and more preponderant in the island, and the Greeks were at length led to invoke the assistance of Pyrrhus, king of Epirus, who was at this time carrying on war in Italy against the Romans. He readily listened to their overtures, and landed in

the island in the autumn of *b. c.* 278. Phintias was at this time dead, and Hicetas had not long before been expelled from Syracuse. Pyrrhus therefore had no Greek adversaries to contend with, and was able to turn all his efforts against the Carthaginians. His successes were at first rapid and decisive: he wrested one town after another from the dominion of Carthage, took Panormus, which had long been the metropolis of their Sicilian possessions, and had never before fallen into the hands of a Greek invader, and carried by assault the strong fortresses of Ercte and Eryx: but he was foiled in an attack on Lilybæum; jealousies and dissensions now arose between him and his Sicilian allies, and after little more than two years he was fain to return to Italy (*b. c.* 276), abandoning all his projects upon Sicily (Diod. *Exc. Hæsch.* xxii. 10, pp. 497—499).

The departure of Pyrrhus left the Sicilian Greeks without a leader, but Hieron, who was chosen general by the Syracusans, proved himself worthy of the occasion. Meanwhile a new and formidable enemy had arisen in the Mamertines, a band of Campanian mercenaries, who had possessed themselves by treachery of the important city of Messana, and from thence carried their arms over a considerable part of Sicily, and conquered or plundered many of its principal towns. Hieron waged war with them for a considerable period, and at length obtained so decisive a victory over them, in the immediate neighbourhood of Messana, that the city itself must have fallen, had it not been saved by the intervention of the Carthaginian general Hannibal. Hieron was now raised to the supreme power at Syracuse, and even assumed the title of king, *b. c.* 270. A few years after this we find him joining his arms with the Carthaginians, to effect the expulsion of the Mamertines, an object which they would doubtless have accomplished had not that people appealed to the protection of Rome. The Romans, who had recently completed the conquest of Italy, gladly seized the pretext for interfering in the affairs of Sicily, and espoused the cause of the Mamertines. Thus began the First Punic War, *b. c.* 264.

It is impossible here to relate in detail the events of that long-protracted struggle, during which Sicily became for twenty-three years the field of battle between the Romans and Carthaginians. Hieron, who had found himself at the beginning engaged in active hostilities with Rome, after sustaining several defeats, and losing many of his subject towns, wisely withdrew from the contest, and concluded in *b. c.* 263 a separate peace with Rome, by which he retained possession in full sovereignty of Syracuse and its territory, including the dependent towns of Acrae, Helorus, Netum, Megara, and Leontini, together with Tanomenium (Diod. xxiii. *Exc. H.* p. 502). From this time to the day of his death Hieron remained the faithful ally of the Romans, and retained the sovereign power at Syracuse undisturbed. In the rest of Sicily all trace of independent action on the part of the several Greek cities disappears: Agrigentum was indeed the only one of these cities in the island which appears to have retained any considerable importance: it was not taken by the Roman consuls till after a long and obstinate siege, *b. c.* 262, and was severely punished for its protracted resistance, the inhabitants being sold as slaves. Agrigentum indeed at a later period fell again into the hands of the Carthaginians, *b. c.* 255, but on the other hand the Romans made themselves mas-

ters of Panormus, for a long time the capital of the Carthaginian dominion in the island, which was thenceforth occupied by a strong Roman garrison, and never again fell into the hands of its former masters. For several years before the conclusion of the war, the possessions of the Carthaginians in Sicily were confined to the mountain of Eryx, occupied by Hamilcar Barca, and to the two strongly fortified seaports of Lilybæum and Drepanum, the former of which defied all the attacks of the Romans, as it had previously done those of Pyrrhus. The siege, or rather blockade, of Lilybæum was continued for nearly ten years, until the destruction of the Carthaginian fleet off the islands of the Aegates, *b. c.* 241, compelled that people to purchase peace by the surrender of all their remaining possessions in Sicily.

The whole island was now reduced into the condition of a Roman province, with the exception of the territory still governed by Hieron as an allied, but independent sovereign. The province thus constituted was the first that had ever borne that name (Cic. *Verr.* ii. 1): it was placed under the government of a praetor, who was sent annually from Rome (Appian, *Sic.* 2). On the first outbreak of the Second Punic War (*b. c.* 218), the consul Sempronius was at first sent to Sicily as his province, to guard against any threatened invasion from Africa; but he was soon recalled to oppose Hannibal in Italy, and for some years Sicily bore but an unimportant part in the war. A great change, however, occurred in the fourth year of the war (*b. c.* 215), in consequence of the defection of Hieronymus, the grandson and successor of Hieron at Syracuse, who abandoned the alliance of Rome to which Hieron had continued constant throughout his long reign, and espoused the Carthaginian cause. Hieronymus indeed was soon after assassinated, but the Carthaginian party at Syracuse, headed by Hippocrates and Epicydes, still maintained the ascendancy, and Marcellus, who had been sent in haste to Sicily to put down the threatened revolt, was compelled to form the siege of Syracuse, *b. c.* 214. But so vigorous was the resistance offered to him that he soon found himself obliged to convert the siege into a blockade, nor was it till the autumn of *b. c.* 212 that the city finally fell into his hands. Meanwhile the war had extended itself to all parts of Sicily: many cities of the Roman province had followed the example of Syracuse, and joined the alliance of Carthage, while that power spared no exertions for their support. Even after the fall of Syracuse, the war was still continued: the Carthaginian general Mutines, who had made himself master of Agrigentum, carried on a desultory warfare from thence, and extended his ravages over the whole island. It was not till Mutines had been induced to desert the Carthaginian cause, and betray Agrigentum into the hands of the Romans, that the consul Laevinus was able to reduce the revolted cities to submission, and thus accomplished the final conquest of Sicily, *b. c.* 210 (Liv. xvi. 40; xxvii. 5).

From this time the whole of Sicily became united as a Roman province, and its administration was in most respects similar to that of the other provinces. But its lot was anything but a fortunate one. Its great natural fertility, and especially its productiveness in corn, caused it, indeed, to be a possession of the utmost importance to Rome; but these very circumstances seem to have made it a favourite field for

speculators, who bought up large tracts of land, which they cultivated solely by means of slaves, so that the free population of the island became materially diminished. The more mountainous portions of the island were given up to shepherds and herdsmen, all likewise slaves, and accustomed to habits of rapine and plunder, in which they were encouraged by their masters. At the same time the number of wealthy proprietors, and the extensive export trade of some of the towns, maintained a delusive appearance of prosperity. It was not till the outbreak of the Servile War in B. C. 135 that the full extent of these evils became apparent, but the frightful state of things then revealed sufficiently shows that the causes which had produced it must have been long at work. That great outbreak, which commenced with a local insurrection of the slaves of a great proprietor at Enna, named Damophilus, and was headed by a Syrian slave of the name of Eunus, quickly spread throughout the whole island, so that the slaves are said to have mustered 200,000 armed men. With this formidable force they defeated in succession the armies of several Roman praetors, so that in B. C. 134, it was thought necessary to send against them the consul Fulvius Flaccus, and it was not till the year B. C. 132 that their strongholds of Tauromenium and Enna were taken by the consul P. Rupilius. (Diod. xxxiv. *Exc. Phot.*, *Exc. Vales.*) The insurrection was now finally quelled, but the state of Sicily had undergone a severe shock, and the settlement of its affairs was confided to P. Rupilius, together with ten commissioners, who laid down a code of laws and rules for its internal government which continued to be observed in the days of Cicero (Cic. *Verr.* ii. 16).

But the outbreak of the second Servile War, under Salvius and Athenion, less than thirty years after the termination of the former one (B. C. 103), and the fact that the slaves were again able to maintain the contest against three successive consuls till they were finally vanquished by M. Aquilius, in B. C. 100, sufficiently proves that the evils in the state of society had been but imperfectly remedied by Rupilius; nor can we believe that the condition of the island was in reality altogether so flourishing as it is represented by Cicero during the interval which elapsed between this Servile War and the praetorship of Verres, B. C. 73. But the great natural resources of Sicily and its important position as the granary of Rome undoubtedly enabled it to recover with rapidity from all its disasters. The elder Cato had called it the store-room (*cella penaria*) of the Roman state, and Cicero observes that in the great Social War (B. C. 90—88) it supplied the Roman armies not only with food, but with clothing and arms also (Cic. *Verr.* ii. 2). But the praetorship of Verres (B. C. 73—70) inflicted a calamity upon Sicily scarcely inferior to the Servile wars that had so recently devastated it. The rhetorical expressions of Cicero must not indeed be always understood literally; but with every allowance for exaggeration, there can be no doubt that the evils resulting from such a government as that of Verres were enormous; and Sicily was just in such a state as to suffer from them most severely.

The orations of Cicero against Verres convey to us much curious and valuable information as to the condition of Sicily under the Roman republic as well as to the administration and system of government of the Roman provinces generally. Sicily at that time formed but one province, under the government

of a praetor or pro-praetor, but it had always two quaestors, one of whom resided at Syracuse, the other at Lilybaeum. This anomaly (for such it appears to have been) probably arose from the different parts of the island having been reduced into the form of a province at different periods. The island contained in all above sixty towns which enjoyed municipal rights; of these, three only, Messana, Tauromenium, and Netum, were allied cities (*civitates foederatae*), and thus enjoyed a position of nominal independence; five were exempt from all fiscal burdens and from the ordinary jurisdiction of the Roman magistrates (*civitates immunes et liberae*); the rest were in the ordinary position of provincial towns, but retained their own magistrates and municipal rights, as well as the possession of their respective territories, subject to the payment of a tenth of their produce to the Roman state. These tenths, which were paid in kind, were habitually farmed out, according to principles and regulations laid down in the first instance by Hieron, king of Syracuse, and which therefore continued to be known as the *Lex Hieronica*. For judicial purposes, the island appears to have been divided into districts or *conventus*, but the number of them is not stated; those of Syracuse, Agrigentum, Lilybaeum, and Panormus are the only ones mentioned.

Sicily took little part in the Civil War between Caesar and Pompey. It was at first held by M. Cato on behalf of the latter, but abandoned by him when Pompey himself had quitted Italy, and was then occupied by Curio, as pro-praetor, with four legions (Caes. B. C. i. 30, 31). Caesar himself visited it previous to his African war, and it was from Lilybaeum that he crossed over with his army into Africa (Hirt. B. Afr. i.). After the death of Caesar, it fell into the hands of Sextus Pompeius, whose powerful fleet enabled him to defy all the efforts of Octavian to recover it, and was at length secured to him by the peace of Misenum, B. C. 39, together with Sardinia and Corsica. But Octavian soon renewed his attempts to dispossess him, and though he sustained repeated defeats at sea, and lost a great part of his fleet by a storm, the energy and ability of Agrippa enabled him to triumph over all obstacles; and the final defeat of his fleet at Naulochus compelled Pompeius to abandon Sicily, and take refuge in the east (Appian, B. C. v. 77—122; Dion Cass. xlix. 1—17). There seems no doubt that the island suffered severely from this contest, and from the rapacity or exactions of Sextus Pompeius; Strabo distinctly ascribes its decayed condition in his time principally to this cause (Strab. vi. pp. 270, 272). Augustus made some attempts to relieve it by sending colonies to a few cities, among which were Tauromenium, Catana, Syracuse, Thermae, and Tyndaris (Strab. vi. p. 272; Plin. iii. 8. s. 14); but the effect thus produced was comparatively small, and Strabo describes the whole island as in his time, with few exceptions, in a state of decay, many of its ancient cities having altogether disappeared, while others were in a declining condition, and the interior was for the most part given up to pasturage, and inhabited only by herdsmen (Strab. l. c.).

Augustus appears to have greatly remodelled the internal administration of Sicily: so that the condition of most of the towns had undergone a change between the time of Cicero and that of Pliny. Caesar had indeed proposed to give Latin rights to all the Sicilians, and M. Antonius even brought

forward a law to admit them without distinction to the Roman franchise (Cic. *ad Att.* xiv. 2), but neither of these measures was accomplished; and we learn from Pliny that Messana was in his day the only city in the island of which the inhabitants possessed the Roman citizenship: three others, Centuripa, Netum, and Segesta enjoyed the *Jus Latii*, while all the others (except the colonies already mentioned) were in the ordinary condition of "*civitates stipendiariae*" (Plin. iii. 8. s. 14). We hear very little of Sicily under the Empire; but it is probable that it never really recovered from the state of decay into which it had fallen in Strabo's time. Almost the only mention of it in history is that of an outbreak of slaves and banditti in the reign of Gallienus which seems to have resembled on a smaller scale the Servile wars that had formerly devastated it (Treb. Poll. *Gallien.* 4). The increasing importance of the supply of corn from Africa and Egypt renders it probable that that from Sicily had fallen off, and the small number of remains of the imperial period still existing in the island, though so many are preserved from a much earlier date, seems to prove that it could not then have been very flourishing. At a late period of the Empire, also, we find very few names of towns in the Itineraries, the lines of road being carried through stations or "*mansiones*" otherwise wholly unknown, a sufficient proof that the neighbouring towns had fallen into decay. (*Itin. Ant.* pp. 86—98.) In the division of the provinces under Augustus, Sicily was assigned to the senate, and was governed by a proconsul; at a later period it was considered as a part of Italy, and was governed by a magistrate named a Consularius, subject to the authority of the Vicarius Urbis Romae. (*Notit. Dign.* ii. p. 64; and Böcking, *ad loc.*)

Its insular position must have for a considerable time preserved Sicily from the ravages of the barbarians who devastated Italy towards the close of the Western Empire. Alaric indeed attempted to cross over the straits, but was foiled by a tempest. (*Hist. Miscell.* xiii. p. 535.) But Genserik, being master of a powerful fleet, made himself master of the whole island, which was held by the Vandals for a time, but subsequently passed into the hands of the Goths, and continued attached to the Gothic kingdom of Italy till it was conquered by Belisarius in A. D. 535. It was then united to the Eastern Empire, and continued to be governed as a dependency by the Byzantine emperors till the ninth century, when it fell into the hands of the Saracens or Arabs. That people first landed at Mazara, in the W. of the island in A. D. 827, and made themselves masters of Agrigentum; but their progress was vigorously opposed. They took Messana in 831, and Panormus in 835, but it was not till 878 that Syracuse, the last fortress in the island, fell into their hands. The island continued in the possession of the Saracens till the middle of the eleventh century, when it was partially recovered by the Byzantine emperors with the assistance of the Normans. But in 1061 the Norman Roger Guiscard invaded Sicily on his own account, and, after a long struggle, wholly reduced the island under his dominion. It has since remained attached, with brief exceptions, to the crown of Naples, the monarch of which bears the title of King of the Two Sicilies.

The extant remains of antiquity in Sicily fully confirm the inference which we should draw from the statements of ancient historians, as to the

prosperity and opulence of the island prior to the Greeks, and its comparatively decayed condition under the Romans. The ruins of the island are few, and for the most part unimportant, the exceptions being confined to the three colonies which we know to have received Roman citizenship; while the temples, theatres, and other edifices of the Greek period are numerous and of a most striking character. No city of Greek origin, with the exception of Athens, can produce remains to vie with those of which the remains are still to be seen at Agrigentum, Selinus and Segesta. At the same time the existing relics of antiquity, epigraphical and inscriptions, strongly confirm the fact that almost the whole population of the island has gradually Hellenised. It is evident that the line of demarcation which existed in the days of Thucydides between the Greek cities and those of non-Hellenic or barbarian origin had become to a degree effaced before the island passed into the dominion of Rome. The names of Sicilian cities mentioned by Cicero in his *Verrine orationes* are purely Greek where they belong to cities of Greek origin, such as Centuripa and Agrigium, or even Carthaginian cities like Panormus and Lilybaea, as are those of Syracuse or Agrigentum. In the same manner we find coins with Greek legends from numerous cities which undoubtedly were named Greek colonies, such as Alaisa, Menacum, and others. It is probable indeed that during the Roman Republic the language of the whole island (as far as the written and cultivated language) was Greek, which must, however, have gradually given place to Latin under the Empire, as the Sicilian dialect of the present day is one of purely Latin origin; it differs but slightly from that of the south of Italy. Of the language of the ancient Sicels we have no trace at all, and it is highly probable that it was never used as a written language.

III. TOPOGRAPHY.

The general description of the physical features of Sicily has been already given. But it is necessary here to describe its coasts in somewhat more detail. The E. coast, extending from Pelorus to Pachynus, consists of three parts, each of a very different character. From Pelorus to Tauromenium, a distance of about 40 miles, it is bordered by the chain of mountains called the *Monte Neptunius*, the slopes of which descend towards the sea, forming a very uniform line of coast, marked by numerous small torrents. Two of these mountains between these valleys appear to have the names of Drepanum (Plin.) and Argenta (Strabo), but their identification is quite uncertain. From Tauromenium, from the mouth of the *Ambrosius*, that of the *Symæthus*, the whole coast is formed by beds of lava and other volcanic materials, which have flowed down from Aetna. Off this coast, midway between Acium and Catania are several islets of volcanic origin, called by Pliny the *Scopuli*; the name of *Portus Ulpianus* is given by the same author to a port in this region, but it is impossible so say which of the numerous sheltered coves on this line of coast he was designating. S. of the *Symæthus* the coast is varied, being indented by several deep bays and inlets, separated by projecting rocky headlands. The principal of these is the bay of *Megara* (*Megarensis*) so called from the Greek city of the name; it was bounded on the N. by the *Xylo-*

promontory, now *Capo di Sta Croce* (Ἐσπερίας ἀπερρίπτος, Strab. vi. p. 267), within which was the XIPHONIAN PORT (Λιμὴν Ξιφώνεως, Scyl. p. 4), evidently the harbour of *Augusta*, one of the finest natural harbours in the island. Between this and Syracuse is the remarkable peninsular promontory of *THAPSUS* (*Magnisi*), while immediately S. of Syracuse occurs the remarkable landlocked bay called the Great Harbour of that city, and the rocky headland of *PLEMMYRIUM* which bounds it on the S. From this point to Cape Pachynus no ancient names have been preserved to us of the headlands or harbours. From Cape Pachynus to the site of Gela the coast is low but rocky. Along this line must be placed the port of *Ulysses* (Portus Odysseae) mentioned by Cicero, and the promontory of *Ulysses* of Ptolemy, both apparently in the immediate neighbourhood of Cape Pachynus [*PACHYRUS*]. The *Buca* promontory (Βούκρας ἕκτα) of Ptolemy, which he places further W., is wholly unknown, as is also the port of *Caucana* of the same author (Καυκάνια λιμὴν, Ptol. iii. 4. § 7). The remainder of the S. coast of Sicily from Gela to Lilybaeum presents on the whole a very uniform character; it has few or no natural ports, and no remarkable headlands. It is bounded for the most part by hills of clay or soft limestone, generally sloping gradually to the sea, but sometimes forming cliffs of no great elevation. The celebrated promontory of *LILYBAEUM* is a low rocky point, and its famous port, though secure, is of small extent. N. of Lilybaeum was the promontory of *AECHITHALLUS*, with the adjacent low islands, on one of which the city *MOTYA* was built; while the more considerable islands of the *ARGOLTES* lay a few miles further to the W., and the promontory of *DREPANUM* adjoining the city of the same name formed the NW. point of Sicily. It is remarkable that no ancient name is preserved to us for the deep gulf of *Castellamare* which occurs on the coast between *Trapani* and *Palermo*, though it is one of the most remarkable features of the N. coast of Sicily; nor are the two striking headlands that bound the *Bay of Palermo* itself known to us by their ancient names. The bold and insulated hill of *Monte Sta Rosalia* is, however, the ancient *ERCTE*. The northern coast of Sicily is bold and varied, formed by offshoots and ridges of the northern chain of mountains descending abruptly to the sea; hence it was always a rugged and difficult line of communication. But none of the rocky headlands that interrupt it are mentioned to us by their ancient names, till we come to that of *Mylae* adjoining the town of the same name (*Milazzo*), and the *PHALACRIAN* PROMONTORY (Ptol. iii. 4. § 2), apparently the *Capo di Rasocolmo* within a few miles of Cape Pelorus.

From the triangular form of Sicily and the configuration of the mountain chains which traverse it, it is evident that it could not have any rivers of importance. Most of them indeed are little more than mere mountain torrents, swelling with great rapidity after violent storms or during the winter rains, but nearly, if not wholly, dry during the summer months. The most important rivers of the island are: 1. The *SYMAETHUS* (*Simeto* or *Giarretta*), which rises in the northern chain of mountains (the Mons Nebrodes), and flows to the S. and SE. round the foot of Aetna, falling into the sea about 6 miles S. of *Catania*. It receives several tributaries, of which the *Dittaino* is certainly the ancient *CHRYSA*, that flowed near the city of Assorus, while the *ADRANUS* of Stephanus can

be no other than the northern or main branch of the *Symaethus* itself. The *CYANOSORUS* (Κυανόσωρος) of Polybius, which appears to have been in the neighbourhood of Centuripa, must probably be the branch now called *Fiume Salso*, which joins the *Simeto* just below *Centorbi*. 2. The *ACESINES* or *ASINUS* (*F. Cantara*), which rises very near the *Symaethus*, but flows along the northern foot of Aetna, and falls into the sea just below *Tauromenium*. 3. The *HIMERA* (*F. Salso*), the most considerable of two rivers which bore the same name, rising in the *Monte Madonia* (Mons Nebrodes) only about 15 miles from the N. coast, and flowing due S.; so that it traverses nearly the whole breadth of Sicily, and falls into the sea at *Alicata* (Phintias). 4. The *HALYCUS* (*Platani*), so long the boundary between the Carthaginian and Greek territories in the island, is also a considerable stream; it rises not far from the *Himera*, but flows to the SW., and enters the sea between *Agirgentum* and *Selinus*, close to the site of *Heracles Minoa*. 5. The *HYPASA* (*Belici*), falling into the sea on the S. coast, a few miles E. of *Selinus*; and 6, the *ANAPUS* (*Anapo*), which flows under the walls of Syracuse and falls into the great harbour of that city. It is unlike most of the rivers of Sicily, being a full clear stream, supplied from subterranean sources. The same character belongs still more strongly to its tributary the *CYANE*, which has a considerable volume of water, though its whole course does not exceed two miles in length.

The minor rivers of Sicily which are mentioned either in history or by the geographers are numerous, but in many cases are very difficult to identify. Beginning at Cape Pachynus and proceeding along the coast westward, we find: 1, the *MOTYCHANUS* (Μοτύχωνος, Ptol. iii. 4. § 7), evidently so called from its flowing near *Motycæ*, and therefore probably the stream now called *Fiume di Scicli*; 2, the *Hirminius* of Pliny, probably the *Fiume di Ragusa*, very near the preceding; 3, the *HIPPARIS*; and 4, the *OANUS*, two small streams which flowed under the walls of *Camarina*, now called the *F. di Camarana* and *Frascolari*; 5, the *GELA* or *GELAS*, which gave name to the city of Gela, and must therefore be the *Fiume di Terranova*; 6, the *ACRAEAS*, a small stream flowing under the walls of *Agirgentum*, to which it gave name, and receiving a tributary called the *HYPASA* (*Drago*), which must not be confounded with the more important river of the same name already mentioned; 7, the *CAMICUS*, probably the *Fiume delle Canne*, about 10 miles W. of *Girgenti*; 8, the *SELINUS*, flowing by the city of that name, now the *Maduni*; 9, the *MAZARA* or *MAZARUS*, flowing by the town of the same name, and still called *Fiume di Mazzara*. Besides these Ptolemy mentions the *Isburus* and *Sosias* or *Sossius*, two names otherwise wholly unknown, and which cannot be placed with any approach to certainty. Equally uncertain is the more noted river *ACHATES*, which is placed by Pliny in the same part of Sicily with the *Mazara* and *Hypsas*; but there is great confusion in his enumeration as well as that of Ptolemy. It is generally identified with the *Dirillo*, but this is situated in quite a different part of Sicily. The *Acithius* of Ptolemy, which he places between *Lilybaeum* and *Selinus*, may be the *Fiume di Marsala*.

Along the N. coast, proceeding from Lilybaeum to Cape Pelorus, we meet with a number of small streams, having for the most part a short torrent

like course, from the mountains to the sea. Their identification is for the most part very obscure and uncertain. Thus we find three rivers mentioned in connection with Segesta, and all of them probably flowing through its territory, the Porpax, Telmessus, and CRIMESSUS or CRIMISUS. The last of these is probably the *Fiume di S. Bartolomeo*, about 5 miles E. of Segesta; the other two, which are mentioned only by Aelian (*V. H.* ii. 33), cannot be identified, though one of them is probably the *Fiume Gagera*, which flows beneath Segesta itself, and falls into the *F. di S. Bartolomeo* near its mouth. But, to complicate the question still more, we are told that the names of Scamander and Simois were given by the Trojan colonists to two rivers near Segesta; and the former name at least seems to have been really in use. (Strab. xiii. p. 608; Diod. xx. 71.) Proceeding eastward we find: 1, the Orethus (Vib. Sequest. p. 15), still called the *Oreto*, a small stream flowing under the walls of Panormus; 2, the Eleutherus ('Ελευθερος, Ptol. iii. 4. § 3), placed by Ptolemy between Panormus and Soluntum, and which must therefore be the *Fiume di Bagaria*; 3, the northern HIMERA, commonly identified with the *Fiume di S. Leonardo*, near *Termini*, but more probably the *Fiume Grande*, about 8 miles further E. [HIMERA]; 4, the Monalus (Μόναλος, Ptol.), between Cephaloedum and Alaesa, now the *Follina*; 5, the Halesus or Alaeus, flowing beneath the city of Alaesa, now the *Pettineo*; 6, the Chydas (Χύδας, Ptol.), between Alaesa and Aluntium; 7, the Timethus (Τίμηθος, Id.), between Agathyrna and Tyndaris; 8, the Helicon ('Ελικών, Id.), between Tyndaris and Mylae; 9, the Phacelinus (Vib. Sequest.), which was near Mylae, or between that city and Messina (the nearer determination of these four last is wholly uncertain); 10, the Melas of Ovid (*Fast.* iv. 476) is generally placed in the same neighbourhood, though without any obvious reason.

Along the E. coast the names may be more clearly identified. 1. The ONOBALAS of Appian (*B. C.* v. 109) is probably identical with the Acetes already noticed; 2, the ACIS, a very small stream, is the *Fiume di Jaci*; 3, the AMENANUS, flowing through the city of Catania, is the *Giudicello*; 4, the TERIAS is the *Fiume di S. Leonardo*, which flows from the Lake of *Lentini*; 5, the PANTAGIAS is the *Porcari*; 6, the ALABUS is the *Cantaro*, a small stream flowing into the bay of *Augusta*. The Anapus and its confluent the Cyane have been already mentioned. S. of Syracuse occur three small rivers, memorable in the retreat of the Athenians; these are, 1, the CACYPARIS (*Cassibile*); 2, the ERINEUS (*Fiume di Avola*); and 3, the ASINARUS (*Falconara*). A few miles S. of this was the HELORUS, now called the *Abisso*, flowing by the city of the same name. No other stream occurs between this and Cape Pachynum.

Sicily contains no lakes that deserve the name; but there are a few pools or marshy lagoons, of which the names have been preserved to us. Of the latter description were the LYSIMELIA PALUS near Syracuse, and the CAMARINA PALUS adjoining the city of the same name. The LACUS PALICORUM, on the contrary, was a deep pool or basin of volcanic origin; while the small lake called by the poets Pergus or Pergusa is still extant in the neighbourhood of Enna. The *Lago di Lentini*, though much the most considerable accumulation of waters in Sicily, is not mentioned by any ancient author.

The towns and cities of Sicily were very numerous.

The Greek colonies and their dependencies have been already mentioned in the history of their settlement; but the names of towns so far as they can be ascertained are enumerated in geographical order, with regard to their origin, omitting only the places named in the Itineraries, which were probably permanent or stations. 1. Beginning from Cape Pachynus, proceeding along the E. coast towards Capri, were: MESSANA, TAUROMENIUM, NAXOS, CATANA and SYRACUSE. TROTUNDE was an early period, as well as MEGARA HYDRUNTINA situated between Catana and Syracuse. The Greek colonies of CALLIPOLIS and EUBOEA, however, disappeared at an early period, must have been situated on or near the E. coast of Sicily, to the N. of Syracuse, but we have no means to their situation. S. of Syracuse, between Cape Pachynus, was HELORES, at the mouth of a river of the same name. 2. W. of Cape Pachynus, proceeding along the S. coast, were CAMARINAE, PHINTIAS, AGRIGENTUM, HERACLEA, THERMAE SELINUNTIAE, SELINUS, RHEGIA, LILYBAEUM. Besides these the most important of CAMICUS, CAENA, and INTYCN. The dependencies of Agrigentum, the limits of which must be placed on or near the S. coast of Sicily. 3. N. of Lilybaeum was MOTYA, which must exist at a comparatively early period, and was situated (Trapani) at the NW. angle of the island, between this and Panormus, were ENTELLA and the mountain of the same name, with a distance from the coast, the Emporium of SEGESTA, CARA, and CETARIA. Proceeding along the N. coast, along the N. coast of the island, were SOLUNTUM, THERMAE, HIMERA, CEPHALOEDUM, ALAESA, CAIACTA, AGATHYRNA, ALUNTIA, TYNDARIS, and MYLAE.

The towns in the interior are more difficult to enumerate: with regard to some of them we are at a loss to determine, even if we knew the island they were situated. For the present enumeration it will be convenient to divide the island into three portions; the first comprising the western half of Sicily as far as the narrowest part, and a line drawn from its sources to the N. of the other two, the NE. and SE. portions being separated by the course of the river *Timethus* to the sea. 1. In the NE. district were SEGESTA and HALICARNASSUS, westerly of the inland cities; ENTELLA, and HYPSSA, about midway between the two; and MACELLA, both of which may have been placed in the mountainous district between Panormus and Tricocala, near Callipolis, the mountains inland from the *Thymarae* and SCHERA, of very uncertain site, but probably situated in the same part of Sicily; HALICARNASSUS, the neighbourhood of Agrigentum; and the sources of the W. branch of the *Thymarae*, the *Madonis* mountains; and ENCYRUS (near the head of the *Fiume Grande*, the E. branch of the same river. PAROPUS must appear to be situated on the northern declivity of the same mountain, but further to the W.

A little to the E. of the Himera and near possible in the centre of the island, was the fortress of ENNA (*Castro Germanico*). The boundary line between the NE. and SE. portions may be conveniently drawn from the mountain of the NE. region were: ASSORIS and

NE. of Enna, but W. of the valley of the Symaethus; CENTURIPA (*Centorbi*), nearly due E. of Enna; ADUANUM (*Adernò*), on the E. bank of the Symaethus, at the foot of Mount Aetna; HYBLA MAJOR (which must not be confounded with the city of the same name near Syracuse), and AETNA, previously called INESSA, both situated on the southern slope of the same mountain. N. of Agyrium, on the southern slopes of the Mons Nebrodes were situated HERBITA, CAPTIUM, and probably also GALARIA: while on the northern declivities of the same mountains, fronting the sea, but at some distance inland, were placed APOLLONIA (probably *Pollina*), AMESTRATUS (*Mistretta*), ABACAENUM, a few miles inland from Tyndaris, and NOAE, probably *Noara*. Three other towns, IMACHARA, ICHANA, and TISSA, may probably be assigned to this same region of Sicily, though their exact position cannot be determined. S. in the SE. portion of Sicily, S. of the Symaethus and its tributary the Chrysas or *Dittaino*, were situated ERGETIUM, MORGANTIA, LEONTINI, and HYBLA: as well as MENAENUM and HERBESSUS: but of all these names Leontini (*Lentini*) and Menaenum (*Mineo*) are the only ones that can be identified with anything like certainty. In the hills W. of Syracuse were ACRAE (*Palazzolo*), BIDIS (*S. Gio. di Bidino*), and CACRYUM (*Cassaro*); and W. of these again, in the direction towards Gela, must be placed the Heraean HYBLA, as well as ECHETLA, in the neighbourhood of *Gran Michele*. SW. of Syracuse, in the interior, were NETUM or NECTUM (*Noto Vecchio*), and MOTYCA (*Modica*), both of which are well known. The Syracusan colony of CASMENAE must probably have been situated in the same district but its site has never been identified.

After going through this long list of Sicilian towns, there remain the following, noticed either by Cicero or Pliny, as municipal towns, to the position of which we have no means of even approximating. The ACHERINI (Cic.), TYRACINI (Cic.; Tyracienses, Plin.), ACESTAEI (Plin.), ETINI (Id.), HERBULENSES (Id.), SEMELLITANI (Id.), TALARENSE (Id.). Many of the above names are probably corrupt and merely false readings, but we are at a loss what to substitute. On the other hand, the existence of a town called MUTISTRATUM or MYTISTRATUM is attested by both Cicero and Pliny, and there seems no sufficient reason for rejecting it as identical with Amestratus, as has been done by many modern geographers, though its site is wholly uncertain. Equally unknown are the following names given by Ptolemy among the inland towns of the island: Aleta (*Ἀλέτρα*), Hydra or Lydia (*Ῥῆφα or Λυδία*), Patyorus (*Πατίωρος*), Coturga or Cortuga (*Κότρυρα or Κόρρυρα*), Legum or Letum (*Λήγων or Λήτων*), Ancirina (*Ἀγκίρινα*), Ina or Ena (*Ἰνα or Ἡνα*), and Eleoethium (*Ἐλεοῦθιον*). It would be a waste of time to discuss these names, most of which are probably in their present form corrupt, and are all of them otherwise wholly unknown. On the other hand the existence of NACONA, mentioned by Stephanus of Byzantium, but not noticed by any other writer, is confirmed by coins.

The topography of Sicily is still very imperfectly known. The ruins of its more celebrated cities are indeed well known, and have been often described; especially in the valuable work of the Duke of Serra di Falco (*Antichità della Sicilia*, 5 vols. fol. Palermo, 1834—1839), as well as in the well-known travels of Swinburne, Sir R. Hoare, &c. (Swinburne's

Travels in the Two Sicilies, 2 vols. 4to. Lond. 1783; Sir R. Hoare's *Classical Tour through Italy and Sicily*, 2 vols. 8vo. Lond. 1819; St. Non, *Voyage Pittoresque de Naples et de la Sicile*, 5 vols. fol. Paris, 1781; Biscari, Principe di, *Viaggio per le Antichità della Sicilia*, 8vo. Palermo, 1817, &c.); but the island has never been thoroughly explored by an antiquarian traveller, like those to whom we are indebted for our knowledge of Greece and Asia Minor. The valuable work of Cluverius (*Sicilia Antiqua*, fol. Lugd. Bat. 1619) must here, as well as for Italy, be made the foundation of all subsequent researches. But much valuable information is found in the more ancient work of Fazello, a Sicilian monk of the sixteenth century, as well as of his commentator Amico, and in the Topographical Dictionary of the latter author. (Thomae Fazelli de *Rebus Siculis Decades Duo*, first edit. in fol. Panormi, 1558, republished with copious notes by Amico, 3 vols. fol. Cataniae, 1749—1753; Amico, *Lexicon Topographicum Siculum*, 3 vols. 4to. Cataniae, 1759). Much, however, still remains to be done. Many localities indicated by Fazello in the sixteenth century as presenting ancient remains have never (so far as we are aware) been visited by any modern traveller: no good map of the island exists, which can be trusted for topographical details, and there can be little doubt that a minute and careful examination of the whole country, such as has been made of the neighbouring island of Sardinia by the Chev. De la Marmora, would well reward the labours of the explorer. Even the ruins described by Sir R. Hoare as existing in the neighbourhood of *Sta Croce*, or those situated near *Vindiciari*, a few miles N. of Cape Pachynus and commonly ascribed to Imachara, have never been examined in detail, nor has any clue been obtained to their identification.

The Itineraries give several lines of route through the island, but many of the stations mentioned are wholly uncertain, and were probably never more than obscure villages or mere solitary posthouses. The first line of route (*Itin. Ant.* pp. 86—89) proceeds from Messina along the E. coast by Tauroemum and Acium to Catania, and from thence strikes inland across the centre of the island to Agrigentum; the course of this inland route is wholly uncertain and the names of the three stations upon it, Capitoniana, Gelasinum Philosophiana and Petiliana, are entirely unknown. From Agrigentum it followed the line of coast to Lilybaeum; the stations given are Cena [*CAENA*], Allava, Ad Aquas (i. e. the Aquae Labodes or Thermae Seliuntiae), Ad fluvium Lanarium, and Mazara; all except the 3rd and 5th of very uncertain site. A second route (*Itin. Ant.* pp. 89, 90) proceeds in the inverse direction from Lilybaeum to Agrigentum, and thence by a more southerly line, through Calvisiana, Hybla, and Acrae (*Palazzolo*) to Syracuse, and from thence as before along the E. coast to Messina. A third line follows the N. coast of the island from Lilybaeum by Panormus to Messina. The stations on this line are better known and can for the most part be determined: they are, Drepana, Aquae Segestanae (near Segesta), Parthenium (*Partinico*), Hyccara (*Muro di Carini*), Panormus, Soluntum, Thermae, Cephaloedium, Halesus (*Alaesa*), Calacte, Agatinnum, (Agathyrnum), Tyndaris, and Messina. A fourth route (*Itin. Ant.* p. 93) crossed the interior of the island from Thermae, where it branched off from the preceding, passing through Enna, Agyrium, Centuripa and Aetna to Catania. A fifth gives us a line

of strictly maritime route around the southern extremity of the island from Agrigentum to Syracuse; but with the exception of Pintis, which is probably Phintias (*Alicata*), none of the stations can be identified. Lastly, a line of road was in use which crossed the island from Agrigentum direct to Panormus (*Itin. Ant.* p. 96), but none of its stations are known, and we are therefore unable to determine even its general course. The other routes given in the Itinerary of Antoninus are only unimportant variations of the preceding ones. The Tabula gives only the one general line around the island (crossing, however, from Calvisiana on the S. coast direct to Syracuse), and the cross line already mentioned from Thermae to Catana. All discussion of distances along the above routes must be rejected as useless, until the routes themselves can be more accurately determined, which is extremely difficult in so hilly and broken a country as the greater part of the interior of Sicily. The similarity of names, which in Italy is so often a sure guide where all other indications are wanting, is of far less assistance in Sicily, where the long period of Arabic dominion has thrown the nomenclature of the island into great confusion [E. H. B.]

COIN OF SICILIA.

SICILIBBA or **SICILIBRA** (in the Geogr. Rav. Siciliba, iii. 5), a place in Africa Propria (*Itin. Ant.* pp. 25, 45), variously identified with *Basilbah* and *Haouch Alouina*. [T. H. D.]

SICINOS (*Σικινος*; *Eth. Σικινός*; *Sikino*), a small island in the Aegæan sea, one of the Sporades, lying between Pholegandros and Ios, and containing a town of the same name. (Scylax, p. 19; Strab. x. p. 484; Ptol. iii. 15. § 31.) It is said to have been originally called *Oenoî* from its cultivation of the vine, but to have been named *Sicinos* after a son of Thoms and *Oenoî*. (Steph. B. s. v.; Apoll. Rhod. i. 623; Schol. *ad loc.*; Plin. iv. 12. s. 23; Etym. M. p. 712. 49.) Wine is still the chief production of the island. It was probably colonised by Ionians. Like most of the other Grecian islands, it submitted to Xerxes (Herod. viii. 4), but it afterwards formed part of the Athenian maritime empire. There are some remains of the ancient city situated upon a lofty and rugged mountain, on whose summit stands the church of *S. Marina*. There is also still extant an ancient temple of the Pythian Apollo, now converted into the church *Episkopi* (ἡ Ἐπισκοπή). It stands in a depression between the main range of mountains, and the summit lying more to the left, upon which the ruins of the ancient city stand. We learn from an inscription found there by Ross that it was the temple of the Pythian Apollo. (Ross, *Reisen auf den Griech. Inseln*, vol. ii. p. 149, seq.; Fiedler, *Reise*, vol. ii. p. 151, seq.)

SICOR. [SECOR.]

SICORIS (*Σικωρίς*, Dion Cass. xli. 20), a tributary river of the Iberus in Hispania Tarracensis. It rose in the Pyrenees in the territory of the Cer-

retani, and separated the countries of the Bergetes and Lacetani. It flowed past Ilerda, and according to Vibius Sequester (p. 224, ed. Bipont) bore the name of that town. A little afterwards it received the Cinga, and then flowed into the Iberus near Octogesa. (Caes. B. C. i. 40, 48; Plin. iii. 3. s. 4; Lucan. iv. 13, seq.) Ausonius describes it as flowing impetuously ("torrentem," *Epist.* xxv. 59). Now the *Segre*. [T. H. D.]

SICULI (*Σικυλαί*), is the name given by ancient writers to an ancient race or people that formed one of the elements in the primitive population of Italy, as well as Sicily. But the accounts given of them are very confused and uncertain. We find the Siculi mentioned: 1, as among the early inhabitants of Latium; 2, in the extreme S. of Italy; 3, in Sicily; 4, on the shores of the Adriatic. It will be convenient to examine these notices separately.

1. The Siculi are represented by Dionysius as the earliest inhabitants of the country subsequently called Latium (i. 9), as well as of the southern part of Etruria; they were an indigenous race, i. e. one of whose wanderings and origin he had no account. They held the whole country till they were expelled from it by the people whom he calls Aborigines, descending from the mountains of Central Italy [ABORIGINES], who made war upon them, in conjunction with the Pelasgians; and after a long protracted struggle, wrested from them one town after another (Id. i. 9, 16). Among the cities that are expressly mentioned by him as having once been occupied by the Siculi, are Tibur, where a part of the city was still called in the days of Dionysius *Σικυλαία*, Ficulea, Antemnae, and Tellenae, as well as Falerii and Fescennium, in the country afterwards called Etruria (Id. i. 16, 20, 21). The Siculi being thus finally expelled from their possessions in this part of Italy, were reported to have migrated in a body to the southern extremity of the peninsula, from whence they crossed over the straits, and established themselves in the island of Sicily, to which they gave the name it has ever since borne. [SICILIA.] (Id. i. 22.) Dionysius is the only author who has left us a detailed account of the conquest and expulsion of the Siculi, but they are mentioned by Pliny among the races that had successively occupied Latium (Plin. iii. 5. s. 9); and this seems to have been an established and received tradition.

2. We find the Siculi frequently mentioned in the southernmost portion of the Italian peninsula, where they appear in close connection with the Oenotrians, Morgetes, and Itali, all of them kindred tribes, which there are good reasons for assigning to the Pelasgic race. [OENOTRIA.] It is probable, as suggested by Strabo, that the Siculi, more than once, mentioned by Homer (*Odys.* xx. 383, xxiv. 211, &c.), were the inhabitants of the coast of Italy opposite to Ithaca: and the traditions of the Epizephyrian Locrians, reported by Polybius, spoke of the Siculi as the people in whose territory they settled, and with whom they first found themselves engaged in war. (Polyb. xii. 5, 6.) Numerous traditions also, reported by Dionysius (i. 22, 73) from Antiochus, Hellenicus, and others, concur in bringing the Siculi and their eponymous leader Siculus (*Σικυλαίς*) into close connection with Italus and the Itali; and this is confirmed by the linguistic relation which may fairly be admitted to exist between *Σικυλαίς* and *Ἰταλός* (Niebuhr, vol. i. p. 47) though this is not clear enough to be in itself conclusive. So far as

our scanty knowledge goes, therefore, we must conclude that the two shores of the Sicilian strait were at one period peopled by the same tribe, who were known to the Greeks by the name of Sicels or Siculi; and that this tribe was probably a branch of the Oenotrian or Pelasgic race. The legends which connected these Siculi with those who were expelled from Latium seem to have been a late invention, as we may infer from the circumstance that Sicelus, who is represented by Antiochus as taking refuge with Morges, king of Italia, was called a fugitive from Rome. (Dionys. i. 73.)

3. The Siculi or Siceli were the people who occupied the greater part of the island of Sicily when the Greek colonies were first established there, and continued throughout the period of the Greek domination to occupy the greater part of the interior, especially the more rugged and mountainous tracts of the island. [SICILIA.] The more westerly portions were, however, occupied by a people called Sicani, whom the Greek writers uniformly distinguish from the Siculi, notwithstanding the resemblance of the two names. These indeed would seem to have been in their origin identical, and we find Roman writers using them as such; so that Virgil more than once employs the name of Sicani, where he can only mean the ancient Latin people called by Dionysius Siculi. (Virg. *Aen.* viii. 795, xi. 317.)

4. The traces of the Siculi on the western shores of the Adriatic are more uncertain. Pliny indeed tells us distinctly that Numana and Ancona were founded by the Siculi (Plin. iii. 13. s. 18); but it is by no means improbable that this is a mere confusion, as we know that the latter city at least was really founded by *Sicilian Greeks*, as late as the time of Dionysius of Syracuse [ANCONA]. When, however, he tells us that a considerable part of this coast of Italy was held by the Siculians and Liburnians, before it was conquered by the Umbrians (*ib.* 14. s. 19), it seems probable that he must have some other authority for this statement; Pliny is, however, the only author who mentions the Siculi in this part of Italy.

From these statements it is very difficult to arrive at any definite conclusion with regard to the ethnographic affinities of the Siculi. On the one hand, the notices of them in Southern Italy, as already observed, seem to bring them into close connection with the Itali and other Oenotrian tribes, and would lead us to assign them to a Pelasgic stock; but on the other it must be admitted that Dionysius distinctly separates them from the Pelasgi in Latium, and represents them as expelled from that country by the Pelasgi, in conjunction with the so-called Aborigines. Hence the opinions of modern scholars have been divided; Niebuhr distinctly receives the Siculi as a Pelasgic race, and as forming the Pelasgic or Greek element of the Latin people; the same view is adopted by O. Müller (*Etrusker*, pp. 10—16, &c.) and by Abeken (*Mittel Italien*, p. 5); while Grotefend (*Alt Italien*, vol. iv. pp. 4—6), followed by Forbiger and others, regards the Siculi as a Gaulish or Celtic race, who had gradually wandered southwards through the peninsula of Italy, till they finally crossed over and established themselves in the island of Sicily. This last hypothesis is, however, purely conjectural. We have at least some foundation for supposing the Siculi as well as the Oenotrians to be of Pelasgic origin: if this be rejected, we are wholly in the dark as to their origin or affinities. [E. H. B.]

SICULUM MARE (τὸ Σικελικὸν πέλαγος, Pol. Strab. &c.), was the name given in ancient times to that portion of the Mediterranean sea which bathed the eastern shores of Sicily. But like all similar appellations, the name was used in a somewhat vague and fluctuating manner, so that it is difficult to fix its precise geographical limits. Thus Strabo describes it as extending along the eastern shore of Sicily, from the Straits to Cape Pachynus, with the southern shore of Italy as far as Locri, and again to the eastward as far as Crete and the Peloponnese; and as filling the Corinthian Gulf, and extending northwards to the Iapygian promontory and the mouth of the Ionian gulf. (Strab. ii. p. 123.) It is clear, therefore, that he included under the name the whole of the sea between the Peloponnese and Sicily, which is more commonly known as the Ionian sea [IONIAN MARE], but was termed by later writers the Adriatic [ADRIATICUM MARE]. Polybius, who in one passage employs the name of Ionian sea in this more extensive sense, elsewhere uses that of the Sicilian sea in the same general manner as Strabo, since he speaks of the island of Cephallenia as extending out towards the Sicilian sea (v. 3); and even describes the Ambracian gulf as an inlet or arm of the Sicilian sea (iv. 63, v. 5). Eratosthenes also, it would appear from Pliny, applied the name of Siculum Mare to the whole extent from Sicily to Crete. (Plin. iii. 5. s. 10.) The usage of Pliny himself is obscure; but Mela distinguishes the Sicilian sea from the Ionian, applying the former name to the western part of the broad sea, nearest to Sicily, and the latter to its more easterly portion, nearest to Greece. (Mel. ii. 4. § 1.) But this distinction does not seem to have been generally adopted or continued long in use. Indeed the name of the Sicilian sea seems to have fallen much into disuse. Ptolemy speaks of Sicily itself as bounded on the N. by the Tyrrhenian sea, on the S. by the African, and on the E. by the Adriatic; thus omitting the Sicilian sea altogether (Ptol. iii. 4. § 1); and this seems to have continued under the Roman Empire to be the received nomenclature.

Strabo tells us that the Sicilian sea was the same which had previously been called the Ansonian (Strab. ii. p. 133, v. p. 233); but it is probable that that name was never applied in the more extended sense in which he uses the Sicilian sea, but was confined to the portion more immediately adjoining the southern coasts of Italy, from Sicily to the Iapygian promontory. It is in this sense that it is employed by Pliny, as well as by Polybius, whom he cites as his authority. (Plin. l. c.) [E. H. B.]

SICUM (Σικόν, Ptol. ii. 16. § 4; Plin. iii. 22; Siclis, *Pent. Tab.*), a town of Dalmatia, to the E. of Tragurium, on the road to Salona, where Claudius is said to have quartered the veterans. (Plin. l. c.) From its position it cannot be *Sebenico*, with which it has been identified, but may be represented by the vestiges of a Roman station to the NW. of *Castel Vetturi*, on the *Riviere dei Castelli*, where a column with a dedicatory inscription to M. Julius Philippus has been lately found, as well as much pottery and Roman tiles. (Wilkinson, *Dalmatia*, vol. i. p. 176.) [E. B. J.]

SICYON (ὁ and ἡ Σικυών, also Σικυών, Bekker, *Anecd.* p. 555; *Eth.* Σικυώνιος; the territory Σικυωνία; *Vasiliká*.)

I. *Situation*.—Sicyon was an important city of Peloponnesus, situated upon a table-height of no great elevation, at the distance of about 2 miles from the

Corinthian gulf. Strabo (viii. p. 382) correctly describes it as occupying a strong hill distant 20 stadia from the sea, though he adds that others made the distance 12 stadia, which may, however, have reference to the lower town built at the foot of the table-height. Upon this height the modern village of *Vasiliki* now stands. It is defended on every side by a natural wall of precipices, which can be ascended only by one or two narrow passages from the plain. A river flows upon either side of the hill, the one on the eastern side being the Asopus, and that on the western side the Helisson. When Sicyon was at the height of its power, the city consisted of three parts, the Acropolis on the hill of *Vasiliki*, the lower town at its foot, and a port-town upon the coast. The port-town was well fortified. (Zurvorius *Λιμν.* Xen. *Hell.* vii. 3. § 2; Polyb. v. 27; Paus. ii. 12. § 2; Strab. l. c.)

11. *History.*—Sicyon was one of the most ancient cities of Greece, and is said to have existed under the name of *Αἰγιάλεια* (*Aigyaleia*, Paus. ii. 5. § 6) or *Αἰγιάλι* (*Aigyali*, Strab. viii. p. 382) long before the arrival of Pelops in Greece. It was also called *Μερόνη* (*Mērōnē*), which was apparently its sacerdotal name, and under which it is celebrated as the "dwelling-place of the blessed," and as the spot where Prometheus instituted the Hellenic sacrifices and deceived Zeus. (Steph. B. s. v. *Σικυών*; Strab. viii. p. 382; Callim. *Fragm.* 195, p. 513, ed. Ernesti; Hesiod. *Theog.* 535.) Its name *Τελχινία* (*Telchiria*) has reference to its being one of the earliest seats of the workers in metal. (Steph. B. s. v. *Σικυών*.) Its name *Aigyaleia* was derived from a mythical autochthon Aegialeus, and points to the time when it was the chief city upon the southern coast of the Corinthian gulf, the whole of which was also called Aegialeia. Its later name of Sicyon was said to have been derived from an Athenian of this name, who became king of the city, and who is represented as a son of either Marathon or Metion. (Paus. ii. 6. § 5.) This legend points to the fact that the early inhabitants of Sicyon were Ionians. Aegialeus is said, in some traditions, to have been the son of Inachus, the first king of Argos, and the brother of Phoroneus. A long series of the successors of Aegialeus is given, among whom one of the most celebrated was the Argive Adrastus, who, being expelled from his own dominions, fled to Polybus, then king of Sicyon, and afterwards succeeded him on the throne. (Euseb. *Chron.* p. 11, seq.; August. *Civ. Dei.* xviii. 2; Paus. ii. 6. §§ 6, 7.) Homer indeed calls Adrastus first king of Sicyon (Hom. *Il.* ii. 572); and we know that in historical times this hero was worshipped in the city. (Herod. v. 67.) Sicyon was subsequently conquered by Agamemnon, who, however, left Hippolytus on the throne; but Sicyon became a tributary city to Mycenae. (Paus. ii. 6. §§ 6, 7; Hom. *Il.* ii. 572, xxiii. 299.) Hippolytus was the grandson of Phaestus, who was a son of Hercules; and in consequence of this connection, the inhabitants were not expelled or reduced to subjection upon the conquest of the city by the Dorians under Phalces, the son of Temenus; for while the Dorian conquerors, as in all other Doric states, were divided into three tribes under the names of Hylleis, Pamphyli, and Dymanatae, the original Sicyonians were formed into a fourth tribe, under the name of Aegialeis, which possessed the same political rights as the other three. (Paus. ii. 6. § 7; Strab. viii. p. 389; Herod. v. 68.) Sicyon was now a Dorian

state; and from this time its real history begins. It was at first dependent upon Argos (Paus. l. c.), which was for some time the most powerful state in the Peloponnesus, Sparta being second to it. In the First Messenian War the Sicyonians fought on the side of the Messenians along with the Argives and Arcadians. (Paus. iv. 11. § 1.) In the Second Messenian War, about B. C. 676, Sicyon became subject to the tyranny of the Orthagorides, who governed the city for more than 100 years, and whose rule is praised by Aristotle (*Pol.* v. 9. § 21) for its mildness. The family of the Orthagorides belonged to the non-Dorian tribe, and the continuance of their power is to be accounted for by the fact of their being supported by the original population against the Dorian conquerors. Orthagoras, the founder of the dynasty, is said to have been originally a cook. (Aristot. l. c.; Hellad. ep. Phot. cod. 279, p. 530; Liban. vol. iii. p. 251, ed. Reiske.) In other accounts Andreas is mentioned as the first of the Sicyonian tyrants (Herod. vi. 126; Diod. *Fragm.* Vat. 14); and it is probable that he is the same person as Orthagoras, as the two names do not occur in the same author. He was succeeded by his son Myron, who gained a chariot victory at Olympia in B. C. 648; Myron by Aristonymus; and Aristonymus by Cleisthenes (Herod. vi. 126; Paus. ii. 8. § 1, vi. 19. § 1.) The latter was celebrated for his wealth and magnificence, and was also distinguished by his bitter hatred against Argos, and his systematic endeavour to depress and dishonour the Dorian tribes. He changed the ancient and venerable names of the three Dorian tribes into the insulting names of Hyatae, Oneatae, and Choeratae, from the three Greek words signifying the sow, the ass, and the pig; while he declared the superiority of his own tribe by giving it the designation of Archelai, or lords of the people. Cleisthenes appears to have continued despot till his death, which may be placed about B. C. 560. The dynasty perished with him. He left no son; but his daughter Agariste, whom so many suitors wooed, was married to the Athenian Megacles, of the great family of the Alcmaeonidae, and became the mother of Cleisthenes, the founder of the Athenian democracy after the expulsion of the Peisistratidae. The names given to the tribes by Cleisthenes continued in use for sixty years after the death of the tyrant, when by mutual agreement the ancient names were restored. (Herod. vi. 126—131; Grote, *Hist. of Greece*, vol. iii. p. 43, seq.; *Dict. of Biogr.* art. *CLEISTHENES*.)

A Dorian reaction appears now to have taken place, for during a long time afterwards the Sicyonians were the steady allies of the Spartans. In the invasion of Greece by Xerxes (B. C. 480), the Sicyonians sent a squadron of 15 ships to Salamis (Herod. viii. 43), and a body of 3000 hoplites to Plataea. (Herod. ix. 28.) In the interval between the Persian and Peloponnesian wars the territory was twice invaded and laid waste by the Athenians, first under Tolmides in B. C. 456 (Thuc. i. 108; Paus. i. 27. § 5), and a second time under Pericles, B. C. 454 (Thuc. i. 111; Diod. xi. 88). A few years later (B. C. 445) the Sicyonians supported the Megarians in their revolt from Athens. (Thuc. i. 114.) In the Peloponnesian War they sided with Sparta, and sent a contingent of ships to the Peloponnesian fleet. (Thuc. ii. 9, 80, 83.) In B. C. 424 the Sicyonians assisted Brasidas in his operations against the Athenians in the Megari

(Thuc. iv. 70), and in the same year they repulsed a descent of the Athenians under Demosthenes upon their territory. (Thuc. iv. 101.) In B.C. 419 they united with the Corinthians in preventing Alcibiades from erecting a fortress upon the Achæan promontory of Rhium. (Thuc. v. 52.) About this time a democratical revolution appears to have taken place, since we find the Lacedæmonians establishing an oligarchical government in Sicyon in B.C. 417. (Thuc. v. 82.) In the wars of Lacedæmon against Corinth, B.C. 394, and against Thebes, B.C. 371, the Sicyonians espoused the side of the Lacedæmonians. (Xen. *Hell.* iv. 2. § 14, iv. 4. § 7, seq. vi. 4. § 18.) But in B.C. 368 Sicyon was compelled by Epaminondas to join the Spartan alliance, and to admit a Theban harmonist and garrison into the citadel. Euphron, a leading citizen of Sicyon, taking advantage of these circumstances, and supported by the Arcadians and Argives, succeeded in establishing a democracy, and shortly afterwards made himself tyrant of the city. But being expelled by the Arcadians and Thebans, he retired to the harbour, which he surrendered to Sparta. By the assistance of the Athenians he returned to Sicyon; but finding himself unable to dislodge the Theban garrison from the Acropolis, he repaired to Thebes, in hopes of obtaining, by corruption and intrigue, the banishment of his opponents and the restoration of his own power. Here, however, he was murdered by some of his enemies. (Xen. *Hell.* vii. 1—3; Diod. xv. 69, 70; *Dict. of Biogr.* art. EUPHRON.) Sicyon seems, however, to have been favorable to tyrants; for, after a short time, we again find the city in their power. The facility with which ambitious citizens obtained the supreme power was probably owing to the antagonism between the Dorian and old Ionian inhabitants. Demosthenes mentions two Sicyonian tyrants, Aristratus and Epichares, in the pay of Philip (*de Cor.* pp. 242, 324). In the Lamian war, after the death of Alexander the Great, B.C. 323, the Sicyonians joined the other Greeks against the Macedonians. (Diod. xviii. 11.) The city subsequently fell into the hands of Alexander, the son of Polysperchon; and after his murder in B.C. 314, his wife Cratesipolis continued to hold the town for Cassander till B.C. 308, when she was induced to betray it to Ptolemy. (Diod. xix. 67, xx. 37.) In B.C. 303, Sicyon passed out of the hands of Ptolemy, being surprised by Demetrius Poliorcetes in the night. It appears that at this time Sicyon consisted of three distinct parts, as already mentioned, the Acropolis, on the hill of *Vasiliká*, the lower city at its foot, and the port-town. It is probable that formerly the Acropolis and the lower city were united with the port-town, by walls extending to the sea; but the three quarters were now separated from one another, and there was even a vacant space between the lower town and the citadel. Seeing the difficulty of defending so extensive a space with the diminished resources and population of the city, and anxious to secure a strongly fortified place, Demetrius compelled the inhabitants to remove to the site of the ancient Acropolis, which Diodorus describes as "a site very preferable to that of the former city, the inclosed space being an extensive plain, surrounded on every side by precipices, and so difficult of access that it would not be possible to attack the walls with machines." This new city was called Demetrias. (Diod. xx. 102; Plut. *Demetr.* 25; Paus. ii. 7. § 1; Strab. viii. p. 382.) The name Demetrias

soon disappeared; but the city continued to remain upon its lofty site, which was better adapted than most mountain heights in Greece for a permanent population, since it contained a good supply of water and cultivable land. Pausanias (*l.c.*) represents the lower town as the original city of Aegialeus; but Col. Leake justly remarks, it is more natural to conclude that the first establishment was made upon the hill *Vasiliká*, which, by its strength and its secure distance from the sea, possesses attributes similar to those of the other chief cities of Greece. Indeed, Pausanias himself confirms the antiquity of the occupation of the hill of *Vasiliká*, by describing all the most ancient monuments of the Sicyonians as standing upon it. (Leake, *Morea*, vol. iii. p. 367.)

After Demetrius quitted Sicyon, it again became subject to a succession of tyrants, who quickly displaced one another. Cleon was succeeded in the tyranny by Euthydemus and Timocleides; but they were expelled by the people, who placed Cleinias, the father of Aratus, at the head of the government. Cleinias was soon afterwards murdered by Abantidas who seized the tyranny, B.C. 264. Abantidas was murdered in his turn, and was succeeded by his father Pasceas; but he again was murdered by Nicocles, who had held the sovereign power only four months, when the young Aratus surprised the citadel of Sicyon, and delivered his native city from the tyrant, B.C. 251. (Paus. ii. 8. §§ 1—3; Plut. *Arat.* 2.) Through the influence of Aratus, Sicyon now joined the Achæan League, and was one of the most important cities of the confederacy. (Paus. ii. 8. § 3; Plut. *Arat.* 9; Polyb. ii. 43.) In consequence of its being a member of the league, its territory was devastated, both by Cleomenes, B.C. 233 (Plut. *Arat.* 41, *Cleom.* 19; Polyb. ii. 52), and by the Aetolians, B.C. 221. (Polyb. iv. 13.) In the Roman wars in Greece, Sicyon was favoured by Attalus, who bestowed handsome presents upon it. (Polyb. xvii. 16; Liv. xxxii. 40.) The conquest of Corinth by the Romans, B.C. 146, was to the advantage of Sicyon, for it obtained the greater part of the neighbouring territory and the administration of the Isthmian games. (Paus. ii. 2. § 2.) But even before Corinth was rebuilt, Sicyon again declined, and appears in an impoverished state towards the end of the Republic. (Cic. *ad Att.* i. 19, 20, ii. 1.) After the restoration of Corinth, it still further declined, and its ruin was completed by an earthquake, which destroyed a great part of the city, so that Pausanias found it almost depopulated (ii. 7. § 1). The city, however, still continued to exist in the sixth century of the Christian era; for Hierocles (p. 646, Wees.) mentions New Sicyon (*Νέα Σικυών*) among the chief cities of Achæia. The maritime town was probably Old Sicyon. Under the Byzantine empire Sicyon was called Hellas, and the inhabitants Helladici, probably in contradistinction to the surrounding Slavonic inhabitants. (*Σικυών, ἡ νῦν Ἑλλάς*, Suidas; *τῶν Σικυωνίων τῶν νυνὶ λεγομένων Ἑλλαδικῶν*, Malala, iv. p. 68, Bonn.) The name *Vasiliká* (*τὰ Βασιλικά*) has reference to the ruins of the temples and other public buildings.

III. *Art, &c.*—Sicyon is more renowned in the artistic than in the political history of Greece. For a long time it was one of the chief seats of Grecian art, and was celebrated alike for its painters and sculptors. According to one tradition painting was invented at Sicyon, where Telephanes was the first to practise the monogram, or drawing in outline

the one sacred to Athena Colocasia, mentioned by Athenaeus (iii. p. 72). There were two adjoining temples, one sacred to Artemis and Apollo, built by Epopeus, and the other sacred to Hera, erected by Adrastus, who was himself worshipped by the people of Sicyon (Herod. v. 68; Pind. *Nem.* ix. 20). There can be little doubt that these ancient temples stood in the original Acropolis of Sicyon; and indeed Pausanias elsewhere (ii. 5. § 6) expressly states that the ancient Acropolis occupied the site of the temple of Athena. We may place these temples near the northern edge of the hill upon the site of the modern village of *Vasiliká*; and accordingly the

remarkable opening in the rocks near the village may be regarded as the position of the Sacred Gate, leading into the ancient Acropolis. (Leake, *Morea*, vol. iii. p. 372.)

In descending from the Heraeum, on the road to the plain, was a temple of Demeter; and close to the Heraeum were the ruins of the temple of Apollo Carneius and Hera Prodomia, of which the latter was founded by Phalces, the son of Temenus. (Paus. ii. 11. §§ 1, 2.)

The walls of Sicyon followed the edge of the whole hill, and may still be traced in many parts. The direction of the ancient streets may also still be

a a Road from the lake of Styμφalus to *Vasiliká* and Corinth.

followed by the existing foundations of the houses: they run with mathematical precision from NE. to SW., and from NW. to SE., thus following the rule of Vitruvius. Few of the ruins rise above the ground; but there is a Roman building better preserved, and containing several chambers, which lies near the ridge separating the two levels of the hill. Leake supposes that this building was probably the praetorium of the Roman governor during the period between the destruction of Corinth by Mummius and its restoration by Julius Caesar, when Sicyon was the capital of the surrounding country; but more recent observers are inclined to think that the ruins are those of baths. West of this building are the theatre and the stadium; and the modern road which leads from *Vasiliki* to Stymphalus runs between this Roman building and the theatre and then through a portion of the stadium. The theatre was cut out of the rock, separating the two levels of the hill, as already described; its total diameter was about 400 feet, and that of the orchestra 100. Each wing was supported by a mass of masonry, penetrated by an arched passage. To the NW. of the theatre are the remains of the stadium, of which the total length, including the seats at the circular end, is about 680 feet. Col. Leake remarks that "the stadium resembles that of Messene, in having had seats which were not continued through the whole length of the sides. About 80 feet of the rectangular extremity had no seats; and this part, instead of being excavated out of the hill like the rest, is formed of factitious ground, supported at the end by a wall of polygonal masonry, which still exists." There are also, in various parts of the hill, remains of several subterraneous aqueducts, which supplied the town with water. The opening of one of them is seen on the SE. side of the theatre; and there is another opening now walled up W. of the modern village. The tyrant Nicocles escaped through these subterraneous passages when Sicyon was taken by Aratus. (Plut. *Arat.* 9.)

V. *Topography of the Sicyonia*.—The territory of Sicyon was very small, and, in fact, was little more than the valley of the Asopus. In the upper part of its course the valley of the Asopus is confined between mountains, but near the sea it opens out into a wide plain, which was called ASOPIA. (*Asopia*, Strab. viii. p. 382, ix. p. 408; Paus. ii. 1. § 1.) This plain was celebrated for its fertility (*μῆλα φέρειν ἐν τῇ τῷ Ἰσχυρίων πεδίον γαστρῶν*, Lucian, *Icarom.* c. 18), and was especially adapted for the cultivation of the olive. ("Sicyonia bacca," Virg. *Georg.* ii. 519; Ov. *Ep. ex Pont.* iv. 15. 10; Stat. *Theb.* iv. 50.) The neighbouring sea supplied an abundance of excellent fish. (Athen. i. p. 27.) It was separated from the Corinthia on the E. by the river Nemea, and from the territory of Pellene on the W. by the Sythas; and on the S. it was bounded by the territories of Phlius and Cleonae. At one time the territory of Sicyon must have extended even beyond the Sythas, since GONUSSA or DONUSSA, which lay W. of this river, is described by Pausanias as belonging to the Sicyonians. [PTELLENÉ, p. 571, a.] Between the Helisson and the Sythas was probably the river Selleis, with the neighbouring village of Ephyra, mentioned by Strabo (viii. p. 338). [EPHYRA, No. 3.] Sixty stadia S. of Sicyon, and near the frontiers of Phliasia, was Titane or Titane, the most important of the dependencies of Sicyon. [TITANE.] Forty stadia beyond Titane was Phlius; but this road, which

was too narrow for carriages, was not the direct road from Sicyon to Phlius. The direct road was to the right of the Asopus; and the circuitous road through Titane to the left of that river. Between these two roads, at the distance of 20 stadia from Sicyon, was a sacred grove, containing a temple of the Eumenides. (Paus. ii. 11. § 3, seq.) East of Sicyon was Epieicia, on the river Nemea: [EPIEICIA.] In the same direction was the fortress DERAE. (*Δέραι*, Xen. *Hell.* vii. 1. § 22.) There was also a fortress Phoebia, taken by Epaminondas in his march through the valley of the Asopus: it is probably the same place as Buphia. [BUPHIA.] Strabo (ix. p. 412) mentions a demus Plataeas in the Sicyonia (Hagen, *Sicyonia*, Regimont. 1831; Gompf, *Sicyoniacorum Spec.* Berol. 1832, Torg. 1834; Bobrik, *De Sicyoniae Topographia*, Regimont. 1839; Leake, *Morea*, vol. iii. p. 351, seq.; Boblaye, *Recherches*, &c. p. 30, seq.; Ross, *Reisen im Peloponnes*, p. 39, seq.; Curtius, *Peloponnesos*, vol. ii. p. 482, seq.; Benlé, *Études sur le Péloponnèse*, p. 343, seq.)

COIN OF SICYON.

SIDAE (*Σίδα*), a place in Boeotia, celebrated for its pomegranates. Hence the Boeotians called this fruit *σίδη*, though the more usual name was *πόδι*. As the Athenians are said to have contended with the Boeotians for the possession of the place, it must have been upon the borders of Attica, but its exact site is unknown. (Athen. xiv. pp. 650, 651.)

SIDE (*Σίδα*; *Eth.* *Σιδῆρς*), a town with a good harbour on the coast of Pamphylia, 50 stadia to the west of the river Melas, and 350 east of Attaleia. (*Stad. Mar. Mag.* § 214, foll.) The town was founded by Cumae in Aeolia. (Scylax, *Periplus* p. 40; Strab. xiv. p. 667, comp. p. 664; Steph. B. s. v.; Pomp. Mela, i. 15.) Arrian (*Anab.* i. 26) who admits the Cumaeae origin of the place, relates a tradition current at Side itself, according to which the Sidetae were the most ancient colonists sent out from Cumae, but soon after their establishment in their new home forgot the Greek language, and formed a peculiar idiom for themselves, which was not understood even by the neighbouring barbarians. When Alexander appeared before Side, it surrendered and received a Macedonian garrison. In the time of Antiochus the Great, a naval engagement took place off Side between the fleet of Antiochus, commanded by Hannibal, and that of the Rhodians, in which the former was defeated. (Liv. xxxv. 13, 18, xxxvii. 23, 24.) Polybius (v. 73) states that there existed great enmity between the people of Side and Aspendus. At the time when the pirates had reached their highest power in the Mediterranean, they made Side their principal port, and used it as a market to dispose of their prisoners and booty by auction. (Strab. xiv. p. 664.) Side continued to be a town of considerable importance under the Roman emperors, and in the ultimate division of the province it became the metropolis of Pamphylia Prima. (Herod.

p. 682; *Concil. Const.* ii. p. 240.) The chief divinity of this city was Athena, who is therefore seen represented on its coins, holding a pomegranate (*σῖδη*) in her hand. (Sestini, *Num. Vet.* p. 392, foll.; comp. Xenoph. *Anab.* i. 2. § 12; Cicero, *ad Fam.* iii. 6; Athen. viii. p. 350; Paus. viii. 28. § 2; Ptol. v. 5. § 2, viii. 17. § 31.) The exact site of ancient Side, which is now called *Eski Adalia*, as well as its remains, have been described by modern travellers. Beaufort (*Karamania*, p. 146, foll.), who gives an excellent plan of the present condition of the place, states that the city stood on a low peninsula, and was surrounded by walls; the part facing the land was of excellent workmanship, and much of it is still perfect. There were four gates, one from the country and three from the sea. The agora, 180 feet in diameter, was surrounded by a double row of columns. One side of the square is at present occupied by the ruins of a temple and portico. The theatre appears like a lofty acropolis rising from the centre of the town, and is by far the largest and best preserved of any seen in Asia Minor. The harbour consisted of two small moles, connected with the quay and principal sea gate. At the extremity of the peninsula were two artificial harbours for larger vessels. Both are now almost filled with sand and stones, which have been borne in by the swell. The earliest coins of Side are extremely ancient; the inscriptions are in very barbarous characters, resembling the Phoenician, and the imperial coins exhibit the proud titles of *λαμπερὸν* and *ἐνδοξόν*. (Eckhel, vol. iii. pp. 44, 161; Spanheim, *De Usu et Praest. Num.* p. 879; Fellows, *Asia Minor*, p. 201; Leake, *Asia Minor*, p. 195, foll.)

Respecting Side, the ancient name of Polemonium, see POLEMONIUM. [L. S.]

SIDE (*Σῖδη*), a town on the eastern coast of Laconia, a little N. of the promontory Malea. It was said to have existed before the Dorian conquest, and to have derived its name from a daughter of Danaus. The inhabitants were removed by the Dorian conquerors to the neighbouring town of Boeae. It probably occupied the site of the monastery of *St. George*, where there is a port. (Scylax, p. 17; Paus. iii. 22. § 11; Boblaye, *Recherches*, &c. p. 99; Curtius, *Peloponnesos*, vol. ii. p. 297.)

SIDE'NE (*Σιδήνη*). 1. A town of Mysia, on the river Granicus, which was destroyed by Croesus, and was never rebuilt, in consequence of a curse pronounced on the site by the destroyer. (Strab. xiii. pp. 587, 601.)

2. A town in Lycia, mentioned only by Stephanus B. (*s. v.*) on the authority of the *Lydiaca* of Xanthus.

3. A district on the coast of Pontus, about the mouth of the river Sidenus, which derived its name from the town of Side, afterwards called Polemonium. The greater part of the district was formed by the deposits of the river (Strab. i. p. 52, ii. p. 126, xii. pp. 547, 548, 556; Plin. i. 4.) [L. S.]

SIDE'NI (*Σιδήνιοι*), a people of Arabia Felix, placed by Ptolemy between the Thamyditae on the north, and the Darrae on the south, on the Elanitic gulf (vi. 7. § 4). Mr. Forster identifies them with the *Djeheyme* tribe of Burckhardt, in the north of the *Hedjas*, extending along the coast from *Jebel Hassane* (certainly identical with the *Hippos Mons* — both meaning Horse-mountain — of Ptolemy), to Yembo. "All the circumstances, of name, locality, and neighbourhood," he says, "concur to prove their identity." (*Arabia*, vol. i. p. 126.) [G. W.]

SIDE'NI (*Σιδήνιοι*, *Σειδῖνοι*, *Σιδήνιοι*), a German tribe on the coast of the Baltic, between the mouth of the river Suebus and that of the Viadus. (Ptol. ii. 11. § 14.) It is possible that Sibini (*Σιβῖνοι*) is only a corrupt form of the name of this same tribe. (Zeuss, *Die Deutschen*, p. 154.) [L. S.]

SIDE'NUS, a small river of Pontus, having its sources in Mount Paryadres, and flowing through the district of Sidene into the Euxine; at its mouth was the town of Side or Polemonium (Plin. vi. 4), from which the river is now called *Pouleman Chai*. (Comp. Hamilton, *Researches*, i. p. 270.) [L. S.]

SIDERIS, a river of Hyrcania, mentioned by Pliny (vi. 16. s. 18), which flowed into the Caspian sea. It cannot be now determined to which river he refers, but he states from it the Caspian sea was called the Hyrcanian. [V.]

SIDE'RUS (*Σιδήρους*), according to Scylax (p. 39) a promontory and a port-town on the coast of Lycia. The same place seems to be meant in Stephanus B. (*s. v.* *Σιδήρους*), when he calls Sidarus a town and harbour. Col. Leake (*Asia Minor*, p. 189) has shown that the town of Siderus is in all probability no other than Olympus, on the south of Phaselis. [L. S.]

SIDICINI'NI (*Σιδικῖνιοι*), a people of Central Italy bordering on the Samnites and Campanians. In the time of the geographers they had disappeared as a people, or become absorbed into the general appellation of Campanians (Strab. v. p. 237), but at an earlier period they appear as a wholly independent people. Their chief city was Teannum, on the E. slope of the volcanic mountain group of *Rocca Monfina*: but they had at one time extended their power considerably further to the N. and up the valley of the Liris, as the territory of *Fregellae* is said to have been subject to them, before they were dispossessed of it by the Volscians (Liv. viii. 22). It is clear however that this extension of their limits was of short duration, or at all events had ceased before they first appear in history. Strabo tells us expressly that they were an Oscan tribe (*s. c.*), and this is confirmed by the coins of Teannum still extant, which have Oscan inscriptions. They were therefore closely allied to the neighbouring tribes of the Campanians on the S. and the Aurunci and Ausones on the W. Hence Virgil associates the inhabitants of the Sidicini plains ("Sidicina aequora," *Æn.* vii. 727) with the Auruncans and the inhabitants of Cales. The last city is assigned by Silius Italicus to the Sidicini, but this is opposed to all other authorities (Sil. Ital. viii. 511). The name of the Sidicini is first mentioned in history in B. C. 343, when they were attacked by the Samnites, who had been long pressing upon their neighbours the Volscians. Unable to contend with these formidable assailants, the Sidicini had recourse to the Campanians, who sent an army to their assistance, but were easily defeated (Liv. vii. 29, 30), and being in their turn threatened by the whole power of the Samnites, invoked the assistance of Rome. During the war which followed (the First Samnite War), we lose sight altogether of the Sidicini, but by the treaty which put an end to it (in B. C. 341) it was particularly stipulated that the Samnites should be at liberty to pursue their ambitious designs against that people (Id. viii. 1, 2). Thus abandoned by the Romans to their fate the Sidicini had recourse to the Latins (who were now openly shaking off their connection with Rome) and the Campanians: and the Samnites were a second time driven off from

their special attack on this petty people to oppose a more powerful coalition (*ib.* 2, 4, 5). It is clear that the Sidicini took part as allies of the Latins and Campanians in the war that followed: but we have no account of the terms they obtained in the general settlement of the peace in B. C. 338. It is certain, however, that they retained their independence, as immediately afterwards we find them engaging in a war on their own account with their neighbours the Auruncans. The Romans espoused the defence of the latter people, but before they were able to take the field, the Auruncans were compelled to abandon their ancient city, which was destroyed by the Sidicini, and withdrew to Suessa. (*Liv.* viii. 15.) The Ausonians of Cales had on this occasion been induced to make common cause with the Sidicini, but their combined forces were easily defeated by the Roman consuls. Cales soon after fell into the hands of the Romans; but though the territory of the Sidicini was overrun by the consuls of B. C. 332, who established their winter-quarters there to watch the movements of the Samnites, their city of Teanum still held out (*ib.* 16, 17). Nor do we know at what time it fell into the power of the Romans, or on what terms the Sidicini were ultimately received to submission. But it is probable that this took place before B. C. 297, when we are told that the consul Decius Mus advanced to attack the Samnites "per Sidicinum agrum" in a manner that certainly implies the district to have been at that time friendly, if not subject, to Rome (*Liv.* x. 14).

After this the name of the Sidicini never appears in history as that of a people, but their territory (the "Sidicinus ager") is mentioned during the Second Punic War, when it was traversed and ravaged by Hannibal on his march from Capua to Rome (*Liv.* xvi. 9). The Sidicini seem to have gradually come to be regarded as a mere portion of the Campanian people, in common with the Ausonians of Cales and the Auruncans of Suessa, and the name still occurs occasionally as a municipal designation equivalent to the Teanenses (*Liv.* xxvi. 15; *Cic. Phil.* ii. 41). Strabo speaks of them in his time as an extinct tribe of Oscan race; and under the Roman Empire the only trace of them preserved was in the epithet of Sidicinum, which still continued to be applied to the city of Teanum. (*Strab.* v. p. 237; *Plin.* iii. 5. s. 9; *Ptol.* iii. 1. § 68; *Sil. Ital.* v. 551. xii. 524.) [TEANUM.] [E. H. B.]

SIDODONE (Σιδωδώνη or Σιδωδών; *Arrian. Ind.* c. 37), a small place on the coast of Carmania, noticed by Arrian in Nearchus's voyage. Kempthorne thinks that it is represented by a small fishing village called *Mogou*; but Müller suggests, what seems more probable, that it is the present *Duan*. (*Geogr. Græc. Minor.* p. 359, ed. Müller, Paris, 1855.) [V.]

SIDOLEUCUS or SIDOLEUCUS, in Gallia, is mentioned by Ammianus Marcellinus when he is speaking of Julian's march from Augustodunum to Autissiodunum. Sidoleucum is supposed to be *Saulieu* [CHORA.] [G. L.]

SIDON (Σιδών; *Eth. Σιδωνίος*), a very ancient and important maritime city of Phœnicia, which, according to Josephus, derived its origin and name from Sidon, the firstborn son of Canaan (*Gen.* x. 15; *Joseph. Ant.* i. 6. § 2), and is mentioned by Moses as the northern extremity of the Canaanitish settlements, as Gaza was the southernmost (*Gen.* x. 19); and in the blessing of Jacob it is said of Zebulun "his border shall be unto Sidon" (*xliz.*

13). At the time of the Exodus of the children of Israel, it was already distinguished by the appellation of "the Great" (*Josh.* xi. 8; compare in LXX. ver. 2), and was in the extreme north border which was drawn from Mount Hermon (called Mount Hor in *Numb.* xxxiv. 7) on the east to Great Sidon, where it is mentioned in the border of the tribe of Asher, as also is "the strong city of Tyre" (*Josh.* xix. 28, 29.) It was one of several cities from which the Israelites did not dispossess the old inhabitants. (*Judg.* i. 31.)

As the origin of this ancient city, its history, and manufactures, have been noticed under PHOENICIA, it only remains in this place to speak of its geographical position and relations so far as they either serve to illustrate, or are illustrated by, its history.

It is stated by Josephus to have been a day's journey from the site of Dan, afterwards Pancez (*Ant.* v. 3. § 1). Strabo places it 400 stadia S. of Berytus, 200 N. of Tyre, and describes it as situated on a fair haven of the continent. He does not attempt to settle the questions between the rival cities, but remarks that while Sidon is most celebrated by the poets (of whom Homer does not so much as name Tyre), the colonists in Africa and Spain, even beyond the Pillars of Hercules, showed more honour to Tyre (*xvi.* 2. §§ 22, 24). Herodotus's account of the origin of the race has been given under PHOENICIA [p. 607, b.], and is shown to be in accordance with that of other writers. Justin follows it, but gives a different etymology of the name: "Conditæ urbe, quam a piscium uberitate Sidona appellaverunt, nam piscem Phœnices Sidon vocant;" but this is an error corrected by Michaelis and Geœnius (*Lex. s. v. סִידוֹן*), who derive it from סִיד, "to hunt or snare" game, birds, fish, &c., indifferently, so that the town must have derived its name from the occupation of the inhabitants as fishers, and not from the abundance of fish; and Ritter refers to the parallel case of Beth-saida on the sea of Tiberias. (*Erdkunde, Syrien.* vol. iv. p. 43.) Pliny, who mentions it as "artifex vitri Thebæarumque Boœtiarum parens," places "Sarepta et Ornithæ oppida" between it and Tyre (*v.* 19). It is reckoned xxx. M. P. from Berytus, xxiv. from Tyre, in the Itinerary of Antoninus (*p.* 149). But the Itinerarium Hierosolymitanum reckons it xxviii. from Berytus, placing Heldua and Parphirion between (*p.* 534). Scylax mentions the closed harbour of Sidon (Λιμὴν κλειστός, *p.* 42, ed. Hudson), which is more fully described by a later writer, Achilles Tatius (*circa.* A. D. 500), who represents Sidon as situated on the Assyrian sea, itself the metropolis of the Phœnicians, whose citizens were the ancestors of the Thebans. A double harbour shelters the sea in a wide gulf; for where the bay is covered on the right hand side, a second mouth has been formed, through which the water again enters, opening into what may be regarded as a harbour of the harbour. In this inner basin, the vessels could lie securely during the winter, while the outer one served for the summer. (Cited by Reland, *Palæst.* p. 1012.) This inner port Reland conjectures, with great probability, is the closed port of Scylax, and to be identified with the second harbour described by Strabo at Tyre, where he says there was one closed and another open harbour, called the Egyptian. The best account of the site is given by Pococke. "It was situated," he says, "on a rising ground, defended by the sea on the north and west. The present city is mostly on

the north side of the hill. The old city seems to have extended further east, as may be judged from the foundations of a thick wall, that extends from the sea to the east; on the south it was probably bounded by a rivulet, the large bed of which might serve for a natural fosse; as another might which is on the north side, if the city extended so far, as some seem to think it did, and that it stretched to the east as far as the high hill, which is about three quarters of a mile from the present town. . . . On the north side of the town, there are great ruins of a fine fort, the walls of which were built with very large stones, 12 feet in length, which is the thickness of the wall; and some are 11 feet broad, and 5 deep. The harbour is now choked up. . . . This harbour seems to be the minor port mentioned by Strabo (xvi. p. 756) for the winter; the outer one probably being to the north in the open sea between Sidon and Tyre (?), where the shipping rides in safety during the summer season." (*Observations on Palestine*, p. 86.) The sepulchral grots are cut in the rock at the foot of the hills; and some of them are adorned with pilasters, and handsomely painted.

The territory of the Sidonians, originally circumscribed towards the north by the proximity of the hostile Gibbites, extended southwards to the tribe of Zebulun, and Mount Carmel; but was afterwards limited in this direction also by the growing power of their rivals the Tyrians. (Ritter, *l. c.* p. 43, &c.)

COIN OF SIDON.

SIDON'ES (*Σιδωνες*), a tribe in the extreme east of Germany, about the sources of the Vistula (Ptol. ii. 11. § 21), and no doubt the same which appears in Strabo (vii. p. 306) under the name of *Σιδωνες*, as a branch of the Bastarnæ. [L. S.]

SIDON'IA. [PEDONIA.]

SIDUS (*Σιδῶς*, *Σιδωνιάς κόμης*, Hesych.: *Eth. Σιδούριος*), a village in the Corinthia, on the Saronic gulf, between Crommyon and Schoenus. It was taken by the Lacedæmonians along with Crommyon in the Corinthian War, but was recovered by Iphicrates. (Xen. *Hell.* iv. 4. § 13, iv. 5. § 19.) It probably stood in the plain of *Suadki*. (Scylax; Steph. B. s. v.; Plin. iv. 7. s. 11; Boblaye, *Recherches*, &c. p. 35; Leake, *Peloponnesiaca*, p. 397; Curtius, *Peloponnesos*, vol. ii. p. 555.)

SIDUSSA (*Σιδουσσα*), a small town of Ionia, belonging to the territory of Erythrae. (Thucyd. viii. 24; Steph. B. s. v.) Pliny (v. 38) erroneously describes it as an island off the coast of Erythrae. It is probable that the place also bore the name of Sidus (*Σιδῶς*), as Stephanus B. (s. v.) mentions a town of this name in the territory of Erythrae. [L. S.]

SIDYMA (*Σιδύμα*; *Eth. Σιδυμεύς*), a town of Lycia, on the southern slope of Mount Cragus, to the north-west of the mouth of the Xanthus. (Plin. v. 23; Steph. B. s. v.; Ptol. v. 3. § 5; Hierocles, p.

684; Cædrenus, p. 344.) The ruins of this city, on a lofty height of Mount Cragus, have first been discovered and described by Sir C. Fellows. (*Lycia*, p. 151, foll.) They are at the village of *Tortoorcar Hissá*, and consist chiefly of splendidly built tombs, abounding in Greek inscriptions. The town itself appears to have been very small, and the theatre, agora, and temples, are of diminutive size, but of great beauty. [L. S.]

SIELEDIVA. [TAPROBANE.]

SIGA (*Σίγυ*, Ptol. iv. 2. § 2), a commercial town of Mauritania Caesariensis, seated near the mouth of a river of the same name in a large bay. The mouth of the river formed the port of the city, at a distance of 3 miles from it (*Sigensis Portus*, *Itin. Ant.* p. 13), opposite to the island of Acra, on the highroad, and near Cirta, the residence of Syphax. (Strab. xvii. p. 829; Plin. v. 2. a. 1.) In Strabo's time it was in ruins, but must have been subsequently restored, since it is mentioned in the *Itinerary* (p. 12) as a Roman municipium. (Comp. Ptol. l. c.; Mela, i. 5; Scylax, 51, 52.) According to Shaw (*Travels*, p. 12), who, however, did not visit the place, its ruins are still to be seen by the present *Tacumbrit*; others identify it with the *Arachkul* of the Arabs, at the mouth of the *Tafna*, near *Rasgum*. [T. H. D.]

SIGA (*Σίγυ*, Ptol. iv. 2. § 2), a river of Mauritania Caesariensis, falling into a bay of the sea opposite to the island of Acra (now *Caracoles*). Scylax (p. 51) calls it *Σγορ*. Probably the present *Tafna*. [T. H. D.]

SIGE'UM (*Σίγειον* or *ἡ Σιγείας ἄκρα*), a promontory in Troas, forming the north-western extremity of Asia Minor, at the entrance of the Hellespont, and opposite the town of Elæus, in the Thracian Chersonesus. Near it the naval camp of the Greeks was said to have been formed during the Trojan War. (Herod. v. 65, 94; Thucyd. viii. 101; Strab. xiii. pp. 595, 603; Pomp. Mela, i. 18; Plin. v. 33; Ptol. v. 2. § 3; Serv. *ad Aen.* ii. 312.) This promontory is now called *Yenisleri*.

Near the promontory was situated the town of Sigæum, which is said to have been an Aæolian colony, founded under the guidance of Archæanax of Mytilene, who used the stones of ancient Troy in building this new place. But some years later the Athenians sent troops under Phrynon and expelled the Mytileneans; and this act of violence led to a war between the two cities, which lasted for a long time, and was conducted with varying success. Pittacus, the wise Mytilenean, is said to have slain Phrynon in single combat. The poet Alcæus also was engaged in one of the actions. The dispute was at length referred to Periander, of Corinth, who decided in favour of the Athenians. (Strab. xiii. p. 599; Herod. v. 95; Steph. B. s. v.; Diog. Laërt. i. 74.) Henceforth we find the Pisistratidæ in possession of Sigæum, and Hippias, after being expelled from Athens, is known to have retired there with his family. (Herod. v. 65.) The town of Sigæum was destroyed by the inhabitants of Ilium soon after the overthrow of the Persian empire, so that in Strabo's time it no longer existed. (Strab. xiii. p. 600; Plin. v. 33.) A hill near Sigæum, forming a part of the promontory, was believed in antiquity to contain the remains of Achilles, which was looked upon with such veneration that gradually a small town seems to have risen around it, under the name of Achilleum [ACHILLÆUM]. This town, which was visited by Alexander the Great, Julius

Cæsar, and Germanicus, is still visible in the form of a mound or tumulus. [L. S.]

SIGMAN (*Σίγμαν*), a river in Gallia. Ptolemy (ii. 7. § 2) places the mouth of the Sigman between the *Aturia* (*Adour*) and the *Garonne*; and between the Sigman and the *Garonne* he places *Curianum Promontorium*. [CURIANUM.] Marcianus (*Periplus*), who has the name *Signatus*, gives two distances between the mouth of the *Adour* and that of the Sigman, one of which is 500 and the other 450 stadia. We cannot trust either the latitudes of Ptolemy or the distances of Marcian along this coast. There is no river between the *Adour* and the *Garonne* that we can suppose to have been marked down by the ancient coasting ships to the exclusion of the *Leyre*, which flows into the *Basin d'Arcachon*. But Gosselin supposes the Sigman to be the *Mimisan*, which is about half-way between the *Adour* and the *Basin d'Arcachon*. [G. L.]

SIGNIA (*Σίγνια*; *Æth.* *Signinus*; *Segni*), an ancient city of Latium, situated on a lofty hill at the NW. angle of the Volscian mountains, looking down upon the valley of the *Sacco*. It is represented by ancient authors as a Roman colony founded by Tarquinius Superbus, at the same time with Circeii. (Liv. i. 55; Dionys. iv. 63.) No trace of it is found before this; its name does not figure among the cities of the Latin League or those of which the foundation was ascribed to Alba; and the story told by Dionysius (l. c.), that it originated at first in a fortuitous settlement of some Roman troops encamped in the neighbourhood, which was afterwards enlarged and strengthened by Tarquin, certainly points to the fact of its being a new town, and not, like so many of the Roman colonies, a new settlement in a previously existing city. It passed, after the expulsion of Tarquin, into the hands of the Roman Republic, as it was attacked in B. C. 497 by Sextus Tarquinius, who in vain endeavoured to make himself master of it (Dionys. v. 58). A few years later, it received a fresh colony, to recruit its exhausted population (Liv. ii. 21). From this time it appears to have continued a dependency of Rome, and never, so far as we learn, fell into the power of the Volscians, though that people held all the neighbouring mountain country. Signia must indeed, from its strong and commanding position, overlooking all the valley of the *Trerus* and the broad plain between it and *Praeneste*, have been a point of the utmost importance for the Romans and Latins, especially as securing their communications with their allies the *Hernicans*. In B. C. 340 the Signians shared in the general defection of the Latins (Liv. viii. 3); but we have no account of the part they took in the war that followed, or of the terms on which they were received to submission. We know only that Signia became again (as it had probably been before) a *Colonia Latina*, and is mentioned as such during the Second Punic War. On that occasion it was one of those which continued faithful to Rome at the most trying period of the war (Liv. xxvii. 10), and must therefore have been still in a flourishing condition. On account of its strong and secluded position we find it selected as one of the places where the Carthaginian hostages were deposited for safety (Id. xxxii. 2); but this is the last mention of it that occurs in history, except that the battle of *Sacriportus* is described by Plutarch as taking place near Signia (Plut. *Sull.* 28). That decisive action was fought in the plain between Signia and *Praeneste* [*SACRI-PORTUS*]. It, however, certainly continued during

the later ages of the Republic and under the Empire to be a considerable municipal town. It received a fresh body of colonists under the Triumvirate, but it is doubtful whether it retained the rank of a *Colonia*. Pliny does not reckon it as such, and though it is termed "*Colonia Signina*" in some inscriptions, these are of doubtful authenticity. (Strab. v. p. 237; Plin. iii. 5. a. 9; Sil. Ital. viii. 378; *Lib. Colon.* p. 237; Zumpt, *de Col.* p. 338; Gruer, *Inscr.* p. 490. 5. &c.)

Signia was chiefly noted under the Roman Empire for its wine, which, though harsh and astringent, was valued for its medical qualities, and seems to have been extensively used at Rome (Strab. v. p. 237; Plin. xiv. 6. a. 8; Athen. i. p. 27; Sil. Ital. l. c.; Martial. xiii. 116; Cels. *de Med.* iv. 5). Its territory produced also pears of a celebrated quality (Juv. xi. 73; Plin. xv. 15. a. 16; Colum. v. 10. § 18; Macrob. *Sat.* ii. 15), as well as excellent vegetables, which were sent in large quantities to Rome (Colum. x. 131). These last were grown on a hill near the city, called by *Columella Mons Lepinus*, apparently one of the underfalls of the Volscian mountains; but there is no authority for applying the name (as modern writers have frequently done) to the whole of that mass of mountains [*Lepistis Mons*]. Signia also gave name to a particular kind of cement known as "*opus Signinum*," and extensively employed both for pavements and reservoirs of water (Plin. xxxv. 12. a. 46; Colum. i. 6. § 12, viii. 15. § 3; Vitruv. viii. 7. § 14).

The modern town of *Segni* (a poor place, with about 3500 inhabitants) occupies a part only of the site of the ancient city. The latter embraced within the circuit of its walls the whole summit of the hill, which stands boldly out from the Volscian mountains, with which it is connected only by a narrow neck or isthmus. The line of the ancient walls may be traced throughout its whole extent: they are constructed of large masses of stone (the hard limestone of which the hill itself consists), of polygonal or rudely squared form, and afford certainly one of the most remarkable specimens of the style of construction commonly known as Cyclopean or Pelasgic, of which striking instances are found also in other cities in this part of Latium. The city had in all five gates, two of which still retain their primitive construction; and one of these, known as the *Porta Saracinesca*, presents a remarkable instance of the rudest and most massive Cyclopean construction. The architrave is formed of single masses of stone not less than 12 feet in length, laid across from one impost to the other. This gate has been repeatedly figured*; another, less celebrated but scarcely less remarkable, is found on the SE. side of the town, and is constructed in a style precisely similar. The age of these walls and gates has been a subject of much controversy; on the one hand the rude and massive style of their construction, and the absence of all traces of the arch in the gateways, would seem to assign them to a remote and indefinite antiquity; on the other hand, the historical notices that we possess concerning Signia all tend to prove that it was not one of the most ancient cities of Latium, and that there could not have existed a city of such magnitude previous to the settlement of the Roman colony under Tarquin. (For the discussion of this question as well as for

* The annexed figure is taken from that given by Abeken (*Mittel Italien*, pl. 2).

the description of the remains themselves, see the *Annali dell' Istituto Archeologico* for 1829, pp. 78—87, 357—360; *Classical Museum*, vol. ii. pp. 167—170; Abeken, *Mittel Italien*, p. 140, &c.) The only other remains within the circuit of the walls are a temple (now converted into the church of *S. Pietro*) of Roman date, and built of regularly squared blocks of tufo; and nearly adjoining it a circular reservoir for water, of considerable size and lined with the "opus Signinum." (*Annali*, l. c. p. 82.) Several inscriptions of imperial date are also preserved in the modern town. [E.H.B.]

GATE OF SIGNIA.

SIGRIANE (ἡ *Στριανή*, Strab. xi. p. 525), a district of Media Atropatene, near the Caspian Gates. Ptolemy calls it *Στριανική* (vii. 2. § 6). [V.]

SIGRIUM (Σίτριον), the westernmost promontory of the island of Lesbos, which now bears the name of *Sigri* (Strab. xiii. pp. 616, 618.) Stephanus B. (s. v.) calls Sigrium a harbour of Lesbos. [L. S.]

SIGULONES (Σιγούλωνες), a German tribe mentioned by Ptolemy (ii. 11. § 11) as inhabiting the Cimbrian Chersonesus, to the north of the Saxones, but is otherwise unknown. [L. S.]

SIGYNNES (Σιγύννες, Herod. v. 9; Σίγυννοι, Apoll. Rhod. iv. 320; Orph. *Arg.* 759; Σίγυννοι, Strab. xi. p. 520). The only name of any Trans-Danubian population, other than Scythian, known to Herodotus was that of the Sigynnes, whom he seems to have described as the Thracians described them to either himself or his informants. The Thracian notion of one of these Sigynnes was that he wore a Median dress, and considered himself a descendant of the Medes; though how this could be was more than Herodotus could say. "Anything, however, is possible in a long space of time." The horses of the Sigynnes were undersized — ponies, indeed, rather than horses. They were flat-nosed and long-haired; their coat being five fingers deep. They were too weak to carry a man on their back; but not too weak for harness. In chariots they were light and quick; and in the drawing of chariots the Sigynnes took great delight.

We must look on Sigynnes as a general and collective name for a large assemblage of populations; inasmuch as their country is said to extend as far westwards as the Heneti on the Adriatic. Say that it reached what was afterwards the frontier of Pan-

nonia. On the north it must really have been bounded by some of the Scythian districts. In the language of the Ligyns above Massilia, the word *Sigynna* means a *merchant*, or *retail-dealer*, or *carrier*. In Cyprus they call *spears* by the name *Sigymna*. The resemblance of this word to the name *Zigeun* = *Gipsy* has often been noticed. Word for word, it may be the same. It may also have been applied to the gipsies with the meaning it has in Ligyan. It does not, however, follow that the Sigynnes were gipsies. [R. G. L.]

SIHOR (Σιῶρ). 1. The torrent more commonly known as "the River of Egypt," the southern boundary of the Promised Land, identified by the LXX. with Rhinocorura, the modern *Wady-el-Arish*. [RHINOCORURA.] (*Joshua*, xiii. 3; 1 *Chron.* xiii. 5; *Jeremiah*, ii. 18.) In the first cited passage, the LXX. read ἀπὸ τῆς ἀουχίτου τῆς κατὰ πρόσωπον Αἰγύπτου; in the second, ἀπὸ ὁρίων Αἰγύπτου, and only in the last is a proper name retained, and there it is changed to Ἰγῶν. St. Jerome (*Onomast.* s. v.), following Eusebius, describes it as before Egypt, and speaks of a village of the name between Aelia and Eleutheropolis, which it is difficult to imagine that they could have identified with the Sihor above named. St. Jerome says that he has said more on the subject "in libris Hebraicorum quaestionum," but the passage is not to be found there. In his "Epitaphium Paulae" he writes, "veniam ad Aegypti flumen Sior, qui interpretatur turbidus" (p. 677); but he here probably means the Nile, which is sometimes supposed to be called Sihor, as in the passage of Jeremiah above referred to. The village named by Eusebius and St. Jerome doubtless marked the site of the city of the tribe of Judah, situated in the mountains, and written Zior in the authorised version, but Ἰγῶν in the original (*Joshua*, xv. 54), and in the LXX. Σιῶρ, (al. Σιῶρ). [E.H.B.]

2. SIHOR or SHIHOR LIBNATH (LXX. Σιῶρ καὶ Λιβνᾶθ), perhaps to be taken as two names, as by the LXX., Eusebius, and St. Jerome, who name "Sior in tribu Aser," without the addition of Libnath. It is mentioned only in the border of Asher. (*Joshua*, xix. 26.) The various conjectures concerning the place or places are stated by Bonfrerius (*Comment. in loc.*), but none are satisfactory, and the site or sites have still to be recovered. [G. W.]

SILA (ἡ Σίλα: *Sila*) was the name given in ancient times to a part of the Apennines in the S. of Bruttium, which were clothed with dense forests, and furnished abundance of pitch, as well as timber for ship-building. Strabo tells us it was 700 stadia (70 geog. miles) in length, and places its commencement in the neighbourhood of Locri. (Strab. vi. p. 261.) It is evident, therefore, that he, as well as Pliny (iii. 5. s. 10), who notices it in connection with Rhegium and Leucopetra, assigned the name to the southernmost group of the Apennines (the range of *Aspromonte*), S. of the isthmus which separates the *Terinaean* and *Scyletic* gulfs. At the present day the name of *Sila* is given only to the detached and outlying mountain group N. of that isthmus, and E. of *Cosenza* (Consentia.) It is probable that the name, which evidently means only "the forest," and is connected with the Latin *silva*, and the Greek ὄλη, was originally applied in a more general sense to all the forest-covered mountains of this part of Calabria, though now restricted to the group in question. [E. H. B.]

SILACENAE, a place in Lower Pannonia, on the south of Lake Peiso. (*It. Ant.* p. 233, where it appears in the ablat. form *Silacensis*). Its exact site is unknown. [L. S.]

SILANA, a town in the NW. of Thessaly, near the frontiers of Athamania, mentioned along with Gomphi and Tricca by Livy. Leake conjectures that it occupied the site of *Polidna*, near which are several squared blocks of ancient workmanship. (*Liv.* xxxvi. 13; Leake, *Northern Greece*, vol. iv. p. 529.)

SILARUS (Σίλαρος, Ptol.; Σιλαρίς, Strab.: *Sele*), a considerable river of Southern Italy, flowing into the gulf of Posidonia, and forming the boundary between Campania and Lucania. It rises in the mountains near *Teora*, on the confines of the Hirpini, and not far from the sources of the Aufidus; thence flows for some distance in a southerly direction till it receives the waters of the Tanager (*Tanagro*), a considerable stream, which joins it from the SE.; it then turns to the SW. and pursues that direction to the sea, which it enters about 5 miles to the N. of the city of Paestum. About 5 miles from its mouth it receives another important tributary in the *Calor* (*Calore*), which joins it from the S. Between the *Calor* and *Tanager*, on the S. bank of the *Silarus* rises the mountain group of Mount *Alburnus*, mentioned by Virgil in connection with that river. The "luci Silari" of the same author are evidently the same with the extensive woods which still clothe the valley of the *Sele* from its confluence with the *Tanager* to within a few miles of the sea. (*Virg. Georg.* iii. 146.) The *Silarus* was in the days of Strabo and Pliny the recognised boundary between Campania (including under that name the land of the Picentini) and Lucania; but this applies only to its course near its mouth, as *Eburi* (*Eboli*), though situated to the N. of it, is included by Pliny among the towns of Lucania. (Strab. v. p. 251, vi. p. 252; Plin. iii. 5. ss. 9, 10, 11. s. 15; Ptol. iii. 1. § 8; Mel. ii. 4. § 9; *Tab. Peut.*; Dionys. Per. 361.) A peculiarity of its waters, mentioned by several ancient writers, is that they had the power of petrifying sticks, leaves, and other substances immersed in them. (Strab. v. p. 251; Plin. ii. 103. s. 106; Sil. Ital. viii. 582.)

The name is written by Lucan and Columella *Siler*, and the same form is found in Vibius Sequester, indicating an approach to the modern name of *Sele*. (Lucan, ii. 426; Colum. x. 136; Vib. Seq. p. 18.) [E. H. B.]

SILAS (Σιλάς, Arrian, *Ind.* c. 6; Strab. xv. p. 703; Diod. ii. 37), a river of the Upper *Panjab*, the story of which, as told by ancient writers, is clearly fabulous. According to Arrian and others, the water of this river was so light that nothing could swim in it. Lassen, who has examined this story with his usual acuteness, has shown from the *Mahabharata* that there was a stream in the northern part of India called the *Sila*, the water of which was endowed with a highly petrifying power, from which circumstance the river obtained its signification, *Sila* meaning in Sanscrit a stone. (*Zeitschr. f. Kunde des Morgenlands*, ii. p. 63.) It may be remarked that the name occurs differently written. Thus Diodorus writes Σίλααν ποταμόν; Antigonos Σίλαν κρήνην. (*Mirab.* c. 161.) Pliny evidently refers to the same story, but calls the river *Sile* in his quotation from Ctesias (xxx. 2. s. 18). [V.]

SILBIUM (Σίλβιον; *Eth.* Sil'bianus), a small

town of Phrygia, on the east of Apamea and Celaenae, and beyond the source of the Maeander (Ptol. v. 2. § 25; Plin. v. 29). In the Byzantine writers it is sometimes mentioned under corrupt forms of its name, such as *Silbia* (Hierocl. p. 667), *Sublas* (Cinnamus, vi. 15), or *Sublimum* and *Sylbaea* (*Oriens Christ.* p. 809). This place, which was the see of a bishop, belonged to the conventus of Apamea. Modern travellers seek its site in the neighbourhood of *Sandukli*. (Kiepert, in *Franz's Fünf Inschriften*, p. 37.) [L. S.]

SILI or **SIMI** (Σίλοι or Σιμοί, Strab. xvi. p. 772), a tribe of Aethiopians, who used the horns of the oryx, a species of gazelle, as weapons. Some have considered them to be the same as the *Aithiopes Σιμοί* of Agatharchides, p. 42. (Comp. Diodor. iii. 8.) [T. H. D.]

SILICENSE FLUMEN, a river in Hispania Baetica, in the neighbourhood of Corduba, probably the *Guadajoz*, or one of its tributaries. (*Hirt. B. A.* 57.) [T. H. D.]

SILINDIUM (Σιλινδιον), a small town of Trass at the foot of Mount Ida, is mentioned only by Stephanus B. (s. v.) on the authority of Demetrius of Scepsis. [L. S.]

SILINGAE (Σιλίγγαι), a tribe of Germany, on the south of the Semnones, between the western slopes of Mons *Asciurginus* and the river *Albis*. (Ptol. ii. 11. § 18.) It is generally supposed that this name is the one from which the modern *Silesie* or *Schlesien* is formed. (Latham, *Tacit. Germ.* p. 138; Palacky, *Gesch. von Böhmen*, vol. i. p. 68.) [L. S.]

SILIS (*Sele*), a small river of Venetia, in the N. of Italy, which rises in the mountains above *Trevise* (Tarvisium), and flows into the lagoons at *Altinum* (*Altino*). It is still called the *Sele*. (Plin. iii. 18. s. 22.) [E. H. B.]

SILLA (Σίλλα, Isid. Charax, § 2, ed. Müller, 1835), a river of Apolloniatis, a district of Assyria, which, according to Isidorus, flows through the centre of the town of Artemita. [ARTEMITA.] There can be little doubt that this is the river now called the *Digulak*. It is also, in all probability, the same as that called by Steph. B. (s. v. 'Ανάμεια) the *Delas*. Forbiger imagines that the *Diabus* of Ammianus (xxiii. 6), the *Durus* of Zosimus (iii. 25), and the *Gorgos* of Ptolemy (iv. 1. § 7), refer to the same river. It is, however, more likely that the first of these streams is the same as that elsewhere called the *Zabatus*. [V.]

SILO or **SHILOH** (Σηλόμ; *Eth.* Σηλωνίτης), a town of Palestine, in the tribe of Ephraim, in the mountain region according to Josephus (*Ant.* v. 1), where the ark and the tabernacle were first established by Joshua on the settlement of the land by the tribes of Israel. There also were assembled the national convocations for the division of the land and the transaction of other public business affecting the whole Union. (*Joshua*, xviii. 1, 10, xix. 51, xxi. 2, xxii. 9.) There Samuel ministered before the Lord in the days of Eli the high-priest (1 Sam. i.—iii.). There was the seat of the Divine worship until the disastrous battle of Aphek, from which period the decline of Shiloh must be dated (ch. iv.) until its desolation became proverbial in Israel. (*Psalms* lxxviii. 60; *Jeremiah*, vii. 12, xxvi. 6, 9.) Its situation is very particularly described in the book of Judges (xxi. 19), as "on the north side of Bethel, on the east side of the highway that goeth up from Bethel to Shechem, and on the south of Lebonah."

St. Jerome places it xii. M. P. from Neapolis (=Shechem = *Nablús*), in the toparchy of Acrabattena. (*Onomast. s. v.*) Its ruins were shown, and the remains of the altar among them, in his day. (*Comment. in Sophon. i. 14, Epitaph. Paulae.*) From these notes the site is easily identified with the modern *Silún*, on the east of the *Nablús* road, about four hours south of that town, situated over against a village named *El-Lebban* (Lebonah), which lends its name also to a Khan on the road-side. *Silún* is merely a heap of ruins lying on a hill of moderate elevation at the south-eastern extremity of a valley through which passes the great north road from Judea to Galilee. "Among the ruins of modern houses are traces of buildings of greater antiquity, and at some distance, towards the east, is a well of good water, and in the valleys many tombs excavated in the rock." (Robinson, *Bibl. Res.* vol. iii. pp. 86—89.) Among the tombs of Shiloh, if Reland's conjecture is correct, is to be sought the very slender authority on which the pagans rested their assertion that their demigod Silenus was buried in the country of the Hebrews; and the fact of the effigy of this deity being found on the coins of Flavia Neapolis, certainly lends countenance to his ingenious hypothesis that the fable originated in the imaginary correspondence between this name and the town of Ephraim. (*Palaestina*, p. 1017.) But the error which he has copied from Benjamin of Tudela, of placing the tomb of Samuel in Shiloh, is obviously attributable to a lapse of memory on the part of that writer, as no one has ever identified Shiloh with the modern *Nebi Samu'el*. The error is corrected by Asher. (*Itinerary of R. Benjamin of Tudela*, ed. A. Asher, vol. i. p. 78, vol. ii. p. 95.) [G. W.]

SILOAM. [*JERUSALEM*, p. 28, b.]

SI'LPIA, a town in Hispania Baetica, N. of the Baetis, and apparently in the *Sierra Morena*. (Liv. xxviii. 12.) Probably *Linares*. [T. H. D.]

SI'LILIS (*Not. Imp.*), a fort situated on the right bank of the Nile, between Ombos and Apollinopolis Magna in Upper Aegypt. The original name of this place is nearly preserved in the modern *Silili*. The fort of Sililiis stood at the foot of the mountain now called *Gebel Selsilek*, or "hill of the chain," and was one of the points which commanded the passage of the river. For at this spot the Arabian and Libyan hills approach each other so nearly that the Nile, contracted to about half its ordinary width, seems to flow between two perpendicular walls of sandstone. Silsilis was one of the principal seats for the worship of the Nile itself, and Rameses II. consecrated a temple to it, where it was worshipped under the emblem of a crocodile and the appellation of Hapimoum. The stone quarries of Silsilis were also celebrated for their durable and beautiful stone, of which the great temples and monuments of the Thebaid were for the most part built. (Wilkinson, *Mod. Egypt and Thebes*, vol. ii. p. 283.) [W. B. D.]

SILVANECTES. This name occurs in the Notitia of the Provinces of Gallia, where the chief town is called Civitas Silvanectium. In the Notit. Imp. the Silvanectes are placed in Belgica Secunda, but the name there denotes a town, according to the usage then established of giving to the capital towns the names of their people. It appears almost certain that the Subanecti of Ptolemy (ii. 9. § 11) is the same name as Silvanectae or Silvanectes. Ptolemy places the Subanecti east of the *Seine*, and makes

Ratomagus their capital. But this Ratomagus is conjectured to be the same as the Augustomagus of the Itin. and of the Table, which is *Senlis* [AUGUSTOMAGUS].

Pliny (iv. c. 17) mentions the Ulmanetes in Gallia Belgica: "Suessiones liberi, Ulmanetes liberi, Tungri." It is possible that this too may be a corrupted form of Silvanectes, for the modern name *Senlis* confirms the form Silvanectes, and the name Ulmanetes is otherwise unknown. [G. L.]

SI'LZIA, a place in Illyria, on the road from Sirmium to Salona. (*Itin. Ant.* p. 269.) It is probably the same town as the Salvia of Ptolemy [SALVIA]. It is identified with *Keupris* by Lapie. [T. H. D.]

SI'LVIUM (*Σιλῳιον*; *Eth.* Silvinus; *Garagnone*), a town of Apulia in the interior of the country. It is noticed by Strabo (vi. p. 283) as the frontier town of the Peucetii, and its name is noticed by Pliny among the municipal towns of Apulia (Plin. iii. 11. s. 16). But at a much earlier period it is mentioned by Diodorus as an Apulian town, which was wrested from the Samnites by the Romans in B. C. 306 (Diod. xx. 80). Our only clue to its position is derived from the Itineraries, which place it 20 miles from Venusia, on the branch of the Appian Way which led direct to Tarentum. This distance coincides with the site of a town (now destroyed) called *Garagnone*, situated about midway between *Spinazolo* and *Poggio Orsino*, and nearly due E. of *Venusia* (Pratilli, *Via Appia*, iv. 6. p. 478; Romanelli, vol. ii. p. 188). [E. H. B.]

SILURA, an island of Britain, separated only by a narrow strait from the coast of the Dumnonii, who inhabited the most SW. point of Britannia. (Solin. c. 22.) It is probably the same island which Sulpicius Severus (ii. 51) calls *Sylina*, and seems to mean the *Scilly Islands*. [T. H. D.]

SILURES (*Σιλῦρες*, Ptol. ii. 3. § 24), a powerful and warlike people in the W. part of Britannia Romana, whose territory was bounded on the S. by the estuary of the Sabrina. The important towns of Ica and Venta belonged to them. Tacitus (*Agr.* 11) calls them descendants of the Iberi of Spain, and states that they had emigrated from Ireland into Britain; but there seems to be no foundation for this opinion. (Cf. Zeuss, *Die Deutschen*, p. 202.) Although subjugated by the Romans, they caused them continual alarm; and they were the only people of Britain who, at a later period, maintained their independence against the Saxons. (Beda, *Hist. Ecc.* i. 12, seq.; cf. Tac. *Ann.* xii. 2, 31; Plin. iv. 16. s. 30.) [T. H. D.]

SIME'NA (*Σίμωνα*; *Eth.* *Σιμωνες*), a town on the coast of Lycia, 60 stadia from Aperiae (Plin. v. 27; Steph. B. s. v.; *Stadiasm. Mar. Mag.* §§ 239, 240, where it is called *Somena*, *Σόμωνα*; comp. Leake *Asia Minor*, p. 188; Spratt and Forbes, *Travels in Lycia*, vol. i. p. 137, vol. ii. pp. 86, 274.) [L. S.]

SI'MENI. [ICENI.]

SIMEON. [PALAESTINA, p. 529, b.]

SIMITTU (*Σιμιττον*, Ptol. iv. 3. § 29), called by Pliny (v. 4. § 4) Simittense Oppidum, a Roman colony in the interior of Numidia, on the road from Cirta to Carthago, 7 miles to the W. of Bulla Regia. (*Itin. Ant.* p. 43.) There were some mineral waters 5 miles E. of the town (*ib.*). It lay on the site of the present *Ain Semit*, on the *Qued-el-Bull*, 2 leagues to the W. of Bull. [T. H. D.]

SIMOIS (*Σιμοῖς*), a small river of Troas, having its source in Mount Ida, or more accurately in Mount

Cotytus, which passed by Ilion, joined the Scamander below that city. This river is frequently spoken of in the *Iliad*, and described as a rapid mountain torrent. (*Il.* iv. 475, v. 774, xii. 22, xxi. 308; comp. Aeschyl. *Agam.* 692; Strab. xiii. p. 597; Ptol. v. 2. § 3; Steph. B. s. v.; Pomp. Mela, i. 18; Plin. v. 33; and SCAMANDER.) Its present name is *Dum-breki Chai*, and at present its course is so altered that it is no longer a tributary of the Scamander, but flows directly into the Hellespont. [L. S.]

SIMUNDU. [TAPEOBANE.]

SIMYLLA (Σιμύλλα, Ptol. vii. 1. § 6), a commercial entrepôt on the western coast of *Hindustan*, in the district called Ἀριακὰ Σαδύρων. It is noticed in the *Periplus* by the name of Σιμύλλα, and was probably at or near *Bassein*, a little N. of *Bombay*. [V.]

SIMYRA (Σιμύρα), a maritime city of Phoenicia mentioned by Pliny in connection with Marathus and Antaratius, N. of Tripolis, Orthosia, and the river Eleutherus (v. 20). It is placed by Ptolemy between the mouth of the Eleutherus and Orthosia, and, if the figures can be trusted, 10' west of the former, 14' north; in the same latitude with Orthosia (i. e. 34° 40'), but 40' east of it, which would seem either to imply an ignorance of the coast, or to intimate that Simyra lay at some distance from the shore, and that the Eleutherus ran southward to the sea. Strabo says that it was occupied by the Aradians, together with the neighbouring Marathus (xvi. p. 753), apparently placing it north of the Eleutherus. In addition to what has been said under MARATHUS, and in confirmation of the identification there attempted, the following may be cited from Shaw, and will serve to illustrate the situation of Simyra: "The ancient Marathus may be fixed at some ruins near the *Serpent Fountain*, which make, with *Rou-wadde* and Tortosa, almost an equilateral triangle. About 5 miles from the river *Akker*, and 24 to the SSE. of Tortosa, there are other considerable ruins known by the name of *Sumrah*, with several rich plantations of mulberry and other fruit trees growing in and round about them. These, from the very name and situation, can be no other than the remains of the ancient Simyra . . . the seat formerly of the Zenarites. Pliny v. 20 makes Simyra a city of Coele Syria, and acquaints us that Mount Libanus ended there to the northward; but as *Sumrah* lies in the *Jeune* (i. e. the great plain), 2 leagues distant from that mountain, this circumstance will better fall in with Arca, where Mount Libanus is remarkably broken off and discontinued." (*Travels*, pp. 268, 269.) The ruins of Arca are 5 miles E. of *Sumrah*, and 2 leagues WSW. of Arca is the *Nahr-el-Berd*, the Cold River, which Shaw and others identify with the Eleutherus. It is manifest how irreconcilable all this is with Ptolemy and other ancient geographers. [ELEUTHERUS; ORTHOSIA; MARATHUS.] [G.W.]

SINA. [SENA.]

SINAE (οἱ Σίναι, Ptol. vii. 3, &c.), the ancient nation of the Chinese, whose land is first described by Ptolemy (l. c.) and Marcianus (p. 29, seq.), but in an unsatisfactory manner. Indeed, the whole knowledge of it possessed by the Greeks and Romans rested on the reports of individual merchants who had succeeded in gaining admittance among a people who then, as in modern times, isolated themselves as much as possible from the rest of the world. For the assumption which Deguignes sought to establish, that a political alliance was formed between

Rome and China, and that the emperor M. Aurelius Antoninus sent a formal embassy thither in the year 166, rests solely on the name of Yan-Tun, which that writer discovered in some ancient Chinese annals, and must therefore be regarded with great suspicion. (See Bohlen, *das Alte Indien*, i. p. 71.) According to the description of Ptolemy, the country of the Sinæ extended very far to the S, and was connected with the E. coast of Africa by an unknown land, so that the Indian Ocean formed a large mediterranean sea. He does not venture to define its eastern boundary, but finishes his account of the known earth with the 180th degree of longitude, without, however, denying that there were tracts of unknown land still farther to the E. But Cosmas Indicopleustes (sp. Montfaucon, *N. Coll. Patrum*, ii. p. 337), who calls the country of the Sinæ Τύβρις, was the first who laid down its correct boundary by the ocean on the E. On the N. it was bounded by Serica, and on the S. and W. by India extra Gangem, from which it was divided by the river Aspidhra (probably the *Bangpa-Kung*) and the Semanthine mountains. Thus it embraced the southern half of China, and the eastern part of Further India, as *Tongquin*, *Cochin-China*, *Camboja*, &c. Ptolemy mentions several large bays and promontories on the coast. At the extreme NE. of the Indian Ocean, where the land of the Sinæ abutted on Further India, was the great gulf (of *Siam*), which on the coast of the Sinæ was formed by the South Cape (τὸ Νότιον ἕκαστο) (probably Cape *Camboja*), and on the side of India by another large promontory (perhaps *Cape Romania*). To the S. of South Cape, and between it and the Cape of the Satyrs (Σατύρων ἕκαστο), Ptolemy and Marcianus (p. 30) place another large bay called Theriodes (Θηριώδης κόλπος); and to the S. of the Cape of Satyrs, again, and between it and the mouth of the river Cottiaris, the Bay of the Sinæ (Σινών κόλπος). These very vague and incorrect accounts do not permit us to decide with any confidence respecting the places indicated by Ptolemy; but it has been conjectured that the Cape of the Satyrs may have been *Cape St. James*, the Theriodes Sinus the bay between it and the mouth of the river *Camboja* or *Maykiang*, and the Bay of the Sinæ the gulf of *Tongquin*. Among the mountains of the country Ptolemy names only the Montes Semanthini (Σημανθινὸν ὄρος), which formed its NW. boundary. Among the rivers indicated are the Aspidhra (Ἀσπίθρα), rising in the mountains just mentioned, to which we have already alluded; the Ambastus (Ἀμβαστος), probably the *Camboja*, which fell into the Great Bay between the towns of Bramma and Rhabana; the Senos or Sainos (Σένος or Σαίνος) more to the S.; and further still in the same direction the Cottiaris (Κοττίαις), which emptied itself into the bay of the Sinæ to the N. of the town of Cattigara. The last may perhaps be the *Si Kiang*, which discharges itself at Canton. Respecting the nation of the Sinæ themselves, we have no information, though Ptolemy mentions several subdivisions of them; as in the N. the Semanthini, on the like named mountains; S. of them the Acadorae, with a town called Acadra, and again to the S. the Aspidhrae, on the Aspidhra, and having a city of the same name as the river. SE. of the latter, on the Great Bay, and dwelling on the river Ambastus, were the Ambastae. Lastly, in a still more southern district between the bay of Theriodes and that of the Sinæ, were the Aethiopes

Ichthyophagi and the Sinæ Ichthyophagi. Among the 8 cities mentioned by Ptolemy, namely, Brama, Rhabana, Cattigara, Acadra, Asphira, Cocconagra, Sarata, and Thinae or Sinæ, the last was undoubtedly the most important, and was regarded by him and others as the capital of the nation. It has been conjectured to be *Thina*, in the province of *Chensi*, or even *Nankin* itself. It may be remarked that the Sinæ were anciently called Thinae (*Θῖναι*); though it is said that this form of their name only arose from the Arabic pronunciation of Sinæ. (See Sickler, ii. p. 518; Gesenius, *Heb. Lex.* p. 788.) The next town in point of importance was Cattigara, which both Ptolemy and Marcianus regard as the chief place of trade. [CATTIGARA.] [T.H.D.]

SINAI (*Σινά ὄρος*), the celebrated mountain of Arabia Petraea. It, however, lent its name to the whole peninsula in which it was situated, which must therefore first be described. It is formed by the bifurcation of the Red Sea at its northern extremity, and is bounded by the Heroopoliticus Sinus (or *Sea of Suez*) on the west, and the Aelaniticus Sinus (the *Gulf of Akaba*) on the east, ending in the Posidium Promontorium (*Ras Mohammed*). At the northern extremity of the *Sea of Suez* stood Arainoe (*Suez*), and Aelana (*Akaba*), at the extremity of the gulf that bears its name. The caravan road of the great *Haj*, which joins these two towns, traverses a high table-land of desert, now called *El-Tih*—"the Wilderness of the Wandering," part of ancient Idumaea. To the south of this road, the plateau of chalk formation is continued to *Jebel Tih*, the *μέλαρα ὄρη* of Ptolemy, extending from the eastern to the western gulf, in a line slightly curved to the south, and bounded in that direction by a belt of sandstone, consisting of arid plains, almost without water or signs of vegetation. To this succeeds the district of primitive granite formation, which extends quite to the southern cape, and runs into the *Gulf of Akaba* on the east, but is separated by a narrow strip of alluvial soil called *El-Kaa* from the *Sea of Suez*. The northern part of the *Tih* is called in Scripture "the wilderness of Paran" (*Numb.* xii. 16, xiii. 3, xxxii. 8, &c.), in which the Israelites abode or wandered during great part of the forty years; although Eusebius and St. Jerome, as will be presently seen, identify this last with the wilderness of *Sin*. This wilderness of *Sin* is commonly supposed to be connected, in name and situation, with Mount Sinai; but as the Israelites entered on the wilderness of *Sin* on leaving their encampment by the Red Sea, the next station to Elim (*Exod.* xvi. 1; *Numb.* xxxiii. 10, 11), and traversed it between Elim and Rephidim, where they had apparently left it (*Exod.* xvii. 1),—for Dophkah and Alush are inserted between the two in *Numbers* xxxiii. 12—14,—and yet had not arrived at Sinai (*Exod.* xvi. 1), it may be questioned whether the identification rests on solid ground. Eusebius and St. Jerome, who distinguish between the deserts of *Sin* and Sinai, yet appear to extend the former too far eastward. "The desert of *Sin*," they say, "extends between the Red Sea and the desert of *Sina*; for they came from the desert of *Sin* to Rephidim, and thence to the desert of *Sinai*, near Mount *Sina*, where Moses received the dispensation of the Law; but this desert is the same as that of Kades according to the Hebrew, but not according to the LXX." The confusion indicated by this last remark may be explained by the observations, 1st, that *Zin*, which is a synonym "for the wilderness of

Kadesh" (*Numb.* xx. 1, xxxiii. 36), is identical in Greek with the *Sin* (i. e. *Σιν*); the *Z* representing both the *z* (teadi) of *z* and the *z* (samech) of *z*; and, 2dly, that instead of making *Zin* identical with Kadesh, as it is in the Hebrew, the LXX. read so as to make "the desert of *Paran*," which they identify with "the desert of Kadesh," an intermediate station between *Sin* and Mount *Hor* (*Numb.* xxxiii. 36, in LXX.)

The wilderness of *Sin*, then, must be fixed to the northwest part of the granite district of the peninsula between *Serbal* and the Red Sea, while *Zin* is north of Ezion Geber, between it and Mount *Hor*,—the southern extremity in fact of *Wady Mûsa*, or the *Arabah*, north of *Akaba*.

With respect to Sinai, it is difficult to decide between the rival claims of the two mountains, which, in modern as in ancient times, have been regarded as the Mountain of the Law. The one is *Serbal* above-mentioned, situated towards the NW. extremity of the granite district, towering with its five sharp-pointed granite peaks above the fruitful and agreeable oasis of *Wady Pharan*, still marked by extensive ruins of the churches, convents, and buildings of the old episcopal town of *Paran*; the other between 30 and 40 miles south-east of *Serbal*, in the heart of the granite district, where native traditions, of whatever value, have affixed to the mountains and valleys names connected with the inspired narrative of the giving of the Law, and where the scenery is entirely in unison with the events recorded. Emerging from the steep and narrow valley *Nabba Hawa*, whose precipitous sides rise to the perpendicular height of 1000 feet, into the wide plain called *Wady Mûsa*, at the northern base of the traditionary Horeb, Russegger describes the scene as grand in the extreme. "Bare granite mountains, whose summits reach to a height of more than 7000 Paris feet above the level of the sea; wonderful, I might say fabulous, forms encompass a plain more than a mile in length, in the background of which lies the convent of St. Catharine, at the foot of *Jebel Mûsa*, between the holy Horeb on the west, and Ebestimmi on the east." In this valley, then, formed at the base of Horeb by what may be called a junction of the *Wady-er-Rahh* and *Wady-esh-Sheikh*, but which, according to Russegger's express testimony, bears in this place the native name of *Wady Mûsa*, must the children of Israel have encamped before *Jebel Mûsa*, whose rugged northern termination, projected boldly into the plain, bears the distinctive name of *Ras Sasifah*. *Jebel Mûsa* rises to the height of 5956 Paris feet above the sea, but is far from being the highest of the group. Towering high above it, on the south, is seen the summit of Horeb, having an elevation of 7097 Paris feet, and south of that again *Jebel Katherina*, more than 1000 feet higher still (viz. 8168 Paris feet), all outtopped by *Jebel-om-Shomer*, the highest of this remarkable group, which attains an altitude of 8300 Paris feet. Over against *Jebel Mûsa* on the north, and confining the valley in that direction, is the spur of a mountain which retains in its name, *Jebel Sena*, a memorial of the ancient Scripture appellation of the Mountain of the Law. To attempt anything like a full discussion of the questions at issue between the advocates of the conflicting traditions or hypotheses, would be as inconsistent with the character of such an article as this, as with the limits which must be assigned it: a very few remarks

must suffice. There seems, then, to be no question that the site of Horeb was traditionally known to the Israelites for many centuries after the Exodus (1 Kings, xix. 8); and if so, it is improbable that it was subsequently lost, since its proximity to Elath and Ezion Geber, which were long in their possession, would serve to ensure the perpetuity of the tradition. It is worthy of remark that Josephus nowhere uses the name Horeb, but in the passage parallel to that above cited from the 1st book of Kings, as uniformly throughout his history, substitutes τὸ Σιναιὸν ὄρος,—so far confirming the identity of locality indicated by the two names, learnedly maintained by Dr. Lepsius, who holds Horeb to be an Amalekite appellative equivalent in signification with Sin, both signifying "earth made dry by draining off the water," which earth he finds in the large mounds of alluvial deposit in the bed of *Wady Faran*, at the northern base of *Serbal*, his Sinai. Buxtorf, however, cites rabbinical authorities for another etymology of Sinai, derived from the nature of the rock in the vicinity. (See *Shaw's Travels*, 4to. p. 443. and note 7.) Josephus does not in any way identify the site; but Eusebius and St. Jerome have been erroneously understood to describe Serbal under the name Sina, when they say that Pharan was south of Arabia, next to the desert of the Saracens, through which the children of Israel journeyed when they decamped from Sina (*Onomast. s. v. Pharan*); for they obviously confound the city of Pharan with the wilderness mentioned in Numbers (xii. 16, xiii. 3); and the description is so vague as to prove only their ignorance, if not of the true site of the city Pharan (which they place 3 days east of Aila), at least of the utter want of all connection between this and the desert of Zin, which is Pharan; and in this, as in other passages, on which much reliance has been placed in this discussion, it is clear that they are not writing from any local knowledge, but simply drawing deductions from the Scripture narrative (see e. g. *Onomast. s. v. Raphadim*), which we are perhaps equally competent to do. The earliest Christian writer, then, who can be quoted as a witness to the true site of the "Mountain of the Law" is Cosmas Indicopleustes (circ. A. D. 530), who undoubtedly describes Mount Choreb, in the Sinaic (desert ?), as near to Pharan, about 6 miles distant; and this Pharan must be the Pharan of the ecclesiastical annals, whose ruins at the foot of Mount Serbal have been noticed above. This then is direct historical testimony in favour of a hypothesis first started by Burckhardt in modern times, advocated by Dr. Lepsius, and adopted by Mr. Forster and others. But then it appears to be the only clear historical evidence, and must therefore be compared with that in favour of the existing tradition, which, as it is accepted in its main features by Drs. Robinson and Wilson, Ritter, Mr. Stanley, and other eminent scholars, is obviously not unworthy of regard. That the present convent of St. Catharine was originally founded by the emperor Justinian (about A. D. 556), is as certain as any fact in history; and it is equally difficult to imagine that, at so short an interval after the journey of Cosmas, the remembrance of the true Sinai could have been lost, and that the emperor or the monks would have acquiesced in what they knew to be a fictitious site; for the mountain had long been regarded with veneration by the monks, who, however, had erected no monastery before this time, but dwelt in the mountains and valleys about the bush in which God appeared to

Moses (Eutychii *Annales*, tom. ii. p. 163; comp. Procopius, *De Aedificiis Justiniani*, v. 8); so that when their monasteries are mentioned in earlier times, it is clear that the monastic cells only are to be understood. On the whole, then, the testimony of Cosmas can hardly avail against a tradition which was not originated, but only perpetuated, by the erection of Justinian's monastery. To this historical argument in favour of the existing traditions a topographical one may be added. If Rephidim is correctly placed by Dr. Lepsius and others at *Wady Faran*, at the foot of *Serbal*, it seems to follow uncontestedly that *Serbal* cannot be Sinai; for what occasion could there be for the people to decamp from Rephidim, and journey to Sinai, if Rephidim were at the very base of the mount? (*Exod.* xix. 1, 2). Dr. Lepsius feels the difficulty, and attempts to remove it by insinuating that the sacred narrative is not to be implicitly trusted. That Horeb is mentioned in connection with Rephidim is certainly a palpable difficulty (*Exod.* xviii. 1—6), but in a choice of difficulties it is safer to adopt that which does least violence to the sacred text.

By far the strongest argument in favour of the identity of Serbal with Sinai is to be found in the celebrated inscriptions with which the rocks on that mountain and in the surrounding valleys are covered. Not that anything can be certainly determined from these mysterious records, while the art of deciphering them is still in its infancy. The various theories respecting them cannot here be discussed; the works containing them are referred to at the end of the article; but it may be well to put on record the whole of the earliest testimony concerning them, and to offer for their elucidation an observation suggested by an early writer which has been strangely overlooked in this discussion. It is an interesting theory of Cosmas Indicopleustes, that the Israelites, having been instructed in written characters in the Decalogue given in Horeb, were practised in writing, as in a quiet school, in the desert for forty years: "from whence it comes to pass," he proceeds, "that you may see in the desert of Mount Sinai, and in all the stations of the Hebrews, all the rocks in those parts, which have rolled down from the mountains, engraved with Hebrew inscriptions, as I myself, who journeyed in those parts, testify; which certain Jews also having read, interpreted to us, saying that they were written thus. 'The pilgrimage (ἀρεποις) of such an one, of such a tribe, in such a year, and such a month,'—as is frequently written in our hostelries. For they, having newly acquired the art, practised it by multiplying writing, so that all those places are full of Hebrew inscriptions, preserved even unto this time, on account of the unbelievers, as I think; and any one who wishes can visit those places and see them, or they can inquire and learn concerning it that I have spoken the truth." (Cosmas Indicopleustes, *de Mundo*, lib. v. apud Montfaucon, *Collectio Nova Patrum*, tom. ii. p. 205.) On this it may suffice to remark, that while it is certain that the characters are neither the original nor later Hebrew,—i. e. neither Phœnician nor Chaldaic,—still the Jews in Cosmas's company could decipher them. We know that they are far the most part similar to the ancient Arabian (the Hamyaritic or Hadramitic) character, with which the whole region in the south of the Arabian peninsula teems. If, then, Mr. Forster's ingenious and very probable conjecture of the identity of the rock-hewn inscription of *Hism Ghorab* with that

copied by Abderakhman from the southern coast of Arabia, preserved and translated by Schultens, be correct, it will follow that the old Adite character was decipherable even two centuries later than the date assigned to Cosmas, who could scarcely have failed to discover the Christian origin of these inscriptions, if they had been really Christian. Indeed it may well be questioned whether any Christians could have been sufficiently conversant with this ancient character to use it as freely as it is used on the rocks of the peninsula. Certainly if the hypothesis of this place having been resorted to as a place of pilgrimage by the pagan tribes of Arabia, and so having acquired a sanctity in the very earliest times, could be established, the fact might furnish a clue to the future investigation of this deeply interesting subject, and, as Ritter has suggested, might serve to remove some difficulties in the Sacred Narrative. Now the journal of Antoninus Placentinus does in fact supply so precisely what was wanting, that it is singular that his statement has attracted so little notice in connection with the Sinaitic inscriptions; which, however, he does not expressly mention or even allude to. But what we do learn from him is not unimportant, viz., that before the time of Islâm, in "the ages of ignorance," as the Mohammedans call them, the peninsula of Mount Sinai was a principal seat of the idolatrous superstition of the Arabians; and that a feast was held there in honour of their miraculous idol, which was resorted to by Ishmaelites, as he calls them, from all parts; the memorial of which feast seems still to be preserved by the Bedawin. (Burckhardt, *Syria*, pp. 566, 567.) Now when it is remembered that the eastern commerce of Greece and Rome, conducted by the Arabs of *Yemen* and *Hadramaut*, must have brought their merchants and sailors to the vicinity of this ancient sanctuary at Arsinoe or at Elana, the pilgrimage becomes almost a matter of course; and the practice which we know prevailed in their own country of gravestones and memorials with an iron pen in the rock for ever, was naturally adopted by them, and imitated by the Christian pilgrims in after times. Undue stress has been laid on the frequency of the inscriptions about *Serbal*, contrasted with their rarity about *Jebel Musa*; but it should be remembered that they are executed almost entirely in the soft sandstone which meets the granite on and around *Serbal*, but which is scarcely found in the interior, where the hard, primitive rock did not encourage the scribbling propensities of the travellers, as the softer tablets in the more western part, where the blocks of trap-stone (which are also largely interspersed with the granite, and which present a black surface without, but are lemon-coloured within) were studiously selected for the inscriptions, which, in consequence, come out with the effect of a rubricated book or illuminated manuscript, the black surface throwing out in relief the lemon-coloured inscriptions.

This account of the peninsula must not be concluded without a brief notice of the very remarkable temple of *Sarbut el-Châdem*, and the stelæ which are found in such numbers, not only in the temple, but in other western parts of the peninsula, where large masses of copper, mixed with a quantity of iron ore, were and still are found in certain strata of the sandstone rocks along the skirts of the primeval chain, and which gave to the whole district the name still found in the hieroglyphics, *Maphat*, "the copper land," which was under the particular pro-

tection of the goddess Hathor, Mistress of Maphat. The temple, dedicated to her, stands on a lofty sandstone ledge, and is entirely filled with lofty stelæ, many of them like obelisks with inscriptions on both sides; so crowded with them in fact, that its walls seem only made to circumscribe the stelæ, although there are several erected outside it, and on the adjacent hills. The monuments belong, apparently, to various dynasties, but Dr. Lepsius has only specially mentioned three, all of the twelfth. The massive crust of iron ore covering the hillocks, 250 yards long and 100 wide, to the depth of 6 or 8 feet, and blocks of scorise, prove that the smelting furnaces of the Egyptian kings were situated on these airy heights; but the caverns in which the ore was found contain the oldest effigies of kings in existence, not excepting the whole of Egypt and the pyramids of *Gizeh*.

The chief authorities for this article, besides those referred to in the text, are Niebuhr (*Voyage en Arabie*, vol. i. pp. 181—204); Seetzen (*Reisen*, vol. iii. pp. 55—121). For the physical history and description of the peninsula, Russegger is by far the fullest and most trustworthy authority (*Reisen*, vol. iii. pp. 22—58). Dr. Robinson has investigated the history and geography of the peninsula, with his usual diligence (*Travels*, vol. i. §§ 3, 4. pp. 87—241); and Dr. Wilson has added some important observations in the way of additional information or correction of his predecessor (*Lands of the Bible*, vol. i. chapters vi.—viii. pp. 160—275). Lepsius's *Tour from Thebes to the Peninsula of Sinai* (*Letters*, pp. 310—321, 556—562), which has been translated by C. H. Cottrell (London, 1846), argues for *Serbal* as the true Mountain of the Law; and his theory has been maintained with great learning and industry by Mr. John Hogg (*Remarks on Mount Serbal, &c. in Transactions of the Royal Society of Literature*, 1849). The graphic description of the country from Mr. A. P. Stanley's pen is the latest contribution to the general history of the peninsula (*Sinai and Palestine*, 1856). The decipherment of the inscriptions has been attempted by the learned Orientalists of Germany, Gesenius, Roediger, Beer, and others (Ch. Bunsen, *Christianity and Mankind*, vol. iii. pp. 231—234); and Mr. Forster has published a vindication of his views against the strictures of Mr. Stanley on his original work (*The Voice of Israel from the Rocks of Sinai*, 1851; *The Israelitish Authorship of the Sinaitic Inscriptions*, 1856).

[G. W.]

SINCHI, a sub-division of the Sarmatian tribe of the Tauri. (Amm. Mar. xxii. 8. § 33.) [T. H. D.]

SINDA (*Σινδα*; *Eth. Sindensis*), a town which seems to have been situated on the western frontier of Pisidia, in the neighbourhood of Cibyra and the river Caularis (Liv. xxxviii. 15; Strabo, xii. p. 570, xiii. p. 630). Stephanus B. (*α. v. Σινδία*), who speaks of Sindia as a town of Lycia, is probably alluding to the same place. (Comp. Hierocl. p. 680; Polyb. *Excerpt. de Leg.* 30.) Some writers have confounded Sinda with Isionda, which is the more surprising, as Livy mentions the two as different towns in the same chapter. (Leake, *Asia Minor*, p. 152.) [L. S.]

SINDA SARMATICA (*Σινδα σαρματ.*, Ptol. v. 9. § 8), a town or village in Asiatic Sarmatia, in the territory of the Sindi, with an adjoining harbour (*Σινδικὸς λιμὴν*, Ptol. *Id.*), 180 stadia E. of the mouth of the Bosphorus Cimmerius at Corcondama, and, according to Arrian (*Per. P. Euz.* p. 19), 500

must suffice. There seems, then, to be no question that the site of Horeb was traditionally known to the Israelites for many centuries after the Exodus (1 Kings, xix. 8); and if so, it is improbable that it was subsequently lost, since its proximity to Elath and Ezion Geber, which were long in their possession, would serve to ensure the perpetuity of the tradition. It is worthy of remark that Josephus nowhere uses the name Horeb, but in the parallel to that above cited from the 1st Kings, as uniformly throughout his histories τὸ Σιναιτικὸν ὄρος,—so far confirming the locality indicated by the two names maintained by Dr. Lepsius, who holds that an Amalekite appellative equivalent with Sin, both signifying "east," and "draining off the water," which is the large mounds of alluvial deposits at the base of Paran, at the northern base of the Sinai. Buxtorf, however, cites another etymology of Sin, as a name belonging to the rock in the vicinity of Massa, Gergippia, &c. (p. 443, and note 735.) They had a way to identify the site:—Polyaen. viii. 55), have been erroneously identified of their kings under the name Sinus. Damascus (p. 160, etc.) south of Arabia, a custom which they had through which the grave of a deceased person as they decamped. number of enemies whom he had for they obviously name is variously written, and wilderness of the Sindones (ii. 19), Lucian (Tox. and the desert. Eichwald (*Alt Geogr. d. Kasp. M.* ignorance, as them to have been a Hindoo colony. (which they, *Acta Petrop.* ix. p. 370; St. Croix, the *Acta des Inscr.* xli. p. 403; Larcher, ad the *desert* p. 506; Ukert, vol. iii. pt. 2. p. 494, others [T. H. D.]

ANCE (Σινδοκή, Strab. xi. pp. 492, 495, &c.),
the part of country inhabited by the Sindi, which
according to Scylax (p. 31), lay between that
of the Maenae, to the Maeotae, on the Palus Maeotis, and
that of the Ceretae (the modern *Cherkas*), and
which must therefore be sought at or near the
peninsula of *Taman*. According to Strabo (xi. p.
492) it reached to the Achaei, and extended in a
southerly direction from the Hypanis. [T. H. D.]

SINDOCANDA (Σινδοκάνδα, Ptol. vii. 4. § 3), a city in the middle of the W. coast of Taprobane, belonging to the people called Sandocandae. Hence it has been conjectured, either that the name of the town should be changed into Sandocanda, or that the people should be called Sindocandae. [T. H. D.]

SINDOMANA (Σινδόμανα, Strab. xv. p. 701), a town on the lower course of the Indus, and in the neighbourhood of the island of Pattalene. (Comp. Arrian, *Anab.* vi. 15; Diod. xvii. 102; Curtius, ix. 8, 13, 17.) [T. H. D.]

SINDUS (Σίνδος, Herod. vii. 123; Steph. B. s. v.), a maritime town of Mygdonia in Macedonia, between Therme (Thessalonica) and Chalastra. [E. B. J.]

SINGA (*Σίγγα*, Ptol. v. 15. § 10), a city of the Syrian province of Commagene, to the N. of Doliche, and situated on the river Singas (*ib.* § 9), (now the *Senseja*), which had its source in Mount Pieria and flowed to the NW. till it fell into the Euphrates to the S. of Samosata. [T. H. D.]

SINGAMES (*Zirydzuns*, Arrian, *Per. P. Eux.* p. 10), a navigable river of Colchis, which entered the Pontus Euxinus 210 stadia N. of the Cobus, and 120 stadia SE. from the Tarsuras. (Plin. vi. 4. a. 4.) Now the *Osinquiri*. [T. H. D.]

...mountain near it, called *phrygia* (v. 18. § 2), as appears from the way by the district of the *phrygia* to have been taken by *Imperator* (v. 22); and as the legend of *Imperator* reads *ATP. CEPI. KOA. CIMFAPA*, i. e. the head of Gordian on the throne, they have formed a Roman colony under the Severus and Gordian. It was the seat of a nocturnal conflict between Constantine and the king of Persia, the result of which was satisfactory that both sides claimed victory (Amm. Marc. xviii. 5; Euseb. p. 1. 1. c. 27). Still later, under the reign of *Imperator*, it underwent a calamitous length was carried by the Persians to the gallantly defended by the *triginta* legions. (Amm. Marc. xx. 6.) The country is stated by Ammianus and Theophrastus to be extremely arid, which rendered it difficult to take or to relieve from a capture.

SINGIDAVA (*Σινγιδάβα*, Ptol. iii. 9, § 3), a town in the interior of Dacia, between Sarmatia and Aluta, now *Buda* on the Maros.

SINGIDUNUM (*Σινγιδουνον*, Ptol. iii. 9, § 3), a town in Moesia Superior, at a spot where the Savus falls into the Danube, on the main road along the banks of the river, opposite to the town of Taurnum (Sirmium).

(*Itin. Ant.* p. 182; *Jes. Nub.* v. 6. By Procopius (*de Aed.* iv. 6, p. 287) *ἡ Σινγιδών*. It was a fortress, and the head-quarters of the Legio iv. Flavia Felix (Nabagada), modern Belgrade.

SINGILI or SINGILIS. *a town in*
Baetica. (Plin. iii. 1. s. 3.) It lay
or *Valsequilla*, and D'Aurville (l. p. 10)
with *Puente de don Gonzalo*. Consult
and inscriptions, see *Flora*, *Exp. Sp.*
xii. 20; Morales, p. 21.

SINGITICUS SINUS. [Singers].
SINGONE (Σῆγγον), a town of the
south-east of Germany, mentioned
(ii. 11. § 30), but otherwise unknown.
SINGULIS, a tributary river of the Dan-
gible as far up as Astigi. (Plin. ii. 11. § 1.)
the Xenii.
SINGUS (Σῆγρος, Herod. vii. 132; Theophr.
Büchh, Corp. Inscr. vol. i. p. 394; Plin. ii. 11. § 1.)
Steph. B. s. v.; Plin. iv. 17; Arist. Zoon. ii. 1.)
of Sithonia in Macedonia, upon the Gulf of
gave its name, SINGITICUS SINUS (Σῆγγρος
αἰνός, Ptol. l. c.: Gulf of Alpha), con-
fined with Sykia, probably a corruption of the
old name. (Leake, Northern Greece, i. p.
153.)

SHINAR, a district of Babylonia, mentioned in Genesis under the title of "Shinar." It is noticed under the name of τῆς Βαβυλωνίας by Histories of Moses Josephus (*Ant. Jud.* i. 5) and *Evangel.* ix. 15: comp. *Gen.* xi. 2: *Isaiah*.

Zech. v. 11). It would seem to comprehend especially the great plain land of Babylonia, as distinguished from Assyria and Elymais (*Gen.* xiv. 1), and probably extended to the junction of the Tigris and Euphrates, if not as far as the Persian gulf. Some have, without reason, confounded it with Singara, the modern *Singdr*. [V.]

SINIS (*Σινίς*), a Roman colony in the district of Melitene in Armenia Minor. (*Ptol.* v. 7. § 5.) The place is not mentioned by any other writer, but it is possible that it may be the same place as the one which Procopius (*de Aed.* iii. 4) simply calls *Κολωνία*. [L. S.]

SINNA. 1. (*Σιννα*, *Ptol.* v. 18. §§ 11, 12), the name of two towns in Mesopotamia, one on the S. declivity of Mount Masius, the other more to the SE., on the Tigris.

2. (*Σιννα*, *Strab.* xvi. p. 755), a mountain fortress in Lebanon. [T. H. D.]

SINONIA (*Zamone*), was the name given in ancient times to the smallest of the three islands known as the *Isolæ di Ponza*. It is situated about 5 miles to the NE. of Pontia (*Ponza*), the principal island of the group (*Plin.* iii. 6. a. 12; *Mel.* ii. 7. § 18). [E. H. B.]

SINOPE (*Σινώπη*: *Eth.* *Σινωπεύς*), the most important of all the Greek colonies on the coast of the Euxine, was situated on a peninsula on the coast of Paphlagonia, at a distance of 700 stadia to the east of Cape Carambis (*Strab.* xii. p. 546; *Marcian.* p. 73; *Eustath.* *ad Dion. Per.* 775.) It was a very ancient place, its origin being referred to the Argonauts and to Sinope, the daughter of Asopus. (*Apollon. Rhod.* ii. 947; *Val. Flacc.* v. 108.) But the Sinopians themselves referred the foundation of their city to Antolycus, a companion of Heracles, and one of the Argonauts, to whom they paid heroic honours (*Strab.* l. c.). But this ancient town was small and powerless, until it received colonists from Miletus. The Milesians were in their turn dispossessed by the Cimmerians, to whom Herodotus (iv. 12) seems to assign the foundation of the city; but when the Cimmerians were driven from Asia Minor, the Ephesians (in B. C. 632) recovered possession of their colony. (*Scymn.* 204, foll.; *Anonym. Peripl.* P. E. p. 8.) The leader of the first Milesian colony is called Ambron, and the leaders of the second Coss and Critines; though this latter statement seems to be a mistake, as Eustathius and Stephanus B. (s. v.) call the founder Critius, a native of Coss. After this time Sinope soon rose to great power and prosperity. About the commencement of the Peloponnesian War the Sinopians, who were then governed by a tyrant, Timesileon, received assistance from the Athenians; and after the expulsion of the tyrant, 600 Athenian colonists were sent to Sinope (*Plut. Pericl.* 20). At the time of the retreat of the Ten Thousand under Xenophon, Sinope was a wealthy and flourishing city, whose dominion extended to the river Halys, and which exercised great influence over the tribes of Paphlagonia and Cappadocia, independently of its colonies of Cerasus, Cotoyora, and Trapezus. It was mainly owing to the assistance of the Sinopians, that the returning Greeks were enabled to procure ships to convey them to Heracleia (*Xenoph. Anab.* v. 5. § 3; *Arrian. Peripl.* P. E. p. 17; *Diod. Sic.* xiv. 30, 32; *Amm. Marc.* xxii. 8). Strabo also acknowledges that the fleet of the Sinopians held a distinguished position among the naval powers of the Greeks; it was mistress of the Euxine as far as the entrance

of the Bosphorus, and divided with Byzantium the lucrative tunny fisheries in that sea. In the time of Ptolemy Soter, Sinope was governed by a prince, Scydrthemias, to whom the Egyptian king sent an embassy. (*Tac. Hist.* iv. 82, foll.) Its great wealth, and above all its excellent situation, excited the cupidity of the kings of Pontus. It was first assailed in B. C. 220, by Mithridates IV., the great-grandfather of Mithridates the Great. Polybius (iv. 56), who is our principal authority for this event, describes the situation of Sinope in the following manner: It is built on a peninsula, which advances out into the sea. The isthmus which connects the peninsula with the mainland is not more than 2 stadia in breadth, and is entirely barred by the city, which comes up close to it, but the remainder of the peninsula stretches out towards the sea. It is quite flat and of easy access from the town; but on the side of the sea it is precipitous all around, and dangerous for vessels, and presents very few spots fit for effecting a landing. This description is confirmed by Strabo (xii. p. 545), for he says that the city was built on the neck of the peninsula; but he adds, that the latter was girt all around with rocks hollowed out in the form of basins. At high water these basins were filled, and rendered the shore inaccessible, especially as the rocks were everywhere so pointed that it was impossible to walk on them with bare feet. The Sinopians defended themselves bravely against Mithridates, and the timely aid of the Rhodians in the end enabled them to compel the aggressor to raise the siege. Pharnaces, the successor of Mithridates IV., was more successful. He attacked the city unexpectedly, and finding its inhabitants unprepared, easily overpowered it, B. C. 183. From this time Sinope became the chief town, and the residence of the kings of Pontus. (*Strab.* l. c.; *Polyb.* xxiv. 10.) Mithridates, surnamed Euergetes the successor of Pharnaces, was assassinated at Sinope in B. C. 120 (*Strab.* x. p. 477). His son, Mithridates the Great, was born and educated at Sinope, and did much to embellish and strengthen his birthplace; he formed a harbour on each side of the isthmus, built naval arsenals, and constructed admirable reservoirs for the tunny fisheries. After his disaster at Cyzicus, the king intrusted the command of the garrison of Sinope to Bacchides, who acted as a cruel tyrant; and Sinope, pressed both from within and from without, was at last taken by Lucullus, after a brave resistance. (*Strab.* l. c.; *Plut. Lucull.* 18; *Appian, Bell. Mithr.* 83; *Memnon*, in *Phot. Cod.* p. 238, ed. Bekker.) Lucullus treated the Sinopians themselves mildly, having put the Pontian garrison to the sword; and he left them in possession of all their works of art, which embellished the city, with the exception of the statue of Antolycus, a work of Sthenis, and the sphere of Billarus. (*Strab.* *Plut.* *l. cc.*; *Cic. pro Leg. Man.* 8.) Lucullus restored the city to its ancient freedom and independence. But when Pharnaces, the son of Mithridates, had been routed at Zela, Caesar took Sinope under his protection, and established Roman colonies there, as we must infer from coins bearing the inscription *Col. Jul. Caes. Felix Sinope*. In the time of Strabo Sinope was still a large, splendid, and well fortified city; for he describes it as surrounded by strong walls, and adorned with fine porticoes, squares, gymnasias, and other public edifices. Its commerce indeed declined, yet the tunny fisheries formed an inexhaustible

source of revenue, which maintained the city in a tolerable state of prosperity. It possessed extensive suburbs, and numerous villas in its vicinity (Strab. l. c.; Plin. vi. 2). From Pliny's letter's (x. 91), it appears that the Sinopians suffered some inconvenience from the want of a good supply of water, which Pliny endeavoured to remedy by a grant from the emperor Trajan to build an aqueduct conveying water from a distance of 16 miles. In the time of Arrian and Marcian, Sinope still continued to be a flourishing town. In the middle ages it belonged to the empire of Trebizond, and fell into the hands of the Turks in A. D. 1470, in the reign of Mohammed II. Sinope is also remarkable as the birthplace of several men of eminence, such as Diogenes the Cynic, Baton, the historian of Persia, and Diphilus, the comic poet.

Near Sinope was a small island, called Scopelus, around which large vessels were obliged to sail, before they could enter the harbour; but small craft might pass between it and the land, by which means a circuit of 40 stadia was avoided (Marcian, p. 72, &c.) The celebrated Sinopian cinnabar (Σινωπική μύλτος, Σινωπία or Σινωπική γῆ) was not a product of the district of Sinope, but was designated by this name only because it formed one of the chief articles of trade at Sinope. (Groskurd on Strabo, vol. ii. p. 457, foll.) The imperial coins of Sinope that are known, extend from Augustus to Gallienus. (Sestini, Num. Vet. p. 63; Rasche, Lex. Num. iv. 2. p. 1105, foll.)

Sinope, now called *Sinab*, is still a town of some importance, but it contains only few remains of its former magnificence. The wall across the isthmus has been built up with fragments of ancient architecture, such as columns, architraves, &c., and the same is found in several other parts of the modern town; but no distinct ruins of its temples, porticoes, or even of the great aqueduct, are to be seen. (Hamilton, Researches, vol. i. p. 306, &c.) [L. S.]

SINORIA (Σινωρία, Strab. xii. p. 555), a town on the frontier of Armenia Major, a circumstance which gave rise to a pun of the historian Theophanes who wrote the name Σινωρία. The place is no doubt the same as the one called Sinorega by Appian (*Mithrid.* 101), by Ammianus Marcellinus (xvii. 7) Synhorium, by Ptolemy (v. 7. § 2) Sinibra or Sinera, and in the Antonine Itinerary (p. 208) Sinervaa. The pun upon the name made by Theophanes seems to show that the form Sinoria, which Strabo gives, is the correct one. The town was a fortress built by Mithridates on the frontier between Greater and Lesser Armenia; but assuming that all the different names mentioned above are only varieties or corruptions of one, it is not easy to fix the exact site of the town, for Ptolemy and the Antonine Itinerary place it to the south-west of Satala, on the road from this town to Melitene, and on the Euphrates, while the Table, calling it Sinara, places it 79 miles to the north-east of Satala, on the frontiers of Pontus; but there can be no doubt that the Sinara of the Table is altogether a different place from Sinoria, and the site of the latter place must be sought on the banks of the Euphrates between Satala and Melitene, whence some identify it with *Murad Chai* and others with *Semi Beli*. [L. S.]

SINOTIUM. [SINODURUM.]

SINSII (Σίνσιοι, Ptol. iii. 8. § 5), a people in the S. of Dacia. [T. H. D.]

SINTI (Thuc. ii. 98; Steph. B. a. v.; Liv. xlii. 51), a Thracian tribe who occupied the district lying

between the ridge called Cercine and the right or W. bank of the Strymon, in the upper part of the course of that river, which was called from thence SIXTICE (Σιτυχή, Ptol. iii. 13. § 30). When Macedonia was divided into four provinces at the Roman conquest, Sintice was associated with Bisaltia in the First Macedonia, of which Amphipolis was the capital (Liv. xiv. 29). It contained the three towns HERACLEIA, PAROECOPOLIS, TRISTOLUS. [E.B.J.]

SINTIES. [LEMNOS.]

SINUSSA (Σινώσσα or Σινέσσα; Eth. Σινωσσαῖος, Sinussanus; *Mondragone*), a city of Latium, in the more extended sense of the name, situated on the Tyrrhenian sea, about 6 miles N. of the mouth of the Vulturnus. It was on the line of the Via Appia, and was the last place where that great highroad touched on the sea-coast. (Strab. v. p. 233.) It is certain that Sinussa was not an ancient city; indeed there is no trace of the existence of an Italian town on the spot before the foundation of the Roman colony. Some authors, indeed, mention an obscure tradition that there had previously been a Greek city on the spot which was called Sinope; but little value can be attached to this statement. (Liv. x. 21; Plin. iii. 5. s. 9.) It is certain that if it ever existed, it had wholly disappeared, and the site was included in the territory of the Ansonian city of Vesica, when the Romans determined to establish simultaneously the two colonies of Minturnae and Sinussa on the Tyrrhenian sea. (Liv. x. 21.) The name of Sinussa was derived, according to Strabo, from its situation at the spacious gulf (Sinus), now called the *Gulf of Gaeta*. (Strab. v. p. 234.) The object of establishing these colonies was chiefly for the purpose of securing the neighbouring fertile tract of country from the ravages of the Samnites, who had already repeatedly overrun the district. But for this very reason the plebeians at Rome hesitated to give their names, and there was some difficulty found in carrying out the colony, which was, however, settled in the following year, B. C. 296. (Liv. x. 21; Vell. Pat. i. 14.) Sinussa seems to have rapidly risen into a place of importance; but its territory was severely ravaged by Hannibal in B. C. 217, whose cavalry carried their devastations up to the very gates of the town. (Liv. xxii. 13, 14.) It subsequently endeavoured, in common with Minturnae and other "coloniae maritimae," to establish its exemption from furnishing military levies; but this was overruled, while there was an enemy with an army in Italy. (Id. xxvii. 38.) At a later period (B. C. 191) they again attempted, but with equal ill success, to procure a similar exemption from the naval service. (Id. xxxvi. 3.) Its position on the Appian Way doubtless contributed greatly to the prosperity of Sinussa; for the same reason it is frequently incidentally mentioned by Cicero, and we learn that Caesar halted there for a night on his way from Brundisium to Rome, in B. C. 49. (Cic. ad Att. ix. 15, 16, xiv. 8, ad Fam. xii. 20.) It is noticed also by Horace on his journey to Brundisium, as the place where he met with his friends Varius and Virgil. (*Sat.* i. 5. 40.) The fertility of its territory, and especially of the neighbouring ridge of the Mons Massicus, so celebrated for its wines, must also have tended to promote the prosperity of Sinussa, but we hear little of it under the Roman Empire. It received a body of military colonists, apparently under the Triunvirate (*Lib. Col.* p. 237), but did not retain the rank of a Colonia, and

is termed by Pliny as well as the *Liber Coloniarum* only an "oppidum," or ordinary municipal town. (Plin. iii. 5. s. 9; *Lib. Col. l. c.*) It was the furthest town in Latium, as that term was understood in the days of Strabo and Pliny, or "Latium adjectum," as the latter author terms it; and its territory extended to the river Savo, which formed the limit between Latium and Campania. (Strab. v. pp. 219, 231, 233; Plin. iii. 5. s. 9; Mel. ii. 4. § 9.) At an earlier period indeed Polybius reckoned it a town of Campania, and Ptolemy follows the same classification, as he makes the Liris the southern limit of Latium (Pol. iii. 91; Ptol. iii. 1. § 6); but the division adopted by Strabo and Pliny is probably the most correct. The Itineraries all notice Sinuessa as a still existing town on the Appian Way, and place it 9 miles from Minturnae, which is, however, considerably below the truth. (*Itin. Ant.* p. 108; *Itin. Hier.* p. 611; *Tab. Peut.*) The period of its destruction is unknown.

The ruins of Sinuessa are still visible on the seacoast just below the hill of *Mondragone*, which forms the last underfall or extremity of the long ridge of *Monte Massico*. The most important are those of an aqueduct, and of an edifice which appears to have been a triumphal arch; but the whole plain is covered with fragments of ancient buildings. (Cluver. *Ital.* p. 1080; Romanelli, vol. iii. p. 486.)

At a short distance from Sinuessa were the baths or thermal springs called *AQUÆ SINUESSANÆ*, which appear to have enjoyed a great reputation among the Romans. Pliny tells us they were esteemed a remedy for barrenness in women and for insanity in men. They are already mentioned by Livy as early as the Second Punic War; and though their fame was eclipsed at a later period by those of Baiae and other fashionable watering-places, they still continued in use under the Empire, and were resorted to among others by the emperor Claudius. (Liv. xxii. 13; Tac. *Ann.* xii. 66; Plin. xxxi. 2. s. 4.) It was there, also, that the infamous Tigellinus was compelled to put an end to his own life. (Tac. *Hist.* i. 72; Plut. *Oth.* 2.) The mild and warm climate of Sinuessa is extolled by some writers as contributing to the effect of the waters (Tac. *Ann.* xii. 66); hence it is called "Sinuessa tepens" by Silius Italicus, and "mollis Sinuessa" by Martial. (Sil. *Ital.* viii. 528; Mart. vi. 42.) The site of the waters is still called *I. Bagni*, and the remains of Roman buildings still exist there. [E. H. B.]

SINUS AD GRADUS or AD GRADUS. [FOSSA MARIANA.]

SION, Μ. (Σιών), originally the name of a particular fortress or hill of Jerusalem, but often in the poetical and prophetic books extended to the whole city, especially to the temple, for a reason which will presently be obvious. Sion proper has been always assumed by later writers to be the SW. hill of Jerusalem, and this has been taken for granted in the article on Jerusalem [JERUSALEM, p. 18]. The counter hypothesis of a later writer, however, maintained with great learning, demands some notice under this head. Mr. Thrupp (*Antient Jerusalem*, 1855) admits the original identity of Sion and the city of David, but believes both to have been distinct from the upper city of Josephus, which latter he identifies with the modern Sion, in agreement with other writers. The transference of the name and position of Sion he dates as far back as the return from the Babylonian

captivity, believing that the Jews had lost the tradition of its identity with the city of David; so that, while they correctly placed the latter, they erroneously fixed the former where it is still found, viz., at the SW. of the Temple Mount, which mount was in fact the proper "Sion," identical with "the city of David;" for it is admitted that the modern Sion is identical not only with that recognised by the Christian (he might have added the Jewish) inhabitants of Jerusalem, and by all Christian (and Jewish) pilgrims and travellers from the days of Constantine, but with the Sion of the later Jewish days, and with that of the Maccabees. The elaborate argument by which it is attempted to remove this error of more than 2000 years standing from the topography of Jerusalem, cannot here be stated, much less discussed; but two considerations may be briefly mentioned, which will serve to vindicate for the SW. hill of the city the designation which it has enjoyed, as is granted, since the time of the Babylonian captivity. One is grounded on the language of Holy Scripture, the other on Josephus. Of the identity of the original Sion with the city of David, there can be no doubt. Mr. Thrupp (pp. 12, 13) has adduced in proof of it three conclusive passages from Holy Scripture (2 Sam. v. 7; 1 Kings, viii. 1; 1 Chron. xi. 5). It is singular that he did not see that the second of these passages is utterly irreconcilable with the identity of the city of David with the Temple Mount; and that his own attempt to reconcile it with his theory, is wholly inadequate. According to that theory Mount Sion, or the city of David, extended from the NW. angle of the present Haram, to the south of the same enclosure; and the tombs of David, which were certainly in the city of David, he thinks might yet be discovered beneath the south-western part of the Haram (p. 161). That the temple lay on this same mount, between these two points, is not disputed by any one. Now, not to insist upon the difficulty of supposing that the threshing-floor of Araunah the Jebusite, where the temple was undoubtedly founded (2 Chron. iii. 1), lay in the very heart of the city of David, from which David had expelled the Jebusites, it is demonstrable, from the contents of the second passage above referred to, that the temple was in no sense in the city of David; for, after the completion of the temple, it is said in that and the parallel passage (2 Chron. v. 2, 5, 7) that Solomon and the assembled Israelites brought up the ark of the covenant of the Lord out of the city of David, which is Sion, into the temple which he had prepared for it on what Scripture calls Mount Moriah (2 Chron. iii. 1). Again, in 2 Samuel, v. 6—9, we have the account of David's wresting "the stronghold of Sion, the same is the city of David," out of the hands of the Jebusites; after which "David dwelt in the fort, and called it the city of David." Josephus, in recording the same events, states that David "laid siege to Jerusalem, and took the lower city by assault, while the citadel still held out." (*Ant.* vii. 3. § 2.) This citadel is clearly identified with the upper city, both in this passage and in his more detailed description of the city, where he says "that the hill upon which the upper city was built was by far the highest, and on account of its strength was called by King David the fortress" (φρούριον). (*Bell. Jud.* v. 4. § 1.) We are thus led to a conclusion directly opposite to that arrived at by Mr. Thrupp, who says that "the accounts in the books of Samuel and Chronicles represent David as taking the stronghold of Sion first

and the Jebusite city afterwards; Josephus represents him as taking the lower city first, and afterwards the citadel. There can be no doubt, therefore, that in Josephus's view, Sion was the lower city, and the Jebusite city the citadel;" for a comparison of the 7th with the 9th verse in 2 Sam. v., and of the 5th with the 7th verse in 1 Chron. xi. can leave no doubt that the intermediate verses in both passages relate to the particulars of occupation of Sion, which particulars are narrated by Josephus of the occupation of the upper city, here called by him by the identical name used by the sacred writer, of the "castle in which David dwelt; therefore they called it the city of David;" and this *φρούριον* of Josephus is admitted by Mr. Thrupp to be the upper city (p. 56, note 2). That the name Sion was subsequently used in a much wider acceptance, and applied particularly to the sanctuary, is certain; and the fact is easily explained. The tent or tabernacle erected by David for the reception of the ark was certainly on Mount Sion, and in the city of David (2 Sam. vi. 12; 1 Chron. xv. 1, 29), and therefore in all the language of his own divine compositions, and of the other Psalmists of the conclusion of his and the commencement of Solomon's reign, Sion was properly identified with the sanctuary. What could be more natural than that, when the ark was transferred to the newly-consecrated temple on the contiguous hill, which was actually united to its former resting-place by an artificial embankment, the signification of the name should be extended so as to comprehend the Temple Mount, and continue the propriety and applicability of the received phraseology of David's and Asaph's Psalms to the new and permanent abode of the most sacred emblem of the Hebrew worship? But to attempt to found a topographical argument on the figurative and frequently elliptical expressions of Psalms or prophecies is surely to build on a foundation of sand. It was no doubt in order not to perplex the topography of Jerusalem by the use of ecclesiastical and devotional terminology that Josephus has wholly abstained from the use of the name Sion.

[G. W.]

SIPH or ZIPH (LXX. Alex. *Zip*, Vat. *Ῥοῖς*; *ἔθ. Ζιφαῖος*), a city of the tribe of Judah, mentioned in connection with Maon, Carmel, and Juttah (*Josh. xv. 55*). The wilderness of Ziph was a favourite hiding-place of David when concealing himself from the malice of Saul. (1 Sam. xxiii. 14, 26, xxvi. 1; *Psalms* liv. title.) This wilderness of Ziph was contiguous to the wilderness of Maon (1 Sam. xxiii. 25); and this Maon is connected with Carmel in the history of Nabal and Abigail (xxv. 2). The three names are still found a few miles south of Hebron, as *Kirmel*, *Māin*, *Ziph*. The ruins lie on a low ridge between two small wadya, which commence here and run towards the Dead Sea. "There is here little to be seen except broken walls and foundations, most of them of unhewn stone, but indicating solidity, and covering a considerable tract of ground. Numerous cisterns also remain." (Robinson, *Bibl. Res.* vol. ii. p. 191.) Ziph is placed by St. Jerome 8 miles E. of Hebron (S. would be more correct), and the desert of Ziph is frequently mentioned in the annals of the recluses of Palestine, while the site of the town was identified by travellers at least three centuries ago. (Füer, *Itinerarium*, p. 68.) [G.W.]

SIPHAË or TIPHA (*Σίφα*, Thuc. iv. 76; Scylax, p. 15; Steph. B. s. v.; Ptol. iii. 15. § 5; Plin. iv. 3. s. 4; *Tiipa*, Paus. ix. 32. § 4; *ἔθ. Τίφαῖος*, *Τίφαεύς*), a town of Boeotia, upon the Corinthian

gulf, which was said to have derived its name from Tiphys, the pilot of the Argonauts. In the time of Pausanias the inhabitants of Siphæ pointed out the spot where the ship Argo anchored on its return from its celebrated voyage. The same writer mentions a temple of Hercules at Siphæ, in whose honour an annual festival was celebrated. (Paus. l. c.) Thucydides (l. c.), Apollonius Rhodius (l. 105), and Stephanus B. (s. v. *Σίφα*) describe Siphæ as a dependency of Thespiae; and it is accordingly placed by Müller and Kiepert at *Alibis*. But Leake draws attention to the fact that Pausanias describes it as lying W. of Thiabe; and he therefore places it at port *Sarandî*, near the monastery dedicated to St. Taxiarches, where are the remains of a small Hellenic city. On this supposition the whole of the territory of Thiabe would lie between Thespiae and Siphæ, which Leake accounts for by the superiority of Thespiae over all the places in this angle of Boeotia, whence the whole country lying upon this part of the Corinthian gulf may have often, in common acceptance, been called the Thespice. (Leake, *Northern Greece*, vol. ii. p. 515.)

SIPHONOS or SIPHNUS (*Σίφνος*; *ἔθ. Σίφνος*; *Siphno* Gr., *Siphanto* Ital.), an island in the Aegæan sea, one of the Cyclades, lying SE. of Seriphos, and NE. of Melos. Pliny (iv. 12. s. 22. § 66) describes it as 28 miles in circuit, but it is considerably larger. The same writer says that the island was originally called Merope and Acis; its ancient name of Merope is also mentioned by Stephanus B. (s. v.). Siphnos was colonised by Ionians from Athens (Herod. viii. 48), whence it was said to have derived its name from Siphnos, the son of Sunius. (Steph. B. s. v.) In consequence of their gold and silver mines, of which remains are still seen, the Siphnians attained great prosperity, and were regarded, in the time of Polycrates (s. c. 520), as the wealthiest of all the islanders. Their treasury at Delphi, in which they deposited the tenth of the produce of their mines (Paus. x. 11. § 2), was equal in wealth to the treasuries of the most opulent states; and their public buildings were decorated with Parian marble. Their riches, however, exposed them to pillage; and a party of Samian exiles, in the time of Polycrates, invaded the island, and levied a contribution of 100 talents. (Herod. iii. 57, 58.) The Siphnians were among the few islanders in the Aegæan who refused tribute to Xerxes, and they fought with a single ship on the side of the Greeks at Salamis. (Herod. viii. 46, 48.) Under the Athenian supremacy the Siphnians paid an annual tribute of 3600 drachmae. (Franz, *Elem. Epigr. Gr.* n. 52.) Their mines were afterwards less productive; and Pausanias (l. c.) relates that in consequence of the Siphnians neglecting to send the tenth of their treasure to Delphi, the gods destroyed their mines by an inundation of the sea. In the time of Strabo the Siphnians had become so poor that *Σίφνιον δοτρίδαλον* became a proverbial expression. (Strab. x. p. 448; comp. Eustath. *ad Dionys. Per.* 525; Hesych. s. v. *Σίφνιος ἀπώλετος*.) The moral character of the Siphnians stood low; and hence to act like a Siphnian (*Σίφνιδ(ε)ω*) was used as a term of reproach. (Steph. B.; Suid; Hesych.) The Siphnians were celebrated in antiquity, as they are in the present day, for their skill in pottery. Pliny (xxvi. 22. § 159, *Siliig*) mentions a particular kind of stone, of which drinking cups were made. This, according to Fiedler, was a species of talc, and is probably intended by

Stephanus B. when he speaks of *Σίπιος* worth-
prior.

Siphnos possessed a city of the same name (Ptol. iii. 15. § 31), and also two other towns, Apollonia and Minoa, mentioned only by Stephanus B. The ancient city occupied the same site as the modern town, called *Kastron* or *Seraglio*, which lies upon the eastern side of the island. There are some remains of the ancient walls; and fragments of marble are found, with which, as we have already seen, the public buildings in antiquity were decorated. A range of mountains, about 3000 feet in height, runs across Siphnos from SE. to NW.; and on the high ground between this mountain and the eastern side of the island, about 1000 feet above the sea, lie five neat villages, of which *Staori* is the principal. These villages contain from 4000 to 5000 inhabitants; and the town of *Kastron* about another 1000. The climate is healthy, and many of the inhabitants live to a great age. The island is well cultivated, but does not produce sufficient food for its population, and accordingly many Siphnians are obliged to emigrate, and are found in considerable numbers in Athens, Smyrna, and Constantinople. (Tournefort, *Voyage*, &c. vol. i. p. 134, seq. transl.; Fiedler, *Reise*, vol. ii. p. 125, seq.; Ross, *Reise auf den Griech. Inseln*, vol. i. p. 138, seq.)

COIN OF SIPHNOS.

SIPIA, in Gallia, is placed by the Table on a route from Condate (*Rennes*) to Juliomagus (*Angers*). The distance from Condate to Sipa is xvi. and this distance brings us to a little river *Seche* at a place called *Vi-seche*, the *Vi* being probably a corruption of Vadum. The same distance xvi. measured from *Vi-seche* brings us to Combaristum (*Combré*) on the road to *Angers*. But see the article COMBARISTUM. The *Seche* is a branch of the *Vilaine* (D'Anville, *Notice*, &c.). [G. L.]

SIPONTUM, or SIPUNTUM, but in Greek always SIPUS (*Σίπυρος* - *οὔριος*: *Eth. Σίπορτιος*, Sipontinus: *Sta Maria di Siponto*), a city of Apulia, situated on the coast of the Adriatic, immediately S. of the great promontory of Garganus, and in the bight of the deep bay formed by that promontory with the prolongation of the coast of Apulia. (Strab. vi. p. 284.) This bay is now called the *Gulf of Manfredonia*, from the city of that name which is situated within a few miles of the site of Sipontum. The Cerebus, or *Cervaro*, and the *Candelaro* fall into this bay a short distance S. of Sipontum, and form at their mouth an extensive lagoon or salt-water pool (*στομαλμυνη*, Strab. l.c.), now called the *Pantano Salco*. Like most places in this part of Apulia the foundation of Sipontum was ascribed to Diomed (Strab. l.c.): but with the exception of this vague and obscure tradition, which probably means no more than that the city was one of those belonging to the Daunian tribe of Apulians, we have no account of its being a Greek colony. The name is closely analogous in form to others in this part of

Italy (Hydruntum, Butuntum, &c.): and its Greek derivation from *σύνια*, a cuttle-fish (Strab. l.c.), is in all probability fictitious. The Greek form Sipus, is adopted also by the Roman poets. (Sil. Ital. viii. 633; Lucan. v. 377.) The only mention of Sipontum in history before the Roman conquest is that of its capture by Alexander, king of Epirus, about B. C. 330. (Liv. viii. 24.) Of the manner in which it passed under the yoke of Rome we have no account; but in B. C. 194 a colony of Roman citizens was settled there, at the same time that those of Salernum and Buxentum were established on the other sea. (Liv. xxxiv. 45.) The lands assigned to the colonists are said to have previously belonged to the Arpani, which renders it probable that Sipontum itself had been merely a dependency of that city. The new colony, however, does not seem to have prospered. A few years later (B. C. 184) we are told that it was deserted, probably on account of malaria; but a fresh body of colonists was sent there (Liv. xxxix. 22), and it seems from this time to have become a tolerably flourishing town, and was frequented as a seaport, though never rising to any great consideration. Its principal trade was in corn. (Strab. vi. p. 284; Mel. iii. 4. § 7; Plin. iii. 11. s. 16; Ptol. iii. 1. § 16; Pol. x. 1.) It is, however, mentioned apparently as a place of some importance, during the Civil Wars, being occupied by M. Antonius in B. C. 40. (Appian, *B. C.* v. 56; Dion Cass. xlviii. 47.) We learn from inscriptions that it retained its municipal government and magistrates, as well as the title of a colony, under the Roman Empire (Mommsen, *Inscr. R. N.* 927—929); and at a later period Paulus Diaconus mentions it as still one of the "*urbes satis opulentae*" of Apulia. (P. Diac. *Hist. Lang.* ii. 21.) Lucan notices its situation immediately at the foot of Mount Garganus ("*subdita Sipus montibus*," Lucan, v. 377). It was, however, actually situated in the plain and immediately adjoining the marshes at the mouth of the *Candelaro*, which must always have rendered the site unhealthy; and in the middle ages it fell into decay from this cause, till in 1250 Manfred king of Naples removed all the remaining population to a site about a mile and a half further N., where he built a new city, to which he gave the name of *Manfredonia*. No ruins of the ancient city are now extant, but the site is still marked by an ancient church, which bears the name of *Sta Maria di Siponto*, and is still termed the cathedral, the archbishop of *Manfredonia* bearing officially the title of Archbishop of Sipontum. (Craven's *Southern Tour*, p. 67; Romanelli, vol. ii. p. 209.) The name of Sipontum is found in the Itineraries (*Itin. Ant.* p. 314; *Tab. Peut.*), which give a line of road proceeding along the coast from thence to Barium, passing by the Salinae at the mouth of the Palus Salapina, and therefore following the narrow strip of beach which separated that lagoon from the sea. There is still a good horse-road along this beach; but the distances given in the Itineraries are certainly corrupt. [E. H. B.]

SIPYLUS (*Σίπυλος*), a mountain of Lydia between the river Hermus and the town of Smyrna; it is a branch of Mount Tmolus, running in a north-western direction along the Hermus. It is a rugged, much torn mountain, which seems to owe its present form to violent convulsions of the earth. The mountain is mentioned even in the *Iliad*, and was rich in metal. (Hom. *Il.* xxiv. 615; Strab. i. p. 58, xii. p. 579, xiv. p. 680.) On the eastern slope of the

mountain, there once existed, according to tradition, an ancient city, called Tantalus, afterwards Sipylus, the capital of the Maeonians, which was believed to have been swallowed up by an earthquake, and plunged into a crater, afterwards filled by a lake, which bore the name of Sale or Salœ (Strab. i. p. 58, xii. p. 579; Steph. B. s. v.; Plin. v. 31; Paus. vii. 24. § 7). Pliny relates that the spot once occupied by Sipylus was successively occupied by other towns, which he calls Archæopolis, Colpe and Lebade. Pausanias (v. 13. § 4) calls the lake the marsh of Tantalus, and adds that his tomb was conspicuous near it, and that the throne of Pelops was shown on the summit of the mountain above the temple of (Cybele) Plasteia. The tops of the houses of Sipylus were believed to have been seen under the water for some time after (Paus. vii. 24. § 7); and some modern travellers, mistaking the ruins of old Smyrna for those of Sipylus, imagine that they have discovered both the remains of Sipylus and the tomb of Tantalus. Chandler (*Travels in Asia Minor*, p. 331) thought that a small lake of limpid water at the north-eastern foot of Mount Sipylus, not far from a sepulchre cut in the rock, might be the lake Sale; but Hamilton (*Researches*, i. p. 49, foll.) has shown that the lake must be sought for in the marshy district of Manissa.

In speaking of Mount Sipylus, we cannot pass over the story of Niobe, alluded to by the poets, who is said to have been metamorphosed into stone on that mountain in her grief at the loss of her children. (Hom. *Il.* xxiv. 614; Soph. *Antig.* 822; Or. *Met.* vi. 310; Apollod. iii. 5; Paus. viii. 2. § 3.) Pausanias (i. 21. § 5) relates that he himself went to Mount Sipylus and saw the figure of Niobe formed out of the natural rock; when viewed close he saw only the rock and precipices, but nothing resembling a woman either weeping or in any other posture; but standing at a distance you fancied you saw a woman in tears and in an attitude of grief. This phantom of Niobe, says Chandler (p. 331), whose observation has been confirmed by subsequent travellers, may be defined as an effect of a certain portion of light and shade on a part of Sipylus, perceivable at a particular point of view. Mount Sipylus now bears the name of *Soboundji Dagh* or *Sipili Dagh*. [L. S.]

SIRACELLÆ (*Itin. Ant.* p. 332; *It.* p. 333, Siracelle; *It. Hier.* p. 602, Siragellæ; *Tab. Pent.* Syracellæ; and in *Geog. Rav.* iv. 6, and v. 12, Syrascele), a place in Thrace, on the road from Trajanopolis to Callipolis, and on the main road to Constantinople. Its distance from Trajanopolis is variously given in the *Itin. Ant.*, and the readings of the MSS. differ,—one stating the distance to be as much as 59,000 paces, another as little as 50,000. According to Mannert (vii. p. 205), its site is near the modern *Chakom* or *Rusqesser* (?) of P. Lucas (*Trois Voy.* p. 47); but Richard places it near *Zerna*, and Lape near *Malgara* or *Migalgara*; the uncertainty of the Itinerary above mentioned being probably the cause of this discrepancy. [J. R.]

SIRAC'ENE. [SIBOC.]

SIRAC'ENI (*Σαρακενῶν*, Ptol. v. 9. §§ 17, 19), a great and mighty people of Asiatic Sarmatia on the east shore of the Maeotis, beyond the Rha and the Achaerons, in the district called by Strabo (xi. 504) *Saracena*. They appear under various names. Thas Strabo (xi. p. 506) and Mela (i. 19) call them *Siraces*; Tacitus (*Ann.* xii. 15, seq.) *Siraci* (in Strabo, xi. p. 492, *Σαρακαί*); and in an inscription (Rösch, ii. p. 1009) we find the form *Σαρδικες*.

They were governed by their own kings, and the Romans were engaged in a war with them, A.D. (Tac. *L. c.*; Strab. x. p. 504.) [T. R. B.]

SIRAE or SEIRAE. [PSOPHIA.]

SIRAE, in Macedonia. [SIRIA.]

SIRANGAE (*Σιράγγαι* or *Σιράγγα*, Ptol. ii. § 17), a tribe in the interior of Libya. [T. R. B.]

SIRBES. [XANTHUS.]

SIRBI. [SERBI.]

SIRBITUM, a city of Aethiopia, above which the mountains cease, and at a distance of 14 days' ride from Meroë. (Plin. vi. 30. s. 35.) First two particulars Mannert (x. pt. i. p. 171) is inclined to regard it as the modern *Sennar*. [T. R. B.]

SIRBO'NIS LACUS (*ὁ Σιρβωνίς ἢ Σιρβωνίς Ἄλυσ*, Herod. ii. 6; Diodor. i. 90; Ptol. ii. § 2, 20; Strab. i. pp. 50, 65, xvii. 760—763; Steph. B. s. v.; Plin. v. 12. s. 14; *Scholes-Bardil*), was a vast tract of morass, the centre of which formed the Sirbonian lake, lying between the same angle of the Delta, the *Ischias* of Suez, then Casius, and the Mediterranean sea. With the lake it was at one time connected by a natural channel (*τὸ ἔσπερμα*), running through bars of quind and shingle (*τὰ βάραθρα*), which separated the sea from the morass. The limits of the Sirbonian bog have, however, been much contracted in late ages by the elevation of the sea-borders and the drying of the sands, and the lake is now of inconsiderable extent. The Sirbonian region is celebrated in history for having been the scene of at least the partial destruction of the Persian army in a.c. 338, when Darius Ochus was leading it, after the sailing of Sidon, to Aegypt, in order to restore the authority of Persia in that kingdom. Diodorus (i. 30) has probably exaggerated the serious disaster into a total annihilation of the invading host, and Mela (P. L. ii. 293) has adopted the statement of Diodorus when he speaks of

“—— that Serbonian bog
Betwixt Damietta and Mount Casius;
Where armies whole have sunk.”

The same Persian army, however, afterwards met Pelusium, Bubastis, and other cities of the Delta. The base of the Deltaic triangle of Aegypt was reckoned by Herodotus (ii. 6) from the bay of Phthine to the lake of Serbonia. [W. R. D.]

SIRENU'SAE I'NSULAE. [MIRAVIAE P'NOMONTORIUM.]

SIRICAE, a place in Cappadocia on the road from Comana to Melitene, and 24 miles NW. of the first. (*Itin. Ant.* pp. 210, 211.) According to Lape, near the *Bembodagh*. [T. R. B.]

SIRIO, in Gallia, is placed by the *Itin.* on a road from Bardigala (*Bordeaux*) to Agrinza (*Agon*). The distance is probably corrupt in the *Table*, which places Sirio x. from *Bordeaux*; for the true distance is xv. or xvi. Gallic leagues. D'Anville finds Sirio (the *Pont de Siron*) near the point where the small river *Siron* or *Siron* joins the *Garonne* on the left bank. [G. L.]

SIRIS (*Σίρις*: *Eth.* *Σιρίρις*, but also *Σίρις*; *Sirites*), an ancient city of Magna Graecia, situated at the mouth of the river of the same name flowing into the Tarentine gulf, and now called the *Siron*. There is no doubt that Siris was a Greek colony, and that at one time it attained to a great extent of wealth and prosperity; but its history is extremely obscure and uncertain. Its first origin was generally ascribed to a Trojan colony; and, as a proof of this

an ancient statue of Minerva was shown there which claimed to be the true Trojan Palladium (Strab. vi. p. 264; Lycophr. *Alex.* 978—985). Whatever may have been the origin of this legend, there seems no doubt that Siris was originally a city of the Chones, the native Oenotrian inhabitants of this part of Italy (Strab. l. c.). A legend found in the Etymologicum (*s. v. Σίρις*), according to which the city derived its name from a daughter of Morges, king of the Siculi, evidently points in the same direction, as the Morges also were an Oenotrian tribe. From these first settlers it was wrested, as we are told, by a body of Ionian colonists from Colophon, who had fled from their native city to avoid the dominion of the Lydians. (Strab. l. c.; Athenae. xii. p. 523.) The period of this emigration is very uncertain; but it appears probable that it must have taken place not long after the capture of the city by Gyges, king of Lydia, about 700—690 B. C. Archilochus, writing about 660 B. C., alludes to the fertility and beauty of the district on the banks of the Siris; and though the fragment preserved to us by Athenaeus does not expressly notice the existence of the city of that name, yet it would appear from the expressions of Athenaeus that the poet certainly did mention it; and the fact of this colony having been so lately established there was doubtless the cause of his allusion to it (Archil. *ap. Athen.* xii. p. 523). On the other hand, it seems clear from the account of the settlement at Metapontum (Strab. vi. p. 265), that the territory of Siris was at that time still unoccupied by any Greek colony. We may therefore probably place the date of the Ionian settlement at Siris between 690 and 660 B. C. We are told that the Ionic colonists gave to the city the name of Polieum (Πολίειον, Strab. vi. p. 264; Steph. B. *s. v. Σίρις*); but the appellation of Siris, which it derived from the river, and which seems to have been often given to the whole district (ἡ Σίρις, used as equivalent to ἡ Σιρῖτις), evidently prevailed, and is the only one met with in common use. Of the history of Siris we know literally nothing, except the general fact of its prosperity, and that its citizens indulged in habits of luxury and effeminacy that rivalled those of their neighbours the Sybarites. (Athen. xii. p. 523.) It may be received as an additional proof of their opulence, that Damasus, a citizen of Siris, is noticed by Herodotus among the suitors for the daughter of Cleisthenes of Sicyon, about 580—560 B. C., on which occasion Siris and Sybaris among the cities of Italy alone furnished claimants. (Herod. vi. 127.) This was probably about the period that Siris was at the height of its prosperity. But an Ionian city, existing as it did in the midst of the powerful Achaean colonies, must naturally have been an object of jealousy to its neighbours; and hence we are told that the Metapontines, Sybarites, and Crotonians formed a league against Siris; and the war that ensued ended in the capture of the city, which appears to have been followed by the expulsion of the inhabitants (Justin. xx. 2). The date of the destruction of Siris cannot be fixed with any approach to certainty: it was probably after 550 B. C., and certainly preceded the fall of its rival Sybaris in B. C. 510. Its ruin appears to have been complete, for we meet with no subsequent mention of the city, and the territory is spoken of as open to colonisation at the time of the Persian War, B. C. 480. (Herod. viii. 62.)

Upon that occasion we learn incidentally that the Athenians considered themselves as having a claim of old standing to the vacant district of the Sirites,

and even at one time thought of removing thither with their wives and families. (Herod. l. c.) The origin of this claim is unknown; but it seems pretty clear that it was taken up by the Athenian colonists who established themselves at Thurii in B. C. 443, and became the occasion of hostilities between them and the Tarentines. These were at length terminated by a compromise, and it was agreed to found in common a fresh colony in the disputed territory. This appears to have been at first established on the site of the ancient city, but was soon after transferred to a spot 3 miles distant, where the new colony received the name of Heracleia, and soon rose to be a flourishing city. (Strab. vi. p. 264; Diod. xii. 36.) [HERACLEIA.] According to Strabo, Siris still continued to exist as the port or naval station of Heracleia; but no other mention of it is found, and it is not clear whether Strabo himself meant to speak of it as still subsisting in his day. No remains of it are extant, and the exact site does not appear to have been determined. But it may be placed on the left bank of the river Siris (now called the *Sinno*), at or near its mouth; a position which well accords with the distance of 24 stadia (3 miles) from Heracleia, the remains of which are visible at *Policoro*, near the river *Agri*, the ancient *Aciris*. [HERACLEIA.]

The river Siris is mentioned by Lycophron (*Alex.* 982), as well as by Archilochus in a passage already cited (*ap. Athen.* xii. p. 523); but the former author calls it *Σίρις*, and its modern name of *Sinno* would seem to be derived from an ancient period; for we find mention in the Tabula of a station 4 miles from Heracleia, the name of which is written *Sennum*, probably a corruption for *Ad Sinnum* or *Sinnum*. The Siris and *Aciris* are mentioned in conjunction by Pliny as well as by Strabo, and are two of the most considerable streams in Lucania. (Plin. iii. 11. s. 15; Strab. vi. p. 264.) The name of the former river is noticed also in connection with the first great battle between Pyrrhus and the Romans, B. C. 280, which was fought upon its banks (Plut. *Pyrrh.* 16). It has been absurdly confounded by Florus and Orosius with the Liris in Campania. (Flor. i. 18. § 7; Oros. iv. 1.)

The fertile district of the Siritis (ἡ Σιρῖτις or *Σειρῖτις*) is a portion of the level tract or strip of plain which borders the gulf of Tarentum from the neighbourhood of *Rocca Imperiale* to the mouth of the *Bradano*. This plain stretches inland from the mouth of the *Sinno* to the foot of the hill on which stands the modern city of *Turi*, about 8 miles from the sea. It is a tract of extraordinary natural fertility, but is now greatly neglected, and, in common with all this coast, desolated by malaria. [E. H. B.]

SIRIS, SIRAE, SERRHAE (Σίρις, Herod. viii. 115; Sirae, Liv. xiv. 4; Σέρραι, Hierocl.: *Eth. Sipontinensis*, Herod. v. 15; Steph. B.: *Serrés*), a town of Macedonia, standing in the widest part of the great Strymonic plain on the last slopes of the range of mountains which bound it to the NE. Xerxes left a part of his sick here, when retreating to the Hellespont (Herod. l. c.): and P. Aemilius Paulus, after his victory at Pydna, received at this town, which is ascribed to Odomantice, a deputation from Perseus, who had retired to Samothrace. (Liv. l. c.) Little is known of Serrhae, which was the usual form of the name in the 5th century (though from two inscriptions found at *Serrés* it appears that Sirrha, or Sirrhæ, was the more ancient orthography, and that which obtained at least until the division of the empire), until the great spread of

the Servian kingdom. Stephen Dusan in the 14th century seized on this large and flourishing city, and assumed the imperial crown here, where he established a court on the Roman or Byzantine model, with the title of Emperor of Romania, Sclavonia, and Albania. (Niceph. Greg. p. 467.) After his death a partition of his dominions took place but the Greeks have never since been able to recover their former preponderance in the provinces of the Strymonic valley. Sultan Murad took this town from the Servians, and when Sigismund, king of Hungary, was about to invade the Ottoman dominions, Bayezid (Bajazet Ilderim) summoned the Christian princes who were his vassals to his camp at Serrhae, previous to his victory at Nicopolis, A.D. 1396. (J. von Hammer, *Gesch. des Osman. Reiches*, vol. i. pp. 193, 246, 600.)

Besides the Macedonian inscriptions of the Roman empire found by Leake (*Inscr.* 126) and Cousinéry, the only other vestige of the ancient town is a piece of Hellenic wall faced with large quadrangular blocks, but composed within of small stones and mortar forming a mass of extreme solidity. Servian remains are more common. (Leake, *Northern Greece*, vol. iii. pp. 200—210.) [E. B. J.]

SIRMIO (*Sermione*), a narrow neck or tongue of land, projecting out into the Lake Benacus (*Lago di Garda*), from its southern shore. Though a conspicuous and picturesque object in all views of the lake from its southern shores, it is unnoticed by any of the geographers, and its name would probably have been unknown to us, but for the circumstance that Catullus, who was a native of the neighbouring Verona, had a villa on its shores, and has sung the praises of Sirmio in one of the most charming odes in the Latin language (Catull. xxxi.). The name of Sirmio is, however, found in the Itineraries, which place a "Sermione mansio" on the road from Brixia to Verona, and just midway between the two cities, 22 M. P. from each (*Itin. Ant.* p. 127). This must, however, have been situated at the entrance of the peninsula, probably where a road turned off to it, as it is clear that the highroad could never have turned aside to the promontory itself.

Extensive substructions and other remains of an ancient villa are still visible at the extremity of the promontory, where it juts out into the lake; but these undoubtedly belong to an abode on a much more magnificent scale than the villa of Catullus, and probably belong to some villa of the imperial times, which had replaced the humbler dwelling of the poet. [E. H. B.]

SIRMIMUM (*Σίρμιον*), an important city in the south-eastern part of Lower Pannonia, was an ancient Celtic place of the Taurisci, on the left bank of the Savus, a little below the point where this river is joined by the Bacontius (Plin. iii. 28.) Zosimus (ii. 18) is mistaken when he asserts that Sirmium was surrounded on two sides by a tributary of the Ister. The town was situated in a most favourable position, where several roads met (*It. Ant.* pp. 124, 131; *It. Hieros.* p. 563), and during the wars against the Dacians and other Danubian tribes, it became the chief dépôt of all military stores, and gradually rose to the rank of the chief city in Pannonia. (Herodian, vii. 2.) Whether it was ever made a Roman colony is not quite certain, though an inscription is said to exist containing the words Dec. Colon. Sirmiensi. It contained a large manufactory of arms, a spacious forum, an imperial palace, and other public build-

ings, and was the residence of the admiral of the first Flavian fleet on the Danube. (Amm. Marc. xvii. 13, xix. 11; *Notit. Imp.*) The emperor Probus was born at Sirmium. (Vopisc. Prob. 3, 21; comp. Strab. ii. p. 134; Ptol. ii. 16. § 8, viii. 7. § 6; Steph. B. s. v.; Eutrop. ix. 17; Aethicus, p. 715, ed. Gronov.; Geog. Rav. iv. 19.) The city is mentioned for the last time by Procopius (*B. Goth.* iii. 33, 34), as being in the hands of the Avari, but when and how it perished are questions which history does not answer. Extensive ruins of it are still found about the modern town of *Mitrovitz*. (See Orelli, *Inscript.* n. 3617; Marsili, *Danubius*, p. 246, foll.) [L. S.]

SIRNIDES, a group of small islands off the promontory Sammonium in Crete. (Plin. iv. 12. a. 20.)

SIROC (*Σίρων*), a town of Parthyene, noticed by Isidorus. (*Stath. Parth.* c. 12, ed. Müller.) It is not clear whether there is any corresponding modern town; but Rennell thinks it is represented by the present *Serakhs*. (Geog. Herod. p. 297.) Ptolemy places a district which he calls Siracene among the Astabeni, a people who occupied part of Hyrcania (vi. 9. § 5). It is not impossible that Sirac and Siracene may be thus connected. [V.]

SISAPON (*Σισάπων*, Strab. iii. p. 142), a considerable town in Hispania Baetica. (Cic. Phil. ii. 19; Plin. iii. 1. s. 3.) It lay N. of Corduba, between the Baetis and the Anas, and was celebrated for its silver mines and veins of cinnabar (Strab. l. c.; Vitruv. vii. 9; Plin. xxxiii. 7. s. 40; Dioscor. v. 109.) The town of *Almaden* in the *Sierra Morena*, with which Sisapon is identified, still possesses a rich mine of quicksilver. "The mine is apparently inexhaustible, becoming richer in proportion as the shafts deepen. The vein of cinnabar, about 25 feet thick, traverses rocks of quartz and slate; and runs towards *Almadenjoa*. Virgin quicksilver occurs also in pyrites and hornstein." "Between 20,000 and 25,000 quintals of mercury are now procured annually." (Ford, *Handbook of Spain*, p. 70; comp. Laborde, *Itin.* ii. p. 133; Dillon's *Travels*, ii. pp. 72, 77.) The name of this town is variously written. It appears on coins as "Sisipo" (Sestini, p. 87), whilst others have the correct name. (Flores, *Med.* iii. p. 119; Mionnet, i. p. 25, and Supp. i. p. 114.) The form "Sisalone" (*Itin. Ant.* p. 444) is probably corrupt. It appears to be the same town called *Σισαρόν* by Ptolemy (ii. 6. § 59), who, however, places it in the territory of the Oretani, in Hispania Tarraconensis, on which indeed it borders. [T. H. D.]

SISAR. [USAR.]

SISARA (*Σισάρα*, Ptol. iv. 3. § 17), a lake in Africa Propria, in the neighbourhood of Hippo Diarrhytus. Now *Benizert* or *Bizerta*. [T. H. D.]

SISARACA (*Σισαράκα*, Ptol. ii. 6. § 32), a town of the Marbogi or Turmodigi in Hispania Tarraconensis. For coins, see Sestini, p. 197. [T. H. D.]

SISAURANUM (ὡς *Σισαυρανόν*, Procop. Pers. ii. 19, de *Aedif.* ii. 4), a fortress of Mesopotamia, above Dara, noticed by Procopius. It is not elsewhere mentioned. [V.]

SISCIA, SEGESTA, or SEGE'STICA (*Σίσκία, Σεγέστα, Σεγεστική*), a great town in the south of Upper Pannonia, on the southern bank of the Savus, on an island formed by that river and two others, the Colapis and Odra, a canal dug by Tiberius completing the island. (Dion Cass. xlix. 37.) It was situated on the great road from Aemona to Sirmium.

(*It. Ant.* pp. 259, 260, 265, 266, 272, 274; *Plin.* iii. 28.) According to Pliny the name Segestica belonged only to the island, and the town was called Siscia; while Strabo (*vii.* p. 314) says that Siscia was a fort in the neighbourhood of Segestica; but if this was so, it must be supposed that subsequently the fort and town became united as one place. (*Comp.* Strab. *iv.* p. 202, *v.* p. 214, *vii.* p. 218; Appian, *Illyr.* 16, 23, &c.) Siscia was from the first a strongly fortified town; and after its capture by Tiberius, in the reign of Augustus (Appian, *Dion. Cass.*, *ll.* cc.; Vell. Pat. *ii.* 113), it became one of the most important places of Pannonia; for being situated on two navigable rivers, it not only carried on considerable commerce (Strab. *v.* pp. 207, 214), but became the central point from which Augustus and Tiberius carried on their undertakings against the Pannonians and Illyrians. Tiberius did much to enlarge and embellish the town, which as early as that time seems to have been made a colonia, for Pliny mentions it as such: in the time of Septimius Severus it received fresh colonists, whence in inscriptions it is called Col. Septimia Siscia. The town contained an imperial mint, and the treasury for what was at a later time called the province Savia; at the same time it was the station of the small fleet kept on the Savus. Siscia maintained its importance until Sirmium began to rise, for in proportion as Sirmium rose, Siscia sank and declined. (*Comp.* Zosim. *ii.* 48; Orelli, *Inscript.* n. 504, 505, 2703, 3075, 3346, 4993.) The modern town of *Sisek*, occupying the place of the ancient Siscia, contains many interesting remains of antiquity. (Mariti, *Danubius*, p. 47; Schönwiesner, *Antiq. Sabariae*, p. 52, foll.; Muchar, *Norikum*, i. p. 159.) [L. S.]

SITACE (Σιτάκη), a large town, first noticed by Xenophon (*Anab.* *ii.* 4. § 13), situated about 8 parasangs from the Median Wall, and 15 from the Tigris and the mouth of the Phrycus. The exact situation cannot be now determined, but several travellers have noticed, in this neighbourhood, extensive ancient remains, which may perhaps belong to this city. (Mannert, *v.* pt. *ii.* p. 281; Niebuhr, *ii.* p. 305; Ives, *Travels*, &c. p. 133.) [V.]

SITACUS (Σιτάκος, Arrian, *Ind.* c. 38), a river of Persia, to which Nearchus came in his celebrated coasting voyage. It is in all probability the same as that called by Pliny Sitionagrus (*vi.* 23. s. 26); although his statement that, from its mouth, an ascent could be made to Pasargada in 7 days, is manifestly erroneous. There is no reason to doubt that it is at present represented by a stream called *Sita-Rhegion*. (Vincent, *Voy. of Nearchus*, i. p. 385; D'Anville, *Mém. de l'Acad.* xxx. p. 158; Ritter, *Erldkunde*, *vii.* p. 763.) [V.]

SITHONIA (Σιθωνία, Herod. *vii.* 123; Steph. B.; Virg. *Bucol.* x. 66; Hor. *Carm.* i. 18. 9: *Longos*), the central of the three prongs which run out into the Aegean from the great peninsula of Chalcidice, forming a prolongation to the peak called *Solomon* or *Kholomón*. The Sithonian peninsula, which, though not so billy as that of Acte, is not so inviting as Pallene, was the first, it appears, to be occupied by the Chalcidic colonists. A list of its towns is given in CHALCIDICE. [E. B. J.]

SITIA, a place in Hispania Baetica. (*Plin.* *iii.* 1. s. 3.) [T. H. D.]

SITIFI (Σιτίφι, Ptol. *iv.* 2. § 34), a town in the interior of Mauretania Caesariensis, situated in an extensive plain not far from the borders of

Numidia, and on the road from Carthage to Cirta. (*Itin. Ant.* pp. 24, 29, 31, &c.; *comp.* Amm. Marc. xxviii. 6.) At first, under the Numidian kings, it was but an unimportant place; but under the Roman dominion it became the frontier town of the new province of Numidia, was greatly enlarged and elevated to be a colony; so that on the subsequent division of Mauretania Caesar. into two smaller provinces it became the capital of Mauretania Sitifensis. Under the dominion of the Vandals, it was the capital of the district Zabé. (*Zabé*, Procop. *B. Vand.* *ii.* 20.) It is still called *Setif*, and lies upon an eminence in a delightful neighbourhood. Some ruins of the ancient town are still to be seen. (Shaw's *Travels*, p. 49.) [T. H. D.]

SITILLIA, in Gallia, is placed by the Table on a road from Aquae Bormonis (*Bourbon l'Archambault*) to Pocrinium, supposed to be *Perrigni*. Sitillia is xvi. from Aquae Bormonis and xiii. from Pocrinium. Sitillia is probably a place named *Tiel*. (D'Anville *Notice*, &c.) [G. L.]

SITIOGAGUS. [SITACUS.]

SITOMAGUS, a town of the Iceni or Simeni, in the E. part of Britannia Romana. (*Itin. Ant.* p. 480.) Camden (p. 456) identifies it with *Thetford* in Norfolk, whilst others seek it at *Stowmarket*, *Southwold*, and *Saxmundham*. In the *Tab. Peut.* it is erroneously written "Sinomachus." [T. H. D.]

SITONES, a population continuous with the Suiones, from whom they differ only in being governed by a female: "in tantum non modo a libertate sed etiam a servitute degenerant. Hic Sueviae finis." (*Tac. Germ.* 45.) The Sitonian locality is some part of Finland; probably the northern half of the coast of the Gulf of Bothnia.

The statement that they were under a female rule is explained as follows. The name by which the East Bothnian Finlanders designate themselves is *Kainu-laiset* (in the singular *Kainu-lainen*). The Swedes call them *Qwaens* (*Kwaïns*). The mediaeval name for their country is *Cajania*. Now *grima* in the Norse language = woman, being our words *queen* and *quean*; and in the same Norse tongue the land of the *Qwaens* would be *Cvena-land*; as it actually is, being *Cwaen-land* (*Queen-land*) in Anglo-Saxon. Hence the statement of Tacitus arises out of information concerning a certain *Cwaen-land*, erroneously considered to be a *terra feminarum*, instead of a *terra Quenorum*. The reader who thinks this fanciful should be informed that in Adam of Bremen, writing in the 12th century, when the same country comes under notice, the same confusion appears, and that in a stronger form. The Sitonian country is actually *terra feminarum*. More than this, the *feminae* become *Amazons*: "circa haec litora Baltici maris ferunt esse Amazonas, quod nunc terra *feminarum* dicitur, quas aquae gustu aliqui dicunt concipere. . . . Hae simul viventes, spernunt consortia virorum, quas etiam, si advenierint, a se viriliter repellunt," c. 228. (Zeuss, *Die Deutschen*, &c., s. v. *Kwenen*.)

It is worth noticing that King Alfred's locality of the *Cwenas* is, in respect to their relations to the *Sorias*, exactly that of Tacitus,—*Cvena-land* succeeding *Svea-land*.

The Sitones seem to have been the ancient representatives of the Finns of Finland,—the Fenni of the ancients being the Laps. This is not only what the words Sitones and *Qwaen* suggest, but the inference from the word Fenni also. To the Finlander, Fin is a strange name. The Swede calls him *Qwaen*;

he calls himself *Suoma-lainen* or *Hamelainen*. On the other hand, it is the Lap of Finmark that is called a Fin, and it is the Norwegian who calls him so. [FENN.] [R. G. L.]

SITTACE (*Σιττάκις*, Ptol. vi. 1. § 6), a town of ancient Assyria, at the southern end of this province, on the road between Artemita and Susa. (Strab. xvi. p. 744.) It is called Sitta (*Σίττα*) by Diodorus (xvii. 110). It was the capital of the district of Sittacene, which appears to have been called in later times Apolloniatis (Strab. xi. p. 524), and which adjoined the province of Susia (xv. p. 732). Pliny, who gives the district of Sittacene a more northerly direction, states that it bore also the names of Arbelitis and Palaestine (vi. 27. s. 31). It is probably the same country which Curtius calls Satrapene (v. 2). [V.]

SITTACENE. [SITTACE.]

SITTOCATIS (*Σιττοκάτις*, Arrian, *Ind.* c. 4), a navigable river, which, according to Arrian, flowed into the *Ganges*. It has been conjectured by Mannert that it is the same as the present *Sind*, a tributary of the *Jumna*, near *Rampur* (v. pt. i. p. 69). [V.]

SIUPH (*Σιούφ*, Herod. ii. 172), a town of the Saitic nome in the Delta of Egypt. It does not appear to be mentioned by any other writer besides Herodotus. [T. H. D.]

SIVA (*Σίβωα*), a town in the prefecture of Cilicia in Cappadocia, on the road from *Mazaca* to *Tavium*, at a distance of 22 miles from *Mazaca*. (Ptol. v. 6. § 15; *Tab. Peut.*) [L. S.]

SMARAGDUS MONS (*Σμαργάδος ὄρος*, Ptol. iv. 5. § 15), was a portion of the chain of hills which runs along the western coast of the Red Sea from the Heropolite gulf to the straits of *Bab-el-Mandeb*. Between lat. 24° and 25° in this range is the Mount *Smaragdus*, the modern *Djebel Zabareh*, which derived its name from the emeralds found there, and early attracted by its wealth the Egyptians into that barren region. The principal mine was at *Djebel-Zabareh*; but at *Bender-el-Sogheir* to N., and at *Sekket* to S., each a portion of Mount *Smaragdus*, there are traces of ancient mining operations. Small emeralds of an inferior quality are still found in this district. (Mannert, *Geograph.* vol. x. p. 21.) Strabo (xvii. p. 815) and Pliny (xxxvii. 15. s. 16) mention the wealth obtained from these mines. At *Sekket* there is a temple of the Ptolemaic era; but the mines were known and wrought at least as early as the reign of Amunoph III., in the 18th dynasty of the native kings of Egypt. [W. B. D.]

SMENUS. [LACONIA, p. 114, b.]

SMILA. [CROSSAEA.]

SMYRNA (*Σμύρνα*; *Ἑθ. Σμυρναῖος*, *Smyrnaeus*; *Smyrna* or *Izmir*), one of the most celebrated and most flourishing cities in Asia Minor, was situated on the east of the mouth of the *Hermus*, and on the bay which received from the city the name of the *Smyrnaeus Sinus*. It is said to have been a very ancient town founded by an Amazon of the name of *Smyrna*, who had previously conquered Ephesus. In consequence of this *Smyrna* was regarded as a colony of Ephesus. The Ephesian colonists are said afterwards to have been expelled by Aeolians, who then occupied the place, until, aided by the Colophonians, the Ephesian colonists were enabled to re-establish themselves at *Smyrna*. (Strab. xiv. p. 633; Steph. B. s. v.; Plin. v. 31.) Herodotus, on the other hand (i. 150), states that *Smyrna* originally belonged to

the Aeolians, who admitted into their city some Colophonians exiles; and that these Colophonians afterwards, during a festival which was celebrated outside the town, made themselves masters of the place. From that time *Smyrna* ceased to be an Aeolian city, and was received into the Ionian confederacy (Comp. Paus. vii. 5. § 1.) So far then as we are guided by authentic history, *Smyrna* belonged to the Aeolian confederacy until the year B. C. 688, when by an act of treachery on the part of the Colophonians it fell into the hands of the Ionians, and became the 13th city in the Ionian League. (Herod. l. c.; Paus. l. c.) The city was attacked by the Lydian king Gyges, but successfully resisted the aggressor (Herod. i. 14; Paus. ix. 29. § 2.) Alyattes, however, about B. C. 627, was more successful; he took and destroyed the city, and henceforth, for a period of 400 years, it was deserted and in ruins (Herod. i. 16; Strab. xiv. p. 646), though some inhabitants lingered in the place, living *κωμῆδόν*, as is stated by Strabo, and as we must infer from the fact that Scylax (p. 37) speaks of *Smyrna* as still existing. Alexander the Great is said to have formed the design of rebuilding the city (Paus. vii. 5. § 1); but he did not live to carry this plan into effect; it was, however, undertaken by Antigonus, and finally completed by Lysimachus. The new city was not built on the site of the ancient one, but at a distance of 20 stadia to the south of it, on the southern coast of the bay, and partly on the side of a hill which Pliny calls *Mastusia*, but principally in the plain at the foot of it extending to the sea. After its extension and embellishment by Lysimachus, new *Smyrna* became one of the most magnificent cities, and certainly the finest in all Asia Minor. The streets were handsome, well paved, and drawn at right angles, and the city contained several squares, porticoes, a public library, and numerous temples and other public buildings; but one great drawback was that it had no drains. (Strab. l. c.; *Marm. Ozon.* n. 5.) It also possessed an excellent harbour which could be closed, and continued to be one of the wealthiest and most flourishing commercial cities of Asia; it afterwards became the seat of a conventus juridicus which embraced the greater part of Aeolis as far as *Magnesia*, at the foot of Mount Sipylus. (Cic. p. Flacc. 30; Plin. v. 31.) During the war between the Romans and Mithridates, *Smyrna* remained faithful to the former, for which it was rewarded with various grants and privileges. (Liv. xxxv. 42. xxxvii. 16, 54, xxxviii. 39.) But it afterwards suffered much, when Trebonius, one of Caesar's murderers, was besieged there by Dolabella, who in the end took the city, and put Trebonius to death. (Strab. l. c.; Cic. *Phil.* xi. 2; Liv. *Epit.* 119; Dion Cass. xlvii. 29.) In the reign of Tiberius, *Smyrna* had conferred upon it the equivocal honour of being allowed, in preference to several other Asiatic cities, to erect a temple to the emperor (Tac. *Ann.* iii. 63, iv. 56). During the years A. D. 178 and 180 *Smyrna* suffered much from earthquakes, but the emperor M. Aurelius did much to alleviate its sufferings (Dion Cass. lxxi. 32.) It is well known that *Smyrna* was one of the places claiming to be the birthplace of Homer, and the *Smyrnaeans* themselves were so strongly convinced of their right to claim this honour, that they erected a temple to the great bard, or a *Ἱομήτειον*, a splendid edifice containing a statue of Homer (Strab. l. c.; Cic. p. *Arch.* 8); they even showed a cave in the neigh-

bourhood of their city, on the little river Meles, where the poet was said to have composed his works. Smyrna was at all times not only a great commercial place, but its schools of rhetoric and philosophy also were in great repute. The Christian Church also flourished through the zeal and care of its first bishop Polycarp, who is said to have been put to death in the stadium of Smyrna in A. D. 166 (Iren. iii. p. 176). Under the Byzantine emperors the city experienced great vicissitudes: having been occupied by Tzachas, a Turkish chief, about the close of the 11th century, it was nearly destroyed by a Greek fleet, commanded by John Ducas. It was restored, however, by the emperor Comnenus, but again subjected to severe sufferings during the siege of Tamerlane. Not long after it fell into the hands of the Turks, who have retained possession of it ever since. It is now the great mart of the Levant trade. Of Old Smyrna only a few remains now exist on the north-eastern side of the bay of Smyrna; the walls of the acropolis are in the ancient Cyclopean style. The ancient remains of New Smyrna are more numerous, especially of its walls which are of a solid and massive construction; of the stadium between the western gate and the sea, which, however, is stripped of its marble seats and decorations; and of the theatre on the side of a hill fronting the bay. These and other remains of ancient buildings have been destroyed by the Turks in order to obtain the materials for other buildings; but numerous remains of ancient art have been dug out of the ground at Smyrna. (Chandler's *Travels in Asia*, pp. 76, 87; Prokesch, *Denkwürdigkeiten*, i. p. 515, foll.; Hamilton, *Researches*, i. p. 46, foll.; Sir C. Fellows, *Asia Minor*, p. 10, foll.) [L. S.]

COIN OF SMYRNA.

SMYRNAEUS SINUS (Σμυρναῖον κόλπος), also called the bay of Hermus (Ἑρμείου κόλπος), from the river Hermus, which flows into it, or the bay of Meles (Μελήτρον κ.), from the little river Meles, is the bay at the head of which Smyrna is situated. From its entrance to the head it is 350 stadia in length, but is divided into a larger and a smaller basin, which have been formed by the deposits of the Hermus, which have at the same time much narrowed the whole bay. A person sailing into it had on his right the promontory of Celaenae, and on his left the headland of Phocaea; the central part of the bay contained numerous small islands. (Strab. xiv. p. 645; Pomp. Mela, i. 17; Vit. Hom. 2; Steph. B. s. v. Σμύρνα.) [L. S.]

SOANAS (Σοάνας, Ptol. vii. 4. § 3), a small river of Taprobane (Ceylon), which flowed into the sea on the western side of the island. Lassen (in his map) calls it the Kilau. On its banks lived a people of the same name, the Soani. (Ptol. vii. 4. § 9.) [V.]

SOANDA or SOANDUM (Σοάνδα or Σοάνδον), a castle of Cappadocia, between Therna and Sacoena. (Strab. xiv. p. 663; It. Ant. p. 202.) The

same place seems to be alluded to by Frontinus (iii. 2. § 9), who calls it Suenda. Hamilton (*Researches*, ii. p. 286, foll.) identifies it with *Soghanli Dere*, a place situated on a rock, about 8 miles on the south-west of *Karahissar*, but other geographers place it in a different locality. [L. S.]

SOAS. [SONUS.]

SOATRA (Σοάρτα), or probably more correctly Savatra (Σαβάρτα), as the name appears on coins, was an open town in Lycaonia, in the neighbourhood of Apameia Cibotus, on the road from thence to Laodiceia. The place was badly provided with water (Strab. xiv. p. 668; Ptol. v. 4. § 12; Hierocl. p. 672; Tab. Peut.), whence travellers are inclined to identify its site with the place now called *Su l'ermess*, that is, "there is no water here." [L. S.]

SOATRAE, a town in Lower Moesia (Itin. Ant. p. 229), variously identified with *Pravadi* and *Kiopikeni*. In the Tab. Peut. and by the Geogr. Rav. (iv. 6) it is called *Scatrae*. [T. H. D.]

SOBU'RA (Σοβοῦρας ἐμπορίον), a place on the eastern coast of *Hindustan*, mentioned in the Periplus (p. 34). It is probably the same as the modern *Sabras*, between *Pondicherry* and *Madras*. (See Lassen's map.) [V.]

SOCANAA or SOCANDA (Σοκάνδα or Σοκάνδα), a small river of Hyrcania, noticed by Ptolemy (vi. 9. § 2). It is probably the present *Gurgan*. Ammianus Marcellinus speaks of a place called Socunda, on the shores of the Hyrcanian or Caspian sea (xxiii. 6). [V.]

SO'CRATIS I'NSULA (Σοκράτους νῆσος), an island of the Sinus Arabicus (Red Sea), placed by Ptolemy (vi. 7. § 44), who alone mentions it, in long. 70°, lat. 16° 40', and therefore off the N. coast of his *Elisari*, the Sabaei of other geographers, 30' east of his *Accipitrum Insula* (Ἱερδάρων) and 2° 20' south of them. They are probably identical with the *Farsan* islands, of the E. I. Company's Chart, described by commanders Moresby and Elwon, in their *Sailing Directions* for the Red Sea, as "the largest all along this coast, situated upon the extensive banks west of *Gheesan*. They are two in number, but may be considered as forming one island, being connected by a sandy spit of shoal-water, across which camels frequently pass from one to the other." The westernmost is *Farsan Kebeer* (= the greater), 31 miles in length, extending from lat. 16° 35' long. 42° 13' to lat. 16° 54' long. 41° 47'. *Farsan Seggeer* (= the smaller) is, on its NE. side, 18 miles in length, and extends to lat. 17° 1½': their whole breadth is only 12 miles. The land is of considerable height, interspersed with some plains and valleys: the hilly parts are coral rock (pp. 38, 39; C. Müller, *Tabulas in Geog. Graec. Min. tab. viii*). In other comparative atlases, adopted by Arrowsmith, the modern name is given as *Kotumbul Is.*, considerably to the N. of the *Farsan*, described by the same writers as lying only 2 miles from the main, a small island about ½ a mile in length and therefore not likely to have been noticed by Ptolemy, who obviously mentions only the more important. (*Sailing Directions*, p. 50.) Mannert identifies the Socratis Insula with Niebuhr's *Firan*, where the traveller says the inhabitants of *Loheia* have a pearl fishery. This name does not occur in the "Sailing Directions," but is probably the same as *Farsan*. (Mannert, *Geographie von Arabien*, p. 49; Niebuhr, *Description de l'Arabie*, p. 201.) [G. W.]

SOCCUNDA. [SOCANAA.]

SODOM (τὰ Σόδομα, Strab. xv. p. 764; Steph. B.

s. v.; Sodoma, -orum, Tertul. *Apolog.* 40; Sodoma, -ae, Sever. Sulp. i. 6; Sedul. *Carm.* i. 105; Sodomum, Solin. 45. § 8; Sodomi, Tertull. *Carm. de Sodom.* 4), the infamous city of Canaan situated near the Dead Sea in an exceedingly rich and fruitful country, called in its early history "the plain of Jordan" and described as "well watered everywhere, before the Lord destroyed Sodom and Gomorrah, even as the garden of the Lord, like the land of Egypt, as thou comest to Zoar." (*Gen.* xiii. 10—12.) It is also reckoned one of "the cities of the plain" (xiii. 12. xix. 29), and was probably the capital of the Pentapolis, which consisted of Sodom, Gomorrah, Admah, Zeboiim, and Bela, afterwards Zoar (*Deut.* xxix. 23; *Gen.* xiv. 8, xix. 22), all of which towns, however, had their several petty kings, who were confederate together against Chedorlaomer king of Elam and his three allies, Amraphel king of Shinar, Arioch king of Ellasar, and Tidal king of nations. After Chedorlaomer had succeeded in reducing these sovereigns to subjection, they served him twelve years; in the thirteenth year they revolted, and in the fourteenth year were again vanquished by their northern enemies, when the conquerors were in their turn defeated by Abraham, whose nephew Lot had been carried captive with all his property. The sacred historian has preserved the names of four of the petty kings who at this time ruled the cities of the plain, viz. Bera of Sodom, Birsha of Gomorrah, Shinab of Admah, and Shemeber of Zeboiim; and the scene of the engagement was "the vale of Siddim, which is the salt sea" (*Gen.* xiv.), an expression which seems clearly to imply that the battle-field, at least, was subsequently submerged; the admission of which fact, however, would not involve the consequence that no lake had previously existed in the plain; although this too may be probably inferred from the earlier passage already cited, which seems to describe a wide plain watered by the river Jordan, as the plain of Egypt is irrigated by the Nile: and as this vale of Siddim was full of slime-pits (beds of bitumen), its subsidence naturally formed the Asphalt Lake. The catastrophe of the cities, as described in the sacred narrative, does not certainly convey the idea that they were submerged, for fire and not water was the instrument of their destruction (*Gen.* xix.; *S. Jude* 7); so that the cities need not necessarily have been situated in the middle of the valley, but on the sloping sides of the hills which confined the plain, from which they would still be appropriately denominated "cities of the plain." (Reland, *Palaestina*, p. 255.) This is remarked in order to remove what has been regarded as a fundamental objection to the hypotheses of a late traveller, who claims to have recovered the sites of all the cities of the Pentapolis, which, as he maintains, are still marked by very considerable ruins of former habitations. Whatever value may be attached to the identification of the other four, there is little doubt that the site of Sodom is correctly fixed near the south-western extremity of the lake, where the modern native name *Udom* or *Esdom*, containing all the radicals of the ancient name, is attached to a plain and a hill (otherwise called *Khashm* or *Jebel-el-Milkh*, i. e. the salt hill), which consequently has long been regarded as marking the site of that accursed city. This singular ridge has been several times explored and described by modern travellers, whose testimony is collected and confirmed by Dr. Robinson (*Bibl. Res.* vol. ii. p. 481—483); but it was reserved for the diligence or imagination of M. de

Sauley to discover the extensive *débris* of this ancient city, covering the small plain and mounds on the north and north-east of the salt-ridge, and extending along the bed of *Wady Zueirah* (*Voyage autour de la Mer Morte*, vol. ii. pp. 71—74). On the other side of the question M. Van de Velde is the latest authority. (*Syria and Palestine* in 1851 and 1852, pp. 114, 115, note). Lieut. Lynch, of the American exploring expedition, has given a striking view of this salt mountain, illustrative of his description of the vicinity of Usdom. (*Expedition to the Dead Sea*, pp. 306—308.) [G.W.]

SODRAE (Σόδραι), a tribe met with by Alexander the Great in the lower Panjab, near Pattakhe, according to Diodorus (xvii. 102). The name is probably of Indian origin, and may represent the caste of the *Sudras*. [V.]

SOGDI (Σόγδοι), one of the smaller tribes noticed by Arrian (*Anab.* vi. 15) as encountered by Alexander in the lower Panjab. By their name, they would appear to represent an immigration from the north. [V.]

SOGDIANA (ἡ Σογδιανή, Strab. ii. p. 73, xi. p. 516; Ptol. vi. 12, &c.), a widely extending district of Central Asia, the boundaries of which are not consistently laid down by ancient authors. Generally, it may be stated that Sogdiana lay between the Oxus and the Jaxartes, as its N. and S. limits, the former separating it from Bactriana and Ariana, the latter from the nomad populations of Scythia. (Strab. xi. pp. 511, 514; Ptol. vi. 12 § 1.) To the W. the province was extended in the direction of the Caspian sea, but, in early times at least, not to it; to the E. were the Sacae and the Seres. The district comprehended the greater part of the present *Turkestan*, with the kingdom of *Bokhara*, which bears to this day the name of *Sogd*. The character of the country was very diversified; some part of it being very mountainous, and some part, as the valley of *Bokhara*, very fertile and productive. The larger extent would seem to have been, as at present, a great waste. (Arrian, *Anab.* iv. 16; Curt. vii. 10. § 1.) At the time when Alexander visited the country, there appear to have been extensive forests, filled with all manner of game, and surrounded, at least in some parts, with walls, as preserves. Alexander is said to have hunted down 4000 wild beasts. (Curt. viii. 1. § 19.)

The principal mountain chains are those called the Montes Oxii to the N. (at present the *Pamir Mountains*), the Comedarus Montes (probably the range of the *Ak-tagh* or *White Mountains*) to the S., and the Montes Sogdii (the modern name of which is not certain, there being a doubt whether they comprehend the *Belur-tagh* as well as the *Kara-tagh*). The two great rivers of the country were those which formed its boundaries; the Oxus (*Gihon* or *Amu-Darja*) and the Jaxartes (*Sikou* or *Syr-Darja*). There are, also, besides these main streams, several smaller ones, feeders of the great rivers, as the Demus, Bascatis, and the Polytemus, the latter, doubtless, the stream which flows beside the town of *Sogd*. The generic name of the inhabitants of Sogdiana is Sogdii or Sogdiani (Arrian, iv. 16, 18; Plin. vi. 16; Curt. iii. 2. § 9, &c.), a race who, as is stated by Strabo (xi. p. 517), appear, in character at least, to have borne a great resemblance to their neighbours of Bactriana. Besides these, Ptolemy and other writers have given a list of other names,—those, probably, of local tribes,

who occupied different parts of the province. Many of these show by the form of their name that if not directly of Indian descent, they are clearly connected with that country. Thus we have the Pasicae, near the Montes Oxii; the Thacori (*Takurs*) on the Jaxartes; the Oxydrancae, Drybactae, and Gandari (*Gandhāras*), under the mountains; the Mardiyeni (*Madras*), Chorasmii (*Khwāremshians*), near the Oxus; and the Cirrodes (*Kirātas*) near the same river. (Wilson, *Ariana*, p. 164.)

The historians of Alexander's march leave us to suppose that Sogdiana abounded with large towns; but many of these, as Professor Wilson has remarked (*l. c.*), were probably little more than forts erected along the lines of the great rivers to defend the country from the incursions of the barbarous tribes to its N. and E. Yet these writers must have had good opportunity of estimating the force of these places, as Alexander appears to have been the best part of three years in this and the adjoining province of Bactriana. The principal towns of which the names have been handed down to us, were Cyreschata or Cyropolis, on the Jaxartes (Steph. B. s. v.; Curt. vi. 6); Gaza (*Ghas* or *Ghasna*, Ibn Haukil, p. 270); Alexandria Ultima (Arrian, iii. 30; Curt. l. c.; Amm. Marc. xxiii. 6), doubtless in the neighbourhood of, if not on the site of the present *Khojend*; Alexandria Oxiāna (Ptol. vi. 12. § 5; Steph. B. s. v.); Nautaca (Arrian, iii. 28, iv. 18), in the neighbourhood of *Karshi* or *Nakshab*; Branchidae (Strab. xi. p. 518), a place traditionally said to have been colonised by a Greek population; and Marginia (Curt. vii. 10. § 15), probably the present *Marghinan*. (Droysen, *Rhein. Mus.* 2. Jahr. p. 86; Mannert, iv. p. 452; Burnes, *Travels*, i. p. 350; *Memoirs of Bāber*, p. 12; De Sacy, *Notices et Extraits*, iv. p. 354; Thirlwall, *Hist. of Greece*, vi. p. 284.) [V.]

SOGDII MONTES. [SOGDIANA.]

SOGIUNTII, an Alpine people mentioned by Pliny (iii. 20. s. 24). Nothing but resemblance of name gives us any indication of the position of many small mountain tribes, but the names remain frequently very little changed. The position of the Sogiuntii is conjectured to be shown by the name *Sauze* or *Souches*, NE. of Briançon in the department of *Hautes Alpes*. But this is merely a guess; and even the orthography of the name Sogiuntii is not certain. [G. L.]

SOLE, a small town in the interior of Hyrcania, mentioned by Ammianus (xxiii. 6). [V.]

SOLEN (Σολήν, Ptol. vii. 1. §§ 10, 34), a small river of S. India, which has its sources in M. Bettigo, and flows thence into the Sinus Colchicus or *Gulf of Manasar*. It is not certain which of two rivers, the *Vaiparu* or the *Tamraparni*, represent it at present: Lassen inclines to the latter. [V.]

SOLENTA. [OLYNTA INSULA.]

SOLENTUM. [SOLUS.]

SOLETUM (*Soletto*), a town of Calabria, situated in the interior of the Iapygian peninsula, about 12 miles S. of Lupiae (*Lecce*). It is mentioned only by Pliny, in whose time it was deserted ("Soletum desertum," Plin. iii. 11. s. 16), but it must have been again inhabited, as it still exists under the ancient name. That the modern town occupies the ancient site is proved by the remains of the ancient walls which were still visible in the days of Galateo, and indicated a town of considerable magnitude (Galateo, *de Sit. Iapyg.* p. 81; Romanelli, vol. ii. p. 26.) [E. H. B.]

SOLI (Σόλοι: *Eth. Soléus* or Σόλιος), an im-

portant town on the coast of Cilicia, between the mouths of the rivers *Lamus* and *Pyramus*, from each of which its distance was about 500 stadia. (Strab. xiv. p. 675; *Stadium. Mar. Mag.* § 170, &c.) The town was founded by Argives joined by Lincians from Rhodes. (Strab. xiv. p. 671; Pomp. Mela, i. 13; Liv. xxvii. 56.) It is first mentioned in history by Xenophon (*Anab.* i. 2. § 24) as a maritime town of Cilicia; it rose to such opulence that Alexander the Great could fine its citizens for their attachment to Persia with 200 talents. (Arrian, *Anab.* ii. 5. § 5; Curt. iii. 17.) During the Mithridatic War the town of Soli was taken and destroyed by Tigranes, king of Armenia, who probably transplanted most of its inhabitants to Tigranocerta. (Dion Cass. xxxvi. 20; Plut. *Pomp.* 28; Strab. xi. p. 532.) But the place was revived by Pompey, who peopled it with some of those pirates who had fallen into his hands, and changed its name into *Pompeipolis*. (Πομπηίουπολις, Plut. l. c.; Strab. xiv. p. 671; Appian, *Mithr.* 105; Ptol. v. 8. § 4; Plin. v. 22; Steph. B. s. v.; Tac. *Ann.* ii. 58; Hierocl. p. 704.) Soli was the birthplace of Chrysippus the philosopher, and of two distinguished poets, Philemon and Aratus, the latter of whom was believed to be buried on a hill near the town. The Greek inhabitants of Soli are reported to have spoken a very corrupt Greek in consequence of their intercourse with the natives of Cilicia, and hence to have given rise to the term solecism (σολοικισμός), which has found its way into all the languages of Europe; other traditions, however, connect the origin of this term with the town of Soli, in Cyprus. (Diog. Laert. i. 2. § 4; Eustath. *ad Dion. Per.* 875; Suid. s. v. Σόλοι.) The locality and the remains of this ancient city have been described by Beaufort (*Karamania*, p. 261, foll.). "The first object that presented itself to us on landing," says he, "was a beautiful harbour or basin, with parallel sides and circular ends; it is entirely artificial, being formed with surrounding walls or moles, which are 50 feet in thickness and 7 in height. Opposite to the entrance of the harbour a portico rises from the surrounding quay, and opens to a double row of 200 columns, which, crossing the town, communicates with the principal gate towards the country. Of the 200 columns no more than 42 are now standing; the remainder lie on the spot where they fell, intermixed with a vast assemblage of other ruined buildings which were connected with the colonnade. The theatre is almost entirely destroyed. The city walls, strengthened by numerous towers, entirely surrounded the town. Detached ruins, tombs, and sarcophagi were found scattered to some distance from the walls, on the outside of the town, and it is evident that the whole country was once occupied by a numerous and industrious people." The natives now call the place *Mezethu*. (Comp. Leake, *Asia Minor*, p. 213, foll.) The little river which passed through Soli was called *Liparis*, from the oily nature

COIN OF SOLI.

of its waters. (Vitruv. viii. 3; Antig. Caryst. 150; Plin. l. c.) Pliny (xxi. 2) mentions bituminous springs in the vicinity, which are reported by Beaufort to exist at *Bikhardy*, about six hours' walk to the north-east of *Meritu*. [L. S.]

SOLI or SOLOE (Σόλοι, Ptol. v. 14. § 4), an important seaport town in the W. part of the N. coast of Cyprus, situated on a small river. (Strab. xiv. p. 683.) According to Plutarch (Sol. 26) it was founded by a native prince at the suggestion of Solon and named in honour of that legislator. The sojourn of Solon in Cyprus is mentioned by Herodotus (v. 113). Other accounts, however, make it an Athenian settlement, founded under the auspices of Phalerus and Acamas (Strab. l. c.), or of Demophon, the son of Theseus (Plut. l. c.). We learn from Strabo (l. c.) that it had a temple of Aphrodite and one of Isis; and from Galen (*de Simp. Med.* ix. 3, 8) that there were mines in its neighbourhood. The inhabitants were called Solii (Σόλιοι), to distinguish them from the citizens of Soli in Cilicia, who were called Σολεῖς (Diog. Laert. V. Solon, 4). According to Pococke (ii. p. 323), the valley which surrounded the city is still called *Solea*; and the ruins of the town itself may be traced in the village of *Aligora*. (Comp. Aesch. Pers. 889; Scyl. p. 41; *Stadiasm. M. Magni*, § 295, seq.; Const. Porphy. *de Them.* i. p. 39, Lips.; Hierocl. p. 707, &c.) [T. H. D.]

SOLIA. [ARAB. HESPERI.]

SOLICINIUM, a town in the Agri Decumates, in South-western Germany, on Mount Pirus, where Valentinian in A. D. 369 gained a victory over the Alemanni. (Amm. Marc. xxvii. 10, xxviii. 2, xxx. 7.) A variety of conjectures have been made to identify the site of the town, but there are no positive criteria to arrive at any satisfactory conclusion. [L. S.]

SOLIMARIACA, in Gallia, is placed in the Antonine Itin. on the road from Andomatunum (*Langres*) to Tullum Lencorum (*Toul*), and nearly half-way between Mosa (*Meuse*) and Tullum. There is a place named *Soulesse*, which in name and in position agrees with Solimariaca. "The trace of the Roman road is still marked in several places by its elevation, both on this side of *Soulesse* and beyond it on the road to *Toul*." (D'Anville, *Notice*, &c.) [G. L.]

SOLIMNIA, a small island of the Aegean sea, off the coast of Thessaly, near Scopelos. (Plin. iv. 12. s. 23.)

SOLIS INSULA (Plin. vi. 22. s. 24), an island mentioned by Pliny between the mainland of *India* and *Ceylon*, in the strait. There can be no doubt that it is the present *Ramisseram Cor*, famous for a temple of Rama. It bore also the name of *Κῶρυ* [CORY.] [V.]

SOLIS FON. [OASIS, p. 458.]

SOLIS PORTUS (Ἡλίου λιμὴν, Ptol. vii. 4. § 6), a harbour near the SE. corner of Taprobane (*Ceylon*). It has been conjectured by Forbiger that it is the present *Vendeluehai*,—a name we do not discover on the best maps. Its position, south of the Malea mountains (*Adam's Peak*), is certain. [V.]

SOLIS PROMONTORIUM (Ἱερὰ Ἡλίου ἄκρα), "Sacra solis extrema," a promontory of the east coast of Arabia at the south of the Persian gulf, between the mouth of the river Lar and Rhegma, in the country of the Nariti. (Ptol. vi. 7. § 14.) [LAR: RHEGMA.] [G. W.]

SOLLUM (Σόλλιον; *Eth. Σολλιεύς*), a town on the coast of Acarnania, on the Ionian sea.

Its exact site is uncertain, but it was probably in the neighbourhood of Palæurus, which lay between Lencas and Alyzia. [PALÆURUS.] Leake, however, places it S. of Alyzia, at *Stravolimiōna* (i. e. *Port Strabo*). Sollium was a Corinthian colony, and as such was taken by the Athenians in the first year of the Peloponnesian War (B. C. 431), who gave both the place and its territory to Palæurus. It is again mentioned in B. C. 426, as the place at which Demosthenes landed when he resolved to invade Aetolia. (Thuc. ii. 30. iii. 95, comp. v. 30; Steph. B. s. v.; Leake, *Northern Greece*, vol. iv. p. 18, seq.)

SOLMISSUS (Σολμισός), a hill near Ephesus, rising above the grove of Leto, where the Curetes, by the loud noise of their arms, prevented Hera from hearing the cries of Leto when she gave birth to her twins. (Strab. xiv. p. 640.) [L. S.]

SOLOMATIS (Σολμάτις, Arrian, *Ind. c.* 4), a river named by Arrian as one of the feeders of the Ganges. There has been much difference of opinion as to what modern stream this name represents. Mannert thinks that it is one of the affluents of the *Jumna* (v. pt. i. p. 69); while Benfey, on the other hand, considers it not unlikely that under the name of Solomatis lurks the Indian *Sarasvati* or *Sarasoti*, which, owing to its being lost in the sands, is fabled by the Indians to flow under the earth to the spot where the *Ganges* and *Jumna* join, near *Allahabad*. (Benfey, *art. Indien*, in *Erech und Gruber*, p. 4.) [V.]

SOLO'NA (*Eth. Solonas; Città del Sole*), a town of Gallia Cispadana, mentioned only by Pliny among the municipal towns of the 8th region (Plin. iii. 13. s. 20), but the name of the Solonates is found also in an inscription, which confirms its municipal rank (Gruter, *Inscr.* p. 1095. 2). Unfortunately this inscription, which was found at Ariminum, affords no clue to the site of Solona: it is placed conjecturally by Cluver at a place called *Città del Sole* about 5 miles SW. of *Forlì*; but this site would seem too close to the important town of Forum Livii. (Cluver, *Ital.* p. 291.) [E. H. B.]

SOLONIUM (Σολώνιον), in Gallia Narbonensis, where C. Pomptinus defeated the Allobroges, B. C. 61. (Dion Cass. xxxvii. c. 48; Liv. *Epit.* 103, where it is said, "C. Pontinius Praetor Allobroges qui rebellaverant ad Salonem (Solonem?) domuit.") It has been conjectured that Solonium is *Sallomaz*, in the department of Ais, near the small river *Briess*; but this is merely a guess. The narrative of Dion is useless, as usual, for determining anything with precision. Other guesses have been made about the position of Solonium; one of which is too absurd to mention. [G. L.]

SOLONIUS AGER (Σολώνιον, Plut.), was the name given to a district or tract in the plain of Latium, which appears to have bordered on the territories of Ostia, Ardea, and Lanuvium. But there is some difficulty in determining its precise situation or limits. Cicero in a passage in which he speaks of a prodigy that happened to the infant Roscius, places it "in Solonio, qui est compus agri Lanuvini" (*de Div.* i. 36); but there are some reasons to suspect the last words to be an interpolation. On the other hand, Livy speaks of the Antistes as making incursions "in agrum Ostiensem, Ardeatem, Solonium" (viii. 12). Plutarch mentions that Marius retired to a villa that he possessed there, when he was expelled from Rome in B. C. 88; and from thence repaired to Ostia. (Plut. *Mari.* 35.) But

the most distinct indication of its locality is afforded by a passage of Festus (*s. v. Pomonal*, p. 250), where he tells us "Pomonal est in agro Solonio, via Ostiensis, ad duodecimum lapidem, diverticulo a miliario octavo." It is thence evident that the "ager Solonius" extended westward as far as the Via Ostiensis, and probably the whole tract bordering on the territories of Ostia, Laurentum, and Ardea, was known by this name. It may well therefore have extended to the neighbourhood of Lanuvium also. Cicero tells us that it abounded in snakes. (*De Div.* ii. 31.) It appears from one of his letters that he had a villa there, as well as Marius, to which he talks of retiring in order to avoid contention at Rome (*ad Att.* ii. 3).

The origin of the name is unknown; it may probably have been derived from some extinct town of the name; but no trace of such is found. Dionysius, indeed, speaks of an *Etruscan* city of Solonium, from whence the Lucum came to the assistance of Romulus (*Dionys.* ii. 37); but the name is in all probability corrupt, and, at all events, cannot afford any explanation of the *Latin* district of the name.

[E. H. B.]

SOLORIUS MONS, an offshoot of Mons Argentarius, running to the SW., on the borders of Hispania Tarraconensis and Baetica, and connecting Mount Ortuspeda with Mount Ilipula. (*Plin.* iii. 1. s. 2.) It is probably the same mountain mentioned by Strabo (iii. p. 156) as rich in gold and other mines, and the present *Sierra Nevada*. [T. H. D.]

SOLUS or **SOLUNTUM** (Σολοῦς, Thuc.; Σολοῦς, Diod.; *Eth.* Σολουντιος, Diod., but coins have Σολοντιος; Soluntinus: *Solanto*), a city of Sicily, situated on the N. coast of the island, about 12 miles E. of Panormus, and immediately to the E. of the bold promontory called *Capo Zaffarana*. It was a Phœnician colony, and from its proximity to Panormus was one of the few which that people retained when they gave way before the advance of the Greek colonies in Sicily, and withdrew to the NW. corner of the island. (Thuc. vi. 2.) It afterwards passed together with Panormus and Motya into the hands of the Carthaginians, or at least became a dependency of that people. It continued steadfast to the Carthaginian alliance even in B. C. 397, when the formidable armament of Dionysius shook the fidelity of most of their allies (*Diod.* xiv. 48); its territory was in consequence ravaged by Dionysius, but without effect. At a later period of the war (B. C. 396) it was betrayed into the hands of that despot (*Id.* 78), but probably soon fell again into the power of the Carthaginians. It was certainly one of the cities that usually formed part of their dominions in the island; and in B. C. 307 it was given up by them to the soldiers and mercenaries of Agathocles, who had made peace with the Carthaginians when abandoned by their leader in Africa. (*Diod.* xx. 69.) During the First Punic War we find it still subject to Carthage, and it was not till after the fall of Panormus that Soluntum also opened its gates to the Romans. (*Id.* xxiii. p. 505.) It continued to subsist under the Roman dominion as a municipal town, but apparently one of no great consideration, as its name is only slightly and occasionally mentioned by Cicero. (*Verr.* ii. 42, iii. 43.) But it is still noticed both by Pliny and Ptolemy (*Plin.* iii. 8. s. 14; *Ptol.* iii. 4. § 3, where the name is corruptly written 'ΟΛουλις), as well as at a later period by the Itineraries, which place it 12 miles from Panormus and 12 from Thermae (*Termini*).

(*Itin. Ant.* p. 91; *Tab. Peut.*) It is probable that its complete destruction dates from the time of the Saracens.

At the present day the site of the ancient city is wholly desolate and uninhabited. It stood on a lofty hill, now called the *Monte Catalano*, at the foot of which is a small cove or port, with a fort, still called the *Castello di Solanto*, and a station for the tunny fishery. The traces of two ancient roads, paved with large blocks of stone, which led up to the city, may still be followed, and the whole summit of the hill is covered with fragments of ancient walls and foundations of buildings. Among these may be traced the remains of two temples, of which some capitals, portions of friezes, &c. have been discovered; but it is impossible to trace the plan and design of these or any other edifices. They are probably all of them of the period of the Roman dominion. Several cisterns for water also remain, as well as sepulchres; and some fragments of sculpture of considerable merit have been discovered on the site. (*Fazell. de Reb. Sic.* viii. p. 352; *Amico, Lez. Top.* vol. ii. pp. 192—195; *Hoare's Class. Tour*, vol. ii. p. 234; *Serra di Falco, Ant. della Sicilia*, vol. v. pp. 60—67.) [E. H. B.]

COIN OF SOLUS.

SOLYGEIA, SOLYGEIUS. [*CORINTHUS*, pp. 684, b, 685, a.]

SOLYMA (τὰ Σόλυμα), a high mountain near Phaselis in Lycia. (*Strab.* xiv. p. 666.) As the mountain is not mentioned by any other writer, it is probably only another name for the Chimaera Mons, the Olympus, or the mountains of the Solymi, mentioned by Homer. (*Od.* v. 283.) In the *Stadiasmus* it is simply called the *ὄρος μέγα*: it extends about 70 miles northward from Phaselis, and its highest point, now called *Taghtalu*, rises immediately above the ruins of Phaselis, which exactly corresponds with the statement of Strabo. (*Leake, Asia Minor*, p. 189.) [L. S.]

SOLYMI. [*LYCIA*.]

SOMENA. [*SIMENA*.]

SONAUTES, according to Pliny (vi. 1), a river in Pontus; while, according to Apollonius Rhodius (ii. 747), the Acheron in Bithynia was anciently called *Sonautes* (Σωνάυτης). [L. S.]

SONEIUM, a place in Moesia Superior, on the borders of Thrace, at the pass of Mount Scamius, called *Succi*. (*Itin. Hieros.* p. 567.) Identified with *Bagna*. [T. H. D.]

SONISTA, a town in Upper Pannonia, on the road from Poetovium to Siscia. (*Geog. Rav.* iv. 19; *Tab. Peut.*; *It. Hieros.* p. 561, where it is written *Sunista*.) Its exact site is unknown. [L. S.]

SONTIA (*Eth.* *Sontinus*: *Sanza*), a town of Lucania, known only from Pliny, who enumerates the Sontini among the municipal towns of that province (*Plin.* iii. 11. s. 15). It is probable that it is the same place now called *Sanza*, situated in the mountains about 12 miles N. of the *Gulf of Policastro*. [E. H. B.]

SONTIUS (*Isoneo*), one of the most considerable of the rivers of Venetia, which has its sources in the Alps, at the foot of the lofty *Mt. Terglou*, and has from thence a course of above 75 miles to the sea, which it enters at the inmost bight of the Adriatic, between Aquileia and the Timavus. It receives at the present day the waters of the *Natisone* and *Torre*, the ancient *Nariso* and *Turris*, both of which in ancient times pursued independent courses to the sea under the walls of Aquileia, and from the E. those of the *Wippach* or *Vipao*, called by the ancients the *FLUVIUS FRIGIDUS*. Though so important a stream, the name of the Sontius is not mentioned by any of the geographers; but it is found in the *Tabula*, which places a station called *Ponte Sonti* (*Ad Pontem Sontii*) 14 miles from Aquileia on the highroad to *Aemona* (*Laybach*). This bridge, which lay on the main entrance into Italy on this side, was a military point of considerable importance. It checked for a time the march of the emperor Maximin when advancing upon Aquileia, in A. D. 238 (Herodian, viii. 4; *Capit. Maximin.* 22); and at a later period it was here that Odoacer took up his position to oppose the advance of Theod. sius, by whom he was, however, defeated in a decisive battle, A. D. 489 (*Cassiod. Chron.* p. 472; *Id. Var.* i. 18; *Jornand. Get.* 57). The Sontius is correctly described by Herodian, though he does not mention its name, as a large and formidable stream, especially in spring and summer, when it is fed by the melting of the Alpine snows. [E. H. B.]

SONUS (*Σῶνος*, Arrian, *Ind.* c. 4; *Plin.* vi. 18. a. 22), a principal affluent of the *Ganges*, which flows in a NE. direction to it from the *Vindhya Mountains*. Its modern name is *Soane*. There is no doubt that it has been contracted from the Sanscrit *Suparna*, golden. The *Soas* (*Σῶας*) of Ptolemy (vii. 1. § 30) is certainly the same river. [V.]

SOPHENE (*Σοφηνή*, Strab. et alii; *Σοφονηή*, Dion Cass. xxxvi. 36; *Procop. de Aedif.* iii. 2, *B. Pers.* i. 21; *Eth. Σοφηνός*), a district of Armenia, lying between Antitaurus and Mount Masius, separated by the Euphrates from Melitene in Armenia Minor, and by Antitaurus from Mesopotamia. Its capital was *Carchiocoerta*. (Strab. xi. pp. 521, 522, 527.) It formed at one time, with the neighbouring districts, a separate west Armenian kingdom, governed by the Sophian Artanes, but was annexed to the east Armenian kingdom by Tigranes. Sophene was taken away from Tigranes by Pompey. (Strab. xi. p. 532; Dion Cass. xxxvi. 26; *Plut. Lucull.* 24, *Pomp.* 33.) Nero gave Sophene as a separate kingdom to Sohaemus. (*Tac. Ann.* xiii. 7.)

SOPIANAE, a town in the central part of Lower Pannonia, on the road from Mursa to Sabaria (*It. Ant.* pp. 231, 232, 264, 267), was according to Ammianus Marcellinus (xxviii. 1) the birthplace of the emperor Maximinus. Its site is occupied by the modern *Fünfkirchen*. [L. S.]

SORA (*Σῶρα*; *Eth. Soranus*; *Sora*), a city of Latium, situated in the valley of the Liris, on the right bank of that river, about 6 miles to the N. of Arpinum. Though included in Latium in the more extended sense of that term, as it was understood under the Roman Empire, Sora was originally a Volscian city (*Liv.* x. 1), and apparently the most northerly possessed by that people. It was wrested from them by the Romans in B. C. 345, being surprised by a sudden attack by the consuls Fabius Dorso and Ser. Sulpicius. (*Liv.* vii. 28.) It was subsequently occupied by the Romans with a colony:

the establishment of this is not mentioned by Livy, but in B. C. 315 he tells us the inhabitants had revolted and joined the Samnites, putting to death the Roman colonists. (*Id.* ix. 23; *Diod.* xix. 72.) The city was in consequence besieged by the dictator C. Fabius, and, notwithstanding the great defeat of the Romans at *Lautulae*, the siege was continued into the following year, when the city was at length taken by the consuls C. Sulpicius and M. Poetelius; the citadel, which was in a very strong and inaccessible position, being betrayed into their hands by a deserter. The leaders of the defection were sent to Rome and doomed to execution; the other inhabitants were spared. (*Liv.* ix. 23, 24.) Sora was now occupied by a Roman garrison; but notwithstanding this it again fell into the hands of the Samnites in B. C. 306, and it was not recovered by the Romans till the following year. (*Id.* ix. 43, 44; *Diod.* xx. 80, 90.) After the close of the Second Samnite War it was one of the points which the Romans determined to secure with a colony, and a body of 4000 colonists was sent thither in B. C. 303. (*Id.* x. 1.) From this time Sora became one of the ordinary "coloniae Latinae" and is mentioned in the Second Punic War among the refractory colonies, which in B. C. 209 refused any further contributions. (*Liv.* xxvii. 9, xxix. 15. The text of Livy gives *Cora* in the first passage, and *Sora* in the second, but the same place is necessarily meant in both passages, and it is probable that Sora is the true reading.) From this time we hear little more of Sora, which lapsed into the condition of an ordinary municipal town. (*Cic. pro Planc.* 9.) Its rank of a *Colonia Latina* was merged in that of a municipium by the *Lex Julia*; but it received a fresh colony under Augustus, consisting, as we learn from an inscription, of a body of veterans from the 4th legion. (*Lib. Colon.* p. 237; *Plin.* iii. 5. a. 9; *Orell. Inscr.* 3681.) *Jurnal* speaks of it as a quiet country town, where houses were cheap (*Jur.* iii. 233); and it is mentioned by all the geographers among the towns of this part of Italy. (Strab. v. p. 238; *Ptol.* iii. 1. § 63; *Sil. Ital.* viii. 394; *Orell. Inscr.* 3972.) Nothing more is heard of it under the Roman Empire, but it survived the fall of the Western Empire, and continued throughout the middle ages to be a place of consideration. Sora is still an episcopal see, and much the most important place in this part of Italy, with about 10,000 inhabitants. The modern town undoubtedly occupies the same site with the ancient one, in the plain or broad valley of the Liris, resting upon a bold and steep hill, crowned by the ruins of a mediaeval castle. The ancient citadel, described by Livy, stood on a hill at the back of this, called the *Rocca di S. Angelo*, where some remains of the ancient walls, constructed of massive polygonal blocks, are still visible. No remains of Roman times are preserved, except a few inscriptions, and some foundations, supposed to be those of a temple. (Romanelli, vol. iii. pp. 362—366; Hoare's *Classical Tour*, vol. i. pp. 299—302.) [E. H. B.]

SORA (*Σῶρα* or *Σῶρα*), a town of Paphlagonia, noticed only by the latest writers of antiquity, and of unknown site. (Constant. *Porph. Them.* i. 7; *Novellae*, xxix. 1; Hierocl. p. 695; *Conc. Nicæna* ii. p. 52; *Conc. Chalced.* p. 664, where it is called Sura.) [L. S.]

SORA (*Σῶρα*, *Ptol.* vii. 1. § 68), a town in the southern part of India, between *M. Bettigo* and *Adeisathron*. It was the capital of a named race

called *Sorae* (Ptol. l. c.), and the royal residence of a king named *Arcates*. The people are evidently the same as the *Surae* of Pliny (vi. 20. s. 23). Lassen places them in the mountains above *Madras* (see map). [V.]

SORACTE (*Monte S. Oreste*), a mountain of Etruria, situated between Falerii and the Tiber, about 26 miles N. of Rome, from which it forms a conspicuous object. It is detached from the chain of the Apennines, from which it is separated by the intervening valley of the Tiber; yet in a geological sense it belongs to the Apennine range, of which it is an outlying offset, being composed of the hard Apennine limestone, which at once distinguishes it from the Mons Ciminius and the other volcanic hills by which it is surrounded. Though of no great elevation, being only 2420 feet in height, it rises in a bold and abrupt mass above the surrounding plain (or rather table-land), which renders it a striking and picturesque object, and a conspicuous feature in all views of the *Campagna*. Hence the selection of its name by Horace in a well-known ode (*Carm.* i. 9) is peculiarly appropriate. It was consecrated to Apollo, who had a temple on its summit, probably on the same spot now occupied by the monastery of *S. Silvestro*, and was worshipped there with peculiar religious rites. His priests were supposed to possess the power of passing unharmed through fire, and treading on the hot cinders with their bare feet. (Virg. *Aen.* vii. 696, xi. 785—790; Sil. Ital. v. 175—181, vii. 662; Plin. vii. 2.) Its rugged and craggy peaks were in the days of Cato still the resort of wild goats. (Varr. *R. R.* ii. 3. § 3.)

Soracte stands about 6 miles from *Civita Castellana*, the site of the ancient Falerii, and 2 from the Tiber. It derives its modern appellation from the village of *Sani Oreste*, which stands at its S. extremity on a steep and rocky hill, forming a kind of step or ledge at the foot of the more elevated peaks of *Soracte* itself. This site, which bears evident signs of ancient habitation, is supposed to be that of the ancient *FERONTIA* or *LUCUS FERONTIAE*. (Dennisi's *Etruria*, vol. i. p. 179.) [E. H. B.]

SORBIODU'NUM, or **SORVIODU'NUM**, a town of Britannia Romana, in the territory of the Belgae. (*Itin. Ant.* pp. 483, 486.) It is identified with *Old Sarum*, where coins of several Roman emperors have been found, and where the traces of the ancient Roman walls show it to have been about half a mile in circumference. (Camden, p. 113.) [T.H.D.]

SORDICE, a lake in Gallia. A river *Sordus* ran out of the *E'tang Sordice*, in the country of the *Sordones* or *Sordi*. [*SORDONES*.]

"Stagnum hic palusque, quippe diffuse patet,
Et incolae istam Sordicen cognominant."

(Avienus, *Or. Mar.*, as I. Vossius reads it.)

The *Sordice* is supposed by some geographers to be the *E'tang de Leucate*; but others take it to be an *étang* further south, called *E'tang de St. Nazaire*, and the *E'tang de Leucate* to be that near *Salsulæ*, which is described by Strabo, Mela, and others. [*SALSULÆ*; *RUSCINO*.] [G. L.]

SORDONES, or **SARDONES**, as the name has sometimes been written, a people in Gallia. Mela (ii. 5) writes: after the *Salsulæ fons* "is the ora *Sordonum*, and the small streams *Telis* and *Tichis*; the *Colonia Ruscino*, and the vicus *Illiberia*." Pliny (iii. 4) begins his description of *Gallia Narbonensis* from the foot of the Pyrenees. He says: "On

the coast is the regio *Sordonum* or *Sardonum*, and in the interior the *Consuarani*; the rivers *Techum*, *Vernodubrum*; towns, *Illiberia* and *Ruscino*." These *Sordones* are the *Sordi* of Avienus (*Or. Marit.* 562):—

"Sordus inde denique

Populus agebat inter avios locos

Ac perimentes usque ad interius mare,

Qua pinifertae stant Pyrenae vertices,

Inter ferarum lustra ducebat greges,

Et arva late et gurgitem ponti premit: "

as I. Vossius reads the passage in his edition of Mela. The *Sordi* then occupied the coast of the Mediterranean from the Pyrenees northward, and the neighbouring part of the interior at the north foot of the Pyrenees. Ptolemy, as D'Anville observes, does not mention the *Sordones*, and he has made the territory of the *Volcae Tectosages* comprehend *Illiberis* and *Ruscino*. The *Sordones* probably occupied the whole of the territory called *Rousillon*, and they would be in possession of that pass of the Pyrenees called *Col de Pertus*, which is defended by the fort of *Bellegarde*. They bordered on the *Consuarani*. [*CONSUARANI*.] [G. L.]

SORICARIA, a place in Hispania Baetica, mentioned by Hirtius (*B. Hisp.* c. 24), and the same called also "Soritia" by that author (c. 27). Ukert (ii. pt. i. p. 361) seeks it in the neighbourhood of the *Flumen Salsum* (the *Salado*), S. of the *Baetis*, and between *Osuña* and *Antequera*. [T. H. D.]

SORINGI (*Σόριγγι*, *Periopl. M. E.* p. 34), a people of the southern part of *Hindostan*, who apparently dwelt along the banks of the *Chaberus* (*Kāverī*). Lassen places them below the *Sorae*, on the slopes of the hills above *Madras*. [V.]

SORTITA. [*SORICARIA*.]

SORNUM, (*Σόρνον*, Ptol. iii. 8. § 10), a city of *Dacia*; now *Gieritza*. [T. H. D.]

SORORES (AD), a station in Lusitania, N. of *Emerita*. (*Itin. Ant.* p. 433.) Various identified with *Montanches* and *Aliseda*. [T. H. D.]

SOSTOMAGUS, in Gallia, is placed by the *Jerusalem Itin.* between *Tolosa* (*Toulouse*) and *Carcaso* (*Carcassonne*), 38 miles from *Toulouse* and 24 from *Carcassonne*. The road is nearly direct, and if the distances are correct, we might perhaps find some name like *Sosto* in the proper place. Some geographers have found *Sostomagus* near *Castelnau-dari*. [G. L.]

SOTERA, a place in *Ariana*, mentioned by Ammianus (xxiii. 6). It is probably the same as that called by Ptolemy *Σότρεψα* (vi. 17. § 7). [V.]

SOTIATES or **SONTIATES**, a people of *Aquitania*. Schneider (*Caesar*, *B. G.* iii. 20) who writes "in *Sontiatium fines*" has a long note on the various forms of this word. Nicolaus Damascenus (quoted by Athenaeus, vi. p. 249) writes the name *Sotiani*, but as Caesar was his authority for what he says, he may have altered the form of the word. In Dion Cassius (xxxix. c. 46) the reading is *Αῠιδρας* (ed. Reimar); but there are other variations in the MSS. In Pliny (iv. 19) we find among the nations of *Aquitania* "*Ansci*, *Elusates*, *Sotiates*, *Osquidates* *Campestres*." Orosius (vi. 8, ed. Haverkamp) has *Sontiates*, but one MS. has *Sotiates* and others have *Sociates*.

In B. C. 56 Caesar sent P. Crassus into *Aquitania*. Crassus came from the north, and after summoning the men of fighting age who were on the muster rolls of *Toulouse*, *Carcassonne*, and *Narbonne*,

he entered the territory of the Sotiates, the first of the Aquitanian peoples whom he attacked. The Sotiates were the neighbours of the Elusates a name represented by the town of *Eause*. A line drawn from Auch (Ausi) on the *Gers* to *Bazas* in the department of *La Gironde*, passes near *Sos*, a town which is on the *Getise*, and in the *Gabaret*. In the middle ages it was called Sotium. Ancient remains have been found at *Sos*. Here we have an instance of the preservation of ancient names in this part of France, and there are many other instances.

D'Anville in determining the position of the Sotiates argues correctly that Crassus having passed through the Santones, a people who had submitted to Caesar (*B. G.* iii. 12) and would offer no resistance, entered Aquitania by the north, and the Sotiates who were only seven or eight leagues south of the *Garonne* would be the first tribe on whom he fell. He says that he has evidence of a Roman road very direct from *Sos* to *Eause*; and he is convinced that this is part of the road described in the Jerusalem Itin. between *Vasatae* and *Elusa*. On this road the name Scittium occurs in the Itin., and as the distance between Scittium and *Elusa* corresponds very nearly to the distance between *Sos* and *Eause*, he conjectures that this word Scittium is written wrong, and that it should be Sotium.

The Sotiates, who were strong in cavalry, attacked the Romans on their march, and a battle took place in which they were defeated. Crassus then assaulted their town, which made a stout resistance. He brought up his vineae and towers to the walls, but the Sotiates drove mines under them, for as they had copper mines in their country they were very skilful in burrowing in the ground. At last they sent to Crassus to propose terms of surrender (*B. G.* iii. 21). While the people were giving up their arms on one side of the town, Adcantuannus, who was a king or chief, attempted to sally out on another side with his 600 "soldurii." The Romans met him there, and after a hard fight Adcantuannus was driven back into the town; but he still obtained the same easy terms as the rest.

These Soldurii were a body of men who attached themselves to a chief with whom they enjoyed all the good things without working, so long as the chief lived; but if any violence took off their leader it was their duty to share the same fate or to die by their own hand. This was an Iberian and also a Gallic fashion. The thing is easily understood. A usurper or any desperate fellow seized on power with the help of others like himself; lived well, and fed his friends; and when his tyranny came to an end, he and all his crew must kill themselves, if they wished to escape the punishment which they deserved. (Plut. *Sertor.* c. 14; Caesar, *B. G.* vii. 40; and the passage in Athenaeus.)

The MSS. of Caesar vary in the name of Adcantuannus. Schneider writes it Adiatunus, and in Athenaeus it is 'Αδίατομον. Schneider mentions a medal of Pellerin, with REX ΔΑΛΕΤΥΩΝΥΣ and a lion's head on one side, and on the other SOTIOGA. Walckenaer (*Géogr.* &c. i. 284) may be speaking of the same medal, when he describes one which is said to have been found at *Toulouse*, with a head of Adictunus on one side and the word Sotiagae on the other. He thinks it "very suspected," and it may be.

[G. L.]
SOZO'POLIS (Σωζόπολις), a town noticed only by late writers as a place in Pisidia, on the north of Termessus, in a plain surrounded on all sides by

mountains. (Hierocl. p. 672; Evagr. *Hist. Eccles.* iii. 33.) It is possibly the same place which Stephanus B. notices under the name of Σόρνα. Nicetas (*Ann.* p. 9) mentions that it was taken by the Turks, but recovered from them by John Comnenus. (Comp. *Ann.* p. 169; Cinnamus, p. 13.) The traveller Paul Lucas (*Sec. Voy.* vol. i. c. 33) observed some ancient remains at a place now called *Sousou*, south of *Aglaoum*, which probably belong to Sozopolis. [L. S.]

SOZO'POLIS, a later name of Apollonia in Thrace. [Vol. I. p. 160.] [J. R.]

SPALATHRA (Plin. iv. 9. s. 16; Σπάλθη, Scylax, p. 25; Σπαλίθη, Steph. B. s. v.; Σπάλθηρον, Hellenic. *ap.* Steph. B. s. v.; *Εθ.* Σπάλθηρον), a town of Macedonia, in Thessaly, upon the Pagasaeon gulf. It is conjectured that this town is meant by Lycophron (899), who describes Prothous, the leader of the Magnes in the *Iliad*, as δ ἐκ Παλαίθρων (Σπαλαίθρων). (See Müller, *ad Scyl.* l. c.)

SPALATUM. [SALONA.]

SPANETA, a town in Lower Pannonia, of unknown site. (*It. Ant.* p. 268; *It. Hieros.* p. 563; Geogr. Rav. iv. 19, who writes Spaneatia. [L. S.]

SPARATA, a place in Moesia Superior, probably on the river *Ister*. (*Itin. Hieros.* p. 567.) By the Geogr. Rav. it is called Sparthou (iv. 7). [T. H. D.]

SPARTA (Σπάρτη, Dor. Σπάρτα; *Εθ.* Σπαρτιάτης, Spartiates, Spartanus), the capital of Laconia, and the chief city of Peloponnesus. It was also called LACEDÆMON (Λακεδαιμόν; *Εθ.* Λακεδαιμόνιος, Lacedaemonius), which was the original name of the country. [See Vol. II. p. 103. a.] Sparta stood at the upper end of the middle vale of the Eurotas, and upon the right bank of the river. The position of this valley, shut in by the mountain ranges of Taygetus and Parnon, its inaccessibility to invaders, and its extraordinary beauty and great fertility, have been described in a previous article [LACONIA]. The city was built upon a range of low hills and upon an adjoining plain stretching SE. to the river. These hills are offshoots of Mt. Taygetus, and rise almost immediately above the river. Ten stadia S. of the point where the Oenus flows into the Eurotas, the latter river is divided into two arms by a small island overgrown with the oleander, where the foundations of an ancient bridge are visible. This is the most important point in the topography of the site of Sparta. Opposite to this bridge the range of hills rises upon which the ancient city stood; while a hollow way (*Map. ff.*) leads through them into the plain to *Mogila*, a village situated about half-way between *Mistrid* and the island of the Eurotas. Upon emerging from this hollow into the plain, there rises on the left hand a hill, the south-western side of which is occupied by the theatre (*Map. A.*). The centre of the building was excavated out of the hill; but the two wings of the cavea were entirely artificial, being built of enormous masses of quadrangular stones. A great part of this masonry still remains; but the seats have almost entirely disappeared, because they have for many ages been used as a quarry by the inhabitants of *Mistrid*. The extremities of the two wings are about 430 feet from one another, and the diameter or length of the orchestra is about 170 feet; so that this theatre was probably the largest in Greece, with the exception of those of Athens and Megalopolis. There are traces of a wall around this hill, which also embraces a considerable part of the adjoining plain to the east. Within the

space enclosed by this wall there are two terraces, upon one of which, amidst the ruins of a church, the French Commission discovered traces of an ancient temple. In this space there are also some ancient doors, formed of three stones, two upright with the architrave, buried in the ground; but no conjecture can be formed of the building to which they belonged without excavations.

The hill we have been describing is the largest of all the Spartan heights, and is distinguished by the wall which surrounds it, and by containing traces of foundations of some ancient buildings. From it two smaller hills project towards the Eurotas, parallel to one another, and which may be regarded as portions of the larger hill. Upon the more southerly of the two there are considerable remains of a circular brick building, which Leake calls a circus, but Curtius an amphitheatre or odeum (Map, 3). Its walls are 16 feet thick, and its diameter only about 100 feet; but as it belongs to the Roman period, it was probably sufficient for the diminished population of the city at that time. Its entrance was on the side towards the river. West of this building is a valley in the form of a horse-shoe, enclosed by walls of earth, and apparently a stadium, to which its length nearly corresponds.

To the north of the hollow way leading from the bridge of the Eurotas to *Magula* there is a small insulated hill, with a flat summit, but higher and more precipitous than the larger hill to the south of this way. It contains but few traces of ancient buildings (Map, B.). At its southern edge there are the remains of an aqueduct of later times.

The two hills above mentioned, north and south of this hollow way, formed the northern half of Sparta. The other portion of the city occupied the plain between the southern hill and the rivulet falling into the Eurotas, sometimes called the *River of Magula*, because it flows past that village, but more usually *Trypiotiko*, from *Trypi*, a village in the mountains (Map, cc). Two canals, beginning at *Magula*, run across this plain: upon the southern one (Map, dd), just above its junction with the *Trypiotiko*, stands the small village of *Psychiko* (Map, e). Between this canal and the *Trypiotiko* are some heights upon which the town of New Sparta is now built (Map, D.). Here are several ancient ruins, among which are some remains of walls at the southern extremity, which look like city-walls. The plain between the heights of New Sparta and the hill of the theatre is covered with corn-fields and gardens, among which are seen fragments of wrought stones, and other ancient remains, cropping out of the ground. The only remains which make any appearance above the ground are those of a quadrangular building, called by the present inhabitants the tomb of Leonidas. It is 22 feet broad and 44 feet long, and is built of ponderous square blocks of stone. It was probably an heronum, but cannot have been the tomb of Leonidas, which we know, from Pausanias (iii. 14. § 1), was near the theatre, whereas this building is close to the new town.

This plain is separated from the Eurotas by a range of hills which extend from the Roman amphitheatre or circus to the village of *Psychiko*. Between the hills and the river is a level tract, which is not much more than 50 yards wide below the Roman amphitheatre, but above and below the latter it swells into a plain of a quarter of a mile in breadth. Beyond the river *Trypiotiko* there are a few traces of the foundations of ancient buildings near the little

village of *Kalagoniá* (Map, 7). Leake mentions an ancient bridge over the *Trypiotiko*, about a quarter of a mile NE. of the village of *Kalagoniá*. This bridge, which was still in use when Leake visited the district, is described by him as having a rise of about one-third of the span, and constructed of large single blocks of stone, reaching from side to side. The same traveller noticed a part of the ancient causeway remaining at either end of the bridge, of the same solid construction. But as this bridge is not noticed by the French Commission, it probably no longer exists, having been destroyed for its materials. (Leake, *Morea*, vol. i. p. 157, *Peloponnesiaca*, p. 115.)

Such is the site of Sparta, and such is all that now remains of this famous city. There cannot be any doubt, however, that many interesting discoveries might be made by excavations; and that at any rate the foundations of several ancient buildings might be found, especially since the city was never destroyed in ancient times. Its present appearance corresponds wonderfully to the anticipation of Thucydides, who remarks (i. 10) that "if the city of the Lacedæmonians were deserted, and nothing remained but its temples and the foundations of its buildings, men of a distant age would find a difficulty in believing in the existence of its former power, or that it possessed two of the five divisions of Peloponnesus, or that it commanded the whole country, as well as many allies beyond the peninsula,—so inferior was the appearance of the city to its fame, being neither adorned with splendid temples and edifices, nor built in contiguity, but in separate quarters, in the ancient method. Whereas, if Athens were reduced to a similar state, it would be supposed, from the appearance of the city, that the power had been twice as great as the reality." Compared with the Acropolis of Athens, which rises proudly from the plain, still crowned with the columns of its glorious temples, the low hills on the Eurotas, and the shapeless heap of ruins, appear perfectly insignificant, and present nothing to remind the spectator of the city that once ruled the Peloponnesus and the greater part of Greece. The site of Sparta differs from that of almost all Grecian cities. Protected by the lofty ramparts of mountains, with which nature had surrounded their fertile valley, the Spartans were not obliged, like the other Greeks, to live within the walls of a city pent up in narrow streets, but continued to dwell in the midst of their plantations and gardens, in their original village trim. It was this rural freedom and comfort which formed the chief charm and beauty of Sparta.

It must not, however, be supposed that Sparta was destitute of handsome public buildings. Notwithstanding the simplicity of the Spartan habits, their city became, after the Messenian wars, one of the chief seats of poetry and art. The private houses of the Spartans always continued rude and unadorned, in accordance with a law of Lycurgus, that the doors of every house were to be fashioned only with the saw, and the ceiling with the axe (Plut. *Lyc.* 13); but this regulation was not intended to discourage architecture, but to prevent it from ministering to private luxury, and to restrain it to its proper objects, the buildings for the gods and the state. The palace of the kings remained so simple, that its doors in the time of Agesilaus were said to be those of the original building erected by Aristodemus, the founder of the Spartan monarchy (Xen. *Ages.* 8. § 7); but the temples of the gods were built with

great magnificence, and the spoils of the Persian wars were employed in the erection of a beautiful stoa in the Agora, with figures of Persians in white marble upon the columns, among which Pausanias admired the statues of Mardonius and Artemisia (iii. 11. § 3). After the Persian wars Athens became more and more the centre of Greek art; but Sparta continued to possess, even in the time of Pausanias, a larger number of monuments than most other Grecian cities.

Sparta continued unfortified during the whole period of autonomous Grecian history; and it was first surrounded with walls in the Macedonian period. We learn from Polybius (ix. 21) that its walls were 48 stadia in circumference, and that it was much larger than Megalopolis, which was 50 stadia in circuit. Its superiority to Megalopolis in size must have been owing to its form, which was circular. (Polyb. v. 22.) Leake remarks that, "as the side towards the Eurotas measured about two miles with the windings of the outline, the computation of Polybius sufficiently agrees with actual appearances, though the form of the city seems rather to have been semicircular than circular." (*Morea*, vol. i. p. 180.) Its limits to the eastward, at the time of the invasion of Philip (B. C. 218), are defined by Polybius, who says (v. 22) that there was a distance of a stadium and a half between the foot of the cliffs of Mt. Menelaion and the nearest part of the city. Livy also describes the Eurotas as flowing close to the walls (xxxiv. 28, xxxv. 29). When Demetrius Poliorcetes made an attempt upon Sparta in B. C. 296, some temporary fortifications were thrown up; and the same was done when Pyrrhus attacked the city in B. C. 272. (Paus. i. 13. § 6, vii. 8. § 5.) But Sparta was first regularly fortified by a wall and ditch by the tyrant Nabias in B. C. 195 (Liv. xxxiv. 27; Paus. vii. 8. § 5); though even this wall did not surround the whole city, but only the level parts, which were more exposed to an enemy's attack. (Liv. xxxiv. 38.) Livy, in his account of the attack of Sparta by Philopoemen in B. C. 192, alludes to two of the gates, one leading to Pharae, and the other to Mount Barbothesenes. (Liv. xxxv. 30.) After the capture of the city by Philopoemen, the walls were destroyed by the Achaean League (Paus. vii. 8. § 5); but they were shortly afterwards restored by order of the Romans, when the latter took the Spartans under their protection in opposition to the Achaeans. (Paus. vii. 9. § 5.) Its walls and gates were still standing when Pausanias visited Sparta in the second century of the Christian era, but not a trace of them now remains. When Alaric took Sparta in A. D. 396, it was no longer fortified, nor protected by arms or men (Zosim. v. 6); but it continued to be inhabited in the thirteenth century, as we learn from the "Chronicle of the Morea." It was then always called Lacedaemon, and was confined to the heights around the theatre. The walls which surrounded it at that time may still be traced, and have been mentioned above. It is to the medieval Lacedaemon that the ruins of the churches belong, of which no less than six are noticed by the French Commission. After the conquest of Peloponnesus by the Franks in the thirteenth century, William de Villehardouin built a strong fortress upon the hill of *Misitrá*, usually pronounced *Mistrá*, a little more than two miles west of Sparta, at the foot of Mt. Taygetus. The inhabitants of the medieval Lacedaemon soon abandoned their town and took refuge within the fortress

of *Mistrá*, which long continued to be the chief place in the valley of the Eurotas. The site of Sparta was occupied only by the small villages of *Megolis* and *Psychidó*, till the present Greek government resolved to remove the capital of the district to its ancient seat. The position of New Sparta upon the southern part of the ancient site has been already described.

It has been observed that Sparta resembled Rome in its site, comprehending a number of contiguous hills of little height or boldness of character. (*Morea, Tour in Greece*, vol. ii. p. 236.) It also resembled Rome in being formed out of several earlier settlements, which existed before the Dorian conquest, and gradually coalesced with the later city, which was founded in their midst. These earlier places, which are the hamlets or *κώμαι* mentioned by Thucydides (i. 10), were four in number, Pitane, Limnae or Limnaeum, Mesos, and Cynosura, which were united by a common sacrifice to Artemis. (Paus. iii. 16. § 9.) They are frequently called *φύλας*, or tribes, by the grammarians (Müller, *Dorians*, iii. 3. § 7), and were regarded as divisions of the Spartans; but it is clear from ancient writers that they are names of places.* We are best informed about Pitane, which is called a *πόλις* by Euripides (*Troad.* 1112), and which is also mentioned as a place by Pindar (*ἐπὶ Πύρρῳ δὲ παρ' Εὐφράτη πόρον*, *Ol.* vi. 46). Herodotus, who had been there, calls it a *δῆμος* (iii. 53). He also mentions a *λόχος Περσάνων* (ix. 53); and though Thucydides (i. 20) denies its existence, Caracalla, in imitation of antiquity, composed a *λόχος Περσάνων* of Spartans. (Herodian. iv. 8.) It appears from the passage of Pindar quoted above, that Pitane was at the ford of the Eurotas, and consequently in the northern part of the city. It was the favourite and fashionable place of residence at Sparta, like Collytus at Athens and Craneum at Corinth. (Plut. *de Exsil.* 6. p. 601.) We are also told that Pitane was near the temple and stronghold of Issorium, of which we shall speak presently. (Polyaen. ii. 1. § 14; Plut. *Ages.* 32.) Limnae was situated upon the Eurotas, having derived its name from the marshy ground which once existed there (Strab. viii. p. 363); and as the Dromus occupied a great part of the lower level towards the southern extremity, it is probable that Limnae occupied the northern. (Leake, *Morea*, vol. i. p. 177.) It is probable that Mesos was in the SE. part of the city [see below, p. 1028, b.], and Cynosura in the SW.

In the midst of these separate quarters stood the Acropolis and the Agora, where the Dorian invaders first planted themselves. Pausanias remarks that the Lacedaemonians had no acropolis, towering above other parts of the city, like the Cadmeia at Thebes and Larissa at Argos, but that they gave this name to the loftiest eminence of the group (iii. 17. § 2). This is rather a doubtful description, as the great hill, upon which the theatre stands, and the hill at the northern extremity of the site, present nearly the same elevation to the eye. Leake places the Acropolis upon the northern hill, which, he observes, was

* Some modern writers mention a fifth tribe, the Aegidaeae, because Herodotus (iv. 149) speaks of the Aegidaeae as a great tribe (*φυλή*) in Sparta; but the word *φυλή* seems to be here used in the more general sense of family, and there is no evidence that the word Aegidaeae was the name of a place, like the other four mentioned above.

better adapted for a citadel than any other, as being separated from the rest, and at one angle of the site; but Curtius supposes it to have stood upon the hill of the theatre, as being the only one with a sufficiently large surface on the summit to contain the numerous buildings which stood upon the Acropolis. The latter opinion appears the more probable; and the larger hill, cleared from its surrounding rubbish, surrounded with a wall, and crowned with buildings, would have presented a much more striking appearance than it does at present.

The chief building on the Acropolis was the temple of Athena Chalcioecus, the tutelary goddess of the city. It was said to have been begun by Tyndareus, but was long afterwards completed by Gitiadas, who was celebrated as an architect, statuary, and poet. He caused the whole building to be covered with plates of bronze or brass, whence the temple was called the Brazen House, and the goddess received the surname of Chalcioecus. On the bronze plates there were represented in relief the labours of Hercules, the exploits of the Dioscuri, Hephaestus releasing his mother from her chains, the Nymphs arming Perseus for his expedition against Medusa, the birth of Athena, and Amphitrite and Poseidon. Gitiadas also made a brazen statue of the goddess. (Paus. iii. 17. §§ 2, 3.) The Brazen House stood in a sacred enclosure of considerable extent, surrounded by a stoa or colonnade, and containing several sanctuaries. There was a separate temple of Athena Ergane. Near the southern stoa was a temple of Zeus Cosmetas, and before it the tomb of Tyndareus; the western stoa contained two eagles, bearing two victories, dedicated by Lysander in commemoration of his victories over the Athenians. To the left of the Brazen House was a temple of the Muses; behind it a temple of Ares Areia, with very ancient wooden statues; and to its right a very ancient statue of Zeus Hypatus, by Learchus of Rhegium, parts of which were fastened together with nails. Here also was the *σκηναία*, a booth or tent, which Curtius conjectures to have been the *οικία οὐ μέγα, ἢ τῇ τοῦ ἱεροῦ* (Thuc. i. 134), where Pausanias took refuge as a suppliant. Near the altar of the Brazen House stood two statues of Pausanias, and also statues of Aphrodite Amblogera (delaying old age), and of the brothers Sleep and Death. The statues of Pausanias were set up by order of the Delphian Apollo to expiate his being starved to death within the sacred precincts. (Paus. iii. 17. § 2—18. § 1.)

The Agora was a spacious place, surrounded, like other Greek market-places, with colonnades, from which the streets issued to the different quarters of the city. Here were the public buildings of the magistrates,—the council-house of the Gerusia and senate, and the offices of the Ephori, Nomophylaces, and Bidiaei. The most splendid building was the Persian stoa, which had been frequently repaired and enlarged, and was still perfect when Pausanias visited the city. The Agora contained statues of Julius Caesar and Augustus; in the latter was a brazen statue of the prophet Agias. There was a place called Chorus, marked off from the rest of the Agora, because the Spartan youths here danced in honour of Apollo at the festival of the Gymnopaedia. This place was adorned with statues of the Pythian deities, Apollo, Artemis, and Leto; and near it were temples of Earth, of Zeus Agoraeus, of Athena Agoraea, of Apollo, of Poseidon Asphaleius, and of Hera. In the Agora was a colossal statue

representing the people of Sparta, and a temple of the Moerae or Fates, near which was the tomb of Orestes, whose bones had been brought from Tegea to Sparta in accordance with the well-known tale in Herodotus. Near the tomb of Orestes was the statue of king Polydorus, whose effigy was used as the seal of the state. Here, also, was a Hermes Agoraeus bearing Dionysus as a child, and the old Ephoreia, where the Ephors originally administered justice, in which were the tombs of Epimenides the Cretan and of Aphareus the Aeolian king. (Paus. iii. 11. §§ 2—11.)

The Agora was near the Acropolis. Lycurgus, it is said, when attacked by his opponents, fled for refuge from the Agora to the Acropolis; but was overtaken by a fiery youth, who struck out one of his eyes. At the spot where he was wounded, Lycurgus founded a temple of Optileitis* or Ophthalmitis, which must have stood immediately above the Agora. Plutarch says that it lay within the *temenos* of the Brazen House; and Pausanias mentions it, in descending from the Acropolis, on the way to the so-called Alpium, beyond which was a temple of Ammon, and probably also a temple of Artemis Coagia. (Plut. *Lyc.* 11; *Apophth. Lac.* p. 227, b.; Paus. iii. 18. § 2.) The Agora may be placed in the great hollow east of the Acropolis (Map, 2). Its position is most clearly marked by Pausanias, who, going westwards from the Agora, arrived immediately at the theatre, after passing only the tomb of Brasidas (iii. 14. § 1). The site of the theatre, which he describes as a magnificent building of white marble, has been already described.

The principal street, leading out of the Agora, was named Aphetais (*Ἀφῆταις*), the Corso of Sparta (Map, *dd*). It ran towards the southern wall, through the most level part of the city, and was bordered by a succession of remarkable monuments. First came the house of king Polydorus, named Booneta (*Βοώνητα*), because the state purchased it from his widow for some oxen. Next came the office of the Bidiaei, who originally had the inspection of the race-course; and opposite was the temple of Athena Celenthea, with a statue of the goddess dedicated by Ulysses, who erected three statues of Celenthea in different places. Lower down the Aphetais occurred the heros of Iops, Amphiarus, and Lelex,—the sanctuary of Poseidon Taenarius,—a statue of Athena, dedicated by the Tarentini,—the place called Hellenium, so called because the Greeks are said to have held counsel there either before the Persian or the Trojan wars,—the tomb of Talchibius,—an altar of Apollo Acreitas,—a place sacred to the earth named Gaseptum,—a statue of Apollo Maleates,—and close to the city walls the temple of Dictynna, and the royal sepulchres of the Eurypontidae. Pausanias then returns to the Hellenium, probably to the other side of the Aphetais, where he mentions a sanctuary of Arsinoe, the sister of the wives of Castor and Pollux; then a temple of Artemis near the so-called Phruria (*Φρούρια*), which were perhaps the temporary fortifications thrown up before the completion of the city walls; next the tombs of the Iamidæ, the Eleian prophets,—sanctuaries of Maro and Alpheius, who fell at Thermopylae,—the temple of Zeus Tropæus, built by the Dorians after conquering the Achaean inhabitants of Laconia, and especially the Amyclæi,—the temple

* So called, because *ὀπτιλοῖ* was the Lacedaemonian form for *ὀφθαλμοί*, Plut. *Lyc.* 11.

of the mother of the gods,—and the heroes of Hippolytus and Aulon. The Aphetais upon quitting the city joined the great Hyacinthian road which led to the Amyclaeum. (Paus. iii. 12. §§ 1—9.)

The next most important street leading from the Agora ran in a south-easterly direction. It is usually called Scias, though Pausanias gives this name only to a building at the beginning of the street, erected by Theodorus of Samos, and which was used even in the time of Pausanias as a place for the assemblies of the people. Near the Scias was a round structure, said to have been built by Epimenides, containing statues of the Olympian Zeus and Aphrodite; next came the tombs of Cyriatas, Castor, Idas, and Lynceus, and a temple of Core Soteira. The other buildings along this street or in this direction, if there was no street, were the temple of Apollo Carneus, who was worshipped here before the Dorian invasion,—a statue of Apollo Aphetaeus,—a quadrangular place surrounded with colonnades, where small-warres (*δῶρος*) were anciently sold,—an altar sacred to Zeus, Athena, and the Dioscuri, all surnamed Ambulii. Opposite was the place called Colona and the temple of Dionysus Colonnatas. Near the Colona was the temple of Zeus Euanemus. On a neighbouring hill was the temple of the Argive Hera, and the temple of Hera Hypercheiria, containing an ancient wooden statue of Aphrodite Hera. To the right of this hill was a statue of Hecatomocles, who had gained the victory in the Olympic games. (Paus. iii. 12. § 10—iii. 13.) Although Pausanias does not say that the Colona was a hill, yet there can be no doubt of the fact, as *κολόνα* is the Doric for *κόληνη*, a hill. This height and the one upon which the temple of Hera stood are evidently the heights NW. of the village of *Πρυχικό* between the Eurotas and the plain to the S. of the theatre (Map, C.).

After describing the streets leading from the Agora to the S. and SE. Pausanias next mentions a third street, running westward from the Agora. It led past the theatre to the royal sepulchres of the Agiadae. In front of the theatre were the tombs of Pausanias and Leonidas (iii. 14. § 1).

From the theatre Pausanias probably went by the hollow way to the Eurotas, for he says that near the Sepulchres of the Agiadae was the Lesche of the Crotani, and that the Crotani were a portion of the Pitanae. It would appear from a passage in Athenaeus (i. p. 31) that Pitane was in the neighbourhood of the Oenus; and its proximity to the Eurotas has been already shown. [See above, p. 1026, a.] It is not improbable, as Curtius observes, that Pitane lay partly within and partly without the city, like the Cerameicus at Athens. After proceeding to the tomb of Taenarus, and the sanctuaries of Poseidon Hippocorinus and the Aeginetan Artemis, Pausanias returns to the Lesche, near which was the temple of Artemis Issoria, also called Limnaea. Issorium, which is known as a stronghold in the neighbourhood of Pitane (Polyaen. ii. 1. § 14; Plut. *Ages.* 32), is supposed by Curtius to be the hill to the north of the Acropolis (Map, C.). Leake, as we have already seen, regards this hill as the Acropolis itself, and identifies the Issorium with the height above the ruined amphitheatre or circus. Pausanias next mentions the temples of Thetis, of Demeter Chthonia, of Sarapis, and of the Olympian Zeus. He then reached the Dromus, which was used in his day as a place for running. It extended along the stream southwards, and contained gym-

nasia, one of which was dedicated by a certain Eurycles. The Roman amphitheatre and the stadium, of which the remains have been already described, were included in the Dromus. In the Dromus was a statue of Hercules, near which, but outside the Dromus, was the house of Menelaus. The Dromus must have formed part of Pitane, as Menelaus is called a Pitatan. (Hesych. s. v.) Proceeding from the Dromus occurred the temples of the Dioscuri, of the Graces, of Eileithyia, of Apollo Carneus, and of Artemis Hegemone; on the right of the Dromus was a statue of Asclepius Agnitas; at the beginning of the Dromus there were statues of the Dioscuri Aphetarii; and a little further the heroism of Alcon and the temple of Poseidon Domatites. (Paus. iii. 14. §§ 2—7.)

South of the Dromus was a broader level, which was called Platanistas, from the plane-trees with which it was thickly planted. It is described as a round island, formed by streams of running water, and was entered by two bridges, on each of which there was a statue of Hercules at one end and of Lycurgus at the other. Two divisions of the Spartans Ephebi were accustomed to cross these bridges and fight with one another in the Plataniston; and, though they had no arms, they frequently inflicted severe wounds upon one another. (Paus. iii. 15. § 8, seq.; Lucian, *Anachars.* 38; Cic. *Tusc. Quaest.* v. 27.) The running streams surrounding the Plataniston were the canals of the *Trypsitiko*, which were fed by several springs in the neighbourhood, and flowed into the Eurotas. Outside the city was the district called Phoebeum, where each division of the Ephebi sacrificed the night before the contest. The Phoebeum occupied the narrow corner south of the Plataniston formed by the *Trypsitiko* and the Eurotas. Pausanias describes it as near Therapne, which was situated upon the Menelaum, or group of hills upon the other side of the Eurotas, mentioned below. The proximity of the Phoebeum to Therapne is mentioned in another passage of Pausanias (iii. 19. § 20), and by Herodotus (vi. 61). The heroism of Cynisca, the first female who conquered in the chariot-race in the Olympic games, took close to the Plataniston, which was bordered upon one side by a colonnade. Behind this colonnade there were several heroic monuments, among which were those of Alcimus, Enaresphorus, of Dorceus, with the fountain Dorceia, and of Sebrus. Near the latter was the sepulchre of the poet Alcman; this was followed by the sanctuary of Helena and that of Hercules, with the monument of Oenous, whose death he here avenged by slaying the sons of Hippocoon. The temple of Hercules was close to the city walls. (Paus. iii. 14. § 8—15. § 5.) Since the poet Alcman, whose tomb was in this district, is described as a citizen of Mesoa [*Dict. of Biogr.*, art. *ALCMAN*], it is probable that this was the position of Mesoa, the name of which might indicate a tract lying between two rivers. (Comp. *Μεσσηνή—ὁπὸ δύο ποταμῶν—μεσσηνίαι*, Steph. B. s. v. *Μεσσηνή*.)

After reaching the SE. extremity of the city, Pausanias returns to the Dromus. Here he mentions two ways: the one to the right leading to a temple of Athena Axiopoenus, and the other to the left to another temple of Athena, founded by Theras, near which was a temple of Hipposthenes, and an ancient wooden statue of Enyalios in fetters. He then describes, but without giving any indication of its position, the painted Lesche, with its surrounding heroes of Cadmus, Oeolycus, Aegeus, and Amphilo-

chus, and the temple of Hera Aegophagus. He afterwards returns to the theatre, and mentions the different monuments in its neighbourhood; among which were a temple of Poseidon Genethlius, heroa of Cleodacus and Oebalus, a temple of Asclepius, near the Booneta, the most celebrated of all the temples of this god in Sparta, with the heroum of Teleclus on its left; on a height not far distant, an ancient temple of Aphrodite armed, upon an upper story of which was a second temple of Aphrodite Morpho; in its neighbourhood was a temple of Hilaëira and Phoebe, containing their statues, and an egg suspended from the roof, said to have been that of Leda. Pausanias next mentions a house, named Chiton, in which was woven the robe for the Amyclæan Apollo; and on the way towards the city gates the heroa of Cheilon and Athenaëus. Near the Chiton was the house of Phormion, who hospitably entertained the Dioscuri when they entered the city as strangers (Paus. iii. 15. § 6—16. § 4.) From these indications we may suppose that the Amyclæan road issued from this gate, and it may therefore be placed in the southern part of the city. In that case the double temple of Aphrodite probably stood upon one of the heights of New Sparta.

Pausanias next mentions a temple of Lycurgus; behind it the tomb of his son Encosmus, and an altar of Lathria and Alexandra: opposite the temple were monuments of Theopompus and Eurybiades, and the heroum of Astrabacus. In the place called Limnaeum stood the temples of Artemis Orthia and Leto. This temple of Artemis Orthia was, as we have already remarked, the common place of meeting for the four villages of Pitane, Mesoa, Cynosura, and Limnae. (Paus. iii. 16. § 6, seq.) Limnae was partly in the city and partly in the suburbs. Its position to the N. of the Dromus has been mentioned above; and, if an emendation in a passage of Strabo be correct, it also included a district on the left bank of the Eurotas, in the direction of Mt. Thornax (τὸ Ἀμυκλαίων κατὰ τὸν [Θόρνα] κα, Meineke's emendation instead of [Θόρνα] κα, Strab. viii. p. 364).

The most ancient topographical information respecting Sparta is contained in the answer of the Delphic oracle to Lycurgus. The oracle is reported to have directed the lawgiver to erect temples to Zeus and Athens, and to fix the seat of the senate and kings between the Babyca and Cnacion. (Plut. *Lyc.* 6.) These names were obsolete in the time of Plutarch. He says that the Cnacion was the Oenus, now the *Kelefiná*; and he also appears to have considered the Babyca a river, though the text is not clear; in that case the Babyca must be the *Trypitiko*, which forms the southern boundary of the city. It appears, however, from the same passage of Plutarch, that Aristotle regarded the Babyca as a bridge, and only the Cnacion as a river; whence he would seem to have given the name of Cnacion to the *Trypitiko*, and that of Babyca to the bridge over the Eurotas.

The left, or eastern bank of the Eurotas, was not occupied by any part of Sparta. When Epaminondas invaded Laconia in B. C. 370 he marched down the left bank of the Eurotas till he reached the foot of the bridge which led through the hollow way into the city. But he did not attempt to force the passage across the bridge; and he saw on the other side a body of armed men drawn up in the temple of Athena Alea. He therefore continued his march along the left bank of the river till he arrived opposite to Amyclæ, where he crossed the river. (Xen. *Hell.*

vi. 5. § 27.) The account of Xenophon illustrates a passage of Pausanias. The latter writer, in describing (iii. 19. § 7) the road to Therapne, mentions a statue of Athena Alea as standing between the city and a temple of Zeus Plusius, above the right bank of the Eurotas, at the point where the river was crossed; and as only one bridge across the Eurotas is mentioned by ancient writers, there can be no doubt that the road to Therapne crossed the bridge which Xenophon speaks of, and the remains of which are still extant. Therapne stood upon the Menelaïum or Mount Menelaïus, which rose abruptly from the left hand of the river opposite the south-eastern extremity of Sparta. (*Μενελαϊον*, Polyb. v. 22; *Μενελαϊον*, Steph. B. s. v.; Menelaïus Mons, Liv. xxxiv. 28.) The Menelaïum has been compared to the Janiculum of Rome, and rises about 760 feet above the Eurotas. It derived its name from a temple of Menelaus, containing the tombs of Menelaus and Helen, whither solemn processions of men and women were accustomed to repair, the men imploring Menelaus to grant them bravery and success in war, the women invoking Helen to bestow beauty upon them and their children. (Paus. iii. 19. § 9; Herod. vi. 61; Isocr. *Encom. Hel.* 17; Hesych. s. v. 'Ελένιος, *Θερπανάριβια*.) The foundations of this temple were discovered in 1834 by Ross, who found amongst the ruins several small figures in clay, representing men in military costume and women in long robes, probably dedicatory offerings made by the poorer classes to Menelaus and Helen. (Ross, *Wanderungen in Griechenland*, vol. ii. p. 13, seq.) The temple of Menelaus is expressly said to have been situated in THERAPNE (*Θερπάνη, Θερπάναι*; Theramne, Plin. iv. 5. s. 8), which was one of the most ancient and venerable places in the middle valley of the Eurotas. It was said to have derived its name from a daughter of Lelex (Paus. iii. 19. § 9), and was the Achæan citadel of the district. It is described by the poets as the lofty well-towered Therapne, surrounded by thick woods (Pind. *Isthm.* i. 31; Coluth. 225), where slept the Dioscuri, the guardians of Sparta. (Pind. *Nem.* x. 55.) Here was the fountain of Messeis, the water of which the captive women had to carry (Paus. iii. 20. § 1; Hom. *Il.* vi. 457); and it was probably upon this height that the temple of Menelaus stood, which excited the astonishment of Telemachus in the Odyssey. Hence Therapne is said to have been in Sparta, or is mentioned as synonymous with Sparta. (*Θερπάναι, πόλις Λακωνική, ἣν τινες Σπάρτην φασί*, Steph. B. s. v.; *ἐν Σπάρτῃ*, Schol. ad *Apoll. Rhod.* ii. 162, Pind. *Isthm.* i. 31.) It is probable that further excavations upon this spot would bring to light some tombs of the heroic ages. The Phœbeaen, which has been already described as the open space on the right bank of the Eurotas [see p. 1028, b.], contained a temple of the Dioscuri. Not far from this place was the temple of Poseidon, surnamed Gæaochus. (Paus. iii. 20. § 2.)

After the power of Sparta was destroyed by the battle of Leuctra, its territory was exposed to invasion and the city to attack. The first time that an enemy appeared before Sparta was when Epaminondas invaded Laconia in B. C. 390, as already related. After crossing the river opposite Amyclæ, he marched against the city. His cavalry advanced as far as the temple of Poseidon Gæaochus, which we have seen from Pausanias was in the Phœbeaen. We also learn from Xenophon that the Hippodrome was

in the neighbourhood of the temple of Poseidon, and consequently must not be confounded with the Dromus. The Thebans did not advance further, for they were driven back by a body of picked hoplites, whom Agesilaus had placed in ambush in the sanctuary of the Tyndaridae (Dioscuri), which we likewise know from Pausanias was in the Phoebaeum. (Xen. *Hell.* vi. 5. §§ 31, 32.) In B.C. 362 Epaminondas made a daring attempt to surprise Sparta, and actually penetrated into the market-place; but the Spartans having received intelligence of his approach, the city had been put into a state of defence, and Epaminondas again withdrew without venturing upon an assault. (Xen. *Hell.* vii. 5. §§ 11–14; Polyb. ix. 8; Diod. xv. 83.) In B.C. 218 Philip unexpectedly entered Laconia, descended the vale of the Eurotas by the left bank of the river, passing by Sparta, and then laid waste the whole country as far as Taenarus and Malea. Lysurgus, the Spartan king, resolved to intercept him on his return: he occupied the heights of the Menelaum with a body of 2000 men, ordered the remaining forces of Sparta to be ready to take up their position between the city and the western bank of the river, and at the same time, by means of a dam, laid the low ground in that part under water.

Philip, however, contrary to the expectation of Lysurgus, stormed the Menelaum, and brought his whole army safely through the pass, and encamped two stadia above the city. (Polyb. v. 17–24.) In B.C. 193 Quintus Flaminius attacked Sparta, because Nabis, the tyrant of the city, refused obedience to the terms which the Roman general imposed. With an army of 50,000 men Flaminius assaulted the city on its three undefended sides of Phoebaeum, Dictynnaeum, and Heptagoniae. He forced his way into the city, and after overcoming the resistance which he met with in the narrow ways at the entrance of the city, marched along the broad road (probably the Aphetais) leading to the citadel and the surrounding heights. Theraps Nabis set fire to the buildings nearest to the city walls, which compelled the Romans to retreat. But the main object of Flaminius had been answered, for three days afterwards Nabis sent his son-in-law to implore peace. (Liv. xxxiv. 38, 39.) The position of the Phoebaeum has been already explained. The Dictynnaeum was so called from the temple of Artemis Dictynna, which Pausanias describes as situated at the end of the Aphetais, close to the walls of the city (iii. 12. § 8). Leake thinks that the name of the village of *Kalagonid* may be a

- g g. Modern Road.
- h h. The *Pandeleimona*.

corruption of Heptagoniae; but it is more probable that the Heptagoniae lay further west in the direction of *Mistra*, as it was evidently the object of Flamininus to attack the city in different quarters.

The small stream which encloses Sparta on the south, now called the *Trypitióto* or river of *Magála*, is probably the ancient *Tiassa* (*Tiāsa*), upon which stood the sanctuary of Phaëna and Cleta, and across which was the road to Amyclae. (Paus. iii. 18. § 6.) Leake, however, gives the name of *Tiassa* to the *Pandeleimona*, the next torrent southwards falling into the Eurotas.

With respect to the gates of Sparta, the most important was the one opposite the bridge of the Eurotas: it was probably called the gate to Therapne. Livy mentions two others, one leading to the Messenian town of Pharae, and the other to Mount Barboethenes (xxxv. 30). The former must have been upon the western side of the city, near the village of *Magála*. Of the southern gates the most important was the one leading to Amyclae.

In this article it has not been attempted to give any account of the political history of Sparta, which forms a prominent part of Grecian history, and cannot be narrated in this work at sufficient length to be of any value to the student. A few remarks upon the subject are given under *Laconia*.

The modern authority chiefly followed in drawing up the preceding account of the topography of Sparta is Curtius, *Peloponnesos*, vol. ii. p. 219, seq. Valuable information has also been derived from Leake, *Morea*, vol. i. p. 150, seq.; *Peloponnesiaica*, p. 129, seq. See also Mure, *Tour in Greece*, vol. ii. p. 220, seq.; Ross, *Wanderungen in Griechenland*, vol. ii. p. 11, seq.; *Expédition scientifique de Morée*, vol. ii. p. 61, seq.; Boblaye, *Recherches*, &c., p. 78, seq.; Beulé, *Études sur la Péloponnèse*, p. 49, seq.

SPARTARIUS CAMPUS (*Σπαρτῆριον πεδῖον*, Strab. iii. p. 160), a district near Carthago Nova in Hispania Tarraconensis, 100 miles long and 30 broad, which produced the peculiar kind of grass called *spartum*, used for making ropes, mats, &c. (Plin. xix. 2. s. 8.) It is the *stipa tenacissima* of Linnaeus; and the Spaniards, by whom it is called *esparto*, still manufacture it for the same purposes as those described by Pliny. It is a thin wiry rush, which is cut and dried like hay, and then soaked in water and plaited. It is very strong and lasting, and the manufacture still employs a large number of women and children. It was no doubt the material of which the Iberian whips mentioned by Horace (*Epod.* iv. 3) were composed. (See Ford, *Handb. of Spain*, p. 168.) From this district Carthago Nova itself obtained the surname of "Spartaria." [T. H. D.]

SPARTOLUS (*Σπάρτολος*, Thuc. ii. 79, r. 18; Steph. B.), a town of the Chalcidic peninsula, at no great distance from Olynthus (Isseus, *de Dicaeogen. Haered.* p. 55), under the walls of which the Athenian forces were routed, B. C. 249. It belonged to the Bottiaeans, and was perhaps their capital, and was of sufficient importance to be mentioned in the treaty between Sparta and Athens in the tenth year of the Peloponnesian War. [E. B. J.]

SPAUTA (*Σπαυτά*), a lake in Media Atropatene, which is intensely salt, so as to cause the itch on the bodies of persons who have unwittingly bathed in it, with injury also to their clothes (Strab. xi. p. 523). Its present name is the *Sea of Urumiah*. Its earliest Armenian name is said to have been *Kaputan*, or *Kaputan Chow*, whence the Greek form would seem

to have been modified. (L. Ingi, *Archaeol. Armen.* i. p. 160; St. Martin, *Mémoires*, i. p. 59.) It is probably the same as the *Μαρτιανή λίμνη* of Ptolemy (vi. 2. § 17). Many travellers have visited it in modern times. (Tavernier, i. ch. 4; Morier, *Sec. Voy.* ii. p. 179.) [V.]

SPELAEUM, a place in Macedonia which Livy says was near Pella (xiv. 33).

SPELUNCA (*Sperlonga*), a place on the coast of Latium (in the more extended sense of that name), situated between Tarracina and Caieta. The emperor Tiberius had a villa there, which derived its name from a natural cave or grotto, in which the emperor used to dine, and where he on one occasion very nearly lost his life, by the falling in of the roof of the cavern (Tac. *Ann.* iv. 59; Suet. *Tib.* 39). The villa is not again mentioned, but it would appear that a village had grown up around it, as Pliny mentions it in describing the coast ("locus, Spelunca," Plin. iii. 5. a. 9), and its memory is still preserved by a village named *Sperlonga*, on a rocky point about 8 miles W. of *Gaëta*. Some Roman remains are still visible there, and the cave belonging to the Imperial villa may be identified by some remains of architectural decoration still attached to it (Craven's *Abruzzi*, vol. i. p. 73). [E. H. B.]

SPEOS ARTEMIDOS, the present grottoes of *Beni-hassan*, was situated N. of Antinoë, in Middle Egypt, on the eastern bank of the Nile, in lat. 27° 40' N. The name is variously written: Peos in the Itinerary of Antoninus (p. 167, Wesseling); Pois in the *Notitia Imperii*; but *Speos* is probably the true form, implying an excavation (*σπείος*) in the rocks. *Speos Artemidos* was rediscovered by the French and Tuscan expedition into Egypt early in the present century. It was constructed by some of the Pharaohs of the 18th dynasty in a desert-valley running into the chain of Arabian hills. The structure as a whole consists of a temple, and of between thirty and forty catacombs. The temple is dedicated to Pasht, Bubastis, the Artemis of the Greeks. (Herod. ii. 58.) The catacombs appear to have served as the general necropolis of the Hermopolite nome. For although Hermopolis and its district lay on the western bank of the Nile, yet as the eastern hills at this spot approach very closely to the stream, while the western hills recede from it, it was more convenient to ferry the dead over the river than to transport them across the sands. Some of these catacombs were appropriated to the mummies of animals, cats especially, which were worshipped by the Hermopolitans. In the general cemetery two of these catacombs merit particular attention: (1) the tomb of Neophth, a military chief in the reign of Sesortasen I. and of his wife Rotei; (2) that of Amenheme, of nearly the same age, and of very similar construction. The tomb of Neophth, or, as it is more usually denominated, of Rotei, has in front an architrave excavated from the rock, and supported by two columns, each 23 feet high, with sixteen fluted facelets. The columns have neither base nor capital; but between the architrave and the head of the column a square abacus is inserted. A dented cornice runs over the architrave. The effect of the structure, although it is hardly detached from the rock, is light and graceful. The chamber or crypt is 30 feet square, and its roof is divided into three vaults by two architraves, each of which was originally supported by a single column, now vanished. The walls are painted in compartments of the most brilliant colours, and the

drawing is generally in the best style of Egyptian art. They represent various events in the life of Neophth. From the tomb of Rotei, indeed, might be compiled a very copious record of the domestic life of the Egyptians. On its walls are depicted, among many others, the following subjects: the return of warriors with their captives; wrestlers; hunting wild beasts and deer; the Nile boats, including the *Bari* or high-prowed barge, and fisheries; granaries and flax-dressing; spinning and weaving; games with the lance, the ball, and the discus; and the rites of sepulture. The tomb of Amenheme is covered also with representations of men in various postures of wrestling; and the other grottoes are not less interesting for their portraits of civil and domestic life. (Wilkinson, *Modern Egypt and Thebes*; Rosellini, *Mon. Civ.* vol. i.; Kenrick, *Anc. Egypt*, vol. i. p. 47, foll.) [W.B.D.]

SPERCHEIUS (Σπερχεύς; *Elidha*), a river in the S. of Thessaly, rising in Mount Tymphrestus (Strab. ix. p. 433), and flowing into the Maliac gulf. The Dryopes and Aenianes dwelt in the upper part of its course till it entered the plain of Malis, through which it flowed to the sea. In ancient times it joined the sea at Anticyra; and the rivers Dyrras, Melas, and Asopus fell separately into the sea to the S. of the Spercheus. (Herod. vii. 198.) But the Spercheus has changed its course, and now falls into the sea much further south, about a mile from Thermopylae. The Dyrras and Melas now unite their streams, and fall into the Spercheus, as does also the Asopus. [THERMOPTILAE.] Spercheus is celebrated in mythology as a river-god [*Dict. of Biogr. a. v.*], and is mentioned in connection with Achilles. (Hom. *Il.* xvii. 142.) Its name also frequently occurs in the other poets. (Aesch. *Pers.* 486; Sophocl. *Phil.* 722; Virg. *Georg.* ii. 485; Lucan, vi. 366.) (Leake, *Northern Greece*, vol. ii. pp. 8, 11, 15.)

SPERCHIAE, a place in Thessaly, which, according to the description of Livy (xxxii. 13), would seem to have been situated at no great distance from the sources of the Spercheus. Ptolemy (iii. 13. § 17) mentions a place Spercheia between Echinnus and Thebes in Phthiotis; and Pliny (iv. 7. a. 13) places Sperchio in Doris. It is probable that these three names indicate the same place, but that its real position was unknown.

SPHACTERIA. [PYLUS.]

SPHAE'RIA. [CALAURIA.]

SPHA'GIAE. [PYLUS.]

SPHENDALE. [ATTICA, p. 330, a.]

SPHENTZANIUM, a place in Dalmatia, SE. of the road from Scodra to Naissus. (Ann. Comn. 9. p. 252.) Probably the modern *Pecozina*. [T.H.D.]

SPHETTUS. [ATTICA, p. 332, b.]

SPHINGIUM. [BOEOTIA, p. 412, a.]

SPINA (Σπίνα, Strab.; Σπίνα, Steph. B.; *Ἐθ. Σπινάρις* and *Σπινάρις*), an ancient city of Italy, situated near the southernmost mouth of the Padus, within the limits of Gallia Cisalpina. It was, according to Dionysius, a Pelagic settlement, and one of the most flourishing cities founded by that people in Italy, enjoying for a considerable time the dominion of the Adriatic, and deriving great wealth from its commercial relations, so that the citizens had a treasury at Delphi, which they adorned with costly offerings. They were subsequently expelled from their city by an overwhelming force of barbarians, and compelled to abandon Italy. (Dionys. i. 18, 28.) Strabo gives a similar account of the naval

greatness of Spina, as well as of its treasury at Delphi; but he calls it a Greek (Hellenic) city; and *Spina*, who notices only Greek, or repeats Greek, does not mention Spina apparently as such. Its Greek origin is confirmed also by Justin, whose authority, however, is not worth much. (Strab. v. p. 334, a. p. 421; Scyl. p. 6. § 19; Justin, xx. 1; Plin. ii. 16. a. 20.) But these authorities, as well as the fact that it had a treasury at Delphi, which is undeniably historical, seem to exclude the supposition that it was an Etruscan city, like the neighbouring *Adra*; and whatever be the foundation of the story of the Pelagic settlement, there seems no reason to doubt that it was really a Greek colony, though we have no account of the period of its establishment. *Spina* alludes to it as still existing in his time: how it is clear that the barbarians who are said by Dionysius to have driven out the inhabitants, can be other than the neighbouring Gauls; and that the period of its destruction was not very long before the conquest of Cisalpine Gaul by the Romans. It does not appear to have ever been rebuilt or become a Roman town. Strabo speaks of it as in his time a mere village; and Pliny repeatedly alludes to it as a place no longer in existence. (Plin. ii. 16. a. 21; 17. a. 21; Strab. v. p. 214.) No subsequent trace of it is found, and its site has never been ascertained. We know, however, that it must have been situated on or near the southernmost arm of the Padus, which derived from it the name of *SPINETICUS* *Canalis*, and which probably corresponded with the modern *Po di Primaro*. [PADUS.] But the site of Spina must now be sought far from the sea: Strabo tells us that even in his time it was 90 *stadia* (11 *miles*) from the coast; though it was said to have been originally situated on the sea. It is probably now 4 or 5 miles further inland; but the changes which have taken place in the channels of the river, as well as the vast accumulations of alluvial soil, make it almost hopeless to look for its site.

Pliny tells us that the Spinetic branch of the Padus was the one which was otherwise called *Eridanus*, but it is probable that this was merely one of the attempts to connect the mythical *Eridanus* with the actual Padus, by applying its name to one particular branch of the existing river. It is, however, probable that the Spinetic channel was, in very early times, one of the principal mouths of the river, and much more considerable than it afterwards became. [T.D.]

SPINAE, a place in Britannia Romana, E. of Aqua Solis (*Bath*). (*Itin. Ant.* pp. 465, 466.) Near the village of *Spene* near *Newbury* in *Berkshire*, which has its name of *Spene* in regard to Spina, the ancient borough. (Camden, p. 166.) [T.H.D.]

SPIRAEUM (Plin. iv. 5. a. 9) or SPERAEUM (Ptol. iii. 16. § 12), a promontory on the eastern coast of Peloponnesus upon the confines of the territories of Corinth and Epidaurus. For details, see Vol. I. p. 685, a.

SPOLETIUM (Σπολῆτιον; *Ἐθ. Spoletiens*; *Spoleto*), a city of Umbria, situated between *Interamna* (*Terni*) and *Trebia* (*Trevi*), about 8 miles S. of the sources of the *Clitumnus*. Its name is not mentioned in history as an Umbrian town, nor have we any account of its existence previous to the establishment of the Roman colony, which was settled there in a. c. 240, just after the close of the First Punic War (Liv. *Epit.* xx.; Vol. I. p. 14). It was a *Colonia Latina*, and its name is repeatedly mentioned during the Second Punic War.

In B. C. 217, just after the battle at the Lake Trasimenus, Hannibal advanced to the gates of Spolegium, and made an assault upon the city, but was repulsed with so much vigour by the colonists, that he drew off his forces and crossed the Apennines into Picenum. (Liv. xxii. 9.) A few years later (B. C. 209) Spolegium was one of the colonies which distinguished themselves by their fidelity and zeal in the service of Rome, at the most trying moment of the war. (Id. xxvii. 10.) For some time after this we hear but little of Spolegium, though it seems to have been a flourishing municipal town. In B. C. 167 it was selected by the senate as the place of confinement of Gentius, king of Illyria, and his sons; but the citizens declined to take charge of them, and they were transferred to Iguvium (Liv. xlv. 43). But in the civil war between Marius and Sulla it suffered severely. A battle was fought beneath its walls in B. C. 82, between Pompeius and Crassus, the generals of Sulla, and Carrinas, the lieutenant of Carbo, in which the latter was defeated, and compelled to take refuge in the city. (Appian, *B. C. i.* 89.) After the victory of Sulla, Spolegium was one of the places severely punished, all its territory being confiscated, apparently for the settlement of a military colony. (Flor. iii. 21; Zumpt, *de Colon.* p. 254.) Florus calls Spolegium at this time one of the "municipia Italica splendidissima;" but this is probably a rhetorical exaggeration. Cicero, however, terms it, in reference to a somewhat earlier period, "colonia Latina in primis firma et illustris." (Cic. *pro Balb.* 21.) It became a municipium (in common with the other Latin colonies) by virtue of the Lex Julia; and does not appear to have subsequently obtained the title of a colony, though it received a fresh accession of settlers. (Lib. *Col.* p. 225; Zumpt, *l. c.*) It is again mentioned during the Peruvian War (B. C. 41), as affording a retreat to Munatius Plancus when he was defeated by Octavian (Appian, *B. C. v.* 33); and seems to have continued under the Empire to be a flourishing municipal town, though rarely mentioned in history. (Strab. v. p. 227; Plin. iii. 14. s. 19; Ptol. iii. 1. § 54; Orell. *Inscr.* 1100, 1103, 3966.) It was at or near Spolegium that the emperor Aemilianus was encamped, when the death of his rivals Gallus and Volusianus gave him temporary possession of the empire; and it was there also that he was himself put to death by his soldiers, after a reign of only three months. (Vict. *Epit.* 31.) Spolegium is again mentioned during the Gothic Wars, after the fall of the Western Empire, when it was taken by the Gothic king Totila (Procop. *B. G.* iii. 12), who partially destroyed its fortifications; but these were restored by Narses (*Ib.* iv. 33). It was at this time regarded as a strong fortress, and was a place of importance on that account. Under the Lombards it became the capital of a duchy (about A. D. 570), the dukes of which soon rendered themselves altogether independent of the Lombard kings, and established their authority over a considerable part of Central Italy. The duchy of *Spoleto* did not cease to exist till the 12th century.

Spolegium was not situated on the Via Flaminia, properly so called. That line of highroad proceeded from Narnia to Mevania (*Bevagna*) by a more direct course through Carsulae, thus leaving on the right hand the two important towns of Interamna and Spolegium. (Strab. v. p. 227.) We learn from Tacitus that this continued to be the line of the

Flaminian Way as late as the time of Vespasian (Tac. *Hist.* iii. 60); but at a later period the road through Interamna and Spolegium came into general use, and is the one given in the Itineraries. (*Itin. Ant.* p. 125; *Itin. Hier.* p. 613.) This must have followed very nearly the same line with the modern road from Rome to *Perugia*, which crosses a steep mountain pass, called *Monte Somma*, between *Spoleto* and *Terni*; and this was probably the reason that this line was avoided in the first instance by the Via Flaminia. But there must always have been a branch road to Spolegium, and from thence, as we learn from Suetonius (*Vesp.* 1), another branch led to Nursia in the upper valley of the Nar.

Spoleto is still a tolerably flourishing place, with the rank of a city. It has several Roman remains, among which the most interesting is an arch commonly called the *Porta d'Annibale*, as being supposed to be the gate of the city from whence that general was repulsed. There is, however, no foundation for this; and it is doubtful whether the arch was a gateway at all. Some remains of an ancient theatre are still visible, and portions of two or three ancient temples are built into the walls of modern churches. A noble aqueduct, by which the city is still supplied with water, though often ascribed to the Romans, is not really earlier than the time of the Lombard dukes. Some remains of the palace inhabited by the latter, but first built by Theodoric, are also visible in the citadel which crowns the hill above the town. [E. H. B.]

SPORADES (Σποράδες), or the "Scattered," a group of islands in the Aegean, Cretan, and Carpathian seas, so called because they were scattered throughout these seas, in opposition to the Cyclades, which lay round Delos in a circle. But the distinction between these groups was not accurately observed, and we find several islands sometimes ascribed to the Cyclades, and sometimes to the Sporades. The islands usually included among the Cyclades are given under that article. [Vol. I. p. 723.] Scylax makes two groups of Cyclades; but his southern group, which he places off the coast of Laconia and near Crete, are the Sporades of other writers: in this southern group Scylax specifies. Melos, Cimolos, Olios, Sincinos, Thera, Anaphe, Astypalaea (p. 18, ed. Hudson). Strabo first mentions among the Sporades the islands lying off Crete, — Thera, Anaphe, Therasia, Ios, Sincinos, Lagusa, Pholegandros (x. pp. 484, 485). Then, after describing the Cyclades, he resumes his enumeration of the Sporades, — Amorgos, Lebinthos, Leria, Patmos, the Corassiae, Icaria, Astypalaea, Telos, Chalcia, Nisyros, Casmos, the Calyndae (x. pp. 487—489). Pliny (iv. 12. s. 23) gives a still longer list. An account of each island is given under its own name.

STABATIUM, in Gallia, a name which occurs in the Table on a road from Vienna (*Vienne*) past Cularo (*Grenoble*) to the Alpis Cottia (*Mont Genève*). Stabatio is placed between Durotincum and Alpis Cottia. D'Anville fixed Stabatio at *Monestier* or *Monetier* near *Briançon*. [G. L.]

STABIAE (Στάβιαι; *Eth.* Stabianus; Ru. near *Castell'a Mare*), a city of Campania, situated at the foot of the Mons Lactarius, about 4 miles S. of Pompeii, and a mile from the sea. The first mention of it in history occurs during the Social War (B. C. 90), when it was taken by the Samnite general C. Papius (Appian, *B. C. i.* 42). But it was retaken by Sulla the following year (B. C. 89), and entirely destroyed

(Plin. iii. 5. s. 9). Nor was it ever restored, so as to resume the rank of a town; Pliny tells us that it was in his time a mere village, and the name is not mentioned by any of the other geographers. It is, however, incidentally noticed both by Ovid and Columella (Ovid. *Met.* xv. 711; Colum. *R. R.* x. 133), and seems to have been, in common with the whole coast of the *Bay of Naples*, a favourite locality for villas. Among others Pomponianus, the friend of the elder Pliny, had a villa there, where the great naturalist sought refuge during the celebrated eruption of Vesuvius in A. D. 79, and where he perished, suffocated by the cinders and sulphurous fumes (Plin. *Ep.* vi. 16). It is certain that Stabiae was on this occasion buried under the ashes and cinders of the volcano, though less completely than Pompeii and Herculaneum; but the site was again inhabited, and the name was retained throughout the period of the Roman Empire, though it appears to have never again risen into a place of any consideration. It was chiefly resorted to by invalids and others, on account of its neighbourhood to the Mons Lactarius, for the purpose of adopting a milk diet (Galen, *de Meth. Med.* v. 12; Cassiod. *Var.* xi. 10; Symmach. *Ep.* vi. 17). Its name is found also in the Tabula, and was preserved in that of *Castell' a Mare di Stabia*, borne by the modern town. The Stabiae of the Lower Empire seems to have been situated on the coast, in the bight of the *Bay of Naples*; and probably did not occupy the same site with the older town, which seems to have been situated about a mile inland at the foot of the hill of *Groggano*. The exact spot was forgotten till the remains were accidentally brought to light about 1750; and since that time excavations have been frequently made on the site, but the results are far less interesting than those of Pompeii and Herculaneum. They confirm the account of Pliny, by showing that there was no town on the spot, but merely a row of straggling villas, and these for the most part of an inferior class. They seem to have suffered severely from the earthquake of A. D. 63, which did so much damage to Pompeii also. (Swinburne's *Travels*, vol. i. p. 82.) [E. H. B.]

STABULA, in Gallia, is placed by the Antonine Itin. vi. from Cambes (*Gros Kembs*) and xviii. from Argentovaria (*Arzheim*). These distances bring us to a place between *Otmarsheim* and *Bautsheim*, where Rhenanus, quoted by D'Anville, says that traces of an old place are found.

The word Stabula meant a station or resting place for travellers, a kind of inn, as we see from a passage of Ulpian (*Dig.* 47. tit. 5. s. 1): "qui naves, cauponas, stabula exerceant;" and the men who kept these places were "Stabularii." [G. L.]

STABULUM, AD, in Gallia, is placed by the Antonine Itin. between Saluslae (*Salces*) and Samumus Pyrenaeus, or the pass of the Pyrenees at *Bellegarde*. It is supposed to be *Le Boulu*, which looks like a part of the old name, on the left bank of the *Tech*. The distances in the Itin. both from Saluslae to Ad Stabulum, and from Ad Stabulum to Samumus Pyrenaeus, are a great deal too much. The name, however, and the place *Le Boulu* on the *Tech* seem to fix the position of this Stabulum. [CENTURIONES, AD; STABULA.] [G. L.]

STABULUM DIOME'DIS (*Itin. Ant.* p. 331; *It. Hier.* p. 603), a place on the coast of Thrace, on the Via Egnatia, 18,000 paces, according to Itin. Ant., 12,000, according to It. Hier., from Porsula, or Maximianopolis; probably the same as Pliny (iv.

11. s. 18) calls Tirida: "Oppidum fuit Tirida, Diomedis equorum stabulis dirum." This Diomedes was king of the Bistones in Thrace, and was in the habit of throwing strangers to be devoured by his savage horses, till at length he himself was punished in the same way by Hercules. (Mela, ii. 2. § 8.) Lapis places it near the modern *Issikent*. [J. E.]

STA'BULUM NOVUM, a town probably of the Co-setani, in Hispania Tarraconensis. (*Itin. Ant.* p. 390.) Various identified with *Villanueva de Sitges*, *Villanueva*, and *Solivela*, or *Sagarra*. [T. H. D.]

STACHIR (Στάχειρ, *Itol.* iv. 6. §§ 7 and 8), a river on the W. coast of Libya Interior, which runs in Mount Ryssadium. Not far from its source it formed a lake named Clonia, and after flowing in a westerly direction, discharged itself into the Sinus Hesperius, to the SE. of the promontory of Byssadium. It is probably the same river which Pliny (v. 1. s. 1) calls Salsus, and may be the modern *St. John* or *St. Antonio* river, also called *Rio de Guano*. [T. H. D.]

STAGEIRA, STAGEIRUS (Στάγειρος, *Herod.* vii. 115; *Thuc.* iv. 68, v. 18; *Strab.* vii. p. 331, *Fr.* 33, 35; Στάγειρα, al. Στάδρεπα, *Procl.* iii. 13. § 10; *Plin.* iv. 17, xvi. 57), a town of Chalcidice in Macedonia, and a colony of Andros. The army of Xerxes, after passing through the plain of Sylea, passed through Stageirus to arrive at Acanthes. In the eighth year of the Peloponnesian War it surrendered to Brasidas, and two years afterwards was included in the treaty between Sparta and Athens. It was the birthplace of Aristotle. Alexander, from regard to his great teacher, restored this town, which with other Grecian colonies in that quarter had fallen into decay, when W. Thrace had become part of the Macedonian kingdom. (*Plut. Alex.* 7; *Diog. Laert.* v. § 4; *Theophr. H. P.* 102; *Aelian*, *V. H.* iii. 17.) But the improvement was not permanent, and no memorial of the birthplace of Aristotle remains, unless the coins inscribed *Οφειγος* are of this place, as Eckhel (vol. ii. p. 73) supposed, on the authority of a fragment in the *Geographi Minores* (vol. iv. p. 42, ed. Hudson). Leake (*Northern Greece*, vol. iii. p. 168) has fixed the site at *Stavris*, which he considers to be a contraction of the old name: it is almost presumptuous to differ with so great an authority in comparative geography; but it may be observed that the name *Stavris* or "Cross" is common enough in Greece, and Mr. Bowen (*Mount Athos*, &c. p. 120, London, 1852) has shown, from a comparison with the passage in Herodotus (l. c.), that the traditional belief of the Macedonian peasants in identifying *Iabovos* or *Nizovo*, as it is called by them, with Stageirus, rests upon satisfactory grounds. The position of this village, on the S. face of a wooded mountain which commands a view of Mt. Athos and the Aegean, is very much that of an Hellenic city, and there are vast substructions of Hellenic masonry all around. The Epitomiser of Strabo (vii. p. 331), who lived not long before the eleventh century, has a port and island called *ΚΑΡΡΟΣ* (*Kárpōi*) near Stageirus, which is probably the island of *Lefthériðha* near *C. Marmári*; Leake (l. c.) prefers, in accordance with his views that *Stavris* represents Stageirus, the port and island of *Lefthériðha*. [E. B. J.]

STAGNA VOLCARUM, on the coast of Gallia Narbonensis. Mela (ii. 5) speaks of the *Stagna Volcarum*, which he places W. of the Rhone. They are the long line of *étangs* between *Aiguas-Mortes*

and *Agde*, separated from the land by a long, narrow, flat, which widens near *Cette*, where the *Mons Setius* is. These lagoons are the *Étangs de Tau*, de *Fron-tignan*, de *Maguelone*, and others. *Ariens* (*Or. Marii*. 58) mentions the *Taurus* or *Étang de Tau*:

"Taurum paludem namque gentiles vocant."

[*PECTY JUGUM; LEDUS*].

[G. L.]

STALIOCANUS PORTUS (Σταλιοκανὸς λιμήν). Ptolemy (ii. 8. § 2) places this port between *Gobæum Promontorium* [*GOBÆUM*] and the mouth of the *Tetus*, on the coast of *Gallia Lugdunensis*. *D'Anville* (*Notice, &c.*) found in a manuscript plan of the *Anse du Conquet* the name of *Port Stiocan*, N. of *Cap Mahé*, at the bottom of the road of *Lochrist*. *Lobineau* in his *History of Bretagne* says that the name means *White Tower*, and that there were traces of a port there, constructed of brick and cement. *Gosselin* places the *Staliocanus* on the N. coast of *Bretagne*, at the outlet of the river on which *Morlaix* stands. It is impossible to determine which of the numerous bays on this irregular coast is Ptolemy's *Staliocanus*.

[G. L.]

STANACUM, a place in *Noricum*, on the road leading along the Danube from *Augusta Vindelicorum* to *Carnuntum* and *Vindobona*. (*It. Ant.* p. 249; *Tab. Pent.*) Its exact site is uncertain. (Comp. *Muchar*, *Norikum*, i. p. 285.)

[L. S.]

STATIELLI (Στατιέλλαι), a tribe of *Ligurians*, who inhabited the northern slopes of the *Apennines*, on both sides of the valley of the *Bormida*. Their locality is clearly fixed by that of the town of *Aquæ Statiellæ*, now *Aquæ*, which grew up under the Roman Empire from a mere watering place into a large and populous town, and the chief place of the surrounding district. The *Statielli* are mentioned by *Livy* in B. C. 173, as an independent tribe, who were attacked by the Roman consul, *M. Popilius*: after defeating them in the field, he attacked and took their city, which *Livy* calls *Carystus*, and, not content with disarming them, sold the captives as slaves. This proceeding was severely arraigned at Rome by the tribunes, especially on the ground that the *Statielli* had previously been uniformly faithful to the Roman alliance; but they did not succeed in enforcing reparation (*Liv.* xlii. 7, 8, 9, 21). *Livy* writes the name *Statiellates*, while *Decimus Brutus*, who crossed their territory on his march from *Mutina*, B. C. 44, and addresses one of his letters to *Cicero* from thence, dates it "finibus Statiellensium" (*Cic. ad Fam.* xi. 11). *Pliny*, who enumerates them among the tribes of *Ligurians* existing in his time, calls them *Statielli*, and their chief town *Aquæ Statiellorum* (*Plin.* iii. 5. a. 7). The site of *Carystus*, mentioned only by *Livy*, in the passage above cited, is wholly unknown.

[E. H. B.]

STATONIA (Στατωνία: *Éth.* *Statoniensis*), a town of Southern *Etruria*, which is mentioned by *Strabo* among the smaller towns (πολιεῖς) in that part of Italy. (*Strab.* v. p. 226.) *Pliny* also mentions the *Statones* among the municipalities of *Etruria* (iii. 5. a. 8), but neither author affords any nearer clue to its situation. We learn, however, that it was celebrated for its wine, which was one of the most noted of those grown in *Etruria* (*Plin.* xiv. 6. a. 8), and that there were valuable stone-quarries in its territory. (*Vitruv.* ii. 7. § 3.) From the terms in which *Vitruvius* speaks of these, it seems probable that the district of *Statonia*, which he calls "præfectura Statoniensis," adjoined that of *Tarquinius*; and both *Pliny* and *Seneca* allude to the

existence of a lake "in agro Statoniensi," in which there were floating islands. (*Plin.* ii. 95. a. 96; *Senec. N. Q.* iii. 25.) This can hardly be any other than the small *Lago di Mezzano*, a few miles W. of the more extensive *Lago di Bolena*: we must therefore probably look for *Statonia* between this and *Tarquinius*. But within this space several sites have been indicated as possessing traces of ancient habitation; among others, *Farnese* and *Castro*, the last of which is regarded by *Cluver* as the site of *Statonia*, and has as plausible a claim as any other. But there is nothing really to decide the point. (*Cluver, Ital.* p. 517; *Dennis's Etruria*, vol. i. pp. 463-468.)

[E. H. B.]

STATUAS (AD), the name of two places in *Pannonia*, one of which was situated on the Danube, a little to the west of *Bregetio* (*It. Ant.* p. 246; *Notit. Imp.*), and the other further south-east, in the neighbourhood of *Alisca* and *Alta Ripa* (*It. Ant.* p. 244), which *Muchar* (*Norikum*, i. p. 264) identifies with *Seckzard*.

[L. S.]

STATUAS (AD), a town in the territory of the *Contestani* in *Hispania Tarraconensis*. (*Itin. Ant.* p. 400.) Various identified with *Adaneta* and *Xativa* or *S. Felipe*.

[T. H. D.]

STAVANI (Σταβανί, *Ptol.* iii. 5. § 25), a people in European *Sarmatia*, at the N. foot of *Mons Bodinus*. *Ukert* (iii. 2. § 435) conjectures that we should read Σταβανί, that is, *Slavi*, and seeks them on the *Dună* and the *Imenee*.

[T. H. D.]

STECTORIUM (Στεκτόριον: *Éth.* *Στεκτορῖον*), a town of *Phrygia*, between *Peltæ* and *Synnada*. (*Ptol.* v. 2. § 25; *Pans* x. 27. § 1.) *Kiepert* (in *Franz's Fünf Inschriften*, p. 36) identifies it with the modern *Aşşum Karahisar*. (Comp. *Sestini, Num. Vet.* p. 126.)

[L. S.]

STELYRIA. [ATTICA, p. 332, a.]

STELAE (Στῆλαι, *Steph. B. s. v.*), a *Cretan* city which is described by the *Byzantine* geographer as being near two towns, which are called, in the published editions of his work, *Paræus* and *Rhithymna*. In Mr. *Pashley's* map the site is fixed at the Mohammedan village of *Philippo* on the route from *Kastelianá* (*Inatus*) to *Haghias Dhéka* (*Gortyna*).

[E. B. J.]

STELLATIS CAMPUS was the name given to a part of the rich plain of *Campania*, the limits of which cannot be clearly determined, but which appears to have adjoined the "Falernus ager," and to have been situated likewise to the N. of the *Vulturnus*. *Livy* mentions it more than once during the wars of the Romans with the *Samnites* (ix. 44, x. 31), and again during the Second *Punic* War, when *Hannibal* found himself there by an error of his guides (*Liv.* xxii. 13). From his expressions it would appear to have adjoined the "Calenus ager," and apparently was the part of the plain lying between *Cales* and the *Vulturnus*. It was a part of the public lands of the Roman people, which the tribune *Rullus* proposed by his agrarian law to parcel out among the poorer citizens (*Cic. de Leg. Agr.* i. 7. ii. 31): this was for the time successfully opposed by *Cicero*, but the measure was carried into effect a few years later by the agrarian law of *Caesar*, passed in his consulship, B. C. 59 (*Suet. Caes.* 20). The statement of *Suetonius* that the district thus named was previously regarded by the Romans as consecrated, is clearly negated by the language of *Cicero* in the passages just referred to. The name of *Stellatinus Ager* seems to have been given to a district in quite another part of Italy, forming a part of the

territory of Capena in southern Etruria. It was from this district that the Stellatine tribe derived its name (Fest. s. v. *Stellatinus*). [E. H. B.]

STENA, a station in Macedonia, on the road from Tauriana (Doirda) to Stobi (Pent. Tab.), which is evidently the pass now called *Demirkapi*, or "Iron Gate," where the river Axios is closely bordered by perpendicular rocks, which in one place have been excavated for the road (Leake, *Northern Greece*, vol. iii. p. 442.) [E. B. J.]

STENTORIS LACUS (Στεντορίς λίμνη, Herod. vii. 58; Acropol. p. 64), a lake on the south-east coast of Thrace, formed by the Hebrus, and opening into the Aegean near the town of Aenos. Pliny (iv. 11. s. 18) incorrectly places on it a STENTORIS PORTUS; and Mannert conjectures that perhaps the right reading in Herodotus (l. c.) is λιμένα, not λίμνη. [J. R.]

STENUS, a river of Thrace, mentioned by Mela only (ii. 2. § 8) as near Maronea, on the south coast. The name is probably corrupt, as it occurs in the MSS. in a great variety of forms, — Stenoes, Stonos, Schoenus, Soenus, Sithenos, &c. (See Tschucke, *ad loc.*) [J. R.]

STENYCLARUS (Στενύκλαρος, Στενύκληρος; Eth. Στενυκλήριος), a town in the north of Messenia, and the capital of the Dorian conquerors, built by Cresphontes. Andania had been the ancient capital of the country. (Paus. iv. 3. § 7; Strab. viii. p. 361.) The town afterwards ceased to exist, but its name was given to the northern of the two Messenian plains. (Paus. iv. 33. § 4, iv. 15. § 8; Herod. ix. 64.) [Messenia, p. 341.]

STEPHANAPHANA, more correctly, perhaps, Stephani Fanum, a place in Illyris Graeca, on the Via Egnatia (Itin. Hieros. p. 608). It was the castle of St. Stephen (τὸν ἁγίου Στεφάνου), repaired by Justinian. (Procop. de Aed. iv. 4.) Lape places it on the river *Bacovitica*. [T. H. D.]

STEPHANE (Στεφάνη), a small port town on the coast of Paphlagonia, according to Arrian (*Peripl. P. E.* p. 15) 180 stadia east of Cimolia, but according to Marcian (p. 72) only 150. The place was mentioned as early as the time of Hecataeus as a town of the Mariandyni (Steph. B. s. v. Στεφανίς), under the name of Stephanis. (Comp. Scylax, p. 34; Ptol. v. 4. § 2.) The modern village of *Stephanio* or *Estifas* probably occupies the site of the ancient Stephane. [L. S.]

STEREONTIUM (Στερεόντιον), a town in North-western Germany, probably in the country of the Bructeri or Marsi, the exact site of which cannot be ascertained. (Ptol. ii. 11. § 27.) [L. S.]

STIPHANE (Στιφάνη), a lake in the north-western part of Pontus, in the district called Phazemonitis. The lake was extensive and abounded in fish, and its shores afforded excellent pasture (Strab. xii. p. 560.) Its modern name is *Boghas Kieu* Ghieul. (Hamilton, *Researches*, i. p. 336. foll.) [L. S.]

STIRIA. [ATTICA, p. 332, a.]

STIRIS (Στίρις; Eth. Στιρίνης), a town of Phocis situated 120 stadia from Chaeroneis, the road between the two places running across the mountains. The inhabitants of Stiris claimed descent from an Athenian colony of the Attic demus of Steiria, led by Peteus, when he was driven out of Attica by Aegeus. Pausanias describes the city as situated upon a rocky summit, with only a few wells, which did not supply water fit for drinking, which the inhabitants obtained from a fountain, four stadia below the city,

to which fountain there was a descent excavated among the rocks. The city contained in the time of Pausanias a temple of Artemis Stiritis, made of crude brick, containing two statues, one of Pentelic marble, the other of ancient workmanship, covered with bandages. (Paus. x. 35. §§ 8—10.) Stiris was one of the Phocian cities destroyed by Philip at the close of the Sacred War (Paus. x. 3. § 2); but it was afterwards rebuilt and was inhabited at the time of the visit of Pausanias. The ruins of Stiris, now called *Palaé khora*, are situated upon a tabular height defended by precipitous rocks, about a quarter of an hour's ride from the monastery of St. Luke. The summit is surrounded with a wall of loose construction, and the surface of the rock within the inclosure is excavated in many places for habitations. The fountain of water described by Pausanias is probably the copious source within the walls of the monastery issuing from the side of the hill. This fountain is mentioned in an inscription fixed in the outer wall of the church. (Leake, *Northern Greece*, vol. ii. p. 528, seq.)

STLUPI or STLUPPI (Στλοῦπι, Στλοῦππι, Ptol. ii. 16. (17.) § 9), a place in Liburnia. The inhabitants are called Stlapini by Pliny (iii. 21. s. 25). Perhaps the present *Sluni*. [T. H. D.]

STOBI (Στόβι, Strab. vii. p. 329, Fr. 4, viii. p. 389; Ptol. iii. 13. § 4; Liv. xxxiii. 19, xxxix. 59, xl. 21, xlv. 29; Plin. iv. 17), a town in the NW. of Paconia in Macedonia, which appears to have been a place of some importance under the Macedonian kings, although probably it had been greatly reduced by the incursions of the Dardani, when Philip had an intention of founding a new city near it in memory of a victory over these troublesome neighbours, and which he proposed to call Perseis, in honour of his son. At the Roman conquest, Stobi was made the place of deposit of salt, for the supply of the Dardani, the monopoly of which was given to the Third Macedonia. In the time of Pliny (l. c.) Stobi was a municipal town, but probably as late as the time of Heliogabalus it was made a "colonia." When about A. D. 400 Macedonia was under a "consular," Stobi became the chief town of Macedonia II or Salutaris (Marquardt, in *Becker's Rom. Alter.* vol. iii. pt. i. p. 118). According to the Tabular Itinerary it stood 47 M. P. from Heracleia of Lynceus, which was in the Via Egnatia, and 55 M. P. from Tauriana, and was therefore probably in the direct road from Heracleia to Serdica. The position must have been therefore on the Erigon, 10 or 12 miles above the junction of that river with the Axios, a situation which agrees with that of Livy, who describes it as belonging to Deuriopis of Paconia, which was watered by the Erigon. Stobi was a point from which four roads issued. (Pent. Tab.) One proceeded NW. to Scupi, and from thence to Naissus on the great SE. route from Viminacium on the Danube to Byzantium; the second NE. to Serdica, 100 M. P. SE. of Naissus on the same route; the third SE. to Thessalonica; and the fourth SW. to Heracleia, the last forming a communication with that central point on the Via Egnatia leading through Stobi from all the places on the three former routes. In A. D. 479 Stobi was captured by Theodoric the Ostrogoth (Malch. Philadelph. *Exc. de Leg. Rom.* pp. 78—86, ap. Müller, *Fragm. Hist. Graec.* vol. iv. p. 125); and in the Bulgarian campaign of A. D. 1014, it was occupied by Basil II. and the Byzantine army (Στάβιον, Cedren. p. 709). The geography of the basin of the Erigon in which Stobi was situated

is so imperfectly known that there is a difficulty in identifying its site: in Kiepert's map (*Europäische Türkei*) the ruins of Stobi are marked to the W. of *Demirkapti*, or the pass of the "Iron Gate." (Leake, *Northern Greece*, vol. iii. pp. 306, 440.) [E. B. J.]

STOBORRUM PROM. (*Στόβορρον ἔκπορ*, Ptol. iv. 3. § 5), a headland of Numidia, between the promontory of Hippus and the town of Aphrodisium, at the E. point of the Sinus Olchacites. Now *Cap Ferro* or *Ras Hadid*. [T. H. D.]

STOECHADES (*αἱ Στοιχάδες νῆσοι*) or STICHADES, on the S. coast of Gallia. Strabo (iv. p. 184) speaks of the Stoechades islands lying off the coast of Narbonensis, five in number, three larger and two smaller. They were occupied by the Massaliots. Steph. B. (*s. v. Στοιχάδες*) says, "islands near Massalia; and they are also named Ligystides." Ptolemy (ii. 10. § 21) also mentions five islands Stoechades, which he places in the meridian of the Citharistes Promontorium [CITHARISTES].

Pliny (iii. 5) mentions only three Stoechades, which he says were so named from being in a line (*στοιχῶς*), and he gives to them the Greek names respectively *Prote*, *Mese* or *Pomponiana*, and *Hypaea*. These must be the islands now named *Isles d'Hières*, of which the most westerly is *Porquerolles*, the central is *Porteoz*, and the most easterly is *l'île du Levant* or *du Titan*, opposite to the town of *Hières*, in the department of *Var*. These islands are mere barren rocks. Besides the three larger islands, which have been enumerated, there are two others at least, mere rocks, *l'Esquillade* and *Bagneau*, which make up the number of five. Coral was got in the sea about the Stoechades (Plin. xxxii. 3), and is still got on this part of the French coast.

Agathemerus (*Geog. Min.* ii. p. 13, ed. Hudson) places the Stoechades along the coast which was occupied by the settlements of the Massaliots; but he fixes the two small Stoechades near Massilia. These are the two dismal rocks named *Ratoneau* and *Pomègue* which are seen as soon as you get out of the port of *Marseille*, with some still smaller rocks near them [MASSILIA, p. 292], one of which contains the small fort named *Château d'If*.

The Stoechades still belonged to the Massaliots in 'Tacitus' time (*Hist.* iii. 43). The Romans who were exiled from Rome sometimes went to Massilia, as L. Scipio Asiaticus did; if he did not go to the Stoechades as the Scholiast says (*Cic. pro Sest.* c. 3); but the Roman must have found the Stoechades a dull place to live in. When Lucan (iii. 516) says "Stoechades arva," he uses a poetic license; and Ammianus (xv. 11) as usual in his geography blunders when he places the Stoechades about Nicaea and Antipolis (*Nizza, Antibes*). [G. L.]

STOENI. [EUGANELI.]

STOMA, AD, a place in Moesia on the Southernmost arm of the Danube. (*Tab. Peut.*; Geogr. Rav. iv. 5.) Mannert (vii. p. 123) places it by the modern *Zof*. [T. H. D.]

STOMALIMNE. [FOSSA MARIANA.]

STRADELA, a town of Palestine mentioned only in the *Itinerarium Hierosolymitanum* as x. M.P. from Maximianopolis, and xii. M.P. from Scipolis (i. e. Scythopolis), and identified by the writer with the place where Ahab abode and Elias prophesied, and—by a strange confusion—where David slew Goliath (p. 586, ed. Wesseling). The name is undoubtedly a corruption of *Esdraela*, the classical form of the Scriptural *Jezreel*. [ESDRAELA.] [G. W.]

STRA'GONA (*Στραγόνα*), a town in the south-

eastern part of Germany, either in the country of the *Silingae* or in that of the *Diduni*, on the northern slope of *Mons Asciburgius*. (Ptol. ii. 11. § 28.) If the resemblance of names be a safe guide, we might identify it with *Strigau*, though this hardly agrees with the degrees in which it is placed by Ptolemy; whence others suppose it to have been situated at *Strehlen*, between *Schweidnitz* and *Brieg*. [L. S.]

STRAPELLUM. [APULIA, p. 167.]

STRATIA. [ENISPE.]

STRATONICEIA (*Στρατονίκη*, Ptol. iii. 13. § 11), a town of Chalcidice in Macedonia, which Ptolemy places on the Singitic gulf. Leake (*Northern Greece*, vol. iii. p. 160) considers that there is here the same mistake as in the case of *Acanthus* [ACANTHUS], and refers it to the Hellenic remains on the coast of the Strymonic gulf in the confined valley of *Stratoni*. [E. B. J.]

STRATONICEIA (*Στρατονίκη* or *Στρατονίκη*, Ptol. v. 2. § 20: *Ἑθ. Στρατονικεύς*), one of the most important towns in the interior of Caria, was situated on the south-east of *Mylasa*, and on the south of the river *Marsyas*. It appears to have been founded by Antiochus Soter, who named it after his wife Stratonice. (Strab. xiv. p. 660; Steph. B. *s. v.*) The subsequent Syro-Macedonian kings adorned the town with splendid and costly buildings. At a later time it was ceded to the Rhodians. (Liv. xxxiii. 18, 30.) Mithridates of Pontus resided for some time at Stratoniceia, and married the daughter of one of its principal citizens. (Appian, *Mithr.* 20.) Some time after this it was besieged by Labienus, and the brave resistance it offered to him entitled it to the gratitude of Augustus and the Senate (*Tac. Ann.* iii. 62; Dion Cass. xlviii. 26). The emperor Hadrian is said to have taken this town under his special protection, and to have changed its name into *Hadrianopolis* (Steph. B. *l. c.*), a name, however, which does not appear to have ever come into use. Pliny (v. 29) enumerates it among free cities in Asia. Near the town was the temple of *Zeus Chrysaureus*, at which the confederate towns of Caria held their meetings; at these meetings the several states had votes in proportion to the number of towns they possessed. The Stratoniceans, though not of Carian origin, were admitted into the confederacy, because they possessed certain small towns or villages, which formed part of it. Menippus, surnamed *Catochas*, according to Cicero (*Brut.* 91) one of the most distinguished orators of his time, was a native of Stratoniceia. Stephanus B. (*s. v. Ἰδρία*) mentions a town of *Idrias* in Caria, which had previously been called *Chrysaoris*; and as Herodotus (v. 118) makes the river *Marsyas*, on whose banks stood the white pillars at which the Carians held their national meetings, flow from a district called *Idrias*, it is very probable that Antiochus Soter built the new city of Stratoniceia upon the site of *Idrias*. (Leake, *Asia Minor*, p. 235.) *Estikiesar*, which now occupies the place of Stratoniceia, is only a small village, the whole neighbourhood of which is strewn with marble fragments, while some shafts of columns are standing single. In the side of a hill is a theatre, with the seats remaining, and ruins of the proscenium, among which are pedestals of statues, some of which contain inscriptions. Outside the village there are broken arches, with pieces of massive wall and marble coffins. (Chandler, *Travels in Asia Minor*, p. 240; Leake, *Asia Minor*, p. 229; Fellows, *Asia Minor*,

p. 254, foll., *Lycia*, p. 80, foll.; Sestini, *Nova. Vel.* p. 90.) [L. S.]

STRATONIS INSULA, an island in the Arabian gulf between the harbour Elaea and the harbour Saba. (Strab. xvi. p. 770; Plin. vi. 29. s. 34.)

STRATONIS TURRIS. [CAERARIA, No. 4, p. 470.]

STRATUS (*Στράτος*; *Éth. Στράτιος*; its territory *ἡ Στρατιχὴ*; *Σωρογίλι*), the chief town of Acarnania, was situated in the interior of the country, in a fertile plain on the right bank of the Achelous. It commanded the principal approaches to the plain from the northward, and was thus a place of great military importance. Strabo (x. p. 450) places it 200 stadia from the mouth of the Achelous by the course of the river. At the distance of 80 stadia S. of the town the river Anapus flowed into the Achelous; and 5 Roman miles to its N., the Achelous received another tributary stream, named Petitauros. (Thuc. ii. 82; Liv. xliii. 22.) Stratus joined the Athenian alliance, with most of the other Acarnanian towns, at the commencement of the Peloponnesian War. In B.C. 429 it was attacked by the Ambraciots, with a number of barbarian auxiliaries, aided by some Peloponnesian troops, under the command of Cnemus; but they were defeated under the walls of Stratus, and obliged to retire. Thucydides describes Stratus at that time as the chief town of Acarnania, which it is also called by Xenophon in his account of the expedition of Agesilaus into this country. (Thuc. ii. 80, seq.; iii. 106; Xen. *Hell.* iv. 6.) When the Aetolians extended their dominions, Stratus fell into the hands of this people, whence it is called by Livy a town of Aetolia. It is frequently mentioned during the Macedonian and Roman wars. Neither Philip V. nor his successor Perseus was able to wrest the town from the Aetolians; and it remained in the power of the latter till their defeat by the Romans, who restored it to Acarnania, together with the other towns, which the Aetolians had taken from the Acarnanians. (Polyb. iv. 63, v. 6, 7, 13, 14, 96; Liv. xxxvi. 11, xliii. 21, 22.) Livy (xliii. 21) gives an erroneous description of the position of Stratus when he says that it is situated above the Ambracian gulf, near the river Inachus.

There are considerable remains of Stratus at the modern village of *Σωρογίλι*. The entire circuit of the city was about 2½ miles. The eastern wall followed the bank of the river. Leake discovered the remains of a theatre situated in a hollow: its interior diameter below is 105 feet, and there seem to have been about 30 rows of seats. (Leake, *Northern Greece*, vol. i. p. 137, seq.)

STRAVIA'NAE or STRAVIA'NA, a town in Lower Pannonia, on the road from Siscia to Mursa, of which the exact site has not been ascertained. (*It. Ant.* p. 265, where it appears in the ablat. form *Stavianis*.) [L. S.]

STRENUS (*Στρήνους*; *Éth. Στρήνιος*), a town of Crete, which Stephanus of Byzantium (s. v.) mentions on the authority of Herodian (others read Herodotus), but no further notice is found of it either in Herodotus or any other author. [E. B. J.]

STREVINTA (*Στρεβίντα*), a place in the south-east of Germany, near Mons Asciburgius, of uncertain site. (Ptol. ii. 11. § 29.) [L. S.]

STROBILUS (*Στροβίλος*), a peak of mount Caucasus, to which, according to the legend, Prometheus had been fastened by Hephaestus. (Aelian, *Periplus P. E.* p. 12.) [L. S.]

STRONGYLE. [ÆOLIAN INSULAE.]

STRONGYLUS. [SEMITRAMIDIS MORS.]

STRO'PHADES (*Στροφάδες*; *Éth. Στροφάδεις*; *Strophadia* and *Strivadi*), formerly called *Plotas* (*Πλάτας*), two small islands in the Ionian sea, about 35 miles S. of Zacynthus, and 400 stadia distant from Cyparissia in Messenia, to which city they belonged. The sons of Boreas pursued the Harpies to these islands, which were called the "Turning" islands, because the Boreades here returned from the pursuit. (Strab. viii. p. 359; Ptol. iii. 16. § 23; Steph. B. s. v.; Plin. iv. 12. s. 19; Mela, ii. 7; Apoll. Rhod. ii. 296; Apollod. i. 9. § 21; Virg. *Æn.* iii. 210; *It. Ant.* p. 523.)

STRUCHATES (*Στρούχαιες*), one of the six tribes into which Herodotus divides the ancient inhabitants of Media. (Herod. i. 101.) [V.]

STRUTHUS. [HERMIONE.]

STRYME (*Στρυμή*), a town on the S. coast of Thrace, a little to the W. of Mesembria, between which and Stryme flowed the small river *Lias*, which the army of Xerxes is said to have drunk dry. (Herod. vii. 108.) Stryme was a colony of Thasos; but disputes seem to have arisen respecting it between the Thasii and the people of the neighbouring city of Maroneia. (Philipp. ap. Demos. p. 163, R.) [J. R.]

STRYMON (*Στρυμών*, Ptol. iii. 13. § 18), the largest river of Macedonia, after the Axius, and before the time of Philip, the ancient boundary of that country towards the E. It rises in Mount Scomius near Pantalía (the present *Gastendi*) (Thuc. ii. 96), and, taking first an E. and then a SE. course, flows through the whole of Macedonia. It then enters the lake of Prasias, or Cercinitis, and shortly after its exit from it, near the town of Amphipolis, falls into the Strymonic gulf. Pliny, with less correctness, places its sources in the *Hæmus* (iv. 10. s. 12). The importance of the Strymon is rather magnified in the ancient accounts of it, from the circumstance of Amphipolis being seated near its mouth; and it is navigable only a few miles from that town. Apollodorus (ii. 5. 10) has a legend that Hercules rendered the upper course of the river shallow by casting stones into it, it having been previously navigable much farther. Its banks were much frequented by cranes (Juv. xiii. 167; Virg. *Æn.* x. 269; Mart. ix. 308). The Strymon is frequently alluded to in the classics. (Cæmp. Hesiod. *Theog.* 339; Aesch. *Suppl.* 258, *Agam.* 192; Herod. vii. 75; Thuc. i. 200; Strab. vii. p. 323; Mela. ii. 2; Liv. xlv. 44. &c.) Its present name is *Soramus*, but the Turks call it *Karasa*. (Comp. Leake, *North. Gr.* iii. pp. 225, 465, &c.) [T. H. D.]

STRYMONICUS SINUS (*Στρυμονικός κόλπος*, Strab. vii. p. 330), a bay lying between Macedonia and Thrace, on the E. side of the peninsula of Chalcidice (Ptol. iii. 13. § 9). It derived its name from the river Strymon, which fell into it. Now the gulf of *Rendina*. [T. H. D.]

STRYMONII (*Στρυμόνιοι*), the name by which, according to tradition, the Bithynians in Asia originally were called, because they had immigrated into Asia from the country about the Strymon in Europe. (Herod. vii. 75; Steph. B. s. v. *Στρυμόνιοι*.) Pliny (v. 40) further states that Bithynia was called by some Strymonia. [L. S.]

STUBERA. [STYMBARA.]

STUCCIA (*Στουκκία*, Ptol. ii. 3. § 3), a small river on the W. coast of Britain, identified by Camden (p. 772) with the *Ystwyth* in *Cardigan-shire*. [T. H. D.]

STURA (*Stura*), a river of Northern Italy, one of the confluent of the Padus (Plin. iii. 16. s. 20), which joins that river a few miles below Turin (Augusta Taurinorum), within a few miles of the Duria Minor or *Dora Riparia*. It still retains its ancient name and is a considerable stream, rising in the glaciers of the Alps, between the *Rocha Melon* and *Mont Isèran*. [E. H. B.]

STURA (*Στούρα*), a small place in Pattalene, near the mouths of the Indus, mentioned by Arrian (*Ind.* c. 4). [V.]

STURIUM INSULA. [PHILA].

STURNIUM (*Στούρνιον*; *Eth.* Sturninus; *Sternaccio*), a town of Calabria, mentioned both by Pliny and Ptolemy among the municipal towns of that region. (Plin. iii. 11. s. 16; Ptol. iii. 1. § 77.) Its name is not otherwise known, but it is supposed to be represented by the modern village of *Sternaccio*, about 10 miles S. of *Lecco* (Lupiae) and a short distance NE. of *Soletto* (Soletum). (Cluver. *Ital.* p. 1231; Romanelli, vol. ii. p. 114.) There exist coins with the inscription ΣΤΥ, and types resembling those of the Tarentines, which are ascribed to Sturnium. [E. H. B.]

STYLLANGIUM (*Στυλλάγγιον*, Polyb. iv. 77, 80; *Στυλλάγιον*, Steph. B. s. v.; *Eth.* *Στυλλάγιος*, *Στυλλαγιεύς*), a town of Triphylia in Elis of uncertain site, which surrendered to Philip in the Social War.

STYMBARA (*Στύμβαρα*, Strab. vii. p. 327; *Στυβέρβα*, Polyb. xviii. 8. § 8; *Stubera*, Liv. xxxi. 39, xliii. 20, 22), a town on the frontier of regal Macedonia, which is by some assigned to Deuriopus, and by others to Pelagonia, which in the campaign of B. C. 400 was the third encampment of the consul Sulpicius; it must be looked for in the basin of the Erigon. (Leake, *Northern Greece*, vol. iii. p. 306.) [E. H. J.]

STYMPHALIS, a district annexed by the Romans, along with Atintania and Elimiotis, to Macedonia upon the conquest of this kingdom, A.D. 168. (Liv. xiv. 30.) From the mention of this district along with Atintania and Elimiotis, which were portions of Epeirus upon the borders of Thessaly, it would appear that Stymphalis is only another form of the more common name Tymphalis or Tymphaea; though, it is true, as Cramer has observed, that Diodorus has mentioned Stymphalia (Diod. xx. 28), and Callimachus speaks of the Stymphalian oxen in that territory (*Hymn. in Dian.* 179). Ptolemy (iii. 13. § 43) likewise mentions a town Gyrtone in Stymphalia, but in this passage other MSS. read Tymphalia. (Cramer, *Ancient Greece*, vol. i. p. 198.)

STYMPHALUS (*Στύμφαλος*, *Στύμφηλος*, Paus. et alii; *τὸ Στύμφηλον*, Schol. ad *Pind. Ol.* vi. 129; *Stymphalum*, Plin. iv. 6. s. 10; *Stymphala*, Lucret. v. 31; *Eth.* *Στυμφάλιος*, *Στυμφήλιος*), the name of a town, district, mountain, and river in the NE. of Arcadia. The territory of Stymphalus is a plain, about six miles in length, bounded by Achaia on the N., Sicyonia and Phlissia on the E., the territory of Mantinea on the S., and that of Orchomenus and Pheneus on the W. This plain is shut in on all sides by mountains. On the N. rises the gigantic mass of Cyllene, from which a projecting spur, called Mt. Stymphalus, descends into the plain. (*Στύμφαλος ὄρος*, Ptol. iii. 16. § 14; Hesych. s. v.; *nivalis Stymphalus*, Stat. *Sile.* iv. 6. 100.) The mountain at the southern end of the plain, opposite Cyllene, was called Apelaureum (*τὸ Ἀρέλαιον*,

Polyb. iv. 69)*, and at its foot is the *kata-vóthra* or subterranean outlet of the lake of Stymphalus (*ἡ Στυμφαλὶς λίμνη*, Strab. viii. p. 371; *ἡ Στυμφαλὴ λίμνη*, Herod. vi. 76). This lake is formed partly by the rain-water descending from Cyllene and Apelaureum, and partly by three streams which flow into it from different parts of the plain. From the west descends a small stream, which rises in Mount Geronteium in the neighbourhood of *Kastanás*; and from the east comes another stream, which rises near *Dusa*. But the most important of the three streams is the one which rises on the northern side of the plain, from a copious *kefalóvrys*. In summer it flows about two miles through the plain into the *kata-vóthra* of Apelaureum; but in winter it becomes almost immediately a part of the waters of the lake, though its course may be traced through the shallower water to the *kata-vóthra*. This stream was called Stymphalus by the ancients; it was regarded by them as the principal source of the lake, and was universally believed to make its reappearance, after a subterranean course of 200 stadia, as the river Erasinus in Argolis. (Herod. vi. 76; Paus. ii. 3. § 5, ii. 24. § 6, viii. 22. § 3; Strab. viii. p. 371; *Angos*, Vol. I. p. 201, a.) The Stymphalii worshipped the Erasinus and Metope (*Μετόπη*, Aelian, V. H. ii. 33), whence it has been concluded that Metope is only another name of the river Stymphalus. Metope is also mentioned by Callimachus (*Hymn. in Jov.* 26), with the epithet pebbly (*ω-λίστετος*), which, as Leake observes, seems not very appropriate to a stream issuing in a body from the earth, and flowing through a marsh. (*Peloponnesiaca*, p. 384.) The water, which formed the source of the Stymphalus, was conducted to Corinth by the emperor Hadrian, by means of an aqueduct, of which considerable remains may still be traced. The statement of Pausanias, that in summer there is no lake, is not correct, though it is confined at that time to a small circuit round the *kata-vóthra*. As there is no outlet for the waters of the lake except the *kata-vóthra*, a stoppage of this subterranean channel by stones, sand, or any other substance occasions an inundation. In the time of Pausanias there occurred such an inundation, which was ascribed to the anger of Artemis. The water was said to have covered the plain to the extent of 400 stadia; but this number is evidently corrupt, and we ought probably to read *τεσσαράκοντα* instead of *τετρακοσίους*. (Paus. viii. 22. § 8.) Strabo relates that Iphicrates, when besieging Stymphalus without success, attempted to obstruct the *kata-vóthra*, but was diverted from his purpose by a sign from heaven (viii. p. 389). Strabo also states that originally there was no subterranean outlet for the waters of the lake, so that the city of the Stymphalii, which was in his time 50 stadia from the lake, was originally situated upon its margin. But this is clearly an error, even if his statement refers to old Stymphalus, for the breadth of the whole lake is less than 20 stadia.

The city derived its name from Stymphalus, a son of Elatus and grandson of Arcas; but the ancient city, in which Temenus, the son of Pelasgus, dwelt, had entirely disappeared in the time of Pausanias,

* There was also a small town, Apelaureus, which is mentioned by Livy as the place where the Achaeans under Nicostratus gained a victory over the Macedonians under Androsthenes, B. C. 197. (Livy, xxxiii. 14.)

and all that he could learn respecting it was, that Hera was formerly worshipped there in three different sanctuaries, as virgin, wife, and widow. The modern city lay upon the southern edge of the lake, about a mile and a half from the *kataróthra*, and upon a rocky promontory connected with the mountains behind. Stympthalus is mentioned by Homer (*Il.* ii. 608), and also by Pindar (*Ol.* vi. 169), who calls it the mother of Arcadia. Its name does not often occur in history, and it owes its chief importance to its being situated upon one of the most frequented routes leading to the westward from Argolis and Corinth. It was taken by Apollonides, a general of Cassander (Diod. xix. 63), and subsequently belonged to the Achaean League (Polyb. ii. 53, iv. 68, &c.). In the time of Pausanias it was included in Argolis (viii. 22. § 1). The only building of the city, mentioned by Pausanias, was a temple of Artemis Stympthalia, under the roof of which were figures of the birds Stympthalides; while behind the temple stood statues of white marble, representing young women with the legs and thighs of birds. These birds, so celebrated in mythology, the destruction of which was one of the labours of Heracles (*Dict. of Biogr.* Vol. II. p. 396), are said by Pausanias to be as large as cranes, but resembling in form the ibis, only that they have stronger beaks, and not crooked like those of the ibis (viii. 22. § 5). On some of the coins of Stympthalus, they are represented exactly in accordance with the description of Pausanias.

The territory of Stympthalus is now called the vale of *Zarakí*, from a village of this name, about a mile from the eastern extremity of the lake. The remains of the city upon the projecting cape already mentioned are more important than the cursory notice of Pausanias would lead one to expect. They cover the promontory, and extend as far as the fountain, which was included in the city. On the steepest part, which appears from below like a separate hill, are the ruins of the polygonal walls of a small quadrangular citadel. The circuit of the city walls, with their round towers, may be traced. To the east, beneath the acropolis, are the foundations of a temple in antis; but the most important ruins are those on the southern side of the hill, where are numerous remains of buildings cut out of the rock. About ten minutes N. of Stympthalus, are the ruins of the medieval town of *Krónia* (Leake, *Morea*, vol. iii. p. 108, seq.; *Peloponnesiaca*, p. 384; Boblaye, *Recherches*, &c., p. 384; Ross, *Reisen im Peloponnes*, p. 54; Curtius, *Peloponnesos*, vol. i. p. 201, seq.).

STYRA (τὰ Στύρα; *Eth. Στυρεῖς: Stura*), a town of Euboea, on the W. coast, N. of Carystus, and nearly opposite the promontory of Cynosura in Attica. The town stood near the shore in the inner part of the bay, in the middle of which is the island Aegileia, now called *Sturani*. Styra is mentioned by Homer along with Carystus (*Il.* ii. 539). Its inhabitants were originally Dryopians, though they denied this origin (Herod. viii. 46; Paus. iv. 34. § 11), and claimed to be descended from the demus of Steiria in Attica. (Strab. x. p. 446.) In the First Persian War (B. C. 490) the Persians landed at Aegileia, which belonged to Styra, the prisoners whom they had taken at Eretria. (Herod. vi. 107.) In the Second Persian War (B. C. 480, 479) the Styrians fought at Artemisium, Salamis, and Plateae. They sent two ships to the naval engagements, and at Plateae they and the Eretrians amounted together

to 600 men. (Herod. viii. 1, 46, ix. 28; Paus. v. 23. § 2.) They afterwards became the subjects of Athens, and paid a yearly tribute of 1200 drachmae. (Thuc. vii. 57; Franz, *Elem. Epigr. Gr.* n. 49.) The Athenian fleet was stationed here B. C. 356. (Dem. c. *Mid.* p. 568.) Strabo relates (x. p. 446) that the town was destroyed in the Maliac war by the Athenian Phaedrus, and its territory given to the Eretrians; but as the *Maliac* war is not mentioned elsewhere, we ought probably to substitute *Lamiae* for it. (Leake, *Northern Greece*, vol. ii. pp. 422, 432.)

STYX (Στύξ), a waterfall descending from a lofty rock in the Arcadian mountains, above Nonacris, a town in the NE. of Arcadia, in the district of Pheneus. The water descends perpendicularly in two slender cascades, which, after winding among a labyrinth of rocks, unite to form a torrent that falls into the Crathis. It is by far the highest waterfall in Greece; the scenery is one of wild desolation; and it is almost impossible to climb over the rocks to the foot of the cascade. The wildness of the scenery, the inaccessibility of the spot, and the singularity of the waterfall made at an early period a deep impression upon the Greeks, and invested the Styx with superstitious reverence. It is correctly described by both Homer and Hesiod. The former poet speaks of the "down-flowing water of the Styx" (τὸ καταρρέον ὕδωρ Στυγὸς ὕδαρ, *Il.* xv. 37), and of the "lofty torrents of the Styx" (Στυγὸς ὕδατος αἰεὶ βέεθρα, *Il.* viii. 369). Hesiod describes it as "a cold stream, which descends from a precipitous lofty rock" (ὕδαρ ψυχρὸν δ' ἔκ πετρῆς καταλείεται ἡλιθότατο ὕψηλῃς, *Theog.* 785), and as "the perennial most ancient water of the Styx, which flows through a very rugged place" (Στυγὸς ἀπὸ πρὸν ὕδαρ ἀνύγιο· τὸ δ' ἔστι καταστροφέλου διὰ χρόας, *Theog.* 805). The account of Herodotus, who does not appear to have visited the Styx, is not so accurate. He says that the Styx is a fountain in the town Nonacris; that only a little water is apparent; and that it dropt from the rock into a cavity surrounded by a wall (vi. 74). In the same passage Herodotus relates that Cleomenes endeavoured to persuade the chief men of Arcadia to swear by the waters of the Styx to support him in his enterprise. Among the later descriptions of this celebrated stream that of Pausanias (viii. 17. § 6) is the most full and exact. "Not far from the ruins of Nonacris," he says, "is a lofty precipice higher than I ever remember to have seen, over which descends water, which the Greeks call the Styx." He adds that when Homer represents Hera swearing by the Styx, it is just as if the poet had the water of the stream dropping before his eyes. The Styx was transferred by the Greek and Roman poets to the invisible world [see *Dict. of Gr. and Rom. Biogr. and Myth.* art. STYX]; but the waterfall of Nonacris continued to be regarded with superstitious terrors; its water was supposed to be poisonous; and it was believed that it destroyed all kinds of vessels, in which it was put, with the exception of those made of the hoof of a horse or an ass. There was a report that Alexander the Great had been poisoned by the water of the Styx. (Arrian, *Anab.* vii. 27; Plut. *Alex.* 77, de *Prim. Frig.* 20. p. 954; Paus. viii. 18. § 4; Strab. viii. p. 389; Aelian, *H. An.* x. 40; Antig. *Hist. Mirab.* 158 or 174; Stob. *Ecl. Phys.* i. 52. § 48; Plin. ii. 103. s. 106, xxx. 16. s. 53, xxxi. 2. s. 19; Vitruv. viii. 3; Senec. *Q. N.* iii. 25.) The belief in the deleterious nature of the

water continues down to the present day, and the inhabitants of the surrounding villages relate that no vessel will hold the water. It is now called τὰ Μαυράνερα, or the Black Waters, and sometimes τὰ Ἀρακο-νέρια, or the Terrible Waters. (Leake, *Morea*, vol. iii. p. 160, seq.; Fiedler, *Reise durch Griechenland*, vol. i. p. 400, who gives a drawing of the Styx; Curtius, *Peloponnesos*, vol. i. p. 195.)

SUA'GELA (Σουάγελα), a town of Caria, in which was shown the tomb of Car, the ancestor of all the Carians; the place was in fact believed to have received its name from this circumstance, for in Carian *σοβα* signified a tomb, and γέλας a king. (Steph. B. s. v.) Strabo, who calls the place Syangela (xiii. p. 611), states that this town and Myndus were preserved at the time when Mausolus united six other towns to form Halicarnassus. [L.S.]

SUANA (Σούανα, Ptol.: *Eth. Suanensis: Sovana*), a town of Southern Etruria, situated in the valley of the *Fiore* (Arminia), about 24 miles from the sea, and 20 W. of Volsinii (*Bolsena*). No mention of it is found in history as an Etruscan city, but both Pliny and Ptolemy notice it as a municipal town of Etruria under the Roman Empire. (Plin. iii. 5. s. 8; Ptol. iii. 1. § 49.) Its site is clearly marked by the modern town of *Sovana* or *Soana*, which was a considerable place in the middle ages, and still retains the title of a city, and the sea of a bishop, though now a very poor and decayed place. It has only some slight remains of Roman antiquity, but the ravines around the town abound with tombs hewn in the rock, and adorned with architectural façades and ornaments, strongly resembling in character those at *Castel d'Asso* and *Bieda*. These relics, which are pronounced to be among the most interesting of the kind in Etruria, were first discovered by Mr. Ainsley in 1843, and are described by him in the *Annali dell' Istituto di Corrispondenza Archeologica* for 1843 (pp. 223—226); also by Mr. Dennis (*Etruria*, vol. i. pp. 480—500). [E. H. B.]

SUARDONES, a tribe of the Suevi in Northern Germany, on the right bank of the Albia, south of the Saxones, and north of the Langobardi. (Tac. *Germ.* 40.) Zeuss (*Die Deutschen*, p. 154), deriving their name from *suard* or *sward* (a sword), regards it as identical with that of the Pharodini, mentioned by Ptolemy (ii. 11. § 13) as living in nearly the same part of Germany. [L.S.]

SUARNI, a rude people of Asiatic Sarmatia, in the neighbourhood of the Portae Caucasas and the Rha. They possessed gold mines (Plin. vi. 11. s. 12). They are probably the same people whom Ptolemy calls Surani (Σουρανοί, v. 9. § 20) and places between the Hippic and Ceraunian mountains. [T. H. D.]

SUASA (Σούδρα: *Eth. Suasanus*: Ru. near *Castel Leone*), a town of Umbria mentioned both by Ptolemy and Pliny, of whom the latter reckons it among the municipal towns of that country. Ptolemy places it, together with Ostra, in the district of the Senones, and it was therefore situated on the northern declivity of the Apennines. Its site is clearly identified at a spot between *S. Lorenzo* and *Castel Leone* in the valley of the *Cesano*, about 18 miles from the sea. Considerable ruins were still extant on the spot in the time of Cluver, including the remains of the walls, gates, a theatre, &c.; and inscriptions found there left no doubt of their identification. (Cluver, *Ital.* p. 620.) [E. H. B.]

SUASTENE (Σουαστήνη, Ptol. vii. 1. § 42), a district in the NW. of India, beyond the *Panjab*, and above the junction of the *Kabul* river and the

Indus. It derives its name from the small river *Suastus* (the *Suastu* or *Suoad*), which is one of the tributaries of the *Kabul* river. [GORYA.] [V.]

SUASTUS. [SUASTENE.]

SUBANECTI. [SILVANECTES.]

SUBATHI. [TURANTES.]

SUBDINNUM. [CENOMANI.]

SUBERTUM, another reading of SUDERTUM.

SUBI, a river on the E. coast of Hispania Tarraconensis, which entered the sea near the town of Subur. (Plin. iii. 3. s. 4.) Probably the modern *Francoli*. [T. H. D.]

SUBLA'QUEUM (*Subiaco*), a place in the valley of the Anio about 24 miles above Tibur (*Tivoli*). It derived its name from its situation below the lake or lakes formed by the waters of the Anio in this part of its course, and called the *SIMBRUINA STAGNA* or *SIMBRIVII LACUS*. These lakes have now entirely disappeared: they were evidently in great part artificial, formed as reservoirs for the *Aqua Marcia* and *Aqua Claudia*, both of which were derived from the Anio in this part of its course. There is no mention of Sublaqueum before the time of Nero, who had a villa there called by Frontinus "Villa Neroniana Sublacensis;" and Tacitus mentions the name as if it was one not familiar to every one. (Tac. xiv. 22; Frontin. *de Aquaed.* 93.) It seems certain therefore that there was no town of the name, and it would appear from Tacitus (l. c.) that the place was included for municipal purposes within the territory of Tibur. Pliny also notices the name of Sublaqueum in the 4th Region of Augustus, but not among the municipal towns: as well as the lakes ("lacus tres amoenitate nobiles") from which it was derived. (Plin. iii. 12. s. 17.) It appears from mediaeval records that these lakes continued to exist down to the middle ages, and the last of them did not disappear till the year 1305. (Nibby, *Dintorni*, vol. iii. p. 125.) *Subiaco* obtained a great celebrity in the middle ages as the place of retirement of St. Benedict, and the cradle of the celebrated monastic order to which he gave his name. It seems probable that the site was in his time quite deserted, and that the modern town owes its origin to the monastery founded by him, and a castle which was soon after established in its neighbourhood. (Nibby, l. c. p. 123.) [E. H. B.]

SUBLA'VIO (*St. Ant.* p. 280) or SUBLA'BIO (*Tab. Peut.*), a place in Rhætia, on the site of the modern convent of *Seben*, near the town of *Clausen*. Some suppose the correct name to be *Subsaviene*, which occurs in a middle age document of the reign of the emperor Conrad II. [L.S.]

SUBUR (*Σούβουρ*, Ptol. ii. 6. § 17), a town of the *Laetani* in Hispania Tarraconensis lying E. of Tarraco. (Mela, ii. 6.) Ptolemy (l. c.) ascribes it to the *Coetani*, and Pliny (iii. 3. s. 4) to the *Ilergetes*. It is mentioned in an inscription. (Gruter, p. 414.) Various identified with *Stiges* and *Villanueva*. [T. H. D.]

SUBUR (*Σούβουρ*, Ptol. iv. 1. § 13). 1. A town in the interior of Mauretania Tingitana, near the river of the same name.

2. (Ptol. iv. 1. § 2), a river of Mauretania Tingitana. Pliny (v. 1. s. 1) calls it a fine navigable river. It fell into the Atlantic near Colonia *Baana*, 50 miles S. of Lixus. It is still called *Subu* or *Cuba*, and rises among the forests of *Mount Salek* in the province of *Scaus* (Graberg of Hemsö, *Das Kaiserreich Marokko*, tr. by Reumont, p. 12). [T. H. D.]

SUBUS (*Σούβος*, Ptol. iv. 6. § 8), a river on the

W. coast of Libya Interior, which had its source in Mount Sagapola, and discharged itself to the S. of the point of Atlas Major; now the *Sus*. [T. H. D.]

SUBZUPARA, a place in Thracia, on the road from Philippopolis to Hadrianopolis (*Itin. Ant.* pp. 137, 231). It is called *Castozobra* or *Castra Larba* in the *Itin. Hieros.* (p. 568), and *Καστράπερα* by Procopius (*de Aed.* iv. 11. p. 305, ed. Bonn), and still retains the name of *Castro Zarvi*, or simply *Zarvi*. It has, however, also been identified with *Hirmonly* and *Cotimlou*. In the *Tab. Peut.* it is called *Castra Rubra*. [T. H. D.]

SU'CCABAR (*Σουκκάβη*, Ptol. iv. 2. § 25, 3. § 20, xiii. 13. § 11), a town in the interior of Mauretania Caesariensis, lying to the SE. of the mouth of the Chinalaph, and a Roman colony with the name of *Colonia Augusta* (Plin. v. 2. a. 1). It appears in Ammianus Marcellinus under the name of *Oppidum Sugabarritanum* (xxix. 5). Mannert (x. 2. p. 451) would identify it with the present *Masama*, where Leo Africanus (Lohrbach, p. 382) found considerable remains of an ancient city, with inscriptions, &c. [T. H. D.]

SUCCI or **SUCCORUM ANGSTIAE**, the principal pass of Mount Haemus in Thrace, between Philippopolis and Serdica, with a town of the same name. (Amm. Marc. xxi. 10. § 2, xxii. 2. § 2, xxvi. 10. § 4.) It is called *Σούκις* by Sozomenus (ii. 22), and *Σουκκρες* by Nicephorus (ix. 13). Now the pass of *Soulu Derbend* or *Demir Kapi* (Comp. V. Hammer, *Gesch. des Osman. Reichs*, i. p. 175). [T. H. D.]

SUCCO'SA (*Σουκκόσσα*, Ptol. ii. 6. § 68), a town of the Hergetes in Hispania Tarraconensis [T. H. D.]

SUCCOTH (LXX. *Σουκκόθ*, Vat., *Σουκό*, Alex.), a city of the tribe of Gad in the valley, formerly part of the kingdom of Sihon king of Heshbon (*Josh.* xiii. 27). It is connected with Zarthan in 1 Kings, vii. 46, where Hiram is said to have cast his brassen vessels, &c. for Solomon's temple "in the plain of Jordan, in the clay ground between Succoth and Zarthan," elsewhere called *Zaretan*, mentioned in the account of the miraculous passage of the Israelites (*Josh.* iii. 16). The city doubtless derived its name from the incident in the life of Jacob mentioned in Genesis (xxxiii. 17) where the name is translated by the LXX. as in the parallel passage in Josephus (*Ant.* i. 21. § 1), *Συναλ* (booths). It was therefore south of the Jabbok, and the last station of Jacob before he crossed the Jordan towards Shechem. S. Jerome, in his commentary on the passage, says, "Sochoth: est usque hodie civitas trans Jordanem hoc vocabulo in parte Scythopoleos," from which some writers have inferred that Scythopolis may have derived its name from this place in its vicinity (Robinson, *Bibl. Res.* vol. iii. p. 175. n. 5), and this hypothesis is supported by the respectable names of Beland, Gesenius, and Rosenmüller. A place called *Succat* is still pointed out by the Arabs south of *Beisan* (=Bethshan=Scythopolis), on the east side of Jordan, near the mouth of *Wady Mús*. [G. W.]

SUCCUBO, a town in Hispania Baetica, in the jurisdiction of Corduba. (Plin. iii. 1. a. 3.) Capitolinus mentions it under the name of *Municipium Succubitanum*. (*Anton. Phil.* 1; cf. *Florez, Esp. Sagr.* xii. p. 302.) [T. H. D.]

SUCHE (τὸ *Σούχου φρούριον*, Strab. xvi. p. 770), the *SUCHIM* of the Hebrews (2 Chron. xii. 3), and the modern *Suachim*, was a harbour on the western coast of the Red Sea, just above the bay of

Adule, lat. 16° N. It was occupied by the Egyptians and Greeks successively as a fort and trading station; but the native population of *Suche* were the Sabae Aethiopians. [W. B. D.]

SUCIDAVA (*Σουκιδάβα*, Ptol. iii. 10. § 11), a town in Moesia Inferior, between Durostorum and Axiopolis. (*Itin. Ant.* p. 224; *Tab. Peut.*; *Not. Imp.*) Procopius calls it *Σουκιδάα* (*de Aed.* iv. 7. p. 298, ed. Bonn) and *Σουκίδα* (*Id.* p. 291). Various identified with *Osenik*, or *Assenik*, and *Sasomou*. [T. H. D.]

SUCRO (*Σούκρον*, Ptol. ii. 6. § 14), a river of Hispania Tarraconensis, which rises in the country of the Celtiberi in a S. offshoot of Mount Idubeta, and after a considerable bend to the SE. discharged itself in the Sucronensis Sinus, to the S. of Valentia. (Strab. iii. pp. 158, 159, 163, 167; *Mela*, ii. 6; *Plin.* iii. 3. ss. 4, 5, 11.) Now the *Xucar*. [T. H. D.]

SUCRON (*Σούκρον*, Strab. iii. p. 158), a town of the Edetani in Hispania Tarraconensis, on the river of the same name, midway between Carthago Nova and the river Iberus. (*Itin. Ant.* p. 400; cf. *Cic. Balb.* 2; *Liv.* xxviii. 24, xxix. 19; *App. B. C.* i. 110; *Plut. Sert.* 19, &c.) It was already destroyed in the time of Pliny (iii. 3. a. 4). Various placed at *Aleira*, *Sueca*, and *Cullera*. (Cf. *Florez, Esp. Sagr.* v. p. 35; *Marca, Hisp.* ii. 5.) [T. H. D.]

SUCRONENSIS SINUS, a bay on the E. coast of Hispania Tarraconensis, now the *Gulf of Valencia*. (*Mela*, ii. 6 and 7.) [T. H. D.]

SUDE'NI (*Σουδήνοι*), a tribe in the east of Germany, about the Gabreta Silva, and in close proximity to the Marcomanni. (Ptol. ii. 11. § 15; comp. *SUDENI*.) [L. S.]

SUDERTUM (*Σουδέριον*; *Eth.* *Sudertanus*), a town in the southern part of Etruria, apparently situated between Volsinii and the sea-coast, but we have no clue to its precise situation. The name itself is uncertain. The MSS. of Pliny, who enumerates it among the municipal towns of Etruria, vary between *Sudertani* and *Subertani*; and the same variation is found in Livy (xxvi. 23), who mentions a prodigy as occurring "in foro Sudertano." Ptolemy on the other hand writes the name *Σουδέριον*, for which we should probably read *Σουδέριον*. (Ptol. iii. 1. § 50.) Cluver would identify it, without any apparent reason, with the *Maternum* of the Itineraries, and place it at *Farnese*. *Soranus*, a few miles NE. of *Soranus* (Suana), would seem to have a more plausible claim, but both identifications are merely conjectural. (Cluver, *Ital.* p. 517; *Dennis's Etruria*, vol. i. p. 478.) [E. H. B.]

SUDE'TI MONTES (*Σουδήττα ὄρη*), a range of mountains in the SE. of Germany, on the N. of the Gabreta Silva, thus forming the western part of the range still called the *Sudeten*, in the NW. of *Bohemia*. (Ptol. ii. 11. §§ 7, 23.) [L. S.]

SUEBUS (*Σούβος*), a river on the north coast of Germany, between the Albis and Viadus, which flows into the Baltic at a distance of 850 stadia to the west of the mouth of the Viadus (Marcian. p. 53) and which, according to Ptolemy (ii. 11. § 1), divided at its mouth into several branches. Notwithstanding these explicit statements, it is extremely difficult to identify the river, whence some regard it as the *Peene*, others as the *Warne*, and others again as the Viadus or *Oder* itself, or rather the central branch of it, which is called the *Sarce* or *Schwene*. [L. S.]

SUEL (*Σούελα*, Ptol. ii. 4. § 7), a town of Hispania Baetica, on the road from Malaca to Gades.

(*Itin. Ant.* p. 405.) According to inscriptions it was a Roman municipium in which Ileritini had been settled. (Reines. pp. 13, 131; Spon, *Miscell.* v. p. 189; Orelli, *Inscr.* no. 3914; Mela, ii. 6; Plin. iii. 1. s. 3.) It is the modern *Fuengirola*. (*Inscr.* in Aldrete, *Orig. Ling. Cast.* i. 2.) [T. H. D.]

SUELTERI, a people of Gallia Narbonensis, enumerated by Pliny (iii. 4), between the Camatullici and the Verrucini. The name Selteri is placed in the Table above Forum Julia (*Fréjus*). Nothing can be ascertained about the position of this people [CAMATULLICI]. [G. L.]

SUESIA PALUS, a large lake of Germany mentioned only by Pomponius Mela (iii. 3) along with two others, the Estia and Melsagium, but it is impossible to say what lake he is alluding to. [L. S.]

SUESSA, sometimes called for distinction's sake SUESSA AURUNCA (*Σουεσσα Αιρουνκα*; *Eth.* Suessanus; *Sessa*), a city of Latium in the widest sense of that term, but previously a city of the Aurunci, situated on the SW. slope of the volcanic mountain of *Rocca Monfina*, about 5 miles S. of the Liris, and 8 from the sea. Though it became at one time the chief city of the Aurunci, it was not a very ancient city, but was founded as late as B. C. 337, in consequence of the Aurunci having abandoned their ancient city (called from their own name Aurunca), which was situated a good deal higher up, and about 5 miles N. of Suessa. [AURUNCA.] Aurunca was now destroyed by the Sidicini, and Suessa became thenceforth the capital of the Aurunci (Liv. viii. 15). That people had, after their defeat by T. Manlius in B. C. 340, placed themselves under the protection of Rome, and we do not know by what means they afterwards forfeited it: perhaps, like the neighbouring Ausonians of Vescia and Minturnae, their fidelity had been shaken by the defeat of the Romans at Lautulae; but it is clear that they had in some manner incurred the displeasure of the Romans, and given the latter the right to treat their territory as conquered land, for in B. C. 313 a Roman colony was established at Suessa. (Liv. ix. 28; Vell. Pat. i. 14.) It was a colony with Latin rights, and is mentioned among those which in the Second Punic War professed their inability to furnish their required quota to the Roman armies. It was punished a few years later by the imposition of double contributions. (Liv. xxvii. 9, xxix. 15.) It is again mentioned in the Civil Wars of Marius and Sulla, when it espoused the party of the latter, but was surprised and occupied by Sertorius. (Appian, *B. C.* i. 85, 108). In the time of Cicero it had passed into the condition of a municipium by virtue of the Lex Julia, and is spoken of by that orator as a prosperous and flourishing town; it was the scene of a massacre by Antonius of a number of military captives. (Cic. *Phil.* iii. 4, iv. 2, xiii. 8.) It received a fresh colony under Augustus, and assumed in consequence the titles of "Colonia Julia Felix Classica," by which we find it designated in an inscription. (*Lit. Col.* p. 237; Plin. iii. 5. s. 9; Gruter, *Inscr.* p. 1093. 8; Orell. *Inscr.* 4047.) Numerous other inscriptions attest its continuance as a flourishing and important town under the Roman Empire (Orell. *Inscr.* 130, 836, 1013, 2284, 3042; Mommsen, *Inscr. R. N.* pp. 210—212); and this is confirmed by existing remains: but no mention of it is found in history. Nor is its name found in the Itineraries; but we learn from existing traces that there was an ancient road which branched off from the Via Appia at Minturnae and proceeded

by Suessa to Teanum, from which it was continued to Beneventum. (Hoare's *Class. Tour.* vol. i. p. 145. This is evidently the same line given in the *Itin. Ant.* p. 121, though the name of Suessa is not there mentioned.)

Suessa Aurunca was the birthplace of the celebrated satirical poet Lucilius, whence he is called by Juvenal "Aurunca alumna." (Auson. *Epist.* 15. 9; Juv. i. 20.)

The modern city of *Sessa* undoubtedly occupies the ancient site: and considerable ruins are still visible, including, besides numerous inscriptions and other fragments, the remains of a temple incorporated into the church of the *Vescovado*, a remarkable cryptoporicus, and several extensive subterranean vaults under the church of *S. Benedetto*, constructed of reticulated masonry. Some remains of an amphitheatre are also visible, and an ancient bridge of 21 arches, constructed for the support of the road which leads into the town at the modern *Porta del Borgo*. It is still called *Ponte di Ronaco*, supposed to be a corruption of *Ponte Aurunco* (Hoare, *L. c.* pp. 145—147; Giustiniani, *Diz. Topogr.* vol. ix. p. 28, &c.)

The fertile plain which extends from the foot of the hills of *Sessa* to the Liris and the sea, now known as the *Demanio di Sessa*, is the ancient "Ager Vescinus," so called from the Ausonian city of Vescia, which seems to have ceased to exist at an early period [VESCIA]. The district in question was probably afterwards divided between the Roman colonies of Suessa and Sinuessa. [E. H. B.]

COIN OF SUESSA AURUNCA.

SUESSA POMETIA (*Σουεσσα Πομετιν*, Dionys.: *Eth.* Πουεστινός), an ancient city of Latium, which had ceased to exist in historical times, and the position of which is entirely unknown, except that it bordered on the "Pompitinus ager" or Pompinae Paludes, to which it was supposed to have given name. Virgil reckons it among the colonies of Alba, and must therefore have considered it as a Latin city (*Aen.* vi. 776): it is found also in the list of the same colonies given by Diodorus (vii. Fr. 3); but it seems certain that it had at a very early period become a Volscian city. It was taken from that people by Tarquinius Superbus, the first of the Roman kings who is mentioned as having made war on the Volscians (Liv. i. 63; Strab. v. p. 231; Vict. *Vir. Ill.* 8): Strabo indeed calls it the metropolis of the Volscians, for which we have no other authority; and it is probable that this is a mere inference from the statements as to its great wealth and power. These represent it as a place of such opulence, that it was with the booty derived from thence that Tarquinius was able to commence and carry on the construction of the Capitoline temple at Rome. (Liv. *L. c.*; Dionys. iv. 60; Cic. *de Rep.* ii. 24; Plin. vii. 16. s. 15). This was indeed related by some writers of Apollae, another city taken by Tarquin (Val. Antias, *op. Plin.* iii. 5. s. 9), but the current tradition seems to have been

that connected with *Pometia* (Tac. *Hist.* iii. 72). The name of *Suessa Pometia* is only once mentioned before this time, as the place where the sons of *Ancus Marcius* retired into exile on the accession of *Servius*. (Liv. i. 41). It is clear also that it survived its capture by *Tarquin*, and even appears again in the wars of the Republic with the *Volscians*, as a place of great power and importance. *Livy* indeed calls it a "*Colonia Latina*," but we have no account of its having become such. It, however, revolted (according to his account) in B. C. 503, and was not taken till the following year, by *Sp. Cassius*, when the city was destroyed and the inhabitants sold as slaves. (Liv. ii. 16, 17). It nevertheless appears again a few years afterwards (B. C. 495) in the hands of the *Volscians*, but was again taken and pillaged by the consul *P. Servilius* (Ib. 25; *Dionys.* vi. 29). This time the blow seems to have been decisive; for the name of *Suessa Pometia* is never again mentioned in history, and all trace of it disappears. *Pliny* notices it among the cities which were in his time utterly extinct (Plin. iii. 5. s. 9), and no record seems to have been preserved even of its site. We are, however, distinctly told that the *Pomptinus* ager and the *Pomptine* tribe derived their appellation from this city (Fest. s. v. *Pomptina*, p. 233), and there can therefore be no doubt that it stood in that district or on the verge of it; but beyond this all attempts to determine its locality must be purely conjectural. [E. H. B.]

SUESSETA'NI, a people of *Hispania Tarraconensis*, mentioned only by *Livy* (xxv. 34, xxviii. 24, xxxiv. 20, xxxix. 42) and especially in connection with the *Sedetani* (or *Edetani*). *Marco* (*Hisp.* ii. 9. 4) takes them for a branch of the *Cosetani*; and *Ukert* (ii. pt. i. p. 318) seeks them near the *Celtiberi*, *Lacetani*, and *Ilergetae*. [T. H. D.]

SUESSIONES, or **SUESSONES** (*Οὐεσσωνες*, Ptol. ii. 9. § 11), a people of *Gallia Belgica*. The *Remi* told *Caesar* (*B. G.* ii. 3) in B. C. 57 that the *Suessiones* were their brothers and kinsmen, had the same political constitution and the same laws, formed one political body with them, and had the same head or chief; their territory bordered on the territory of the *Remi*, and was extensive and fertile; within the memory of man the *Suessiones* had a king, *Divitiacus*, the most powerful prince in *Gallia*, who even had the dominion of *Britannia*; at this time (B. C. 57) they had a king named *Galba*, a very just and wise man, to whom the *Belgae* who were combining against *Caesar* unanimously gave the direction of the war. The *Suessiones* had twelve towns, and promised a contingent of 50,000 men for the war with *Caesar*.

Caesar (*B. G.* ii. 12) took *Noviodunum*, a town of the *Suessiones*, and the people submitted [*NOVIODUNUM; AUGUSTA SUSSIONUM*]. The *Suessiones* had the rich country between the *Oise* and the *Marne*, and the town of *Soissons* on the *Aisne* preserves their name unchanged. The *Suessiones* are mentioned (*B. G.* vii. 75) among the peoples who sent their contingent to attack *Caesar* at *Alesia*, B. C. 52; but their force was only 5000 men. *Caesar* paid the *Suessiones* for their pains by subjecting them to their brothers the *Remi* (*B. G.* viii. 6: "qui *Remis* erant attributi"); in which passage the word "attributi" denotes a political dependence, and in *Gallia* that signified payment of money. The *Remi* took care of themselves [*REMI*].

Pliny names the *Suessiones Liberi* (iv. 17), which, if it means anything, may mean that they were re-

leased in his time from their dependence on the *Remi*. In *Pliny's* text the name "*Sueconi*" stands between the name *Veromandui* and *Suessiones*; but nobody has yet found out what it means.

The orthography of this name is not quite certain; and the present name *Soissons* is as near the truth as any other form. In *Strabo* (iv. p. 195) it is *Σουεσιώνες*, and *Lucan* (i. 423) has—

"Et *Biturix*, longique leves *Suessiones* in armis:"

Suessones is a correction; but there is no doubt about it (ed. *Oudendorp*). [G. L.]

SUESSULA (*Σουέσσυλα*; *Etā. Saessulanus; Sessola*), a city of *Campania*, situated in the interior of that country, near the frontiers of *Samnium*, between *Capua* and *Nola*, and about 4 miles N.E. of *Acerrae*. It is repeatedly mentioned during the wars of the Romans with the *Samnites*, as well as in their campaigns against *Hannibal*. Thus in the First *Samnite War* (B. C. 343) it was the scene of a decisive victory by *Valerius Corvus* over the *Samnites*, who had gathered together the remains of their army which had been previously defeated at *Mount Gaurus* (Liv. vii. 37). In the great *Campanian War* shortly after, the *Suessulani* followed the fortunes of the citizens of *Capua*, and shared the same fate, so that at the close of the contest they must have obtained the Roman *civitas*, but without the right of suffrage (Id. viii. 14). In the Second *Punic War* the city bears a considerable part, though apparently more from its position than its own importance. The line of hills which rises from the level plain of *Campania* immediately above *Suessula*, and forms a kind of prolongation of the ridge of *Mount Tifata*, was a station almost as convenient as that mountain itself, and in B. C. 216, it was occupied by *Marcellus* with the view of protecting *Nola*, and watching the operations of *Hannibal* against that city (Liv. xxiii. 14, 17). From this time the Romans seem to have kept up a permanent camp there for some years, which was known as the *Castra Claudiana*, from the name of *Marcellus* who had first established it, and which is continually alluded to during the operations of the subsequent campaigns (Liv. xxiii. 31, xxiv. 46, 47, xxv. 7, 22, xxvi. 9). But from this period the name of *Suessula* disappears from history. It continued to be a municipal town of *Campania*, though apparently one of a secondary class; and inscriptions attest its municipal rank under the Empire. It had received a body of veterans as colonists under *Sulla*, but did not attain the colonial rank (Strab. v. p. 249; Plin. iii. 5. s. 9; Orell. *Inscr.* 129, 130, 2333; *Lib. Col.* p. 237). The *Tabula* places it on a line of road from *Capua* to *Nola*, at the distance of 9 miles from each of these cities (*Tab. Peut.*). It was an episcopal see in the first ages of Christianity, and its destruction is ascribed to the *Saracens* in the 9th century. Its ruins are still visible in a spot now occupied by a marshy forest about 4 miles S. of *Maddaloni*, and an adjacent castle is still called *Torre di Sessola*. Inscriptions, as well as capitals of columns and other architectural fragments, have been found there (*Pratilli Via Appia*, iii. 3. p. 347; *Romanelli*, vol. iii. p. 590). [E. H. B.]

SUETRI (*Σουετρίοι*, Ptol. iii. 1. § 42, written *Σουετρίοι* in some editions), a *Ligurian* people, placed by *Pliny* (iii. 4) above the *Oxybii*, who were on the coast between *Fréjus* and *Antibes*. The *Suetri* are the last people named in the *Trophy of the Alps*. If the position of their town *Salinae* [*SALINAE*] is

properly fixed, the Suetri were in the northern part of the diocese of *Fréjus*. [G. L.]

SUEVI (Σουῆτοι or Σουῆτοι), is the designation for a very large portion of the population of ancient Germany, and comprised a great number of separate tribes with distinctive names of their own, such as the Semnones. German authors generally connect the name Suevi with *Suiban*, i. e. to sway, move unsteadily, and take it as a designation of the unsteady and migratory habits of the people, to distinguish them from the Ingaevones, who dwelt in villages or fixed habitations (Zeuss, *Die Deutschen*, p. 55, foll.); others, however, and apparently with good reason, regard the name as of Celtic or even Slavonian origin; for the Romans no doubt employed the name, not because indigenous in Germany, but because they heard it from the Celts in Gaul. We must, however, from the first distinguish between the Suevi of Caesar (*B. G.* i. 37, 51, 54, iii. 7, iv. 1, &c.) and those of Tacitus (*Germ.* 38, &c.): the Suevi in Caesar occupied the eastern banks of the Rhine, in and about the country now called *Baden*, while Tacitus describes them as occupying the country to the north and east of the Suevi of Caesar, so that the two writers assign to them quite a different area of country. Strabo (vii. p. 290) again states that in his time the Suevi extended from the Rhenus to the Albis, and that some of them, such as the Hermunduri and Longobardi, had advanced even to the north of the Albia. Whether the nations called Suevi by Caesar and Tacitus are the same, and if so, what causes induced them in later times to migrate to the north and east, are questions to which history furnishes no answers. It is possible, however, that those whom Caesar encountered were only a branch of the great body, perhaps Chatti and Longobardi. That these latter were pure Germans cannot be doubted; but the Suevi of Tacitus, extending from the Baltic to the Danube, and occupying the greater part of Germany, no doubt contained many Celtic and still more Slavonic elements. It has in fact been conjectured, with great probability, that the name Suevi was applied to those tribes which were not pure Germans, but more or less mixed with Slavonians; for thus we can understand how it happened that in their habits and mode of life they differed so widely from the other Germans, as we see from Tacitus; and it would also account for the fact that in later times we find Slavonians peaceably established in countries previously occupied by Suevi. (Comp. Plin. iv. 28; Ptol. ii. 11. § 15; Oros. i. 2.) It deserves to be noticed that Tacitus (*Germ.* 2, 45) calls all the country inhabited by Suevian tribes by the name Suevia. The name Suevi appears to have been known to the Romans as early as B. C. 123 (Sisenna, *ap. Non. s. v. lancea*), and they were at all times regarded as a powerful and warlike people. Their country was covered by mighty forests, but towns (oppida) also are spoken of. (Caes. *B. G.* iv. 19.) As Germany became better known to the Romans, the generic name Suevi fell more and more into disuse, and the separate tribes were called by their own names, although Ptolemy still applies the name of Suevi to the Semnones, Longobardi, and Angli.

In the second half of the third century we again find the name Suevi limited to the country to which it had been applied by Caesar. (Amm. Marc. xvi. 10; Jornand. *Get.* 55; *Tab. Peut.*) These Suevi, from whom the modern *Suebia* and the *Suebians* derive their names, seem to have been a body of ad-

venturers from various German tribes, who assumed the ancient and illustrious name, which was as applicable to them as it was to the Suevi of old. These later Suevi appear in alliance with the Alamannians and Burgundians, and in possession of the German side of Gaul, and Switzerland, and even in Italy and Spain, where they joined the Visigoths. Ricimer, who acts so prominent a part in the history of the Roman empire, was a Suevian. (Comp. Zeuss, l. c.; Wilhelm, *Germanien*, p. 101, &c.; Grimm, *Deutsche Gram.* i. pp. 8, 60. ii. p. 25, *Gesch. der Deutschen Spr.* i. p. 494; Latham, on *Tacit. Germ. Epilog.* p. lxxi.) [L. S.]

SUEVICUM MARE, is the name given by Tacitus (*Germ.* 45) to the *Baltic Sea*, which Ptolemy calls the Σαλατικὸς Ἰνδαυὸς (vii. § 2, viii. 10. § 2.) [L. S.]

SUFES a place in Byzacena (*Itin. Ant.* pp. 47, 48, 49, 51, 55). Now *Sība* or *Sihah*. [T. H. D.]

SUFETULA a town of Byzacene, 25 miles S. of Sufes. In its origin it seems to have been a later and smaller place than the latter, whence its name as a diminutive—little Sufes. In process of time, however, it became a very considerable town, as it appears to have been the centre whence all the roads leading into the interior radiated. Some vast and magnificent ruins, consisting of the remains of three temples, a triumphal arch, &c., at the present *Sfaiila*, which is seated on a lofty plateau on the right bank of the *Wād Dehmila*, 80 kilometres SW. of *Kairwan*, attest its ancient importance. (See Shaw's *Travels*, p. 107; Pellissier, in *Revue Archeol.* July 1847.) [T. H. D.]

SULA (Συλα, Steph. B. s. v.: *Eth. Συδρην, Συεύς; Συλα, Stadiam*, §§ 331, 332), the harbour of Elyrus in Crete, 50 stadia to the W. of Poecilassus, situated on a plain. It probably existed as late as the time of Hierocles, though now entirely uninhabited. Mr. Pashley (*Travels*, vol. ii. p. 100) found remains of the city walls as well as other public buildings, but not more ancient than the time of the Roman Empire. Several tombs exist resembling those of *Haghio Ky'rko*; an aqueduct is also remaining. [E. B. J.]

SUILUM [HELVILLUM.]

SUINDINUM. [CENOMANI.]

SUIONES, are mentioned only by Tacitus (*Germ.* 44) as the most northern of the German tribes, dwelling on an island in the ocean. He was no doubt thinking of Scandia or Scandinavia; and Suiones unquestionably contains the root of the modern name *Sweden* and *Svedes*. [L. S.]

SUISSA, a town in Armenia Minor (*It. Ant.* pp. 207, 216), where, according to the *Notitia Imperii* (p. 27), the Ala I. Ulpia Dacorum was stationed; but its site is now unknown. [L. S.]

SUISSATIUM (in Ptol. *Σουεσάτιον*, ii. 6. § 65), a town of the Caristi in Hispania Tarraconensis. The Geogr. Rav. (iv. 45) calls it *Seustatium*. It is the modern *Vittoria*. [T. H. D.]

SULCI (Σολκοί, Steph. B., Ptol.; Σούλχοι, Strab.; Σόλκοι, Paus.; *Eth. Sulcitani*; S. *Antiocho*), one of the most considerable cities of Sardinia, situated in the SW. corner of the island, on a small island, now called *Isola di S. Antiocho*, which is, however, joined to the mainland by a narrow isthmus or neck of sand. S. of this isthmus, between the island and the mainland, is an extensive bay, now called the *Golfo di Palmas*, which was known in ancient times as the *Sulcitani Portus* (Ptol.). The foundation of Sulci is expressly attributed to the Cartha-

ginians (Pans. x. 17. § 9; Claudian. *B. Gild.* 518), and it seems to have become under that people one of the most considerable cities of Sardinia, and one of the chief seats of their power in the island. Its name was first mentioned in history during the First Punic War, when the Carthaginian general, Hannibal, having been defeated in a sea-fight by C. Sulpicius, took refuge at Sulci, but was slain in a tumult by his own soldiers (Zonar. viii. 12). No other mention of the name occurs in history till the Civil War between Pompey and Caesar, when the citizens of Sulci received in their port the fleet of Nauidius, the admiral of Pompey, and furnished him with supplies; for which service they were severely punished by Caesar, on his return from Africa, a. c. 46, who imposed on the city a contribution of 100,000 sesterces, besides heavily increasing its annual tribute of corn (Hirt. *B. Afr.* 98). Notwithstanding this infliction, Sulci seems to have continued under the Roman Empire to be one of the most flourishing towns in the island. Strabo and Mela both mention it as if it were the second city in Sardinia; and its municipal rank is attested by inscriptions, as well as by Pliny. (Strab. v. p. 225; Mel. ii. 7. § 19; Plin. iii. 7. a. 13; Ptol. iii. 3. § 3; *Inscr.* ap. De la Marmora, vol. ii. pp. 479, 482.) The Itineraries give a line of road proceeding from Tibula direct to Sulci, a sufficient proof of the importance of the latter place. (*Itin. Ant.* pp. 83, 84.) It was also one of the four chief episcopal sees into which Sardinia was divided, and seems to have continued to be inhabited through a great part of the middle ages, but ceased to exist before the 13th century. The remains of the ancient city are distinctly seen a little to the N. of the modern village of *S. Antioco*, on the island or peninsula of the same name: and the works of art which have been found there bear testimony to its flourishing condition under the Romans. (De la Marmora, vol. ii. p. 357; Smyth's *Sardinia*, p. 317.) The name of *Sulcis* is given at the present day to the whole district of the mainland, immediately opposite to *S. Antioco*, which is one of the most fertile and best cultivated tracts in the whole of Sardinia. The Sulcitani of Ptolemy (iii. 3. § 6) are evidently the inhabitants of this district.

The Itineraries mention a town or village of the name of Sulci on the E. coast of Sardinia, which must not be confounded with the more celebrated city of the name. (*Itin. Ant.* p. 80.) It was probably situated at *Girasol*, near *Tortoli*. (De la Marmora, p. 443.) [E. H. B.]

SULGAS, river. [GALLIA, p. 954; VINDALIUM.]

SULLIA, SULE'NA (Σουλία, Σουλῆνα, *Stadiasm.* §§ 324, 325), a promontory of Crete, 65 stadia from Matala, where there was a harbour and good water, identified by Mr. Pashley (*Travels*, vol. i. p. 304) with *Hághio Gálene*, the chief port of *Amdri*, on the S. coast of the island. [E. B. J.]

SULLIS, in Gallia, is placed in the Table on a route from Dardotunum, which is Darioirigum [DARIOIRIGUM] the capital of the Veneti, to Gesocribate the western extremity of *Bretagne*. The distance from Darioirigum to Sullis is xx. By following the direction of the route we come to the junction of a small river named *Sewel* with the river of *Blavet*. The name and distance, as D'Anville supposes, indicate the position of Sullis. [G. L.]

SULLONLACAE, a town in Britannia Romana (*Itin. Ant.* p. 471), now *Brockley Hill* in *Hertfordshire*. (Camden, p. 359.) [T. H. D.]

SULMO (*Sermoneta*), an ancient city of Latium,

mentioned only by Pliny (iii. 5. a. 9) among those which were extinct in his time, and incidentally noticed by Virgil. (*Aen.* x. 517.) It is in all probability the same place with the modern *Sermoneta*, which stands on a hill between Norba and Setia, looking over the Pontine Marshes. [E. H. B.]

SULMO (Σουλμὸν; *Etik.* Sulmonensis; *Sulmons*), a city of the Peligni, situated in the valley of the *Gizio*, in a spacious basin formed by the junction of that river with several minor streams. There is no doubt that it was one of the principal cities of the Peligni, as an independent tribe, but no notice of it is found in history before the Roman conquest. A tradition alluded to by Ovid and Silius Italicus, which ascribed its foundation to Solymus, a Phrygian and one of the companions of Aeneas, is evidently a mere etymological fiction (Ovid, *Fast.* iv. 79; Sil. Ital. ix. 70—76.) The first mention of Sulmo occurs in the Second Punic War, when its territory was ravaged by Hannibal in a. c. 211, but without attacking the city itself. (*Liv.* xxvi. 11.) Its name is not noticed during the Social War, in which the Peligni took so prominent a part; but according to Florus, it suffered severely in the subsequent civil war between Sulla and Marius, having been destroyed by the former as a punishment for its attachment to his rival. (Flor. iii. 21.) The expressions of that rhetorical writer are not, however, to be construed literally, and it is more probable that Sulmo was confiscated and its lands assigned by Sulla to a body of his soldiers. (Zumpt, *de Colon.* p. 261.) At all events it is certain that Sulmo was a well-peopled and considerable town in a. c. 49, when it was occupied by Domitius with a garrison of seven cohorts; but the citizens, who were favourably affected to Caesar, opened their gates to his lieutenant M. Antonius as soon as he appeared before the place. (Caes. *B. C.* i. 18; Cic. *ad Att.* viii. 4, 12 a.) Nothing more is known historically of Sulmo, which, however, appears to have always continued to be a considerable provincial town. Ovid speaks of it as one of the three municipal towns whose districts composed the territory of the Peligni ("Peligni pars tertia ruri", *Amor.* ii. 16. 1); and this is confirmed both by Pliny and the Liber Coloniarum; yet it does not seem to have ever been a large place, and Ovid himself designates it as a small provincial town. (*Amor.* iii. 15.) From the Liber Coloniarum we learn also that it had received a colony, probably in the time of Augustus (Plin. iii. 12. a. 17; *Lib. Colon.* pp. 229, 260); though Pliny does not give it the title of a Colonia. Inscriptions, as well as the geographers and Itineraries, attest its continued existence as a municipal town throughout the Roman Empire. (Strab. v. p. 241; Ptol. iii. 1. § 64; *Tab. Peut.*; *Orrell. Inscr.* 3856; Mommsen, *Inscr.* R. N. pp. 287—289.) The modern city of *Sulmona* undoubtedly occupies the ancient site: it is a tolerably flourishing place and an episcopal see, having succeeded to that dignity after the fall of *Falco*, which had arisen on the ruins of *Corfinium*. (Romanelli, vol. iii. pp. 154—156.)

The chief celebrity of Sulmo is derived from its having been the birthplace of Ovid, who repeatedly alludes to it as such, and celebrates its salubrity, and the numerous streams of clear and perennial water in which its neighbourhood abounded. But, like the whole district of the Peligni, it was extremely cold in winter, whence Ovid himself, and Silius Italicus in imitation of him, calls it "gelidas

Sulmo" (Ovid, *Fast.* iv. 81, *Trist.* iv. 10. 3, *Amor.* ii. 16; Sil. Ital. viii. 511.) Its territory was fertile, both in corn and wine, and one district of it, the Pagus Fabianus, is particularly mentioned by Pliny (xvii. 26. s. 43) for the care bestowed on the irrigation of the vineyards.

The remains of the ancient city are of little interest as ruins, but indicate the existence of a considerable town; among them are the vestiges of an amphitheatre, a theatre, and thermae, all of them without the gates of the modern city. About 2 miles from thence, at the foot of the *Monte Morrone*, are some ruins of reticulated masonry, probably those of a Roman villa, which has been called, without the slightest reason or authority, that of Ovid. (Romanello, vol. iii. pp. 159, 161; Craven's *Abuzzi*, vol. ii. p. 32.)

Sulmo was distant seven miles from Corfinium, as we learn both from the Tabula and from Caesar. (Caes. B. C. i. 18; *Tab. Peut.*) Ovid tells us that it was 90 miles from Rome (*Trist.* iv. 10. 4), a statement evidently meant to be precise. The actual distance by the highroad would be 94 miles; viz. 70 to Cerfennia, 17 from thence to Corfinium, and 7 from Corfinium to Sulmo. (D'Anville, *Anal. Géogr. de l'Italie*, pp. 175, 179.) There was, however, probably a branch road to Sulmo, after passing the Mons Imeus, avoiding the *détour* by Corfinium. [E. H. B.]

SUMATIA (*Σουμαρία*, Paus. viii. 3. § 4; Steph. B. s. v.; *Σουμρία*, Paus. viii. 36. § 7; *Σουμδρεϊορ*, Paus. viii. 27. § 3; *Σουμφρέια*, Steph. B. s. v.), a town of Arcadia in the district Maenalia, on the southern slope of Mt. Maenalia. It was probably on the summit of the hill now called *Sylimna*, where there are some remains of polygonal walls. (Leake, *Morea*, vol. ii. p. 51; Ross, *Peloponnes*, p. 120.)

SUMMONTORIUM, a place in Vindelicia (*It. Ant.* p. 277), where, according to the Notitia Imperii, the commander of the 3rd legion was stationed. Its exact site is uncertain. [L. S.]

SUMMUS PYRENAEUS. One of the passes of this name mentioned in the Antonine Itin. and the Table was on the road from Narbo (*Narbonne*) to Juncaria (*Junqueira*) in Spain. The road passed from Narbo through Ad Centuriones and Ad Stabulum; but the distances in the Itin. are not correct; nor is the distance in the Itin. correct from Summus Pyrenaeus to Juncaria. The pass, however, is well marked; and it is the *Col de Pertus*, which is commanded by the fort of *Bellegarde*. This is the road by which Hannibal entered Gallia, and the Roman armies marched from Gallia into Spain. A second pass named Summus Pyrenaeus in the Antonine Itin. was on the road from Beneharnum [*BENEHARNUM*] in Aquitania to Caesaraugusta (*Saragosa*) in Spain. The road went through Iluro (*Oleron*) and Aspa Luca [*ASPA LUCA*] and Forum Ligneum [*FORUM LIGNEUM*], which is 5 from Summus Pyrenaeus. This road follows the *Gare d'Aspe* from Oleron; and on reaching the head of the valley there are two roads, one to the right and the other to the left. That to the right called *Port de Bernère* must be the old road, because it leads into the valley of *Aragues* and to *Beilo* in Spain, which is the Ebullinum of the Itin. on the road from Summus Pyrenaeus to *Saragosa*.

There is a third pass the most western of all also named Summus Pyrenaeus on the road from Aquae Tarbellicae (*Dax*) in Aquitania to Pompelon (*Pamplona*) in Spain. The Summus Pyrenaeus is the *Sommet de Castel-Pinson*, from which we descend

into the valley of *Roncesvalles* on the road to *Pamplona* [*IMUS PYRENAEUS*]. (D'Anville, *Notice*, &c.) [G. L.]

SUNA [ABORIGINES.]

SUNICI. Tacitus (*Hist.* iv. 66) mentions the Sunici in the history of the war with Civilis. Civilis having made an alliance with the Agrippinenses (*Côln*) resolved to try to gain over the nearest people to *Côln*, and he first secured the Sunici. Claudius Labeo opposed him with a force hastily raised among the Betasii, Tungri and Nervii, and he was confident in his position by having possession of the bridge over the Mosae. [*PONS MOSAE*]. No certain conclusion as to the position of the Sunici can be derived from this; but perhaps they were between *Côln* and the *Maas*. Pliny (iv. 17) mentions the Sunici between the Tungri and the Frisabones. [G. L.]

SUNTIUM (*Σούντιον*; *Eth. Σουντιός*), the name of a promontory and demus on the southern coast of Attica. The promontory, which forms the most southerly point in the country, rises almost perpendicularly from the sea to a great height, and was crowned with a temple of Athena, the tutelary goddess of Attica. (Paus. i. 1. § 1; *Σούντιον ἱερὸν*, Hom. *Od.* iii. 278; Soph. *Ajax*, 1235; Eurip. *Cycl.* 292; Vitruv. iv. 7.) Suntiium was fortified in the nineteenth year of the Peloponnesian War (B.C. 413) for the purpose of protecting the passage of the cornships to Athens (Thuc. viii. 4), and was regarded from that time as one of the principal fortresses of Attica (Comp. Dem. *pro Cor.* p. 238; Liv. xxxi. 25; Scylax, p. 21.) Its proximity to the silver mines of Laurium probably contributed to its prosperity, which passed into a proverb (Anaxand. *ap. Athen.* vi. p. 263, c.); but even in the time of Cicero it had sunk into decay (*ad Att.* xiii. 10). The circuit of the walls may still be traced, except where the precipitous nature of the rocks afforded a natural defence. The walls which are fortified with square towers, are of the most regular Hellenic masonry, and enclose a space of a little more than half a mile in circumference. The southern part of Attica, extending northwards from the promontory of Suntiium as far as Thoricus on the east, and Anaphlystus on the west, is called by Herodotus the Sunician angle (*τὸν γωνίον τὸν Σουνιακόν*, iv. 99). Though Suntiium was especially sacred to Athena, we learn from Aristophanes (*Equit.* 557, *Aves*, 869) that Poseidon was also worshipped there.

The promontory of Suntiium is now called *Cape Kolónnes*, from the ruins of the temple of Athena which still crown its summit. Leake observes that "the temple was a Doric hexastyle; but none of the columns of the fronts remain. The original number of those in the flanks is uncertain; but there are still standing nine columns of the southern, and three of the northern side, with their architraves, together with the two columns and one of the antae of the pronaos, also bearing their architraves. The columns of the peristyle were 3 feet 4 inches in diameter at the base, and 2 feet 7 inches under the capital, with an intercolumniation below of 4 feet 11 inches. The height, including the capital, was 19 feet 3 inches. The exposed situation of the building has caused a great corrosion in the surface of the marble, which was probably brought from the neighbouring mountains; for it is less homogeneous, and of a coarser grain, than the marble of Pentelè. The walls of the fortress were faced with the same kind of stone. The entablature

ture of the peristyle of the temple was adorned with sculpture, some remains of which have been found among the ruins. North of the temple, and nearly in a line with its eastern front, are foundations of the Propylaeum or entrance into the sacred peribolus: it was about 50 feet long and 30 broad, and presented at either end a front of two Doric columns between antae, supporting a pediment. The columns were 17 feet high, including the capital, 2 feet 10 inches in diameter at the base, with an opening between them of 8 feet 8 inches." (*The Demi of Attica*, p. 63, 2nd ed.) Leake remarks that there are no traces of any third building visible, and that we must therefore conclude that here, as in the temple of Athena Polias at Athens, Poseidon was honoured only with an altar. Wordsworth, however, remarks that a little to the NE. of the peninsula on which the temple stands is a conical hill, where are extensive vestiges of an ancient building, which may perhaps be the remains of the temple of Poseidon. (*Athens and Attica*, p. 207.)

SUNNESIA, a small island on the S. coast of Spain (Geogr. Rav. v. 27.) [T.H.D.]

SUNONENSIS LACUS, a lake in Bithynia, between the Ascania Lacus and the river Sangarius. (Amm. Marc. xxvi. 3.) It is probably the same lake which is mentioned by Evagrius (*Hist. Eccl.* ii. 14) under the name of Βοδρὴ λίμνη in the neighbourhood of Nicomedeia, and which is at present known under the name of *Shabanja*. It seems, also, to be the same lake from which the younger Pliny (x. 50) proposed to cut a canal to the sea. [L.S.]

SUPERAÆQUUM or SUPERÆQUUM (*Eth.* Superaequanus; *Castel Vecchio Subequo*), a town of the Peligni, one of the three which possessed municipal rights, and among which the territory of that people was divided. [PELIGNI.] Hence it is mentioned both by Pliny and in the Liber Coloniarum, where it is termed "Colonia Superaequana." It received a colony of veterans, probably under Augustus, to which a fresh body of colonists was added in the reign of M. Aurelius. (Plin. iii. 12. s. 17; *Lib. Colon.* p. 229; Zumpt, *de Colon.* p. 361.) The name is not mentioned by any other author, but several inscriptions attest its municipal importance. Its site, which was erroneously transferred by Cluverius to *Palena*, was clearly fixed by Holstenius at a place still called *Castel Vecchio Subequo* (in older documents *Subregno* or *Subrego*), where the inscriptions alluded to are still extant. It is situated on a hill on the right bank of the Aternus, and about 4 miles on the left of the Via Valeria. Its territory probably comprised the hilly district between that road and the Aternus. (Cluver, *Ital.* p. 758; Holsten. *Not. in Cluver.* p. 145; Romanelli, vol. iii. pp. 134—137; Mommsen, *Inscr. R. N.* p. 289.) [E. H. B.]

SUPERATIL. [ASTURUS.]

SUPERUM MARE. [ADRIATICUM MARE.]

SUPPARA (*Σουπαρα*, *Peripl. M. E.* c. 52, ed. Müll.), a place on the western coast of Hindostan, at no great distance from Barygaza or Beroach. Ptolemy calls it *Σουπαρα* (vii. 1. § 6). In Lassen's map it is placed on the left bank of the *Tápati* or *Managána*, not far to the N. of *Surat*. This place is also mentioned by Edrisi (l. p. 171), and by Cosmas Indicopleustes under the form of 'Οππαρά (p. 337, ed. Montfaucon). It has been suspected, with good reason, by Benfey, that this is the "Ophir" of the Bible,—the name in Sanscrit and Hebrew respectively offering some remarkable analogies. (Benfey, *art. Indien*, in *Erach und Gruber*, p. 28.) [V.]

SURA (*τὰ Σούρα*; *Eth.* *Σουρράς*), a city of Syria, situated on the Euphrates, in the district of Palmyrene, long. 72° 40', lat. 35° 40' of Ptolemy, who places it between Alalis and Alamata (v. 15. § 25); apparently the Sure of the Peutinger Table, according to which it was 105 M.P. distant from Palmyra. It is called in the Notitiae Imperii (§ 24) Flavia Turina Sura (ap. Mannert, p. 408). It is probably identical with the Ura of Pliny, where, according to him, the Euphrates turns to the east from the deserts of Palmyra (v. 24. s. 87). He, however, mentions Sura (26. s. 89) as the nearest town to Philiscum, a town of the Parthians on the Euphrates. It was 126 stadia distant from Heliopolis, which was situated in what was called "Barbaricus campos." It was a Roman garrison of some importance in the Persian campaigns of Belisarius; and a full account is given of the circumstances under which it was taken and burned by Chosroes I. (A. D. 532), who, having marched three long days' journey from Circesium to Zenobia, along the course of the Euphrates, thence proceeded an equal distance up the river to Sura. Incidental mention of the bishop proves that it was then an episcopal see. (Procop. *Bell. Pers.* i. 18, ii. 5.) Its walls were so weak that it did not hold out more than half an hour; but it was afterwards more substantially fortified, by order of the emperor Justinian. (*Id. de Aedificiis Justiniani*, ii. 9.) "About 36 miles below Balis (the Alalis of Ptolemy), following the course of the river, are the ruins of *Sura*; and about 6 miles lower is the ford of *El-Hammam*," which Col. Chesney identifies with the Zeugma of Thapsacus, where, according to local tradition, the army of Alexander crossed the Euphrates (*Expedition for Survey*, &c. vol. i. p. 416). In the Chart (iii.) it is called *Soorack*, and marked as "brick ruins," and it is probable that the extensive brick ruins a little below this site, between it and *Phumea* (Thapsacus), may be the remains of Alamata, mentioned in connection with Sura by Ptolemy. Ainsworth is certainly wrong in identifying the modern *Suriyeh* with the ancient Thapsacus (p. 72). [G. W.]

SURA, a branch of the Mosella in Gallia. Ausonius (*Mosella*, v. 354):—

"Namque et Pronaee Nemesaeque adjuta meatu
Sura tuas propter non degener ire sub undas."

The Sura (*Sour* or *Sure*), comes from *Luxemboury*, and after receiving the Pronaea (*Praem*) and Nemea (*Nims*), joins the *Our*, which falls into the *Moselle* on the left bank above Augusta Trevirorum. [G. L.]

SURAE. [SORAE.]

SURASE'NAE (*Σουρασηναι*, Arrian, *Ind.* c. 8), an Indian nation, noticed by Arrian, who appears to have dwelt along the banks of the Jamna. They were famous for the worship of the Indian Hercules, and had two principal cities, Methora (*Μαθωρα*) and Cleisobora. The name is, pure Sanscrit, *Sarasénakas*. [V.]

SURDAONES, a people of Hispania Tarraconensis, seated near Herda, and probably belonging to the Illyretes. (Plin. iii. 3. s. 4.) [T.H.D.]

SU'RIMUM (*Σούριμον*, Ptol. v. 10. § 6), a place in Colchis, at the mouth of the Sarius. (Plin. vi. 4. s. 4.) There is still at this spot a plain called *Sorac*. (Bitter, *Erdkunde*, ii. p. 809.) [T.H.D.]

SU'RIOUS a small tributary river of the Phasis in Colchis. (Plin. vi. 4. s. 4.) According to the same authority, its water had a petrifying power (ii. 103. s. 106.) [T.H.D.]

SURRENTINUM PROM. [MINERVÆ PROM.]

SURRENTUM (*Συρρεντόν*, Strab.; *Σούπερρον*, Ptol.; *Eth.* *Surrentinus*: *Sorrento*), a city on the coast of Campania, on the southern side of the beautiful gulf called the Crater or *Bay of Naples*, about 7 miles from the headland called Minervæ Promontorium, which forms the southern boundary of that bay. We have very little information as to its early history; its name is never mentioned till after the Roman conquest of Campania. Tradition indeed ascribed the foundation of Surrentum to the Greeks, but whether it was a colony from Cumæ, or an earlier Greek settlement, we have no account: and there does not appear any evidence that it had, like many places in this part of Italy, a distinctly Greek character in historical times. Strabo calls it a Campanian city (Strab. v. p. 247), but this may very probably refer to its not being one of those occupied by the Picentines. According to the *Liber Coloniarum* a great part of its territory, and perhaps the town itself, was considered in a certain sense as consecrated to Minerva, on account of its proximity to her celebrated temple on the adjoining promontory, and was for that reason occupied by Greek settlers (*Lib. Col.* p. 236). It nevertheless received a partial colony under Augustus (*ib.*), but without attaining the rank or character of a Colonia. Numerous inscriptions record its existence as a municipal town under the Roman Empire, and it is noticed by all the geographers; but its name is rarely mentioned in history (Strab. l. c.; Plin. iii. 5. s. 9; Mel. ii. 4. § 9; Ptol. iii. 1. § 7; Orell. *Inscr.* 3742; Mommsen, *Inscr. R. N.* 2111—2125). It was, however, resorted to by wealthy Romans on account of its beautiful scenery and delightful climate; among others Pollius Felix, the friend of Statius, had a villa there, which the poet has celebrated at considerable length in one of his minor poems (*Silv.* ii. 2). We are told also that Agrippa Postumus, when he first incurred the displeasure of Augustus, was ordered to retire to Surrentum, before he was consigned to more complete banishment in the island of Planasia (Suet. *Aug.* 65).

But the chief celebrity of Surrentum was derived from its wine, which enjoyed a high reputation at Rome, and is repeatedly alluded to by the poets of the Empire. It was considered very wholesome, and was in consequence recommended by physicians to convalescents and invalids. Tiberius indeed is said to have declared that it owed its reputation entirely to the physicians, and was in reality no better than vinegar. It did not attain its maturity till it had been kept 25 years (Plin. xiv. 6. s. 8; Athenæ. i. p. 126; Ovid. *Met.* xv. 710; Martial, xiii. 110; Stat. *Silv.* iii. 5. 102; Strab. v. p. 243; Colum. *R. R.* iii. 2. § 10). We learn from Martial also (xiii. 110, xiv. 102) that Surrentum was noted for its pottery. The hills which produced the celebrated wine were those which encircle the plain in which the city was situated ("Surrentini colles," Ovid. *Met.* l. c.), and separate it from the gulf of Posidonia on the other side. These hills form a part of the ridge which descends from the lofty mountain group of the *Monte S. Angelo* between *Castellamare* and *Amalfi*, and is continued as far as the headland opposite *Capri*. This point, now called the *Punta della Campanella*, the ancient Promontorium Minervæ, was known also by the name of Surrentinum Promontorium, from its close connection with the town of Surrentum (Tac. *Ann.* iv. 67; Stat. *Silv.* v. 3. 165). The celebrated sanctuary of the Sirens,

from which Surrentum itself was supposed to have derived its name, seems to have been situated (though the expressions of Strabo are not very clear) between this headland and the town (Strab. v. p. 247). But the islands of the Sirens (*Sirenusæ Insulæ*) were certainly the rocks now called *Lì Galli*, on the opposite side of the promontory. The villa of Pollius, which is described by Statius as looking down upon the deep *Gulf of Puteoli*, stood upon the headland now called *Capo di Sorrento*, on the W. of the town, separating the *Bay of Sorrento* from that of *Massa*: extensive ruins of it are still visible, and attest the accuracy of the poet's description. (Stat. *Silv.* ii. 2; Swinburne's *Travels*, vol. i. pp. 88—90.)

The other ruins still visible at *Sorrento* and in its neighbourhood are of no great interest: they present numerous fragments of buildings of imperial times, to some of which the names of a temple of Hercules, temple of Neptune, &c. have been applied by local antiquarians, with no other foundation than the fact that we learn from Statius the existence of temples to those divinities at Surrentum. The most considerable relic of antiquity is a Piscina of large dimensions, which is in such good preservation that it still serves to supply the inhabitants with water. The modern town of *Sorrento* is a flourishing and populous place with a population of above 6000 souls: it is much resorted to by strangers on account of its mild and delicious climate, for which it is already extolled by Silius Italicus ("Zephyro Surrentum molle salubri," *Sil. Ital.* v. 466.) [E. H. B.]

SUSA (ῥά Σούσα, Aeschyl. *Pers.* 535, 730; Herod. i. 188; Xen. *Cyr.* viii. 6. § 8, &c.; in O. T. *SHUSHAN*, *Ether*, i. 2; *Nehemiah*, i. 1; *Daniel*, viii. 2), the chief city of the province of *Susiana*, on the eastern bank of the *Choaspes* (*Kerkhah*). There was considerable doubt among the ancient writers as to the exact position of this celebrated city. Thus Arrian (vii. 7), Pliny (vi. 27. s. 31), and Daniel (viii. 2) place it on the *Eulaeus* (*Uai* in Daniel); while from other authors (Strab. xv. p. 728) it may be gathered that it was situated on the *Choaspes*. (For the probable cause of this confusion, see *CHOASPE*.) We may add, however, that, according to Curtius, Alexander on his way from Babylon had to cross the *Chonspes* before he could reach Susa (v. 2), and that the same inference may be drawn from the account of Aristagoras of the relative position of the places in Persia in his address to Cleomenes. (Herod. v. 52.) It appears to have been an early tradition of the country that Susa was founded by Dareius the son of Hystaspes (Plin. l. c.); and it is described by Aeschylus as *μῆτρ' ἑσσυ Σουσιδός* (*Pers.* 119). By others it is termed *Μεμνδνεον ἑσσυ* (Herod. v. 54), and its origin is attributed to Memnon, the son of Tithonus. (Strab. l. c.; Steph. *B. s. v.*) The name is said to have been derived from a native Persian word *Susan* (meaning *lily*), from the great abundance of those plants in that neighbourhood. (Steph. *B. s. v.*; Athen. xii. p. 513, ed. Cassaub.) Athenæus also confirms the account of the excellence of the climate of Susa (l. c.). It may be remarked that the word *Σούσων* was well known as applied to an unguent extracted from lilies. (Dioscor. iii. c. *de lilio*; Athen. xv. p. 609; Etymol. *M. s. v.* *Σούσων*.) The city was said to have been 120 stadia in circumference (Strab. l. c.), and to have been surrounded by a wall, built like that of Babylon of burnt brick. (Strab. l. c.; Paus. iv. 31.

§ 5.) Diodorus (xix. 16, xvii. 65) and Cassiodorus (vii. 15) speak of the strength and splendour of its citadel; and the latter writer affirms that there was a splendid palace there, built for Cyrus by Memnon. Besides this structure, Pliny speaks of a celebrated temple of Diana (l. c.; see also Mart. Capella, vi. de *India*, p. 225, ed. Grotius), in all probability that of the Syrian goddess Anaitis; while St. Jerome adds, that Daniel erected a town there (Hieronym. in *Dan.*), a story which Josephus narrates, with less probability, of Ecbatana. (*Ant.* x. 11.) Susa was one of the capitals at which the kings of Persia were wont to spend a portion of the year. Thus Cyrus, according to Xenophon, lived there during the three months of the spring. (*Cyrop.* viii. 6. § 22.) Strabo offers the most probable reason for this custom, where he states that Susiana was peculiarly well suited for the royal residence from its central position with respect to the rest of the empire, and from the quiet and orderly character of its government (l. c.). From these and other reasons, Susa appears to have been the chief treasury of the Persian empire (Herod. v. 49); and how vast were the treasures laid up there by successive kings, may be gathered from the narrative in Arrian, of the sums paid by Alexander to his soldiers, and of the presents made by him to his leading generals, on the occasion of his marriage at Susa with Barsine and Parysatis (Curt. vii. 4, 5): even long after Alexander's death, Antigonus found a great amount of plunder still at Susa. (Diod. xix. 48.)

With regard to the modern site to be identified as that of the ruins of Susa, there has been considerable difference of opinion in modern times. This has, however, chiefly arisen from the scarcity of travellers who have examined the localities with any sufficient accuracy. The first who did so, Mr. Kinneir, at once decided that the modern *Sūs*, situated at the junction of *Kerkhah* and river of *Diz*, must represent the Shushan of Daniel, the Susa of profane authors. (*Travels*, p. 99; comp. Malcolm, *Hist. Persia*, i. p. 256.) Rennell had indeed suspected as much long before (*Geogr. Herodot.* i. p. 302); but Vincent and others had advanced the rival claim of *Shuster*. (*Anc. Commerce*, i. p. 439.) The question has been now completely set at rest, by the careful excavations which have been made during the last few years, first by Colonel (now Sir W. F.) Williams, and secondly by Mr. Loftus. The results of their researches are given by Mr. Loftus in a paper read to the Royal Society of Literature in November, 1855. (*Transactions*, vol. v. new series.) Mr. Loftus found three great mounds, measuring together more than $3\frac{1}{2}$ miles in circumference, and above 100 feet in height; and, on excavating, laid bare the remains of a gigantic colonnade, having a frontage of 343 feet, and a depth of 244, consisting of a central square of 36 columns, flanked to the N., E., and W. by a similar number—the whole arrangement being nearly the same as that of the Great Hall of Xerxes at Persepolis. A great number of other curious discoveries were made, the most important being numerous inscriptions in the cuneiform character. Enough of these has been already deciphered to show, that some of the works on the mound belong to the most remote antiquity. Among other important but later records is an inscription,—the only memorial yet discovered of Artaxerxes Mnemon, the conqueror of the Greeks at Cunaxa,—which describes the completion of a palace, commenced by Darius the son of Hystaspes and

dedicated to the goddesses Tanaitis and Mithra. A Greek inscription was also met with, carved on the base of a column, and stating that Arrenides was the governor of Susiana. The natives exhibit a monument in the neighbourhood, which they call and believe to be the tomb of Daniel. There is no question, however, that it is a modern structure of the Mohammedan times. [V.]

SUSIANA (ἡ Σουσιανή, Ptol. vi. 3. § 1; Polyb. v. 46; Strab. xv. 729, &c.; ἡ Σουσις, Strab. xv. 731; ἡ Σουσις, Strab. ii. p. 134), an extensive province in the southern part of Asia, consisting in great measure of plain country, but traversed by some ranges of mountains. Its boundaries are variously given by different writers according as it was imagined to include more or less of the adjacent district of Persia. Generally, its limits may be stated to have been, to the N., Media with the mountains Charbanus and Cambalidus, part of the chain of the Parachoathras; to the E. the outlying spurs of the Parachoathras and the river Oroatis; to the S. the Persian gulf from the mouth of the Oroatis to that of the Tigris; and to the W. the plains of Mesopotamia and Babylonia. (Cf. Ptol. l. c. with Strab. l. c., who, however, treats Susiana as part of Persia.) As a province it appears to have been very fertile, especially in grain, but exposed along the coasts to intense heat. (Strab. xv. p. 731.) The vine, the Macedonians are said to have introduced. (Strab. l. c.) Its principal mountains are those on the N., called by Pliny Charbanus and Cambalidus (vi. 27. s. 31), while a portion of the Montes Uxi probably belonged to this province, as in them is a pass called Πόλαι Σουσις. (Polyæn. iv. 3. 27.)

Susiana was intersected by numerous rivers which flowed either to the Tigris or Persian gulf, from the high mountain watershed whereby it was surrounded. Of these the principal were the Eulaeus (*Ἰάρις*), the Choaspes (*Κερκχάκ*), the Coprates (river of *Diz*), the Hedypnon or Hedypnus (*Γερράκις*), and the Oroatis (*Τάβ*). The inhabitants of the district appear to have borne indifferently the names of Susii or Susiani, and, as inhabitants of the plain country, to have been devoted to agricultural employments; in the mountains, however, were tribes of robbers, who, from time to time, were strong enough to levy black mail even on their kings when traversing their passes. (Strab. xv. p. 728.) Another name, whereby the people were known, at least in early times, was Cissii (Aesch. *Pers.* 16), and the land itself Cissia (Strab. xv. p. 728; Herod. v. 49). This name is clearly connected with that of one of the chief tribes of the people, the Cossæi, who are repeatedly mentioned in ancient authors. (Strab. xi. p. 522; Arr. *Ind.* 40; Polyb. v. 54, &c.) There were many different tribes settled in different parts of Susiana; but it is hardly possible now to determine to what different races they may have belonged. Among these, the most prominent were the Uxi, a robber tribe on the mountain borders of Media; the Messabatae, who occupied a valley district, probably now that known as *Mah-Sabadan*; the Cossæi, in the direction along the Median mountains; and the Elymaei, inhabitants of Elymais, the remnant, in all probability, of the earliest dwellers in this province—ELAM being the name whereby this whole district is known in the sacred records. (*Isaiah*, xxi. 2; *Jerem.* xlix. 25.) Besides these, several smaller districts are noticed in different authors, as Cabandene, Corbiana, Gabiene, and Characene. Though Ptolemy has preserved the names of several small

towns, there seems to have been no city of importance in Susiana, excepting Susa itself. [V.]

SUSUDATA (Σουσούδρα), a place in the south-east of Germany, probably in the country inhabited by the Silingae, at the foot of the Vandalici Montes. (Ptol. ii. 11. § 28.) Its exact site cannot be ascertained.

[L. S.]

SUTHUL, a town and fortress in the interior of Numidia, where Jugurtha had a treasury. (Sall. Jug. 37.)

[T. H. D.]

SUTRIUM (Σούτριον; *Eth.* Satriensis; *Sutri*), a city of Etruria, situated in the southern part of that country, 32 miles from Rome, on the line of the Via Cassia. There is no doubt that it was an ancient Etruscan site, but apparently a small town, and in all probability a mere dependency of one of its more powerful neighbours. It was not till after the fall of Veii that the Romans carried their arms as far as Sutrium, which they first attacked in B. C. 391, with what success is uncertain (Diod. xiv. 98); but it must have fallen into their hands either in that or the following year, as we find it in a state of dependency on Rome immediately after the Gaulish invasion. (Liv. vi. 3.) The very year after that event (B. C. 389) the neighbouring Etruscans laid siege to Sutrium with a large force; the city fell into their hands, but was recovered (as the tradition related) by the dictator Camillus on the same day. (Liv. vi. 3; Diod. xiv. 117.) Very nearly the same story is told again in B. C. 385, when the city was half taken by the Etruscans, but recovered by Camillus and Valerius. (Liv. vi. 9.) It was doubtless with a view to guard against the repetition of these surprises that two years afterwards Sutrium received a Roman colony, B. C. 383 (Vell. Pat. i. 14), and henceforth became, in conjunction with the neighbouring Nepete, one of the principal frontier fortresses of the Roman territory on this side; hence Livy terms it "claustra Etruriae." (Liv. ix. 32.) We do not find any subsequent mention of it in history till B. C. 311, when the Etruscans again laid siege to the city with their united forces, but were defeated in a great battle under its walls by Aemilius Barbula. (Liv. l. c.) The next year (B. C. 310) they were able to renew the siege at the opening of the campaign, but were once more defeated by the consul Q. Fabius Maximus, and took refuge in the Ciminian forest, which lay only a few miles distant. (Ib. 33, 35.) But this barrier was now for the first time passed by the Roman arms, and henceforth the wars with the Etruscans were transferred to a more northerly region. From this time, therefore, we hear but little of Sutrium, which was, however, still for a time the outpost of the Roman power on the side of Etruria. (Liv. x. 14.) Its name is next mentioned after a long interval during the Second Punic War, as one of the Coloniae Latinae, which, in B. C. 209, declared their inability to bear any longer the burdens of the war. It was in consequence punished at a later period by the imposition of still heavier contributions. (Liv. xxvii. 9, xxix. 15.) Its territory was one of those in which permission was given to the exiled citizens of Capua to settle. (Id. xvi. 34.)

Sutrium continued under the Roman government to be a small and unimportant country town: it is only once again mentioned in history, at the outbreak of the Perusian War (B. C. 41), when it was occupied by Agrippa, in order to cut off the communications of Lucius Antonius with Rome. (Appian,

B. C. v. 31.) But its position on the Cassian Way preserved it from falling into decay, like so many of the Etruscan cities, under the Roman Empire: it is noticed by all the geographers, and its continued existence down to the close of the Western Empire is proved by inscriptions as well as the Itineraries. We learn that it received a fresh colony under Augustus, in consequence of which it bears in inscriptions the titles "Colonia Julia Sutrina." (Strab. v. p. 226; Plin. iii. 5. s. 8; Ptol. iii. 1. § 50; *Itin. Ant.* p. 286; *Tab. Peut.*; *Lib. Col.* p. 217; Gruter, *Inscr.* p. 302. 1; Zumpt, *de Col.* p. 351.)

The modern town of *Sutri* is but a poor place with only about 2000 inhabitants, but retains its episcopal see, which it has preserved throughout the middle ages. It occupies the site of the ancient city, as is shown by many fragments of columns and other architectural ornaments built into the modern houses, as well as by some portions of the ancient walls, which resemble in their style of construction those of Nepe and Falerii. The situation is, like that of most of the towns in this part of Etruria, on a nearly isolated hill bounded by precipitous cliffs or banks of tufo rock, of no great elevation, and surrounded by small glens or ravines on all sides. In the cliffs which bound these are excavated numerous tombs, of no great interest. But the most remarkable relic of antiquity at *Sutri* is its amphitheatre, which is excavated in the tufo rock, and is in this respect unique of its kind. It is, however, of small size, and, though irregular in construction, its architectural details are all of a late character: hence it is probable that it is really of Roman and Imperial times, though great importance has been sometimes attached to it as a specimen of an original Etruscan amphitheatre. Its anomalies and irregularities of structure are probably owing only to the fact that it was worked out of a previously existing stone-quarry. (Dennis's *Etruria*, vol. i. pp. 94—97; Nibby, *Dintorni*, vol. iii. pp. 142, 143.)

[E. H. B.]

SUZAEI (Σουζαίοι), a tribe of ancient Persia, noticed by Ptolemy (vi. 4. § 3). Lassen considers from this name that they were connected with the people of Susa, and that they were of the same race as the Uxii, one of the mountain races of Susiana. (Ersch. u. Gröber's *Encycl.* iii. sect. vol. xvii. p. 438.)

[V.]

SYAGROS PROMONTORIUM (Συαγρος ἄκρα), a promontory of the S. coast of Arabia, at the eastern extremity of the Adramitae, the westernmost of the gulf of the Sachalites, placed by Ptolemy in long. 90°, lat. 14° (vi. 7. § 11). He comments on an error of his predecessor, Marinus, who, he says, places the gulf Sachalites on the W. of Cape Syagros, while all who had navigated those seas distinctly asserted that the country Sachalites and its synonymous bay were to the E. of Syagros (i. 17. §§ 2, 3). Marcinus (p. 23, *ap. Hudson Geogr. Min.* tom. i.) agrees with Ptolemy. The author of the Periplus ascribed to Arrian seems, however, to confirm the testimony of Marinus, by placing the Sinus Sachalites next to Cane Emporium, between that and Syagros Promontorium, and naming the bay to the E. of Syagros, Omana, which he reckons as 600 stadia in width; but as he mentions still further to the E., Moscha Portus, as a magazine for the spicery of Sachalites, which he there more fully describes, it is possible that he may have included all the country as far E. as Moscha under this name. It is at least clear that the Omana Sinus could be no part of the present

district of *Oman*. The maps give no bay to the W. of Syagros, where the Tretus Portus was situated. The Periplus says that the cape extended eastward, places a castle with a harbour and magazine at Syagros, and describes, in connection with it, the Dioscoridia Insula (*Socotora*), which Pliny places at a distance of 2240 stadia.

There is no difficulty in identifying this promontory Syagros with the modern *Ras Fortask*, which derives its designation from the *snout* of the animal commemorated in its Greek name, which was probably a loose translation of its native appellation. The Periplus describes Syagros as the largest promontory in the world,—an hyperbolic expression, no doubt, but better suited to this cape than to any other on the coast, since the isolated mountain that forms *Ras Fortask* reaches an elevation of 2500 feet, and is visible at a distance of 60 miles; while those of *Ras Saugra* (al. *Saukira*), further to the E., sometimes identified with Syagros on account of the similarity of name, do not exceed 600 feet. The subject, it must be admitted, is not free from difficulty, mainly owing to the fact that Ptolemy places *Moscha Portus*,—which is usually supposed to be the same as the *Moscha Portus* of the Periplus, and is identified with *Dzafar* or *Saphar*,—W. of Syagros; in which case *Ras Noos* (al. *Nous*), or *Ras Saugra* (al. *Saukira*), must be his Syagros, and the *Sachalites Sinus* still further E. But since the distance between Socatra and the coast at *Ras Fortask*, about 2000 stadia, approximates much more nearly to Pliny's figures, 240 M.P. (= 2240 stadia), than that between the same island and either of the other capes,—for *Ras Noos* is 3600 stadia distant, and *Ras Saugra* considerably more,—the most probable solution of the difficulty is found in the hypothesis adopted above, of two ports called *Moscha* on the same coast. [*MOSCHA.*] (See Müller's *Notes to Didot's ed. of the Geogr. Græc. Min.* vol. i. pp. 279, 280.) The question has been examined by Dean Vincent, who was the first to fix correctly this important point in Arabian geography, and his main conclusions are acquiesced in by Mr. Forster, who has corroborated them by fresh evidence from the researches of modern travellers; and it is an interesting fact, that while the Greek geographers appear to have translated the native name of the cape, which it retains to this day, the natives would appear to have adopted a modification of that Greek translation as the name of the town situated, then as now, under the cape, which still bears the name of *Sugger*. (Vincent, *Periplus*, vol. ii. pp. 331—351; Forster, *Arabia*, vol. ii. pp. 166—177.) [G. W.]

SYBARIS (Συβαρίς: *Eth. Συβαρίτης*, Sybaritis), a celebrated city of Magna Græcia, situated on the W. shore of the Tarentine gulf, but a short distance from the sea, between the rivers Crathis and Sybaris. (Strab. vi. p. 263; Diod. xii. 9.) The last of these, from which it derived its name, was the stream now called the *Cocile*, which at the present day falls into the *Crati* about 3 miles from its mouth, but in ancient times undoubtedly pursued an independent course to the sea. Sybaris was apparently the earliest of all the Greek colonies in this part of Italy, being founded, according to the statement of Scymnus Chius, as early as B. C. 720. (Scymn. Ch. 360; Clinton, *F. H.* vol. i. p. 174.) It was an Achæan colony, and its Oekist was a citizen of Helice in Achaia; but with the Achæan emigrants were mingled a number of Troezenian citizens. The Achæans, however, eventually ob-

tained the preponderance, and drove out the Troezenians. (Strab. l. c.; Arist. Pol. v. 3.) The Sybarites indeed appear to have sought for an origin in heroic times; and Solinus has a story that the first founder of the city was a son of Ajax Oileus (Solin. 2. § 10); but this is evidently mere fiction, and the city was, historically speaking, undoubtedly an Achæan colony. It rose rapidly to great prosperity, owing in the first instance to the fertility of the plain in which it was situated. Its citizens also, contrary to the policy of many of the Greek states, freely admitted settlers of other nations to the rights of citizenship, and the vast population of the city is expressly ascribed in great measure to this cause. (Diod. xii. 9.) The statements transmitted to us of the power and opulence of the city, as well as of the luxurious habits of its inhabitants, have indeed a very fabulous aspect, and are without doubt grossly exaggerated, but there is no reason to reject the main fact that Sybaris had in the sixth century B. C. attained a degree of wealth and power unprecedented among Greek cities, and which excited the admiration of the rest of the Hellenic world. We are told that the Sybarites ruled over 25 subject cities, and could bring into the field 300,000 of their own citizens (Strab. l. c.), a statement obviously incredible. The subject cities were probably for the most part Ænean towns in the interior, but we know that Sybaris had extended its dominion across the peninsula to the Tyrrhenian sea, where it had founded the colonies of Posidonia, Laüs, and Scidrus. The city itself was said to be not less than 50 stadia in circumference, and the horsemen or knights who figured at the religious processions are said to have amounted to 5000 in number (Athen. xii. p. 519), which would prove that these wealthy citizens were more than four times as numerous as at Athens. Smindyrides, a citizen of Sybaris, who was one of the suitors for the daughters of Cleisthenes of Sicily, is said by Herodotus to have surpassed all other men in refined luxury. (Herod. vi. 127.) It was asserted that on this occasion he carried with him a train of 1000 slaves, including cooks, fishermen, &c. (Athen. vi. p. 273; Diod. viii. Fr. 19.) It is unnecessary to repeat here the tales that are told by various writers, especially by Athenæus, concerning the absurd refinements of luxury ascribed to the Sybarites, and which have rendered their very name proverbial. (Athenæus. xii. pp. 518—521; Diod. viii. Fr. 18—20; Suid. s. v. Συβαρίτας.) They were particularly noted for the splendour of their attire, which was formed of the finest Milesian wool, and this gave rise to extensive commercial relations with Miletus, which produced a close friendship between the two cities. (Timæus, ap. Athen. xii. p. 519; Herod. vi. 21.) As an instance of their magnificence we are told that Alcimeus of Sybaris had dedicated as a votive offering in the temple of the Lacinian Juno a splendid figured robe, which long afterwards fell into the power of Diæsius of Syracuse, and was sold by him for 120 talents, or more than 24,000*l.* sterling. (Pseud Arist. *Mirab.* 96; Athen. xii. p. 541.)

Notwithstanding these details concerning the wealth and luxury of Sybaris, we are almost wholly without information as to the history of the city until shortly before its fall. Herodotus incidentally refers to the time of Smindyrides (about 580—560, B. C.) as the period when Sybaris was at the height of its power. At a later period it seems to have been agitated by political dissensions, with the

circumstances of which we are very imperfectly acquainted. It appears that the government had previously been in the hands of an oligarchy, to which such persons as Smindyrides and Alcimenes naturally belonged; but the democratic party, headed by a demagogue named Telys, succeeded in overthrowing their power, and drove a considerable number of the leading citizens into exile. Telys hereupon seems to have raised himself to the position of despot or tyrant of the city. The exiled citizens took refuge at Crotona; but not content with their victory, Telys and his partisans called upon the Crotoniats to surrender the fugitives. This they refused to do, and the Sybarites hereupon declared war on them, and marched upon Crotona with an army said to have amounted to 300,000 men. They were met at the river Traeis by the Crotoniats, whose army did not amount to more than a third of their numbers; notwithstanding which they obtained a complete victory, and put the greater part of the Sybarites to the sword, continuing the pursuit to the very gates of the city, of which they easily made themselves masters, and which they determined to destroy so entirely that it should never again be inhabited. For this purpose they turned the course of the river Crathis, so that it inundated the site of the city and buried the ruins under the deposits that it brought down. (Diod. xii. 9, 10; Strab. vi. p. 263; Herod. v. 44; Athenae. xii. p. 521; Scymn. Ch. 337—360.) This catastrophe occurred in B.C. 510, and seems to have been viewed by many of the Greeks as a divine vengeance upon the Sybarites for their pride and arrogance, caused by their excessive prosperity, more especially for the contempt they had shown for the great festival of the Olympic Games, which they are said to have attempted to supplant by attracting the principal artists, athletes, &c., to their own public games. (Scymn. Ch. 350—360; Athen. l. c.)

It is certain that Sybaris was never restored. The surviving inhabitants took refuge at Latis and Scidrus, on the shores of the Tyrrhenian sea. An attempt was indeed made, 58 years after the destruction of the city, to establish them anew on the ancient site, but they were quickly driven out by the Crotoniats, and the fugitives afterwards combined with the Athenian colonists in the foundation of Thurii. [THURI.] At the present day the site is utterly desolate, and even the exact position of the ancient city cannot be determined. The whole plain watered by the rivers *Coscile* and *Crati* (the ancient Sybaris and Crathis), so renowned in ancient times for its fertility, is now a desolate swampy tract, pestilential from malaria, and frequented only by vast herds of buffaloes, the usual accompaniment in Southern Italy of all such pestiferous regions. The circumstance mentioned by Strabo that the river Crathis had been turned from its course to inundate the city, is confirmed by the accidental mention in Herodotus of the dry channel of the Crathis" (*καρὰ τὸν ξηρὸν Κράθιν*, Herod. v. 44): and this would sufficiently account for the disappearance of all traces of the city. Swinburne indeed tells us that some "degraded fragments of aqueducts and tombs" were still visible on the peninsula formed by the two rivers, and were pointed out as the ruins of Sybaris, but these, as he justly observes, being built of brick, are probably of Roman times, and have no connection with the ancient city. Keppel Craven, on the other hand, speaks of "a wall sometimes visible in the bed of the Crathis when the

waters are very low" as being the only remaining relic of the ancient Sybaris. (Swinburne's *Travels*, vol. i. pp. 290—292; Craven's *Southern Tour*, pp. 217, 218.) The ruins marked on Zannoni's large map as *l'Antica Sibari* are probably those of Thurii [THURI.] But it is certain that the locality has never yet been thoroughly examined, and it is probable that some light may even yet be thrown upon the site of this celebrated city: especially if the marshy plain in which it is situated should ever be reclaimed and cultivated. There is no doubt that if this were done, it would again be a tract of surpassing fertility: it is cited as such by Varro, who tells us that "in Sybaritano" wheat was said to produce a hundred-fold. (Varr. R. R. i. 44.) Even at the present day the drier spots produce very rich crops of corn. (Swinburne, l. c.)

The river Sybaris was said to be so named by the Greek colonists from a fountain of that name at Bura in Achaia (Strab. viii. p. 386): it had the property, according to some authors, of making horses shy that drank of its waters. (Pseud. Arist. *Mirab.* 169; Strab. vi. p. 263.) It is a considerable stream, and has its sources in the Apennines near *Murano*, flows beneath *Castrovillari*, and receives several minor tributary streams before it joins the Crathis. [E. H. B.]

COIN OF SYBARIS.

SYBOTA. [CORCYRA, p. 670.]

SYBRITA. [*Σύβριτα*, Scyl. p. 18; *Σόβριτα*, Ptol. iii. 17. § 10; *Σόβριτος*, Hierocles; *Σίβριτος*, Polyb. ap. Steph. B. s. v.; *Εὐθ. Σίβριτος*, Böckh, *Corp. Inscr.* vol. ii. p. 637], a town of Crete, 8 M. P. from Eleutherna (*Peut. Tab.*), and famous for its numerous and beautiful silver coins, which, though some of them belong to a very early period, are the finest specimens of the Cretan mint; the types are always connected with the worship of Dionysus or Hermes. (Eckhel, vol. ii. p. 320.) [E. B. J.]

SYCAMINA (*Συκαμίνων πόλις*), a city of Palestine, placed by Strabo between Acre (*Ἀκκῆ*) and Caesarea Palaestinae (*Καίσαρος πόλις*), the name of which alone remained in his time. There were, he says, many such; of which he specifies this and Bocolon (*Βουκόλων*) and Crocodileon (*Κροκοδείλων*). (Strab. xvi. p. 758.) It was here that Ptolemy Lathyrus, son of Cleopatra, landed the army of 30,000 men whom he had brought from Cyprus to besiege Ptolemais, which would imply that it was not far distant from Acre (Josephus, lib. xiii. 13. § 3). The Itinerary of Antoninus makes it xxiv. M. P. from Ptolemais, xx. M. P. from Caesarea; the Jerusalem Itinerary xv. M. P. from Ptolemais, xvi. from Caesarea. (Wesseling, pp. 149, 584.) The last-named authority places it at Mount Carmel, thereby justifying its identification with the modern *Kaifia* or *Hajfa*, followed by Reichard, Mannert, and Kiepert, rather than with *Atlit*, suggested by Lapie. Indeed the testimony of Eusebius would seem to be conclusive on this point,

as he speaks of a village of this name (*Συκαμύριον* *σάμριον*) on the coast between Ptolemais and Caesarea, near Mount Carmel, called also Hephā ('Ηφά) in his day. (*Onomast. s. v. 'Ηφάθ.*) Dr. Wilson, however, thinks that the modern *Haifa* "more probably occupies the site of the 'Mutatio Calamon,' given in the Jerusalem Itinerary as 12 Roman miles from Ptolemais, while the 'Mansio Sicamenes' of the same work was 3 miles farther on. Ruins have been discovered along the shore, about 2 Roman miles to the W. of *Haifa*; . . . these ruins may have been those of *Sycaminos*." (*Lands of the Bible*, vol. ii. p. 241.) *Haifa* is a small walled town to the S. of the *Bay of Acre*, at the northern base of the promontory of Mount Carmel, distant about 10 miles from Ptolemais (*Acre*); a distance far too small to satisfy the statement of the Itinerary of Antoninus, or even that of the Jerusalem Itinerary. But, notwithstanding this, its identity with *Sycamina* seems to be sufficiently established by the testimony of Eusebius, joined to the historical fact recorded by Josephus, which better suits this than any other place on the coast, being in fact the very place where Ibrahim Pasha, when engaged in a similar enterprise against *Acre*, landed some of his troops and concentrated his army, in 1831, preparatory to forming the siege of the town. (Alderson, *Notes on Acre*, pp. 23, 24.) [G. W.]

SYCE (Σύκη), a town of Cilicia, which according to the Ravenna Geographer, who calls it *Sycae* (i. 17), was situated between Arsinoë and Celenderis. (Athen. iii. 5; Steph. B. s. v. Σύκαι.) Leake (*Asia Minor*, p. 202) looks for its site near the modern *Kizilman*. [L. S.]

SYCEON, a town of Galatia, situated at the point where the river *Siberis* flowed into the *Sangarius*. (Procop. *de Aed.* v. 4; Vit. Theod. *Syceotae*, 2; Wessel. *ad Hierocl.* p. 697.) [L. S.]

SYCURUM, a town of Thessaly in the district *Pelasgiotis*, at the foot of Mt. *Ossa*, which Leake identifies with *Marmariani*. (Liv. xlii. 54; Leake, *Northern Greece*, vol. iii. p. 374.)

SYEBI MONTES (τὰ Σέβια ὄρη, Ptol. vi. 14. § 8), a mountain chain in *Scythia*, running from the *Tapuri* mountains in a NE. direction towards *Imana*. [T. H. D.]

SYEDRA (Σέδρα; Eth. *Σεδρεΐς*), a coast-town in the west of Cilicia, between *Coracesium* and *Selinus* (Strab. xiv. p. 669, where the common but erroneous reading is *Arsinoë*; Steph. B. s. v.; Ptol. v. 8. § 1; Hierocl. p. 683; Lucan, viii. 259; Flor. iv. 2.) It should, however, be observed that *Stephanus B.* calls it a town of *Isauria*, and that *Hierocles* assigns it to *Pamphylia*. *Beaufort* (*Karamania*, p. 178) observed some ruins on a steep hill in that district, which he thinks may mark the site of *Syedra*; and Mr. Hamilton, in his map of *Asia Minor*, also marks the ruins of *Sydre* on the same spot, a little to the south-east of *Alaya*, the ancient *Coracesium*. [L. S.]

SYENE (Σύη, Herod. ii. 30; Strab. ii. p. 133, xvii. p. 797, seq.; Steph. B. s. v.; Ptol. vii. 5. § 15, viii. 15. § 15; Plin. ii. 73. s. 75, v. 10. s. 11, vi. 29. s. 34; It. Ant. p. 164), the modern *Assouan*, was the frontier town of Egypt to the S. *Syene* stood upon a peninsula on the right bank of the Nile, immediately below the Great Falls, which extended to it from *Philae*. It is supposed to have derived its name from *Suan*, an Egyptian goddess, the *Ilithya* of the Greeks, and of which the import is "the opener;" and at *Syene Upper Egypt* was

in all ages, conceived to open or begin. The quarries of *Syene* were celebrated for their stone, and especially for the marble called *Syennite*. They furnished the colossal statues, obelisks, and monolithical shrines which are found throughout Egypt; and the traces of the quarrymen who wrought in these 3000 years are still visible in the native rock. They lie on either bank of the Nile, and a road, 4 miles in length, was cut beside them from *Syene* to *Philae*. *Syene* was equally important as a military station and as a place of traffic. Under every dynasty it was a garrison town; and here were levied toll and custom on all boats passing southward and northward. The latitude of *Syene*—24° 5' 23" — was an object of great interest to the ancient geographers. They believed that it was seated immediately under the tropic, and that on the day of the summer solstice a vertical staff cast no shadow, and the sun's disc was reflected in a well at noonday. This statement is indeed incorrect; the ancients were not acquainted with the true tropic; yet at the summer-solstice the length of the shadow, or $\frac{1}{12}$ th of the staff, could scarcely be discerned, and the northern limb of the sun's disc would be nearly vertical. The Nile is nearly 3000 yards wide above *Syene*. From this frontier town to the northern extremity of Egypt it flows for more than 750 miles without bar or cataract. The voyage from *Syene* to *Alexandria* usually occupied between 21 and 28 days in favourable weather. [W. B. D.]

SYGAMBRI [SICAMBRI.]

SYLLINA INSULA [SILURA.]

SYLLIUM (Σύλλιον), a fortified town of *Pamphylia*, situated on a lofty height between *Aspendus* and *Side*, and between the rivers *Eurymedon* and *Costrus*, at a distance of 40 stadia from the coast. (Strab. xiv. p. 667; Arrian, *Anab.* i. 25; Scylax, p. 40; Ptol. v. 5. § 1; Hierocl. p. 679; Polyb. xxii. 17; Steph. B. mentions it under the name Σύλειον, while in other passages it is called Σέλλιον, Σύλλιον, and Σίλλιον.) Sir C. Fellows (*Asia Minor*, p. 300) thinks that the remains of a Greek town which he found in a wood on the side of a rocky hill near *Bolascocoe* belong to the ancient *Syllium*; but from his description they do not appear to exist on a lofty height. [L. S.]

SYMAETHUS (Σύμαθος; *Simeto*), one of the most considerable rivers of Sicily, which rises in the chain of *Mons Nebrodes*, in the great forest now called the *Boeco di Caronia*, and flows from thence in a southerly direction, skirting the base of *Aetna*, till it turns to the E. and flows into the sea about 8 miles S. of *Catania*. In the lower part of its course it formed the boundary between the territory of *Leontini* and that of *Catana*. (Thuc. vi. 63.) It receives in its course many tributaries, of which the most considerable are, the *Fiume Salso*, flowing from the neighbourhood of *Nicosia* and *Trinacria*, probably the *Cyamocorus* of *Polybius* (i. 9), which he describes as flowing near *Centuripa* (*Centoribi*), and the *Dittamo*, which rises in the hills near *Assoro*, the ancient *Assorus*. This is undoubtedly the stream called in ancient times *CHERTAS*. *Stephanus* of *Byzantium* apparently gives the name of *Adranus* to the upper part or main branch of the *Symaethus* itself, which flows under the walls of *ADRARUM* (*Adernò*). This part of the river is still called the *Simeto*; but in the lower part of its course, where it approaches the sea, it is now known as the *Giarretta*. Such differences of name are common in modern, as well as in ancient times. The *Symae-*

[illegible]

Section. 6000. 10000. 10000. 10000.

thus is much the most considerable river on the E. coast of Sicily, and is in consequence noticed by all the geographers (Scyl. p. 4. § 13; Strab. vi. p. 272; Plin. iii. 8. a. 14; Ptol. iii. 4. § 9). It is also repeatedly alluded to by the Roman poets (Virg. *Aen.* ix. 584; Ovid, *Fast.* iv. 472; Sil. Ital. xiv. 232.) [E. H. B.]

SYMBOLON PORTUS (Συμβόλων λιμήν, Ptol. iii. 6. § 2; Συμβόλων λιμήν, Arrian, *Per. Pont. Eux.* p. 20), a harbour with a narrow entrance on the S. coast of the Chersonesus Taurica, between the town of Chersonesus and the port of Cienus. In ancient times it was the chief station for the pirates of the Tauric peninsula. (Strab. vii. p. 309; Plin. iv. 12. a. 26; Anon. *Per. Pont. Eux.* p. 6.) Now the port of *Balaklava*. (Comp. Clarke's *Travels*, ii. p. 398; Pallas, ii. p. 128.) [T. H. D.]

SYMBOLUM (Σύμβολον, Dion Cass. xlvii. 35), a place in the Thracian district of Edonis, in the neighbourhood of Philippi. (Comp. Leake, *North. Gr.* iii. p. 217.) [T. H. D.]

SYMBRA (Σύμβρα), a small town in Babylonia mentioned by Zosimus (iii. 27). It is probably the same as that called by Ammianus, Hucumbra (xiv. 8). [V.]

SYME (Σύμη; *Symē*), an island off the coast of Caria, to the west of Cape Cynossema, between the Cnidian peninsula and Rhodes, at the entrance of the Sinus Schoenus. (Herod. i. 174; Thuc. viii. 41; Strab. xiv. p. 656; Scylax, p. 38; Athen. vi. p. 262.) The island is described as 37 Roman miles in circumference, and as possessing eight harbours (Plin. v. 31, 133) and a town of the same name as the island. The island itself is very high but barren. According to Stephanus B. (s. v.; comp. Athen. vii. p. 296) Syme was formerly called Metapontis and Aegle, and obtained its later name from Syme, a daughter of Ialysus, who, together with Chthonius, a son of Poseidon, is said to have first peopled the island. In the story of the Trojan war, Syme enjoys a kind of celebrity, for the hero Nireus is said to have gone with three ships to assist Agamemnon. (Hom. *Il.* ii. 671; Dictys. Cret. iv. 17; Dares Phryg. 21.) The first historical population of the island consisted of Dorians; but subsequently it fell into the hands of the Carians, and when they, in consequence of frequent droughts, abandoned it, it was for a long time uninhabited, until it was finally and permanently occupied by Argives and Lacedaemonians, mixed with Cnidians and Rhodians. (Diod. Sic. v. 33; Raoul-Rochette, *Hist. des Colon. Grecques*, i. p. 337, iii. p. 72.) There are still a few but unimportant remains of the acropolis of Syme, which, however, are constantly diminished, the stones being used to erect modern buildings. (Comp. Ross, *Reisen auf den Griech. Inseln*, vol. iii. p. 121, foll.) [L. S.]

SYMPLEGADES. [BOEOPORUS, p. 424.]

SYNCA (Σύνκα), a small village of Babylonia noticed by Zosimus (iii. c. 28). [V.]

SYNNADA (Σύνναδα; *Eth. Synadēs*), a town of Phrygia Salutaris, at the extremity of a plain about 60 stadia in length, and covered with olive plantations. It is first noticed during the march of the consul Manlius against the Gallograeci (Liv. xxxviii. 15, xlv. 34); and Cicero (*ad Att.* v. 20; comp. *ad Fam.* iii. 8. xv. 4) mentions that he passed through Synnada on his way from Ephesus to Cilicia. In Strabo's time (xii. p. 577) it was still a small town, but when Pliny wrote (v. 29) it was an important place, being the conventus iudicis for the

whole of the surrounding country. It was very celebrated among the Romans for a beautiful kind of marble furnished by the neighbouring quarries, and which was commonly called Synnadic marble, though it came properly from a place in the neighbourhood, Docimia, whence it was more correctly called Docimites lapis. This marble was of a light colour, interspersed with purple spots and veins. (Strab. l. c.; Plin. xxxv. 1; Stat. *Silv.* i. 5. 36; Comp. Steph. B. s. v.; Ptol. v. 2. § 24; Martial, ix. 76; Symmach. ii. 246.) There still are appearances of extensive quarries between *Koru-Khan* and *Bulukudun*, which Col. Leake (*Asia Minor*, p. 36) is inclined to identify with those of Synnada or Docimia. Remains of the town of Synnada still exist under the name *Eski-kara-hisar* about 3 miles to the north-west of these quarries, where they were discovered by Texier. Earlier travellers imagined they had found them at *Surmina* or *Surmeneh*, or in the plain of *Sandakleh*. (Comp. Hamilton, *Researches*, i. p. 466, ii. 177; *Journal of the R. Geogr. Society*, vii. p. 58, viii. p. 144; Eckhel, *Doctr. Num.* iii. p. 172; Sestini, *Num. Vet.* p. 127.) [L. S.]

SYNNAAUS (Σύνναος), a town in Phrygia Pacatiana, not far from the sources of the Maeander, probably on the site of the modern *Simavul*. (Ptol. v. 2. § 22; Socrat. *Hist. Eccl.* vii. 3; Niceph. *Hist. Eccles.* xiv. 11; *Concil. Chalced.* p. 674; Hamilton, *Researches*, ii. p. 124; Franz, *Fünf Inschriften*, p. 33.) [L. S.]

SYNO'DIUM (Συνόδιον, Appian, *Illyr.* 27; *Συνόδιον*, Strab. vii. p. 315), a town of Dalmatia, situated in a deep gorge between two hills, where Gabinus was defeated, and to which the Dalmatians retreated in the campaign of B.C. 34. Octavius, suspecting their intentions, sent skirmishers over the high ground while he advanced through the valley and burnt Synodium. [E. B. J.]

SYRACUSAE (Συρακούσαι; *Eth. Syrakobāsios*, Steph. B.; but Thucydides, Diodorus, &c. use the form *Συρακάσιος*, which, as we learn from coins and inscriptions, was the native form; Syracusanus; *Siracusa*, *Syracuse*), the most powerful and important of all the Greek cities in Sicily, situated on the E. coast of the island, about midway between Catana and Cape Pachynus. Its situation exercised so important an influence upon its history and progress, that it will be desirable to describe this somewhat more fully before proceeding to the history of the city, reserving, at the same time, the topographical details for subsequent discussion.

I. SITUATION.

Syracuse was situated on a table-land or tabular hill, forming the prolongation of a ridge which branches off from the more elevated table-land of the interior, and projects quite down to the sea, between the bay known as the Great Harbour of Syracuse, and the more extensive bay which stretches on the N. as far as the peninsula of THAPSUS or *Magnisi*. The broad end of the kind of promontory thus formed, which abuts upon the sea for a distance of about 2½ miles, may be considered as the base of a triangular plateau which extends for above 4 miles into the interior, having its apex formed by the point now called *Mongibellisi*, which was occupied by the ancient fort of EURYALUS. This communicates, as already stated, by a narrow ridge with the table-land of the interior, but is still a marked point of separation, and was the highest point of

the ancient city, from whence the table-land slopes very gradually to the sea. Though of small elevation, this plateau is bounded on all sides by precipitous banks or cliffs, varying in height, but only accessible at a few points. It may be considered as naturally divided into two portions by a slight valley or depression running across it from N. to S., about a mile from the sea: of these the upper or triangular portion was known as *EPIPOLAE*, the eastern portion adjoining the sea bore the name of *ACHRADINA*, which thus forms in some degree a distinct and separate plateau, though belonging, in fact, to the same mass with *Epipolae*.

The SE. angle of the plateau is separated from the Great Harbour by a small tract of low and level ground, opposite to which lies the island of *ORTYGIA*, a low islet about a mile in length, extending across the mouth of the Great Harbour, and originally divided by only a narrow strait from the mainland, whilst its southern extremity was separated from the nearest point of the headland of *Plemmyrium* by an interval of about 1200 yards, forming the entrance into the Great Harbour. This last was a spacious bay, of above 5 miles in circumference; thus greatly exceeding the dimensions of what the ancients usually understood by a port, but forming a very nearly land-locked basin of a somewhat oval form, which afforded a secure shelter to shipping in all weather; and is even at the present day one of the finest harbours in Sicily. But between the island of *Ortygia* and the mainland to the N. of it, was a deep bight or inlet, forming what was called the Lesser Port or *PORTUS LACRUSIUS*, which, though very inferior to the other, was still equal to the ordinary requirements of ancient commerce.

S. of the Great Harbour again rose the peninsular promontory of *PLEMMYRIUM*, forming a table-land bounded, like that on the N. of the bay, by precipitous escarpments and cliffs, though of no great elevation. This table-land was prolonged by another plateau at a somewhat lower level, bounding the southern side of the Great Harbour, and extending from thence towards the interior. On its NE. angle and opposite to the heights of *Epipolae*, stood the temple of *Jupiter Olympius*, or the *OLYMPIEUM*, overlooking the low marshy tract which intervenes between the two table-lands, and through which the river *Anapus* finds its way to the sea. The beautiful stream of the *CYANE* rises in a source about 1½ mile to the N. of the *Olympieum*, and joins its waters with those of the *Anapus* almost immediately below the temple. From the foot of the hill crowned by the latter extends a broad tract of very low marshy ground, extending along the inner side of the Great Harbour quite to the walls of the city itself. A portion of this marsh, which seems to have formed in ancient times a shallow pool or lagoon, was known by the name of *LYSIMELEIA* (*Λυσιμελία*, Thuc. vii. 53; Theocr. Id. xvi. 84), though its more ancient appellation would seem to have been *SYRACO* (*Συρακό*), from whence the city itself was supposed to derive its name. (Steph. B. s. v. *Συρακοῖσι*; Scymn. Ch. 281.) It is, however, uncertain whether the names of *Syraco* and *Lysimeleia* may not originally have belonged to different portions of these marshes. This marshy tract, which is above a mile in breadth, extends towards the interior for a considerable distance, till it is met by the precipitous escarpments of the great table-land of the interior. The proximity of

these marshes must always have been prejudicial to the healthiness of the situation; and the legend, that when *Archias* and *Myscellus* were about to found *Syracuse* and *Crotona*, the latter chose health while the former preferred wealth (Steph. B. l. c.), points to the acknowledged insalubrity of the site even in its most flourishing days. But in every other respect the situation was admirable; and the prosperity of *Syracuse* was doubtless owing in a great degree to natural as well as political causes. It was, moreover, celebrated for the mildness and serenity of its climate, it being generally asserted that there was no day on which the sun was not visible at *Syracuse* (Cic. *Ferr.* v. 10), an advantage which it is said still to retain at the present day.

II. HISTORY.

Syracuse was, with the single exception of *Naxos*, the most ancient of the Greek colonies in Sicily. It was a Corinthian colony, sent out from that city under a leader named *Archias*, son of *Enaetes*, who belonged to the powerful family of the *Bacchiadae*, but had been compelled to expatriate himself. According to some accounts the colony was strengthened by an admixture of Dorian or Locrian colonists with the original Corinthian settlers; but it is certain that the *Syracusans* regarded themselves in all ages as of pure Corinthian origin (Theocr. Id. xv. 91), and maintained relations of the closest amity with their parent city. The colony was founded in a. c. 734, and the first settlers established themselves in the island of *Ortygia*, to which it is probable that the city was confined for a considerable period. (Thuc. vi. 2; Strab. vi. p. 269; Scymn. Ch. 279—282; Marm. Par.; concerning the date, see Clinton, *F. H.* vol. i. p. 164.) The name of *Ortygia* is evidently Greek, and derived from the well-known epithet of *Diana*, to whom the island was regarded as consecrated (Diod. v. 3); but the city seems to have assumed from the very beginning the name of *Syracusae*, which was derived, as already mentioned, from the name of the adjoining marsh or lake, *Syraco*, doubtless an indigenous name, as it has no significance in Greek. It appears indeed that the form *Syraco* was used by *Epicharmus* for the name of the city itself, but this was evidently a mere poetic license. (Strab. viii. p. 364.)

As in the case of most of the Greek colonies in Sicily, we have very little information concerning the early history and progress of *Syracuse*; but we may infer that it rose steadily, if not rapidly, to prosperity, from the circumstance that it continued to extend its power by the foundation of fresh colonies: that of *Acrae* within 70 years after its own establishment (b. c. 664), *Caemenae* 20 years later (b. c. 644), and *Camarina* 45 years afterwards, or b. c. 599. None of these colonies, however, rose to any considerable power: it was obviously the policy of *Syracuse* to keep them in the position of mere dependencies; and *Camarina*, having given umbrage to the parent city, was destroyed only 46 years after its foundation. (Thuc. vi. 5; Scymn. Ch. 294—296.) *Syracuse* was not, however, free from internal dissensions and revolutions. An obscure notice preserved to us by *Thucydides* indicates the occurrence of these as early as b. c. 648, which led to the expulsion of a party or clan called the *Myletidae*, who withdrew into exile and joined in the foundation of *Himera*. (Thuc. vi. 5.) Another indication of such disputes is found in *Aristotle* (*Pol.* v. 4), but we are unable

to assign any definite place in chronology to the occurrence there alluded to. At a later period we find the government in the hands of an exclusive oligarchy called the Geomori or Gamori, who, from their name, would appear to have been the descendants of the original colonists, around whom there naturally grew up a democracy or *plebe*, composed of the citizens derived from other sources. At length, about B. C. 486, a revolution took place; and the democracy succeeded in expelling the Geomori, who thereupon withdrew to Casmenae. (Herod. vii. 155; Dionys. vi. 62.) But this revolution quickly led to another; Gelon, the powerful despot of Gela, having espoused the cause of the exiles. Gela was at this time at least equal, if not superior, to Syracuse in power. Hippocrates, its late despot, had extended his power over many of the other cities in the east of Sicily, and defeated the Syracusans themselves in a great battle at the river Helorus. He would probably indeed have made himself master of Syracuse upon this occasion had it not been for the interposition of the Corinthians and Coreyraeans, who brought about a peace upon equitable terms. (Herod. vii. 154.) But the expulsion of the Geomori opened a fresh opportunity to Gelon, who, putting himself at the head of the exiles, easily effected their restoration, while the people of Syracuse readily admitted Gelon himself as their ruler with despotic authority. (Ib. 155.)

This revolution (which occurred in B. C. 485) seemed at first likely to render Syracuse subordinate to Gela, but it ultimately produced a directly contrary effect. Gelon seems to have been fully alive to the superior advantages of Syracuse, and from the moment he had established his power in that city, made it the chief object of his solicitude, and directed all his efforts to the strengthening and adorning his new capital. Among other measures, he removed thither the whole body of the citizens of Camarina (which had been re-peopled by Hippocrates), and subsequently more than half of those of Gela itself, admitting them all to the full rights of Syracusan citizens. Afterwards, as he directed his arms successively against the Sicilian Megara and Euboea, he removed the wealthy and noble citizens of both those cities also to Syracuse. (Ib. 156.) That city now rose rapidly to a far greater amount of power and prosperity than it had previously enjoyed, and became, under the fostering care of Gelon, unquestionably the first of the Greek cities in Sicily. It was probably at this period that it first extended itself beyond the limits of the island, and occupied the table-land or heights of Achradina, which were adapted to receive a far more numerous population, and had already become thickly peopled before the time of Thucydides. (Thuc. vi. 3.) This portion of the city now came to be known as the Outer City (*ἡ ἔξω πόλις*), while the island of Ortygia was called the Inner City, though still frequently designated as "the Island." Strictly speaking, however, it had ceased to merit that term, being now joined to the mainland by an artificial dike or causeway. (Thuc. l. c.)

From the time of Gelon the history of Syracuse becomes inseparably blended with that of Sicily in general; its position in the island being so important that, as Strabo justly remarks, whatever vicissitudes of fortune befel the city were shared in by the whole island. (Strab. vi. p. 270.) Hence it would be useless to recapitulate the events of which a brief summary has been already given in

the article SICILIA, and which are more fully detailed by all the general historians of Greece. The following summary will, therefore, be confined to those historical events which more immediately affected the city itself, as distinguished from the political vicissitudes of the state.

There can be no doubt that Syracuse continued to flourish extremely throughout the reign of Gelon (B. C. 485—478), as well as that of his successor Hieron (B. C. 478—467), who, notwithstanding the more despotic character of his government, was in many respects a liberal and enlightened ruler. His patronage of letters and the arts especially rendered Syracuse one of the chief resorts of men of letters, and his court afforded shelter and protection to Aeschylus, Pindar, and Bacchylides. Nor was Syracuse itself deficient in literary distinction. Epicharmus, though not a native of the city, spent all the latter years of his life there, and Sophron, the celebrated writer of mimes, was a native of Syracuse, and exhibited all his principal works there. The care bestowed upon the arts is sufficiently attested by the still extant coins of the city, as well as by the accounts transmitted to us of other monuments; and there is every probability that the distinction of Syracuse in this respect commenced from the reign of Hieron. The tranquil reign of that monarch was followed by a brief period of revolution and disturbance; his brother Thrasybulus having, after a short but tyrannical and violent reign, been expelled by the Syracusans, who established a popular government, B. C. 466. This was for a time agitated by fresh tumults, arising out of disputes between the new citizens who had been introduced by Gelon and the older citizens, who claimed the exclusive possession of political power; but after some time these disputes were terminated by a compromise, and the new citizens withdrew to Messana. (Diod. xi. 67, 68, 72, 73, 76.)

The civil dissensions connected with the expulsion of Thrasybulus, which on more than one occasion broke out into actual hostilities, show how great was the extent which the city had already attained. Thrasybulus himself, and afterwards the discontented citizens, are mentioned as occupying the Island and Achradina, both of which were strongly fortified, and had their own separate walls (Diod. xi. 68, 73); while the popular party held the *rest of the city*. It is evident therefore that there were already considerable spaces occupied by buildings outside the walls of these two quarters, which are distinctly mentioned on one occasion as "the suburbs" (*τὰ προαστεία*, Ib. 68). Of these, one quarter called Tycha, which lay to the W. of Achradina, adjoining the N. slope of the table-land, is now first mentioned by name (*Ibid.*); but there can be no doubt that the plain between the heights of Achradina and the marshes was already occupied with buildings, and formed part of the city, though it apparently was not as yet comprised within the fortifications.

The final establishment of the democracy at Syracuse was followed by a period of about sixty years of free government, during which we are expressly told that the city, in common with the other Greek colonies in Sicily, developed its resources with great rapidity, and probably attained to its maximum of wealth and power. (Diod. xi. 68, 72.) Before the close of this period it had to encounter the severest danger it had yet experienced, and gave abundant proof of its great resources by coming off victorious in a contest with Athens, then at the very height of

its power. The circumstances of the great siege of Syracuse by the Athenians must here be related in some detail, on account of their important bearing on all questions connected with the topography of the city, and the interest they confer on its localities. At the same time it will obviously be impossible to do more than give a very brief sketch of that memorable contest, for the details of which the reader must refer to the narrative of Thucydides, with the copious illustrations of Arnold, Grote, and Col. Leake.

It was not till the spring of B. C. 414 that the siege of Syracuse was regularly commenced. But in the autumn of 415, the Athenians had already made a demonstration against the city, and sailing into the Great Harbour, effected a landing without opposition near the Olympieum, where they established their camp on the shore, and erected a temporary fort at a place called Dascon (Thuc. vi. 66; Diod. xii. 6), apparently on the inner bight of the harbour, between the mouth of the Anapus and the bay now called the *Bay of Maddalena*. But though successful in the battle that ensued, Nicias did not attempt to follow up his advantage, and withdrew to winter at Catania. The next spring the Athenians landed to the N. of Syracuse, at a place called Leon, about 6 or 7 stadia from the heights of Epipolae, while they established their naval station at the adjoining peninsula of Thapsus (*Magnisi*). The land troops advanced at once to occupy Epipolae, the military importance of which was felt by both parties, and succeeded in establishing themselves there, before the Syracusans could dislodge them. They then proceeded to build a fort at a place called Labdalm, which is described by Thucydides as situated "on the top of the cliffs of Epipolae, looking towards Megara" (Thuc. vi. 97), and having occupied this with a garrison, so as to secure their communications with their fleet, they advanced to a place called Syce (ἡ Συκή), where they established themselves, and began to construct with great rapidity a line of circumvallation across the plateau of Epipolae.* The construction of such a line was the customary mode of proceeding in Greek sieges, and it was with the special object of guarding against it that the Syracusans had in the preceding winter extended their fortifications by running a new line of wall so as to enclose the temple of Apollo Temenites (Thuc. vi. 75), which probably extended from thence down to the Great Harbour. Nevertheless the Athenian line of circumvallation was carried on so rapidly as to excite in them the greatest alarm. Its northern extremity was made to rest on the sea at a point called Trogilius (probably near the *Scala Greca*), and it was from thence carried across the table-land

of the Epipolae, to the point nearest to the Great Harbour. Alarmed at the rapid progress of this wall, the Syracusans endeavoured to interrupt it by constructing a counter or cross wall (*ἀντιτείχισμα* or *ἐνσπόμενον τεῖχος*), directed apparently from the wall recently erected around the temple of Apollo Temenites towards the southern cliff of Epipolae (Thuc. vi. 99.) This wall was, however, carried by the Athenians by a sudden attack and destroyed, whereupon the Syracusans attempted a second counterwork, carried through the marshes and low ground, so as to prevent the Athenians from connecting their works on Epipolae with the Great Harbour. But this work was, like the preceding one, taken and destroyed; and the Athenians, whose fleet had meanwhile entered the Great Harbour, and established itself there, were able to construct a strong double line of wall, extending from the cliffs of Epipolae quite down to the harbour. (Ib. 100—103.) On the table-land above, on the contrary, their works were still incomplete, and especially that part of the line of circumvallation near Trogilius was still in an unfinished state when Gylippus landed in Sicily, so that that commander was able to force his passage through the lines at this point, and effect an entry into Syracuse. (Ib. vii. 2.) It is remarkable that the hill of Euryalus, though in fact the key of the position on the Epipolae, seems to have been neglected by Nicias, and was still undefended by any fortifications.

Gylippus immediately directed his efforts to prevent the completion of the Athenian lines across the table-land, and obtained in the first instance an important advantage by surprising the Athenian fort at Labdalm. He next began to erect another cross wall, running out from the walls of the city across the plateau, so as to cross and intersect the Athenian lines; and notwithstanding repeated efforts on the part of the Athenians, succeeded in carrying this on so far as completely to cut off their line of circumvallation, and render it impossible for them to complete it. (Ib. vii. 4—6.) Both parties seem to have looked on the completion of this line as the decisive point of the siege; Nicias finding himself unable to capture the outwork of the Syracusans, almost despaired of success, and wrote to Athens for strong reinforcements. Meanwhile he sought to strengthen his position on the Great Harbour by occupying and fortifying the headland of Plemmyrium, which completely commanded its entrance. (Ib. 4.) The Syracusans, however, still occupied the Olympieum (or Polichne, as it was sometimes called) with a strong body of troops, and having, under the guidance of Gylippus, attacked the Athenians both by sea and land, though foiled in the former attempt, they took the forts which had been recently erected on the Plemmyrium. (Ib. 4, 22—24.) This was a most important advantage, as it rendered it henceforth very difficult for the Athenians to supply their fleet and camp with provisions; and it is evident that it was so regarded by both parties (Ib. 25, 31): the Syracusans also subsequently gained a decisive success in a sea-fight within the Great Harbour, and were preparing to push their advantage further, when the arrival of Demosthenes and Eurymedon from Athens with a powerful fleet restored for a time the superiority of the Athenians. Demosthenes immediately directed all his efforts to the capture of the Syracusan counterwork on Epipolae; but meanwhile Gylippus had not neglected to strengthen his position there, by constructing three

* The account here given of the Athenian operations assumes that "the circle" repeatedly spoken of by Thucydides (vi. 98, 99, &c.), is the circuit of the lines of circumvallation. This is the construction adopted by Gölter, and all earlier editors of Thucydides, as well as by Col. Leake; and appears to the writer of this article by far the most natural and intelligible interpretation. Mr. Grote, on the contrary, as well as Dr. Arnold in his later edition adopts the suggestion of M. Firmin Didot that "the circle" (ὁ κύκλος) was a particular intrenchment or fortified camp of a circular form. It is difficult to understand the military object of such a work, as well as to reconcile it with the subsequent details of the siege operations.

redoubts or forts, each of them occupied with a strong garrison, at intervals along the sloping plateau of Epipolæ, while a fort had been also erected at the important post of Euryalus, at the extreme angle of the heights. (Thuc. vii. 43.) So strong indeed was their position that Demosthenes despaired of carrying it by day, and resolved upon a night attack, in which he succeeded in carrying the fort at Euryalus, but was foiled in his attempt upon the other outworks, and repulsed with heavy loss. (Ib. 43—45.)

The failure of this attack was considered by Demosthenes himself as decisive, and he advised the immediate abandonment of the siege. But the contrary advice of Nicias prevailed; and even when increasing sickness in the Athenian camp had induced him also to consent to a retreat, his superstitious fears, excited by an eclipse of the moon, again caused them to postpone their departure. The consequences were fatal. The Syracusans now became rather the besiegers than the besieged, attacked the Athenian fleet in the Great Harbour, and cut off and destroyed the whole of their right wing under Eurymedon, in the bay of Dascon. Elated with this success, they sought nothing less than the capture of the whole armament, and began to block up the mouth of the Great Harbour, from Ortygia across to Plennyrium, by mooring vessels across it. The Athenians were now compelled to abandon all their outposts and lines on the heights, and draw together their troops as close to the naval camp as possible; while they made a final effort to break through the barrier at the entrance of the harbour. But this attempt proved unsuccessful, and led to a complete defeat of the Athenian fleet. There was now no course but to retreat. The army under Nicias and Demosthenes broke up from its camp, and at first directed their course along the valley of the Anapus, till they came to a narrow pass, commanded by a precipitous ridge called the Acraean Rock (*Ἀκραίων Λέων*, Thuc. vii. 78), which had been occupied in force by the Syracusans. Failing in forcing this defile, the Athenians changed their line of retreat, and followed the road to Helorus, but after forcing in succession, though not without heavy loss, the passage of the two rivers Cacyparis and Erineus, and reaching the banks of the Asinarus, the last survivors of the Athenian army were compelled to lay down their arms. The whole number of prisoners was said to amount to 7000. A trophy was erected by the Syracusans on the bank of the Asinarus, and a festival called the Asinaria instituted to commemorate their victory. (Thuc. vii. 78—87; Diod. xiii. 18, 19.)

The failure of the Athenian expedition against Syracuse seemed likely to secure to that city the unquestionable superiority among the Greek colonies in Sicily. But a new and formidable power now appeared—the Carthaginians, who were invited by the Segestans to support them against the Selinuntines, but who, not content with the destruction of Selinus and Himera (B. C. 410), and with that of Agrigentum (B. C. 406), pushed forward their conquests with a view of making themselves masters of the whole island. Dionysius, then a young man, took advantage of the alarm and excitement caused by this danger to raise himself to despotic power at Syracuse (B. C. 405), and he soon after concluded a peace with the Carthaginians, whose career of victory had been checked by a pestilence. The history of the reign of Dionysius at

Syracuse, which continued for a period of 38 years (B. C. 405—387), cannot be here related: it is briefly given in the *Biogr. Dict.*, art. DIONYSIUS, and very fully in Grote's *History of Greece*, vols. x. and xi.; but its influence and effects upon the city itself must be here noticed. From a very early period he turned his attention to the strengthening and fortification of the city, and constructed great works, partly with a view to the defence of the city against external invasion, partly for the security of his own power. One of his first operations was to convert the island of Ortygia into a strong fortress, by surrounding it with a lofty wall, fortified with numerous towers, especially on the side where it adjoined the land, where he raised a strongly fortified front, called the Pentapyla; while, for still further security, he constructed an interior fort or citadel within the island, which became the acropolis of Syracuse, and at the same time the residence of Dionysius and his successors in the despotism. Adjoining this he constructed within the lesser port, or Portus Laccæus, docks for his ships of war on a large scale, so as to be capable of receiving 60 triremes: while they were enclosed with a wall, and accessible only by a narrow entrance. But not content with this, he a few years afterwards added docks for 160 more ships, within the Great Port, in the recess or bight of it which approaches most nearly to the Portus Laccæus, and opened a channel of communication between the two. At the same time he adorned the part of the city immediately outside the island with porticoes and public buildings for the convenience of the citizens. (Diod. xiv. 7.) But his greatest work of all was the line of walls with which he fortified the heights of Epipolæ. The events of the Athenian siege had sufficiently proved the vital importance of these to the safety of the city; and hence before Dionysius engaged in his great war with Carthage he determined to secure their possession by a line of permanent fortifications. The walls erected for this purpose along the northern edge of the cliffs of Epipolæ (extending from near *Sta Panagia* to the hill of Euryalus, or *Mongibellini*) were 30 stadia in length, and are said to have been erected by the labour of the whole body of the citizens in the short space of 20 days. (Diod. xiv. 18.) It is remarkable that we hear nothing of the construction of a similar wall along the southern edge of the plateau of Epipolæ; though the table-land is at least as accessible on this side as on the other; and a considerable suburb called Neapolis had already grown up on this side (Diod. xiv. 9), outside of the wall of Achradina, and extending over a considerable part of the slope, which descends from the Temenitis towards the marshy plain of the Anapus. But whatever may have been the cause, it seems certain that Syracuse continued till a later period to be but imperfectly fortified on this side.

The importance of the additional defences erected by Dionysius was sufficiently shown in the course of the war with Carthage which began in B. C. 397. In that war Dionysius at first carried his arms successfully to the western extremity of Sicily, but fortune soon turned against him, and he was compelled in his turn to shut himself up within the walls of Syracuse, and trust to the strength of his fortifications. The Carthaginian general Himilco entered the Great Port with his fleet, and established his head-quarters at the Olympium, while he not only ravaged the country outside the walls, but made himself master of one of the suburbs,

in which were situated the temples of Ceres and Proserpine, both of which he gave up to plunder. But the anger of the goddesses, brought on by this act of sacrilege, was believed to be the source of all the calamities that soon befel him. A pestilence broke out in the Carthaginian camp, from which they sustained very heavy losses, and Dionysius took advantage of their enfeebled state to make a general attack on their camp both by sea and land. The position occupied by the Carthaginians was very much the same as that which had been held by the Athenians: they occupied the headland of Plemmyrium, on which they had erected a fort, while they had also fortified the Olympieum, or Polichne, and constructed a third fort close to the edge of the Great Harbour for the protection of their fleet, which lay within the inner bay or harbour of Dascon. But Dionysius, by a sudden attack from the land side, carried both the last forts, and at the same time succeeded in burning a great part of the Carthaginian fleet, so that Himilco was compelled to abandon the enterprise, and by a secret capitulation secured a safe retreat for himself and the native Carthaginians in his army, abandoning his allies and mercenaries to their fate. (Diod. xiv. 62, 63, 70—75.)

The defeat of the Carthaginian armament left Dionysius undisputed master of Syracuse, while that city held as unquestioned a pre-eminence over the other cities of Sicily; and it is probable that the city itself continued to increase in extent and population. The impregnable citadel in the island of Ortygia constructed by the elder Dionysius continued to be the bulwark of his power, as well as that of his son and successor. Even when the citizens, in B. C. 357, opened their gates to Dion, who made a triumphal entry into Achradina, and made himself master with little difficulty of the fort on the summit of Epipolae, the island still held out, and Dion was compelled to resort to a blockade, having erected a line or wall of contravallation across from the lesser port to the greater, so as effectually to cut off the garrison from all communication with the interior. (Plut. Dion. 29; Diod. xvi. 12.) It was not till after the blockade had been continued for above a year that Apollonates was compelled by scarcity of provisions to surrender this stronghold, and Dion thus became complete master of Syracuse, B. C. 356. But that event did not, as had been expected, restore liberty to Syracuse, and the island citadel still remained the stronghold of the despots who successively ruled over the city. When at length Timoleon landed in Sicily (B. C. 344) Ortygia was once more in the possession of Dionysius, while the rest of the city was in the hands of Hicetas, who was supported by a Carthaginian fleet and army, with which he closely blockaded the island fortress. But the arrival of Timoleon quickly changed the face of affairs: Ortygia was voluntarily surrendered to him by Dionysius; and Neon, whom he left there as commander of the garrison, by a sudden sally made himself master of Achradina also. Soon after Timoleon carried the heights of Epipolae by assault, and thus found himself master of the whole of Syracuse. One of the first measures he took after his success was to demolish the fortress erected by Dionysius within the Island, as well as the palace of the despot himself, and the splendid monument that had been erected to him by his son and successor. On the site were erected the new courts of justice. (Plut. Timol. 22.)

Syracuse had suffered severely from the long

period of civil dissensions and almost constant hostilities which had preceded its liberation by Timoleon; and one of the first cares of its deliverer was to recruit its exhausted population, not only by recalling from all quarters the fugitive or exiled citizens, but by summoning from Corinth and other parts of Greece a large body of new colonists. Such was the success of his invitation that we are assured the total number of immigrants (including of course the restored exiles) amounted to not less than 60,000. (Plut. Timol. 22, 23.) The democratic form of government was restored, and the code of laws which had been introduced by Diocles after the Athenian expedition, but had speedily fallen into neglect under the long despotism of the two Dionysii, was now revived and restored to its full vigour. (Diod. xiii. 35, xvi. 70.) At the same time a new annual magistracy was established, with the title of Amphipolus of the Olympian Jove, who was thenceforth destined, like the Archon at Athens, to give name to the year. The office was apparently a merely honorary one, but the years continued to be designated by the names of the Amphipoli down to the time of Augustus. (Diod. xvi. 70; Cic. Ferr. ii. 51, iv. 61.)

There can be no doubt that the period following the restoration of liberty by Timoleon was one of great prosperity for Syracuse, as well as for Sicily in general. Unfortunately it did not last long. Less than 30 years after the capture of Syracuse by Timoleon, the city fell under the despotism of Agathocles (B. C. 317), which continued without interruption till B. C. 289. We hear very little of the fortunes of the city itself under his government, but it appears that, like his predecessor Dionysius, Agathocles devoted his attention to the construction of great works and public buildings, so that the city continued to increase in magnificence. We are told, among other things, that he fortified the entrance of the lesser port, or Portus Laccocius, with towers, the remains of one of which are still visible. During the absence of Agathocles in Africa, Syracuse was indeed exposed to the assaults of the Carthaginian general Hamilcar, who encamped, as Himilco had formerly done, at Polichne, and from thence made desultory attacks upon the city, but without any important result; and having at length made a night attack upon the fort of Euryalus, he was defeated, and himself taken prisoner. (Diod. xx. 29.) After the death of Agathocles, Syracuse for a short time recovered its liberty, but soon fell again under the virtual despotism of Hicetas, and subsequently passed into the hands of successive military adventurers, till in B. C. 275, the government became vested in Hieron, the son of Hierocles, who, at first with the title of general autocrat, and afterwards with that of king, continued to reign over the city till B. C. 216. His wisdom and moderation proved a striking contrast to the despotism of several of the former rulers of Syracuse, and while his subjects flourished under his liberal and enlightened rule, external tranquillity was secured by the steadiness with which he adhered to the alliance of Rome, after having once measured his strength against that formidable power. By the treaty concluded between him and the Romans in B. C. 263, he was recognised as king of Syracuse, with the dependent towns of Acras, Helorus, Netum, Megara, and Leontini, to which was annexed Tauromenium also, as an obnoxious dependency. (Diod. xxiii. Exc. H. p. 502.) Notwithstanding the small extent of his territory,

Hieron was undoubtedly a powerful prince, and Syracuse seems to have risen, during this long period of peace and tranquillity, to a high state of wealth and prosperity. Its commercial relations with foreign countries, especially with Egypt, were assiduously cultivated and extended, while the natural resources of its fertile territory were developed to the utmost by the wise and judicious regulations of Hieron, which, under the name of the *Lex Hieronica*, were subsequently introduced into all parts of Sicily, and continued to be observed by the Romans, in their administration of that province. At the same time the monarch adorned the city with many public works and buildings, including temples, gymnasia, &c., while he displayed his wealth and magnificence by splendid offerings, both at Rome and the most noted sanctuaries of Greece. On the whole it may probably be assumed that the reign of Hieron II. was the period when Syracuse attained its highest degree of splendour and magnificence, as well as of wealth and population.

But this state of things was abruptly changed after the death of Hieron. His grandson, Hieronymus, who succeeded him, deserted the alliance of Rome for that of Carthage, and though the young king was shortly after assassinated, the Carthaginian party continued to maintain its ascendancy at Syracuse under two leaders named Hippocrates and Epicydes, who were appointed generals with supreme power. They shut the gates against Marcellus, who was in command of the Roman armies in Sicily, and having refused all terms of accommodation, compelled that general to form the siege of Syracuse, B. C. 214. (*Liv. xxiv. 21—33.*) The enterprise proved far more arduous than the Roman General seems to have anticipated. He established his camp, as the Carthaginians had repeatedly done, on the height of the Olympium; but his principal attacks were directed against the northern walls, in the neighbourhood of Hexapylum (the outlet of the city towards Leontini and Megara), as well as against the defences of Achradina from the sea. His powerful fleet gave Marcellus the complete command of the sea, and he availed himself of this to bring up his ships with powerful battering engines under the very walls which bordered the rocks of Achradina; but all his efforts were baffled by the superior skill and science of Archimedes; his engines and ships were destroyed or sunk, and after repeated attempts, both by sea and land, he found himself compelled to abandon all active assaults and convert the siege into a blockade. (*Liv. xxiv. 33, 34.*)

During the winter he left the camp and army at the Olympium, under the command of T. Quinctius Crispinus, while he himself took up his winter-quarters and established a fortified camp at Leon, on the N. side of the city. But he was unable to maintain a strict blockade by sea, and the Carthaginians succeeded in frequently throwing in supplies, so that the blockade was prolonged for more than two years; and Marcellus began to entertain little prospect of success, when in the spring of B. C. 212 an accident threw in his way the opportunity of scaling the walls by night, at a place called by Livy the *Portus Troglitorum* (evidently the little cove called *Scala Greca*); and having thus surprised the walls he made himself master of the gate at Hexapylum, as well as of a great part of the slope of Epipolae. But the strong fort of Euryalus, at the angle of Epipolae, defied his efforts, and the walls of Achradina, which still retained its separate fortifications, enabled the

Syracusans to hold possession of that important part of the city, as well as of the island and fortress of Ortygia. The two quarters of Tyche and Neapolis were, however, surrendered to him, and given up to plunder, the citizens having stipulated only for their lives; and shortly after Philodemus, who commanded the garrison of Euryalus, having no hopes of relief, surrendered that important post also into the hands of Marcellus. (*Liv. xxv. 23—25.*) The Roman general was now in possession of the whole heights of Epipolae, and being secured from attacks in the rear by the possession of Euryalus, he divided his forces into three camps, and endeavoured wholly to blockade Achradina. At the same time Crispinus still held the old camp on the hill of the Olympium. (*Ib. 26.*) In this state of things a vigorous effort was made by the Carthaginians to raise the siege: they advanced with a large army under Himilco and Hippocrates, and attacked the camp of Crispinus; while Bomilcar, with a fleet of 150 ships, occupied the Great Harbour, and took possession of the shore between the city and the mouth of the Anapus, at the same time that Epicydes made a vigorous sally from Achradina against the lines of Marcellus. But they were repulsed at all points, and though they continued for some time to maintain their army in the immediate neighbourhood of the city, it was soon attacked by a pestilence, arising from the marshy nature of the low grounds in which they were encamped, to which both Hippocrates and Himilco fell victims, with a great part of their troops. Bomilcar, also, who had quitted the port with the view of obtaining reinforcements from Carthage, never returned, and Epicydes, who had gone out to meet him, abandoned the city to its fate, and withdrew to Agrigentum. The defence of Syracuse was now entrusted to the leaders of the mercenary troops, and one of these, a Spaniard named Mericus, betrayed his post to Marcellus. A body of Roman troops was landed in the night at the extremity of the island, near the fountain of Arethusa, and quickly made themselves masters of the whole of Ortygia; while Marcellus, having at the same time made a general assault on Achradina, succeeded in carrying a portion of that quarter also. The remaining part of the city was now voluntarily surrendered by the inhabitants; and Marcellus, after taking precautions to secure the royal treasures, and the houses of those citizens who had been favourable to the Romans, gave up the whole city to be pillaged by his soldiers. Archimedes, who had contributed so much to the defence of the city, was accidentally slain in the confusion. The plunder was said to be enormous; and the magnificent statues, pictures, and other works of art which were carried by Marcellus to Rome, to adorn his own triumph, are said to have given the first impulse to that love of Greek art which afterwards became so prevalent among the Romans. (*Liv. xxv. 26—31, 40; Plut. Marc. 14—19; Diod. xxvi. Fr. 18—20.*)

From this time Syracuse sank into the ordinary condition of a Roman provincial town; but it continued to be the unquestionable capital of Sicily, and was the customary residence of the Roman praetors who were sent to govern the island, as well as of one of the two quaestors who were charged with its financial administration. Even in the days of Cicero it is spoken of by that orator as "the greatest of Greek cities, and the most beautiful of all cities." (*Cic. Verr. iv. 52.*) Its public buildings had apparently suffered little, if at all, from its capture by

Marcellus, and were evidently still extant in the days of the orator, who enumerates most of them by name. All the four quarters of the city, the Island, Achradina, Tyche, and Neapolis, were still well inhabited; though as a measure of precaution no persons of native Syracusan extraction were permitted to dwell in the Island. (*Ib.* v. 32.) But the prosperity of Syracuse seems to have sustained a severe shock in the time of Sextus Pompeius, who, according to Strabo, inflicted upon it injuries, from which it appears never to have recovered. Such was its decayed condition that Augustus endeavoured to recruit it by sending thither a Roman colony (*n. o.* 21). But the new settlers were confined to the Island and to the part of the city immediately adjoining it, forming a portion only of Achradina and Neapolis. (*Strab.* vi. p. 270; *Dion Cass.* liv. 7; *Plin.* iii. 8. s. 14.) It is in this part of the town that the amphitheatre and other edifices of Roman construction are still found.

But though greatly fallen from its former splendour, Syracuse continued throughout the Roman Empire to be one of the most considerable cities of Sicily, and still finds a place in the 4th century in the *Ordo Nobilium Urbium* of Ausonius. The natural strength of the Island as a fortress rendered it always a post of the utmost importance. After the fall of the Western Empire, it fell with the rest of Sicily under the dominion of the Goths, but was recovered by Belisarius in A. D. 535, and annexed to the dominions of the Byzantine emperors, in whose hands it continued till the 9th century, when it was finally wrested from them by the Arabs or Saracens. Syracuse was, with the single exception of Tauromenium, the last place in Sicily that fell into the hands of those invaders: it was still a very strong fortress, and it was not till 878, more than fifty years after the Saracens first landed in the island, that it was compelled to surrender, after a siege of nine months' duration. The inhabitants were put to the sword, the fortifications destroyed, and the city given up to the flames. Nor did it ever recover from this calamity, though the Island seems to have always continued to be inhabited. Its fortifications were strengthened by Charles V., and assumed very much their present appearance. The modern city, which is still confined to the narrow limits of the Island, contains about 14,000 inhabitants. But the whole of the expanse on the opposite side of the strait, as well as the broad table-land of Achradina and Epipolae, are now wholly bare and desolate, being in great part uncultivated as well as uninhabited.

III. TOPOGRAPHY.

The topographical description of Syracuse as it existed in the days of its greatness cannot better be introduced than in the words of Cicero, who has described it in unusual detail. "You have often heard (says he) that Syracuse was the largest of all Greek cities, and the most beautiful of all cities. And it is so indeed. For it is both strong by its natural situation and striking to behold, from whatever side it is approached, whether by land or sea. It has two ports, as it were, enclosed within the buildings of the city itself, so as to combine with it from every point of view, which have different and separate entrances, but are united and conjoined together at the opposite extremity. The junction of these separates from the mainland the part of the town which is called the Island, but this is reunited to the continent by a bridge across the nar-

row strait which divides them. So great is the city that it may be said to consist of four cities, all of them of very large size; one of which is that which I have already mentioned, the Island, which is surrounded by the two ports, while it projects towards the mouth and entrance of each of them. In it is the palace of king Hieron, which is now the customary residence of our praetors. It contains, also, several sacred edifices, but two in particular, which far surpass the others, one a temple of Diana, the other of Minerva, which before the arrival of Verres was most highly adorned. At the extremity of this island is a fountain of fresh water, which bears the name of Arethusa, of incredible magnitude, and full of fish: this would be wholly overflowed and covered by the waves were it not separated from the sea by a strongly-built barrier of stone. The second city at Syracuse is that which is called Achradina, which contains a forum of very large size, beautiful porticoes, a most highly ornamented Prytaneum, a spacious Curia, and a magnificent temple of Jupiter Olympius; not to speak of the other parts of the city, which are occupied by private buildings, being divided by one broad street through its whole length, and many cross streets. The third city is that which is called Tyche, because it contained a very ancient temple of Fortune; in this is a very spacious gymnasium, as well as many sacred edifices, and it is the quarter of the town which is the most thickly inhabited. The fourth city is that which, because it was the last built, is named Neapolis: at the top of which is a theatre of vast size; besides this it contains two splendid temples, one of Ceres, the other of Libera, and a statue of Apollo, which is known by the name of Temenites, of great beauty and very large size, which Verres would not have hesitated to carry off if he had been able to remove it." (*Cic. Verr.* iv. 52, 53.)

Cicero here distinctly describes the four quarters of Syracuse, which were commonly compared to four separate cities; and it appears that Diodorus gave the same account. (*Diod.* xxvi. 19, ed. Didot.) In later times, also, we find it alluded to as "the quadruple city" ("quadruplices Syracusae," *Ansea. Cl. Urb.* 11). Others, however, enumerated five quarters, as Strabo tells us that it was formerly composed of five cities (*πεντάπολις ἢ τὸ τελευθέρων*, *Strab.* v. p. 270), probably because the heights of Epipolae towards the castle of Euryalus were at one time inhabited, and were reckoned as a fifth town. But we have no distinct statement to this effect. The several quarters of the city must now be considered separately.

1. ORTYGIA (*Ὀρτυγία*, *Pind.*, *Diod.*, *Strab.*, &c.), more commonly known simply as "the Island" (*ἡ νῆσος*, *Thuc.*, &c., and in the Doric dialect *Nāros*: hence *Livy* calls it *Nasus*, while *Cicero* uses the Latin *Insula*), was the original seat of the colony, and continued throughout the flourishing period of the city to be as it were the citadel or Acropolis of Syracuse, though, unlike most citadels, it lay lower than the rest of the city, its strength as a fortress being derived from its insular position. It is about a mile in length, by less than half a mile in breadth, and of small elevation, though composed wholly of rock, and rising perceptibly in the centre. There is no doubt that it was originally an island, naturally separated from the mainland, though in the time of Thucydides it was united with it (*Thuc.* vi. 3): probably, however, this was merely effected by an artificial mole or causeway,

for the purpose of facilitating the communication with "the outer city," as that on the mainland was then called. At a later period it was again severed from the land, probably by the elder Dionysius, when he constructed his great docks in the two ports. It was, however, undoubtedly always connected with the mainland by a bridge, or series of bridges, as it is at the present day. The citadel or castle, constructed by Dionysius, stood within the island, but immediately fronting the mainland, and closely adjoining the docks or *navalia* in the Lesser Port. Its front towards the mainland, which appears to have been strongly fortified, was known as the *Pentapyla* (*τὰ πεντάπυλα*, *Plut. Dion.* 29); and this seems to have looked directly upon the Agora or Forum, which we know to have been situated on the mainland. It is therefore clear that the citadel must have occupied nearly the same position with the modern fortifications which form the defence of Syracuse on the land side. These were constructed in the reign of Charles V., when the isthmus by which Ortygia had been reunited to the mainland was cut through, as well as a Roman aqueduct designed to supply this quarter of the city with water, constructed, as it appeared from an inscription, by the emperor Claudius. (*Fazell. Sic. iv. i. p. 169.*)

Ortygia was considered from an early time as consecrated to Artemis or Diana (*Diod. v. 3*), whence Pindar terms it "the couch of Artemis," and "the sister of Delos" (*ἑμίονον Ἀρτέμιδος, Δέλον κασιγνήτρα*, *Nem. i. 3*). Hence, as we learn from Cicero (*l. c.*), one of the principal edifices in the island was a temple of Diana. Some remains of this are supposed to be still extant in the N.E. corner of the modern city, where two columns, with a portion of their architrave, of the Doric order, are built into the walls of a private house. From the style and character of these it is evident that the edifice was one of very remote antiquity. Much more considerable remains are extant of the other temple, noticed by the orator in the same passage—that of Minerva. This was one of the most magnificent in Sicily. Its doors, composed of gold and ivory, and conspicuous for their beautiful workmanship, were celebrated throughout the Grecian world; while the interior was adorned with numerous paintings, among which a series representing one of the battles of Agathocles was especially celebrated. All these works of art, which had been spared by the generosity of Marcellus, were carried off by the insatiable Verres. (*Cic. Verr. iv. 55, 56.*) On the summit of the temple was a shield, which served as a landmark to sailors quitting or approaching the port. (*Polemon, ap. Athen. xi. p. 462.*) There can be no doubt that this temple, which must have stood on the highest point of the island, is the same which has been converted into the modern cathedral or church of *Sa Maria delle Colonne*. The columns of the sides, fourteen in number, are still perfect, though built into the walls of the church; but the portico and *façade* were destroyed by an earthquake. It was of the Doric order, and its dimensions (185 feet in length by 75 in breadth), which nearly approach those of the great temple of Neptune at Paestum, show that it must have belonged to the first class of ancient edifices of this description. The style of the architectural details and proportions of the columns would render it probable that this temple may be referred to the sixth century B. C., thus confirming an incidental notice of Diodorus (*viii. Fr. 9*), from which it would ap-

pear that it was built under the government of the Geomori, and therefore certainly prior to the despotism of Gelon. No other ancient remains are now extant in the island of Ortygia; but the celebrated fountain of Arethusa is still visible, as described by Cicero, near the southern extremity of the island, on its western shore. It is still a very copious source, but scarcely answering to the accounts of its magnitude in ancient times; and it is probable that it has been disturbed and its supply diminished by earthquakes, which have repeatedly afflicted the modern town of Syracuse.

At the extreme point of the island, and outside the ancient walls, probably on the spot where the castle built by John Maniaces now stands, was situated a temple of the Olympian Juno, with an altar from which it was the custom for departing sailors to take a cup with certain offerings, which they flung into the sea when they lost sight of the shield on the temple of Minerva (*Polemon, ap. Athen. l. c.*). Of the other edifices in the island the most remarkable were the *Hexecontactinus* (*οἶκος δ' Ἑξηκοντάκτινος καλούμενος*, *Diod. xvi. 86*), built, or at least finished, by Agathocles, but the purpose and nature of which are uncertain; the public granaries, a building of so massive and lofty a construction as to serve the purposes of a fortress (*Liv. xxiv. 21*); and the palace of king Hieron, which was afterwards made the residence of the Roman praetors (*Cic. Verr. iv. 52*). The site of this is uncertain: the palace of Dionysius, which had been situated in the citadel constructed by him, was destroyed together with that fortress by Timoleon, and a building for the courts of justice erected on the site. Hence it is probable that Hieron, who was always desirous to court popularity, would avoid establishing himself anew upon the same site. No trace now remains of the ancient walls or works on this side of the island, which have been wholly covered and concealed by the modern fortifications. The remains of a tower are, however, visible on a shoal or rock near the N. angle of the modern city, which are probably those of one of the towers built by Agathocles to guard the entrance of the Lesser Harbour, or *Portus Laccæus* (*Diod. xvi. 83*); but no traces have been discovered of the corresponding tower on the other side.

2. *ACHRADINA* (*Ἀχραδίνη*, *Diod.*, and this seems to be the more correct form of the name, though it is frequently written *Acradina*; both *Livy* and *Cicero*, however, give *Achradina*), or "the outer city," as it is termed by *Thucydides*, was the most important and extensive of the quarters of Syracuse. It consisted of two portions, comprising the eastern part of the great triangular plateau already described, which extended from the angle of Epipolæ to the sea, as well as the lower and more level space which extends from the foot of this table-land to the Great Harbour, and borders on the marshes of *Lysimeleia*. This level plain, which is immediately opposite to the island of Ortygia, is not, like the tract beyond it extending to the *Anapus*, low and marshy ground, but has a rocky soil, of the same limestone with the table-land above, of which it is as it were a lower step. Hence the city, as soon as it extended itself beyond the limits of the island, spread at once over this area; but not content with this, the inhabitants occupied the part of the table-land above it nearest the sea, which, as already mentioned in the general description, is partly separated by a cross valley or depression from the upper part of the plateau, or the heights of Epipolæ. Hence this part of the city

was of considerable natural strength, and seems to have been early fortified by a wall. It is not improbable that, in the first instance, the name of Achradina was given exclusively to the heights*, and that these, as well as the island, had originally their own separate defences; but as the city spread itself out in the plain below, this must also have been protected by an outer wall on the side towards the marshes. It has indeed been supposed (*Grote's Greece*, vol. vii. p. 556) that no defence existed on this side till the time of the Athenian expedition, when the Syracusans, for the first time, surrounded the suburb of Temenitis with a wall; but no mention is found in Thucydides of so important a fact as the construction of this new line of defence down to the Great Harbour, and it seems impossible to believe that this part of the city should so long have remained unprotected.† It is probable indeed (though not certain) that the Agora was already in this part of the city, as we know it to have been in later times; and it is highly improbable that so important a part of the city would have been placed in an unfortified suburb. But still more necessary would be some such defence for the protection of the naval arsenals or dockyards in the inner bight of the Great Harbour, which certainly existed before the Athenian invasion. It seems, therefore, far more natural to suppose that, though the separate defences of Ortigia and the heights of Achradina (Diod. xi. 67, 73) were not destroyed, the two were from an early period, probably from the reign of Gelon, united by a common line of defence, which ran down from the heights to some point near that where the island of Ortigia most closely adjoined the mainland. The existence of such a boundary wall from the time of the Athenian War is certain; and there seems little doubt that the name of Achradina, supposing it to have originally belonged to the heights or table-land, soon came to be extended to the lower area also. Thus Diodorus describes Dionysius on his return from Gela as arriving at the gate of Achradina, where the outer gate of the city is certainly meant. (Diod. xiii. 113.) It is probable that this gate, which was that leading to Gela, is the same as the one called by Cicero the *Portae Agriganae*, immediately outside of which he had discovered the tomb of Archimedes. (*Cic. Tusc. Quæst.* v. 23.) But its situation cannot be determined: no distinct traces of the ancient walls remain on this side of Syracuse, and we know not how they may have been modified when the suburb of Neapolis was included in the city. It is probable, however, that the wall (as suggested by Col. Leake) ran from the brow of the hill near the amphitheatre in a direct line to the Great Harbour.

* These still abound in the wild pear-trees (*aypδ-δερ*), from which the name, as suggested by Leake, was probably derived.

† The argument against this, urged by Cavallari, and derived from the existence of numerous tombs, especially the great necropolis of the catacombs, in this part of the city, which, as he contends, must have been without the walls, would prove too much, as it is certain that these tombs were ultimately included in the city; and if the ordinary custom of the Greeks was deviated from at all, it may have been so at an earlier period. In fact we know that in other cases also, as at Agrigentum and Tarentum, the custom was violated, and persons habitually buried within the walls.

Of the buildings noticed by Cicero as still standing Achradina in his day there are scarcely any vestiges, but the greater part of them were certainly situated in the lower quarter, nearest to the island and the two ports. The Forum or Agora was necessarily directly opposite to the Pentapyle or fortified entrance of the island; it was surrounded with walls by the elder Dionysius (Diod. xiv. 7), which are some of those alluded to by Cicero ("pulcherrima prae" *Verr.* iv. 53). The temple of Jupiter (*Iovis*), noticed by the orator, also adjoined the Agora; it was built by Hieron II. (Diod. xvi. 83), and must not be confounded with the more celebrated temple of the same divinity on a hill at some distance from the city. The prytæneum, which was most richly adorned, and among its chief ornaments possessed a splendid statue of Sappho, which fell a prey to the rapacity of Verres (*Cic. Verr.* iv. 53, 57), was probably also situated in the neighbourhood of the Agora; as was certainly the Timoleonteum, or monument erected to the memory of Timoleon. (*Phil. Timol.* 30.) The splendid sepulchral monument which had been erected by the younger Dionysius in memory of his father, but was destroyed after his own expulsion, seems to have stood in front of the Pentapyle, opposite the entrance of the citadel. (Diod. xv. 74.) A single column is still standing on this site, and the bases of a few others have been discovered, but it is uncertain to what edifice they belonged. The only other remains now visible in this quarter of the city are some remains of Roman baths of little importance. Beneath the surface of the soil there exist extensive catacombs, constituting a complete necropolis: these tombs, as in most similar cases, are probably the work of successive ages, and can hardly be traced to any particular period. There exist, also, on points on the slope of the hill of Achradina, extensive quarries hewn in the rock, similar to those found at Neapolis near the theatre, of which we shall presently speak.

Traces of the ancient walls of Achradina, covering the low cliffs which bound it towards the sea, may be found from distance to distance along the whole line extending from the quarries of the *Cappuccini* round to the little bay or cove of *Sta Panagia* to the NW. angle of the plateau. Recent researches have also discovered the line of the western wall of Achradina, which appears to have run nearly in a straight line from the cove of *Sta Panagia*, to the steep and narrow pass or hollow way that leads up from the lower quarter to the heights above, then taking advantage of the partial depression or valley already noticed. The cove of *Sta Panagia* may perhaps be the *Portus Troglitorum* of Livy (xvi. 39), though the similar cove of the *Socle Græce*, about half a mile further W., would seem to have the better claim to that designation. The name is evidently the same with that of Troglita, mentioned by Thucydides as the point on the N. side of the heights towards which the Athenians directed their line of circumvallation, but without succeeding in reaching it. (*Thuc.* vi. 99, vii. 2.)

3. ΤΥΧΗ (Τύχη), so called, as we are told by Cicero, from its containing an ancient and celebrated temple of Fortune, was situated on the plateau or table-land W. of Achradina, and adjoining the northern face of the cliffs looking towards *Marina*. Though it became one of the most populous quarters of Syracuse, no trace of its existence is found at the period of the Athenian siege; and it may fairly be assumed that there was as yet no considerable

suburb on the site, which must otherwise have materially interfered with the Athenian lines of circumvallation, while the Syracusans would naturally have attempted to protect it, as they did that of Temenitis, by a special outwork. Yet it is remarkable that Diodorus notices the name, and even speaks of it as a distinct quarter of the city, as early as B. C. 466, during the troubles which led to the expulsion of Thrasybulus (Diod. xi. 68). It is difficult to reconcile this with the entire silence of Thucydides. Tycha probably grew up after the great wall erected by Dionysius along the northern edge of the plateau had completely secured it from attack. Its position is clearly shown by the statement of Livy, that Marcellus, after he had forced the Hexapylum and scaled the heights, established his camp between Tycha and Neapolis, with the view of carrying on his assaults upon Achradina. (Liv. xxv. 25.) It is evident therefore that the two quarters were not contiguous, but that a considerable extent of the table-land W. of Achradina was still unoccupied.

4. NEAPOLIS (Νεάπολις), or the New City, was, as its name implied, the last quarter of Syracuse which was inhabited, though, as is often the case, the New Town seems to have eventually grown up into one of the most splendid portions of the city. It may, however, well be doubted whether it was in fact more recent than Tycha; at least it appears that some portion of Neapolis was already inhabited at the time of the Athenian invasion, when, as already mentioned, we have no trace of the existence of a suburb at Tycha. But there was then already a suburb called Temenitis, which had grown up around the sanctuary of Apollo Temenites. The statue of Apollo, who was worshipped under this name, stood as we learn from Cicero, within the precincts of the quarter subsequently called Neapolis; it was placed, as we may infer from Thucydides, on the height above the theatre (which he calls ἄκρα Τεμενίτις), forming a part of the table-land, and probably not far from the southern escarpment of the plateau. A suburb had apparently grown up around it, which was surrounded by the Syracusans with a wall just before the commencement of the siege, and this outwork bears a conspicuous part in the operations that followed. (Thuc. vi. 75.) But this extension of the fortifications does not appear to have been permanent, for we find in B. C. 396 the temples of Ceres and the Cora, which also stood on the heights not far from the statue of Apollo, described as situated in a suburb of Achradina, which was taken and the temples plundered by the Carthaginian general Himilco. (Diod. xiv. 63.) The name of Neapolis (ἡ Νέα πόλις) is indeed already mentioned some years before (Id. xiv. 9), and it appears probable therefore that the city had already begun to extend itself over this quarter, though it as yet formed only an unfortified suburb. In the time of Cicero, as is evident from his description, as well as from existing remains, Neapolis had spread itself over the whole of the southern slope of the table-land, which here forms a kind of second step or underfall, rising considerably above the low grounds beneath, though still separated from the heights of Temenitis by a second line of cliff or abrupt declivity. The name of Temenitis for the district on the height seems to have been lost, or merged in that of Neapolis, which was gradually applied to the whole of this quarter of the city. But the name was retained by the adjoining gate, which was called the Temenitid Gate

(Plut. *Dion.* 29, where there seems no doubt that we should read Τεμενίτιδας for Μενίτιδας), and seems to have been one of the principal entrances to the city.

Of the buildings described by Cicero as existing in Neapolis, the only one still extant is the theatre, which he justly extols for its large size ("theatrum maximum," *Verr.* iv. 53). Diodorus also alludes to it as the largest in Sicily (xvi. 83), a remark which is fully borne out by the existing remains. It is not less than 440 feet in diameter, and appears to have had sixty rows of seats, so that it could have accommodated no less than 24,000 persons. The lower rows of seats were covered with slabs of white marble, and the several cunei are marked by inscriptions in large letters, bearing the name of king Hieron, of two queens, Philistis and Nereis, both of them historically unknown, and of two deities, the Olympian Zeus and Hercules, with the epithet of Εὐφρόν. These inscriptions evidently belong to the time of Hieron II., who probably decorated and adorned this theatre, but the edifice itself is certainly referable to a much earlier period, probably as early as the reign of the elder Hieron. It was used not merely for theatrical exhibitions, but for the assemblies of the people, which are repeatedly alluded to as being held in it (Diod. xiii. 94; Plut. *Dion.* 38, *Timol.* 34, 38, &c.), as was frequently the case in other cities of Greece. The theatre, as originally constructed, must have been outside the walls of the city, but this was not an unusual arrangement.

Near the theatre have been discovered the remains of another monument, expressly mentioned by Diodorus as constructed by king Hieron in that situation, an altar raised on steps and a platform not less than 640 feet in length by 60 in breadth (Diod. xiv. 83). A little lower down are the remains of an amphitheatre, a structure which undoubtedly belongs to the Roman colony, and was probably constructed soon after its establishment by Augustus, as we find incidental mention of gladiatorial exhibitions taking place there in the reigns of Tiberius and Nero (*Tac. Ann.* xiii. 49; *Val. Max.* i. 7. § 8). It was of considerable size, the arena, which is the only part of which the dimensions can be distinctly traced, being somewhat larger than that of Verona. No traces have been discovered of the temples of Ceres and Libera or Proserpine on the height above: the colossal statue of Apollo Temenites had apparently no temple in connection with it, though it had of course its altar, as well as its sacred enclosure or τέμενος. The statue itself, which Verres was unable to remove on account of its large size, was afterwards transported to Rome by Tiberius (*Suet. Tib.* 74).

Immediately adjoining the theatre are extensive quarries, similar in character to those already mentioned in the cliffs of Achradina. The quarries of Syracuse (Latomiae or Lantumiae) are indeed frequently mentioned by ancient authors, and especially noticed by Cicero among the most remarkable objects in the city. (*Cic. Verr.* v. 27; *Aelian, V.H.* xii. 44.) There can be no doubt that they were originally designed merely as quarries for the extraction of the soft limestone of which the whole table-land consists, and which makes an excellent building stone; but from the manner in which they were worked, being sunk to a considerable depth, without any outlet on a level, they were found places of such security, that from an early period they were em-

ployed as prisons. Thus, after the Athenian expedition, the whole number of the captives, more than 7000 in number, were confined in these quarries (Thuc. vii. 86, 87; Diod. xiii. 33); and they continued to be used for the same purpose under successive despots and tyrants. In the days of Cicero they were used as a general prison for criminals from all parts of Sicily. (Cic. Verr. v. 27.) The orator in one passage speaks of them as constructed expressly for a prison by the tyrant Dionysius (*Ib.* 55), which is a palpable mistake if it refers to the Lautumiae in general, though it is not unlikely that the despot may have made some special additions to them with that view. But there is certainly no authority for the popular tradition which has given the name of the Ear of Dionysius to a peculiar excavation of singular form in the part of the quarries nearest to the theatre. This notion, like many similar ones now become traditional, is derived only from the suggestion of a man of letters of the 16th century.

5. EPIPOLÆ (Ἐπιπόλαι), was the name originally given to the upper part of the table-land which, as already described, slopes gradually from its highest point towards the sea. Its form is that of a tolerably regular triangle, having its vertex at Euryalus, and its base formed by the western wall of Achradina. The name is always used by Thucydides in this sense, as including the whole upper part of the plateau, and was doubtless so employed as long as the space was uninhabited; but as the

suburbs of Tyche and Temenitis gradually spread themselves over a considerable part of the heights, the name of Epipolæ came to be applied in a more restricted sense to that portion only which was nearest to the vertex of the triangle. It is generally assumed that there subsequently arose a considerable town near this angle of the walls, and that this is the fifth quarter of the city alluded to by Strabo and those who spoke of Syracuse as a Pentapolis or aggregate of five cities. But there is no allusion to it as such in the passage of Cicero already quoted, or in the description of the capture of Syracuse by Marcellus; and it seems very doubtful whether there was ever any considerable population at this remote point. No vestiges of any ancient buildings remain within the walls; but the line of these may be distinctly traced along the top of the cliffs which bound the table-land both towards the N. and the S.; in many places two or three courses of the masonry remain; but the most important ruins are those at the angle or vertex of the triangle, where a spot named *Mongibellini* is still crowned by the ruins of the ancient castle or fort of EURLALUS (Ἐβρύλαος, Thuc., but the Doric form was Ἐπιπόλαιος, which was adopted by the Romans). The ruins in question afford one of the best examples extant of an ancient fortress or castle, designed at once to serve as a species of citadel and to secure the approach to Epipolæ from this quarter. The annexed plan will give a good idea of its general

PLAN OF THE FORT EURLALUS.

form and arrangement. The main entrance to the city was by a double gate (A.), flanked on both sides by walls and towers, with a smaller postern or sally-port a little to the right of it. The fortress itself was an irregular quadrangle, projecting about 200 yards beyond the approach to the gate, and fortified by strong towers of solid masonry with a deep ditch cut in the rock in front of it, to which a number of subterranean passages gave access from within. These passages communicating with the fort above by narrow openings and stairs, were evidently designed to facilitate the sallies of the besieged without exposing the fortress itself to peril. As the whole arrangement is an unique specimen of ancient fortification a view is added of the external, or N. front of the fort, with the subterranean openings.

There can be no doubt that the fortress at *Mongibellini* is the one anciently known as Euryalus.

This clearly appears from the mention of that fort at the time of the siege of Syracuse by Marcellus, as one capable of being held by a separate garrison after the capture of the outer walls of Epipolæ, and threatening the army of Marcellus in the rear, if he proceeded to attack Achradina. (Liv. xiv. 25, 26.) Euryalus is also mentioned by Thucydides at the time of the Athenian expedition, when it was still unfortified, as the point which afforded a ready ascent to the heights of Epipolæ (Thuc. vi. 93, vii. 2); and it must indeed have always been, in a military point of view, the key of the whole position. Hence, the great care with which it was fortified after the occupation of Epipolæ by the Athenians had shown the paramount importance of that position in case of a siege. The existing fortifications may, indeed, be in part the work of Hieron II. (as

supposed by Col. Leake); but it is certain that a strong fort was erected there by Dionysius I., and

the importance of this was sufficiently shown in the reign of Agathocles, when the attack of Hamilcar

VIEW OF THE FORT EURYALUS.

was repulsed by means of a strong garrison posted at Euryalus, who attacked his army in flank, while advancing to the attack of Epipolæ. (Diod. xx. 29.)

Some writers on the topography of Syracuse have supposed the fortress of *Mongibellisi* to be the ancient Hexapylum, and that Euryalus occupied the site of *Belvedere*, a knoll or hill on the ridge which is continued from *Mongibellisi* inland, and forms a communication with the table-land of the interior. But the hill of *Belvedere*, which is a mile distant from *Mongibellisi*, though somewhat more elevated than the latter point, is connected with it only by a narrow ridge, and is altogether too far from the table-land of Epipolæ to have been of any importance in connection with it; while the heights of *Mongibellisi*, as already observed, form the true key of that position. Moreover, all the passages that relate to Hexapylum, when attentively considered, point to its position on the N. front of the heights, looking towards Megara and Thapsus; and Colonel Leake has satisfactorily shown that it was a fort constructed for the defence of the main approach to Syracuse on this side; a road which then, as now, ascended the heights at a point a short distance W. of the *Scala Greca*, where a depression or break in the line of cliffs affords a natural approach. (Leake, *Notes on Syracuse*, pp. 258, 342, &c.) The gate at Hexapylum thus led, in the first instance, into the suburb or quarter of Tyche, a circumstance completely in accordance with, if not necessarily required by, a passage in Livy (xxiv. 21), where the two are mentioned in close connection.

It is more difficult to determine the exact position of LABDALUM, where the Athenians erected a fort during the siege of Syracuse. The name is not subsequently mentioned in history, so that we have no knowledge of its relation to the fortifications as they existed in later times; and our only clue to its position is the description of Thucydides, that it stood "on the summit of the cliffs of Epipolæ, looking towards Megara." It was probably situated (as placed by Gölter and Mr. Grote) on the point of those heights which forms a slightly projecting

angle near the farmhouse now called *Targia*. Its purpose was, doubtless, to secure the communications of the Athenians with their fleet which lay at Thapsus, as well as with the landing-place at Leon.

It was not till the reign of the elder Dionysius (as we have already seen) that the heights of Epipolæ were included within the walls or fortifications of Syracuse. Nor are we to suppose that even after that time they became peopled like the rest of the city. The object of the walls then erected was merely to secure the heights against military occupation by an enemy. For that purpose he in B. C. 402 constructed a line of wall 30 stadia in length, fortified with numerous towers, and extending along the whole N. front of the plateau, from the NW. angle of Achradina to the hill of Euryalus. (Diod. xiv. 18.) The latter point must at the same time have been occupied with a strong fort. The north side of Epipolæ was thus securely guarded; but it is singular that we hear of no similar defence for the S. side. There is no doubt that this was ultimately protected by a wall of the same character, as the remains of it may be traced all around the edge of the plateau; but the period of its construction is uncertain. The portion of the cliffs extending from Euryalus to Neapolis may have been thought sufficiently strong by nature; but this was not the case with the slope towards Neapolis, which was easily accessible. Yet this appears to have continued the weakest side of the city, as in B. C. 396 Himilco was able to plunder the temples in the suburb of Temenitis with apparently little difficulty. At a later period, however, it is certain from existing remains, that not only was there a line of fortifications carried along the upper escarpment as far as Neapolis, but an outer line of walls was carried round that suburb, which was now included for all purposes as part of the city. Strabo reckons the whole circuit of the walls of Syracuse, including the fortifications of Epipolæ, at 180 stadia (Strab. vi. p. 270); but this statement exceeds the truth, the actual circuit being about 14 English miles, or 122 stadia. (Leake, p. 279.)

* This must have been the fort on Epipolæ taken by Dion, which was then evidently held by a separate garrison. (Plut. *Dion*. 29.)

It only remains to notice briefly the different localities in the immediate neighbourhood of Syracuse, which are noticed by ancient writers in connection with that city. Of these the most important

is the OLYMPIEUM, or Temple of Jupiter Olympius, which stood, as already mentioned, on a height, facing the southern front of Epipolae and Neapolis, from which it was about a mile and a half distant (Liv. xxiv. 33), the interval being occupied by the marshy plain on the banks of the Anapus. The sanctuary seems to have early attained great celebrity: even at the time of the Athenian expedition there had already grown up around it a small town, which was known as POLICHNE (ἡ Πολίχνη, Diod.), or the Little City. The military importance of the post, as commanding the bridge over the Anapus and the road to Helorus, as well as overlooking the marshes, the Great Harbour, and the lower part of the city, caused the Syracusans to fortify and secure it with a garrison before the arrival of the Athenians. (Thuc. vi. 75.) For the same reason it was occupied by all subsequent invaders who threatened Syracuse; by Himilco in B.C. 396, by Hamilcar in B.C. 309, and by Marcellus in B.C. 214. The remains of the temple are still visible; in the days of Cluverius, indeed, seven columns were still standing, with a considerable part of the substructure (Claver. Sicil. p. 179), but now only two remain, and those have lost their capitals. They are of an ancient style, and belong probably to the original temple, which appears to have been built by the Geomori as early as the 6th century B.C.

The adjoining promontory of Plemyrium does not appear to have been ever inhabited, though it presents a table-land of considerable height, nor was it ever permanently fortified. It is evident also, from the account of the operations of successive Carthaginian fleets, as well as that of the Athenians, that the Syracusans had not attempted to occupy, or even to guard with forts, the more distant parts of the Great Harbour, though the docks or arsenal, which were situated in the inner bight or recess of the bay, between Ortygia and the lower part of Achradina, were strongly fortified. The southern bight of the bay, which forms an inner bay or gulf, now known as the bay of *Sta Maddalena*, is evidently that noticed both during the Athenian siege and that by the Carthaginians as the gulf of DASCON. (*ἡ Δασκων*, Thuc. vi. 66; Diod. xiii. 13, xiv. 72.) The fort erected by the Athenians for the protection of their fleet apparently stood on the adjacent height, which is connected with that of the Olympieum.

Almost immediately at the foot of the Olympieum was the ancient bridge across the Anapus, some remains of which may still be seen, as well as of the ancient road which led from it towards Helorus, memorable on account of the disastrous retreat of the Athenians. They did not, however, on that occasion cross the bridge, but after a fruitless attempt to penetrate into the interior by following the valley of the Anapus, struck across into the Helorine Way, which they rejoined some distance beyond the Olympieum. Not far from the bridge over the Anapus stood the monument of Gelon and his wife Demarete, a sumptuous structure, where the Syracusans were in the habit of paying heroic honours to their great ruler. It was adorned with nine towers of a very massive construction; but the monument itself was destroyed by Himilco, when he encamped at the adjacent Olympieum, and the towers were afterwards demolished by Agathocles. (Diod. xi. 38, xiv. 63.)

About a mile and a half SW. of the Olympieum is the fountain of CYANE, a copious and clear stream

rising in the midst of a marsh: the source of the nymph to whom it was consecrated (ἡ νῆς Κυανὴ ἱερὴ, Diod.), must have stood on the height above, as we are told that Dionysius led his troops round to this spot with a view to attack the Athenian camp at the Olympieum (Diod. xi. 72). The marsh itself must always have been a place of great importance to the Athenians, and the troops. Some ruins on the slope of the hill W. of the source are probably those of the temple. [CYANE.] The fountain of CYANE, now called *La Pisma*: near it is a small source called *Pismotta*, and a third, called *Cefalino*, rises between the Cyane and the Pismotta. The number of these fountains of clear water, proceeding no doubt from distant sources in the limestone hills, is characteristic of the neighbourhood of Syracuse, and is noticed by Diodorus (iii. 8. a. 14.) None of these springs is so well adapted to supply the city itself as the Cyane, and hence an aqueduct was in early times carried along the heights from the interior. The remains of this is already noticed at the time of the Athenian siege (Thuc. vi. 100); and the aqueduct is in great part subterranean, is still in use on the present day, and conveys a stream sufficient to supply a mill situated on the steps of the great stairs.

A few localities remain to be noticed in the neighbourhood of Syracuse, which, though not now inhabited, are repeatedly alluded to in its history. The spot where the Athenians first landed, and the commencement of the siege (Thuc. vi. 97), was at the foot of the Olympieum, where Marcellus established his winter quarters. He found himself unable to carry the Olympieum (Liv. xxiv. 39), is probably the little town of about 2 miles N. of the *Santa Greca*, which is more than a mile from the nearest point of land, which would agree with the statement of Strabo, who calls it 6 or 7 stadia from the city. On the contrary, says it was 5 miles from Helorus, but this must certainly be a mistake. About 3 miles further N. is the promontory of *ἡ Θάψος*, now called *Magasin*, a low but fertile peninsula, united to the mainland by a narrow isthmus, so that it formed a tolerably secure position on the S. side. On this account it was one of the first instances, by the Athenians, of the capture of the station of their fleet, previous to their possession of the Great Harbour. (Thuc. vi. 97.) It had been one of the first points on the Sicilian coast occupied by Greek colonists, but was afterwards removed to Megara (Thuc. vi. 4); and it seems to have subsequently always remained uninhabited, at least there was never a town upon it. It was a low promontory, whence Virgil appropriately calls it '*Thapsus juncus*.' (Aen. iii. 689; Ovid, *Fast.* iv. 477.) About a mile N. of the Thapsos, and directly opposite to the narrow isthmus, are the remains of an ancient massive large size, built of massive blocks of stone, and of a quadrangular form. The portion now remaining is above 20 feet high, but it was formerly surmounted by a column, whence the name by which it is known of *L'Agnaglia*, or '*the Needle*.' This monument is popularly believed to have been erected by Marcellus to commemorate the capture of Syracuse, but this is a mere conjecture, for which there is no foundation. It is probably in reality a sepulchral

monument. (D'Orville, *Sicula*, p. 173; Swinburne, vol. ii. p. 318.)

The topography of Syracuse attracted attention from an early period after the revival of letters; and the leading features are so clearly marked by nature that they could not fail to be recognised. But the earlier descriptions by Fazello, Bonanni, and Mirabella, are of little value. Cluverius, as usual, investigated the subject with learning and diligence; and the ground has been carefully examined by several modern travellers. An excellent survey of it was also made by British engineers in 1808; and the researches and excavations carried on by the duke of Serra di Falco, and by a commission appointed by the Neapolitan government in 1839 have thrown considerable light upon the extant remains of antiquity, as well as upon some points of the topography. These have been discussed in a separate memoir by the architect employed, Saverio Cavallari, and the whole subject has been fully investigated, with constant reference to the ancient authors, in an elaborate and excellent memoir by Col. Leake. The above article is based mainly upon the researches of the last author, and the local details given in the

great work of the duke of Serra di Falco, the fourth volume of which is devoted wholly to the antiquities of Syracuse. (Fazell. *de Reb. Sic.* iv. 1; Bonanni, *Le Antiche Siracuse*, 2 vols. fol. Palermo, 1717; Mirabella, *Dichiarazione della Pianta dell' antiche Siracuse*, reprinted with the preceding work; Cluver. *Sicil.* i. 12; D'Orville, *Sicula*, pp. 175—202; Smyth's *Sicily*, pp. 162—176; Swinburne, *Travels in the Two Sicilies*, vol. ii. pp. 318—346; Hoare, *Classical Tour*, vol. ii. pp. 140—176; Leake, *Notes on Syracuse*, in the *Transactions of the Royal Society of Literature*, 2nd series, vol. iii. pp. 239—354; Serra di Falco, *Antichità della Sicilia*, vol. iv; Cavallari, *Zur Topographie von Syrakus*, 8vo. Göttingen, 1845.) [E. H. B.]

SYRASTRE'NE (*Συραστρινή*, *Periopl. M. E. c.* 41; Ptol. vii. 1. § 2), a district of ancient India, near and about the mouths of the Indus. There can be no doubt that it is represented by the modern *Saurashtra*, for a long time the seat of a powerful nation. *Saurashtra* means in Sanscrit "the beautiful kingdom." Ptolemy (*l. c.*) mentions a small village Syrastra, which may have once been its capital. It is probable that the Syrieni of Pliny (vi. 20. s. 23) were inhabitants of the same district. [V.]

SYRGIS (*Σύργις*, Herod. iv. 123), a considerable river of European Sarmatia, which flowed from the country of the Thyssaetæ through the territory of the Maeotæ, and discharged itself into the Palus Maeotis. Modern geographers have variously attempted to identify it. Rennell (*Geogr. of Herod.* p. 90) considers it to be one of the tributaries of the *Wolga*. Gatterer (*Comment. Soc. Gott.* xiv. p. 36) takes it to be the *Donetz*, whilst Reichard identifies it with the *Irgitz*, and Linder (*Scythien*, p. 66) with the *Don* itself. [T. H. D.]

SYRIA (*Συρία* : *Eth. Σέριος*), the classical name for the country whose ancient native appellation was *Aram*, its modern *Esh-Sham*.

I. Name.—The name *Aram* (אַרַם), more comprehensive than the limits of Syria Proper, extends, with several qualifying adjuncts, over Mesopotamia and Chaldaea. Thus we read (1.) of *Aram of the two rivers*, or *Aram Naharaim* (אַרַם נְהַרַיִם, LXX. *ἡς Μεσοποταμίας*, Gen. xxiv. 10), equivalent to *Padan-Aram*, or the *Plain of Aram* (פְּדַן אַרַם, LXX. *ἡς Μεσοποταμίας Συρίας*, Gen. xxv. 20, xxviii. 2, 5, 6, 7, xxxi. 18), but comprehended also a mountain district called "the mountains of the east" (*Nam.* xxii. 5, xxiii. 7; *Deut.* xxiii. 4). (2.) *Aram Sobah* (אַרַם סוּבַה, LXX. *Σουβά*, 1 Sam. xiv. 47; 2 Sam. viii. 3, x. 6, 8). (3.) *Aram of Damascus* (אַרַם דַּמָּשְׁקִי, LXX. *Συρία Δαμασκού*, 2 Sam. viii. 5). (4.) *Aram Beth-Rehob* (אַרַם בֵּית רְחוֹב, LXX. *Ποῦδ*, 2 Sam. x. 6, 8). (5.) *Aram Maaschah* (אַרַם מַסְכָּה, LXX. *Μασχά*, 1 Chron. xix. 6). Of these five districts thus distinguished, the first has no connection with this article. With regard to the second, fourth, and fifth, it is doubtful whether Sobah and Rehob were in Mesopotamia or in Syria Proper. Gesenius supposes the empire of Sobah to have been situated north-east of Damascus; but places the town, which he identifies with Nesebin, Nisibis, and Antiochia Mygdoniae, in Mesopotamia (*Lex. s. vv.* אַרַם וְסוּבָה); but a comparison of 2 Sam. x. 6 with 1 Chron. xix. 6 seems rather to imply that Rehob was in Mesopotamia, Soba and Mascha in Syria Proper; for, in

COINS OF SYRACUSAE.

the former passage, we have the Aramites of Beth-Rehob, and the Aramites of Soba, and the king of Maacah,—in the latter, Aram Naharaim = Mesopotamia, and Aram Maacah and Zobah; from which we may infer the identity of Beth-Rehob and Mesopotamia, and the distinction between this latter and Maacah or Zobah; and again, the alliance between Hadadezer, king of Zobah, and the Aramites of Damascus (2 Sam. viii. 3—6; 1 Chron. xix. 3—6) would imply the contiguity of the two states; while the expedition of the former “to recover his border,” or “establish his dominion at the river Euphrates” (ver. 3), during which David attacked him, would suppose a march from west to east, through Syria, rather than in the opposite direction through Mesopotamia.

With regard to the origin of the name Aram, there are two Patriarchs in the early genealogies from whom it has been derived; one the son of Shem, the progenitor of the Hebrew race, whose other children Uz, Asshur, Arphaxad, and Lud, represent ancient kingdoms or races contiguous to Syria: while Uz, the firstborn son of Aram, apparently gave his name to the native land of Job, at a very early period of the world's history. (Gen. x. 23, 23.) The other Aram was the grandson of Nahor, the brother of Abraham, by Keturah, whose brother Huz is by some supposed to have given his name to the country of Job, as it can scarcely admit of a doubt that the third brother, Buz, was the patriarch from whom the neighbouring district took its name. (Gen. xxii. 30, 31; Job, i. 1, xxxii. 2.) But as we find the name Aram already applied to describe the country of Bethuel and Laban, the uncle and cousin of the later Aram, it is obvious that the country must have derived its name from the earlier, not from the later patriarch. (Gen. xxv. 20, xxviii. 3, &c.)

The classical name Syria is commonly supposed to be an abbreviation or modification of Assyria, and to date from the period of the Assyrian subjugation of the ancient Aram; and this account of its origin is confirmed by the fact that the name Syria does not occur in Babel or Babil, who speak of the inhabitants of the country under the name of Arimi, (see *Asiatic Res.* ii. 3. 783. *Res. Theog.* v. 304), in connection with the myth of Typhon, recorded by Strabo in describing the Orontes (Orontes); and this writer informs us that the Syrians were called Arimians or Arimi, (p. 62. xii. p. 627. xvi. pp. 784, 785), which name was, however, extended too far to the west to reach to other writers, so as to comprehend Cilicia and the Gates of Syria. (See Bochart, *Geog. Sac.* lib. i. cap. 6.) Herodotus, the earliest classical writer who distinctly names the Syrians, declares the name to be identical with the Assyrians, whose he is constantly speaking of in the latter, making the name to be the Orontes, the latter the barbarian name, (i. 1. 85.) and this name he extends as far south as the confines of Egypt,—placing Sabea, Assiria, Persia, and in short the Phoenicians in general, in Syria. (i. 1. 12. 258, 259.) calling the Jews the Syrians in Persia (i. 1. 104.) and as far west as the Nile, in the Cambricopolis, he says, as in a notice of the Orontes (i. 1. 104.) and speaks of the Orontes as the Thermus and Phoenician river, (i. 1. 104.) Consistently with this early name Syria, at a much later period, states that the name is not formerly extended from Babylon as far as the Gulf of Persia, and thence as far as the Persian Gulf (i. 1. 104.) and in this writer seems

the name is used by other classical writers, and thus includes a tract of country on the west which was not comprehended within the widest range of the ancient Aram.

II. *Natural boundaries and limits.*—The limits of Syria proper, which is now to be considered, are clearly defined by the Mediterranean on the west, the Euphrates on the east, the top of Lebanon and Taurus on the north, and the great Desert of Arabia on the south. On the west, however, a long and narrow strip of coast, commencing at the Taurus, and running south to Mount Carmel, is reckoned to Phoenicia, and has been described under that name. In compensation for this deduction at the south-west, a much more ample space is given towards the south-east, by the rapid trending away of the Euphrates eastward, between the 36th and 38th degree north lat., from near the 38th to the 41st degree of east longitude, thereby increasing in distance from the Mediterranean sea, from about 100 miles at Zeugma (Bisr), to 250 miles at the boundary Syria, south of Circesium (Karkisia). Commencing at the northern extremity of the Ismael Sea (Gulf of Iskanderiye), near Issus itself, the Aram Mons (*Almas Dagh*), a branch of the Taurus runs off first in a northern direction for 15 miles, then north-east for 30 more, until it joins the main chain (*Durdan Dagh*), a little westward of Harat, from whence it runs due eastward to the Euphrates. The southern line cannot be accurately described, being marked only by an imaginary line drawn through an interminable waste of sand. The irregular trapezium may now be subdivided.

For the purposes of a physical description, the ranges of Lebanon and Antilibanus may be named as landmarks towards the south, while the Orontes affords a convenient division in the geography of the country towards the north; in the valley of the Orontes may be regarded as a continuation northward of the great crevasse of Cilicia, the watershed being in the vicinity of Babil, that “this depression extends along the whole eastern side of the country, having on each side, though nearly 6 degrees of latitude, an almost continuous chain of mountains, from which numerous rivers strike into the interior in different directions” (Col. Cheesey, *Expedition for the Survey of the Euphrates and Tigris*, vol. i. p. 334.)

1. *The western range.*—Where the range of Lebanon meets the coast at the Gulf of Iskanderiye, the river Issus, it leaves only a narrow pass between its base and the sea, formerly occupied by the Armenians, Syrian, or Ammonian gates of the west, geographers, which will be again referred to here. This range then advances southward under various names, approaching or receding from the coast, and occasionally throwing out bold headlands into the sea, as at *Ras Khamsar*, *Ras Baysi* (Pomus Peak), *Ras-el-Shaba*, &c. The part of the chain south of the Orontes is thus described by Col. Chesey (p. 334):—“The base of the chain consists of masses of serpentine and Gabbro rocks, rising steeply from plains on each side, and supporting a snowy formation, terminating with bold rugged peaks and conical summits, having at the crest an elevation of 5587 feet. The sides of this mass are extremely furrowed by rocky fissures, or broken and calve, between which there is a succession of round shoulders, either protruding through forests of pine, oak, and hurches, or diversified by the sterile, the myrtle, almond, and other shrubs. Some head

appears near *Ayas*, and again in larger masses at some little distance from the NE. side of the chain. ...Southward of *Beilan* the chain becomes remarkable for its serrated sides and numerous summits, of which the *Akhma Tagh* shows about fifteen between that place and the valley of the Orontes." The sharp ridge of *Jebel Rhoms* terminates in the rugged and serrated peaks of *Cape Khanzir*, which overhangs the sea, and separates the *Gulf of Iskanderin* from the *Bay of Antioch*. South of this is *Jebel Musa*, the *Mons Pieria* of classic writers, a limestone offset from *Mount Rhoms*, and itself imperfectly connected with the other classical mount, *Casius*, by the lower range of *Jebel Simán*. A little to the south of the *embouchure* of the Orontes, *Mount Casius* reaches an elevation of 5699 feet, composed of supra-cretaceous limestone, on the skirts of which, among the birch and larch woods, are still to be seen the ruins of the temple, said to have been consecrated by *Cronus* or *Ham* (*Ammianus Marcell.* xxii. 14), while the upper part of its cone is entirely a naked rock, justifying its native modern name *Jebel-el-Akra* (the bald mountain). From this point the mountain chain continues southward, at a much lower elevation, and receding further from the coast, throws out its roots both east and west, towards the Orontes on the one side and the Mediterranean on the other. This range has the general name of *Jebel Anzerieh* from the tribe that inhabits it, but is distinguished in its various parts and branches by local names, chiefly derived from the towns and villages on its sides or base. The southern termination of this range must be the intervening plains which *Pliny* places between *Libanus* and *Bargylus* ("interjacentes campi"), on the north of the former. (*Plin.* v. 20.) These plains *Shaw* finds in the *Jeune* (*fruitful*), as the Arabs call a comparatively level tract, which "commences a little south of *Maguzzel*, and ends at *Sumrah*, extending itself all the way from the sea to the eastward, sometimes five, sometimes six or seven leagues, till it is terminated by a long chain of mountains. These seem to be the *Mons Bargylus* of *Pliny*." *Sumrah* he identifies with *Simyra*,—which *Pliny* places in *Coelesyria* at the northern extremity of *Mount Libanus*,—but remarks that, as *Sumrah* lies in the *Jeune*, 2 leagues distant from that mountain, this circumstance will better fall in with *Arca*, where *Mount Libanus* is remarkably broken off and discontinued. (*Shaw, Travels in Syria*, pp. 268, 269, 4to ed.) We here reach the confines of *Phoenice*, to which a separate article has been devoted, as also to *Mount Lebanon*, which continues the coastline to the southern extremity of *Syria*.

2. *Coelesyria, and the valley of the Orontes*.—Although the name of *Coelesyria* (Hollow Syria) is sometimes extended so as to include even the coast of the Mediterranean—as in the passage above cited from *Pliny*—from *Seleucus* to *Egypt* and *Arabia* (*Strabo, ut infra*), and especially the prolongation of the southern valley along the crevasses of the *Jordan* to the *Dead Sea* (see *Reland, Palestina*, pp. 103, 458, 607, 774), yet, according to *Strabo*, the name properly describes the valley between *Libanus* and *Antilibanus* (xvi. 2. § 21), now known among the natives as *EL-Bukd'a* (the deep plain). "Under this name is embraced the valley between *Lebanon* and *Anti-Lebanon*, from *Zahleh* southward; including the villages on the declivities of both mountains, or rather at their foot: for the eastern declivity of *Lebanon* is so steep as to have very few

villages much above its base; and the western side of *Anti-Lebanon* is not more inhabited. Between *Zahleh* and its suburb, *Mu'allahah*, a stream called *EL-Birdony* descends from *Lebanon* and runs into the plain to join the *Litány*. The latter river divides the *Bukd'a* from north to south; and at its southern end passes out through a narrow gorge, between precipices in some places of great height, and finally enters the sea north of *Súr*, where it is called *Kásiméyeh*" [*LEONTES*]. To the south of the *Bukd'a* is the *Merj 'Ayin* (meadow of the springs), "between *Belád Beshdrá* and *Wády-et-Teim*, on the left of the *Litány*. Here *Lebanon* and *Anti-Lebanon* come together, but in such a manner that this district may be said to separate rather than to unite them. It consists of a beautiful fertile plain, surrounded by hills, in some parts high, but almost every where arable, until you begin to descend towards the *Litány*. The mountains farther south are much more properly a continuation of *Lebanon* than of *Anti-Lebanon*." (*Dr. Eli Smith, in Biblical Researches*, vol. iii. Appendix B. pp. 136, 140.) This then is the proper termination to the south of *Coelesyria*. The *Merj 'Ayin* terminates in the *Erd-el-Huleh*, which is traversed by the several tributaries of the *Jordan*, and extends as far south as the *Bahr-el-Huleh*. [*SAMACHONITIS LACUS; PALESTINA*, pp. 521, 522.]

To return now to the watershed. *Baalbek* gives its name to the remainder of the *Bukd'a*, from the village of *Zahleh* northward (*Smith, ut sup.* p. 143), in which direction, as has been stated, the remotest sources of the Orontes are found, not far from *Baalbek*, which lies in the plain nearer to the range of *Antilibanus* than to *Lebanon*. [*ORONTES; HELIOPOLIS*.] The copious fountain of *Labweh* is about 10 miles north-east of *Baalbek*; and this village gives its name to the stream which runs for 12 miles through a rocky desert, until it falls into the basin of a much larger stream at the village of *Er-Ras* or *'Ain Zerka*, where is the proper source of the Orontes, now *EL-'Azi*. The body of water now "becomes at least threefold greater than before, and continues in its rugged chasm generally in a north-easterly course for a considerable distance, until it passes near *Ribleh*," then runs north through the valley of *Homs*, having been fed on its way by numerous streams from the slopes of *Lebanon* and *Antilibanus*, draining the slopes of *Jebel Anzerieh*, and forming as it approaches *Homs* the *Bahr-el-Kades*, which is 6 miles long by about 2 wide. (*Chesney, ut sup.* p. 394; *Robinson, Journal of the R. G. S.* vol. xxiv. p. 32.) Emerging from the lake, it waters the gardens of *Homs* about a mile and a half to the west of the town, then running north to *Er-Rustan*, where is a bridge of ten arches, it is turned from its direct course by *Jebel Arbdán* on its left bank, round the roots of which it sweeps almost in a semicircle, and enters *Hamah*, where it is crossed by a bridge of thirteen arches. It now continues its course north-west for about 15 miles to *Kaliat-es-Sejar* (*Larissa*), then due west for 8 miles, when it turns due north, and so continues to the *Jir Hadid* mentioned below. About 20 miles below *Larissa* it passes *Kaliat-em-Medaik* (*Apameia*) on its right bank, distant about 2 miles; a little to the north of which it receives an affluent from the small lake *Et-Taka*, remarkable for its abundance of black-fish and carp (*Burekhardt, Syria*, p. 143; *Chesney, ut sup.* p. 395), then, running through *Wady-el-Ghab*, enters the *Birket-el-Howash*, 8 miles

north of Apameia, where its impetuosity is curbed and its waters dissipated in the morasses, so that it flows off in a diminished stream to *Jirr Shogher*, to be again replenished in its course through the plain of 'Umk by other affluents, until it reaches its northernmost point at *Jirr Hadid* (the Iron Bridge), a little below which it winds round to the west, and about 5 miles above Antioch receives from *Bahr-el-Abiad* (the White Sea) the *Nahr-el-Kowahit*, a navigable river, containing a greater volume of water than *El-Azy* itself. It now flows to the north of Antioch and the infamous groves of Daphne, through an exceedingly picturesque valley, in a south-west course to the sea, which it enters a little to the south of Seleucia, after a circuitous course of about 200 miles, between 34° and $36^{\circ} 15'$ of north latitude, 36° and 37° of east longitude.

3. *Antilibanus and the eastern range*.—The mountain chain which confines Coele Syria on the east is properly designated Antilibanus, but it is further extended towards the north and south by offsets, which confine the valley of the Orontes and the Jordan valley respectively. Antilibanus itself, now called *Jebel-esh-Shurkeh* (Eastern Mountain), which is vastly inferior to Libanus both in majesty and fertility, has been already described, as has also its southern prolongation in Mount Hermon, now *Jebel-esh-Sheikh*, sometimes *Jebel-el-Telge* (the Snow Mountain). [ANTILIBANUS.] The northern chain, on the east of the Orontes valley, has not been sufficiently surveyed to admit of an accurate description, but there is nothing striking in the height or general aspect of the range, which throws out branches into the great desert, of which it forms the western boundary.

4. *The eastern desert*.—Although for the purposes of a geographical description the whole country east of the mountain chains above described may be regarded as one region, and the insufficient materials for a minute and accurate survey make it convenient so to regard it, yet it is far from being an uniform flat, presenting throughout the same features of desolation. On the contrary, so far as it has yet been explored, particularly to the south of the parallel of Damascus, the country is diversified by successions of hills and valleys, which often present large fertile tracts of arable land, cultivated in many parts by a hardy and industrious race of inhabitants. By far the richest of these is the plain of Damascus (*El-Ghutah*), at the foot of the eastern declivity of Antilibanus, the most excellent of the four earthly paradises of the Arabian geographers. (Dr. Eli Smith, in *Bib. Res.* vol. iii. Append. B. p. 147.) It owes its beauty, not less than its fertility, to the abundance of water conveyed to it in the united streams of the *Barada* and the *Phégek*, which, issuing together from the eastern roots of Antilibanus, and distributed into numerous rivulets, permeate the city and its thousands of gardens, and finally lose themselves in the Sea of the Plain, *Bahr-el-Merj*, which the exploration of a recent traveller has found to consist of two lakes instead of one, as has been hitherto represented in all modern maps. (Porter, *Five Years in Damascus*, 1855, vol. i. pp. 377—382, and map.) Indeed, so much fresh light has been thrown on the south-west of Syria by Mr. Porter's careful surveys, that the geography of the whole country will have to be greatly modified in all future maps, as we are now, for the first time, in a position to define with some degree of accuracy the limits of several districts mentioned both by sacred and classical writers,

whose relative position even has hitherto been only matter of doubtful conjecture. The statements of Burckhardt, who has hitherto been the sole authority, require considerable correction.

The *Barada*, the ancient Abana, from its rise in Antilibanus, near the plain of *Zeddany* to its termination in the South and East Lakes, is computed to traverse a distance of 42 miles, and to water a tract equal to 311 square miles, inhabited by a population of 150,000 souls, or an average of 482 to every square mile, including Damascus and its suburbs. "The prevailing rock of the mountains through which it flows is limestone. In the higher regions it is hard and compact, but near Damascus soft and chalky, with large nodules of flint intermixed. Fossil shells and corals in great variety are found along the central chain of Antilibanus, through which the river first cuts. In the white hills near Damascus are large quantities of ammonites. At *Suk Wady Barada* (near its source) is a vast bed of organic remains, not less than a mile in length, and in some places exceeding 100 feet in thickness. Trunks of trees, branches of every size and form, and even the delicate tracery of the leaves may be seen scattered about in vast masses. There are in several places among the mountains traces of volcanic action. On a lofty summit, two hours' north-east of Suk, is what appears to be an extinct crater. The mountain has been rent, the limestone strata thrown back, and black porous trap-rock fills up the cavity. The plain of Damascus has a loamy soil intermixed with fine sand. The substratum is generally conglomerate, made up of rounded smooth pebbles, flint, and sand. The south-eastern portion of the plain is entirely volcanic." (Porter, *Journal of Sacred Literature*, vol. iv. p. 262.) The plain of Damascus is bounded towards the south by a low range of hills called *Jebel-el-Awad* (the Black Mountain), the southern base of which is washed by a stream, which has lately been supposed by some travellers to represent the ancient Pharpar. It is now called *Nahr-el-Awoj*, which, rising in the roots of Hermon, runs in a course about north-east to a small lake named *Bahret-el-Hejjang*, only about 4 miles south of the *Bahret-el-Kibliyah*, into which the Barada flows. It runs partly through a limestone and partly through a volcanic formation, which continues hence far to the south. (Porter, in *Journal of Sac. Lit.* vol. v. pp. 45—57, *Travels*, vol. i. pp. 297—322.) On the south side of the river, opposite to *Jebel-el-Awad*, is another low mountain range called *Jebel Mania*, and a higher elevation connected with this range commands a view of those ancient divisions of Southern Syria, which have hitherto been only conjecturally placed in modern maps. Their boundaries have notwithstanding been indelibly traced by the hand of nature, and the limits so clearly defined that they actually exist, mostly under their identical ancient names, as an evidence of the fidelity of classical and sacred geographers. But these will be more conveniently considered in connection with Trachonitis, round which they are grouped [TRACHONITIS], particularly as this part of the country may be regarded as debateable ground between Syria, Arabia, and Palestine.

Turning now to the north of Damascus and the east of the mountain range, the country between this city and Aleppo offers nothing worthy of particular notice; indeed its geography is still a blank in the map of Syria, except its western side, which is traversed by the *Haj* road, the most northern part

of which has been described by Burckhardt, and its southern by the no less enterprising and more accurate Porter, in more recent times. (Burckhardt, *Syria*, p. 121, &c.; Porter, *Damascus*, vol. ii. p. 350, &c.)

The northern part of Syria is now comprehended in the pashalic of Aleppo. It is bounded on the east by the Euphrates, and on the north and west by the mountain chains of Taurus and Amanus, the former of which throws off other diverging branches to the south, until they ultimately flank the valley of the Orontes on the east, so continuing the connection between Antilibanus and its parent stock. Aleppo itself is situated in a rich and extensive plain, separated on the east by undulating hills from the almost unoccupied country, which consists of a level sheep-track, extending from thence to the Euphrates. The sandy level of this Syrian desert is, however, diversified by occasional ranges of hills, and the plateaus are of various elevation, rising a little west of the meridian of Aleppo to a height of 1500 feet above the Mediterranean, and thence declining suddenly to the east and much more gradually to the west. It is on one of these ranges in the heart of the desert, north-east of Damascus, that Palmyra is situated, the only noticeable point in all the dreary waste, which has been described in an article of its own [PALMYRA]. The tract between Damascus and Palmyra has been frequently explored by modern travellers, as well as the ruins themselves; but there is no better account to be found of them than in Mr. Porter's book, already so frequently referred to (vol. i. pp. 149—254; compare Irbay and Mangles, pp. 257—276).

III. *Ancient geographical divisions.*—The earliest classical notice of Syria, which could be expected to enter into any detail, is that of Xenophon in his *Anabasis*. Unhappily, however, this writer's account of the march of Cyrus through the north of Syria is very brief. The following notes are all that he offers for the illustration of its ancient geography. Issus he mentions as the last city of Cilicia, towards Syria. One day's march of 5 parasangs brought the army to the gates of Cilicia and Syria: two walls, 3 stadia apart,—the river Cersus (*Κέρσος*) flowing between,—drawn from the sea to the precipitous rocks, fitted with gates, allowing a very narrow approach along the coast, and so difficult to force, even against inferior numbers, that Cyrus had thought it necessary to send for the fleet in order to enable him to turn the flank of the enemy: but the position was abandoned by the general of Artaxerxes. One day's march of 5 parasangs brought them to Myriandrus (*Μυριάδρος*), a mercantile city of the Phœnicians, on the sea. Four days' march, or 20 parasangs, to the river Chalus (*Χάλος*), abounding in a fish held sacred by the Syrians. Six days, or 30 parasangs, to the fountains of the Daradax (*αἱ Δαρδες, Δάρδης*), where were palaces and parks of Beleys, governor of Syria. Three days, 15 parasangs, to the city Thapsacus on the Euphrates (*Ἀναθ. i. 4. §§ 4—18*). It is to be remarked that the 9 days' march of 50 parasangs beyond this is said by Xenophon to have led through Syria, where he uses that term of the Aram Naharain, of the Scriptures, equivalent to Mesopotamia. Of the places named by the historian in Syria Proper, Issus has been fully described [ISSUS]. The position of the Cilician and Syrian gates is marked by the narrow passage left between the base of the Amanus and the sea, where the ruins of two walls, separated by an interval of about 600 yards, still

preserve the tradition of the fortifications mentioned in the narrative. The Cersus, however, now called the *Merkes-su*, appears to have been diverted from its ancient channel, and runs to the sea in two small streams, one to the north of the northern wall, the other to the south of the southern. The site of Myriandrus has not yet been positively determined, but it must have been situated about half-way between *Iskanderûn* (Alexandria) and *Arziis* (Rhossus), as Strabo also intimates (see below). From this point the army must have crossed the Amanus by the *Beikân* pass, and have marched through the plain of *Umk*, north of the lake of Antioch, where three fordable rivers, the Labotas (*Kara-su*), the Oenoparas (*Anodd*), and the Arceuthus (*Afrin*), must have been crossed on their march; which, however, are unnoticed by the historian. The river Chalus, with its sacred fish, is identified with the *Chalib* or *Koweik*, the river of Aleppo, the principal tributary to which in the mountains is still called *Balikkî-sû*, or *Fish-river*. The veneration of fish by the Syrians is mentioned also by Diodorus, Lucian, and other ancient writers. (Ainsworth, *Travels in the Track of the Ten Thousand*, pp. 57—65.) The source of the river Daradax, with the palaces and parks of Beleys, 30 parasangs, or 90 geographical miles, from Chalus, is marked by an ancient site called to the present day *Ba'lis*, "peculiarly positioned with regard to the Euphrates, and at a point where that river would be first approached on coming across Northern Syria in a direct line trending a little southward, and corresponding at the same time with the distances given by Xenophon." (Ainsworth, *l. c.* p. 66.) The ruins of a Roman castle, built upon a mound of ruins of greater antiquity, doubtless preserve the site of the satrap's palace; while the rich and productive alluvial soil of the plain around, covered with grasses, flowering plants, jungle, and shrubs, and abounding in game, such as wild boars, francolin, quails, landrails, &c., represents "the very large and beautiful paradise:" the river Daradax, however, is reduced to a canal cut from the Euphrates, about a mile distant, which separated the large park from the mainland; and Mr. Ainsworth thinks that the fact of the fountain being 100 feet wide at its source, "tends to show that the origin of a canal is meant, rather than the source of a river" (p. 67. n. 1). Thapsacus is described in a separate article. [THAPSACUS.]

Far more full, but still unsatisfactory, is the description of Syria given by Strabo, a comparison of which with the later notices of Pliny and Ptolemy, illustrated by earlier histories and subsequent Itineraries, will furnish as complete a view of the classical geography of the country as the existing materials allow. The notices of Phœnicia, necessarily intermingled with those of Syria, are here omitted as having been considered in a separate article [PHœNICIA]. On the north Syria was separated from Cilicia by Mons Amanus. From the sea at the gulf of Issus to the bridge of the Euphrates in Commagene was a distance of 1400 stadia. On the east of the Euphrates, it was bounded by the Scenite Arabs, on the south by Arabia Felix and Egypt, on the west by the Egyptian sea as far as Issus (xvi. p. 749). He divides it into the following districts, commencing on the north: Commagene, Seleucis of Syria; Coelesyria; Phœnicia on the coast; Judæa inland. Commagene was a small territory, having Samosata for its capital, surrounded by a rich country. Seleucis, the fortress of Mesopo-

tamia, was situated at the bridge of the Euphrates in this district, and was assigned to Commagene by Pompey. Seleucia, otherwise called Tetrapolis, the best of the before-named districts, was subdivided according to the number of its four principal cities, Seleucia of Pieria, Antioch, Apameia, and Laodiceia. The Orontes flowed from Coele Syria through this district, having to the east the cities of Bambyce, Beroea, and Heracleia, and the river Euphrates. Heracleia was 20 stadia distant from the temple of Athena at Cyrrhestis. This gave its name to Cyrrhestica which extended as far as Antiochia to the south, touched the Amanus on the north, and was continuous with Commagene on the east. In Cyrrhestica were situated Gindarus, its capital, and near it Heracleum. Contiguous to Gindarus lay Pagrae of Antiochia, on the Amanus, above the plain of Antioch, which was watered by the Arcenthus, the Orontes, the Labotas, and the Oenoparus, in which was also the camp of Meleager; above these lay the table mount, Trapezæ. On the coast were Seleucia and Mount Pieria, attached to the Amanus, and Rhodus (*Ῥόδός*), between Issus and Seleucia. South of Antiochia was Apameia, lying inland; south of Seleucia Mount Casius and Anticasius; but the former was divided from Seleucia by the *embouchure* of the Orontes and the rock-hewn temple of Nymphæum; then Posidium a small town, Heracleia, Laodiceia, &c. The mountains east of Laodiceia, sloping gradually on their west side, had a steeper inclination on the east towards Apameia (named by the Macedonians Pella) and the Chersonese, as the rich valley of the Orontes about that city was called. Continuous with the district of Apameia, on the east, was the country of the phylarch of the Arabs, named Parapotamia, and Chalcidice, extending from the Massyas; while the Scenite Arabs also occupied the south, being less wild and less distinctively Arabs in proportion as they were brought nearer by position to the influences of Syrian civilisation. (*Ibid.* pp. 749—753.) Then follows the description of the coast, which belongs to Phœnicia (*sup.* p. 606), and his extraordinary mis-statement about Libanus and Antilibanus (p. 755) alluded to under those articles. According to this view, the western termination of Libanus was on the coast, a little to the south of Tripoli, at a place called *Θεοῦ πρόσχωρον*, while Antilibanus commenced at Sidon. The two ranges then ran parallel towards the east, until they terminated in the mountains of the Arabians, above Damascus, and in the two Trachones [TRACHONITIS]. Between these two ranges lay the great plain of Coele Syria, divided into several districts, the width at the sea 200 stadia, the length inland about double the width; fertilised by rivers, the largest of which was the Jordan, and having a lake called Gennesaritis [TIBERIAS MARE]. The Chrysorrhœas, which rose near Damascus, was almost wholly absorbed in irrigation. The Lycus and Jordan were navigated by the Aradians. The westernmost of the plains, along the sea-border, was called Macra (*Μάκρα ῥέδιον*), next to which was Massyas, with a hilly district in which Chalcis was situated as a kind of acropolis of the district, which commenced at Laodiceia ad Libanum. This hilly district was held by the Iturseans and Arabs [ITURÆA]. Above Massyas was the Royal Plain (*Αὐλὴν Βασιλευδῶν*) and the country of Damascus, followed by the Trachones, &c. (pp. 755, 756). This very confused and inaccurate description has been sufficiently corrected in the account above given of the Physical Geo-

graphy of Syria, and need not be further noticed than to observe that it is very strange that, after Syria had been occupied by the Macedonians and the Romans for so many years, and notwithstanding the frequent campaigns of the Roman legions in that country, even its main features were so little known.

Pliny confines Syria to the limits usually assigned it, that is he distinguishes between Syria and Palestine, which are confounded by Strabo. He describes Galilee as that part of Judæa which adjoins Syria (v. 14. s. 15), but coincides with Strabo in giving a description of the coast under the name of Phœnicia (19. s. 17). His notion of the direction of the ranges of Libanus and Antilibanus is more correct than that of Strabo; but his description of the coast of Phœnicia, like that of his predecessor, is far more correct than that of the interior of the country; while his grouping of the various districts is altogether arbitrary and incorrect. Thus, while he correctly describes Mount Lebanon as commencing behind Sidon, he makes it extend for 1500 stadia (a monstrous exaggeration, if the reading is correct) to Simyra, and this he calls Coele Syria. Then he loosely states the parallel range of Antilibanus to be equal to this, and adds a fact, unnoticed by other writers, that the two ranges were joined by a wall drawn across the intermediate valley. Within, i.e. east of, this last range ("post eum introitus") he places the region of Decapolis and the tetrarchies which he had before enumerated (*viz.* Trachonitis, Paneas, Abila, Arca, Ampeloessa, Gabe), and the whole extent of Palestine ("Palestinae tota latitudo"),—a confusion on the part of the author involving a double or triple error; for, 1st, unless Damascus be included in the Decapolis, the whole region lay south of Antilibanus; 2dly, the cities of the Decapolis lay in several tetrarchies, and therefore ought not to be distinguished from them as a separate district; 3dly, the tetrarchies themselves, which are wrongly enumerated, lay, for the most part, within Coele Syria proper, and only Abilene, in any proper sense, to the east of Antilibanus, although this description might loosely apply to Trachonitis also [TRACHONITIS]. But to descend to particulars.

Phœnicia terminates to the north, according to Pliny, at the island Aradus, north of the river Eleutherus, near Simyra and Marathos. On the coast were situated Carne, Balanea, Paltos, Gabala, the promontory on which lay Laodiceia Libera, Diopolis, Heracles, Charadrus, Posidium; then the promontory of Syria of Antioch, then that of Seleucia Libera, called also Pieria. Another egregious error follows this generally correct statement, and is accompanied with another example of exaggeration. Mons Casius he places above Seleucia ("super eam")—from which it is distant about 15 miles to the north, the Orontes intervening—and states its ascent to be xix. M.P., and its direct height iv. M.P., or nearly 20,000 feet!—its actual height being about 5,700 feet,—from the summit of which the sun might be seen above the horizon at the fourth watch, i.e. three hours before sunrise. North of this came the town Rhœos, behind which ("a tergo") Partes Syriæ, between the Rhœii Montes and the Taurus; then Myriandros, on the coast, and Mount Amanus, on which was Bomitæa, and which separated Syria from Cilicia (v. 20—22). In the interior the following districts belonged to Coele Syria: Apameia, divided by the river Marsyas from the tetrarchy of the Nazerini; Bambyce, otherwise called Hierapolis, but Mabog by the Syrians (famous for the worship

of the monstrous Atargatis, the Derceto of the Greeks); Chalcis ad Belum, which gave its name to the region of Chalcidene, the most fertile in Syria; then Cyrrhестice, named from Cyrrhus; the Gazatae, Gindareni, Gabeni; two tetrarchies named Granucomatae; the Emeseni; Hylatae; the Ituraeans and their kindred Baetarveni; the Mariammitani, the tetrarchy of Mammisea, Paradisus, Pagrae, Pinaritae; two other Seleucia, the one at the Euphrates, the other at Belus; the Cardytenses. All these he places in Coelesyria: the towns and peoples enumerated in the rest of Syria, omitting those on the Euphrates, which are separately described, are the Arethusii, Beroeenses, Epiphanoenses; on the east, the Laodiceans by Libanus, the Leucadii, Larisaei, besides seventeen tetrarchies with barbarous names not further specified. The towns named in connection with the Euphrates are, Samosata, the head of Commagene, xl. M. P. below the cataracts, where it receives the Marayas; Cingilla the end, and Immea the commencement, of Commagene; Epiphania, Antiochia ad Euphratem; then Zeugma, lxxii. M. P. from Samosata, celebrated for the bridge over the Euphrates—whence its name—which connected it with Apameia on the left bank of the river; Europus; Thapsacus, then called Amphipolis. On reaching Ura, the river turned to the east, leaving the vast desert of Palmyra on the right. Palmyra was cccxxxvii. M. P. from the Parthian city of Seleucia ad Tigrim, cciii. M. P. from the nearest part of the Syrian coast, and xxvii. M. P. from Damascus. Below ("infra") the deserts of Palmyra was the region Streulenda, and the above-named Hierapolis, Beroea, and Chalcis; and beyond ("ultra") Palmyra, Emesa and Elatius, half as near again ("dimidio propior") to Petra as was Damascus (lb. cc. 23—26).

It is difficult to discover many of these names in their Latin disguise still further obscured by corrupt readings; but many of them will occur in the more accurate and methodical notices of Ptolemy, in connection with which a comparative Geography of Ancient and Modern Syria may be attempted. The boundaries of Syria are fixed by Ptolemy consistently with earlier writers. On the N., Cilicia, part of Cappadocia, and Mons Amanus; on the W. the Syrian sea; on the S. Judaea; on the E. the Arabian desert as far as the ford of the Euphrates, near Thapsacus; then the river itself as far as Cappadocia (Ptol. v. 15. §§ 1—8).

The districts and towns are enumerated under the following subdivisions:—

i. THE COAST (§§ 2, 3) after Issus and the Cilician Gates. 1. Alexandria by the Issus. 2. Myriandrus. 3. Rhossus. 4. The Rhossian Rock (*σκόπελος*). 5. Seleucia of Pieria. 6. The mouth of the Orontes. 7. Poseidion. 8. Heracleia. 9. Laodiceia. 10. Gabala. 11. Paltos. 12. Balaneae. [Then follows Phoenicia from the Eleutherus to the Chorsus, S. of Dora. See PHOENICIA.] Of the above-named maritime towns of Syria, No. 2 alone has occurred in Xenophon, 5 parasangs S. of the Cilician Gates. Both this and most of the others occur in Strabo and Pliny, and the distances are furnished by the author of the Stadiasmus Maris Magni, and the Itinerarium Hierosolymitanum. Alexandria (*Iskanderin*), not mentioned by Strabo or Pliny, was 45 stadia from the Cilician Pylae. Myriandrus was 80 stadia from Alexandria. Its site has not been identified (Ainsworth, *Travels in the Track of the Ten Thousand*, p. 59), but is conjecturally, though probably, placed by Pococks on the river *Dulgehan*. (*Observations*

on Syria, p. 179.) Rhossus (now *Arsed*) is 90 stadia from Myriandrus; while the Rhossicus Scopulus, 80 stadia from Rhossus, is to be identified in the *Ras Khanzeer*, the southern promontory of the *Gulf of Iskanderin*, a well-known nautical feature on this coast. (lb. p. 180; Chesney, *Expedition*, i. p. 410.) Between Seleucia and the Rhossic rock the Stadiasmus inserts Georgia, 40 stadia from the former, 80 from the latter. Seleucia is clearly marked by extensive and important ruins. [SELEUCIA.] From Seleucia to the Orontes, 40 stadia. Between the Orontes and Poseidion the Stadiasmus enumerates Nymphaeum, 15 stadia; Long Island (*Μακρά νῆσος*), one of the *Pigeon Rocks*, 50 stadia; Chaladrus, or Chaladropolis (obviously the Charadrus of Ptolemy), 10 stadia; Sidonia, 60 stadia, above which was a lofty mountain called the Throne (*Θρόνος*), distant 80 stadia from Poseidion. Heracleia (*Ras-el-Basit*), situated on a cape called Polia, was 100 stadia from Poseidion, and Laodiceia 120 stadia direct distance from Heracleia; between which the Stadiasmus inserts Pasieria and Albus Portus, the former 120 stadia from Polia, the latter 30 stadia from Laodiceia, with a like interval between the two. From Laodiceia the Stadiasmus reckons 200 stadia to Balaneae (*Banias*), in direct distance, subdivided as follows: from Laodiceia to a navigable river, probably *Nahr-el-Kebir*, 70 stadia; from that to Gabala (*Jebeli*), 80; to Paltus (*Boldo*), 30; to Cape Balaneae, 70 stadia.

ii. BY THE EUPHRATES (§ 11). 1. Cholmadas. 2. Samosata.

iii. PIERIA (§ 12). 1. Pinar. 2. Pagrae. 3. The Syrian Gates. This was the N.-western part of the country, where *Bagras* still marks about the centre of the district. [PAGRAE.]

iv. CYRRHESTICE (§ 13). 1. Ariseria. 2. Rhegias. 3. Buba. 4. Heracleia. 5. Niara. 6. Hierapolis. 7. Cyrrhus. 8. Berrhoea. 9. Baena. 10. Paphara. This district lay to the east of Pieria, and corresponded with the fertile plain watered by the three streams that flow into the lake of Antioch, the Labotas, the Arcenuths, and the Oenoparas of Strabo; on the last and easternmost of which, now called the *Afrin*, the modern village of *Corus* still represents the ancient Cyrrhus, the capital of the district to which it gave its name. This part of Syria is so little known that it is impossible to identify its other ancient towns, the names of which, however, might doubtless be recovered in existing villages or sites. The village of *Corus*, which has ruins in its vicinity, is situated on the slopes of the Taurus, about 40 miles N. by W. of Aleppo and 15 miles NW. of *Kilis*, the seat of the Turcoman government, whose limits nearly correspond with those of the ancient Cyrrhestice. (Chesney, *Euphrates Expedition*, vol. i. p. 422, and map i.)

v. BY THE EUPHRATES (§ 14). 1. Urima. 2. Arustia. 3. Zeugma. 4. Europus. 5. Caecilia. 6. Bethamania. 7. Gerrhe. 8. Arimara. 9. Eragiza or Erhasiga. These towns of the Euphrates were situated lower down the stream than those mentioned above (iii.), apparently between *Samosat* and the river *Sajur*, a tributary of the Euphrates, which, rising near *Ain Tab*, enters that river a little below some ancient ruins, supposed to represent the Caecilia of Ptolemy (No. 5). The names of several of these towns are still preserved in the native villages situated between the *Sajur* and the Euphrates; and it is clear that the geographer did

not intend to say that all these towns were on the river. The castle of *Oroum*, not far above *Birch-Jik* and *Port William*, is *Urima* (No. 1 in the list), to the west of which, not far from *Aia Tab*, is the small village of *Arul*, *Arulis* (No. 2). (Chesney, p. 419.)

vi. **SELEUCUS** (§ 15). 1. Gephyra. 2. Gindarus. 3. Imma. The Seleucia of Ptolemy comprehended a small part only of that district described under the same name by Strabo, probably that tract of coast to the north of the Orontes, in which Seleucia Pieria was situated. [SELEUCUS; SELEUCIA PIERIA.]

vii. **CASSIOTIS** (§ 16). 1. Antioch on the Orontes. 2. Daphne. 3. Bactikalle. 4. Audeia (*al. Lydia*). 5. Seleucia ad Belum. 6. Larissa. 7. Epiphaneia. 8. Raphanese. 9. Antaratud. 10. Marathus. 11. Mariame. 12. Mamuga. This district comprehended the coast from the mouth of the Orontes to Aradus, so including part of Phoenice, while to the east it extended as far as the Orontes; thus corresponding nearly with the pashalic of Tripoli in the modern division of the country. This also was part of Strabo's Seleucia, in which he places Antioch. Of the towns recited, 7, 6, 5, 1, 2 were situated at or near the Orontes; 8, 9, and 10 on the coast (see under the names); 3, 4, 11, and 12 have not been identified.

viii. **CHALYBONITIS** (§ 17). 1. Thema. 2. Acoraca (*al. Acoraba*). 3. Derrhima. 4. Chalybon. 5. Spelunca; and, by the Euphrates, 6. Barbarissus. 7. Athia. Chalybonitis received its name from No. 4 in the list of cities, afterwards called Beroea by Seleucus Nicator, and so designated by Strabo, situated about half-way between Antioch and Hierapolis. [BEROEA, No. 3.] This fixes the district to the east of Cassiotis, in the pashalic of Aleppo, whose renowned capital called in Arabic *Chaleb*, is the modern representative of Chalybon, which had resumed its ancient name as early as the time of Ptolemy, unless it had rather retained it throughout among the natives. The district extended from the Orontes to the Euphrates. The sites have not been identified.

ix. **CHALCIDICE** (§ 18). 1. Chalcia. 2. Asaphaidama. 3. Tolmideusa. 4. Maronias. 5. Coara. This district lay south of Aleppo, and therefore of Chalybonitis, according to Pococke (*Observations on Syria*, p. 149), which is confirmed by the existence of *Kemasserin*, which he takes to be identical in situation with Chalcia, and which, among Arab writers, gives its name to this part of Syria, and to the gate of Aleppo, which leads in this direction. [CHALCIS, No. 1.]

x. **AFAMENE** (§ 19). 1. Nazaba (*al. Nazama*). And on the east of the Orontes, 2. Thelmenissus (*al. Thelbenissus*). 3. Apameia. 4. Emisa. This is comprehended in Strabo's Seleucia, and is easily identified with the district of *Homs*. [See *EMESA*, &c.]

xi. **LAODICENE** (§ 20). 1. Scabiosa Laodiccia. 2. Paradisus. 3. Jabruda. To the south of the former, higher up the Orontes, also comprehended in the Seleucia of Strabo. No. 1 is identical with Strabo and Pliny's Laodiccia ad Libanum, placed by Mr. Porter and Dr. Robinson at *Tell Neby Mindan* on the left bank of the Orontes, near *Lake Hom*, Paradisus (2), still marked by a pyramid, on which are represented hunting scenes. (See above, p. 495, *s.v.* *ORONTES*.) Dr. Robinson so nearly agrees with this identification as to place Paradisus at *Juseikh-el-Kadim*, which is only a few miles distant from

the pyramid of *Hurnul* to the east. (Robinson, *Bib. Res.* 1852, p. 556; Porter, *Five Years in Damascus*, vol. ii. p. 339.) Jabruda (3) is distinctly marked by *Yabrud* on the east of Antilibanus, a town mentioned by writers of sacred geography as an episcopal city in the fourth century, a distinction which it still retains.

xii. **PHOENICE**, inland cities (§ 21). 1. Arca. 2. Palaeobiblus. 3. Gabala. 4. Caesaria Panias. These have been noticed under the articles *PHOENICE*, &c.

xiii. **COELESYRIA**, cities of the Decapolis (§§ 22, 23). 1. Heliopolis. 2. Abila, named of Lymanias. 3. Saana. 4. Ina. 5. *Damascus*. 6. Samula. 7. Abida. 8. *Hippus*. 9. Capitolia. 10. *Gadara*. 11. Adra. 12. *Scythopolis*. 13. *Gerasa*. 14. *Pella*. 15. *Dion*. 16. *Gadara*. 17. *Philadelpheia*. 18. *Canatha*. The statement of the geographer that these are the cities of the Decapolis, preceding, as it does, the enumeration of eighteen cities, can only be taken to mean that the ten cities of the Decapolis were comprehended in the list, and that the remainder might be regarded as situated in that region. It is remarkable, too, that the name Coelesyria is here used in a more restricted and proper sense than as the heading of the chapter under consideration, where it is equivalent to Syria in its widest acceptation. According to Pliny the nine cities marked by italics in the above list, with the addition of Raphana,—apparently the Raphanese of Ptolemy in Cassiotis,—properly constituted the cities of the Decapolis, according to most authorities. These and the remaining cities require a very large district to be assigned to this division of the country, comprehending the whole length of the *Bab's*, i.e. Coelesyria Proper, from Heliopolis (1) (*Boalbek*) to Philadelpheia (17) (*Ammon*), and in width from Damascus almost to the Mediterranean. Abila of Lymanias (2), has only lately been identified, and attracted the notice which it deserves, as the capital of the tetrarchy of Abilene, mentioned by St. Luke, in connection perhaps with this same Lymanias, whose name is attached to it by the geographer. (*St. Luke*, iii. 1.) It is situated in the heart of Antilibanus, on the north side of the river *Barada*, where the numerous remains of antiquity and some inscriptions leave no doubt of the identity of the site. (De Saulcy, *Voyage autour de la Mer Morte*, vol. ii. pp. 593—604; Porter, *Damascus*, vol. i. pp. 15, 102, 261—273; Robinson, *Bib. Res.* 1852, pp. 479—484.)

xiv. **PALMYRENE** (§ 24). 1. Rhesapha. 2. Cholla. 3. Oriza. 4. Putea. 5. Adada. 6. Palmyra. 7. Adacha. 8. Danaba. 9. Goaria. 10. Aoria (*al. Aueira*). 11. Casama. 12. Odmana. 13. Atera; and, near the Euphrates, 14. Alalis. 15. Sura. 16. Alamatha. This district obviously lay to the east of the last-named, and south of Chalybonitis. It comprehended the vast desert region in which Palmyra is situated, but which is almost a blank on the map, so as to defy all attempts to identify the sites.

xv. **BATANAEA** (§ 26). 1. Gerra. 2. Elere. 3. Nelaza. 4. Adrama. This district will best be considered in connection with Trachonitis. [G.W.]

IV. *History*.—The earliest accounts which we possess of Syria represent it as consisting of a number of independent kingdoms. Thus we hear of the kings of Maacha in the time of David (2 Sam. x. 6), of the kings of the neighbouring town of Gasher in the time of Solomon (*ib.* iii. 3, xiii. 37), &c. But of all the Aramaean monarchies the most

powerful in the time of Saul and David was Zobah, as appears from the number of men which that people brought into the field against David (*Jb.* viii. 4), and from the rich booty of which they were spoiled by the Israelites (*Jb.* v. 7). Even after sustaining a signal defeat, they were able in a little time to take the field again with a considerable force (*Jb.* x. 6). David nevertheless subdued all Syria, which, however, recovered its independence after the death of Solomon, B.C. 975. From this period Damascus, the history of which has been already given [*DAMASCUS*, Vol. I. p. 748], became the most considerable of the Syrian kingdoms. Syria was conquered by Tiglath-Pileser, king of Assyria, about the year 747 B.C., and was annexed to that kingdom. Hence it successively formed part of the Babylonian and Persian empires; but its history presents nothing remarkable down to the time of its conquest by Alexander the Great. After the death of that conqueror in B.C. 323, Syria and Mesopotamia fell to the share of his general Seleucus Nicator. The sovereignty of Seleucus, however, was disputed by Antigonus, and was not established till after the battle of Ipsus, in 301 B.C., when he founded Antioch on the Orontes, as the new capital of his kingdom. [*ANTIOCHIA*, Vol. I. p. 142.] From this period the descendants of Seleucus, known by the appellation of Seleucidae, occupied the throne of Syria down to the year 65 B.C., when Antiochus XIII. Asiaticus was dethroned by Pompey, and Syria became a Roman province. (*Plut. Pomp.* 39; *Appian, Syr.* 46; *Eutrop.* vi. 14.) Into the history of Syria under the Seleucidae it is unnecessary to enter, since a table of that dynasty is given in the *Dictionary of Biography* [Vol. III. p. 769], and the public events will be found described in the lives of the respective monarchs.

The tract of which Pompey took possession under the name of Syria comprised the whole country from the gulf of Issus and the Euphrates to Egypt and the deserts of Arabia. (*Appian, Syr.* 50, *Mith.* 106.) The province, however, did not at first comprehend the whole of this tract, but consisted merely of a strip of land along the sea-coast, which, from the gulf of Issus to Damascus, was of slender breadth, but which to the S. of that city spread itself out as far as the town of Canatha. The rest was parcelled out in such a manner that part consisted of the territories of a great number of free cities, and part was assigned to various petty princes, whose absolute dependence upon Rome led to their dominions being gradually incorporated into the province. (*Appian, Syr.* 50.) The extent of the province was thus continually increased during the first century of the Empire; and in the time of Hadrian it had become so large, that a partition of it was deemed advisable. Commagene, the most northern of the ten districts into which, according to Ptolemy (v. 15), the upper or northern Syria was divided, had become an independent kingdom before the time of Pompey's conquest, and therefore did not form part of the province established by him. [*COMMAGENE*, Vol. I. p. 651.] The extent of this province may be determined by the free cities into which it was divided by Pompey; the names of which are known partly from their being mentioned by Josephus (*Ant.* xiv. 4. § 4), and partly from the era which they used, namely that of B.C. 63, the year in which they received their freedom. In this way we are enabled to enumerate the following cities in the original province of Syria: Antiocheia, Se-

leuceia in Pieria, Epiphaneia, between Arethusa and Emesa, Apameia; nearly all the towns of the Decapolis, as Abila (near Gadara), Antiocheia ad Hippum or Hippos, Canatha, Dium, Gadara, Pella, and Philadelpheia; in Phoenicia, Tripolis, Sidon, Tyrus, Dora; in the north of Palestine, Scythopolis and Samaria; on the coast, Turris Stratonis (Caesarea), Joppe, Iamneia, Azotus, Gaza; and in the south, Marissa. The gift of freedom to so many cities is not to be attributed to the generosity of the Romans, but must be regarded as a necessary measure of policy. All these towns had their own jurisdiction, and administered their own revenues; but they were tributary to the Romans, and their taxes were levied according to the Roman system established on the organisation of the province. ("Syria tum primum facta est stipendiaria," *Vell. Pat.* ii. 37.) The first governors of Syria, and especially Gabinus, who was proconsul in the year 57 B.C., took much pains in restoring the cities which had been destroyed. (*Joseph. Ant.* xiv. 5, § 3.) The divisions established in Judaea by Gabinus have been noticed in another article. [*PALAESTINA*, Vol. II. p. 532.] Caesar, during his expedition against Pharnaces, B.C. 47, confirmed these cities in their rights, and likewise extended them to others, as Gabala, Laodiceia ad Mare, and Ptolemais. (*Eckhel*, vol. iii. p. 314, sq.; *Norisius, Ep. Syrom.* pp. 175—213, 450.) Of the regulations adopted in Syria during the reign of Augustus we have little information.

The same political reasons which dictated the establishment of these free cities, where it was possible to do so, rendered the continuance of dynastic governments necessary in the eastern and southern districts of the province, where either the nomadic character of the population, or its obstinate adherence to ancient institutions was adverse to the introduction of new and regular forms of government. These dynasties, however, like the free cities, were used as the responsible organs of the Roman administration, and were tributaries of Rome. Thus, in the histories of Commagene and Judaea, we find instances in which their sovereigns were cited to appear at Rome, were tried, condemned, and punished. The Roman idea of a province is essentially a financial one. A province was considered as a "praedium populi Romani" (*Cic. Verr.* ii. 3); and hence the dynasties of Syria may be considered as belonging to the province just as much as the free towns, since, like them, they were merely instruments for the collection of revenue. (*Cf. Huschke, Ueber den zur Zeit der Geburt Jesu Christi gehaltenen Census*, pp. 100—112.) Thus we find these petty sovereigns in other parts of the world regarding themselves merely as the agents, or procurators, of the Roman people (*Sall. Jug.* 14; *Maffei, Mus. Ver.* p. 234); nor were they allowed to subsist longer than was necessary to prepare their subjects for incorporation with the province of which they were merely adjuncts.

The Syrian dynasties were as follows: 1. Chalcis ad Belum. 2. The dynasty of Arethusa and Emesa. 3. Abila. 4. Damascus. 5. Judaea. 6. Palmyra. These states have been treated of under their respective names, and we shall here only add a few particulars that may serve further to illustrate the history of some of them during the time that they were under the Roman sway. All that is essential to be known respecting the first three dynasties has already been recorded. With regard to Damascus, it may be added that M. Aemilius Scaurus, the first

governor of Syria appointed by Pompey, after having punished its ruler, the Arabian prince Aretas, for the attacks which he had made upon the province before it had been reduced to order, concluded a treaty with him in B. C. 62. It is to this event that the coins of Scourus refer, bearing the inscription *REX ARETAS*. (Eckhel, vol. v. p. 131; cf. Dion Cass. xxvii. 15; Appian. Syr. 51; Joseph. Ant. xiv. 4. § 5, 5. § 1.) Damascus was dependent on the Romans, and sometimes had a Roman garrison (Hieron. in *Jasi*. c. 17; Joseph. Ant. xiv. 11. § 7), though it cannot be doubted that the Arabian kings were in possession of it, on the condition of paying a tribute. It has already been remarked that the city was in the possession of an ethnarch of Aretas in A. D. 39; and it was not till the year 105, when Arabia Petraea became a province, that Damascus was united with Syria, in the procuratorship of Cornelius Palma. (Eckhel, vol. iii. p. 330.)

On the other hand, Judaea appears to have been annexed to the province of Syria immediately after its conquest by Pompey in B. C. 63 (Dion Cass. xxxvii. 15, 16; Eutrop. vi. 14; Liv. Ep. 102; Strab. xvi. p. 762. sq.; Joseph. B. J. i. 7. § 7; Amm. Marc. xiv. 8. § 12); though it retained its own administration, with regard especially to the taxes which it paid to the Romans. (Joseph. Ant. xiv. 4. § 4, & J. i. 7. § 6.) The race of the Jewish kings ended with Aristobulus, whom Pompey, after the capture of Jerusalem, carried to Rome to adorn his triumph (Appian. Syr. 50; Dion Cass. xxxvii. 16; Plut. Pomp. 45; Joseph. Ant. xiv. 4, &c.) Hyrcanus, the brother of Aristobulus, was left indeed in Judaea as chief priest and ethnarch, in which offices he was confirmed by Caesar; but his dignity was only that of a priest and judge. (Dion Cass. l. c.; and Joseph. l. c. and xiv. 7. § 2, 10. § 2.) The land, like the province of Syria, was divided for the convenience of administration into districts or circles of an administrative constitution. (Joseph. B. J. i. 8. § 5); and during the constant state of war in which it was then either the theatre of internal disorders, or by the incursions of the Arabians and Parthians, the presence of Roman troops, and of the governor of the province himself, was almost always necessary.

It has been already related (JERUSALEM, Vol. I. p. 297) that Antigonus, the son of Aristobulus, obtained possession of the throne with the assistance of the Parthians in B. C. 40. In the following year the Parthians were expelled from Syria by Ventidius. (Dion Cass. xlii. 39—41; Liv. Epit. 127.) and in B. C. 38 Judaea was conquered by Sosius. Antiochus, son of Antigonus, was captured and executed, and Herod, surnamed the Great, was raised upon the throne, which had been promised to him by the Romans. (Dion Cass. xlii. 19—22; Plut. Ant. 34. sq.; Tac. Hist. v. 9; Appian. B. C. 73. and Ant. xvi. p. 763.) From this time Judaea again became a kingdom. With regard to the manner in which the Romans may be supposed to have administered the province, it is a subject which has attracted the attention of the emperor as lord paramount, and of the king and the absolute dominion of the king was recognised by the payment of a tribute and the granting of subsidiary rights. (Joseph. Ant. xiv. 2. § 4; Tac. Hist. v. 9. sq.) Therefore, it is to be expected that a procurator of the emperor, with the rank of a senator, was assigned part of the revenue of the province. (Joseph. Ant. xv.

4. §§ 2, 4.) According to an ordinance of Caesar, the places in the jurisdiction of Jerusalem, with the exception of Joppa, had to pay a yearly tribute of a fourth of all agricultural produce, which was to be delivered the following year in Sidon, besides a tenth to be paid to Hyrcanus. (Ibid. xiv. 14. § 4) In the seventh, or Sabbath year, however, the tribute was intermitted. Besides this tribute, there was a capitation tax; and it was for the organizing of the tax that the census mentioned in the Gospel of St. Luke (ii. 1, 2) was taken in the year of our Saviour's birth, which appears to have been conducted by Herod's officers according to a Roman form usual. The division of Judaea among the sons of Herod, and its subsequent history till it was incorporated in the province of Syria by the emperor Claudius, A. D. 44 (Tac. Ann. xii. 23, Hist. i. 9), have been already narrated [Vol. II. p. 331]; as well as the fate of Jerusalem under the emperors Titus and Hadrian. [Vol. II. p. 26, seq.]

With regard to Palmyra, the sixth of the dynasties before enumerated, we need here only add to what has been already said [Vol. II. p. 536] that it was united to the province of Syria by Hadrian, and has from him the name of *Ἀρμενία Παλμυρενική*. (Steph. B. p. 498, ed. Meineke; cf. Gruter, p. 86. 8.) It is whether it became a colony with the *Jus Italicum* on that occasion or at a later period, cannot be determined.

Respecting the administration of the province of Syria, it may be mentioned that the series of Roman governors commences with M. Scourus, who was left there by Pompey in the year 62 B. C. with the title of quaestor pro praetore. Scourus was succeeded by two pro-praetores, L. Marcus Philippus, 61—60, and Lentulus Marcellinus, 59—58; and, on account of the war with the Arabs, Galenus was sent there as proconsul, with an army (Appian. Syr. 51; cf. Joseph. xiv. 4, seq.; B. J. i. 6—8; Eckhel, vol. v. p. 131). We then find the following names: Crassus, 55—53; Cassius, the quaestor, 53—51; M. Calpurnius Bibulus, proconsul (Dreumann, Gesch. Roms, vol. ii. pp. 101, 112—113). After the battle of Pharsalus, Caesar gave Syria to Sex. Julius Caesar, B. C. 47, who was put to death in the following year by Cassius and Brutus, an adherent of Pompey. (Ibid. p. 125, iii. p. 764.) Brutus retained possession of the province till the end of 44, when Cassius seized it, and assumed the title of proconsul. (Cic. ad Fam. xii. 11.) After the battle of Philippi, Antony appointed to it his lieutenant, L. Decidius Saxa, B. C. 41, whose overthrow by the Parthians in the following year occasioned the loss of the whole province. (Dion Cass. xlii. 24; Liv. Epit. 127.) The Parthians, however, were driven out by Ventidius, another of Antony's lieutenants, in the autumn of 39. (Dion Cass. l. c. 39—43; Liv. ib.; Plut. Ant. 33.) Syria continued to be governed by Antony's officers till his defeat at Actium in 31, namely, C. Sosius, B. C. 30 (by whom, as we have said, the throne of Judaea was given to Herod), L. Munatius Plancus, B. C. 33, and L. Bibulus, B. C. 31. In B. C. 30, Octavian assumed Syria to his legate, Q. Didius. After the division of the provinces between the emperor and Caesar in A. D. 27, Syria continued to have as governors least Augusti pro praetores, who were always consules. (Suet. Tib. 41; Appian. Syr. 51.) The most accurate accounts of the governors of Syria, from A. C. 47 to A. D. 69, will be found in Nannius, *Compendium Ptolemaei*. (Opp. vol. iii. pp. 634—631.) The

residence was Antioch, which, as the metropolis of the province, reached its highest pitch of prosperity. It was principally this circumstance that induced the emperor Hadrian to divide Syria into three parts (*Spart. Hadr.* 14), namely: 1. SYRIA, which by way of distinction from the other two provinces was called Syria Coele, Magna Syria, Syria Major, and sometimes simply Syria. (*Gruter, Inscr.* 346. 1, 1091. 5; *Orelli, Inscr.* no. 3186, 4997; *Galen, de Antidot.* i. 2.) Antioch remained the capital till the time of Septimius Severus, who deprived it of that privilege on account of its having sided with Pescennius Niger, and substituted Laodicea, which he made a colony in its stead (*Capitol. M. Anton.* 25; *Arid Cass.* 9; *Ulp. Dig.* 50. tit. 15. s. 1. § 3); and although Caracalla procured that its rights should be restored to Antioch, yet Laodicea retained its title of metropolis, together with a small territory comprising four dependent cities, whilst Antioch, which had also been made a colony by Caracalla, was likewise called *Metrocolonia* (*Corp. Inscr. Gr.* no. 4472; *Paul. Dig.* 50. tit. 15. s. 8. § 5; *Eckhel, iii.* p. 302, sq., 319, sq.) II. SYRIA PHOENICE, or SYROPHOENICE, under a *legatus Augusti pro praetore* (*Murat.* 2009. 1, 2; *Marini, Atti, &c.* p. 744), consisted of three parts, with three metropolitan cities, namely: 1. Tyre, which first obtained the title of metropolis, with relation to the Roman province, under Hadrian (*Suidas, ii.* p. 147, *Bernh.*), though it had that appellation previously with relation to its own colonies (*Strab. xvi.* p. 756; *Eckhel, vol. iii.* p. 386). 2. Damascus, which from the time of Hadrian became a metropolis, with a small territory comprising five towns. (*Just. Mart. Dial. c. Tryphone.* c. 78; *Tertull. adv. Marcian.* iii. 13; *Eckhel, vol. iii.* pp. 331—333.) 3. Palmyra, which appears to have been the residence of a procurator Caesaris; whence we may infer that it was the centre of a fiscal circle (*Notit. Dign.* i. p. 85; *Ulpian, Dig.* 50. tit. 15. s. 1. § 5; *Procop. de Aed.* ii. 11; *Corp. Inscr. Gr.* no. 4485, 4496—4499.) A fourth metropolis, Emesa, was added under Heliogabalus (*Eckhel, iii.* p. 311; *Ulpian, Dig.* 50. tit. 15. s. 1. § 4). Trachonitis also formed a separate circle at this time, with the village of Phaina as its *metropolis* (*Corp. Inscr. Gr.* 4551; *Orell. Inscr.* vol. ii. p. 437, no. 5040). III. SYRIA PALAESTINA, from the time of Hadrian administered by a *legatus Augusti pro praet.* The name of Syria Palaestina does not appear on coins till the time of the Antonines (*Eckhel, iii.* p. 435; cf. *Aristid. ii.* p. 470, *Dind.*; *Galen. de Simpl. Medic.* iv. 19; *Just. Mart. Apol.* i. 1; *Corp. Inscr. Gr.* no. 4029, 4151, &c.). Its metropolis was Caesarea, anciently *Turris Stratonis* (*Eckhel, iii.* p. 432).

This division of the province of Syria was connected with an alteration in the quarters of the three legions usually stationed in Syria. In the time of Dion Cassius (iv. 23) the Legio VI. Scythica was cantoned in Syria, the Legio III. Gallica in Phoenicia, and the Legio VI. Ferrata in Syria Palaestina. The system of colonisation which was begun by Augustus, and continued into the third century of our era, was also adapted to insure the security of the province. The first of these colonies was Berytus, where Augustus settled the veterans of the Legio V. Macedonica and VIII. Augusta. It was a *Colonia juris Italici*. (*Eckhel, iii.* p. 356; *Orelli, Inscr.* no. 514; *Ulpian, Dig.* 50. tit. 15. s. 1. § 1; *Euseb. Chron.* p. 155, *Scal.*) Augustus also founded Heliopolis (*Baalbek*), which received the *jus Italicum* under Septimius Severus (*Ulpian, l. c.*; *Eckhel, iii.*

p. 334). Under Claudius was founded Ptolemais (Ace), which did not possess the *jus Italicum* (*Ulpian, ib.* § 3; *Plin. v.* 1; *Eckhel, iii.* p. 424). Vespasian planted two colonies, Caesarea (*Turris Stratonis*) and Nicopolis (Emmaus) *Paul. Dig.* 50. tit. 15. s. 8. § 7; *Eckhel, iii.* p. 430); which latter, however, though originally a military colony, appears to have possessed neither the right, nor the name of a *colonia* (*Eckhel, iii.* p. 454; *Joseph. Bell. Jud.* vii. 6; *Sozomen, Hist. Eccles.* v. 21.) The chief colony founded by Hadrian was Aelia Capitolina (Jerusalem), whose colonists, however, were Greeks, and therefore it did not possess the *jus Italicum*. (*Dion Cass. lxxix.* 12; *Euseb. Hist. Eccles.* iv. 6; *Malalas, xi.* p. 279, *ed. Bonn.*; *Ulpian, l. c.* § 6.) Hadrian also probably founded Palmyra. Under Septimius Severus we have Laodicea, Tyrus, and Sebaste (Samaria), of which the first two possessed the *jus Italicum*. (*Ulpian, ib.* § 3. and 7; *Eckhel, iii.* p. 319, 387, seq., 440, seq.) Caracalla founded Antioch and Emesa (*Ulpian, ib.* § 4; *Paul. ib.* § 5; *Eckhel, iii.* 302, 311), Elagabalus Sidon (*Eckhel, iii.* p. 371), and Philippus, apparently, Damascus (*ib.* p. 331). To these must be added two colonies whose foundation is unknown, Capitolas, of whose former name we are ignorant (*Paul. Dig.* 50. tit. 15. s. 8. § 7; *Eckhel, iii.* p. 328, seq.), and Caesarea ad Libanum (Arca). (*Eckhel, ib.* p. 361.)

At the end of the fourth century of our era, Syria was divided into still smaller portions, namely: 1. Syria prima, governed by a consularis, with the metropolis of Antioch and the following cities: Seleucia, Laodicea, Gabala, Paltos, Beroea, Chalcis. 2. Syria Secunda, under a praeses, with Apamea for its chief city, and the dependent towns of Epiphaneia, Arethusa, Larissa, Mariamne, Balanea, Raphanea, and Seleucia ad Belum. Malalas (xiv. p. 265, *ed. Bonn.*) ascribes its separation from Syria Prima to the reign of Theodosius II., which, however, may be doubted. Böcking attributes the division to Theodosius the Great (*ad Not. Dignit.* i. p. 129). 3. Phoenicia Prima, under a consularis, with the metropolis of Tyrus and the cities Ptolemais, Sidon, Berytus, Byblos, Botryo, Tripolis, Arcae, Orthosias, Aradus, Antaradus, Caesarea Paneas. 4. Phoenicia Secunda, or Phoenicia ad Libanum, under a praeses, having Damascus for its capital, and embracing the cities of Emesa, Laodicea ad Libanum, Heliopolis, Abila, Palmyra. It was first separated by Theodosius the Great. 5. Palaestina Prima, administered by a consularis, and in the years 383—385 by a proconsul. Its chief city was Caesarea, and it comprehended the towns of Dora, Antipatris, Diospolis, Azotus ad Mare, Azotus Mediterranea, Eleutheropolis, Aelia Capitolina (Jerusalem), Neapolis, Livias, Sebaste, Anthedon, Diocletianopolis, Joppa, Gaza, Raphia, Ascalon, &c. 6. Palaestina Secunda, under a praeses, with the capital of Scythopolis, and the towns of Gadara, Abila, Capitolas, Hippos, Tiberias, Dio Caesarea, and Gabae. 7. Palaestina Tertia. This was formed out of the former province of Arabia. (*Procop. de Aed.* v. 8.) It was governed by a praeses, and its chief city was Petra. (*Cf. PALAESTINA, Vol. II.* p. 533.)

With respect to these later subdivisions of Syria, the reader may consult Hierocles, p. 397, *ed. Bonn.*, with the notes of Wesseling, p. 518, *sqq.*; the *Notitia Dignit.* i. p. 5, *seq.*, and the commentary of Böcking, pp. 128—140, 511; Bingham, *Orig. Eccl.* vol. iii. p. 434, *seq.*; Norisius, *de Epoch. Syromaced.* in *Opp.* vol. ii. p. 374, *sqq.*, p. 419, *seq.*

In the year 632, Syria was invaded by the Saracens, nominally under the command of Abu Obeidah, one of the "companions" of Mahomet, but really led by Chaled, "the sword of God." The easy conquest of Bostra inspired the Moslems to attack Damascus; but here the resistance was more determined, and, though invested in 633, the city was not captured till the following year. Heraclius had been able to collect a large force, which, however, under the command of his general Werdan, was completely defeated at the battle of Aisnadin; and Damascus, after that decisive engagement, though it still held out for seventy days, was compelled to yield. Heliopolis and Emesa speedily shared the fate of Bostra and Damascus. The last efforts of Heraclius in defence of Syria, though of extraordinary magnitude, were frustrated by the battle of the Yermuk. Jerusalem, Aleppo, and Damascus successively yielded to the Saracen arms, and Heraclius abandoned a province which he could no longer hope to retain. Thus in six campaigns (633-639) Syria was entirely wrested from the Roman empire. (Gibbon, *Decline and Fall*, ch. 51; Marquardt, *Röm. Alterth.* vol. iii.) [T. H. D.]

SYRIAE PORTAE (Συρίαί πύλαι), a pass between Mount Amanus and the coast of the bay of Issus, which formed a passage from Cilicia into Syria. It was 3 stadia in length, and only broad enough to allow an army to pass in columns. (Xenoph. *Anab.* i. 4. § 4; Arrian, *Anab.* ii. 8; Plin. v. 18; Ptol. v. 15. § 12; Strab. xiv. p. 676.) This mountain pass had formerly been closed up at both ends by walls leading from the rocks into the sea; but in the time of Alexander they seem to have existed no longer, as they are not mentioned by any of his historians. Through the midst of this pass, which is now called the pass of *Beilan*, there flowed a small stream, which is still known under the name of *Merkes-ou*, its ancient name being *Cersus*. [L. S.]

SYRIAS (Συρίας), a headland in the Euxine, on the coast of Paphlagonia, which, to distinguish it from the larger promontory of Carambis in its vicinity, was also called *ἑκπαι Ἀερῆ*. (Marcian. p. 72; Arrian, *Periplus*. P. E. p. 15; Anonym. *Periplus*. P. E. p. 7.) Its modern name is *Cape Indje*. [L. S.]

SYRIENL [SYRISTRENE.]

SYRNOLA (*Itin. Hier.* p. 568), a town in the north-western part of Thrace, between Philippopolis and Parembole. [J. R.]

SYRO-PHOENICE. [SYRIA, p. 1079.]

SYROS or SYRUS (Σύρος, also Συρίν, Hom. *Od.* xv. 403, and Σύρα, Diog. Laert. i. 115; Hesych.; Suid.: *Eth. Σύριος*: *Syra* (Σύρα), and the present inhabitants call themselves Συριῶται or Συριανοί, not Σύριοι), an island in the Aegean sea, one of the Cyclades, lying between Rheneia and Cythnos, and 20 miles in circumference, according to some ancient authorities. (Plin. iv. 12. s. 22.) Syros produces good wine, but is upon the whole not fertile, and does not deserve the praises bestowed upon it by Homer (*l. c.*), who describes it as rich in pastures, cattle, wine, and wheat. It is usually stated upon the authority of Pliny (xxxiii. 12. s. 56) that Syros produced Sil or yellow ochre; but in Sillig's edition of Pliny, *Syros* is substituted for *Syros*.

Syros had two cities even in the time of Homer (*Od.* xv. 412), one on the eastern, and the other on the western side of the island. The one on the eastern side, which was called Syros (Ptol. iii. 15. § 30), stood on the same site as the modern capital

of the island, which is now one of the most flourishing cities in Greece, containing 11,000 inhabitants, and the centre of a flourishing trade. In consequence of the numerous new buildings almost all traces of the ancient city have disappeared; but there were considerable remains of it when Tournefort visited the island. At that time the ancient city was abandoned, and the inhabitants had built a town upon a lofty and steep hill about a mile from the shore: this town is now called *Old Syra*, to distinguish it from the modern town, which has arisen upon the site of the ancient city. The inhabitants of *Old Syra*, who are about 6000 in number, are chiefly Catholics, and, being under the protection of France and the Pope, they took no part in the Greek revolution during its earlier years. Their neutrality was the chief cause of the modern prosperity of the island, since numerous merchants settled there in consequence of the disturbed condition of the other parts of Greece.

There are ruins of the second ancient city on the western coast, at the harbour of *Maria della Grazia*. Ross conjectures that its name may have been *Grynche* or *Gryncheia*, since we find the Γρυγχῆς, who are otherwise unknown, mentioned three times in the inscriptions containing lists of the tributary allies of Athens. There was another ancient town in the island, named Eschatia. (Böckh, *Inschr.* no. 2347, c.) Pherecydes, one of the early Greek philosophers, was a native of Syros. (Comp. Strab. x. pp. 485, 487; Scylax, p. 22; Steph. B. s. v.; Tournefort, *Voyage*, vol. i. p. 245, seq. Engl. tr.; Prokesch, *Erinnerungen*, vol. i. p. 55, seq.; Ross, *Reisen auf den Griech. Inseln*, vol. i. p. 5, seq., vol. ii. p. 24, seq.; Fiedler, *Reise*, vol. ii. p. 164, seq.)

SYRTICA REGIO (ἡ Συρτική, Ptol. iv. 3), a tract on the coast of N. Africa, between the Syrtis Major and Minor, about 100 miles in length. (Strab. xvii. p. 834, seq.; Mela, i. 7; Plin. v. 4. s. 4.) After the third century it obtained the name of the *Regio Tripolitana*, from the three principal cities, which were allied together, whence the modern name of *Tripoli* (*Not. Imp. Occid.* c. 45; Procop. *de Aed.* vi. 3; cf. Solinus, c. 27). Mannert conjectures (x. pt. ii. p. 133) that the emperor Septimius Severus, who was a native of Leptis, was the founder of this Provincia Tripolitana, which, according to the *Not. Imp.* (*l. c.*), was governed by its own duke (Dux) (Comp. *Amm. Marc.* xxviii. 6). The district was attributed by Ptolemy, Mela, and Pliny to Africa Propria; but in reality it formed a separate district, which at first belonged to the Cyrenaeans, but was subsequently wrested from them and annexed to Carthage, and, when the whole kingdom of the latter was subjected to the Romans, formed a part of the Roman province of Africa. For the most part the soil was sandy and little capable of cultivation, as it still remains to the present day (Della Cella, *Viaggio*, p. 50); yet on the borders of the river Cinyps and in the neighbourhood of the town of Leptis, there was some rich and productive land. (Herod. iv. 198; Scylax, p. 47; Strab. xvii. p. 835; Ovid, *ex Pont.* ii. 7. 25.) Ptolemy mentions several mountains in the district, as Mount Giglius or Gigis (τὸ Γίγιον ὄρος, iv. 3. § 20), Mount Thixibi (τὸ Θίξις ὄρος, *ib.*) Mount Zuchabbari or Chuzabbari (τὸ Ζουχάββαρι ἢ Χουζάββαρι, *ib.*) and Mount Vasaletum or Vasaleton (τὸ Οὐασάλετον ἢ Οὐασάλερον ὄρος, *ib.* § 18). The more important promontories were Cephalae (Κεφαλαῖ ὄρος, Ptol. iv. 3. § 13), near which also, on the W., the same author

mentions another promontory, Trieron (Τρίτρων or Τριπτόν ἄκρον, *ib.*) and Zeitha (ῥὰ Ζεῖθα, *ib.* § 12). The principal rivers were the Cinyrs or Cinyphus (Ptol. *ib.* § 20), in the eastern part of the district, and the Triton, which formed its western boundary, and by which the three lakes called Tritonitis, Pallas, and Libya were supplied (*ib.* § 19). Besides these waters there were extensive salt lakes and marshes along the coast (Strab. *l. c.*; *Tab. Pent. tab. vii.*) The lotus is mentioned among the scanty products of this unfertile land (Plin. xxiv. 1. s. 1), and a peculiar kind of precious stones, called after the country Syrtides gemmae, was found on the coast (Id. xxxvii. 10. § 67). The tribes that inhabited the country besides the Nasamones, Paytiti, and Macae, who in the earlier times at least spread themselves over this district, were the Lotophagi [Vol. II. p. 205], who dwelt about Syrtis Minor, and the Gindanes [Vol. I. p. 1002], who were situated to the W. of the former. Ptolemy, however, in place of these more ancient tribes, mentions others that are heard of nowhere else, as the Nigitimii, Samamycii, Nycpii, Nygbeni, Elaeones, Damnesii, &c. (iv. 3. §§ 23–27). But Egyptian and Phœnician colonists had been mixed at a very early period with these aboriginal Libyan tribes, whom the Greeks found there when they settled upon the coast, and with whom, probably, they had for some time previously had connections. The most important towns of the Regio Syrtica were the three from which it subsequently derived its name of Tripolitana, that is, Leptis Magna, Oea, and Sabrata; besides which we find Tacape and other places mentioned by Ptolemy. Opposite to the coast lay the islands of Meninx and Cercina. [T. H. D.]

SYRTIS MAJOR and MINOR (Σύρτις μεγάλη καὶ μικρά, Ptol. iv. 3), two broad and deep gulfs in the Libyan sea on the N. coast of Africa, and in the district called after them Regio Syrtica. The name is derived from the Arabic, *Sert*, a desert from the desolate and sandy shore by which the neighbourhood of the Syrtis is still characterised. The navigation of them was very dangerous because of their shallow and sunken rocks, so that the smaller Syrtis was considered in ancient times as altogether unnavigable, and even into the larger one only small ships ventured. (Strab. xvii. p. 835; Scylax, p. 48; Polyb. i. 39; Mela, i. 7; Plin. v. 4. s. 4; Procop. *de Aed.* vi. 3.) The reports of modern travellers, however, do not tend to establish these dangers. (Lauthier, *Relazione in Della Cella's Viaggio*, p. 214, sqq.) The Greater Syrtis, which was the eastern one, now the *Gulf of Sidra*, extended from the promontory of Boreum on the E. side to that of Cephalæ on the W. (Scyl. 46, sq.; Polyb. iii. 29; Strab. *l. c.* and ii. p. 123; Mela and Plin. *l. cc.*) According to Strabo it was from 4000 to 5000 stadia in circumference (*l. c.*); but in another place (xvii. p. 835) he puts down the measure more accurately at 3930 stadia. Its depth, or landward recess, was from 1500 to 1800 stadia, and its diameter 1500 stadia. (Comp. Agathem. i. 3, and ii. 14.) The smaller, or more western Syrtis (now *Gulf of Gabes*), was formed on the E. by the promontory of Zeitha and on the W. by that of Brachodes. (Scyl. p. 48; Polyb. i. 39, ii. 23, xii. 1; Strab. ii. p. 123, iii. p. 157, xvii. p. 834, &c.) According to Strabo it had a circumference of 1600 stadia and a diameter of 600 (comp. Agathem. *l. c.*). Particulars respecting the size of both will likewise be found in Mela i. 7; and *Itin. Ant.* p. 64, sqq. The shores of both were

inhospitable, and sandy to such a degree that men and even ships were often overwhelmed by the huge cloud-like masses lifted by the wind (Diod. xx. 41; Sall. *Jug.* 79; Herod. iii. 25, 26, iv. 173; Lucan, ix. 294, sqq.); and it is affirmed by modern travellers that these descriptions of the ancients are not exaggerated. (See Browne's *Travels*, p. 282; Bruce, *Travels*, iv. p. 458; Beechey, *Expedition. &c.* ch. 10; Ritter, *Erdbunde*, i. p. 1030.) [T. H. D.]

SYSPIRITIS (Συσπυρίτις, Strab. xi. p. 503), a district in Armenia Major. [T. H. D.]

SYTHAS. [ACHAIA, p. 13, b.]

T.

TAANACH (Θαράκ and Θανάχ), a town in Palestine, not far from Megiddo, with which it is generally mentioned, was originally one of the royal cities of the Canaanites. (*Josh.* xii. 21; *Judges.* v. 19; 1 *Kings.* iv. 12.) It was assigned to Manasseh (*Josh.* xvii. 11), but was afterwards one of the cities given to the Levites. (*Josh.* xxi. 25.) "Taanach by the waters of Megiddo" was the scene of the great battle of Deborah and Barak. (*Judges.* v. 19.) In the time of the Judges the Canaanitish inhabitants still remained in Taanach (*Judges.* i. 27), but in the reign of Solomon it appears as an Israelitish town. (1 *Kings.* iv. 12.) Eusebius describes it as 3 Roman miles, and Jerome as 4 Roman miles from Legio, which is undoubtedly the Megiddo of Scripture. [LEGIÖ.] Taanach is still called *Ta'annuk*, a village standing on the slope of the hills which skirt the plain of Esdraelon towards the south. (Robinson, *Bibl. Res.* vol. ii. p. 316, vol. iii. p. 117, 2nd ed.; Stanley, *Sinai and Palestine*, p. 331.)

TABAE (Τάβαι: *Eth. Taššyrós*), a town which, according to Strabo (xii. p. 570), was situated on the confines between Phrygia and Caria, and which, in another passage (p. 576), he evidently includes in Phrygia. The country was situated in a plain which derived from the town the name of Πεδίον Τασηρόν. (Strab. xii. p. 576.) Stephanus Byz. (*s. v.*) on the other hand calls Tabae a Lydian town, though he at the same time mentions another in Caria; but it is highly probable that not only both are one and the same town, but also the same as the one assigned by Strabo to Phrygia, and that in point of fact the town was in Caria near the confines of Phrygia. Mythically the name of the place was derived from a hero Tabus, while others connected it with an Asiatic term *τάβα*, which signified a rock. (Steph. B. *l. c.*) The latter etymology is not inconsistent with Strabo's account, for though the town is described as being in a plain, it, or at least a part of it, may have been built on a rock. The plain contained several other little towns besides Tabae. Livy (xxviii. 13), in his account of the expedition of Manlius, states that he marched in three days from Gorditichos to Tabae. It must then have been a considerable place, for, having provoked the hostility of the Romans, it was ordered to pay 20 talents of silver and furnish 10,000 medimni of wheat. Livy remarks that it stood on the borders of Pisidia towards the shore of the Pamphylian sea. There can be no doubt that D'Anville is correct in identifying the modern *Thaous* or *Davas*, a place of some note north-east of *Moglah*, with the ancient Tabae. Col. Leake (*Asia Minor*, p. 153), relying too implicitly on Strabo, looks too far east for its site; for Hierocles

(p. 689) distinctly enumerates it among the Carian towns. *Darus* is a large and well-built town, and the capital of a considerable district; the governor's residence stands on a height overlooking the town, and commanding a most magnificent view. (Niehter, *Walfahrten*, p. 543; Franz, *Fünf Inschriften*, p. 30.)

It should be observed that Pliny (v. 27) mentions another town in Cilicia of the name of *Tabae*, of which, however, nothing is known. [L. S.]

COIN OF TABAE.

TABALA (Τάβαλα), a town of Lydia near the river Hermus, is known only from coins found in the country; but it is no doubt the same as the one mentioned by Hierocles (p. 670) under the name of *Gabala*, which is perhaps only miswritten for *Tabala*. It is even possible that it may be the town of *Tabas* which Stephanus Byz. assigns to Lydia. Some trace of the ancient place seems to be preserved in the name of the village *Tombaili* on the left bank of the Hermus, between *Adala* and *Kula*. [L. S.]

TABANA (Τάβανα, Ptol. iii. 6. § 6), a place in the interior of the Chersonesus Taurica. [T.H.D.]

TABASSI (Τάβασσος, Ptol. vii. 1. § 65), a tribe of Lybians who occupied the interior of the southern part of *Libyæ*, in the neighbourhood of the present province of *Mysore*. Their exact position cannot be determined, but they were not far distant from *M. Berge*, the most S. of the W. Ghats. They derived their name from the Sanskrit *Tāpasya*, "woods" *Lassen, Ind. Alterth.* vol. i. p. 240.) [V.]

TABERNAR, in Gallia, is placed by the Itinerary between *Nodumagus* (*Spiez*) and *Colonia* (*Sion*). The position of *Tabernar* is supposed to correspond to that of *Tabernaria*. *Tabernar* is mentioned by *Amianthus Marcellinus* (xii. 2), unless in this passage he points another place (No. 3) which has the same name.

1. *Tabernar* (Tabernarum, Tabernaria) and *Tabernar* (Tabernar, Tabernaria, or *Tabernar* as the Romans call it) which is about 20 miles from *Spiezberg*. This seems to be the place which *Amianthus* (loc. cit.) calls *Tabernar*. When *Julian* was marching against the Germans who were encamped near *Tabernar*, he captured *Tabernar*, for the purpose of preventing the Germans from entering Gaul by the pass in the *Alpes*. *Amianthus* (xii. 2) also gives the *Tabernar* that *Tabernar* to the German ruler in *Amianthus* at 14 "leagues," which is 21 Roman miles, and which they will with the *Tabernar* between *Tabernar* and *Tabernar* (Tabernar, Tabernaria).

2. *Tabernar* is mentioned by *Amianthus* (xii. 2) as being the road between *Tabernar* (*Spiez*) and *Tabernar* (*Tabernaria*), but the position is not given, and the road is not mentioned in the *Itinerary*. A road is mentioned in the *Itinerary* as being the road between *Tabernar* and *Tabernar* (Tabernar, Tabernaria).

3. *Tabernar* is mentioned by *Amianthus* (xii. 2) as being the road between *Tabernar* (*Spiez*) and *Tabernar* (*Tabernaria*), but the position is not given, and the road is not mentioned in the *Itinerary*. A road is mentioned in the *Itinerary* as being the road between *Tabernar* and *Tabernar* (Tabernar, Tabernaria).

TABI'ENT (Τάβιεντι, Ptol. vi. 14. § 10), a people in the N. part of *Syria*, at the head of the *Imanus*. [R.E.D.]

TABIE'NI (Τάβιεντι), an ancient town situated NW of the *Rio* *Tabie'ni* near the headland of *Bazium* (*Rio* of *Naxos*), mentioned by *Ptolemy* alone (iv. 27. § 25). [R.E.D.]

TABLAE, in *Gallia*, is mentioned by *Ptolemy* between *Lugdunum Batavorum* (*Leiden*) and *Novomagus* (*Nijmegen*). D'Anville and others assign it to be *Attila*, a little above the junction of the *Leck* and the *Maas*, and opposite to *Leiden*. [R.E.D.]

TABOR, a celebrated mountain in *Gallia*, mentioned by the Greek writers *Atalapha*, *Tabora*, and *Tabora*. It is described. [ATADITHON.]

TABRACA. [TABRACA.]

TABUDA, or **TABULLAS** is mentioned by *Ptolemy* (ii. 9. § 3), a river of *Nova Gallia*. The mouth of this river is placed by *Ptolemy* near *Gesoriacum* (*Boulogne*) and the mouth of the *Manas*. In another passage (ii. 9. § 4) he places the position of the *Morici*, whose head was near *Tabullas* and *Taruana*, he adds "Tabullas are the *Tungri*." All these statements seem to show that the *Tabullas* or *Tabullas* is the *Schelde*, which would be correctly placed near the *Morici* and the *Tungri*. *Amianthus* (xii. 2) D'Anville and others, is said to have some evidence from writings of the *Tabullas* that the *Schelde* was named *Tabul* and *Tabul*. [R.E.D.]

TABURNUS MONS (*Monte Taburno*), a name given in ancient times to one of the most important mountain groups of the *Apennines* in *Italia*. It is situated nearly due W. of *Neapolis* between the valley of the *Calore* (Calore) and the smaller stream of the *Volturno*. It is a high, elevated mass of the *Monte Mario*, which rises on the N. It forms no part of the main range of the *Apennines* (it is not connected with the line of water-shed), but is connected towards the W. and the W. and NW. slopes descend at once to the broad valley of the *Volturno*, where that river receives its waters from the *Calore*. It is evidently these slopes and masses to which *Virgil* alludes as affording a fertile soil for the cultivation of olives (*Virg. Georg. iii. 28*; *Vit. Sueton. p. 36*), with which it is covered at this day. But in another passage alludes to the "holy *Taburnus*" as one of the forests, which afforded pasture to extensive herds of cattle. (*Id. Id. xii. 715*.) *Quintus Curtius* speaks of it as a rugged and rocky group of hills (xviii. 308). We learn from the same that it was included in the territory of the *Volturni* (*Volturni*), and indeed the main part of the *Casertine Fields* was at a very short distance from the foot of *Monte Taburno*. *Taburnus* of *Monte Taburno* or *Taburno* is not mentioned in the whole group, though the *Volturni* is, but, like those of the *Monte Mario*, was not a particular name.

There is no ground for supposing that the *Volturni* is the *Volturni* of the *Volturni* (loc. cit. 1810), the mountain of which *Volturni* is speaking must have been situated in the western part of Italy. [R.E.D.]

TACAPE (*Tabara* or *Tabara*, Ptol. vi. 14. § 10), a town in the Roman province of *Libya*, near the *Strona* and in the innermost part of the *Libya*. The surrounding country is mentioned by *Ptolemy* (vi. 14. § 10) as being a *Libya*.

fruitful, but its harbour was bad. (Geogr. Nub. *Clim.* iii. pt. ii. p. 87.) In early times it was subject to Byzacium; but subsequently, as a Roman colony, belonged to the Regio Tripolitana, of which it was the most westerly town. In its neighbourhood were warm mineral springs called the Aquae Tacapitanæ (*Itin. Ant.* p. 78), now *El-Hammah*. (Cf. *Plin.* v. 4. s. 3; *Itin. Ant.* pp. 48, 50, 59, &c., where it is called Tacapæ). Now *Gaba*, *Cabes*, or *Quibes*. [T. H. D.]

TACARAEI (*Taxapaioi*, Ptol. vii. 2. § 15), a mountain tribe of India extra Gangem, who lived in the extreme NW. near the junction of the Imaus and Emodus chains, adjoining the Mons Bepyrrius. They must have occupied part of the district now called *Assam*. [V.]

TACHOMPSO (*Tαχομψά*, Herod. ii. 29; *Tachompos*, *Plin.* vi. 29. s. 33; *Mela*, i. 9. § 2), a town in the Regio Dodecascoenus, S. of Aegypt and the Cataracts. It stood upon an island of the Nile, and was inhabited by a mixed colony of Egyptians and Ethiopians. The Coptic word *Tachempsa* signifies "the place of many crocodiles." *Tachompsa* was seated on the E. bank of the river, lat. 23° 12' N., nearly opposite the town of Pselcis. As Pselcis increased, *Tachompsa* declined, so that it at last was regarded as merely a suburb of that town, and went by the name of *Contra-Pselcis*. Though supposed by some to have been near the modern village of *Conzo* in Lower Nubia, it is impossible to reconcile any known locality with the ancient descriptions of this place. *Heeren* (*African Nations*, vol. i. pp. 346, 383) supposes it to have been either at the island *Kalabsha* (*Talnis*) or 20 miles further S as *Ghyrsha*. *Herodotus* (*l. c.*) describes the island on which *Tachompsa* stood as a plain contiguous to a vast lake. But neither such a lake nor island now appear in this part of the Nile's course. The lake may have been the result of a temporary inundation, and the island gradually undermined and carried away by the periodical floods. [W. B. D.]

TACOLA (*Tάκολα*, Ptol. vii. 2. § 5), a place on the west coast of the Aurea Chersonesus, in India extra Gangem, which Ptolemy calls an emporium. There can be no doubt that it is represented now by either *Tavoy* or *Tenasserim*. [V.]

TACUBIS (*Tακουβίς*, Ptol. ii. 5. § 7), a place in Lusitania. [T. H. D.]

TADER, a river on the S. coast of Hispania Tarraconensis. (*Plin.* iii. 3. s. 4.) It is probably indicated by Ptolemy (ii. 6. § 14) under *Τέρτος ποταμὸν ἔκβαλει*. Now the *Segura*. [T. H. D.]

TADINUM (*Eth.* *Tadinas*: Ru. near *Gualdo*), a town of Umbria, mentioned by Pliny among the municipal towns of that region. (*Plin.* iii. 14. s. 19.) It is not noticed by any other ancient author previous to the fall of the Western Empire; but its name is repeatedly found in the epistles of Gregory the Great, and it is evidently the same place called by Procopius *Taginae* (*Τάγιναι*, *Procop.* B. G. iv. 29), near which the Gothic king Totila was defeated by Narses in a great battle, in which he was himself mortally wounded, A. D. 552. The site is clearly fixed by the discovery of some ruins and other ancient monuments in 1750 at a place about a mile and a half from *Gualdo*, where there is an old church consecrated in the middle ages to *Sta Maria di Tadino*. *Gualdo* is about 9 miles N. of *Nocera* (*Nuceria*), close to the line of the Flaminian Way: hence there is little doubt that we should substitute *Tadinas* for "*Ptinas*," a name obviously corrupt,

given in the Jerusalem Itinerary as a station on the Flaminian Way. (*Itin. Hier.* p. 614; *Wesseling, ad loc.*; *Cramer, Italy*, vol. i. p. 267.) [E. H. B.]

TADMOR. [PALMYRA.]

TADU (*Plin.* vi. 29. s. 35; comp. *Strab.* xvii. p. 786), a small island of the Nile that formed the harbour of the city of Meroe. *Bruce* (*Travels*, vol. iv. p. 618) supposes *Tadu* to have been the modern *Curgo*, N. of *Schendy*. As, however, the site of Meroe is much disputed, that of *Tadu* is equally uncertain (*Ritter, Erdkund.* vol. i. p. 567). [W. B. D.]

TAE'NARUM (*Taivapor*, *Herod. Strab.* et alii; ἡ *Taivapia ἄκρα*, Ptol. iii. 16. § 9), a promontory at the extremity of Laconia, and the most southerly point of Europe, now called *C. Matapan*. The name of *Taenarum*, however, was not confined to the extreme point bearing the name of *Matapan*. It has been shown by *Leake* that it was the name given to the peninsula of circular form about seven miles in circumference, which is connected with the end of the great Taygetic promontory by an isthmus about half a mile wide in a direct distance. Hence *Taenarum* is correctly described by *Strabo* as an ἀκτὴ ἐκκεκμηρή (viii. p. 363). *Leake* conjectures with great probability that *Matapan* is merely another form of *Μετάρωρ*, which may have been the name given by the ancients to the southern extremity of the peninsula. (*Morea*, vol. i. p. 301.) On either side of the isthmus, which connects the promontory of *Taenarum* with that of *Taygetus*, is a bay, of which the one on the east is called *Porto Quaglio*, corrupted into *Kaio*, and the one on the west *Marinári* or *Marmári*. The name of *Quaglio* was given to the eastern bay by the Venetians, because it was the last place in Europe at which the quails rested in the autumn before crossing over to *Crete* and *Cyrene*. *Porto Quaglio* is one of the best harbours in Laconia, being sheltered from the S. and S.E.; it is nearly circular, with a narrow entrance, a fine sandy bottom, and depth of water for large ships. *Porto Marmári* is described as only a dangerous creek. In the *Taenarian* peninsula there are also two ports on its eastern side, of which the northern, called *Vathy*, is a long narrow inlet of the sea, while the southern, called *Asómato* or *Kistérnes*, is very small and ill sheltered. A quarter of a mile southward of the inner extremity of the last-mentioned port, a low point of rock projects into the sea from the foot of the mountain, which, according to the inhabitants of the peninsula, is the real *C. Matapan*. The western side of the peninsula is rocky and harbourless.

The whole of the *Taenarian* peninsula was sacred to *Poseidon*, who appears to have succeeded to the place of *Helios*, the more ancient god of the locality. (*Hom. Hymn. in Apoll.* 411.) At the extremity of this peninsula was the temple of *Poseidon*, with an asylum, which enjoyed great celebrity down to a late period. It seems to have been an ancient Achæan sanctuary before the Dorian conquest, and to have continued to be the chief sacred place of the *Periœci* and *Helots*. The great earthquake, which reduced *Sparta* to a heap of ruins in B.C. 464, was supposed to have been owing to the *Lacedæmonians* having torn away some suppliant *Helots* from this sanctuary. (*Thuc.* i. 128, 133; *Paus.* iii. 25. § 4; *Strab.* viii. p. 363; *Enrip. Cycl.* 292.) Near the sanctuary was a cavern, through which *Hercules* is said to have dragged *Cerberus* to the upper regions. (*Paus. Strab. l. cc.*; *Pind. Pyth.* iv. 77; *Taenariæ fauces*, *Virg. Georg.* iv. 467;

Taenarum operta ambrosia, Lucan, ix. 36.) There is a slight difference between Strabo and Pausanias in the position of the cave; the former placing it near the temple, which agrees with present appearances (see below); the latter describing the cave itself as the temple, before which stood a statue of Poseidon. Among the many dedicatory offerings to Poseidon the most celebrated was the brazen statue of Amphi seated on a dolphin, which was still extant in the time of Pausanias (Hered. i. 23, 24.) The temple was razed for the first time by the Athenians (Paus. ix. 34.)

Taenarum is said to have taken its name from Taenarus, a son either of Zeus or Icarus or Elatus (Paus. ii. 14 § 2; Steph. B. s. v.; Schol. ad Apoll. Rhod. i. 12.) Bochart derives the word from the Phoenician name "taen" (Geograph. Sacra, p. 459); and it is not improbable that the Phoenicians may have had a settlement on the promontory at an early period.

Pausanias (ii. 23 § 4) mentions two harbours in connection with the Taenarian promontory, called ΠΟΡΤΟΣ ΠΑΜΑΘΗΣ (Pamathes) and the HARBOUR OF ACHILLES (ἡ ἀπὸ τοῦ Ἀχιλλέως). Scylax (i. 1) also mentions these two harbours, and describes them as situated back to back (ἀντιπρυμνός). Strabo (viii. p. 573) speaks of the former of these two harbours under the name of AMATHUS (Ἀμαθίς), but omits to mention the Harbour of Achilles. It would appear that these two harbours are the Porto Quaglia and the port of Taenari mentioned above, as these are the two most important in the peninsula. Leake identifies Pamathes with Quaglia, and the Harbour of Achilles with Taenari, but the former of these names reverse these positions. We have, however, no doubt that Leake is correct; for the ancient remains above the Porto Quaglia, the treasury at the heights, and the cultivated slopes and crags, show that the Taenarian population has in all ages been chiefly collected here. Moreover, the ancient writers speak of a town in connection with the Harbour of Achilles, while Strabo and others describe Amathus or Pamathes as a village. Strabo (iii. s. v. Pamathes; of Achilles Ep. 1: Pfin. v. 3, s. 5.) If we were to take the description of Strabo literally Pamathes would be Porto Quaglia, and the Harbour of Achilles Porto Taenari; and accordingly they are so identified by Curtius; but it is impossible to believe that the dangerous creek of Taenari is one of the two harbours so specifically mentioned both by Strabo and Pausanias.

The remains of the ancient temple of Poseidon still stand at Amathus, or Kitharion, close to C. It appears to be the eastern side. They now form part of a small church, and the ancient Eolic wall may be traced at one side of the church. Leake observes that the church, instead of facing to the sea, as direct churches usually do, faces south-westward, towards the head of the port, which is not a little curious. No traces of a temple have been found. A few pieces of pottery of the church is a large grove in the valley which appears to be the cave through which Poseidon was supposed to have dragged Caribæus; and there is no appearance of any subterranean passage as has been already mentioned by Pausanias. In the neighbourhood there are several ancient wells and a small temple of antiquity.

There were several ancient quarries in the Taenarian peninsula (Strabo viii. p. 367.) Pausanias mentions the Taenarian marble as black (xxvi.

18. s. 29, 22. s. 43); but Sextus Empiricus (*Pyr. Hypot.* i. 130) speaks of a species of marble when broken to pieces, though it appeared white in the mass. Leake inquired in one of these quarries.

At the distance of 40 stadia, or 5 English miles, north of the isthmus of the Taenarus peninsula was the town TAENARUM or TAENARIA, subsequently called CAENEPOLIS (Καενεπολις, Paus. iii. 25. § 9; Kach, Procl. iii. 16. § 9; Pfin. ii. 15. s. 16; Steph. B. s. v. Ταίναρος; the name was probably mentioned by Strabo viii. p. 360, under the corrupt form Κωνιδίον.) It contained a temple of Demeter and another of Aphrodite, the latter near the sea. The modern village of *Aspirion* stands on the site of this town. Some ancient names and inscriptions of the time of the Athenians as their successors have been found here. (In the door-posts of a small ruined church are two inscribed quadrangular στήλαι, decorated with paintings above and below. One of the inscriptions is a decree of the Taenarii, and the other is by the community of the Eleuthero-Lacones (τῶν ἐλευθέρων Ἐλευθερολακόνων). We have the testimony of Pausanias (iii. 21. § 7) that Caenepolis was one of the Eleuthero-Laconian cities; and it would appear from the above-mentioned inscription that the maritime Laconians, when they were delivered from the Spartan yoke, formed a confederacy so founded as their capital a city in the neighbourhood of the revered sanctuary of Poseidon. The town was called the New Town (Caenepolis); but, as we learn from the inscriptions, it continued to be so called by its ancient name. For the inscriptions relating to Taenarum, see Böckh, *Inscr.* no. 1335 — 1317, 1321, 1322, 1389, 1393, 1453. (On the topography of the Taenarian peninsula, see Leake, *Morae*, vol. i. p. 290, seq.; *Peloponnesica*, p. 173, seq.; Bohlays, *Recherches*, &c., p. 69, seq.; Curtius, *Peloponnesos*, vol. ii. p. 277, seq.)

TAEZALI (Ταίφαλοι or Ταίφαλα, Paus. i. 2 § 15), a people on the eastern coast of Bruttium Barbaria. In their territory was the promontory called Ταίφαλον ἄκρον (ib. § 5), now *Amorini Head*. [T. H. D.]

TAGAE (Ταγὰι, Polyb. x. 29. § 3), a town in the northern part of Parthia, situated in the valley of the chain of Labetas, visited by Artabanus in his war against Arsaces. It has been conjectured by Forbiger that it is the same place as Tapa, mentioned by Strabo (xi. p. 508) as a royal palace in the adjacent province of Hyrcania; but this conjecture seems unnecessary. Perhaps it may be represented by the present *Demaghas*. [V.]

TAGARA (Τάγαρα, *Periplus*, M. Erythr. § 11, ed. Müller; Procl. vii. l. § 82), one of the two principal emporia of the interior of the *Deserta*, according to the author of the *Periplus*. It is not certain what modern town now represents the ancient site, but there is a fair presumption in favour of *Daghar*, which was the seat of government down to A. D. 1253, and which is now in ruins, close to *Durandabad*. (Vincet, *Voyage* of Neuchâtes, ii. p. 413; Masson, v. l. p. 53; *Encyclop. Erythr.* v. p. 513; Berghman's Map.) *Palemy*, the place the town in Armenia, probably copied from the author of the *Periplus*. It may be remarked that the distance given between Bergama (*Erythr.*) Paethana (*Pythia*) and Tagara (*Daghar*), is not reconcilable with the actual position of these places. [V.]

TAGASTE, or **TAGESTENSE OPP.** (Plin. v. 4. s. 4), a town of Numidia, whose spot is now marked by the ruins at *Tajilt* on the *Oued Hamise* or *Sugerast*, a tributary of the river *Mejerda*. (*Itin. Ant.* p. 44.) Tagaste is particularly distinguished by having been the birthplace of St. Augustine. (*Aug. Conf.* ii. 3.) [T. H. D.]

TAGONIUS (*Ταγόnius*, Plut. *Sert.* 17), a tributary of the Tagus in Hispania Tarraconensis, either the *Tajuna* or *Henares*. (Cf. Florez, *Esp. Sagr.* v. p. 40; Ukert, ii. pt. i. p. 389.) [T. H. D.]

TAGORI. [TAGRI.]

TAGRI (*Τάγροι*, Ptol. iii. 5. § 25), a people of European Sarmatia, on the borders of Dacia, and probably identical with the Tagori of Pliny (vi. 7. s. 7) and Jornandes (*Get.* 4). [T. H. D.]

TAGUS (*Τάγος*, Ptol. ii. 5. § 4), one of the principal rivers of Spain, being considerably larger than the Anas and having its sources between Mounts Orospeida and Idubeda, in the country of the Celtiberi. (Strab. iii. pp. 139, 152, 162.) After a tolerably straight course of upwards of 300 miles in a westerly direction, it falls into the Atlantic ocean below Olisippo, where it is 20 stadia broad, and capable of bearing the largest ships. It was navigable as far up as Moron for smaller vessels. According to Strabo, at flood tides it overflowed the country at its mouth for a circumference of 150 stadia. It was celebrated for its fish and oysters (Strab. *ib.*; Mart. x. 78), and likewise for its gold sand (Plin. iv. 22. s. 35; Mela, iii. 1; Catull. *xx.* 30; Ov. *Met.* ii. 251, &c.); of which last, however, so little is now to be found that it hardly repays the amphibious paupers who earn a precarious living by seeking for it. (Ford's *Hand-book of Spain*, p. 487; Dillon, i. p. 257.) The Tagonius alone, is named as a tributary. The Tagus is still called *Tajo* in Spain, *Tejo* in Portugal. (Cf. Liv. *xxi.* 5, *xxvii.* 19; Plin. iii. 3. s. 4, viii. 42. s. 67; Sen. *Thyest.* 352, &c.) [T. H. D.]

TABPANIS or **TEHAPHNIS** (*Jerem.* xliii. 7, *xliv.* 1; *Ezek.* xxx. 18; *Is.* *Tápnas*, LXX.), is supposed to be the same place with the Daphne of Pelusium of the Greeks. It was the seat of a garrison under the native and the Persian kings of Aegypt (Herod. ii. 30), and was probably a place of considerable strength and importance, since it commanded the high road to Syria (Strab. xvii. p. 802). According to the Hebrew writers, Tabpanis was also occasionally a royal residence in Pharaonic times. In the reign of Psammitichus (B.C. 670, foll.) the troops quartered at Tabpanis, in common with the rest of the native Aegyptian army, offended by the king's favour to his Carian and Greek mercenaries, abandoned their country, and established themselves in the Regio Dodecaschoenus S. of Syene (Diodor. i. 67). From the Itineraries it appears that Daphne or Tabpanis was 16 Roman miles from Pelusium. *Tel-de-fenneh*, lying nearly in a direct line between the modern *Sala-késh* and Pelusium, is supposed to be on the site of Tabpanis. [W.B.D.]

TALABRIGA (*τὰ Τάλάβριγα*, App. *Hisp.* 73), a town of Lusitania, between Eminium and Langobriga. (*Itin. Ant.* p. 421; Plin. ii. 5. s. 7, iv. 21. s. 35.) Various identified with *Cacia*, *Aveiro*, *Talavera* of the *Reyna*, and *Villarinho*. [T. H. D.]

TALA'BROCA (*Ταλαβρόκη*, Strab. xi. p. 508), one of the four principal towns of Hyrcania noticed by Strabo. It is perhaps the same place that is called Tambrax by Polybius (x. 31). Its site cannot now be identified. [V.]

TALACORY (*Ταλάκωρον*, Ptol. vii. 4. § 7), a port on the north-western side of the island of Taprobane or *Ceylon*. It is described as an emporium, and has, probably, derived its name from the promontory of Cory, which was opposite to it, on the mainland. It appears to have been also called Aacote (*Ἀακότη*). [V.]

TALADUSII (*Ταλαδοῦσιοι*, Ptol. iv. 2. § 17), a people in the north part of Mauretania Caesariensis. [T. H. D.]

TALAEUS MONS. [TALLAEUS.]

TALAMINA (*Ταλαμίνη*, Ptol. ii. 6. § 27), a town of the Seurri in Gallacia. [T. H. D.]

TALARES (*Τάλαρες*), a Molossian people of Epeirus, extinct in the time of Strabo (ix. p. 434).

TALAURO (*Τάλαυρα*), a mountain fortress in Pontus to which Mithridates withdrew with his most precious treasures, which were afterwards found there by Lucullus. (Dion Cass. *xxxv.* 14; Appian, *Mithr.* 115.) As the place is not mentioned by other writers, some suppose it to have been the same as Gazium, the modern *Tourkhal* which is perched upon a lofty isolated rock. (Hamilton, *Researches*, vol. i. p. 360.) [L. S.]

TALBENDA (*Τάλβενδα* or *Τάλβονδα*), a town in the interior of Pisidia, noticed only by Ptolemy (v. 5. § 8). [L. S.]

TAL'ETUM. [LACONIA, p. 108, b.]

TALIA (*Itin. Ant.* p. 218), or **TALIATA** (*Not. Imp.*), erroneously called *Tavdntis* by Ptolemy (iii. 9. § 4), Tabata by the Geogr. Rav. (iv. 7), and Faliata in the Tab. Pent. A place in Upper Moesia, between Novae and Egeta. Various identified with *Tatalia*, *Gögersinlik*, and a place near *All Porecs*. [T. H. D.]

TALICUS, a river of Scythia intra Imaum. (Amm. Marc. *xxiii.* 6. § 63.) [T. H. D.]

TALLAEUS or **TALAEUS MONS** (Böckh, *Corp. Inscr. Graec.* vol. ii. p. 423; Hesych. s. v.), the station of Talus, the mythical man of bronze, and the guardian of the island of Crete. The well-known inscription which deplores the loss of Artemis, the chaste wife of Salvia Menas, is now buried by the mass of earth and stones heaped up at the entrance of the stalactitic cavern of *Melidhóni*. This grotto, memorable in modern times for the massacre of the Cretan Christians by the Mohammedans, is identified from the inscription with the spot where in ancient times human victims were presented before the statue of Talus. (Pashley, *Travels*, vol. i. pp. 126—139.) [E. B. J.]

TALMEN (*Ταλμήν*, Arrian, *Indic.* c. 29), a port of Gedrosia at which the fleet of Nearchus found a secure harbour. It is not clear what place now may be identified with it, and different geographers have held different opinions. Vincent (*Voyage of Nearchus*, i. p. 271) thinks it is the bay formed by the mouth of a small river called by Ptolemy Candriaces or Hydrices (vi. 8. § 8). It was probably close to the modern town, *Choubas Tiz* and *Purug*. (Cf. Gosselin, iii. p. 148.) [V.]

TALMIS (*It. Anton.* p. 161; Olympiodor. *ap. Photium*, p. 62, ed. Bekker), a town in the Regio Dodecaschoenus, S. of Philae, from which it was five days' journey distant, situated in lat. 23° 30' N., and consequently immediately under the tropic of Cancer. Talmis stood on the western bank of the Nile, and is represented by the modern *Kalabeshe*. The Libyan hills which rise immediately behind the town afforded an inexhaustible supply of materials for building, and the ancient quarries are still visible

in their sides. The ruins of Talmis are of surpassing interest, and comparatively in good preservation, primarily because, being excavated in the sandstone, they escaped mutilation or destruction by the Persians. The principal structure was a rock-temple at the foot of the hills, dedicated, as appears both from a hieroglyphical and a Greek inscription, to a deity named Mandulis or Malasia, a son of Isis. His Egyptian history is exhibited on bas-reliefs. But the sculptures at Talmis are of the highest interest, both as works of art and as historical monuments. Their execution is the work of various ages: some, as appears by their rude forms, according to a remote antiquity, such as those in the temple of Mandulis, being of the best days of Egyptian art. The temple was burned by Antiochus II. was rebuilt by one of the Ptolemies, and repaired in the reigns of the Caesars, Augustus, Caligula, and Trajan. The subjects of these sculptures represent partly the triumphs of the Ptolemies, and partly the tributes exacted by them from the conquered. On one wall is the warrior at his chariot putting to flight bearded men in short tunics, armed with bows and arrows, and a scimitar-shaped knife or sword. In another segment the conqueror is in the act of putting to death. Another represents the booty heaped after a victory, and, besides the captives, exhibits the spoils taken, a g. lion-headed and lion-tailed chariot, knives, lances, sandals, skins of animals, &c. These sculptures illustrate also the ancient history of S. Aethiopia. They contain figures of lions, antelopes, and bulls, greyhounds, giraffes, ostriches and monkeys. The giraffes and ostriches point clearly to a country south of the utmost limit of Egyptian dominion, and seem to indicate wars with the Garamantes and the kingdom of Beremot. Herodotus (i. 17) mentions ebony wood among the articles of tribute which every three years Aethiopia offered to the Persian king. Ebony as well as ivory, a product of the interior of Libya, appears on the walls of the temple of Mandulis. A coloured facsimile of these sculptures is displayed in one of the wings of the British Museum. At a short distance from Talmis stood another temple of scarcely inferior interest, and the space between is covered with heaps of bricks and fragments of pottery, mixed with human bones and skeletons that have been scooped in bitumen—the vilest trash of a large necropolis. At Talmis has been also discovered an inscription in the latest characters supposed to be of the age of Ptolemy, in which Soter, king of Aethiopia and Nubia, commemorates his victories over the Blemmyes. The wealth of Talmis, apparent in its sculptures, was doubtless in great measure owing to its position as a commercial station between Egypt and Aethiopia, but partly also to the emerald mines in its neighbourhood. In the fifth century A.D. it was one of its neighbourhood was occupied by the Berberes, who had a regular government, since the name of their chief (*chahar*) and were celebrated for their still in domestication. (Cyprius, *op. cit.* p. 12.) (W. B. D.)

TALUBATH (*Talubath*, Ptol. ii. 6. § 25), a river of Aethiopia in the NW. of Libya interior, perhaps the modern *Talut*. (T. B. D.)

TALUBATH, a tribe of India, circa Gangem, mentioned by Ptolemy (ii. 19. a. 22). They were probably some of the *Dravidians*, in the mountainous region of Beremot. Nilgiri, in his recent edition of the *Geography*, has given the name as *Talubath*. (V.)

TALUBATH (*Talubath*, Pto. ii. 3. § 30), a town of

the Dumnonii, at the SW. extremity of Britain Romana, at the mouth of the Tamara. See *Tamerton* near *Plymouth*. (Cassini, p. 22.) (T. B. D.)

TAMARICI, a Gallæcian tribe in the river Tamaris in Hispania Tarraconensis. (Pto. ii. 30. a. 34; Mela, iii. 1.) According to Ptolemy (iii. 2. a. 18) there were certain noted springs in their territory, which are undoubtedly the same described by Florez (*Castellania*, p. 4) near the hermitage of *S. Juan de Fuentes divinas*. 12 Spanish miles E. of Leon, and 5 N. of *Saldama*. (Cl. Llan, i. p. 302, note 80.) (T. B. D.)

TAMARIS (called by Ptolemy, *Tamara*, ii. 6. § 2), a small river of Gallæcia in Hispania Tarraconensis, which falls into the Atlantic ocean by the bay of Ebro, between the Minis and the promontory Nerium. (Mela, iii. 1.) Now the *Tamora*. (T. B. D.)

TAMARUS (*Tamara*), a river of Sarmatia, which falls into the Calor (*Colore*), about 5 miles above Bonaventum. Its name is known only from the Itinerary of Antoninus, which places a station "super Tamarum fluvium" on the road from Bonaventum to Equus Tuticus. (*Itin. Ant.* p. 104.) The line of this road is not very clear, but the modern name of the *Tamara* leaves no doubt of the river meant. It rises in the mountainous region of Sarmatia, only a few miles from Bonaventum, and flows with a general direction from N. to S. till it joins the Calor as above indicated. (T. B. D.)

TAMARUS (*Tamarus*, Ptol. ii. 3. § 4), a small river on the S. coast of Britannia Romana, north of *Tamora*. (T. B. D.)

TAMASSUS (*Tamassus*, Ptol. v. 14. § 6; called also *Tamassus* by Ptolemy, v. 31. a. 33, *Tamassus* by Constantine Porphyrogenitus, *de Them.* i. p. 29, and *Tamassa* by Statius, *Adell.* i. 413; cf. also Eckhel, i. 3. p. 88), a town in the interior of the island of Cyprus, 29 miles SW. of Salamis, and on the road from that place to Tremithus. It lay in a fruitful neighbourhood (Ovid, *M.* x. 644) and in the vicinity of some extensive copper mines, which yielded a kind of rust used in medicine (Strabo, vi. p. 864). It is very probably the *Tamassus* of Herodotus (i. 184; Nitzsch, *ad loc.*; cf. Marnett, v. i. p. 452), in which case it would appear to have been the principal market for the copper trade of the island in those early times. Hence some derive its name from the Phœnician word *tamassus*, signifying *smelting*. (T. B. D.)

TAMBRAX. [TALABROCA.]

TAMESA or TAMESIS (*Támesis*, Dion Cass. xl. 3), a river on the E. coast of Britannia Romana, on which Londinium lay; the *Tamara*. (Dion B. G. v. 11; Tac. *Ann.* xiv. 32.) (T. B. D.)

TAMESIS. [TAMERIS.]

TAMIA (*Támesis*, Ptol. ii. 3. § 13), a town of the Vacagæni on the E. coast of Britannia Romana, probably on *Loch Tay*. (T. B. D.)

TAMIATHIS (*Tamiathis*, Strabo, B. G. a. 2), was a considerable town in Lower Egypt, situated at the mouth of the Phœnician arm of the Nile. It is celebrated in history from its reputation in the modern *Damiet* or *Damietta*, which, since the time of the Crusades, has always been, until the rise of *Alexandria* in the present century, one of the most populous and commercial places in the Delta. Many antique columns and blocks from the ancient town are built into the walls of the mosques in the modern one. The present *Damietta*, indeed, does not occupy the site of Tamiathis, since, according to Al-Beladri, the original town of that name was destroyed, a

account of its exposed situation, and rebuilt higher up the Nile, about 5 miles further from the sea. The date of this change of position is fixed by Abulfeda in the year of the Hegira 648 (A.D. 1251). [W.B.D.]

TAMNA (Τάμνα, Strab. xvi. p. 768; Steph. B. s. v.; Tamna, Plin. vi. 28. s. 32; Θάμνα, Ptol. vi. 7. § 37; Thomna, Plin. xii. 14. s. 32; *Eth. Ταμνῆς*), a city of Arabia, and the chief town of the Cattabaneis (Catabani), according to Strabo, or of the Gebanitae, according to Pliny. It is described by Pliny as a large commercial town with 65 temples, to which caravans from Gaza in Palestine resorted. It is probably *Sand*, the present capital of Yemen.

TAMNUM, in Gallia, is placed by the Itineraries on a road from Burdigala (*Bordeaux*) to Mediolanum Santonum (*Saintes*); but in the Table the name is written Lamnum. The distance from Blavia or Blavium (*Blaye*) to Tamnum is xvi. in the Itins.; but the distance xxii. in the Table is nearer the truth, if *Tallemont* or *Talmon* is the site of Tamnum. *Talmon* is below *Blaye* on the right bank of the *Gironde*. [G. L.]

TAMUGADIS, a town in Numidia, on the E. side of Mount Aurasius, and 14 miles NE. of Lambese. (*It. Ant.* pp. 34, 40; *Tamugadia, Tab. Peut.*) It still retains the name of *Tamugadi*. (Bruce.) Lapie identifies it with *Ager Soudah*. [T. H. D.]

TAMYNAE (Ταμύναι, Strab. et alii; Ταμύνα, Steph. B. s. v.; *Eth. Ταμυνάιος, Ταμυνεύς*), a town of Euboea in the territory of Eretria, at the foot of Mt. Cotylaeum, with a temple of Apollo, said to have been built by Admetus. (Strab. x. p. 447; Steph. B. s. v. Ταμύνα, Κορύθαυον.) It was taken by the Persians, when they attacked Eretria in B. C. 490 (Herod. vi. 101), but it is chiefly memorable for the victory which the Athenians, under Phocion, gained here over Callias of Chalcis, B. C. 350. (Aesch. c. *Ctes.* §§ 85—88, *de Fals. Leg.* 180; *Dem. de Pac.* 5; *Plut. Phoc.* 12.) Leake places Tamynae at the village of *Ghymnd*, at the foot of a high mountain, which he supposes to be the ancient Cotylaeum (*Ancient Greece*, vol. ii. p. 439); but Ulrichs regards *Alivéri*, where there are several ancient remains, as the site of Tamynae. (*Rheinisches Museum*, for 1847, p. 512.)

TAMY'RACA (Ταμυράκη, Ptol. iii. 5. § 8, viii. 10. § 3), a town and promontory of European Sarmatia in the neighbourhood of a lake (Arrian, *Per. P. Euz.* p. 20), and in the innermost part of the gulf of Carcinitis, now gulf of *Achmeschid* or *Perekop*. Hence, according to Strabo, the Sinus Carcinites was also called the gulf of Tamyracē (vii. p. 308). But the coast has undergone such extensive alterations at this part, that all attempts to determine the site of the town are unavailing. Some, indeed, have doubted its existence, as it is mentioned only by Ptolemy. (Cf. Neumann, *Die Hellenen in Skythenlande*, p. 375; Ukert, iii. 2. p. 457; Gail, *Geogr. M.* iii. p. 127.) [T. H. D.]

TAMYRACES SINUS. [CARCINIA; TAMYRACA.]

TAMYRAS or DAMURAS (Ταμύρας, Strab. xvi. p. 756; Δαμύρας, Polyb. v. 68), a river of Phoenicia between Sidon and Berytus, the modern *Nahr ed-Dimúr*. (Robinson, *Bibl. Res.* vol. ii. p. 488, 2nd ed.) [Comp. LEONTEA.]

TANAGER or TANAGRUS (*Tanagro*), a river of Lucania, a tributary of the Silarus. It rises in the mountains near *Lago Negro*, flows for about

30 miles in a NNE. direction, through a broad and level upland valley called the *Valle di Diano*, till near *La Polla* it sinks into the earth, and emerges again through a cavern at a place thence called *La Pertusa*. This peculiarity is mentioned by Pliny, who calls it "fluvius in Atinate campo," without mentioning its name (Plin. ii. 103. s. 106, with Harduin's note); but this is known to us from Virgil, who notices it in connection with Mount Alburnus, which rises immediately to the W. of it, and the epithet "siccus" which he applies to it ("siccū ripa Tanagri") doubtless refers to this same peculiarity. (Virg. *Georg.* iii. 151; *Serv. ad loc.*; *Vib. Seq.* p. 19.) There is no doubt, also, that in the Itinerary we should read "Ad Tanagrum" for "Ad Tanarum," a station which it places on the road from Salernum to Nerulum. (*Itin. Ant.* p. 109.) The same Itinerary gives a station "Ad Calorem," as the next on this line of route, which seems to show that the river was then, as now, called in the upper part of its course *Calor* or *Calore*, while in the lower part it assumes the name of *Tanagro* or *Negro*. This part of the route, however, is very confused. [E. H. B.]

TANAGRA (Τάναγρᾱ; *Eth. Ταναγρᾱίος*: the territory *Tanaypala*, Paus. ix. 22. § 1, and *Tanaypalkh* or *Tanaypukh*, Strab. ix. p. 404; *Adj. Tanaypukos*: *Grimiddha* or *Grimdala*), a town of Boeotia, situated upon the left bank of the Asopus, in a fertile plain, at the distance of 130 stadia from Oropus and 200 from Plateae (Dicaearch. *Stat. Gr.* pp. 12, 14, ed. Hudson). Several ancient writers identified Tanagra with the Homeric Graea (*Γραία*, *Hom. Il.* ii. 498; *Lycophr.* 644); but others supposed them to be distinct places, and Aristotle regarded Oropus as the ancient Graea. (Steph. B. s. v. *Τάναγρᾱ*; Strab. ix. p. 404; Paus. ix. 20. § 2.) It is possible, as Leake has remarked, that Tanagra, sometimes written *Tanagraea*, may be connected with the ancient name Graea, Tana, being an Aeolic suffix, and that the modern name *Grimiddha* or *Grimdala* may retain traces of the Homeric name. Tanagra was also called Poemandria, and its territory Poemandria, from the fertile meadows which surrounded the city. (Steph. B. s. v.; Strab. ix. p. 404.) The most ancient inhabitants of Tanagra are said to have been the Gephyraei, who came from Phoenicia with Cadmus, and from thence emigrated to Athens. (Herod. v. 57; Strab. ix. p. 404.) From its vicinity to Attica the territory of Tanagra was the scene of more than one battle. In B. C. 457 the Lacedaemonians on their return from an expedition to Doris, took up a position at Tanagra, near the borders of Attica, with the view of assisting the oligarchical party at Athens to overthrow the democracy. The Athenians, with a thousand Argeians and some Thessalian horse, crossed Mount Parnes and advanced against the Lacedaemonians. Both sides fought with great bravery; but the Lacedaemonians gained the victory, chiefly through the treacherous desertion of the Thessalians in the very heat of the engagement. (Thuc. i. 107, 108; Diod. xi. 80.) At the beginning of the following year (B. C. 456), and only sixty-two days after their defeat at Tanagra, the Athenians under Myronides again invaded Boeotia, and gained at Oenophyta, in the territory of Tanagra, a brilliant and decisive victory over the Boeotians, which made them masters of the whole country. The walls of Tanagra were now razed to the ground. (Thuc. i. 108; Diod. xi. 81, 82.) In B. C. 426 the Athenians made an incursion into the territory of Tanagra, and

on their return defeated the Tanagraeans and Boeotians. (Thuc. iii. 91.) Dicaearchus, who visited Tanagra in the time of Cassander, says that the city stands on a rugged and lofty height, and has a white chalky appearance. The houses are adorned with handsome porticoes and encaustic paintings. The surrounding country does not grow much corn, but produces the best wine in Boeotia. Dicaearchus adds that the inhabitants are wealthy but frugal, being for the most part landholders, not manufacturers; and he praises them for their justice, good faith, and hospitality. (*De Statu Graec.* p. 12.) In the time of Augustus, Tanagra and Thespiae were the two most prosperous cities in Boeotia. (Strab. ix. p. 403.) Tanagra is called by Pliny (iv. 7. s. 12) a free state; it is mentioned by Ptolemy (iii. 15. § 20); and it continued to flourish in the sixth century. (Hierocl. p. 645.) Its public buildings are described at some length by Pausanias (ix. 20. § 3, seq.). The principal temple was that of Dionysus, which contained a celebrated statue of Parian marble, by Calamis, and a remarkable Triton. Near it were temples of Themis, Aphrodite and Apollo, and two of Hermes, in one of which he was worshipped as Criophorus, and in the other as Promachus. Near the latter was the theatre, and probably at no great distance the gymnasium, which contained a picture of Corinna, who was a native of Tanagra. There was also a monument of this poetess in a conspicuous part of the city. Pausanias remarks as a peculiarity in Tanagra, that all their sacred buildings were placed by themselves, apart from the houses of the town (ix. 22. § 2.) He likewise notices (ix. 22. § 4) that Tanagra was famous for its breed of fighting-cocks, a circumstance which is mentioned by other writers. (Varr. *de Re Rust.* iii. 9. § 6; Hesych. s. v. *Κολοφῶν*; Suidas, s. v. *Ταναργαῖος ἀλεκτροπόλος*.) Tanagra possessed a considerable territory; and Strabo (ix. p. 405) mentions four villages belonging to it, Eleon or Heseon, Harma, Mycaleus, and Phrae. (Phrae, Plin. iv. 7. s. 12.)

The ruins of Tanagra are situated at an uninhabited spot, called *Grimádha* or *Grimdā*, situated 3 miles south of the village of *Skimdtari*. The site is a large hill nearly circular, rising from the north bank of the Asopus. The upper part of the site is rocky and abrupt, looking down upon the town beneath; and it was probably upon this upper height that the sacred edifices stood apart from the other buildings of the town. The walls of the city which embraced a circuit of about two miles, may still be traced, but they are a mere heap of ruins. About 100 yards below the height already described are the remains of the theatre, hollowed out of the slope. On the terrace below the theatre to the NE. are the foundations of a public building, formed of marble of a very dark colour with a green cast. The ground is thickly strewn in every direction with remains of earthenware, betokening the existence of a numerous population in former times. (Leake. *Northern*

Greece, vol. ii. p. 454, seq.; Wordsworth, *Athens and Attica*, p. 14, seq.; comp. K. O. Müller, *Orchomenos*, p. 20.)

TANAIS (*Távair*, Ptol. iii. 5. § 14, v. 9. §§ 1. 2, &c.), a famous river, which in the course of time was universally assumed as the boundary between Europe and Asia. (Strab. vii. 310, xi. 490; Mela, i. 3; Scyl. p. 30, &c.) The older writers of antiquity thought that it rose from a large lake (Herod. iv. 57; Ephor. ap. Anon. *Per. P. Eux.* p. 4) which is really the case, its source being in the lake *Joan Oero*, in the government of *Toula*; whilst later writers held that it had its sources either in the Caucasus (Strab. xi. 493; Ammian. xxii. 8), or in the Rhipaeae mountains. (Mela, i. 19; Lucan. iii. 272; Procop. *B. G.* iv. 6, &c.) The last of these hypotheses was most generally accepted; but there was likewise a fourth which made it a branch of the later (Strab. l. c.). Whilst Strabo, however, adduces these different opinions, he himself holds that its source was entirely unknown (ii. 107). It is represented as flowing in so rapid a stream that it never froze. (Mela, l. c.; cf. Nonnus, *Dionys.* xxiii. 85.) It flows first in a SE. and then in a SW. direction; and after receiving the Hyrgis (or Syrgis) as a tributary, empties itself into the Palus Maeotis (Sea of *Asof*) by two mouths. (Herod. iv. 100.) These mouths, which are at the most northern point of the Palus Maeotis, Strabo places at the distance of 60 stadia from one another (vii. 310), whilst Artemidorus (ap. Eustath. *ad Dion.* 14) makes them only 7 stadia distant. At present, however, the *Don* has 13 mouths. (Clarke, *Trav.* i. p. 423.) The etymology of the name is discussed by Plutarch (*de Flum.* 14) and Eustathius (l. c.); but its true derivation is from the Scythian word *Don* or *Dan*, signifying *water*, which occurs in the names of other rivers, as Danubius, Eridanus, &c. (Forbiger, *Handb. des Alt. Geogr.* p. 325, n. 16.) The Tanais is frequently alluded to by the Latin poets. (Hor. *Od.* iii. 10. l.; Virg. *G.* iv. 517; Ov. *Ex. Pont.* iv. 10, 55, &c.) Clarke (*Travels*, i. pp. 339, 448, note) would identify it with the *Danacets*, from the similarity of the name, an hypothesis also accepted by Lindner (*Scythica*, p. 66); but there can scarcely be a doubt that it should be identified with the *Don*. [T. H. D.]

TANAIS (*Távair*, Ptol. iii. 5. § 26, viii. 18. § 5), a town of Asiatic Sarmatia, lying on the more southern mouth and between both mouths of the river of the same name. It may also be described as situated at the northernmost point of the Palus Maeotis, and not far from the sea. It was a flourishing colony of the Milesians, enjoying an extensive commerce, and being the principal market of the surrounding tribes, both of Europe and Asia, who here bartered slaves and skins for the wine, apparel, and other articles of more civilised nations. (Strab. xi. p. 493.) The inhabitants soon reduced a considerable part of the neighbouring coasts to subjection, but were in turn themselves subdued by the kings of the Bosphorus (Id. vii. p. 310, xi. p. 495). An attempt to regain their independence only ended in the destruction of their city by Polemon I. (Id. p. 493), a little before the time when Strabo wrote. Pliny (vi. 7. s. 7) speaks of Tanais as no longer existing in his time; but it appears to have been subsequently restored (Ptol. *l. c.*; Steph. B. p. 633), though it never recovered its former prosperity. Clarke (i. p. 415) could discover no trace of it, nor even a probable site; but its ruins are said to exist near the modern *Nedrigais*

COIN OF TANAGRA.

(cf. Gräfe, *Mém. de l'Ac. des Sc. à St. Petersb.* vi. Ser. vi. p. 24; Stempowaky, *Nouv. Jour. Asiat.* i. p. 55; Böckh, *Inscr.* ii. p. 1008). [T. H. D.]

TANAITAE (*Tavaitai*, Ptol. iii. 5. § 24), a people of European Sarmatia, dwelling NE. of the Roxolani, and between them and the Tanais. [T. H. D.]

TANARUS (*Tanaro*), a river of Liguria, the most important of all the southern tributaries of the Padus. It rises in the Maritime Alps above *Ceva* (Ceba), flows at first due N., receives near *Cherasco* the waters of the *Stura*, a stream as considerable as itself, then turns to the NE., passes within a few miles of Pollentia (*Pollenza*), flows under the walls of Alba Pompeia and Asta (*Asti*), and discharges its waters into the *Po* about 15 miles below *Valenza* (Forum Fulvii). It receives many considerable tributaries besides the *Stura* already mentioned, of which the most important is the *Bormida*, the ancient name of which has not been preserved to us; but the *Orba*, a minor stream which falls into it a few miles above its junction with the *Tanaro*, is evidently the river *Urbs*, mentioned by Claudian (*B. Get.* 555), the name of which had given rise to an ambiguous prophecy, that had misled the Gothic king Alaric. The *Belbo*, which falls into the *Tanaro* a few miles above the *Bormida*, has been identified with the *Fevus* of the *Tabula*; but the names of rivers given in that document in this part of Italy are so corrupt, and their positions so strangely misplaced, that it is idle to attempt their determination. Though the *Tanarus* is one of the most important rivers of Northern Italy, its name is not mentioned by any of the geographers except Pliny; nor does it occur in history until long after the fall of the Western Empire. (Plin. iii. 16. s. 20; P. Diac. *Hist. Lang.* vi. 58.) [E. H. B.]

TANATIS, according to Solinus (c. 12), an island in the neighbourhood of Britain. It is undoubtedly the same which Bede (*Hist. Eccl.* i. 25) calls *Tanatos*, and which still bears the name of *Thanet*. [T. H. D.]

TANATIS. [TALIA.]

TANARUS. [ARGOS, Vol. I. p. 201, s.]

TANETUM or TANNETUM (*Tánneton*, Ptol.: *Etā. Tanetanus*, Plin.: *S. Iliario*), a small town of Gallia Cispadana, on the *Via Aemilia*, between *Regium Lepidum* and *Parma*, and distant 10 miles from the former and 8 from the latter city. (*Itin. Ant.* p. 287; *Itin. Hier.* p. 616; *Tab. Peut.*) It is mentioned in history before the Roman conquest of this part of Italy, as a Gaulish village, to which the praetor L. Manlius retired after his defeat by the Boii in B. C. 218, and where he was surrounded and besieged by that people. (Pol. iii. 40; Liv. xxi. 25.) Its name is not again noticed in history, but it is mentioned both by Pliny and Ptolemy as a municipal town of Gallia Cispadana, though it appears to have never risen to be a place of importance. (Plin. iii. 15. s. 20; Ptol. iii. 1. § 46; Phlegon, *Macrobi.* 1.) Livy calls the Gaulish town "*vicus Pado propinquus*," an expression which would lead to an erroneous idea of its position; for we learn from the *Itineraries* that it certainly stood on the *Via Aemilia*, at a distance of more than 10 miles from the *Padus*. The site is still occupied by a large village, which is now called, from the name of its principal church, *Sant' Iliario*; but a hamlet or village about half a mile to the N. still retains the name of *Taneto*. It is distant about 2 miles from the river *Enza*, the *Nicia* of Pliny (ii. 16. s. 20),

which flows into the *Po*, about 12 miles from the point where it crosses the Aemilian Way. [E. H. B.]

TANIS (*Távis*, Herod. ii. 166; Strab. xvii. p. 802; Ptol. iv. 5. § 52; the ZOAN of the Hebrews, *Numb.* xiii. 23; the COPTIC TANI or ATHENNUS, and the modern *San*), was a city of Lower Egypt, situated, in lat. 30° 59', on the Tanitic arm of the Nile. [NILEUS, Ostium Taniticum.] It was the capital of the Tanitic Nome. Although the name of Tanis does not appear in Egyptian annals earlier than the xxi-st dynasty, which consisted of 21 Tanite kings, it had long previously been among the most important cities of the Delta. The branch of the Nile on which it stood was, with the exception of the Pelusiac, the most easterly, and the nearest to Palestine and Arabia. It is described in the Book of Numbers (i. c.) as founded only seven years later than Hebron; and Hebron, being extant in the time of Abraham, was one of the oldest towns in Palestine. Tanis owed its importance partly to its vicinity to the sea, and partly to its situation among the Deltaic marshes. It probably was never occupied by the Hyksos, but, during their usurpation, afforded refuge to the exiled kings and nobles of Memphis. It was a place of strength during the wars of the early kings of the New Monarchy—the xviii-th dynasty—with the shepherds; and when the Egyptians, in their turn, invaded Western Asia, the position of Tanis became of the more value to them. For after Egypt became a maritime power, in its wars with Cyprus and Phoenicia, a city at no great distance from the coast would be indispensable for its naval armaments. To these purposes Tanis was better adapted than the more exposed and easterly Pelusium. The eastern arms of the Nile were the first that silted up, and the Pelusiac mouth of the river was at a very early period too shallow for ships of war. The greatness of Tanis is attested in many passages of the Hebrew writers. In the 78th Psalm the wonders that attended the departure of the Israelites from Egypt are said to have been "wrought in the plain of Zoan." This Psalm, indeed, is somewhat later than David (B. C. 1055—1015); but it proves the tradition that Tanis was the capital of that Pharaoh who oppressed the Hebrew people. In the age of Isaiah (xix. 11, foll.), about 258 years later, Tanis was still reckoned the capital of the Delta, since the prophet speaks of the princes of Zoan and the princes of Noph (Memphis) as equivalent to the nobles of Egypt. Again, Isaiah (xxx. 4) describes the ambassadors who were sent to Egypt to form an alliance with its king as repairing to Zoan and Hanes, or Heracleopolis; and the desolation of Zoan is threatened by Ezekiel as the consequence of Nebuchadnezzar's invasion. Tanis probably declined as Sais and Memphis rose into importance; yet twenty years before the Christian era it was still a large town (Strab. xvii. p. 802); nor did it shrink into insignificance until nearly 80 A. D. (Joseph. *B. Jud.* iv. 11, § 4.) Its linen manufacture probably long sustained it. The marshy grounds in its environs were well suited to the cultivation of flax; and Pliny (ix. 1) speaks of the Tanitic linen as among the finest in Egypt.

No city in the Delta presents so many monuments of interest as Tanis. The extensive plain of *San* is indeed thinly inhabited, and no village exists in the immediate vicinity of the buried city. A canal passes through, without being able to fertilise, the field of Zoan, and wild beasts

and marsh fever prevent all but a few fishermen from inhabiting it. The mounds which cover the site of Tanis are very high and of great extent, being upwards of a mile from north to south, and nearly three quarters of a mile from east to west. The arm in which the sacred enclosure of the temple of Pthah stood is about 1500 feet in length by 1250 broad. The enclosure, which is of crude brick, is 1000 feet long and about 700 wide. A gateway of granite or fine gritstone, bearing the name of Ramees the Great, stands on the northern side of this enclosure. The numerous obelisks and the greater part of the sculptures of the temple were contributed by Ramees. His name is also inscribed on two granite columns outside the enclosure, and apparently unconnected with the temple. Though in a very ruinous condition, the fragments of walls, columns, and obelisks sufficiently attest the former splendour of this building. The architecture is generally in the best style of Egyptian art, and the beauty of the lotus-bud and palm capitals of the columns is much celebrated by travellers. Among the deities worshipped at Tanis were Pthah (Hephaestus), Maut, Ra, Horus, &c. The Pharaohs who raised these monuments were of various dynasties, ranging from the kings of the xviith dynasty to the Aethiopian Tirhaka. The numerous remains of glass and pottery found here, and the huge mounds of brick, prove that the civil portions of Tanis were commensurate in extent and population with the religious. The modern village of *San* consists of mere huts. Early in the present century an attempt was made to establish nitre-works there; but they have been long abandoned; and the only occupation of the few inhabitants of this once flourishing city is fishing. North of the town, and between it and the coast of the Mediterranean, was the lake Tanis, the present *Menzah-leh*. (Wilkinson, *Mod. Egypt and Thebes*, vol. i. pp. 407, 449, foll.; Kenrick, *Ancient Egypt*, vol. ii. p. 341.) [W.B.D.]

TANUS (Τάνος, Artemidorus, *op. Steph. B. s. v.*), a town in Crete of which there is a coin with the epigraph **TANIQN**. (Eckhel, vol. ii. p. 321.) [E.B.J.]

TANUS. [ARGOS, vol. i. p. 201, a.]

TA'OCE (Τάκην, Arrian, *Ind. c. 39*; Strab. xv. p. 728), a town or fortress of the district of Taocene, in Persia. It was, according to Strabo, the seat of one of the three treasures of the kings of Persia. It is not certain from Arrian's statement whether he means the town or the district, but probably the former. The town appears to have been placed near the river Granis. Ptolemy speaks of a promontory and a town of this name (vi. 4. §§ 2 and 7). It is probable that it is the same place as that called by Al-Edrisi, *Toudj* or *Touj* (ii. p. 391, &c.). Where Dionysius (1069), enumerating the three palaces, speaks of the *Tarkol*, we ought most likely to read *Tokol* or *Tokol*, with reference to the people of this district. The Granis is the river of *Abushir*. [GRANIS, [V.]

TA'OCHI (Τάχοι), a tribe in the interior of Pontus (Steph. B. s. v.), which is frequently noticed by Xenophon in the *Anabasis* (iv. 4. § 18). They lived in mountain fortresses in which they kept all their possessions (iv. 7. § 1, comp. 6. § 5, v. 15. § 17). They occupied the country near the frontiers of Armenia. [L.S.]

TAPANITAE (Ταπανίται, Ptol. iv. 5. § 21), a people in the interior of Marmarica. [T.H.D.]

TAPE. [TAGAE.]

TAPHIAE, and more anciently **TELEBOIAE**, a number of small islands off the western coast of Greece, between Leucas and Aracum (Pto. v. 12. s. 19), also called the islands of the Iapig or Teleboae (Ταφίαι, Τηλεβοαί νήσοι, Strab. i. p. 63), who are frequently mentioned in the *Iliad* as pirates. (Od. xv. 427, xvi. 426.) When Athena visited Telemachus at Ithaca, she assumed the form of Mentes, the leader of the Taphians. (Od. i. 12.) The Taphians or Teleboans are celebrated in the legend of Amphitryon, and are said to have been subdued by this hero. (Herod. v. 59; Apollon. i. §§ 6, 7; Strab. l. c.; Plaut. *Amph. i. 1*; Dict. of *Ant. Art.* **AMPHITRYON**.) The principal island was Taphos (Τάφος) by Homer (Od. i. 417), and by ancient writers Taphia, Taphiussa, or Taphine (Ταφινισσοῖσα, Ταφίνα, Strab. l. c.; Plin. l. c.; Steph. B. s. v. Τάφος), now *Meganisi*. The next largest island of the Taphii was Carnus, now *Kalamo*. (Strab. i. 13; Steph. B. s. v.; Leake, *Northern Greece*, v. s. p. 16; Dodwell, vol. i. p. 60.) Stephanus mentions a town in Cephalonia, named Taphia, represented by the modern *Tafio*, where many ancient sepulchres are found. (Leake, *Northern Greece*, vol. iii. p. 67.)

TAPHIASSUS. [AETOLIA, p. 63.]

TAPHIS (Τάφισ, Anton. p. 161; Tafis, Pto. i. 4. § 17; Τάφισ, Olympiod. *op. Phot.* p. 62, ed. Bekker), a town situated on the western bank of the Nile, in the Regio Dodecaschoenus, S. of Philae and the lower Cataract. The ruins of an ancient city have been discovered at *Teffah* in Lower Nubia, which is supposed to correspond with the ancient Taphis. It was in the neighbourhood of large stone-pyramids. On the opposite side of the river was a town called Contra-Taphis. Both towns in the 5th century A. D. were occupied by the Ehemmyes. [W.B.D.]

TAPHOS. [TAPHIAE.]

TAPHRAE or **TAPHROS** (Τάφρα, Steph. B. p. 642; cf. Mela, ii. 1; Plin. iv. 12. s. 26; Ptolemy, Ptol. iii. 6. § 5), that part of the neck of the *Osanesus* Taurus which was cut through by a ditch and fortified (Herod. iv. 3). Pliny and Ptolemy (l. c.) mention a town called Taphrae; and Strabo (l. c. 308) also notices at this spot a people called *Taphrai*. (Cf. D'Anville, *Mém. de l'Ac. d. Ins.* tom. p. 581; Rennell, *Geogr. of Herod.* p. 64; Niebuhr, iv. p. 291.) *Perecop*, or *Perseop*, the modern name of the isthmus, also signifies in Persian a ditch or entrenchment. (Clarke, *Iran*, i. p. 316.) [T.H.B.]

TAPHROS. [TAUBUS.]

TAPORI, a people of Lusitania. (Pto. ii. 8. s. 25.) [T.H.B.]

TAPOSIRIS (Τάποσις, Strab. xvi. p. 239; *Taposiris*, Ptol. iv. 5. § 34; Dioscorides, *Med. Mat.* iii. 24; *Taposiris*, Steph. B. s. v.; *Tapsiris*, *Perseus*: the *Bostri* of Leo Africanus), was a town in the Libyan Nome, west of the Delta, and about 100 miles distant from Alexandria. There were probably several places of this name in Egypt, and all Nome would be desirous to possess a "wall of Osiris." Abulfeda mentions a *Bastir* near *Silennyus*, another in the Arsinoite Nome, the *Ptolemais* a third at *Gizeh*, close to the Pyramids. There was, however, in the Libyan Nome, a place which held the most considerable of all, inasmuch as it was the place where the prefect of Alexandria held the periodical census of the Libyan Nome. It was, indeed, so much frequented that the emperor Justinian (A. D. 527, foll.) constructed a *Tapsis*

a town-hall, and public baths. (Procop. *de Aedif.* vi. 1.) Nearer Alexandria was a smaller town of this name. (Ταπσοειρις πλησίον Ἀλεξανδρείας, Steph. B. s. v.; ἡ μικρά, Strab. xvii. p. 800.) [W. B. D.]

TAPPUAH or BETH-TAPPUAH, a city in Palestine, upon the mountains of Judah, not far from Hebron, which Robinson identifies with the ancient village of *Teffuh*, lying in the midst of olive-groves and vineyards. (*Josh.* xv. 53; Robinson, *Bibl. Res.* vol. ii. p. 71, 2nd ed.) There was another Tappuah in the plain of Judah (*Josh.* xv. 34); but which of these was the place conquered by Joshua, cannot be determined. (*Josh.* xii. 17.)

TAPRO'BANE (ἡ Ταπροβάνη, Strab. i. 63, xv. 690, &c.; Steph. B. s. v.; Ptol. vii. 4; Plin. vi. 22. s. 24; Mela, iii. 77; Ov. *ex Pont.* i. 5. 80), a very large island, now *Ceylon*. It is situated to the SE. of the peninsula of *Hindostán*, and is all but joined to the continent by a reef now called *Adam's Bridge*, and by an island called *Ramísúr* or *Ramisceram Cor*, the *Kôpu* of Ptolemy (vii. 1. § 11) and the *Insula Solis* of Pliny (vi. 22. s. 24). (Comp. Duncan, *As. Res.* v. p. 39; Ritter, *Erdk.* vi. p. 63.)

Taprobane was not known to the writers of classical antiquity before the time of Alexander the Great, and the various narratives which have reached the West subsequent to his invasion of the *Panjab*, though often correct as to its natural productions, are singularly erroneous as to its position, its size, and its shape. Thus Onesicritus estimates it at 5000 stadia, though whether this number implies length, breadth, or circumference, is not stated by Strabo (xv. p. 690). If the last, he is nearly correct, Rennell considering this to be about 660 miles. (See *Map, and Memoir of India*.) He adds that it was twenty days' sail from the continent—the ships being badly constructed and unfit for sailing; a view remarkably confirmed by Pliny, who notices the change in the length of the voyage owing to the improved kind of vessels, and the shallow character of the intervening strait (vi. 22. s. 24). Eratosthenes reduces the distance to a navigation of seven days—the same time as Pliny states (*l. c.*); but this is far too great (Strab. xv. p. 691), as it is really little more than 50 miles from its nearest shores to the mainland of *Hindostán*. (Vincent, *Voy. of Nearchus*, i. p. 495; Boyd, in *Ind. Ann. Regist.* 1799.) Eratosthenes is still more erroneous in the position he assigns to the island, for he extends it 8000 stadia in the direction of Africa (Strab. *l. c.*), while the author of the *Periplus M. Erythr.* makes it reach almost to the coast of Azania (c. 61, ed. Müller)—an error which has probably led to that of Edrisi, who has confounded *C. Comorin* with *Madagascar*, and in his map has even placed this island to the E. of *Ceylon*. Strabo supposes that *Ceylon* is not less than Britain (ii. p. 130), and Ptolemy gives it a length of more than 1000 miles, and a breadth of more than 700 (i. 14. § 9, viii. 28. § 3). (Compare with this the statement of Marco Polo, which is, as to circumference, identical with Ptolemy, *l. c.*; and Caesar Frederick, *ap. Hackluyt's Voy.* ii. pp. 225—227.)

The history of ancient *Ceylon* falls naturally into three heads: 1. What may be gathered from the writers who followed the march of Alexander. 2. What we may learn from the Roman writers. 3. What may be obtained from the Byzantines.

Of the times preceding the invasion of India by Alexander we have no distinct notice in classical history; yet it may be inferred from Pliny that some report of its existence had reached the West,

where he states that it had long been the opinion that Taprobane was another world, and bore the name of Antichthonus, but that it was determined to be an island about the æra of Alexander (vi. 22. s. 24): while it is not impossible that Herodotus may have heard some tradition on the subject, since he states that cinnamon is produced in those countries in which Dionysus was brought up (iii. 111); from which passage, however, it cannot be determined whether the true cinnamon, that is the bark of the shrub, is intended, or some other kind of cassia.

To the first class of writers belong Onesicritus, the companion of Alexander, Megasthenes and Daimachus, who were sent as ambassadors by Seleucus to Sandrocottus (*Chandragupta*) and his son Amittrochates (*Amitrabhāta*), from whose memorials almost all that is preserved in Strabo and in the earlier portion of the notice in Pliny has been taken. There is no reason to suppose that either Onesicritus or Megasthenes themselves visited this island; they probably collected, while in India, the narratives they subsequently compiled.

The second class of writers are of the period when the vast commerce of Alexandria had extended to India subsequent to the death of Strabo, A. D. 24. (Groskurd, *Proleg. in Strab.* i. p. 16.) Previous to this period, some few ships may have reached India from Egypt; but, from Strabo's own statement, they appear to have been those only of private individuals (*l. c.*). Pliny, the writer of the *Periplus of the Erythraean Sea*, Marcian of Heraclea, Mela, and Ptolemy, belong to this class, and, in the fulness of their narratives, show clearly how much additional knowledge had been acquired during the extension of the power of the early emperors of Rome.

Lastly, under the head of Byzantine writers, we have the remarkable account of the island in Coemias Indicopleustes, the latest which belongs to the period of ancient or classical history.

The most important notice is that of Pliny (*l. c.*), who states that ambassadors from the island were received at Rome by the emperor Claudius, through the instrumentality of the freedman of a certain Annianus Plocamus, who, after having been driven out of his course upon the island, remained there six months, and became intimate with the people and their rulers. He states that Plocamus landed at a port he calls Hippuros, which may be identified with the modern *Kudremalai*, which means the same in Sanscrit; and that the name of the king was Rachia, evidently the Indian *Rajah*: he adds that the island contained 500 towns, the chief of which was called Palæsimundum, and a vast lake Megisba, from which flowed two rivers, one called Cydara (*Kundara* or *Kadambo* in the *Annals*, now *Aripo*). It is not possible accurately to determine what modern place is to be identified with Megisba, but the *Mahavanso* speaks of enormous works of this nature attributed to Vasabha and other early kings. (*Mah.* pp. 65, 210, 221, 215.) Pliny adds some astronomical facts, which are not equally coincident with the truth; and remarks on the richness of the island in precious stones and metals, and on the fineness of the climate, which extended the life of man beyond its usual limits.

We may mention also, that Diodorus tells a remarkable story, which has been generally held to refer to *Ceylon*, though this is not capable of proof. According to him Iambulus, the son of a merchant, on his way to the spice countries, was taken prisoner

by the Aethiopians, and, after a time, with one other companion, placed in a boat and left to his fate. After a long voyage, he came to an island, rich in all kinds of natural productions and 5000 stadia round (*στοργγύλη μὲν ὑπαρχούση τῷ σχήματι*). Iambulus stayed there seven years, and thence went to Palibothra, where he was well received by the king, who is said to have been *φιλῶλλον* (Diod. ii. 55, &c.). That the details of this voyage are fabulous no one can doubt, yet the narrative is probably founded on fact, and points to an early intercourse between the shores of Eastern Africa and India.

The fullest and by far the most interesting account of *Ceylon*, is that preserved by Cosmas Indicopleustes, which was published by Montfaucon (*Coll. Nov. Patr.* ii. p. 336). Cosmas, who flourished in the reign of Justinian, about A.D. 535, states that he obtained his information from a Greek named Sopatrus, whom he met at Adulis. According to this writer, the Taprobane of the Greeks is the Silediba of the Hindus, an island lying beyond the Pepper Coast, or *Malabar*, and having near it a great number of small islands (i. e. the *Maldives*). He reckons it about 900 miles in length and breadth, a measure he deduces from a native measure called *Gaudia* (still said to be known in the island, and the same as the Tamil *naligai*, Vincent, ii. p. 506). There were, at the time he received his information, two kings in the island, one the possessor of the Hyacinth (i. e. of the mountain districts which abound in precious stones), and the other of the plain country and coast, where in later times the Arabians, Portuguese, Dutch, and English, have in succession established factories. A Christian church, he adds, was established there *ἐνδημιούσαντες Περσῶν Χριστιανῶν*, with a priest and deacon ordained in Persia. There is no doubt that these were Nestorians, whose Catholics resided at Ctesiphon, and who, on the Malabar coast, are often called Christians of St. Thomas. He determines the position of Silediba, by stating that it is as far from it to China, as from the *Persian Gulf* to the island (p. 138). Again, he says, which is less correct, that Silediba is five days' sail from the continent; and that on the continent is a place named Marallo (*Μαραλλο* ?), which produces the pearl oysters; and adds, that the king of *Ceylon* sells elephants for their height; and that in India elephants are trained for war, while in Africa they are captured for their ivory. Horses imported from Persia pay no tax. It is remarkable that this notice of the elephants is in strict accordance with that of Aelian, who asserts that they were bred in *Ceylon* and transported in large native vessels to the opposite continent, and sold to the king of Calingae (*Hist. An.* xxvi. 18). Pliny (*l. c.*), on the authority of Onesicritus, affirms that larger and more warlike elephants are reared in this island than anywhere else in India, and that the hunting of them was a constant sport; and Ptolemy places under the *Malea M.* (*Adam's Peak*) his *ἐλεφάντων νομαί*, in the exact position in which they were, till lately, most abundant (vii. 4. § 8). The testimony of all modern travellers on the subject of the *Ceylon* elephant is, that those bearing great tusks, and therefore valuable for their ivory, are extremely rare in the island. (Compare also Dionys. Perieg. v. 593, who calls *Ceylon* *ὑπερπερὶ Ἀσσηγενέων ἐλεφάντων*; Alex. Lechn. in Steph. B., who speaks of *εὐθύβιοι ἐλεφάντες* as the product of the island; Solin. c. 56; and Tzetzes *Chil.* viii. *Hist.* 215). Cosmas concludes his remarkable story with a notice

of a conference between the king of *Ceylon* and Sopatrus, in which the latter convinced the king that the Romans were a greater people than the Persians, by exhibiting some gold coins of Byzantium. It confirms the veracity of the narrator that we know from other sources that the Sassanian princes of the sixth century had only silver money, while at the capital of the Eastern Empire gold coin was not rare. There were many temples in the island, one of them famous for a hyacinth of extraordinary size.

Few islands have borne, at different times, so large a number of names; as many of these have considerable interest, we shall notice them in succession.

The first, as we have stated, by which it was known to the Greeks was *Ταπροβάρη*. Several explanations have been given of this name; the best is probably *Tamraparni* (Sanskrit for red-leaved; cf. Burnouf, *Journ. Asiat.* viii. p. 147; Mahacasa, ed. Turnour, p. 50; Lassen, *Inst. Ling. Præf.* p. 246), a form slightly changed from the *Pali* *Tāmaparni*, the spot where the first king Vigaya is said to have landed (*Mahavamsa*, l. c.). This name is not unknown in other Indian writings; thus we find so named a place on the adjoining continent of *Hindustan*, and a river of the same district which flows from the *Ghâts* into the sea near *Tinnerelly* (Wilson, *Vishnu Purana*, p. 176); and a pearl-fishery at the mouth of this stream is noticed in the *Raghu-vansa* (iv. p. 50; cf. also *Vishnu Purana*, p. 175, and *Asiat. Research.* viii. p. 330). Other interpretations of Taprobane may be found in Bochart (*Geogr. Sacra*, p. 692), who, after the fashion of the scholars of his day, derives it from two Hebrew words, and imagines it the *Ophir* of the Bible; Wahl (*Erdbesch.* i. *Ost-Indien*, ii. 682, 683), Mannert (v. p. 285), Duncan (*Asiat. Research.* v. p. 39), Gladwin (*Asiatic Akberi*, iii. 36), Bohler (*Atlas Indica*, i. 27), Vincent (*Periplus*, ii. p. 493), none of which are, however, free from objection. There can be no doubt that the early language of *Ceylon* approximated very closely to that of the adjoining continent, and was, in fact, a form of *Tamil*. (Cf. Beak, *Ceylon Strift*, p. 1, Colombo, 1821; Buchanan Hamilton, ap. M. Martin's *East India*, ii. p. 795; cf. also Ptol. viii. 1. § 80). It may be observed that the name *Tāmaparni* is found in the *Girnar* inscription of Asoka (B. c. 280), and would therefore naturally be known to the Seleucidian Greeks. (*Asiat. Journ. Beng.* vii. p. 159.)

We may add that Pliny states that the ancient inhabitants were called by Megasthenes *Παλασιμονδοί* (l. c.), doubtless the translation into Greek of some Indian name. It is not impossible that Megasthenes may have been acquainted with the Indian fable, which made the *Rakshasas*, or Giants, the children of the Earth, the earliest inhabitants of this island.

The next name we find applied to *Ceylon* was that of *Simunda* or *Palaesimunda*, which is found after the time of Strabo, but had, nevertheless, gone out of use before Ptolemy. (Ptol. l. c.; Steph. B. s. v. *Taprobane*; *Periplus M. E.*, ed. Hudson, p. 2; Marcian, ed. Hudson, p. 26, and pp. 2, 9.) There is a difficulty at first sight about these names, as to which form is the correct one: on the whole, we are inclined to acquiesce in that of *Palaesimunda* (*Παλασιμονδόν*), on the authority of Marcian (l. c.) and of the *Periplus* (§ 61, ed. Müller). Pliny, too, in his account of the embassy to Rome, calls the city, where the royal palace was, *Palaesimunda*. There can be little doubt that this word is the Græcised form of the Sanscrit *Pālī-Simandā*, the

Head of the Holy Law, which is confirmed by another name of analogous character, Andrasimundu (Ptol. vii. 4), a promontory now called *Calpentyn* (Mannert, l.c. p. 211). The ancient city noticed by Pliny, with the royal palace, must be that elsewhere called *Anurogrammon*, and by the natives *Anurāḍpura*, the royal seat of empire from B.C. 267 to A.D. 769 (*Mahawanso*, *Intr.* p. lxi.). (For other derivations of *Palasimundu*, see Dodwell, *Dissert. de Geogr. Min.* p. 95; Wahl, *Erdbeschr.* ii. p. 684; Renaudot, *Anc. Relat. des Indes*, p. 133; Malte-Brun, *Précis de Géogr.* iv. 113; Mannert, i. p. 210; Paulino-a-St. Barth, *Voyage aux Indes*, ii. p. 482.) The conjecture of Willford (*As. Res.* x. p. 148) that it may be *Sumatra*, and of Heeren (*Soc. Reg. Götting.* vol. vii. p. 32) that it is the town of "Pontgemolle," do not need refutation.

The other names which this island has borne appear to have been as follow: *Salice*, with its inhabitants, the *Salae*, *Serendivus*, *Sieleidiba*, *Serendib*, *Zeilan*, *Ceylon*. These are all closely connected and in reality euphonic modifications of one original form. The first, *Salice*,—perhaps more correctly *Saline*,—which seems to have been in use when Ptolemy wrote the common name of *Taprobane* (l.c.), is certainly derivable from *Sinala*, the *Pāli* form of *Sinhala* (*Mahaw.* cap. vii. p. 50): from this would naturally come the *Σιλαε* of Cosmas (Cosm. Indicopl. l.c.), the termination of this name, *δισα*, being nothing more than the Sanscrit *dvīpa*, an island. (Cf. in the same neighbourhood the *Lakkadive* and *Maldivæ* islands.) The slight and common interchange of the L and R gives the *Serendivus* of Ammianus (xxii. 7). From this, again, we obtain the more modern forms of the Arabic, Dutch, and English. *Sinhala* would mean the abode of lions— which word is found with the same sense, and the form *Senghale*, in the narrative of the Chinese travellers who visited *Ceylon* in A.D. 412. (*Foe-koue-ki*, p. xlii, cf. p. 328, Annot. p. 336). Besides these names there is one other whereby alone this island is known in the sacred Brahminical writings. This is *Lanka* (see *Mahābh.* ii. 30, v. 1177, iii. c. 278, &c.). It is most likely that this name had passed out of use before the time of Alexander, as it is not mentioned by any of the classical writers: it has been, however, preserved by the Buddhists, as may be seen from the notices in the *Mahawanso* (pp. 2, 3, 49, &c.). (Comp. also Colebrooke, *Ess.* ii. p. 427; Davis in *As. Res.* ii. p. 229.)

Ceylon is a very mountainous island, the greater masses being grouped towards the southern end, and forming thereby the watershed for most of its rivers. The ancients had a tolerably accurate knowledge of the position of these hills. To the N. were the Montes Galibi, terminating in a promontory called Boreum (now *Cape Pedro*), and overlooking the principal capital, *Anurāḍpura*. To the S. the great chain was known by the generic name of *Malea*, doubtless a form derived from the Sanscrit *Mala*, a mountain. The centre of this group is the well-known *Adam's Peak*—in the native *Pāli* language, *Samana Kūta* (the Mountain of the Gods) (Upham, *Sacred Books of Ceylon*, iii. p. 202), and the high land now called *Neura-Ellia*.

The principal rivers of Ceylon, as known to the ancients, were the *Phasis*, which flowed from the Montes Galibi in a northern direction; the *Ganges* (now *Mahāvali-Ganga*), the chief of all the streams whereby the island is watered, the principal source of which is in the S. range, of which

Adam's Peak is the pre-eminent mountain (Brooke on *Mahavella-Ganga*, *Roy. Geograph. Journ.* iii. p. 223), and whose course is nearly NE.; the *Baraces*, which rose in the M. *Malea*, and flowed SE.; and the *Soanas*, which flows from the same source in a westerly direction. Besides these rivers was the celebrated lake called *Megisba*, the size of which has been extravagantly overstated by Pliny (vi. 22. s. 24). It is probable that this lake was formed by the connecting together of several great tanks, many remains of which still exist; and thus Forbiger suggests that it may be near the mouths of the *Mahāvali-Ganga*, in which neighbourhood there are still extraordinary remains of canals, earthworks, &c. (Brooke, l.c.). It was on the shores of this lake that Pliny placed the capital *Palasimundum*, with a population of 200,000 souls. The island was rich in towns and peoples, which are not clearly distinguished by ancient writers; of these the *Anurogrammi* with the town *Anurogrammon* (now *Anurāḍpura*) is the most important. The greatness of this place, which was the royal residence of the kings from B.C. 267 to A.D. 769 (*Mahawanso*, *Introd.* p. lxi.), is shown by the vast remains which still exist on the spot. (Chapman, *Ancient Anurāḍpura*, in *Trans. Roy. As. Soc.* ii. pl. ii. p. 463).

Other less known peoples and places were the *Soani*, *Sandocandae*, *Rhogandani*, *Danae* (now *Tangalle*), the *Morduli* with their seaport *Mordulamne*, the *Nagadibi*, *Spartana* (now *Trincomali*), *Maagrammon* (probably *Tamankadawee*), and the *Modutti*. For these and many more we are indebted to Ptolemy, who from his own account (i. 17. § 4), examined the journals and conversed with several persons who had visited the island. It is a strong confirmation of what he states, that a considerable number of the names preserved can be re-produced in the native Indian form.

The people who inhabited the island were for the most part of Indian descent, their language being very nearly connected with the *Pāli*, one of the most widely spread Indian dialects. To this race belong all the monuments which remain of its former greatness, together with a very curious and authentic series of annals which have been of late brought to light by the exertions of Sir Alexander Johnston and the critical acumen of Mr. Turnour (*Mahawanso*) and Upham (*Sacr. Hist. Books*). There are, however, still existing in the island some few specimens of a wholly different race, locally known by the name of the *Veddahs*. These wild and uncivilised people are found in the valleys and woods to the E. and S. of the *Mahāvali-Ganga*; and are, in all probability, the remains of the aboriginal race who dwelt in the land antecedent to the arrival of *Vigaya* and his Indian followers. In physiognomy and colour they bear a striking resemblance to the earliest inhabitants of the S. provinces of *Hindustān* and are, most likely, of similarly Scythic origin. (Knox, *Account of Ceylon*, Lond. 1657; Perceval, *Account of Ceylon*, Lond. 1803; Gardiner, *Descr. of Ceylon*, Lond. 1807; Davy, *Ceylon and its Inhabitants*, Lond. 1821; W. Hamilton, *India*, ii. 522; Ritter, iv. 2. p. 226; Lassen, *Indische Alterth.* i. p. 198; *Dissert. de Taprobane*, Bonn, 1832; Turnour, *Mahawanso*, Ceylon, 1836; *Jour. Asiat. Beng.* vi. 856; Chapman, *Anc. City of Anurāḍpura*, in *Tr. R. As. Soc.* iii. 463; Chitty, *Ruins of Tammana Nunera*, in *R. As. Soc.* vi. 242; Brooke, *Mahavella-Ganga*, *R. Geogr. Soc.* iii. 223.) [V.]

TAPSUS FLUVIUS. [ΤΑΨΥΣ.]

TAPURA (Τάπουρα), a town of uncertain site in Armenia Minor, is mentioned only by Ptolemy (v. 7. § 3). [L. S.]

TAPUREI (Ταπούρειοι, Ptol. vi. 14. §§ 12, 13), a tribe in Scythia intra Imaum. [T. H. D.]

TAPURI (Τάπουροι or Τάυροι, Strab. xi. p. 520; Plin. vi. 16. s. 18), a tribe whose name and probable habitations appear, at different periods of history, to have been extended along a wide space of country from Armenia to the eastern side of the Oxus. Strabo places them alongside the Caspian Gates and Rhagae, in Parthia, (xi. p. 514), or between the Derbices and Hyrcani (xi. p. 520), or in company with the Amardi and other people along the southern shores of the Caspian (xi. p. 523); in which last view Curtius (vi. 4. § 24, viii. 1. § 13), Dionysius (*de Situ Orbis*, 733), and Pliny (vi. 16. s. 18) may be considered to coincide. Ptolemy in one place reckons them among the tribes of Media (vi. 2. § 6), and in another ascribes them to Margiana (vi. 10. § 2). Their name is written with some differences in different authors; thus Τάπουροι and Τάυροι occur in Strabo; Tapuri in Pliny and Curtius; Τάυρροι in Steph. B. There can be no doubt that the present district of *Taberistan* derives its name from them. Aelian (*V. H.* iii. 13) gives a peculiar description of the Tapuri who dwelt in Media. (Wilson, *Ariana*, p. 157.) [V.]

TAPURI MONTES, a chain of mountains, in Scythia, to the N. of the Jaxartes, apparently a portion of the *Altai* range, towards its western extremity (Ptol. vi. 14. § 7). It may, however, be doubted whether this view of Ptolemy is really correct. It would seem more likely that they are connected with the Tapuri, a tribe who nearly adjoined the Hyrcani [TAPURI]; and this a notice in Polybius would appear clearly to imply (v. 44). [V.]

TARACHI (Τάραχοι, Ptol. vii. 4. § 8), a tribe of Taprobane or *Ceylon*, who occupied the S.E. corner of the island before the *Malea* mountains (*Adam's Peak*). They appear to have had a port called *Ἥλιου Αἴλιον*, probably in the neighbourhood of the present *Vintam*. Near to them was a river called the *Barace* (Ptol. vii. 4. § 5). It is not unlikely that the river and the people had once the same name, which has since been modified by the change of the initial letters. [V.]

TARANDRUS (Τάρανδρος; *Eth.* Τάρανδριος), a place in Phrygia of unknown site, is mentioned only by Stephanus Byz. (s. v.). [L. S.]

TARANEI, a people in Arabia Deserta of unknown site. (Plin. vi. 28. s. 32.)

TARAS. [TARENTUM.]

TARASCON (Ταρασκόν; *Tarascon*), a town in the Provincia Narbonensis, on the east side of the *Rhone*, between *Aries* and *Arignon*. The railway from *Arignon* to *Marseille* passes through *Tarascon*, and there is a branch from *Tarascon* to *Nîmes*. Ptolemy (in whose text the name is written *Ταρουσκόν*) enumerates *Tarascon* among the towns of the *Salvæ* [SALYÆ]. Strabo (iv. p. 178) says that the road from *Nemausus* (*Nîmes*) to *Aquæ Sextiæ* passes through *Ugernum* (*Beaucaire*) and *Tarascon*, and that the distance from *Nemausus* to *Aquæ Sextiæ* is 53 Roman miles; which, as D'Anville observes, is not correct. In another passage (iv. p. 187) Strabo makes the distance from *Nîmes* to the bank of the *Rhone* opposite to *Tarascon* about 100 stadia, which is exact enough. [TARUSCONIENSES.] [G. L.]

TARBA. [TARRHA.]

TARBELLI (Τάρβελλοι, Τάρβελοι) are mentioned by Caesar among the Aquitanian peoples (*B. G.* iii. 27). They lived on the shores of the Ocean, on the Gallic bay (Strab. iv. p. 190), of which they were masters. Gold was found abundantly in their country, and at little depth. Some pieces were a handful, and required little purification. The Tarbelli extended southwards to the *Aturia* (*Adour*) and the Pyrenees, as the passages cited from Tibullus (i. 7, 9) and Lucan (*Pharsal.* i. 421) show, so far as they are evidence:—

“Qui tenet et ripas Aturi, quo littore curvo
Molliter admissum claudii Tarbellicus sequor.”

Ansonius (*Parent.* iv. 11) gives the name “Tarbellus” to the Ocean in these parts. Ptolemy (ii. 7. § 9) places the Tarbelli south of the Bituriges Vi-visci, and makes their limits extend to the Pyrenees. He names their city *Τάρτα Αἰγυόστα*, or *Aquæ Tarbellicæ*. [AQUÆ TARBELLICÆ.]

Pliny (iv. 19) gives to the Tarbelli the epithet of *Quatuorsignani*, a term which indicates the establishment of some Roman soldiers in this country, as in the case of the *Cocossates*, whom Pliny names *Sexsignani*. [COCOSSATES.] The country of the Tarbelli contained hot and cold springs, which were near one another. [G. L.]

TARBESSUS (Ταρβησός), a town of Pisidia, mentioned only by Strabo (xii. p. 570). [L. S.]

TARENTINUS SINUS (ὁ Ταραντίνος κόλπος; *Golfo di Taranto*) was the name given in ancient as well as in modern times to the extensive gulf comprised between the two great promontories or peninsulas of Southern Italy. It was bounded by the Iapygian promontory (*Capo della Leuca*) on the N., and by the Lacinian promontory (*Capo delle Colonne*) on the S.; and these natural limits being clearly marked, appear to have been generally recognised by ancient geographers. (Strab. vi. pp. 261, 262; Mel. ii. 4. § 8; Plin. iii. 11. s. 16; Ptol. iii. 1. § 12.) Strabo tells us it was 240 miles in extent, following the circuit of the shores, and 700 stadia (87½ miles) across from headland to headland. Pliny reckons it 250 miles in circuit, and 100 miles across the opening. The latter statement considerably exceeds the truth, while Strabo's estimate is a very fair approximation. This extensive gulf derived its name from the celebrated city of Tarentum, situated at its N.E. extremity, and which enjoyed the advantage of a good port, almost the only one throughout the whole extent of the gulf. (Strab. vi. p. 278.) But notwithstanding this disadvantage, its western shores were lined by a succession of Greek colonies, which rose into flourishing cities. Crotona, Sybaris, Metapontum, and, at a later period, Heraclea and Thurii, all adorned this line of coast; the great fertility of the territory compensating for the want of natural harbours. On the northern or Iapygian shore, on the contrary, the only city was Callipolis, which never rose above a subordinate condition. [E. H. B.]

TARENTUM (Τάρας, -αντος; *Eth.* Ταραντίνος, *Tarentinus*; *Taranto*), one of the most powerful and celebrated cities of Southern Italy, situated on the N. shore of the extensive bay, which derived from it, both in ancient and modern times, the name of the gulf of Tarentum. (TARENTINUS SINEΣ; ὁ Ταραντίνος κόλπος; *Golfo di Taranto*.) It was included within the limits of the province of Calabria, as that term was used by the Romans; but the Greeks

would generally have reckoned it a city of Magna Graecia, and not have regarded it as included in Iapygia. Its situation is peculiar, occupying a promontory or peninsula at the entrance of an extensive but shallow bay, now called the *Mare Piccolo*, but in ancient times known as the Port of Tarentum, an inlet of above 6 miles in length, and from 2 to 3 in breadth, but which was so nearly closed at its mouth by the peninsula occupied by the city, that the latter is now connected by a bridge with the opposite side of the harbour. There can be no doubt that the ancient city originally occupied only the same space to which the modern one is now confined, that of the low but rocky islet which lies directly across the mouth of the harbour, and is now separated from the mainland at its E. extremity by an artificial fosse or ditch, but was previously joined to it by a narrow neck of sand. This may probably have been itself a later accumulation; and it is not unlikely that the city was originally founded on an island, somewhat resembling that of Ortygia at Syracuse, which afterwards became joined to the mainland, and has again been artificially separated from it. As in the case of Syracuse, this island or peninsula afterwards became the Acropolis of the enlarged city, which extended itself widely over the adjoining plain.

Tarentum was a Greek city, a colony of Sparta, founded within a few years after the two Achaean colonies of Sybaris and Crotona. The circumstances that led to its foundation are related with some variation by Antiochus and Ephorus (both cited by Strabo), but both authors agree in the main fact that the colonists were a body of young men, born during the First Messenian War under circumstances which threw over their birth a taint of illegitimacy, on which account they were treated with contempt by the other citizens; and after an abortive attempt at creating a revolution at Sparta, they determined to emigrate in a body under a leader named Phalanthus. They were distinguished by the epithet of Partheniae, in allusion to their origin. Phalanthus, who was apparently himself one of the disparaged class, and had been the chief of the conspirators at Sparta, after consulting the oracle at Delphi, became the leader and founder of the new colony. (Antiochus, *ap. Strab.* vi. p. 278; Ephorus, *ib.* p. 279; Serv. *ad Aen.* iii. 551; Diod. xv. 66; Justin, iii. 4; Scymn. Ch. 332.) Both Antiochus and Ephorus represent them as establishing themselves without difficulty on the spot, and received in a friendly manner by the natives; and this is far more probable than the statement of Pausanias, according to which they found themselves in constant warfare; and it was not till after a long struggle that they were able to make themselves masters of Tarentum. (Paus. x. 10. § 6.) The same author represents that city as previously occupied by the indigenous tribes, and already a great and powerful city, but this is highly improbable. The name, however, is probably of native origin, and seems to have been derived from that of the small river or stream which always continued to be known as the Taras; though, as usual, the Greeks derived it from an eponymous hero named Taras, who was represented as a son of Neptune and a nymph of the country. (Paus. *ib.* § 8.) It is certain that the hero Taras continued to be an object of special worship at Tarentum, while Phalanthus, who was revered as their Oekist, was frequently associated with him, and gradually became the subject of many legends of a very mythical character,

in some of which he appears to have been confounded with Taras himself. (Paus. x. 10. §§ 6—8, 13. § 10; Serv. *ad Aen.* l. c.) Nevertheless, there is no reason to doubt the historical character of Phalanthus, or the Lacedaemonian origin of Tarentum, which was confirmed by numerous local names and religious observances still retained there down to a very late period. (Pol. viii. 30, 35.) The Roman poets also abound in allusions to this origin of the Tarentines. (Hor. *Carm.* iii. 5. 56, ii. 6. 11; Ovid. *Met.* xv. 50, &c.) The date of the foundation of Tarentum is given by Hieronymus as B. C. 708, and this, which is in accordance with the circumstances related in connection with it, is probably correct, though no other author has mentioned the precise date. (Hieron. *Chron.* ad Ol. xviii.)

The history of Tarentum, for the first two centuries of its existence, is, like that of most other cities of Magna Graecia, almost wholly unknown. But the main fact is well attested that it attained to great power and prosperity, though apparently at first overshadowed by the superior power of the Achaean cities, so that it was not till a later period that it assumed the predominant position among the cities of Magna Graecia, which it ultimately attained. There can be no doubt that it owed this prosperity mainly to the natural advantages of its situation. (Scymn. Ch. 332—336; Strab. vi. p. 278.) Though its territory was not so fertile, or so well adapted for the growth of grain as those of Metapontum and Siris, it was admirably suited for the growth of olives, and its pastures produced wool of the finest quality, while its port, or inner sea as it was called, abounded in shell-fish of all descriptions, among which the Murex, which produced the celebrated purple dye, was the most important and valuable. But it was especially the excellence of its port to which Tarentum owed its rapid rise to opulence and power. This was not only landlocked and secure, but was the only safe harbour of any extent on the whole shores of the Tarentine gulf; and as neither Brundisium nor Hydruntum, on the opposite side of the Messapian peninsula, had as yet attained to any eminence, or fallen into the hands of a seafaring people, the port of Tarentum became the chief emporium for the commerce of all this part of Italy. (Pol. x. 1; Flor. i. 18. § 3.) The story of Arion, as related by Herodotus (i. 24) indicates the existence of extensive commercial relations with Corinth and other cities of Greece as early as the reign of Periander, B. C. 625—585.

As the Tarentines gradually extended their power over the adjoining territories, they naturally came into frequent collision with the native tribes of the interior,—the Messapians and Peucetians; and the first events of their history recorded to us relate to their wars with these nations. Their offerings at Delphi noticed by Pausanias (x. 10. § 6, 13. § 10), recorded victories over both these nations, in one of which it appears that Opis, a king of the Iapygians, who had come to the assistance of the Peucetians, was slain; but we have no knowledge of the dates or circumstances of these battles. It would appear, however, that the Tarentines were continually gaining ground, and making themselves masters of the Messapian towns one after the other, until their progress was checked by a great disaster, their own forces, together with those of the Rhegians, who had been sent to their assistance, being totally defeated by the barbarians with great slaughter. (Herod. vii. 170; Diod. xi. 52.) So heavy was their

loss that Herodotus, without stating the numbers, says it was the greatest slaughter of Greeks that had occurred up to his time. The loss seems to have fallen especially upon the nobles and wealthier citizens, so that it became the occasion of a political revolution, and the government, which had previously been an aristocracy, became thenceforth a pure democracy. (Arist. *Pol.* v. 3.) Of the internal condition and constitution of Tarentum previously to this time, we know scarcely anything, but it seems probable that its institutions were at first copied from those of the parent city of Sparta. Aristotle speaks of its government as a *politeia*, in the sense of a mixed government or commonwealth; while Herodotus incidentally notices a king of Tarentum (iii. 156), not long before the Persian War, who was doubtless a king after the Spartan model. The institutions of a democratic tendency noticed with commendation by Aristotle (*Pol.* vi. 5) probably belong to the later and democratic period of the constitution. We hear but little also of Tarentum in connection with the revolutions arising out of the influence exercised by the Pythagoreans: that sect had apparently not established itself so strongly there as in the Achaean cities; though many Tarentines are enumerated among the disciples of Pythagoras, and it is clear that the city had not altogether escaped their influence. (Iamb. *Vit. Pyth.* 262, 266; Porphy. *Vit. Pyth.* 56.)

The defeat of the Tarentines by the Messapians, which is referred by Diodorus to B.C. 473 (Diod. xii. 53), is the first event in the history of Tarentum to which we can assign a definite date. Great as that blow may have been, it did not produce any permanent effect in checking the progress of the city, which still appears as one of the most flourishing in Magna Graecia. We next hear of the Tarentines as interfering to prevent the Thurians, who had been recently established in Italy, from making themselves masters of the district of the Siris. On what grounds the Tarentines could lay claim to this district, which was separated from them by the intervening territory of Metapontum, we are not informed; but they carried on war for some time against the Thurians, who were supported by the Spartan exile Cleandrides; until at length the dispute was terminated by a compromise, and a new colony named Heracleia was founded in the contested territory (B.C. 433), in which the citizens of both states participated, but it was agreed that it should be considered as a colony of Tarentum. (Aesch. *ep. Sirois* vi. p. 264; Diod. xii. 23, 36.) At the time of the Athenian expedition to Sicily, the Tarentines kept aloof from the contest, and contented themselves with refusing all supplies and assistance to the Athenian fleet (Thuc. vi. 44), while they afforded shelter to the Corinthian and Lacemonian ships under Gylippus (*ib.* 104), but they did not even prevent the second fleet under Demosthenes and Eurymedon from touching at the islands of the Chiorades, immediately opposite to the entrance of their harbour, and taking on board some auxiliaries furnished by the Messapians. (*ib.* vii. 33.)

Another most important new chapter, during which the history of Tarentum is to us almost a blank; and the few notices we hear of the city represent it as in a state of great prosperity. We are told that at this time, approximately about 350—360 B.C., Aristotle, the Pythagorean philosopher, exercised a permanent influence over the government, and filled

the office of Strategus or general in his several times, though it was prohibited by law to hold it more than once; and was successful in every campaign. (Diog. Laert. viii. 4. §§ 77—81.) It is evident, therefore, that the Tarentines were enjoying unbroken peace. The Lucanians did not were probably but a renewal of their wars with the Messapians; but the security of the cities in Italy was now menaced by two more formidable foes, Dionysius of Syracuse in the south, and the Lucanians on the north and west. The Tarentines, indeed, seem to have at first taken no notice of both dangers with comparative indifference; but remote position secured them from the immediate brunt of the attack, and it is even doubtful whether they at first joined in the general league of the Greek cities to resist the danger which threatened them. Meanwhile, the calamities which befall the southern cities, the destruction of some by Dionysius, and the humiliation of others, tend to raise Tarentum in comparison, while the city enjoyed an immunity from all hostile attacks; and it seems certain that it was at this period that Tarentum first rose to the preëminent position among the Greek cities in Italy, which it thenceforth enjoyed without a rival. It was apparently an acknowledgment of that superiority, that Tarentum had joined the confederacy of the Greek cities, the place of meeting of their congress was fixed at the Tarentine colony of Heracleia. (Strab. vi. p. 280.)

It was impossible for the Tarentines to keep aloof from the contest with the Lucanians, whose formidable power was now beginning to threaten all the cities in Magna Graecia; and they now appear as taking a leading part in opposing the progress of those barbarians. But they were content with their own resources, and called successively to their assistance several foreign kings and generals of renown. The first of these was the Spartan king Archidamus, who crossed over to Italy with a considerable force. Of his operations there we have no account, but he appears to have carried on the war for some years, as Diodorus places his first landing in Italy in B.C. 368, at the battle in which he was defeated and slain; but not fought till the same time as that of Cheloni, B.C. 338. (Diod. xvi. 63, 68.) This success, which Archidamus himself, and almost all the troops which he had brought with him from Greece, perished, was fought (as we are told), not with the Lucanians, but with the Messapians, in the neighbourhood of Manduria, only 24 miles from Tarentum. (Plut. *Agis* 3; Paus. iii. 10. § 3; Diod. l. c.) There can be no doubt, however, that both states were united, and that the Lucanians lost their support to the Messapians, as the old enemies of Tarentum. Henceforth, indeed, we find both states continually united. A few years after the death of Archidamus, Alexander, king of Epirus, was invited by the Tarentines, and landed in Italy, B.C. 335. The operations of his successive campaigns, which were continued till B.C. 326, are very imperfectly known to us, but he appears to have first turned his arms against the Messapians, and compelled them to conclude a peace with the Tarentines, before he proceeded to make war upon the Lucanians and Bruttians. But his arms were attended with considerable success in this quarter also: he defeated the Samnites and Lucanians in a great battle near Paestum, and penetrated into the heart of the Epirus.

tian territory. Meanwhile, however, he had quarrelled with his allies the Tarentines, so that he turned against them, took their colony of Heracleia, and endeavoured to transfer the congress of the Greek cities from thence to a place on the river Acalandrus, in the territory of Thurii. (Strab. vi. p. 280; Liv. viii. 24; Justin. xii. 2.) Hence his death, in B.C. 226, only liberated the Tarentines from an enemy instead of depriving them of an ally. They appear from this time to have either remained tranquil or carried on the contest single-handed, till B.C. 303, when we find them again invoking foreign assistance, and, as on a former occasion, sending to Sparta for aid. This was again furnished them, and a large army of mercenaries landed at Tarentum under Cleonymus, the uncle of the Spartan king. But though he compelled the Messapians and Lucanians to sue for peace, Cleonymus soon alienated the minds of his Greek allies by his arrogance and luxurious habits, and became the object of general hatred before he quitted Italy. (Diod. xx. 104.) According to Strabo, the Tarentines subsequently called in the assistance of Agathocles (Strab. vi. p. 280); but we find no mention of this elsewhere, and Diodorus tells us that he concluded an alliance with the Iapygians and Peucetians, which could hardly have been done with favourable intentions towards Tarentum. (Diod. xxi. p. 490.)

Not long after this the Tarentines first came into collision with a more formidable foe than their neighbours, the Messapians and Lucanians. The wars of the Romans with the Samnites, in which the descendants of the latter people, the Apulians and Lucanians, were from time to time involved, had rendered the name and power of Rome familiar to the Greek cities on the Tarentine gulf and coast of the Adriatic, though their arms were not carried into that part of Italy till about B.C. 283, when they rendered assistance to the Thurians against the Lucanians [THURI]. But long before this, as early as the commencement of the Second Samnite War (B.C. 326), the Tarentines are mentioned in Roman history as supporting the Neapolitans with promises of succour, which, however, they never sent; and afterwards exciting the Lucanians to war against the Romans. (Liv. viii. 27.) Again, in B.C. 321 we are told that they sent a haughty embassy to command the Samnites and Romans to desist from hostilities, and threatened to declare war on whichever party refused to obey. (Id. ix. 14.) But on this occasion also they did not put their threat in execution. At a subsequent period, probably about B.C. 303 (Arnold's *Rome*, vol. iii. p. 315), the Tarentines concluded a treaty with Rome, by which it was stipulated that no Roman ships of war should pass the Lacinian cape. (Appian, *Samnit.* 7.) It was therefore a direct breach of this treaty when, in B.C. 302, a Roman squadron of ten ships under L. Cornelius, which had been sent to the assistance of the Thurians, entered the Tarentine gulf, and even approached within sight of the city. The Tarentines, whose hostile disposition was already only half concealed, and who are said to have been the prime movers in organising the confederacy against Rome which led to the Fourth Samnite War (Zonar. viii. 2.), immediately attacked the Roman ships, sunk four of them, and took one. After this they proceeded to attack the Thurians on account of their having called in the Romans, expelled the Roman garrison, and made themselves masters of the city. (Appian, *Samn.* 7. § 1; Zonar. viii.

2.) The Romans sent an embassy to Tarentum to complain of these outrages; but their demands being refused, and their ambassador treated with contumely, they had now no choice but to declare war upon the Tarentines, B.C. 281. (Appian, *L. c.* § 2; Zonar. *L. c.*; Dion Cass. *Fr.* 145.) Nevertheless, the war was at first carried on with little energy; but meanwhile the Tarentines, following their usual policy, had invited Pyrrhus, king of Epirus, to their assistance. That monarch readily accepted the overture, and sent over his general Milo to occupy the citadel of Tarentum with 3000 men, while he himself followed in the winter. (Zonar. viii. 2; Plut. *Pyrrh.* 15, 16.)

It is usual to represent the Tarentines as at this period sunk in luxury and effeminacy, so that they were unable to defend themselves, and hence compelled to have recourse to the assistance of Pyrrhus. But there is certainly much exaggeration in this view. They were no doubt accustomed to rely much upon the arms of mercenaries, but so were all the more wealthy cities of Greece; and it is certain that the Tarentines themselves (apart from their allies and mercenaries), furnished not only a considerable body of cavalry, but a large force or phalanx of heavy-armed infantry, called the Leucaspids, from their white shields, who are especially mentioned as serving under Pyrrhus at the battle of Asculum. (Dionys. xx. *Fr.* Didot. 1, 5.) It is unnecessary here to repeat the history of the campaigns of that monarch. His first successes for a time saved Tarentum itself from the brunt of the war; but when he at length, after his final defeat by Curius, withdrew from Italy (B.C. 274), it was evident that the full weight of the Roman arms would fall upon Tarentum. Pyrrhus, indeed, left Milo with a garrison to defend the city, but the Tarentines themselves were divided into two parties, the one of which was disposed to submit to Rome, while the other applied for assistance to Carthage. A Carthaginian fleet was actually sent to Tarentum, but it arrived too late, for Milo had already capitulated and surrendered the citadel into the hands of the Roman consul Papirius, B.C. 272. (Zonar. viii. 6; Oros. iv. 3.)

From this time Tarentum continued subject to Rome. The inhabitants were indeed left in possession of their own laws and nominal independence, but the city was jealously watched; and a Roman legion seems to have been commonly stationed there. (Pol. ii. 24.) During the First Punic War the Tarentines are mentioned as furnishing ships to the Romans (Pol. i. 20); but with this exception we hear no more of it till the Second Punic War, when it became a military post of great importance. Hannibal was from an early period desirous to make himself master of the city, which, with its excellent port, would at once have secured his communications with Africa. It is evident also that there was a strong Carthaginian party in the city, who shortly after the battle of Cannae, opened negotiations with Hannibal, and renewed them upon a subsequent occasion (Liv. xxii. 61, xxiv. 13); but they were kept down by the presence of the Roman garrison, and it was not till B.C. 212 that Nico and Philemenus, two of the leaders of this party, found an opportunity to betray the city into his hands. (Liv. xxv. 8—10; Pol. viii. 26—33.) Even then the Roman garrison still held the citadel; and Hannibal having failed in his attempts to carry this fortress by assault, was compelled to resort to a blockade. He cut it off on

the land side by drawing a double line of fortifications across the isthmus, and made himself master of the sea by dragging a part of the fleet which was shut up within the inner port (or *Mare Piccolo*), across the narrowest part of the isthmus, and launching it again in the outer bay. (Pol. viii. 34—36; Liv. xxv. 11.) This state of things continued for more than two years, during the whole of which time the Carthaginians continued masters of the city, while the Roman garrison still maintained possession of the citadel, and the besiegers were unable altogether to prevent them from receiving supplies from without, though on one occasion the Romans, having sent a considerable fleet under D. Quintius to attempt the relief of the place, this was met by the Tarentines, and after an obstinate conflict the Roman fleet was defeated and destroyed. (Liv. xxv. 15, xxvi. 39, xxvii. 3.) At length in B. C. 209 Fabius determined if possible to wrest from Hannibal the possession of this important post; and laid siege to Tarentum while the Carthaginian general was opposed to Marcellus. He himself encamped on the N. of the port, close to the entrance, so that he readily put himself in communication with M. Livius, the commander of the citadel. But while he was preparing his ships and engines for the assault, an accident threw in his way the opportunity of surprising the city, of which he made himself master with little difficulty. The Carthaginian garrison was put to the sword, as well as a large part of the inhabitants, and the whole city was given up to plunder. (Id. xxvii. 12, 15, 16; Plut. *Fab.* 21—23.) Livy praises the magnanimity of Fabius in not carrying off the statues and other works of art in which Tarentum abounded (Liv. xxvii. 16; Plut. *Fab.* 23); but it is certain that he transferred from thence to Rome a celebrated statue of Hercules by Lysippus, which long continued to adorn the Capitol. (Strab. vi. p. 278; Plin. xxxiv. 7. s. 18.) The vast quantity of gold and silver which fell into the hands of the victors sufficiently bears out the accounts of the great wealth of the Tarentines. (Liv. l. c.)

Tarentum had already suffered severely on its capture by Hannibal, and there can be no doubt that it sustained a still severer blow when it was retaken by Fabius. (Strab. vi. p. 278.) It was at first proposed to degrade it to a condition similar to that of Capua, but this was opposed by Fabius, and the decision was postponed till after the war. (Liv. xxvii. 25.) What the final resolution of the senate was, we know not; but Tarentum is alluded to at a subsequent period, as still retaining its position of an allied city, "*urbs foederata*." (Liv. xxxv. 16.) It is certain that it still remained the chief place in this part of Italy, and was the customary residence of the praetor or other magistrate who was sent to the S. of Italy. Thus we find in B. C. 185, L. Postumius sent thither to carry on investigations into the conspiracies that had arisen out of the Bacchanalian rites, as well as among the slave population. (Liv. xxxix. 29, 41.) But it is nevertheless clear that it was (in common with the other Greek cities of this part of Italy) fallen into a state of great decay; and hence, in B. C. 123, among the colonies sent out by C. Gracchus, was one to Tarentum, which appears to have assumed the title of *Colonia Neptunia*. (Vell. Pat. i. 15; Plin. iii. 11. s. 16; see Mommsen, in *Berichte der Sächsischen Gesellschaft* for 1849, pp. 49—51.) According to Strabo this colony became a flourishing one, and the

city enjoyed considerable prosperity in his day. But it was greatly fallen from its former splendour, and only occupied the site of the ancient citadel, with a small part of the adjoining isthmus. (Strab. vi. p. 278.) It was, however, one of the few cities which still retained the Greek language and manners, in common with Neapolis and Rhegium. (*Id.* p. 253.) The salubrity of its climate, as well as the fertility of its territory, and, above all, the importance of its port, preserved it from the complete decay into which so many of the cities of Magna Graecia fell under the Roman government. It is repeatedly mentioned during the civil wars between Octavian, Antony, and Sex. Pompeius as a naval station of importance; and it was there that in B. C. 36 a fresh arrangement was come to between Octavian and Antony, which we find alluded to by Tacitus as the "*Tarentinum foedus*." (Appian, *B. C.* ii. 40, v. 50, 80, 84, 93—99; Tac. *Ann.* i. 10.)

Even under the Empire Tarentum continued to be one of the chief seaports of Italy, though in some measure eclipsed by the growing importance of Brundisium. (Tac. *Ann.* xiv. 12, *Hist.* ii. 83.) An additional colony of veterans was sent there under Nero, but with little effect, most of them having soon again dispersed. (Tac. *Ann.* xiv. 27.) No subsequent mention of Tarentum is found in history until after the fall of the Western Empire, but it then appears as a considerable town, and bears an important part in the Gothic Wars on account of its strength as a fortress, and the excellence of its port. (Procop. *B. G.* iii. 23, 27, 37, iv. 26, 34.) It was taken by Belisarius, but retaken by Totila in A. D. 549, and continued in the hands of the Goths till it was finally wrested from them by Narses. From that time it continued subject to the Byzantine Empire till A. D. 661, when it was taken by the Lombard Romoaldus, duke of Beneventum (P. Disc. vi. 1); and afterwards fell successively into the hands of the Saracens and the Greek emperors. The latter did not finally lose their hold of it till it was taken by Robert Guiscard in 1063. It has ever since formed part of the kingdom of Naples. The modern city of Tarentum has a population of about 20,000 souls; it is the see of an archbishop, and still ranks as the most important city in this part of Italy. But it is confined to the space occupied by the ancient citadel, the extremity of the peninsula or promontory between the two ports: this is now an island, the low isthmus which connected it with the mainland having been cut through by king Ferdinand I., for the purpose of strengthening its fortifications.

Scarcely any remains are now extant of the celebrated and opulent city of Tarentum. "Never (says Swinburne) was a place more completely swept off the face of the earth." Some slight remains of an amphitheatre (of course of Roman date) are visible outside the walls of the modern city; while within it the convent of the Celestines is built on the foundations of an ancient temple. Even the extent of the ancient city can be very imperfectly determined. A few slight vestiges of the ancient walls are, however, visible near an old church which bears the name of *S. Maria di Murveta*, about 2 miles from the gates of the modern city; and there is no doubt that the walls extended from thence, on the one side to the *Mare Piccolo*, on the other side to the outer sea. The general form of the city was thus triangular, having the citadel at the apex, which is now joined to the opposite shore by a

bridge of seven arches. This was already the case in Strabo's time, though no mention of it is found at the time of the siege by Hannibal.

The general form and arrangement of the city cannot be better described than they are by Strabo. He says: "While the whole of the rest of the Tarentine gulf is destitute of ports, there is here a very large and fair port, closed at the entrance by a large bridge, and not less than 100 stadia in circumference. [This is beneath the truth: the *Mare Piccolo* is more than 16 miles (128 stadia) in circuit.] On the side towards the inner recess of the port it forms an isthmus with the exterior sea, so that the city lies upon a peninsula; and the neck of the isthmus is so low that ships can easily be drawn over the land from one side to the other. The whole city also lies low, but rises a little towards the citadel. The ancient wall comprises a circuit of great extent; but now the greater part of the space adjoining the isthmus is deserted, and only that part still subsists which adjoins the mouth of the port, where also the Acropolis is situated. The portion still remaining is such as to make up a considerable city. It has a splendid Gymnasium, and a good-sized Agora, in which stands the bronze colossal statue of Jupiter, the largest in existence next to that at Rhodes. In the interval between the Agora and the mouth of the port is the Acropolis, which retains only a few remnants of the splendid monuments with which it was adorned in ancient times. For the greater part were either destroyed by the Carthaginians when they took the city, or carried off as booty by the Romans, when they made themselves masters of it by assault. Among these is the colossal bronze statue of Hercules in the Capitol, a work of Lysippus, which was dedicated there as an offering by Fabius Maximus, who took the city." (Strab. vi. p. 278.)

In the absence of all extant remains there is very little to be added to the above description. But Polybius, in his detailed narrative of the capture of the city by Hannibal, supplies us with some local names and details. The principal gate on the E. side of the city, in the outer line of walls, seems to have been that called the Temenid Gate (*αἱ πόλαι Τημενίδαι*, Pol. viii. 30); outside of which was a mound or tumulus called the tomb of Hyacinthus, whose worship had obviously been brought from Sparta. A broad street called the Batheia, or Low Street, led apparently from this gate towards the interior of the city. This from its name may be conjectured to have lain close to the port and the water's edge, while another broad street led from thence to the Agora. (Ib. 31.) Another street called the Soteira (*Σωτεῖρα*) was apparently on the opposite side of the city from the Batheia, and must therefore have adjoined the outer sea. (Ib. 36.) Immediately adjoining the Agora was the Museum (*Μουσείον*), a public building which seems to have served for festivals and public banquets, rather than for any purposes connected with its name. (Ib. 27, 29.) There is nothing to indicate the site of the theatre, alluded to by Polybius on the same occasion, except that it was decidedly *within* the city, which was not always the case. Strabo does not notice it, but it must have been a building of large size, so as to be adapted for the general assemblies of the people, which were generally held in it, as was the case also at Syracuse and in other Greek cities. This is particularly mentioned on several occasions; it was there that the Roman ambassadors

received the insult which finally led to the ruin of the city. (Flor. i. 18. § 3; Val. Max. ii. 2. § 5; Appian, *Samnit.* 7.)

Livy inaccurately describes the citadel as standing on lofty cliffs ("præaltis rupibus," xiv. 11): the peninsula on which it stood rises indeed (as observed by Strabo) a little above the rest of the city, and it is composed of a rocky soil; but the whole site is low, and no part of it rises to any considerable elevation. The hills also that surround the *Mare Piccolo* are of trifling height, and slope very gradually to its banks, as well as to the shore of the outer sea. There can be no doubt that the port of Tarentum, properly so called, was the inlet now called the *Mare Piccolo* or "Little Sea," but outside this the sea on the S. side of the city forms a bay or roadstead, which affords good shelter to shipping, being partially sheltered from the SW. by the two small islands of *S. Pietro* and *S. Paolo*, apparently the same which were known in ancient times as the *CHOERADES*. (Thuc. vii. 33.)

Tarentum was celebrated in ancient times for the salubrity of its climate and the fertility of its territory. Its advantages in both respects are extolled by Horace in a well-known ode (*Carm.* ii. 6), who says that its honey was equal to that of Hymettus, and its olives to those of Venafrum. Varro also praised its honey as the best in Italy (*ap. Macrob. Sat.* ii. 12). Its oil and wines enjoyed a nearly equal reputation; the choicest quality of the latter seems to have been that produced at Aulon (Hor. *l. c.*; Martial, xiii. 125; Plin. xiv. 6. s. 8), a valley in the neighbourhood, on the slope of a hill still called *Monte Melone* [AULON]. But the choicest production of the neighbourhood of Tarentum was its wool, which appears to have enjoyed an acknowledged supremacy over that of all parts of Italy. (Plin. xxix. 2. s. 9; Martial, *l. c.*; Varr. *R. R.* ii. 2. § 18; Strab. vi. p. 284; Colum. vii. 2. § 3.) Nor was this owing solely to natural advantages, as we learn that the Tarentines bestowed the greatest care upon the preservation and improvement of the breed of sheep. (Colum. vii. 4.) Tarentum was noted likewise for its breed of horses, which supplied the famous Tarentine cavalry, which was long noted among the Greeks. Their territory abounded also in various kinds of fruits of the choicest quality, especially pears, figs, and chestnuts, and though not as fertile in corn as the western shores of the Tarentine gulf, was nevertheless well adapted to its cultivation. At the same time its shores produced abundance of shell-fish of all descriptions, which formed in ancient times a favourite article of diet. Even at the present day the inhabitants of *Taranto* subsist to a great extent upon the shell-fish produced in the *Mare Piccolo* in a profusion almost incredible. Its Peccens or scallops enjoyed a special reputation with the Roman epicures. (Hor. *Sat.* ii. 4. 34.) But by far the most valuable production of this class was the Murex, which furnished the celebrated purple dye. The Tarentine purple was considered second only to the Tyrian, and for a long time was the most valuable known to the Romans. (Corn. Nep. *ap. Plin.* ix. 39. s. 63.) Even in the time of Augustus it continued to enjoy a high reputation. (Hor. *Ep.* ii. 1, 207.) So extensive were the manufactories of this dye at Tarentum that considerable mounds are still visible on the shore of the *Mare Piccolo*, composed wholly of broken shells of this species. (Swinburne's *Travels*, vol. i. p. 239.)

The climate of Tarentum, though justly praised by Horace for its mildness, was generally reckoned soft and enervating, and was considered as in some degree the cause of the luxurious and effeminate habits ascribed to the inhabitants ("molle Tarentum," Hor. Sat. ii. 4. 34; "imbelle Tarentum," Id. Ep. i. 7. 45.) It is probable that this charge, as in many other cases, was greatly exaggerated; but there is no reason to doubt that the Tarentines, like almost all the other Greeks who became a manufacturing and commercial people, indulged in a degree of luxury far exceeding that of the ruder nations of Central Italy. The wealth and opulence to which they attained in the 4th century B. C. naturally tended to aggravate these evils, and the Tarentines are represented as at the time of the arrival of Pyrrhus enfeebled and degraded by luxurious indulgences, and devoted almost exclusively to the pursuit of pleasure. To such an excess was this carried that we are told the number of their annual festivals exceeded that of the days of the year. (Theopomp. ap. Athen. iv. p. 166; Clearch. ap. Athen. xii. p. 522; Strab. vi. p. 280; Aelian, V. H. xii. 30.) Juvenal alludes to their love of feasting and pleasure when he calls it "coronat ac petulans madidumque Tarentum" (vi. 297). But it is certain, as already observed, that they were not incapable of war: they furnished a considerable body of troops to the army of Pyrrhus; and in the sea-fight with the Roman fleet off the entrance of the harbour, during the Second Punic War, they displayed both courage and skill in naval combat. (Liv. xxvi. 39.) In the time of their greatest power, according to Strabo, they could send into the field an army of 30,000 foot and 3000 horse, besides a body of 1000 select cavalry called Hipparcha. (Strab. vi. p. 280.) The Tarentine light cavalry was indeed celebrated throughout Greece, so that they gave name to a particular description of cavalry, which are mentioned under the name of Tarentines (*Taparτινοί*), in the armies of Alexander the Great and his successors; and the appellation continued in use down to the period of the Roman Empire. (Arrian, *Anab.*; Id. *Tact.* 4; Pol. iv. 77, xi. 12; Liv. xxxv. 28; Aelian, *Tact.* 2. p. 14; Suidas, s. v. *Taparτινοί*.) It is probable, however, that these may have been always recruited in great part among the neighbouring Messapians and Salentine, who also excelled as light horsemen.

With their habits of luxury the Tarentines undoubtedly combined the refinements of the arts usually associated with it, and were diligent cultivators of the fine arts. The great variety and beauty of their coins is, even at the present day, a sufficient proof of this, while the extraordinary numbers of them which are still found in the S. of Italy attest the wealth of the city. Ancient writers also speak of the numbers of pictures, statues, and other works of art with which the city was adorned, and of which a considerable number were transported to Rome. (Flor. i. 18; Strab. vi. p. 278; Liv. xxvii. 16.) Among these the most remarkable were the colossal statue of Jupiter, mentioned by Strabo (l. c.), and which was apparently still standing in the Agora in his time; the bronze statue of Hercules by Lysippus already noticed; and a statue of Victory, which was also carried to Rome, where it became one of the chief ornaments of the Curia Julia. (Dion Cass. li. 22.) Nor were the Tarentines deficient in the cultivation of literature. In addition to Archytas, the Pythagorean philosopher, celebrated for his

mathematical attainments and discoveries, who long held at Tarentum a place somewhat similar to that of Pericles at Athens (Diog. Laert. viii. 4; Suid. s. v. *Ἀρχύτας*; Athen. xii. p. 545), Aristoxenus, the celebrated musician and disciple of Aristotle, was a native of Tarentum; as well as Rhinthus, the dramatic poet, who became the founder of a new species of, burlesque drama which was subsequently cultivated by Sopater and other authors. (Suid. s. v. *Ῥιθθῦς*.) It was from Tarentum also that the Romans received the first rudiments of the regular drama, Livius Andronicus, their earliest dramatic poet, having been a Greek of Tarentum, who was taken prisoner when the city fell into their hands. (Cic. *Brut.* 18.)

Polybius tells us that Tarentum retained many traces of its Lacedaemonian origin in local names and customs, which still subsisted in his day. Such was the tomb of Hyacinthus already mentioned (Pl. viii. 30): the river Galaestus also was called by them the Eurotas (*l. b.* 35), though the native name ultimately prevailed. Another custom which he notices as peculiar was that of burying their dead within the walls of the city, so that a considerable space within the walls was occupied by a necropolis. (*l. b.* 30.) This custom he ascribes to an oracle, but it may have arisen (as was the case at Agrigento and Syracuse) from the increase of the city having led to the original necropolis being inclosed within the walls.

The name of Tarentum (*Taras*) was supposed to be derived from a river of the name of *TARAS* (*Tápas*), which is noticed by several ancient writers. (Steph. B. s. v. *Tápas*; Paus. x. 10. § 8.) This is commonly identified with a deep, but sluggish stream, which flows into the sea about 4 miles W. of the entrance of the harbour of Tarentum, and is still called *Tara*, though corrupted by the peasantry into *Fiume di Terra*. (Romanelli, vol. i. p. 281; Swinburne, vol. i. p. 271.) The more celebrated stream of the GALAESTUS flowed into the *Mare Piccola* or harbour of Tarentum on its N. shore: it is commonly identified with the small stream called *Le Citresse*, an old church near which still retains the name of *Sia Maria di Galeo*. [*GALAESTUS*.] Another locality in the immediate neighbourhood of Tarentum, the name of which is associated with that of the city by Horace, is *AULON*, a hill or ridge celebrated for the excellence of its vines. This is identified by local topographers, though on very slight grounds, with a sloping ridge on the seashore about 8 miles SE. of Tarentum, a part of which bears the name of *Monte Melone*, supposed to be a corruption of *Aulone* [*AULON*]. A more obscure name, which is repeatedly mentioned in connection with Tarentum, is that of *SATURUM* (*Σατύριον*). From the introduction of this name in the oracle alleged to have been given to Phalanthus (Strab. vi. p. 279), it seems probable that it was an old native name, but it is not clear that there ever was a town or even village of the name. It is more probable that it was that of a tract or district in the neighbourhood of Tarentum. Stephanus of Byzantium distinctly calls it *χώρα σατύριον Τάραντος* (s. v. *Σατύριον*); and the authority of Servius, who calls it a *city* (*civitas*) near Tarentum, is not worth much in comparison. There was certainly no *city* of the name in historical times. Virgil applies the epithet "*Saturium*" (as an adjective) to Tarentum itself (*Georg.* ii. 197; Serv. *ad loc.*: many commentators, however, consider "*saturi*" from "*satur*"

to be the true reading), and Horace speaks of "Saturnian cabellus" as equivalent to Tarentine. (*Sat.* i. 6. 59.) The memory of the locality is preserved by a watch-tower on the coast, about seven miles S.E. of Tarentum, which is still called *Torre di Saturo* (Romanelli, vol. i. p. 294; Zannoni *Carta del Regno di Napoli*).

(Concerning the history and ancient institutions of Tarentum, see Heyne, *Opuscula*, vol. ii. pp. 217—232; and Lorentz, *de Civitate Veterum Tarentinorum*, 4to. Lips. 1833. The present state and localities are described by Swinburne, vol. i. pp. 225—270; Keppel Craven, *Southern Tour*, pp. 174—190; and Romanelli, vol. i. pp. 282—289; but from the absence of existing remains, the antiquities of Tarentum have scarcely received as much attention as they deserve.) [E. H. B.]

COINS OF TARENTUM.

TARE'TICA (*Taperuch*, or *Toperuch* Ἰάρα, Ptol. v. 9. § 9), a headland of Asiatic Sarmatia in the Pontus Euxinus, and in the neighbourhood of the modern town of *Sudaski*. [T. H. D.]

TARGINES (*Tacino*), a small river of Bruttium, mentioned only by Pliny (iii. 10. s. 15) among the rivers on the E. coast of that peninsula. It is probably the stream now called the *Tacino*, which rises in the mountains of the *Sila*, and falls into the *Gulf of Squillace* (Sinus Scylaceus). [E. H. B.]

TARICHEAE or TARICHAEAE (*Tapiχίαί*, Strab. xvi. p. 764; Joseph. *Vita*, 32, 54, 73; *Tapiχίαί*, Joseph. *B. J.* iii. 10. § 1, et alibi; *Tapiχίαί*, Steph. B. s. v.; *Taricheae*, Suet. *Tit.* 4; *Tarichea*, Plin. v. 15; *Eth. Tapiχιδάρης*), a city in Lower Galilee situated below a mountain at the southern end of the lake of Tiberias, and 30 stadia from the city of Tiberias itself. (Joseph. *B. J.* iii. 10. § 1.) It derived its name from its extensive manufactories for salting fish. (Strab. l. c.) It was strongly fortified by Josephus, who made it his headquarters in the Jewish war; and it was taken by Titus with great slaughter. (Joseph. *B. J.* iii. 10. §§ 1—6.) Its ruins stand upon a rising ground, called *Kerak*, where at present there is a Muslim village, at the southern end of the lake. The river Jordan, in issuing from the lake, runs at first south for about a furlong, and then turns west for half a mile. The rising ground *Kerak* stands in the space between the river and lake, and was a place easily defensible according to the ancient mode of warfare. (Robinson, *Bibl. Res.* vol. ii. p. 387, 2nd ed.)

TARNE (*Tάρνη*), is mentioned by Homer (*Il.* v.

44), and after him by Strabo (ix. p. 413), as a town in Asia Minor; but Pliny (v. 30) knows Tarne only as a fountain of Mount Tmolus in Lydia. [L. S.]

TARNIS (*Tarn*), a river in Gallia, a branch of the *Garonne*. It rises near *Mount Lozère*, in the *Cévennes*, and flows in the upper part of its course in a deep valley. After running near 200 miles it joins the *Garonne* below *Moissac*. Sidonius Apollinaris (24, 44) calls it "citus Tarnis." [LESORA.] Ausonius (*Mosella*, v. 465) speaks of the gold found in the bed of the Tarn:—

"Et auriferum postponet Gallia Tarnem."

[G. L.]

TARODU'NUM (*Ταροδουνον*), a town in the south-west of Germany, between Mons Abnoba and the Rhenus. (Ptol. ii. 11. § 30.) It is universally identified with *Mark Zarten* near *Freiburg* in the *Breisgau*, which, down to the 8th century, bore the name of *Zarduna*, a name which is formed from *Tarodunum* in the same way in which *Zabern* is formed from *Tabernae*. [L. S.]

TARO'NA (*Ταρώνα*, Ptol. iii. 6. § 5), a place in the interior of the Chersonesus Taurica. [T. H. D.]

TARPHE (*Τάρπη*; *Eth. Ταρφαίος*), a town of the Locri Epizephirici, mentioned by Homer (*Il.* ii. 533). It was situated upon a height in a fertile and woody country, and was said to have derived its name from the thickets in which it stood. In the time of Strabo it had changed its name into that of *Pharygae* (*Φαρύγαι*), and was said to have received a colony from Argos. It contained a temple of *Hera Pharygaea*. It is probably the modern *Pundonitza*. (Strab. ix. p. 426; Groekurd and Kramer, *ad loc.*; Steph. B. s. v.; Leake, *Northern Greece*, vol. iv. p. 179.)

TARPODIZUS (*It. Ant.* p. 230; *It. Hier.* p. 569; in Geog. Rav. iv. 6, *Tarpodizon*), a town in the E. of Thrace, on the road from Byzantium to Anchialus. According to Kiepert, its site answers to that of the modern *Bojuk-Derbent*; according to Reichard, to that of *Kodje-Tarla*; according to Lapie, to that of *Dewlet-Agatch*. But in some maps it is placed nearly due south of *Sadame*, and on or near the river *Artiscus*; if this is correct, *Tarpodizus* must have been in the neighbourhood of *Erekli*. [J. R.]

TARQUINII (*Ταρκυνία*, Strab. Dionys.; *Ταρκυνίαι*, Ptol.; *Eth. Tarquiniensis*; *Corneto*), one of the most ancient and important cities of Etruria, situated about 4 miles from the Tyrrhenian sea, and 14 miles from Centumcellae (*Civita Vecchia*), near the left bank of the river Marta. All ancient writers represent it as one of the most ancient of the cities of Etruria; indeed according to a tradition generally prevalent it was the parent or metropolis of the twelve cities which composed the Etruscan League, in the same manner as Alba was represented as the metropolis of the Latin League. Its own reputed founder was Tarchon, who according to some accounts was the son, according to others the brother, of the Lydian Tyrrhenus; while both versions represented him as subsequently founding all the other cities of the league. (Strab. v. p. 219; Serv. *ad Aen.* x. 179, 198.) The same superiority of Tarquinii may be considered as implied in the legends that represented the divine being Tages, from whom all the sacred traditions and religious rites of the Etruscans were considered to emanate, as springing out of the soil at Tarquinii (*Cic. de Div.* ii. 23; Censorin. *de Die Nat.* 4; Joan. Lyd. *de Ost.* 3.) Indeed it seems certain that there was a close connec-

Gracchus; but though it is there termed "Colonia Tarquinii," it is certain that it did not retain the title of a colony; Cicero distinctly speaks of it as a "municipium," and the Tarquinienses are ranked by Pliny among the ordinary municipal towns of Etruria. Its municipal rank is further confirmed by inscriptions recently discovered on the site. (*Lib. Col.* p. 219; *Cic. pro Caec.* 4; *Plin. iii.* 5. s. 8; *Prot.* iii. 1. § 50; *Inscr. in Bull. d. Inst. Arch.* 1830, pp. 198, 199.) From these last records we learn that it was apparently still a flourishing town in the time of the Antonines, and its name is still found in the *Tabula* near three centuries later (*Tab. Peut.*) It is probable, therefore, that it survived the fall of the Western Empire, and owed its final desolation to the Saracens.

At the present day the site of the ancient city is wholly desolate and uninhabited; but on a hill about a mile and a half distant stands the modern city of *Corneto*, the origin of which does not date further back than the eighth or ninth century. It was probably peopled with the surviving inhabitants of Tarquinii. The site of the latter is clearly marked: it occupied, like most Etruscan cities, the level summit of a hill, bounded on all sides by steep, though not precipitous escarpments, and occupying a space of about a mile and a half in length, by half a mile in its greatest breadth. It is still known as *Turchina*, though called also the *Piano di Ciccia*. Hardly any ruins are now visible, but the outline of the walls may be traced around the brow of the hill, partly by foundations still *in situ*, partly by fallen blocks. The highest point of the hill (furthest to the W. and nearest to the *Marta*) seems to have served as the *Arx* or citadel, and here the foundations of some buildings, supposed to be temples, may be traced. Numerous fragments of buildings of Roman date are also visible, and though insignificant in themselves, prove, in conjunction with the inscriptions already mentioned, that the site was well inhabited in Roman times. (*Dennis's Etruria*, vol. i. pp. 371—385.)

But by far the most interesting remains now visible at Tarquinii are those of the Necropolis, which occupied almost the whole of the hill opposite to the city, at the W. extremity of which stands the modern town of *Corneto*. The whole surface of the hill (says Dennis) "is rugged with tumuli, or what have once been such," whence the appellation by which it is now known of *Montarozzi*. Vast numbers of these tombs have been opened, and have yielded a rich harvest of vases, ornaments, and other objects of antiquity. But the most important are those of which the walls are adorned with paintings, which possess a double interest, both as works of art and from the light they throw upon Etruscan manners. It may indeed be asserted in general of the paintings in these tombs that while the influence of Greek art is unquestionably to be traced in their design and execution, the subjects represented and the manners they exhibit are purely Etruscan. The number of these painted tombs found at Tarquinii greatly exceeds those which have been discovered on the site of any other city of Etruria; but they still bear only a very small proportion to the whole number of tombs opened, so that it is evident this mode of decoration was far from general. The paintings in many of those first opened, which are figured in the works of Micali and Inghirami, have since been allowed to fall into decay, and have in great measure disappeared. Detailed descriptions of all the most interesting of them, as well as those more recently

discovered, will be found in Dennis's *Etruria* (vol. i. pp. 281—364.) [E. H. B.]

TARRACINA (*Tapphacina*, Strab.; *Tapphacina*, Steph. B.; *Ἐθ. Tapphacivitis*, Tarraciniensis; *Terracina*), a city of Latium in the more extended sense of that name, but originally a Volscian city, situated on the Tyrrhenian sea, about 10 miles from Circeii, and at the extremity of the Pomptine Marshes. It was also known by the name of *ANXUR*, and we learn from Pliny and Livy that this was its Volscian name, while Tarracina was that by which it was known to the Latins and Romans. (*Plin. iii.* 5. s. 9; *Ennius ap. Fest. s. v. Anxur*; *Liv. iv.* 59.) The name of Anxur is frequently used at a much later period by the Roman poets (*Hor. Sat. i.* 5. 26; *Lucan. iii.* 84; *Martial. v.* 1. 6, &c.), obviously because Tarracina could not be introduced in verse; but Cicero, Livy, and all other prose writers, where they are speaking of the Roman town, universally call it Tarracina. The Greek derivation of the latter name suggested by Strabo (*v.* p. 233), who says it was originally called *Tpaxvη*, from its rugged situation, is probably a mere etymological fancy. The first mention of it in history occurs in the treaty between Rome and Carthage concluded in B. C. 509, in which the people of Tarracina are mentioned in common with those of Circeii, Antium, &c., among the subjects or dependencies of Rome. (*Pol. iii.* 22.) It seems certain therefore that Tarracina, as well as Circeii, was included in the Roman dominions before the fall of the monarchy. But it is clear that it must have again fallen under the dominion of the Volscians, probably not long after this period. It was certainly in the possession of that people, when its name next appears in history, in B. C. 406. On that occasion it was attacked by N. Fabius Ambustus, and taken by a sudden assault, while the attention of the Volscian armies was drawn off in another direction. (*Liv. iv.* 57; *Diod. xiv.* 16.) Livy speaks of it as having at this time enjoyed a long period of power and prosperity, and still possessing great wealth, which was plundered by the Roman armies. A few years afterwards (B. C. 402) it again fell into the hands of the Volscians, through the negligence of the Roman garrison (*Liv. v.* 8). In B. C. 400, it was again besieged by the Roman arms under Valerius Potitus, and though his first assaults were repulsed, and he was compelled to have recourse to a blockade, it soon after fell into his hands. (*Ib.* 12, 13.) An attempt of the Volscians to recover it in 397 proved unsuccessful (*Ib.* 16), and from this time the city continued subject to Rome. Nearly 70 years later, after the conquest of Privernum, it was thought advisable to secure Tarracina with a Roman colony, which was established there in B. C. 329. (*Liv. viii.* 21; *Vell. Pat. i.* 14.)

The condition of Tarracina as a Roman colony is not quite clear, for Velleius notices it as if it had been one of the "Coloniae Latinae," while Livy certainly does not consider it as such, for he omits its name among the thirty Latin colonies in the time of the Second Punic War, while he on two occasions mentions it in connection with the other maritime colonies, Antium, Minturnae, &c. In common with these, the citizens of Tarracina in vain contended for exemption from military service during the Second Punic War, and at a later period claimed exemption from naval service also. (*Liv. xxvii.* 38, xxxvi. 3.) There can, therefore, be no doubt that Tarracina was a "colonia maritima civium," and it seems to have early become one of

the most important of the maritime towns subject to Rome. Its position on the Appian Way, which here first touched on the sea (Strab. v. p. 233; Hor. *Sat.* i. 5. 26), doubtless contributed to its prosperity; and an artificial port seems to have in some degree supplied the want of a natural harbour. (Liv. xxvii. 4.) In a military point of view also its position was important, as commanding the passage of the Appian Way, and the narrow defile of Lautulae, which was situated a short distance from the city on the side of Fundi. (Liv. xxii. 15.) [LAUTULAE.]

Under the Roman Republic Tarracina seems to have continued to be a considerable and flourishing town. Cicero repeatedly notices it as one of the customary halting-places on the Appian Way, and for the same reason it is mentioned by Horace on his journey to Brundisium. (Cic. *de Orat.* ii. 59, *ad Fam.* vii. 23, *ad Att.* vii. 5; Hor. *Sat.* i. 5. 26; Appian, *B. C.* iii. 12; Val. Max. viii. 1. § 13.) At the outbreak of the civil war between Caesar and Pompey, Tarracina was occupied by the latter with three cohorts under the praetor Rutilius Lupus, but they abandoned their post, when Pompey withdrew to Brundisium. (Caes. *B. C.* i. 24; Cic. *ad Att.* viii. 11, n.) Again, during the civil war between Vespasian and Vitellius, Tarracina was evidently regarded as a place of importance in a military point of view, and was occupied by the partisans of Vespasian, but was wrested from them by L. Vitellius just before the death of his brother. (Tac. *Hist.* iii. 57, 76, 77.) It was at Tarracina also that the funeral convoy of Germanicus was met by his cousin Drusus and the chief personages of Rome. (Id. *Ann.* iii. 2.) The neighbourhood seems to have been a favourite site for villas under the Roman Empire: among others the Emperor Domitian had a villa there (Martial. v. 1. 6); and it was at another villa near the town, on the road to Fundi, that the emperor Galba was born. (Suet. *Galb.* 4.) In addition to the other natural advantages of the situation, there existed mineral springs in the neighbourhood, which seem to have been much frequented. (Martial, v. 1. 6, x. 51. 8.) The important position of Tarracina doubtless prevented its falling into decay as long as the Western Empire subsisted. Its name is found in the Itineraries as a "civitas" (*Itin. Ant.* p. 187; *Itin. Hier.* p. 611), and even after the fall of the Roman dominion it appears as a fortress of importance during the Gothic wars. (Procop. *B. G.* ii. 2, 4, &c.)

The position of Tarracina at the extremity of the Pomptine Marshes, just where a projecting ridge of the Volscian mountains runs down to the sea, and separates the marshy tract on the W. from a similar but much smaller tract on the E., which extends from thence towards Fundi, must in all ages have rendered it a place of importance. The ancient city stood on the hill above the marshes. Horace distinctly describes it as standing on lofty rocks, which were conspicuous afar, from their white colour:—

"Impositum saxis late candentibus Anxur"

(Hor. *Sat.* i. 5. 26); and the same circumstance is alluded to by other Latin poets. (Lucan, iii. 84; Sil. Ital. viii. 392.) Livy also describes the original Volscian town as "loco alto situm" (v. 12), though it extended also down the slope of the hill towards the marshes ("urbs prona in paludes," iv. 59). At a later period it not only spread itself down the hill, but occupied a considerable level at the foot of it

(as the modern city still does), in the neighbourhood of the port. This last must always have been in great part artificial, but the existence of a regular port at Tarracina is noticed by Livy as early as B. C. 210. (Liv. xxvii. 4.) It was subsequently enlarged and reconstructed under the Roman Empire, probably by Trajan, and again restored by Antoninus Pius. (Capit. *Ant. P.* 8.) Its remains are still distinctly visible, and the whole circuit of the ancient basin, surrounded by a massive mole, may be clearly traced, though the greater part of it is now filled with sand. Considerable portions of the ancient walls also still remain, constructed partly in the polygonal style, partly in the more recent style known to the Romans as "opus incertum." Several ancient tombs and ruins of various buildings of Roman date are still extant in the modern city and along the line of the Via Appia. The modern cathedral stands on the site of an ancient temple, of which only the substructions and two columns remain. This is generally called, though on very uncertain authority, a temple of Apollo. The most celebrated of the temples at Tarracina was, however, that of Jupiter, which is noticed by Livy (xxviii. 11, xl. 45), and the especial worship of this deity in the Volscian city under the title of Jupiter Anxurus is alluded to by Virgil (*Aen.* vii. 799). He was represented (as we are told by Servius) as a beautiful youth, and the figure of the deity corresponding to this description is found on a Roman coin of the Vibian family. (Eckhel, vol. v. p. 340.) It is probable that this temple was situated in the highest part of the city, very probably in the ancient citadel, which occupied the summit of a hill above the town, where remains of its walls and substructions are still extant.

Tarracina was distant by the Via Appia 62 miles from Rome, and 18 from the Forum Appii. (*Itin. Ant.* p. 107; *Itin. Hier.* p. 611; Westphal, *Röm. Kamp.* p. 68.) Three miles from the city, at the side of the Via Appia, as well as of the canal which was frequently used by travellers, was the fountain of Feronia, celebrated by Horace, together with the sacred grove attached to it. [FERONIA.] [E.H.B.]

TARRACO (Ταρρακόν, Ptol. ii. 6. § 17), an ancient city of Spain, probably founded by the Phoenicians, who called it *Tarchon*, which, according to Bochart, means "a citadel." This name was probably derived from its situation on a high rock, between 700 and 800 feet above the sea; whence we find it characterised as "arce potens Tarraco" (Auson. *Clar. Urb.* 9; cf. Mart. x. 104.) It was seated on the river Sulcis, on a bay of the Mare Internum, between the Pyrenees and the river Iberus. (Mela, ii. 6; Plin. iii. 3. a. 4.) Livy xxii. 22 mentions a "portus Tarracensis;" and according to Eratosthenes (*ap. Strab.* iii. p. 159) it had a naval station or roads (ναυορράσιον); but Artemidorus (*ap. Strab.* l. c.; Polyb. iii. 76) says with more probability that it had none, and scarcely even an anchoring place; and Strabo himself calls it *ἀλίσυρος*. This answers better to its present condition; for though a mole was constructed in the 15th century with the materials of the ancient amphitheatre, and another subsequently by an Englishman named John Smith, it still affords but little protection for shipping. (Ford's *Handbook of Spain*, p. 222.) Tarraco lay on the main road along the S. coast of Spain. (*Itin. Ant.* pp. 391, 396, 399, 448, 452.) It was fortified and much en-

larged by the brothers Publius and Cneius Scipio, who converted it into a fortress and arsenal against the Carthaginians. Subsequently it became the capital of the province named after it, a Roman colony, and "conventus iuridicus." (Plin. l. c.; Tac. *Ann.* i. 78; Solin. 23, 26; Polyb. x. 34; Liv. xxi. 61; Steph. B. p. 637.) Augustus wintered at Tarraco after his Cantabrian campaign, and bestowed many marks of honour on the city, among which were its honorary titles of "Colonia Victrix Togata" and "Colonia Julia Victrix Tarraconensis." (Grut. *Inscr.* p. 382; Orelli, no. 3127; coins in Eckhel, i. p. 27; Florez, *Med.* ii. p. 579; Mionnet, i. p. 51, *Suppl.* i. p. 104; Sestini, p. 202.) According to Mela (l. c.) it was the richest town on that coast, and Strabo (l. c.) represents its population as equal to that of Carthago Nova. Its fertile plain and sunny shores are celebrated by Martial and other poets; and its neighbourhood is described as producing good wine and flax. (Mart. x. 104, xiii. 118; Sil. Ital. iii. 369, xv. 177; Plin. xiv. 6. s. 8, xix. 1. s. 2.) There are still many important ancient remains at Tarragona, the present name of the city. Part of the bases of large Cyclopean walls near the *Quartel de Pilatos* are thought to be anterior to the Romans. The building just mentioned, now a prison, is said to have been the palace of Augustus. But Tarraco, like most other ancient towns which have continued to be inhabited, has been pulled to pieces by its own citizens for the purpose of obtaining building materials. The amphitheatre near the sea-shore has been used as a quarry, and but few vestiges of it now remain. A circus, 1500 feet long, is now built over it, though portions of it are still to be traced. Throughout the town Latin, and even apparently Phœnician, inscriptions on the stones of the houses proclaim the desecration that has been perpetrated. Two ancient monuments, at some little distance from the town, have, however, fared rather better. The first of these is a magnificent aqueduct, which spans a valley about a mile from the gates. It is 700 feet in length, and the loftiest arches, of which there are two tiers, are 96 feet high. The monument on the NW. of the city, and also about a mile distant, is a Roman sepulchre, vulgarly called the "Tower of the Scipios;" but there is no authority for assuming that they were buried here. (Cf. Ford, *Handbook*, p. 219, seq.; Florez, *Esp. Sagr.* xxix. p. 68, seq.; Miñano, *Diccion.* viii. p. 398.) [T. H. D.]

TARRACONENSIS PROVINCIA (called by the Greeks *Ταρρακωνσία*, Ptol. ii. 6, viii. 4. § 5, &c.; and *Ἰσθμία ἡ περὶ Ταρρακωνα*, Dion Cass. liii. 3), at first constituted, as already remarked [Vol. I. p. 1081], the province of Hispania Citerior. It obtained its new appellation in the time of Augustus from its chief city Tarraco, where the Romans had established themselves, and erected the tribunal of a prætor. The Tarraconensis was larger than the other two provinces put together. Its boundaries were, on the E. the Mare Internum; on the N. the Pyrenees, which separated it from Gallia, and further westward the Mare Cantabricum; on the W., as far southward as the Durus, the Atlantic ocean, and below that point the province of Lusitania; and on the S. the province of Lusitania and the province of Baetica, the boundaries of which have been already laid down. (Mela, ii. 6; comp. Strab. iii. p. 166; Plin. iv. 21. s. 35; Marcian, p. 34.) Thus it embraced the modern provinces of Murcia, Valencia, Catalonia, Arragon, Navarre, Biscay, Asturias, Galli-

cia, the N. part of Portugal as far down as the Douro, the N. part of Leon, nearly all the Castiles, and part of Andalusia. The nature of its climate and productions may be gathered from what has been already said [HISPANIA, Vol. I. p. 1086.] A summary of the different tribes, according to the various authorities that have treated upon the subject, has also been given in the same article [p. 1083], as well as the particulars respecting its government and administration [p. 1081.] [T. H. D.]

TARRAGA (*Τάρραγα*, Ptol. ii. 6. § 67), called by the Geogr. Rav. (iv. 43) TERRACHA, a town of the Vascones in Hispania Tarraconensis (Plin. iii. 3. s. 4). Now *Larraga*. (Cf. Cellarius, *Orb. Ant.* i. p. 91.) [T. H. D.]

TARRHA (*Τάρρα*, Pausan. ix. 16. § 13; Theophrast. *H. P.* ii. 2; Steph. B. s. v.; Orac. *ap. Euseb. P. E.* p. 133, ed. Stephan.; *Τάρρος*, *Stadiasm.* §§ 329, 330), a town on the SW. coast of Crete between Phœnicæ and Poecilassus, one of the earliest sites of the Apollo-worship, and the native country of the writer Lucillus. For Tarba (*Τάρβα*, Ptol. iii. 17. § 3) Meursius proposes to read Tarrha. There can be little or no doubt that its position should be fixed on the SW. coast of the island, at the very entrance of the glen of *Hághia Rumlí*, where the bold hanging mountains hem in the rocky bed of the river. (Pashley, *Travels*, vol. ii. p. 270.) The Florentine traveller Buonellmonti, who visited Crete A. D. 1415, describes considerable remains of a temple and other buildings as existing on the site of the ancient city (*ap. Cornelius, Creta Sacra*, vol. i. p. 85). [E. B. J.]

TARSATICA (*Ταρσάτικα*, Ptol. ii. 17. § 2), called in the *Itin. Ant.* p. 273, Tharsaticum, a place in Illyricum, on the road from Aquileia to Siscia through Liburnia, now *Tersat*, to the E. of *Fiume*. (Cf. Pliny, iii. 21. s. 25; *Tab. Peut.*) [T. H. D.]

TARSHISH. [TARTESSUS.]

TARSIA (*Τάρσια*, Arrian, *Ind.* c. 37), a promontory on the coast of Carmania, visited by the fleet of Nearchus. The conjecture of Vincent (*Voyage of Nearchus*, i. p. 362) that it is represented by the present *Rás-al-Djerd* appears well founded. It is perhaps the same as the Themistæa Promontorium of Pliny (vi. 25) as suggested by Müller. (*Geog. Græc.* i. p. 360.) [V.]

TARSUUM (*Τάρσουμ*, Ptol. ii. 16. § 8), a place in Pannonia Inferior, now *Tersacz*. [T. H. D.]

TARSUUS (*Τάρσιος*), a river of Mysia in the neighbourhood of the town of Zeleia, which had its source in Mount Temnus, and flowed in a north-eastern direction through the lake of Miletopolis, and, issuing from it, continued its north-eastern course till it joined the Mæcæstus. (Strab. xiii. p. 587.) Strabo indeed states that the river flowed in numerous windings not far from Zeleia; but he can scarcely mean any other river than the one now bearing the name *Báiketsri*, and which the Turks still call *Tarza*. Hamilton (*Researches*, vol. ii. p. 106) identifies it with the *Kara Su* or *Kara Dere Su*, which flows into *Lake Maniayas*. [L. S.]

TARSURAS (*Ταρσούρας*, Arrian, *Per.* P. *Æuz.* p. 10), a river of Colchis falling into the sea between the Singames and the Hippus. (Cf. Plin. vi. 4. s. 4.) It is probably the same river called Tarsiaros in the *Tab. Peut.* [T. H. D.]

TARSUS (*Τάρσος*: *Eth.* *Ταρσινός* or *Ταρσείος*), sometimes also called *Tarsi* (*Τάρσιος*), *Tersus* (*Τέρσος*), *Tharsus* (*Θάρσος*), or *Ταρσός* *πρὸς τῇ Κόλχῃ*, to distinguish it from other places of the same name

was the chief city of Cilicia, and one of the most important places in all Asia Minor. It was situated in a most fertile and productive plain, on both sides of the river Cydnus, which, at a distance of 70 stadia from the city, flowed into a lagoon called Rhegma or Rhegmi. This lagoon formed the port of Tarsus, and was connected with the sea. The situation of the city was most favourable, for the river was navigable up to Tarsus, and several of the most important roads of Cilicia met there. Its foundation is ascribed to Sardanapalus, the Assyrian king, and the very name of the city seems to indicate its Semitic origin. But the Greeks claimed the honour of having colonised the place at a very early period; and, among the many stories related by them about the colonisation of Tarsus, the one adopted by Strabo (xiv. p. 673; comp. Steph. B. s. v.) ascribes the foundation to Argives who with Triptolemus arrived there in search of Io. The first really historical mention of Tarsus occurs in the Anabasis of Xenophon, who describes it as a great and wealthy city, situated in an extensive and fertile plain at the foot of the passes of Mount Taurus leading into Cappadocia and Lycaonia. (*Anab.* i. 2. § 23, &c.) The city then contained the palace of Syennesis, king of Cilicia, but virtually a satrap of Persia, and an equivocal ally of Cyrus when he marched against his brother Artaxerxes. When Cyrus arrived at Tarsus, the city was for a time given up to plunder, the troops of Cyrus being exasperated at the loss sustained by a detachment of Cilicians in crossing the mountains. Cyrus then concluded a treaty with Syennesis, and remained at Tarsus for 20 days. In the time of Alexander we no longer hear of kings; but a Persian satrap resided at Tarsus, who fled before the young conqueror and left the city, which surrendered to the Macedonians without resistance. Alexander himself was detained there in consequence of a dangerous fever brought on by bathing in the Cydnus. (*Arrian, Anab.* ii. 4; *Curt.* iii. 5.) After the time of Alexander, Tarsus with the rest of Cilicia belonged to the empire of the Selencidae, except during the short period when it was connected with Egypt under the second and third Ptolemy. Pompey delivered Tarsus and Cilicia from the dominion of the eastern despots, by making the country a Roman province. Notwithstanding this, Tarsus in the war between Caesar and Pompey sided with the former, who on this account honoured it with a personal visit, in consequence of which the Tarsians changed the name of their city into Juliopolis. (*Caes. B. Alex.* 66; *Dion Cass.* xlvii. 24; *Flor.* iv. 2.) Cassius afterwards punished the city for this attachment to Caesar by ordering it to be plundered, but M. Antony rewarded it with municipal freedom and exemption from taxes. It is well known how Antony received Cleopatra at Tarsus when that queen sailed up the Cydnus in a magnificent vessel in the disguise of Aphrodite. Augustus subsequently increased the favours previously bestowed upon Tarsus, which on coins is called a "libera civitas." During the first centuries of the empire Tarsus was a place of great importance to the Romans in their campaigns against the Parthians and Persians. The emperor Tacitus, his brother Florian, and Maximinus and Julian died at Tarsus, and Julian was buried in one of its suburbs. It continued to be an opulent town until it fell into the hands of the Saracens. It was, however, taken from them in the second half of the 10th century by the emperor Nicephorus, but was soon after again restored to them, and has remained in

their hands ever since. The town still exists under the name of *Terssoo*, and though greatly reduced, it is still the chief town of that part of *Karamania*. Few important remains of antiquity are now to be seen there, but the country around it is as delightful and as productive as ever.

Tarsus was not only a great commercial city, but at the same time a great seat of learning and philosophy, and Strabo (xiv. p. 673, &c.) gives a long list of eminent men in philosophy and literature who added to its lustre; but none of them is more illustrious than the Apostle Paul, who belonged to one of the many Jewish families settled at Tarsus. (*Acts*, x. 30, xi. 30, xv. 22, 41, xxi. 39; comp. *Ptol.* v. 8. § 7; *Diod.* xiv. 20; *Hierocl.* p. 704; *Stadiasm. Mar. M.* § 156; *Leake, Asia Minor*, p. 214; *Russsegger, Reisen in Asien*, i. 1. p. 395, foll. 2. p. 639, foll.)

Another town of the name of Tarsus is said to have existed in Bithynia (*Steph. B. s. v.*) but nothing is known about it. [L. S.]

COIN OF TARSUS.

TARTARUS (*Tartaro*), a river of Venetia, near the borders of Gallia Transpadana. It is intermediate between the Athesis (*Adige*) and the Padus (*Po*); and its waters are now led aside by artificial canals partly into the one river and partly into the other, so that it may be called indifferently a tributary of either. In ancient times it seems to have had a recognised mouth of its own, though this was even then wholly artificial, so that Pliny calls it the "fossiones Philistinae, quod alii Tartarum vocant." (*Plin.* iii. 16. s. 20.) In the upper part of its course it formed, as it still does, extensive marshes, of which Caecina, the general of Vitellius, skilfully availed himself to cover his position near Hostilia. (*Tac. Hist.* iii. 9.) The river is here still called the *Tartaro*: lower down it assumes the name of *Canal Bianco*, and after passing the town of Adria, and sending off part of its waters right and left into the *Po* and *Adige*, discharges the rest by the channel now known as the *Po di Levante*. The river Atrianus (*Ἀτριάριος ποταμός*), mentioned by Ptolemy (iii. 16. § 20), could be no other than the mouth of the Tartarus, so called from its flowing by the city of Adria; but the channels of these waters have in all ages been changing. [E. H. B.]

TARTESSUS (*Ταρτησσός*, *Herod.* i. 163; *Ταρτησσός* and *Ταρτεσσός*, *Diodor. Siculus, Frag.* lib. xxv.), a district in the south of Spain, lying to the west of the Columns of Hercules. It is now the prevailing opinion among biblical critics that the Tarsish of Scripture indicates certain localities in the south of Spain, and that its name is equivalent to the Tartessus of the Greek and Roman writers. The connection in which the name of Tarsish occurs in the Old Testament with those of other places, points to the most western limits of the world, as known to the Hebrews (*Genes.* x. 4; *1 Chron.* i. 7; *Psalms*, lxxii. 10; *Isaiah*, lvi. 19);

and in like manner the word Tartessus, and its derivative adjectives, are employed by Latin writers as synonymous with the West (Ovid, *Met.* xiv. 416; Sil. Ital. iii. 399; Claud. *Epist.* iii. v. 14). Tarshish appears in Scripture as a celebrated emporium, rich in iron, tin, lead, silver, and other commodities; and the Phœnicians are represented as sailing thither in large ships (*Ezek.* xxvii. 12, xxviii. 13; *Jerem.* x. 9). Isaiah speaks of it as one of the finest colonies of Tyre, and describes the Tyrians as bringing its products to their market (xxiii. 1, 6, 10). Among profane writers the antiquity of Tartessus is indicated by the myths connected with it (Strab. iii. p. 149; Justin, xlv. 4). But the name is used by them in a very loose and indefinite way. Sometimes it stands for the whole of Spain, and the Tagus is represented as belonging to it (Rutilius, *Itin.* i. 356; Claud. in *Rufin.* i. 101; Sil. Ital. xiii. 674, &c.). But in general it appears, either as the name of the river Baetis, or of a town situated near its mouth, or thirdly of the country south of the middle and lower course of the Baetis, which, in the time of Strabo, was inhabited by the Turduli. The Baetis is called Tartessus by Stesichorus, quoted by Strabo (iii. p. 148) and by Avienus (*Ora Marit.* i. 224), as well as the town situated between two of its mouths; and Miot (*ad Herod.* iv. 152) is of opinion that the modern town of *S. Lucar de Barameda* stands on its site. The country near the lower course of the Baetis was called Tartessus or Tartesia, either from the river or from the town; and this district, as well as others in Spain, was occupied by Phœnician settlements, which in Strabo's time, and even later, preserved their national customs. (Strab. iii. p. 149, xvii. p. 832; Arr. *Exp. Alex.* ii. 16; App. *Hisp.* 2; Const. Porphyrog. *de Them.* i. p. 107, ed. Bonn.) There was a temple of Hercules, the Phœnician Melcarth, at Tartessus, whose worship was also spread amongst the neighbouring Iberians. (Arr. *l.c.*) About the middle of the seventh century B. C. some Samiot sailors were driven thither by stress of weather; and this is the first account we have of the intercourse of the Greeks with this distant Phœnician colony (Herod. iv. 152). About a century later, some Greeks from Phocæa likewise visited it, and formed an alliance with Arganthionus, king of the Tartessians, renowned in antiquity for the great age which he attained. (Herod. i. 163; Strab. iii. p. 151.) These connections and the vast commerce of Tartessus, raised it to a great pitch of prosperity. It traded not only with the mother country, but also with Africa and the distant Cassiterides, and bartered the manufactures of Phœnicia for the productions of these countries (Strab. i. p. 33; Herod. iv. 196; cf. Heeren, *Ideen*, i. 2. § § 2, 3). Its riches and prosperity had become proverbial, and we find them alluded to in the verses of Anacreon (*ap. Strab.* iii. p. 151). The neighbouring sea (*Fretum Tartessium*, Avien. *Or. Mar.* 64) yielded the lamprey, one of the delicacies of the Roman table (Gell. vii. 16); and on a coin of Tartessus are represented a fish and an ear of grain (Mionnet, *Med. Ant.* i. p. 26). We are unacquainted with the circumstances which led to the fall of Tartessus; but it may probably have been by the hand of Hamilcar, the Carthaginian general. It must at all events have disappeared at an early period, since Strabo (iii. pp. 148, 151), Pliny (iii. 1, iv. 22, vii. 48), Mela (ii. 6), Sallust (*Hist. Fr. ii.*), and others, confounded it with more recent Phœnician colonies, or took its name to be an ancient appellation of them. [T. H. D.]

TARUALTAE (Ταροάλται, Ptol. iv. 6. § 19), a people of Libya Interior. [T. H. D.]

TARVEDUM. [ORCAS.]

TARUENNA or TARUANNA (Ταρουαννα, Ptol. ii. 9. § 8), a town in North Gallia, and according to Ptolemy an inland town of the Morini. [MORINI.] It is written Teruanna in the Table, where it is marked a capital town, and the modern name is *Térouenne*. It is mentioned in several Roman routes. The distance between Gesoriacum (*Boulogne*) in the Antonine Itin. and Taruenna does not agree with the true distance; nor does the distance in the same Itin. between Taruenna and Castellum (*Cassel*) agree with the actual measurement. In both instances we must assume that there is an error in the numerals of the Itin. D'Anville says that the Roman road appears to exist between *Térouenne* and the commencement of the *Boulenois*, or district of *Boulogne*, near *Deur*, where it passes by a place called *La Chaussée*. There are also said to be traces of a Roman road from Itius Portus (*Wissant*) to *Térouenne*. [G. L.]

TARVESEDE (*It. Ant.* p. 279) or TARVES-SEDO, according to the Peut. Table, was a place in Rhaetia on the road from Mediolanum leading by Comum to Augusta Vindelicorum. Its exact site is now unknown, though it seems to have been situated near *Torre di Vercella*. [L. S.]

TARVISIUM (Ταφίσιον: *Eth.* Tarvisianus: *Trevise*), a town of Northern Italy, in the province of Venetia, situated on the left bank of the river Silius (*Sele*), about 15 miles from its mouth. The name is not mentioned by any of the geographers, though Pliny speaks of the Silius as flowing "ex montibus Tarvisanis" in a manner that would lead us to suppose it to have been a municipal town (Plin. iii. 18. s. 22), and this is confirmed by an inscription given by Muratori (*Inscr.* p. 328). After the fall of the Western Empire it appears as a considerable city, and is repeatedly noticed by Procopius during the Gothic Wars, as well as by Cassiodorus and Paulus Diaconus. (Cassiod. *Var.* x. 27; Procop. *B. G.* ii. 29, iii. 1, 2; P. Diac. *Hist. Lang.* ii. 12, iv. 3, v. 28, &c.) It retained this consideration throughout the middle ages, and is still a flourishing city under the name of *Trevise*. [E. H. B.]

TARUS (*Taro*), a river of Gallia Cispadana, one of the southern tributaries of the Padus, which crosses the Æmilian Way between 5 and 6 miles west of Parma. (Plin. iii. 16. s. 20; Geogr. Rav. iv. 36.) [E. H. B.]

TARUSATES are mentioned by Caesar (*B. G.* iii. 27) among the Aquitanian peoples who submitted to P. Crassus; "Vocates, Tarusates, Elusates." After Crassus had defeated the Sotiates [NOTIATES] he entered the territory of the Vocates, and Tarusates, a statement which gives some indication of their position. Pliny (iv. 19) places the Tarusates between the Succasses and Basabocates; but the MSS. reading in Pliny seems to be Latu-sates, which probably should be Tarusates. There appears to be no variation in the name in the MSS. of Caesar. D'Anville conjectures that the name Tarusates is preserved in *Tursan*, or *Teursan*, a part of the diocese of *Aire*. The town of *Aire* is on the Aturis (*Adour*). [G. L.]

TARUSCONIENSES, as the name stands in Harduin's edition of Pliny (iv. 4), but the reading is doubtful. Harduin found Taracconienses in five MSS., and there are other variations. Besides *Tarascon* on the *Rhône*, there is *Tarascon* on the

Arrière, a branch of the *Garonne*. This Tarascon is in the *Pays de Foix*, and in a valley at the foot of the Pyrenees, which circumstance seems to indicate more probably the position of a small tribe or people than that of *Tarascon* on the *Rhône*. This *Tarascon* on the *Arrière* is mentioned in middle age documents under the name of *Castrum Tarasco*. Pliny's *Tarusconenses*, or whatever may be the true name, are enumerated among the *Oppida Latina* of *Narbonensis*. [G. L.]

TASCIACA, a town in Gallia, placed by the Table between *Avaricum* (*Bourges*) and *Caesardunum* (*Tours*). The first station from *Avaricum* is *Gabris*, supposed to be *Chabris* on the *Cher*, and the next is *Tasciaca*, supposed to be *Tezée*, also on the *Cher*. But the number *xxiii*, placed in the Table at the name of *Tasciaca*, which number should represent the distance from *Chabris* to *Tezée*, is nearly the distance between *Tezée* and *Tours*, and accordingly there is some error here. The Table gives no distance between *Tasciaca* and *Caesardunum*. (D'Anville, *Notice*; Ukert, *Gallien*.) [G. L.]

TASCONI is the name of a Gallic people in the *Narbonensis*, mentioned by Pliny (iii. 4), as the name is read in five MSS. There is a small river *Tescou* or *Tescou*, which flows into the *Tarn*, near *Montauban*. D'Anville quotes a life of S. Théodard, archbishop of *Narbonne*, which speaks of this river as called *Tasco* by the people of that part, and as the limit between the territories of the *Tolosani*, or people of *Toulouse*, and the *Caturcenses*, or people of *Cahors*. This is a valuable passage, for it shows how far north the *Narbonensis*, to which the territory of *Toulouse* belonged, extended in this part of its frontier; and it also confirms the conjecture about the northern limits of the *Ruteni* Provinciales [RUTENI], who were also included in the *Narbonensis*. [G. L.]

TASTA. [DATIL.]

TATTA LACUS (ἡ Τάττα), a large salt lake on the frontiers between *Lycania* and *Galatia*; it had originally belonged to *Phrygia*, but was afterwards annexed to *Lycania*. Its waters were so impregnated with brine, that any substance dipped into it, was immediately incrustated with a thick coat of salt; even birds flying near the surface had their wings moistened with the saline particles, so as to become incapable of rising into the air, and to be easily caught. (Strab. xii. p. 568; Plin. xxxi. 41, 45; Dioscorid. v. 126.) Stephanus Byz. (s. v. *Βορίαιον*) speaks of a salt lake in *Phrygia*, which he calls *Attaea* (Ἀτταία), near which there was a town called *Botieum*, and which is probably the same as *Lake Tatta*. The Turks now call the lake *Tatla*, and it still provides all the surrounding country with salt. (Leake, *Asia Minor*, p. 70.) [L. S.]

TAUA. [TAUM.]

TAUA (Ταυα, Steph. B. s. v.; Ταυα, Ptol. iv. 5. § 50; Ταυα, *Itin. Ant.* p. 153), a town in Lower Egypt, situated on the left bank of the Canopic arm of the Nile, S. of the city of *Naucratis*. It was the capital of the small *Phthembuthic Nome* (Plin. v. 9. s. 9), and is supposed to be represented by the present *Thaouah*. (D'Anville, *Mémoire sur l'Égypte*, vol. i. p. 82.) [W. B. D.]

TAUCHIRA or **TEUCHIRA** (Ταύχιρα, Herod. iv. 171, et alii; Τεύχιρα, Hierocl. p. 732; Plin. v. 5. s. 5, &c.), a town on the coast of *Cyrenaica*, founded by *Cyrene*. It lay 200 stadia W. of *Ptolemais*. Under the Ptolemies it obtained the name

of *Arsinoë*. (Strab. xvii. p. 836; Mela, i. 8; Plin. l. c.) At a later period it became a Roman colony (*Tab. Pent.*), and was fortified by Justinian. (Procop. de Aed. vi. 3.) *Tauchira* was particularly noted for the worship of *Cybele*, in honour of whom an annual festival was celebrated. (Synes. Ep. 3.) It is the same town erroneously written *Τάχυρα* by *Diodorus* (xviii. 20). It is still called *Tochira*. (Cf. Della Cella, *Viagg.* p. 198; Pachy, *Voyage*, p. 184.) [T. H. D.]

TAVIUM (Ταυίον, Ταύιον) or **TAVIA**, a town in the central part of eastern *Galatia*, at some distance from the eastern bank of the river *Halys*, was the chief town of the *Galatian* tribe of the *Trocmi*, and a place of considerable commercial importance, being the point at which five or six of the great roads met. (Plin. v. 42; Strab. xii. p. 567; Ptol. v. 4. § 9; Steph. B. s. v. Ἀγκυρα; Hierocl. p. 696; *It. Ant.* pp. 201, 203.) It contained a temple with a colossal bronze statue of *Zeus*. Leake (*Asia Minor*, p. 311) is strongly inclined to believe that *Takharum* occupies the site of ancient *Tavium*; but Hamilton (*Researches*, i. p. 379, &c.) and most other geographers, with much more probability, regard the ruins of *Boghaz Kienä*, 6 leagues to the north-west of *Jazgat* or *Jueghat*, as the remains of *Tavium*. They are situated on the slope of lofty and steep rocks of limestone, some of which are adorned with sculptures in relief. There are also the foundations of an immense building, which are believed to be remains of the temple of *Zeus*. (Comp. Hamilton in the *Journal of the Roy. Geogr. Soc.* vol. vii. p. 74, foll.; Cramer, *Asia Minor*, ii. p. 98.) [L. S.]

TAULANTII (Ταυλάντιοι, Ptol. iii. 13. § 3), a people of Roman *Illyria*, in the neighbourhood of *Epidamnus* and *Dyrrachium*. In ancient times they were a powerful tribe, possessing several cities, and governed by their own kings, but subsequently they were reduced to subjection by the kings of *Illyria*, and at the time when the Romans waged war with *Teuta* they had sunk into insignificance. (Cf. Thucyd. i. 24; Arrian, *Anab.* i. 5; Mela, ii. 3; Liv. xlv. 26; Plin. iii. 22. s. 26.) Aristotle relates that they had a method of preparing meat from honey. (*Mir. Ausc.* t. ii. p. 716.) [T. H. D.]

TAUM, **TAUS**, or **TAVA** (Ταυα εἰς ταυος, Ptol. ii. 3. § 5), a bay on the E. coast of *Britannia* *Barbara*. (Tac. Agr. 22.) Now *Firth of Tay*. [T. H. D.]

TAUM (AD), a place in the SE. of *Britannia* *Romana*, in the territory of the *Icenii* (*Tab. Prat.*). Probably *Yarmouth*. [T. H. D.]

TAUNUS MONS, a range of hills in western Germany, beginning near the river *Nicer* (*Neckar*), and running northward till they reach the point where the *Moenus* (*Main*) joins the *Rhenus*. (Pomp. Mela, iii. 3; Tac. Ann. i. 56, xii. 28.) This range of hills still bears its ancient name, though it is sometimes simply called the *Höhe*, that is, the Height, *Tannus* being probably the Celtic word *Dun* or *Dann*, which signifies a height. In various places along this range of hills Roman inscriptions have been found, in which *Civis Tannenses* are mentioned, from which it may be inferred that there once existed a town of the name of *Tannus*. (Orelli, *Inscript.* nos. 181, 4981, 4982; Wilhelm, *Germanien*, p. 44.) [L. S.]

TAURANIA, a town of *Campania*, mentioned only by Pliny (iii. 5. s. 9) as having in his time entirely disappeared, like *Stabiae*. He affords no clue to its position. The name of *Taurania* (*Tamparia*) is found also in the older editions of *Stephanus* of

Byzantium; but it appears that the true reading is Taurasia. (Steph. B. s. v. ed. Mein.) [E. H. B.]

TAURANITIUM, a district of Armenia Major lying N. of Tigranocerta, in the direction of Artaxata. (Tac. *Ann.* xiv. 24; Cf. Moses Chor. i. 5; Ritter, *Erdkunde*, x. p. 650, sq.) [T. H. D.]

TAURA'SIA (*Taurasi*), an ancient city of Samnium, in the country of the Hirpini situated on the right bank of the river Calor, about 16 miles above its junction with the Tamarus. The name of the city is known only from the inscription on the tomb of L. Scipio Barbatus, which records it among the cities of Samnium taken by him during the Third Samnite War. (Orell. *Inscr.* 550.) It was probably taken by assault, and suffered severely, for no subsequent mention of the town occurs in history: but its territory ("ager, qui Taurasinorum fuerat"), which was doubtless confiscated at the same time, is mentioned long afterwards, as a part of the "ager publicus populi Romani," on which the Apuan Ligurians who had been removed from their own abodes were established by order of the senate. (Liv. xl. 38.) These Ligurians appear to have been settled in the plain on the banks of the Tamarus near its junction with the Calor; but there can be little doubt that the modern village of *Taurasi*, though 16 miles further S., retains the name, and marks (approximately at least) the site of the ancient Taurasia.

Several modern writers identify these Taurasini Campi with the Arusini Campi near Beneventum, which were the scene of the defeat of Pyrrhus by M. Curius Dentatus (Flor. i. 18; Oros. iv. 2), and the suggestion is probable enough, though unsupported by any authority. [BENEVENTUM.] [E. H. B.]

TAURAUNITES. [BAGRAUDANENE.]

TAURESIUM (*Tauphisor*, Procop. *de Aed.* iv. 1. p. 266), a place in Moesia Superior, near Scupi or Justiniana Prima. It was situated in the Haemus, not far from the borders, and was the birthplace of the emperor Justinian. (Cf. Gibbon, vol. v. p. 79, ed. Smith.) [T. H. D.]

TAURI (*Taupoi*, Strab. vii. p. 308), the inhabitants of the Chersonesus Taurica, or modern Crimea. They were probably the remains of the Cimmerians, who were driven out of the Chersonese by the Scythians. (Herod. iv. 11, 12; Heeren, *Ideen*, i. 2. p. 271; Mannert, iv. p. 278.) They seem to have been divided into several tribes: but the two main divisions of them were the nomad Tauri and the agricultural. (Strab. vii. p. 311.) The former possessed the northern part of the country, and lived on meat, mare's milk, and cheese prepared from it. The agricultural Tauri were somewhat more civilised; yet altogether they were a rude and savage people, delighting in war and plunder, and particularly addicted to piracy. (Herod. iv. 103; Strab. vii. p. 308; Mela, ii. 1; Tac. *Ann.* xii. 17.) Nevertheless, in early times at least, they appear to have been united under a monarchical government (Herod. iv. 119). Their religion was particularly gloomy and horrible, consisting of human sacrifices to a virgin goddess, who, according to Ammianus Marcellinus (xxii. 8. s. 34), was named Oreiloche, though the Greeks regarded her as identical with their Artemis, and called her Tauropeles. (Soph. *Aj.* 172; Eur. *Iph. Taur.* 1457; Diod. iv. 44; Ach. Tat. viii. 2; Strab. xiii. 535; Böckh, *Inscr.* ii. p. 89.) These victims consisted of shipwrecked persons, or Greeks that fell into their hands. After killing them, they stuck their heads upon poles, or,

according to Ammianus (l. c.), affixed them to the wall of the temple, whilst they cast down the bodies from the rock on which the temple stood. (Herod. iv. 103; Ov. *ex Pont.* iii. 2. 45, seq., *Trist.* iv. 4. 63.) According to a tradition among the Tauri themselves, this goddess was Iphigenia, the daughter of Agamemnon (Herod. l. c.) They had also a custom of cutting off the heads of prisoners of war, and setting them on poles above the chimneys of their houses, which usage they regarded as a protection of their dwellings (*ib.*). If the king died, all his dearest friends were buried with him. On the decease of a friend of the king's, he either cut off the whole or part of the deceased person's ear, according to his dignity. (Nic. Damasc. p. 160, Orell.) [T. H. D.]

TAURIA'NUM (*Traviano*), a town on the W. coast of Bruttium, near the mouth of the river Metaurus (*Marro*). Its name is mentioned by Mela, who places it between Scylla and Metaurum. It was probably, therefore, situated to the S. of the river, while the town of Metaurum was on its N. bank. Subsequently all trace of the latter disappears; but the name of Tauriana is still found in the Tabula, which places it 23 miles S. of Vibo Valentia. (Mel. ii. 4. § 8; *Tab. Peut.*) It became the see of a bishop in the later ages of the Roman empire, and retained that dignity down to the time of Gregory VII., when the town had fallen into complete decay. Its ruins, however, still exist, and the site is said to retain the name of *Traviano*. (Holsten. *Not. ad Cluver.* p. 299; Romanelli, vol. i. p. 70.)

There can be no doubt that the "Taurocentum oppidum" of Pliny (iii. 5. s. 10), which he mentions immediately after the "Metaurus amnis," is the same place that is called by Mela Taurianum. [E. H. B.]

TAURICA CHERSONE'SUS (ἡ Ταυρική Χερσόνησος, Ptol. iii. Arg. 2, &c.), a peninsula stretching into the Pontus Euxinus from Sarmatia, or the country of the nomad Scythians, with which it is connected by a narrow isthmus, anciently called Taphrus, or Taphrae, now the isthmus of *Perecop*. The peninsula also bore the name of Chersonesus Scythica, and was sometimes styled simply Taurica. (Plin. iv. 12. s. 26; Scylax, i. p. 29, Huds.) It is now called the *Crimea*, from the once famous city of *Eski-Krim*; but since its incorporation with the Russian empire, the name of *Taurica* has also been again applied to it.

The isthmus which connects the peninsula with Sarmatia is so slender, being in some parts scarcely 40 stadia or 5 miles across (Strab. vii. p. 308; Clarke, *Trav.* ii. p. 314, 4th ed. 1816), as to make it probable that in a very remote period Taurica was an island. (Plin. l. c.; cf. Pallas, *Voyages*, &c., ii. p. 2, Fr. Transl. 4to.) The ancients compared it with the Peloponnesus, both as to size and shape (Strab. vii. p. 310; cf. Herod. iv. 99); and this comparison is sufficiently happy, except that Taurica throws out another smaller peninsula on its E. side, the Bosporan peninsula, or peninsula of *Kertsch*, which helps to form the S. boundary, or coast, of the Palus Maeotis. The Chersonese is about 200 miles across in a direct line from *Cape Tarchan*, its extreme W. point, to the *Straits of Kertsch*, and 125 miles from N. to S., from *Perecop* to *Cape Kikineis*. It contains an area of about 10,050 square miles. Nearly three-fourths of Taurica consist of flat plains little elevated above the sea; the remainder towards the S. is moun-

tainous. The NW. portion of the low country, or that which would lie to the W. of a line drawn from the isthmus to the mouth of the river *Alma*, consists of a sandy soil interspersed with salt lakes, an evidence that it was at one time covered by the sea (Pallas, *ib.* p. 605, &c.); but the E. and S. part has a fertile mould. The mountain chain (Taurici Montes) begins to rise towards the centre of the peninsula, gently at first on the N., but increasing in height as the chain approaches the sea, into which it sinks steeply and abruptly. Hence the coast at this part presents huge cliffs and precipices, and the sea is so deep that the lead often finds no bottom at the distance of a mile or two from the shore. From these mountains, which extend from Symbolon, or *Balaclava*, on the W., to Theodosia, or *Caffa*, on the E., many bold promontories are projected into the sea, enclosing between them deep and warm valleys open to the S., and sheltered from the N. wind, where the olive and vine flourish, the apricot and almond ripen, and the laurel creeps among the dark and frowning cliffs. The most remarkable mountains of this chain are that anciently called the Cimmerium at the N. extremity, and the Trapezus at the S. (Strab. vii. p. 309.) The former, which is said to have derived its name from the Cimmerians, once dominant in the Bosphorus, is now called *Aghirmisch-Daghi*. It lies nearly in the centre of the peninsula, to the NW. of the ancient Theodosia, and near the town of *Eski-Krim*, or *Old Krim*. Some writers, however, identify Cimmerium with *Mount Opouk*, on the S. coast of the peninsula of *Kertch*. (Köhler, *Mém. de l'Acad. de St. Pétersb.* 1824, p. 649, seq.; Dubois de Montperreux, *Voyages*, &c. v. p. 253, seq.) But Trapezus is by far the highest mountain of Taurica. Kohl estimates its height at 5000 German feet (*Reisen in Südrußland*, i. p. 204); other authorities make it rather less, or 4740 feet. (Neumann, *Die Hellenen im Scythienlande*, p. 448.) According to Mr. Seymour, it is 5125 English feet high. (*Russia on the Black Sea*, p. 146.) Its form justifies its ancient name, and is said to resemble that of the *Table Mountain* at the *Cape of Good Hope* (Kohl, *ib.*). A good idea of it may be obtained from the vignette in Pallas (ii. p. 196). As it stands somewhat isolated from the rest of the chain, it presents a very striking and remarkable object, especially from the sea. At present it is called *Tchaitr-Dagh*, or the *Tent Mountain*. The other mountains seldom exceed 1200 feet. Their geological structure presents many striking deviations from the usual arrangement, especially in the absence of granite. These anomalies are fully described by Pallas in his second volume of travels. That part of Taurica which lay to the E. of them was called the Bugged, or Rocky, Chersonesus (ῥηγιήνη, Herod. l. c.) It is in these mountains that the rivers which water the peninsula have their sources, none of which, however, are considerable. They flow principally from the northern side, from which they descend in picturesque cascades. Only two are mentioned by the ancients, the Thapsis and the Istrianus. At present the most fertile districts of Taurica are the calcareous valleys among the mountains, which, though often covered with only a thin layer of mould, produce excellent wheat. The nature of the country, however, does not now correspond with the descriptions of the ancients. Strabo (l. c.) praises its fertility in produc-

ing corn, especially in that part which lies between Panticapæum (*Kertch*) and Theodosia (*Caffa*), which at present is a desolate and monotonous steppe. But this may probably be accounted for by the physical and political revolutions which the country has undergone. Taurica yielded a large tribute of wheat to Mithridates Eupator, King of Bosphorus. That sovereign took much interest in promoting the cultivation of the country, especially by the planting of trees; but all his care to rear the laurel and the myrtle in the neighbourhood of Panticapæum is said to have been vain, though other trees grew there which required a mild temperature. (Plin. xvi. s. 59.) Wine was produced in abundance, as at the present day, and the custom mentioned by Strabo (p. 307), of covering the vines with earth during the winter, is still observed, though Pallas considers it unnecessary (*Voyages*, &c. ii. p. 444.)

The interest connected with the ancient history of the Tauric Chersonese is chiefly derived from the maritime settlements of the Greeks, and our attention is thus principally directed to the coasts. An account of the barbarous people who inhabited the peninsula at the time when these settlements were made is given in a separate article [TAURI]. Its coasts, like those of the Euxine in general, were early visited by the Milesians, who planted some flourishing colonies upon it. Besides these we find a Dorian colony established near the site of the present *Sebastopol*; and, if we may believe Aeschines (*contra Ctesiph.* p. 141, sq.), the Athenians once possessed the town of Nymphaeon on the Cimmerian Bosphorus, which, according to him, was betrayed to the Bosphoran kings by Gylon, the maternal grandfather of Demosthenes (Cf. Crateros in Harpocration, s. v. Νύμφαον.) The interior of the peninsula was but little known to the ancients, and we shall therefore best explain their connection with it by taking a survey of the coasts.

We shall begin on the NW. side, after the bay of *Carcina* or *Tamyraca*, which has been already described [CARCINA; TAMYRACA]. From this bay the peninsula stretches to its most westerly point, *Cape Turchan*, which presents some high land; but to the S. of *Turchan* the coast sinks to a dead level as far as the river *Alma*, to the S. of which it again begins to rise in high cliffs. All the W. coast, however, presents no place of note in ancient history till we come to its extreme southern point, where a bald plateau of hills runs in a westerly direction into the sea. On the E. this tract is divided from the rest of the peninsula by a deep and broad valley, into which it falls by steep declivities. The harbour of *Sebastopol* (or *Roads of Aktiar*) on the N., which bites into the land for about 4 miles in a SE. direction, and that of *Balaclava* on the S. coast of the peninsula, which runs up towards the N., form an isthmus having a breadth, according to Strabo (p. 308), of 40 stadia, or 5 miles. This measurement is confirmed by Clarke (*Trav.* ii. p. 219), who, however, seems only to have been guided by his eye; for in reality it is rather more, or about 6 miles. The S. coast of the little peninsula formed by this isthmus presents several promontories and small bays, with cliffs of from 500 to 700 feet in height.

So barren a spot presented no attractions to the Milesians, the chief colonisers of the Euxine; but a more hardy race of emigrants, from the Dorian city of Heracleia in Pontus, found a new home upon it, and founded there the town of Chersonesus (Strab. l. c.). We learn from Pliny (iv. 12. s. 26) that it

was at first called Megarice, apparently from the circumstance that Megara was the mother city of the Pontic Heracleots. From these settlers the little peninsula we have just described obtained the name of the CHERSONESUS HERACLEOTICA, or Heracleotic Chersonese, sometimes also called "the small Chersonesus" (*ἡ μικρά*, Strab. l. c.), by way of distinction from the great, or Tauric, peninsula.

The original city of Chersonesus seems to have been founded at the westernmost point of the peninsula, close to the present *Cape Fanary*. The date and occasion of its foundation are not ascertained; but Neumann conjectures that it may have been built about the middle of the fifth century B.C. (*Die Hellenen*, &c. p. 383). Considerable remains of the ancient city were visible so late as the end of the last century (Clarke, *Trav.* ii. pp. 292, seq.; Pallas, ii. pp. 70, seq.); but every trace of them had vanished when Murawiew Apostol visited the spot (*Reise durch Taurien*, p. 62). They were destroyed by a certain Lieut. Kruse, who used the stones for building and converted the ground into a vineyard (Dubois de Montperreux, *Voyages*, &c. vi. p. 133). The ancient Chersonesus, however, had fallen into decay before the time of Strabo; but the new town was flourishing and appears from the ruins to have been seated on the W. side of what is now the Quarantine Harbour of *Sebastopol* (Neumann, p. 392). The place was much damaged towards the end of the fourteenth century by Olgiard, sovereign of Lithuania, since which time it has been gradually falling into ruins (Karamsin, *Russ. Gesch.* v. 13. Germ. tr.). The Turks carried away many of its sculptures and columns to adorn Constantinople. Nevertheless, the town, although almost entirely deserted, remained for three centuries in so perfect a state that a plan might have been drawn of it at the time when it came into the possession of the Russians; but its ruin was soon completed by its new masters, who blew up the walls and destroyed the graves and temples. (Clarke, ii. p. 207.) Pliny (iv. 12. s. 26) gives the circumference of its walls at 5 miles; but their outline could still be traced in 1820, and according to Dubois de Montperreux (vi. 138), was only about a quarter of that size. It is probable that Pliny may have confounded the town walls with the wall or rampart which extended across the isthmus, which, as we have already seen, Strabo describes as being 40 stadia, or 5 miles, broad. The same writer speaks of it in another place (p. 312) as being fortified with a wall. This wall ran from Ctenus, at the E. extremity of the harbour of *Sebastopol* to Symbolon (*Balaclava*) on the S. coast, and appears to have been made by the Bosporan kings as a defence against the Scythians. An account of its remaining vestiges is given by Clarke (ii. p. 285, seq.; cf. Seymour, p. 149.). The whole enclosure was anciently covered with gardens and villas, and the foundations of houses and of the boundary walls of fields and gardens may still be traced, as well as many remains of the town on the promontory between *Quarantine Bay* and *Streletska Bay*. Vestiges of the principal street show it to have been 20 feet broad. The town wall on the land side was near 2 miles long, built of limestone, and 5 or 6 feet thick, with 3 towers (Seymour, p. 150). Many antiquities and coins have been found in the ruins of Chersonesus. In the neighbourhood are graves of the most simple kind, hewn in the rock. They are easy of access, and present in this respect a remarkable contrast to those at Panticapæum; but, from this cause, nothing but bones have been

found in them, whilst those at Panticapæum have yielded valuable antiquities. According to Clarke (ii. 201, 210), the town of Eupatorium stood close to Chersonesus, though others have identified it with *Inkerman*. About the latter place, the ancient Ctenus, the rock is pierced all over with the subterranean dwellings of the ancient Tauri. On the top are the ruins of the castle built by Diophantes, general of Mithridates, to defend the Chersonese against the Tauro-Scythians. These caverns or crypts are now rapidly falling in. (Seymour, p. 140.) Similar caves are found in other parts of the peninsula.

The Heracleotic Chersonese was noted as the seat of the savage worship of Diana Tauropolis. The natives, or Tauri, themselves had a worship of a similar kind [*TAURI*]; but whether it was indigenous among them, or whether they borrowed it from the Dorian Heracleots who settled here, cannot be ascertained. The account of the Tauri themselves, that their virgin goddess was Iphigenia, the daughter of Agamemnon, would seem to lead to the latter conclusion; though it is well known that the nations of pagan antiquity readily adopted one another's deities when any similarity was observable in their rights and attributes; and from the account of Herodotus (iv. 103) it might perhaps be inferred that this horrible worship existed among the Tauri before the arrival of the Greeks. Artemis was a peculiarly Dorian deity, and was worshipped in several parts of Greece with human sacrifices. There was a tradition that the town of Chersonesus was founded by Artemis herself. The Heracleot Chersonites erected a famous temple on a headland which took the name of Parthenium from it. Strabo however merely calls the Parthenium "the temple of the virgin, a certain daemon" (p. 308), and does not mention Artemis. Opinions vary as to which is the real promontory of Parthenium. Many seek it at *Cape Fanary* or *Chersonese*, which seems too near the town of Chersonesus, as Strabo places the temple at the distance of 100 stadia from the town, though *Fanary* answers to his description in other respects. Clarke and Pallas identify it with the *Asa Barum* or "Sacred Promontory" (Clarke, ii. p. 286, and note), between *Cape Fiolente* and *Balaclava*, which, besides its name, has also a ruin to recommend it; though the latter claim to notice is shared by *C. Fiolente*. Dubois de Montperreux (vi. p. 194, sq.) thinks that the temple may have stood on the spot now occupied by the monastery of St. George; whilst Neumann, again places it on the headland a little to the NW. of *C. Fiolente*. It will be seen that these opinions rest on little more than conjecture. On the coins of the Heracleotic Chersonese the image of Artemis occurs by far the most frequently. She sometimes appears with Apollo, sometimes with Hercules, the patron hero of the mother city, but more generally alone, and always as the goddess of the chase, never as Selene (Von Köhne, in the *Memoirs of the Archaeolog. and Numism. Society of St. Petersburg*, vol. ii. ap. Neumann, p. 420). On other coins a fish is frequently seen; and one has a plough on the obverse, and an ear of corn between two fishes on the reverse (*Id.*). The bays of the Heracleotic peninsula abound with fish, which formed a great part of the riches of the country.

Of the history of the Heracleotic Chersonesus we know but little, but it may perhaps be inferred from the inscription of Agasicles that its constitution was republican. It was impor-

tant enough to take a part in political affairs as an independent city, at least as late as about the middle of the 2nd century A. C. when, like its mother city, Heracleia, it was a party to the alliance against Pharnaces I., king of Pontus, and Mithridates, satrap of Armenia. (Polyb. *Frsg.* lib. xxvi. c. 6, vol. iv. p. 345, sq., ed. Sweigh.) Soon afterwards, however, we find it struggling with the Taurians and their allies the Sarmatians for existence (Polyaen. *Strat.* viii. c. 56), and it was ultimately compelled to place itself under the protection of Mithridates the Great. Subsequently, however, it regained its independence, through the Romans, and under the name of Cherson or Chorsion flourished till a late period of the middle ages, and even overturned the Bosporan kingdom. (Const. Porphyrog. *de Adm. Imp.* c. 53.)

Leaving the Heracleotic Chersonese, we will now proceed to describe the remainder of the coast of the Tauric peninsula, which may be soon despatched, as an account of its different cities is given in separate articles. From the haven of Symbolon (*Balaclava*) to Theodosia (*Caffa*) the coast is correctly described by Strabo as craggy, mountainous, and stormy, and marked with many headlands (p. 309). The distance, however, which he assigns to this tract of 1000 stadia, or 125 miles, is rather too small. In both the *Periplus* of the Euxine the distance given is 1320 stadia, but this must include all the indentures of the coast. The most remarkable promontory in this part was the Criu-metopon, or Ram's Head, which has been variously identified. Some writers have taken it for the promontory of *Lapei*, which is in reality the most southern point of the peninsula. Some again have identified it with *Si Petri*, and a still greater number with the *Aju-dagh*. But the account given by Arrian and the Anonymous agrees better with *Cape Aithodor*. These writers say that the Criu-metopon lay 220 stadia to the W. of Lampas. (Arrian, *Periplus* p. 20; Anon. *Periplus* p. 6.) Now Lampas is undoubtedly the present *Bujuk Lampas*, the distance between which and *Cape Aithodor* agrees very accurately with the preceding measurement. Scymnus indeed (ii. 320, Gail) states the distance at only 120 stadia; but this is evidently an error, as it is too short by half even for *Aju-dagh*. *Cape Aithodor* is not much N. of *Lapei*, and from its position might easily have been taken by the Greeks for the southernmost point of the peninsula. (See Neumann, 451, sq.)

From the traces of Greek names, ruins, remains of marble columns, &c., it may be inferred that the whole of this tract was once in the hands of the Greeks. But these relics probably belong to the Byzantine times, since the older geographers mention only four places on this part of the coast, namely, Charax, Lagyra, Lampas, and Athenaeon.

To the E. of Theodosia the coast of the Euxine trends into a large bay, which, approaching the Palus Maeotis on the N., forms an isthmus about 12 miles broad, to the E. of which, as far as the Cimmerian Bosphorus, extends the Bosporan peninsula, or that of *Kertsch*, which swells out to double the breadth of the isthmus. The western half of this peninsula is flat; but the eastern portion rises into hills, which surround the bay in which Panticapæum was situated. It possessed several flourishing maritime towns, as *Cauca* and Cimmericum on the S. coast; Nymphaeon Panticapæum, the Bosporan capital, on the Cimmerian Bosphorus; with some others of less note, as Myrmecium, Porthmion, and Hermisium. There

were also probably towns in the interior; but we know the name of only one, namely, Iluratum. (Ptol. iii. 6. § 6.) Beyond the Bosporan straits we have little to guide us but the accounts of Ptolemy. From those straits, the N. coast of the peninsula, which is high and chalky, proceeded in a westerly direction to the modern *Arabat*. Somewhere on this tract lay the Greek colony of Heracleion.

On the E. side of the Tauric peninsula, the *Tongue of Arabat*, a narrow slip of land scarcely raised above the level of the sea, 52 miles long and about half a mile broad, runs along the whole coast, dividing the Maeotis from the *Σαρπὰ Ἄλυσιν*, or *Patrid* Sea. But though Strabo knew that the latter formed the western portion of the Maeotis (p. 208), he nowhere mentions the *Tongue of Arabat*. The *Patrid* Sea seems to be the *Lacus Bages* of Pliny (iv. 12. s. 26); but his description is not very intelligible. According to the accounts of recent travellers the *Patrid* Sea, now called the *Shiodzhe*, does not appear to deserve its name, as it has neither an unpleasant smell nor are its shores unhealthy (Seymour, p. 33); yet in the times of Clarke and Pallas it seems to have possessed both these offensive qualities. (Clarke, *Trav.* vol. ii. p. 314, note.)

The chief feature in the history of the Chersonesus Taurica, is that of the kingdom of the Bosporus, a sketch of which has been already given. [BOSPORUS CIMMERIUS, Vol. I. p. 421, seq.] After the extinction of that dynasty, towards the end of the 4th century of our era, the peninsula fell into the hands of the Huns, of which race remnants still existed between Panticapæum and Cherson in the 6th century. (Procop. *Goth.* iv. 5.) It was subsequently overrun by the Goths and other nations who followed the great stream of emigration. Justinian requeired the kingdom of the Bosporus to the Greek Empire; and the Byzantine emperors, till the fall of Constantinople, always regarded the Tauric peninsula as part of their dominions. But the Tatars had made themselves the actual masters of it before the middle of the 13th century. Under these possessors, the Genoese, who settled on the coasts towards the end of the same century, played the same part as the Greeks did when the country was possessed by the Tauri, and planted several flourishing colonies. (Neumann, *Die Hellenen im Skythenlande*; Georgii, *Alte Geographie*, vol. ii.; Clarke's *Travels*, vol. ii.; Danby Seymour, *Russia on the Black Sea*; Forbiger, *Handb. der alt. Geogr.* vol. iii.) [T. H. D.]

TAURICI MONTES. [TAURICA CHERSONESUS.]

TAURINI (*Ταυρινοί*), a Ligurian tribe, who occupied the country on the E. slope of the Alps, down to the left bank of the Padus, in the upper part of its course. They were the most northerly of the Ligurian tribes, and from their geographical position would more naturally have been regarded as belonging to Cisalpine Gaul than to Liguria; but both Strabo and Pliny distinctly say they were a Ligurian tribe, and the same thing may be inferred from the omission of their name by Polybius when he is relating the successive settlements of the *Gaulish* tribes in the N. of Italy (Pol. ii. 17; Strab. iv. p. 204; Plin. iii. 17. s. 21). Their territory adjoined that of the Vagienni on the S., and that of the Insabres on the NE.; though the Laevi and Lebeci, tribes of which we know very little, must also have bordered on their NE. frontier (Pol. l. c.). The first mention of the Taurini in history is at the time of Hannibal's passage of the Alps (B. C. 218), when that general,

on descending into the plains of Italy, found the Taurini on hostile terms with the Insures, and, in consequence, turned his arms against them, took their principal city, and put the inhabitants to the sword. (Pol. iii. 60; Liv. xxi. 38, 39.) Neither Polybius nor Livy mention the name of this city, but Appian calls it Taurasia (*Annib.* 5): it was probably situated on the same site which was afterwards occupied by the Roman colony. The name of the Taurini is not once mentioned during the long wars of the Romans with the Cisalpine Gauls and Ligurians, and we are ignorant of the time when they finally passed under the Roman yoke. Nor have we any precise account of the foundation of the Roman colony in their territory which assumed the name of Augusta Taurinorum, though it is certain that this took place under Augustus, and it was doubtless connected with his final subjugation of the Alpine tribes in B.C. 8. From this time the name of the Taurini never again appears in history as that of a people; but during the latter ages of the Roman Empire the city of Augusta Taurinorum seems to have been commonly known (as was the case in many instances in Transalpine Gaul) by the name of the tribe to which it belonged, and is called simply Taurini in the Itineraries, as well as by other writers. (*Itin. Ant.* p. 341; *Itin. Hier.* p. 556; *Tab. Peut.*; *Ammian.* xv. 8, § 18.) Hence its modern name of *Torino* or *Turin*. This is the only city that we can assign with any certainty to the Taurini. On the W. their territory was bounded (at least in the days of Augustus) by the Segusiani and the other tribes subject to Cottius; and their limit in this direction is doubtless marked by the station *Ad Fines*, situated 18 miles from Augusta, on the road to Segusio (*Itin. Ant.* l.c.). But it appears probable that at an earlier period the nation of the Taurini was more widely spread, or their name used in a more comprehensive sense, so as to comprise the adjoining passes of the Alps; for Livy speaks of the Insubrian Gauls who crossed into Italy, "per Taurinos saltusque invios Alpes transcenderunt" (Liv. v. 34), and Strabo, in enumerating, after Polybius, the passes across the Alps, designates one of them as *τὴν διὰ Ταυρίων* (Strab. iv. p. 209.). Whether the pass here meant is the *Mont Genève* or the *Mont Cenis* (a much disputed point), it would not be included within the territory of the Taurini in the more restricted sense. [E. H. B.]

TAURIS, an island of the Ionian sea, between Pharus and Coreyra, opposite to the NW. point of the peninsula of Hyllis and the mouth of the Naron. (*Auct. B. A.* 47.) Now *Torcola*. [T. H. D.]

TAURISCL. [NORICUM, Vol. II. p. 447.]

TAUROEIS, TAUROE'NTIUM (*Ταυροεῖς, Ταυροέντιον*; *Ἑθ. Ταυροέντιος*). Steph. B. (s. v. *Ταυροεῖς*), who calls it a Celtic town and a colony of the Massaliotæ, quotes the first book of Artemidorus' geography for a foolish explanation of the origin of the name. The place is mentioned by Caesar (*B. C.* ii. 4), who says "Tauroenta quod est castellum Massiliensium perveniunt;" by Strabo (iv. pp. 180, 184), by Scymnus Chius, and by Ptolemy (ii. 10. § 8), who places it between Massilia and Citharistes Promontorium. D'Anville erroneously supposes that Caesar uses Tauroenta for the plural number; but it is the accusative of Tauroeis. Strabo (iv. p. 184) enumerates the Massaliot settlements between Massilia and the Varus in this order: Tauroentium, Olbia, Antipolis, Nicaea. Mela (ii. 5) enumerates the places on this coast in a different order

from east to west: Athenopolis, Olbia, Taurois, Citharistes, and "Lacydon Massiliensium portus." Ptolemy, as we have seen, places Tauroeis between Massilia and Citharistes. In the Maritime Itin. the positions between Telo Martius (*Toulon*) and Imadrus seem to be out of order [IMADRUS]; and they are to be placed thus—Aemines (*Embiez*), Tauroeis (*Taurentis*), Citharista [CITHARISTA], Carsici (*Caaris*), Imadrus, Massilia. Geographers have been much divided in opinion on the site of Tauroeis, but the modern name seems to determine the place to be at the right of the entry of the bay of Ciotat. [G. L.]

TAUROE'NIUM (*Ταυροέντιον*; *Ἑθ. Ταυροέντιον*, Tauromenitanus: *Taormina*), a Greek city of Sicily, situated on the E. coast of Sicily, about midway between Messina and Catania. It was only about 3 miles from the site of the ancient Naxos, and there is no doubt that Tauromenium did not exist as a city till after the destruction of Naxos by Dionysius of Syracuse, B.C. 403; but the circumstances connected with its foundation are somewhat confused and uncertain. [NAXOS.] It appears, however, from Diodorus that after the destruction of Naxos, the remaining inhabitants of that city were driven into exile, and its territory was assigned by Dionysius to the neighbouring Siculi. These, however, did not re-occupy the site of the ancient city, but established themselves on a hill to the N. of it, which was called the hill of Taurus (*ὁ λόφος ὁ καλοῦμενος Ταῦρος*). Here they at first constructed only a temporary camp (in B.C. 396), but afterwards erected walls and converted it into a regular fortress or town, to which they gave the name of Tauromenium. (*Diod.* xiv. 58, 59.) The place was still in the hands of the Siculi in B.C. 394, and they held it against the efforts of Dionysius, who besieged the city in vain for great part of the winter, and though he on one occasion forced his way within the walls by a nocturnal surprise, was again driven out and repulsed with heavy loss. (*Id.* 87, 88.) But by the peace concluded in B.C. 392, it was expressly stipulated that Tauromenium should be subject to Dionysius, who expelled the greater part of the Siculi that had settled there, and supplied their place with his own mercenaries. (*Id.* 96.) From this time we hear no more of Tauromenium till B.C. 358, when we are told that Andromachus, the father of the historian Timæus, brought together all the remains of the exiled Naxians, who were still scattered about in different parts of Sicily, and established them all at Tauromenium. (*Id.* xvi. 7.) This is related by Diodorus as if it were a new foundation, and even as if the name had then first been applied to the city, which is in direct contradiction with his former statements. What had become of the former inhabitants we know not, but there is little doubt that the account of this resettlement of the city is substantially correct, and that Tauromenium now for the first time became a Greek city, which was considered as taking the place of Naxos, though it did not occupy the same site. (Wesseling, *ad Diod.* xiv. 59.) Hence Pliny's expression, that Tauromenium had formerly been called Naxos (*Plin.* iii. 8. a. 14) is nearly, though not strictly, correct.

The new settlement seems to have risen rapidly to prosperity, and was apparently already a considerable town at the time of the expedition of Timoleon in B.C. 345. It was the first place in Sicily where that leader landed, having eluded the vigilance of

the Carthaginians, who were guarding the straits of Messina, and crossed direct from Rhegium to Tauromenium. (Diod. xvi. 68; Plat. *Tamol.* 10.) The city was at that time still under the government of Andromachus, whose mild and equitable administration is said to have presented a strong contrast with that of the despots and tyrants of the other Sicilian cities. He welcomed Timoleon with open arms, and afforded him a secure resting place until he was enabled to carry out his plans in other parts of Sicily. (Diod. l. c.; Plat. l. c.) It is certain that Andromachus was not deprived of the chief power, when all the other tyrants were expelled by Timoleon, but was permitted to retain it undisturbed till his death. (Marcellin. *Vit. Thucyd.* § 27.) We hear, however, very little of Tauromenium for some time after this. It is probable that it passed under the authority of Agathocles, who drove the historian Timæus into exile; and some time after this it was subject to a domestic despot of the name of Tyndarion, who was contemporary with Hieron of Syracuse and Phintias of Agrigento. (Diod. xxii. *Exc. R.* p. 495.) Tyndarion was one of those who concurred in inviting Pyrrhus into Sicily (B.C. 278), and when that monarch landed with his army at Tauromenium, joined him with all his forces, and supported him in his march upon Syracuse. (Diod. l. c. pp. 495, 496.) A few years later we find that Tauromenium had fallen into the power of Hieron of Syracuse, and was surprised by him as a stronghold in the war against the Mamertines. (Id. p. 497.) It was also one of the cities which was left under his dominion by the treaty concluded with him by the Romans B.C. 263. (Id. d. xxiii. p. 502.) This is doubtless the reason that its name is not again mentioned during the First Punic War.

There is no doubt that Tauromenium continued to form a part of the kingdom of Syracuse till the death of Hieron, and that it only passed under the government of Rome when the whole island of Sicily was reduced to a Roman province; but we have scarcely any account of the part it took during the Second Punic War, though it would appear, from a hint in Appian (Sic. 5), that it submitted to Marcellus on favorable terms; and it is probable that it was at that occasion it obtained the peculiarly favored position it enjoyed under the Roman dominion. For we learn from Cicero that Tauromenium was one of the three cities in Sicily which enjoyed the privileges of a *civitas foederata* or allied city, thus rendering a nominal independence, and was not even so far from Messina, to the obligation of furnishing stipend of war when called upon. (Cic. *Verr.* ii. 60. ii. 6. v. 19.) But the city suffered severe calamities during the Servile War in Sicily, B.C. 134—132, having fallen into the hands of the insurrectionary slaves, on account of the great strength of its position, made it one of their chief posts, and were able for a long time to defy the arms of the official Republic. They held out until they were reduced to the most fearful extremities by famine, when the citadel was at length betrayed into the hands of the consul by one of their leaders named Sicilianus, and the value of the survivors put to the sword. (Diod. xxxiv. *Exc. Plat.* p. 528; Oros. v. 9.) Tauromenium again bore a conspicuous part during the wars of Sextus Pompeius in Sicily, and, from its strength as a fortress, was one of the principal points of the position which he took up in B.C. 36, for defence against Octavian. It became the scene also of a sea-fight between a part of the fleet of Octavian,

commanded by the triumvir in person, and that of Pompeius, which terminated in the total and total destruction of the former. (Appian, l. c. v. 103, 105, 106—111, 116; Dion. Cass. l. 5.) In the settlement of Sicily after the *bellum Pompeium*, Tauromenium was one of the places which Augustus received a Roman colony, giving it a measure of protection, on account of its strength of its situation, as we are told that he expelled the former inhabitants to make room for his veterans. (Diod. xvi. 7.) Strabo speaks of it as one of the cities on the E. coast of Sicily that was still subsisting in his time, though inferior in population both to Messina and Catania. (Strab. v. p. 25, 268.) Both Pliny and Ptolemy assign it the rank of a "colonia" (Plin. iii. 8. s. 14; Ptol. ii. 4. § 5), and it seems to have been one of the few also in Sicily that continued under the Roman Empire to be a place of some consideration. Its territory was noted for the excellence of its wine (Plin. iv. 1. s. 8), and produced also a kind of marble which seems to have been highly valued. (Athen. v. 207.) Juvenal also speaks of the sea of its rocky coast as producing the choicest walnuts. (Juv. i. 33.)

The itineraries place Tauromenium 21 miles from Messina, and the same distance from Catania. (*Itin. Ant.* p. 90; *Tab. Pent.*) It continued till the fall of the Roman Empire to be one of the most considerable towns of Sicily, and from the strength of its position was one of the last places that was retained by the Greek emperors; but it was taken by the Saracens in A.D. 906 after a siege of two years, and totally destroyed, a calamity from which it has never more than partially recovered. The present town of *Taurmina* is a very poor place, with about 3500 inhabitants; but it still occupies the ancient site, on a lofty hill which forms the last projecting point of the mountain ridge that crosses along the coast from Cape Pelorus to this point. The site of the town is about 900 feet above the sea, while a very steep and almost unscalable, crowned by a Saracen castle, rises about 500 feet higher: this is undoubtedly the site of the ancient *Arx* or citadel, the inaccessible position of which is repeatedly alluded to by ancient writers. Portions of the ancient walls may be traced at intervals all round the brow of the hill, the whole of the summit of which was evidently occupied by the ancient city. Numerous fragments of ancient buildings are scattered over its whole surface, including extensive reservoirs of water, sepulchres, inscriptions, &c., and the remains of a spacious forum, commonly called a *Naxosmachia*, but the real destination of which it is difficult to determine. Sicily has far the most remarkable monument remaining at *Taurmina* is the ancient theatre, which is one of the most celebrated ruins in Sicily, on account both of its remarkable preservation and of the surpassing beauty of its situation. It is built for the most part of brick, and is therefore probably of later date, though the plan and arrangement are in accordance with those of Greek, rather than Roman, theatres; whence it is supposed that the present structure was rebuilt upon the foundations of an older theatre of the Greek period. The greater part of the seats have disappeared, but the wall which surrounded the whole circus is preserved, and the proscenium with the back wall of the scene and its appendages, of which only traces remain in most ancient theatres, are here preserved in singular integrity, and contribute much to the picturesque

affect, as well as to the interest, of the ruin. From the fragments of architectural decorations still extant we learn that it was of the Corinthian order, and richly ornamented. In size it ranks next to the theatre of Syracuse, among those of Sicily. Some portions of a temple are also visible, converted into the church of *S. Pancrazio*, but the edifice is of small size and of little interest. The ruins at *Taormina* are described in detail by the Duke of Serra di Falco (*Antichità della Sicilia*, vol. v. part iv.), as well as by most travellers in Sicily. (Swinburne's *Travels*, vol. ii. p. 380; Smyth's *Sicily*, p. 129, &c.) [E. H. B.]

COIN OF TAUBOMENIUM.

TAUROSCTYTHAE (*Ταυροσκίθαι*, Ptol. iii. 5. § 25), called by Pliny *Tauri Scythiae* (iv. 12. s. 26), a people of European Sarmatia, composed of a mixture of Taurians and Scythians. They were seated to the W. of the Jazyges, and the district which they inhabited appears to have been called *Taurosctythia*. (Cf. Strab. ap. Hudson, p. 87; Capit. *M. Ant.* 9; Procop. *de Aed.* iii. fin.) [T. H. D.]

TAURUNUM (*Ταύρουρον*), a strong fortress in Lower Pannonia, at the point where the Savus joins the Danubius, on the road from Sirmium to Singidunum. It was the station of a small fleet of the Danubius. (Plin. iii. 28; Ptol. ii. 16. § 4; *It. Ant.* pp. 131, 241; *Tab. Peut.*; Geogr. Rav. iv. 19, where it is called *Taurynum*.) Its site is now occupied by the fortress of *Semlin*, opposite to *Belgrade*. [L. S.]

TAURUS MONS (*ὁ Ταῦρος*), one of the great mountain ranges of Asia, the name of which is believed to be derived from the Aramaic *Tur* or *Tura*, i. e., a high mountain or Alp, and accordingly is in reality a common noun applied to all the high mountains of Asia. The name has even been transferred to Europe, for the Taurian Chersonesus in Sarmatia and the Taurisci in the Northern Alps appear to owe their name to the same origin. We cannot wonder therefore when we find that Eratosthenes (ap. Strab. xv. 689) and Strabo (ii. pp. 68, 129, x. p. 490) apply the name to the whole range of mountains extending from the Mediterranean to the eastern ocean, although their connection is often broken. This extent of mountains is, according to Strabo's calculation (xi. p. 490), 45,000 stadia in length, and 3000 in breadth. But in the narrower and common acceptance Mount Taurus is the range of mountains in Asia Minor which begins at Cape Sacrum or Chelidonium on the coast of Lycia, which for this reason is called by Mela (i. 15) and Pliny (v. 28) *Promontorium Tauri*. It was, however, well known to the ancients that this promontory was not the real commencement, but that in fact the range extended to the south-western extremity of Asia Minor. (Strab. ii. p. 129, xi. p. 520, xiv. pp. 651, 666.) This range rises in the W. as a lofty and precipitous mountain, and runs without any interruptions, first in a northern direction between Lycia and Pamphylia, then in an eastern direction through Pisidia and Isauria as far as the frontiers of Cilicia and Lycaonia. There it separates into two main

branches. The one proceeds north-eastward under the name of *Antitaurus* (*Ἀντίταυρος*), and surpasses the other in height. It runs through Cappadocia, where it forms Mount Argæus (*Ἀργαῖος*), and Armenia, where it is called *Mons Capotes*, and through the Montes Moschici it is connected with the Caucasus, while a more southerly branch, under the names of *Abus* and *Macis* or *Massis*, runs through Armenia towards the Caspian sea. The second branch, which separates itself on the frontiers of Cilicia and Lycaonia, retains the name of *Taurus*, and proceeds from Cilicia, where it forms the *Portæ Ciliciæ*, and sends forth *Mons Amanus* in a southern direction, while the main branch proceeds through Cappadocia. After being broken through by the Euphrates, it again sends forth a southern branch under the name of *Mons Masius*. The name *Taurus* ceases in the neighbourhood of Lake Arsisæ, the mountains further east having other names, such as *Niphates*, *Zagrus*, &c. Most parts of Mount Taurus, which still bears its ancient name, were well wooded, and furnished abundance of timber to the maritime cities on the south coast of Asia Minor. [L. S.]

TAURUS PALUS, an *étang* on the coast of *Narbonensis*, west of the delta of the Rhone. It is named in the verses of Avienus, quoted in the article *FRONTI JUGUM*; and to the verses there cited may be added the following verse:—

"*Taurum paludem namque gentici (gentili) vocant.*"

But I. Vossius in his edition of Mela (ii. 5, note) writes the verses of Avienus thus:—

"*In usque Taphrum pertinet,
Taphron paludem namque gentili vocant;*"

an alteration or corruption which D'Anville justly condemns, for the *étang* is still named *Taur*, or vulgarly *Tau*. [G. L.]

TAXGÆTIUM (*Ταξγαῖτιον*), a place assigned by Ptolemy (ii. 12. § 5) to Rhaetia, but which more properly belonged to Vindelicia, was situated on the northern shore of the *Lacus Brigantinus*, and probably on the site of the modern *Lindau*. [L. S.]

TAXILA (*Τάξιλα*, Arrian, *Anab.* v. 8; *Ταξιλα*, Ptol. vii. 1. § 45), a place of great importance in the Upper *Parijâb*, between the Indus and Hydaspes, which was visited by Alexander the Great. It is said to have been ruled at that time by a chief named *Taxiles*, who behaved in a friendly manner to the Grecian king. The country around was said to be very fertile, and more abundant than even Egypt (Strab. xv. pp. 698—714). There can be little doubt that it is represented by the vast ruins of *Manikyala*, which has in modern times been the scene of some very remarkable researches (Elphinstone, *Cabul*, p. 79; Burnes, *Travels*, i. p. 65, ii. p. 470.) The famous *Topes of Manikyala*, which were examined by General Ventura and others (*Asiatic Res.* xvii. p. 563), lie to the eastward of *Ravil-pindi*. Wilson considers *Taxila* to be the same as the *Takhsasila* of the Hindus (*Ariana*, p. 196). [V.]

TAY'GETUS. [LACONIA, pp. 108, 109.]

TAZUS (*Ταζός*, Ptol. iii. 6. § 6). 1. A town in the SE. part of the Chersonesus Taurica.

2. A town of Asiatic Sarmatia, on the N. coast of the Pontus Euxinus. (Ptol. v. 9. § 9.) [T. H. D.]

TEANUM (*Τεάνον*; *Eth.* *Teanenses*; *Civitate*), sometimes also called **TEANUM APULUM** (*Cic. pro Cluent.* 9; *Τεάνον Ἀπουλον*, Strab.; *Eth.* *Teanenses Apuli*), to distinguish it from the Campanian city of the

same name, was a city of Apulia, situated on the right bank of the river Frento (*Fortore*), about 12 miles from its mouth. It appears to have been one of the most considerable cities of Apulia before its conquest by the Romans; but its name is first mentioned in a. c. 318, when, in conjunction with Canusium, it submitted to the Roman consuls M. Fostius Flaccinator and L. Plautius Venno. (Liv. ix. 20.) It is again noticed during the Second Punic War, when it was selected by the dictator M. Junius Pera as the place of his winter-quarters in Apulia. (Id. xxiii. 24.) Cicero incidentally notices it as a municipal town, at the distance of 18 miles from Larinum (Cic. *pro Cluent.* 9), and its name is found in all the geographers among the municipal towns of Apulia. (Strab. vi. p. 285; Mel. ii. 4. § 6; Plin. iii. 11. s. 16; Ptol. iii. 1. § 72.) Its municipal rank is confirmed also by an inscription, as well as by the Liber Coloniarum, and it is clear that it never attained the rank of a colony. (Orell. *Inscr.* 140; *Lit. Col.* p. 210.) Its ruins still exist at a place called *Civitate*, near the remains of a Roman bridge (now called the *Ponte di Civitate*), over the *Fortore*, by which the ancient road from Larinum to Luceria crossed that river. The distance from the site of Larinum agrees with that stated by Cicero of 18 miles (the *Tabula* erroneously gives only 12), and the discovery of inscriptions on the spot leaves no doubt of the identification. Considerable remains of the walls are still extant, as well as fragments of other buildings. From these, as well as from an inscription in which we find mention of the "Ordo splendidissimus Civitatis Theanensium," it seems probable that it continued to be a flourishing town under the Roman Empire. The period of its final decay is uncertain, but it retained its episcopal see down to modern times. (Holsten. *Not. ad Cluver.* p. 279; Romanelli, vol. ii. p. 291; Mommsen, *Inscr. R. N.* p. 271.)

Strabo speaks of Teanum as situated at some distance inland from a lake, the name of which he does not mention, but which is clearly the Lacus Pantanus of Pliny, now called the *Lago di Lesina*. From an inscription found on its banks it appears that this was comprised within the territory of Teanum, which thus extended down to the sea (Romanelli, *l. c.*), though about 12 miles distant from the coast.

Several Italian topographers have assumed the existence of a city in Apulia of the name of Teate, distinct from Teanum (Giovenazzi. *Sito di Aveja*, p. 13; Romanelli, vol. ii. p. 286); but there seems no doubt that the two names are only different forms of the same, and that the Teates Apuli of Livy (ix. 20) are in reality the people of Teanum. It is true that that writer mentions them as if they were distinct from the Teanenses whom he had mentioned just before; but it is probable that this arises merely from his having followed different annalists, and that both statements refer in fact to the same people, and are a repetition of the same occurrence. (Mommsen, *Unter-Ital. Dialekt.* p. 301.) In like manner the Teate mentioned in the Liber Coloniarum (p. 261) is evidently the same place called in an earlier part of the same document (p. 210) Teanum. [E. H. B.]

TEANUM (*Τεάνο*: *Εἰθ.* *Teanensis*: *Teano*), sometimes called for distinction's sake TEANUM SIDICINUM (Liv. xxiii. 57; Cic. *ad Att.* viii. 11; Plin. iii. 5. s. 9; *Τεάνο* *Σιδικίων*, Strab. v. p. 237), an important city of Campania, situated in the interior of that province, on the Via Latina,

between Cales and Casinum. (Strab. v. p. 237.) It was therefore the frontier city of Campania, as that term was understood under the Roman Empire; but originally Teanum was not reckoned a Campanian city at all, but was the capital of the small independent tribe of the Sidicini. [SIDICINI] It was indeed the only place of importance that they possessed, so that Livy in more than one instance alludes to it, where he is speaking of that people, merely as "their city," without mentioning its name (Liv. viii. 2, 17). Hence its history before the Roman conquest is identical with that of the people, which will be found in the article SIDICINI. The first mention of Teanum after the Roman conquest is in B.C. 216, immediately after the battle of Cannae, when Marcellus sent forward a legion from Rome thither, evidently with the view of securing the line of the Via Latina. (Liv. xxii. 57.) A few years later, B.C. 211, it was selected as a place of confinement for a part of the senators of Capua, while they were awaiting their sentence from Rome; but the consul Fulvius, contrary to the opinion of his colleague App. Claudius, caused them all to be put to death without waiting for the decree of the senate. (Liv. xxvi. 15.) From this time Teanum became an ordinary municipal town: it is incidentally mentioned as such on several occasions, and its position on the Via Latina doubtless contributed to its prosperity. A gross outrage offered to one of its municipal magistrates by the Roman consul, was noticed in one of the orations of C. Gracchus (*op. A. Gell.* x. 3), and we learn from Cicero that it was in his time a flourishing and populous town. (Cic. *de Leg. Agr.* ii. 31, 35, *ad Att.* viii. 11, d.) Its name repeatedly occurs in the Social War and the contest between Sulla and Marius (Appian, *B. C.* i. 45, 85); and at a later period it was the place where the commanders of the legions in Italy held a kind of congress, with a view to bring about a reconciliation between Octavian and L. Antonius (*ib. v.* 20). It was one of the cities whose territory the tribune Rullus proposed by his law to divide among the Roman people (Cic. *l. c.*); but this misfortune was averted. It subsequently, however, received a colony under Augustus (*Lit. Col.* p. 238; Plin. iii. 5. s. 9), and seems to have retained its colonial rank under the Empire. (Mommsen, *Inscr. R. N.* 3969, 3999.) Strabo tells us that it was the largest and most populous town on the Via Latina, and the most considerable of the inland cities of Campania after Capua. (Strab. v. pp. 237, 248.) Inscriptions and existing remains confirm this account of its importance, but we hear little more of it under the Roman Empire. The Itineraries place it 16 miles from Casinum, and 18 from Venafrum: a cross road also struck off from Teanum to Allifae, Telesia, and Beneventum. (*Itin. Ant.* pp. 121, 304; *Tab. Peut.*) Another branch also communicated with Sezze and Minturnae.

Teanum was not more than 5 miles from Cales: the point where the territories of the two cities joined was marked by two shrines or sedes of Fortune, mentioned by Strabo, under the name of *αι δύο Τίχαι* (v. p. 249).

Teanum appears to have declined during the middle ages, and the modern city of *Teano* is a poor place, with only about 4000 inhabitants, though retaining its episcopal see. Many ruins of the ancient city are visible, though none of them of any great interest. They are situated below the modern city, which stands on a hill, and considerably nearer to

Calvi (Calee). The most important are those of an amphitheatre and a theatre, situated near the Via Latina; but numerous remains of other buildings are found scattered over a considerable space, though for the most part in imperfect preservation. They are all constructed of brick, and in the reticulated style, and may therefore probably be all referred to the period of the Roman Empire. Numerous inscriptions have also been found, as well as coins, vases, intaglios, &c., all tending to confirm the account given by Strabo of its ancient prosperity. (Romanelli, vol. iii. p. 456; Hoare's *Class. Tour*, vol. i. pp. 249—264; Mommsen, *Inscr. R. N.* pp. 208, 209).

At a short distance from *Teano* are some mineral springs, now called *Le Caldarelle*, which are evidently the same with the "aquae acidulae," mentioned both by Pliny and Vitruvius as existing near Teanum. (Plin. xxxi. 2. s. 5; Vitruv. viii. 3. § 17.) The remains of some ancient buildings, called *Il Bagno Nuovo*, are still visible on the spot. [E.H.B.]

COIN OF TEANUM SIDICINUM.

TEARI JULIENSES, the inhabitants of a town of the Illeaeones in Hispania Tarraconensis (Plin. iii. 3. § 4). It is called by Ptolemy *Ταριουσία*, and is probably the modern *Trayguera*. [T.H.D.]

TEARUS (Plin. iv. 11. s. 18; *Τέρας*, Herod. iv. 90), now *Teare*, *Deara*, or *Dere*, a river in the SE. of Thrace, flowing in a SW. direction, until it joins the Contadesdos, their united waters falling into the Agrianes, one of the principal eastern tributaries of the Hebrus. Herodotus (*l. c.*) states that the sources of the Tearus are equidistant from Heraeum on the Propontis and Apollonia on the Euxine; that they are thirty-eight in number; and that, though they all issue from the same rock, some of them are cold, others warm. Their waters had the reputation, among the neighbouring people, of being pre-eminently medicinal, especially in cases of itch or mange (*ψώρα*). On his march towards the Danube, Darius halted his army for three days at the sources of the Tearus, and erected a pillar there, with an inscription commemorative of their virtues, and of his own. [J.R.]

TEATE (*Teatía*, Strab. Ptol.; *Εθ. Teatinus*; *Chieti*), the chief city of the Marrucini, was situated on a hill about 3 miles from the river Aternus, and 8 from the Adriatic. All the ancient geographers concur in representing it as the metropolis or capital city of the tribe (Strab. v. p. 241; Plin. iii. 12. s. 17; Ptol. iii. 1. § 60); and Silius Italicus repeatedly notices it with the epithets "great" and "illustrious" ("magnum Teate," Sil. Ital. viii. 520; Clarum Teate, Id. xvii. 453); but, notwithstanding this, we find no mention of it in history. Inscriptions, however, as well as existing remains, concur in proving it to have been a flourishing and important town under the Roman dominion. It was apparently the only municipal town in the land of the Marrucini, and hence the

limits of its municipal district seem to have coincided with those of that people. We learn from the Liber Coloniarum that it received a body of colonists under Augustus, but it did not bear the title of a colony, and is uniformly styled in inscriptions a municipium. (*Lib. Colon.* p. 258; Orell. *Inscr.* 2175, 3853; Mommsen, *Inscr. R. N.* pp. 278, 279.) It derived additional splendour in the early days of the Empire from being the native place of Asinius Pollio, the celebrated statesman and orator; indeed the whole family of the Asinii seem to have derived their origin from Teate. Herius Asinius was the leader of the Marrucini in the Social War, and a brother of the orator is called by Catullus "Marrucine Asini." (Liv. *Epit.* lxxiii.; Catull. 12. 1.) The family of the Vettii also, to which belonged the Vettius Marcellus mentioned by Pliny (ii. 83. s. 85), appears to have belonged to Teate. (Mommsen, *l. c.* 5311.)

The Itineraries place Teate on the Via Valeria, though from the position of the town, on a hill to the right of the valley of the Aternus, the road must have made a considerable *détour* in order to reach it. (*Itin. Ant.* p. 310; *Tab. Peut.*) Its name is also noticed by P. Diaconus (ii. 20), and there seems no doubt that it continued throughout the middle ages to be a place of importance, and the capital of the surrounding district. *Chieti* is still one of the most considerable cities in this part of Italy, with above 14,000 inhabitants, and is the see of an archbishop. Still existing remains prove that the ancient city occupied the same site as the modern *Chieti*, on a long ridge of hill stretching from N. to S., though it must have been considerably more extensive. Of these the most important are the ruins of a theatre, which must have been of large size; those of a large edifice supposed to have been a reservoir for water, and two temples, now converted into churches. One of these, now the church of *S. Paolo*, and considered, but without any authority, as a temple of Hercules, was erected by the Vettius Marcellus above noticed; the other, from the name of *S. Maria del Tricaglio* which it bears, has been conjectured to have been dedicated to Diana Trivia. All these edifices, from the style of their construction, belong to the early period of the Roman Empire. Besides these, numerous mosaics and other works of art have been discovered on the site, which attest the flourishing condition of Teate during the first two centuries of the Christian era. (Romanelli, vol. iii. pp. 104—109; Craven, *Abuzzi*, vol. ii. pp. 8, 9.) [E.H.B.]

COIN OF TEATE.

TEBENDA (*Τέβερδα*), a town in the interior of Pontus Galaticus (Ptol. v. 6. § 9), is no doubt the same as the Tebenna mentioned by Anna Comnena (p. 364, b.) as situated in the vicinity of Trapezus. [L.S.]

TECELIA (*Τεκελία*), a town placed by Ptolemy

(ii. 11. § 27) in the north of Germany, perhaps in the country of the Chauzi, on the left bank of the Visurgis (*Weser*). Its site must probably be looked for near or at the village of *Zetel*, about 3 miles from the western bank of the *Weser*. (Reichard, *Germanien*, p. 245.) [L. S.]

TECMON (*Τεκμών*; *Eth. Τεκμόνιος*), a city of Molossis in Epeirus, incorrectly called by Stephanus B. a city of Thesprotia, taken by L. Anicius, the Roman commander, in a. c. 167. Leake supposes that *Guridnistia*, near *Kürendo*, about 20 miles to the W. of *Jodanina*, may have been the site of Tecmon or Horreum, which Livy mentions in connection with Tecmon. (Liv. xiv. 26; Steph. B. s. v.; Leake, *Northern Greece*, vol. iv. p. 83.)

TECTOSACES (*Τεκτοάκεις*, Ptol. vi. 14. § 9), a people of Scythia within Imaus. [T. H. D.]

TECTOSAGES. [VOLCAE.]

TECTOSAGES, TECTOSAGAE, or TECTOSAGI (*Τεκτοάγεις*, *Τεκτοάγαι*), one of the three great tribes of the Celts or Gallograeci in Asia Minor, of which they occupied the central parts. For particulars about their history, see GALATIA. These Tectosages were probably the same tribe as the one mentioned by Polybius under the names of Aegosages or Rigosages. (Polyb. v. 33, 77, 78, 111.) [L. S.]

TECUM. [TICHA.]

TEDANIUS (*Τηδάνιος*), a small river of Illyricum (Ptol. ii. 16. § 3), on the frontier of the district called Iapydia (Plin. iii. 25), is in all probability the modern *Zernanja*. [L. S.]

TEGEA (*Τεγέα*, Steph. B. s. v.), a town of Crete, which, according to legend, was founded by Agamemnon. (Vell. Pat. i. 1.) The coins which Sestini and Pellerin attributed to the Cretan Tegera have been restored by Eckhel (vol. ii. p. 321) to the Arcadian city of that name. [E. B. J.]

TEGEA (*Τεγέα*, Ion. *Τεγίς*; *Eth. Τεγεαίης*, *Tegesia*), one of the most ancient and powerful towns of Arcadia, situated in the SE. of the country. Its territory, called *TEGEARTIS* (*Τεγεαίς*), was bounded by Cynuria and Argolis on the E., from which it was separated by Mt. Parthenium, by Laconia on the S., by the Arcadian district of Maenalia on the W., and by the territory of Mantinea on the N. The Tegeratae are said to have derived their name from Tegerates, a son of Lycaon, and to have dwelt originally in eight, afterwards nine, demi or townships, the inhabitants of which were incorporated by Alceus in the city of Tegera, of which this hero was the reputed founder. The names of these nine townships, which are preserved by Pausanias, are: *Garevates* (*Γαρεβάται*), *Phylacris* (*Φυλακρίς*), *Corydæus* (*Κορυδαίης*), *Corytheus* (*Κορυθείς*), *Potachidæus* (*Ποταχιδαιίης*), *Oisæus* (*Οίσταίης*), *Monthyreus* (*Μονθυρεύς*), *Echemetheus* (*Εχεμεθεύς*), to which *Apheides* (*Αφειδεύς*) was added as the ninth in the reign of King Apheides. (Paus. viii. 3. § 4, viii. 45. § 1; Strab. viii. p. 337.) The Tegeratae were early divided into 4 tribes (*φύλεις*), called respectively *Carevites* (*Καρεβίταις*, in inscriptions *Καρεβίταις*), *Eghechevites* (*Εγχεχεβίταις*), *Apheidesites* (*Αφειδεβίταις*), and *Adhemetheus* (*Αδμεθεβίταις*), to each of which belonged a certain number of metoeci (*μετοεῖς*) or resident aliens. (Paus. viii. 53. § 6; *Epist. Corp. Inscr.* no. 1513.)

Tegera is mentioned in the *Iliad* (ii. 607), and was probably the most celebrated of all the Arcadian towns in the earliest times. This appears from its heroic renown, since its king Echemene is said

to have slain Hyllus, the son of Heracles, in single combat. (Herod. ix. 26; Paus. viii. 43. § 1.) The Tegeratae offered a long-continued and unsuccessful resistance to the Spartans, who in later attempts to extend their dominion over Arcadia. In one of the wars between the two peoples, Charilaus or Charillus, king of Sparta, desired by an oracle which appeared to promise victory to the Spartans, invaded Tegerata, and was not only defeated, but was taken prisoner with all his men who had survived the battle. (Herod. i. 66; Paus. ii. 7. § 3, viii. 5. § 9, viii. 45. § 3. 47. § 2, 48. § 4.) More than two centuries afterwards, in the reign of Leon and Agesicles, the Spartans again fought unsuccessfully against the Tegeratae, but in the following generation, in the time of their king Alexandrides, the Spartans, having obtained possession of the bones of Orestes in Arcadia with an oracle, defeated the Tegeratae and compelled them to acknowledge the supremacy of Sparta, a. c. 560. (Herod. i. 65, 67, seq.; Paus. ii. 2. § 5, seq.) Tegera, however, still retained its independence, though its military force was at the disposal of Sparta; and in the Persian War it again as the second military power in the Peloponnese, having the place of honour on the left wing of its allied army. Five hundred of the Tegeratae fought at Thermopylae, and 3000 at the battle of Plataeae, half of their force consisting of hoplites and half of light-armed troops. (Herod. vii. 302, ix. 34, seq. 61.) As it was not usual to send the whole force of a state upon a distant march, we may safely estimate, with Clinton, the force of the Tegeratae on this occasion as not more than three-fourths of the whole number. This would give 4000 for the military population of Tegera, and about 17,000 for the whole free population. (Clinton, *F. H.* vol. i. p. 415.)

Soon after the battle of Plataeae, the Tegeratae were again at war with the Spartans, of the name of which, however, we have no information. We only know that the Tegeratae fought twice against the Spartans between a. c. 479 and 464, and were each time defeated; first in conjunction with the Argives, and a second time together with the other Arcadians, except the Mantinians at Epinae, in the Maenalian district. (Herod. ix. 37; Paus. ii. 11. § 7.) About this time, and also at a subsequent period, Tegera, and especially the neighbourhood of Athens Alcia in the city, was a frequent place of refuge for persons who had rendered themselves obnoxious to the Spartan government. Hence led the seer Hegesistratus (Herod. ix. 37) and the king Leotychides, and Pausanias, son of Phaedon. (Herod. vi. 72; Xen. *Hell.* iii. 5. § 25; Paus. ii. 5. § 6.)

In the Peloponnesian War the Tegeratae were the firm allies of the Spartans, to whom they remained faithful both on account of their possessing a constitutional constitution, and from their jealousy of the neighbouring democratical city of Mantinea, with which they were frequently at war. [For details see MANTINEIA.] Thus the Tegeratae not only refused to join the Argives in the alliance formed against Sparta in a. c. 421, but they accompanied the Lacedaemonians in their expedition against Argos in 418. (Thuc. v. 32, 57.) They also fought on the side of the Spartans in the Corinthian War, 394. (Xen. *Hell.* iv. 2. § 12.) After the battle of Leuctra, however (371), the Spartans party in Tegera was expelled, and the city joined the other Arcadian towns in the foundation of Megalopolis and

in the formation of the Arcadian confederacy. (Xen. *Hell.* vi. 5. § 6, seq.) When Mantinea a few years afterwards quarrelled with the supreme Arcadian government, and formed an alliance with its old enemy Sparta, Tegea remained faithful to the new confederacy, and fought under Epaminondas against the Spartans at the great battle of Mantinea, 362. (Xen. *Hell.* vii. 4. § 36, seq., vii. 5. § 5, seq.)

Tegea at a later period joined the Aetolian League, but soon after the accession of Cleomenes III. to the Spartan throne it formed an alliance with Sparta, together with Mantinea and Orchomenus. It thus became involved in hostilities with the Achaeans, and in the war which followed, called the Cleomenic War, it was taken by Antigonus Doson, the ally of the Achaeans, and annexed to the Achaean League, B. C. 222. (Pol. ii. 46, 54, seq.) In 218 Tegea was attacked by Lycurgus, the tyrant of Sparta, who obtained possession of the whole city with the exception of the acropolis. It subsequently fell into the hands of Machanidas, but was recovered by the Achaeans after the defeat of the latter tyrant, who was slain in battle by Philopoemen. (Pol. v. 17, xi. 18.) In the time of Strabo Tegea was the only one of the Arcadian towns which continued to be inhabited (Strab. viii. p. 388), and it was still a place of importance in the time of Pausanias, who has given us a minute account of its public buildings. (Paus. viii. 45—48, 53.) Tegea was entirely destroyed by Alaric towards the end of the 4th century after Christ. (Claud. *B. Get.* 576; comp. Zosim. v. 6.)

The territory of Tegea formed the southern part of the plain of Tripolitza, of which a description and a map are given under MANTINEIA. Tegea was about 10 miles S. of the latter city, in a direct line, and about 3 miles SE. of the modern town of Tripolitza. Being situated in the lowest part of the plain, it was exposed to inundations caused by the waters flowing down from the surrounding mountains; and in the course of ages the soil has been considerably raised by the depositions brought down by the waters. Hence there are scarcely any remains of the city visible, and its size can only be conjectured from the broken pieces of stone and other fragments scattered on the plain, and from the foundations of walls and buildings discovered by the peasants in working in the fields. It appears, however, that the ancient city extended from the hill of *Aio Sostis* (*St. Saviour*) on the N., over the hamlets *Ibrahim-Effendi* and *Paleo-Episkopi*, at least as far as *Akhuria* and *Pialk*. This would make the city at least 4 miles in circumference. The principal remains are at *Pialk*. Near the principal church of this village Leake found the foundations of an ancient building, of fine squared stones, among which were two pieces of some large columns of marble; and there can be little doubt that these are the remains of the ancient temple of Athena Alea. This temple was said to have been originally built by Aleus, the founder of Tegea; it was burnt down in B. C. 394, and the new building, which was erected by Scopas, is said by Pausanias to have been the largest and most magnificent temple in the Peloponnese (Paus. viii. 45, § 4, seq.; for details see *Dict. of Biogr.* art. SCOPAS.) Pausanias entered the city through the gate leading to Pallantium, consequently the south-western gate, which must have been near *Pialk*. He begins his description with the temple of Athena Alea, and then goes across the great agora to the theatre, the remains of which Ross

traces in the ancient foundations of the ruined church of *Paleo-Episkopi*. Perhaps this theatre was the splendid marble one built by Antiochus IV. Epiphanes in B. C. 175. (Liv. xli. 20.) Pausanias ends his description with the mention of a height (*χωρον ὑψηλόν*, viii. 53. § 9), probably the hill *Aio Sostis* in the N. of the town, and apparently the same as that which Pausanias elsewhere calls the Watch-Hill (*λόφος φυλακτρῆς*, viii. 48. § 4), and Polybius the acropolis (*ἀκρᾶ*, v. 17). None of the other public buildings of Tegea mentioned by Pausanias can be identified with certainty; but there can be no doubt if excavations were made on its site many interesting remains would be discovered, since the deep alluvial soil is favourable to their preservation.

The territory of Tegea N. of the city, towards Mantinea, is a plain of considerable size, and is usually called the Tegeatic plain (*Τεγεατικὸν πεδῖον*). There was a smaller plain, separated from the former by a low range of mountains S. of Tripolitza, and lying between Tegea and Pallantium: it was called the Manthyrac plain (*Μανθυράκιον πεδῖον*), from Manthyræ, one of the ancient demi of Tegea, the ruins of which are situated SW. of Tegea, on a slope of Mt. Boreium. (Paus. viii. 44. § 7, comp. viii. 45. § 1, 47. § 1; Steph. B. s. v. *Μανθυραία*.) The remainder of the Tegeatis on the E. and S. is occupied by the mountains separating it from Argolis and Sparta respectively, with the exception of a small plain running eastward from the Tegeatic plain to the foot of Mt. Parthenium, and probably called the Corythiac plain, from Corythis, one of the ancient demi of Tegea, which was situated in this plain. (Paus. viii. 45. § 1, 54. § 4.)

The plain of Tegea having no natural outlet for its waters is drained by natural chasms through the limestone mountains, called *katavóthra*. Of these the two most important are at the modern village of *Persová* and at the marsh of *Taká*. The former is situated in the Corythiac plain above mentioned, at the foot of Mt. Parthenium, and the latter is the marsh in the Manthyrac plain, SW. of Tegea. The chief river in the district is now called the *Sarantapóttamos*, which is undoubtedly the Alpheius of Pausanias (viii. 54. § 1, seq.). The Alpheius rose on the frontiers of Tegea and Sparta, at a place called PHYLACE (*Φυλάκη*, near *Krya Vrysi*), one of the ancient demi of Tegea, and, as we may infer from its name, a fortified watch-tower for the protection of the pass. A little beyond Phylace the Alpheius receives a stream composed of several mountain torrents at a place named SYMBOLA (*Σύμβολα*); but upon entering the plain of Tegea its course was different in ancient times. It now flows in a north-easterly direction through the plain, receives the river of *Dhulianá* (the ancient *Garates*, *Γαράτης*, Paus. viii. 54. § 4), flows through the Corythiac plain, and enters the *katavóthra* at *Persová*. Pausanias, on the other hand, says (viii. 54. § 2) that the Alpheius descends into the earth in the Tegeatic plain, reappears near Asea (SW. of Tegea), where, after joining the Eurotas, it sinks a second time into the earth, and again appears at Asea. Hence it would seem that the Alpheius anciently flowed in a north-westerly direction, and entered the *katavóthra* at the marsh of *Taká*, in the Manthyrac plain. There is a tradition among the peasants that the course of the river was changed by a Turk, who acquired property in the neighbourhood, because the

καταβόθρα at the *Takti* did not absorb quickly enough the waters of the marsh. The Garates therefore anciently flowed into the καταβόθρα at *Persos* without having any connection with the Alpheius. It probably derived its name from *Gareia* or *Gareae*, one of the ancient demi of Tegea, which may have been situated at the village of *Dhuliamd*. (Ross, *Peloponnes*, p. 70, seq.; Leake, *Peloponnesiaca*, p. 112, seq.)

There were five roads leading from Tegea. One led due N. across the Tegeatic plain to Mantinea. [MANTINEIA.] A second led due S. by the valley of the Alpheius to Sparta, following the same route as the present road from *Tripolitá* to *Mistrá*. A third led west to Pallantium. It first passed by the small mountain *Cresium* (Κρήσιον), and then ran across the Manthyrac plain along the side of the *Takti*. Mount *Cresium* is probably the small isolated hill on which the modern village of *Venó* stands, and not the high mountain at the end of the plain, according to the French map. Upon reaching the *Choma* (χῶμα), the road divided into two, one road leading direct to Pallantium, and the other SW. to Megalopolis through Asea. (Paus. viii. 44. § 1, seq.; Xen. *Hell.* vi. 5. § 9, αὐτῇ τῷ Παλλάντιον φέρονται πύλαι.) This *choma* separated the territories of Pallantium and Tegea, and extended as far south as Mount *Boreium* (Κρύσσιον), where it touched the territory of Megalopolis. There are still remains of this *choma* running NE. to SW. by the side of the marsh of *Takti*. These remains consist of large blocks of stone, and must be regarded as the foundations of the *choma*, which cannot have been a *chaussée* or causeway, as the French geographers call it, since χῶμα always signifies in Greek writers an artificial heap of earth, a tumulus, mound, or dyke. (Ross, p. 59.) A fourth road led SE. from Tegea, by the sources of the Garates to Thyreatia. (Paus. viii. 54. § 4.) A fifth road led NE. to Hysiae and Argos, across the Corythiac plain, and then across Mt. Parthenium, where was a temple of Pan, erected on the spot at which the god appeared to the courier *Phaidippides*. This road was practicable for carriages, and was much frequented. (Paus. viii. 54. § 5, seq.; Herod. vi. 105, 106; *Dict. of Biogr.* art. *PHAIPIPPIDES*.) (Leake, *Morea*, vol. i. p. 88, seq., vol. ii. p. 333, *Peloponnesiaca*, pp. 112, seq., 369; Ross, *Peloponnes*, p. 66, seq.; Curtius, *Peloponnesos*, vol. i. p. 247, seq.; Koner, *Com. de Rebus Tegeatarum*, Berol. 1843.)

The Roman poets use the adjective *Tegēsus* or *Tegeacus* as equivalent to *Arcadian*: thus it is given as an epithet to Pan (Virg. *Georg.* i. 18), Callisto, daughter of *Lycaon* (Ov. *Ar. Am.* ii. 55, *Fast.* ii. 167), *Atalanta* (Ov. *Met.* viii. 317, 380), *Carmenta* (Ov. *Fast.* i. 627), and *Mercury* (Stat. *Silv.* i. 54)

COIN OF TEGEA.

TEGLI'NUM (*Eth.* Tegiānensis: *Diano*), a municipal town of Lucania, situated in the interior of that country, on the left bank of the river *Tanager*. Its name is found only in a corrupt form in Pliny,

who enumerates the Tergilani among the "populi" in the interior of Lucania (Plin. iii. 11. s. 15); but the Liber Coloniarum mentions the "Praefectura Tegenensis" among the Praefecturae of Lucania (*Lib. Col.* p. 309), and the correct form of the name is preserved by inscriptions. From the same source we learn that it was a town of municipal rank, while the discovery of them in the neighbourhood of *Diano* leaves no doubt that that place represents the ancient Tegiannum. (Romanelli, vol. i. p. 415; Mommsen, *Inscr. R. N.* pp. 18, 19.) The modern city of *Diano* is a considerable place situated on a hill about 4 miles west of *La Sala*, and gives the name of *Valle di Diano* to the whole of the extensive upland valley which is traversed by the river *Tanager* in the upper part of its course. Some remains of the ancient city are still visible in the plain at the foot of the hill (Romanelli, l. c.). [E. H. R.]

TEGLI'CIUM (*Itin. Ant.* p. 223), **TEGLUCIUM** (*Tab. Peut.*), and **TEGULTIA** (*Geogr. Rav.* iv. 7), a place in Moesia Inferior, on the road between *Caspidiana* and *Dorostolum*. It contained, according to the *Not. Imp.*, a garrison of light troops. Various placed near *Veterniciza* and *Tataritza*. Some modern writers identify it with the fortress in Moesia called *Saltoprygus* by Procopius (*de Aedif.* iv. 7.). [T. H. D.]

TEGNA, in Gallia Narbonensis, was on the Roman road on the east bank of the Rhone between *Vienna* (*Vienne*) and *Valentia* (*Valence*). The name occurs in the *Table*, in which the place is fixed at xiii. from *Valentia*. *Tegna* is *Tein*, the name of which in the writings of a later date is *Tinctum*. A milestone at *Tein* marks the distance to *Vienna* xxviii. *Tein* is right opposite to *Tournon*, which is on the west side of the river. *Tournon* is well situated, and the mountains there approach close to the *Rhone*. (D'Anville, *Notice*, &c.; Ukert, *Gallien*.) [G. L.]

TEGRA. [**TIGRA**.]

TEGULATA, in Gallia Narbonensis, is placed in the *Itins.* east of *Aquae Sextiae* (*Aix*) on the road to *Ad Turrim* (*Tourves*). The distance from *Aquae Sextiae* to *Tegulata* is xv. or xvi., and from *Tegulata* to *Ad Turrim* xvi. The distance measured along the road between *Aquae Sextiae* and *Ad Turrim* is said to exceed the direct distance between these two places, which is not more than 28 Roman miles. *Tegulata* is supposed to be *La Grande Peigrière*, near the bourg of *Porrières* or *Pourrières*, perhaps somewhere about the place where C. Marius defeated the *Teutones* B. c. 102, and where a pyramid was erected to commemorate the great victory. This monument is said to have existed to the fifteenth century (A. Thierry, *Hist. des Gaulois, Desc. Paris*, c. 3); and the tradition of this great battle is not yet effaced. *Pourrières* is said to be a corruption of *Putridi Campi*. (D'Anville, *Notice*, &c.) [G. L.]

TEGULICIUM [**TEGLICIUM**.]

TEGYRA (*Tegyra*: *Eth.* Tegyris), a village of Boeotia, near Orchomenus, and situated above the marshes of the river *Melas*. It was celebrated for its oracle and Temple of Apollo, who was even said to have been born there. In its neighbourhood was a mountain named *Delos*. Leake places *Tegyra* at *Xeropyrgo*, situated 3 miles ENE. of *Scrips* (Orchomenus), on the heights which bound the marshes. (Plut. *Pelop.* 16, *de Def. Or.* 5 and 8; Lycophr. 646; Steph. B. s. v.; Leake, *Northern Greece*, vol. ii. pp. 155, 159; comp. Ulrichs, *Reisen*, vol. i. p. 196.)

TEHAPHENES. [TAHPANIA.]

TEICHIMUM (Τεῖχιον), a town of Aetolia Epicetetus, on the borders of Locris, and one day's march from Crocyleium. (Thuc. iii. 96.)

TEKOAH (Θεκώ, 1 Maccab. ix. 33; Θεκώ or Θεκώ, Joseph. Vit. 75), a town of Palestine in Judah, to the south of Bethlehem. It was the residence of the wise woman who pleaded in behalf of Absalom; was fortified by Rehoboam; was the birthplace of the prophet Amos, and gave its name to the adjacent desert on the east. (2 Sam. xiv. 2; 2 Chron. xi. 6; Amos, i. 1; 2 Chron. xx. 20; 1 Macc. ix. 33.) Jerome describes Tekoah as situated upon a hill, 6 miles south of Bethlehem, from which city it was visible. (Hieron. Proem. in Amos, and Comm. in Jerem. vi. 1.) Its site still bears the name of Teku'a, and is described by Robinson as an elevated hill, not steep, but broad on the top, and covered with ruins to the extent of four or five acres. These consist chiefly of the foundations of houses built of squared stones; and near the middle of the site are the remains of a Greek church. (Robinson, Bibl. Res. vol. i. p. 486, 2nd ed.)

TELA, a place of the Vaccaeii in Hispania Tarraconensis (Itin. Ant. p. 440). Various identified with *Fordesillas* and *Medina de Río Seco*. [T.H.D.]

TELAMON (Τελαμών: *Telamone*), a city on the coast of Etruria, situated on a promontory between the Mons Argentarius and the mouth of the Umbro (*Ombro*), with a tolerable port adjoining it. The story told by Diodorus of its having derived its name from the hero Telamon, who accompanied the Argonauts on their voyage, may be safely dismissed as an etymological fable (Diod. iv. 56). There seems no reason to doubt that it was originally an Etruscan town, but no mention of its name occurs in history during the period of Etruscan independence. It is first noticed in B. C. 225, when a great battle was fought by the Romans in its immediate neighbourhood with an army of Cisalpine Gauls, who had made an irruption into Etruria, but were intercepted by the consuls C. Atilius and L. Aemilius in the neighbourhood of Telamon, and totally defeated. They are said to have lost 40,000 men slain, and 10,000 prisoners, among whom was one of their chiefs or kings (Pol. i. 27—31). The battle, which is described by Polybius in considerable detail, is expressly stated by him to have occurred "near Telamon in Etruria;" Frontinus, in speaking of the same battle, places the scene of it near Populonia (Strat. i. 2. § 7), but the authority of Polybius is certainly preferable. The only other mention of Telamon that occurs in history is in B. C. 87, when Marius landed there on his return from exile, and commenced gathering an army around him. (Plut. Mar. 41.) But there is no doubt that it continued to exist as a town, deriving some importance from its port, throughout the period of the Roman dominion. Its name is found both in Mela and Pliny, who calls it "portus Telamon," while Ptolemy notices only the promontory of the name (Τελαμών ἄκρον, Ptol. iii. 1. § 4; Plin. iii. 5. s. 8; Mel. ii. 4. § 9). The Itineraries prove that it was still in existence as late as the 4th century (Tab. Peut.; Itin. Marii. p. 500, where it is called "Portus Telamonis"); but from this time all trace of it disappears till the 14th century, when a castle was erected on the site. This, with the miserable village which adjoins it, still bears the name of *Telamone*; and the shores of the bay are lined with remains of Roman buildings, but of no great interest;

and there are no relics of Etruscan antiquity. (Dennis's *Etruria*, vol. ii. p. 258.) [E. H. B.]

TELCHINES. [RHODUS, p. 713.]

TELEBOAE. [TAPHIÆ.]

TELEBOAS (δ Τηλεβόας ποταμός, Xen. Anab. iv. 4. § 3), a river of Armenia Major, a tributary of the Euphrates. Probably identical with the *ARSANIAS*. [T. H. D.]

TELEPHRIUS MONS. [EUBOEÆ.]

TELEPTE. [THALÆ.]

TELESIA (Τηλεσία: *Eth. Telesinus; Telese*), a considerable city of Samnium, situated in the valley of the Calor, a short distance from its right bank, and about 3 miles above its confluence with the Vulturmus. It is remarkable that its name is never mentioned during the long wars of the Romans with the Samnites, though the valley in which it was situated was often the theatre of hostilities. Its name first occurs in the Second Punic War, when it was taken by Hannibal on his first irruption into Samnium, B. C. 217 (Liv. xxii. 13); but was recovered by Fabius in B. C. 214. (Id. xxiv. 20.) From this time we hear no more of it till it became an ordinary Roman municipal town. Strabo speaks of it as having in his time fallen into almost complete decay, in common with most of the cities of Samnium. (Strab. v. p. 250.) But we learn that it received a colony in the time of the Triumvirate (Lüb. Colon. p. 238); and, though not mentioned by Pliny as a colony (the name is altogether omitted by him), it is certain, from inscriptions, that it retained its colonial rank, and appears to have continued under the Roman Empire to have been a flourishing and considerable town. (Orell. Inscr. 2626; Romanelli, vol. ii. p. 423; Mommsen, Inscr. R. N. 4840—4915.) It was situated on the line of the Via Latina, or rather of a branch of that road which was carried from Teanum in Campania through Allifae and Telesia to Beneventum (Itin. Ant. pp. 122, 304; Tab. Peut.), and this probably contributed to preserve it from decay.

The ruins of the ancient city are still visible about a mile to the NW. of the village still called *Telese*: the circuit of the walls is complete, inclosing a space of octagonal shape, not exceeding 1½ mile in circumference, with several gates, flanked by massive towers. The masonry is of reticulated work, and therefore probably not earlier than the time of the Roman Empire. The only ruins within the circuit of the walls are mere shapeless mounds of brick; but outside the walls may be traced the vestiges of a circus, and some remains of an amphitheatre. All these remains undoubtedly belong to the Roman colony, and there are no vestiges of the ancient Samnite city. The present village of *Telese* is a very small and poor place, rendered desolate by malaria; but in the middle ages it was an episcopal see, and its principal church is still dignified by the name of a cathedral. Its walls contain many Latin inscriptions, brought from the ancient city, the inhabitants of which migrated to the later site in the ninth century. (Craven, *Abruzzi*, vol. ii. pp. 173—175; Giustiniani, *Dizion. Topogr.* vol. ix. pp. 149, 150.) Telesia was remarkable as being the birthplace of the celebrated Samnite leader, during the Social War, Pontius Telesinus; and it is probable (though there is no distinct authority for the fact) that it was also that of the still more celebrated C. Pontius, who defeated the Romans at the Caudine Forks. [E. H. B.]

TELIS. [RUSCINO.]

TELLE'NAE (Τελλήναι; Dion. Hal.; Τελλήναι, Strab.; Ἐλλήναι, Tellenensia), an ancient city of Latium, which figures in the early Roman history. According to Dionysius it was one of the cities founded by the Aborigines soon after their settlement in Latium (Dionys. i. 16), a proof at least that it was regarded as a place of great antiquity. Livy also reckons it as one of the cities of the Prisci Latini (i. 33), which may perhaps point to the same result, while Diodorus includes it in his list of the colonies of Alba. (Diod. vii. ap. Euseb. Arm. p. 185.) It was attacked by the Roman king Ancus Marcius, who took the city, and transported the inhabitants to Rome, where he settled them on the Aventine, together with those of Politorium and Ficana. (Liv. i. 33; Dionys. iii. 38, 43.) Tellenæ, however, does not seem, like the other two places just mentioned, to have been hereby reduced to insignificance; for its name appears again in B. C. 493 among the confederate cities of the Latin League (Dionys. v. 61); and though this is the last mention that we find of it in history, it is noticed both by Strabo and Dionysius as a place still in existence in their time. (Dionys. i. 16; Strab. v. p. 231.) It is probable, however, that it had at that time fallen into complete decay, like Antennæ and Collatia; as it is only mentioned by Pliny among the once celebrated cities of Latium, which had left no traces of their existence in his day (Plin. iii. 5. s. 9), and from this time its name wholly disappears. The notices of Tellenæ afford scarcely any clue to its position; though the circumstance that it continued to be inhabited, however slightly, down to the days of Augustus, would afford us more hope of being able to identify its site than is the case with Politorium, Apiolæ, and other places, which ceased to exist at a very early period. It is this reason that has led Nibby to identify the ruins of an ancient city at *La Giostra*, as those of Tellenæ, rather than Politorium, as supposed by Gell. [POLITORIUM.] The site in question is a narrow ridge, bounded by two ravines of no great depth, but with abrupt and precipitous banks, in places artificially scarped, and still presenting extensive remains of the ancient walls, constructed in an irregular style of massive quadrangular blocks of tufo. No doubt can exist that these indicate the site of an ancient city, but whether of Politorium or Tellenæ, it is impossible to determine; though the remains of a Roman villa, which indicate that the spot must have been inhabited in the early ages of the Empire, give some additional probability to the latter attribution. *La Giostra* is situated on the right of the Via Appia, about 2 miles from a farm-house called *Fiorano*, immediately adjoining the line of the ancient high-road. It is distant 10 miles from Rome, and 3 from *La Frattocchie*, on the Via Appia, adjoining the ruins of Bovillæ. (Gell, *Top. of Rome*, pp. 280—283; Nibby, *Dintorni*, vol. iii. pp. 146—153.)

Whether the proverbial expression of "tricae Tellenæ" has any reference to the ancient city of Latium or not, can hardly be determined, the origin and meaning of the phrase being involved in complete obscurity. (Varro, *ap. Non.* i. p. 8; Arnob. *adv. Gentes*, v. p. 28, with Oehler's note.) [E. H. B.]

TELMESSUS, or TELMISSUS (Τελμῆσος, Τελμῆσός, or Τελμῆσις; Eth. Τελμῆσσις). 1. A flourishing and prosperous city in the west of Lycia, was situated near Cape Telmissis (Strab. xiv. p. 665), or Telmissias (Steph. B. s. v. Τελμῆσός), on a bay which derived from it the name of

Sinus Telmessicus. (Liv. xxxvii. 16; Lucan, vii. 248.) On the south-west of it was Cape Pedalum, at a distance of 200 stadia. Its inhabitants were celebrated in ancient times for their skill as diviners, and were often consulted by the Lydian kings. (Herod. i. 78; comp. Arrian, *Anab.* ii. 3. § 4.) Is the time of Strabo, however, who calls it a small town (πολίχνη), it seems to have fallen into decay; though at a later period it appears to have been an episcopal see. (Hierocl. p. 684; comp. Pomp. Mela, i. 15; Plin. v. 28; Ptol. v. 3. § 2; Polyb. xxi. 27; *Stadiasm. Mar. M.* §§ 255, 256; Scylax p. 39, where it is miswritten Θεανισός.) Considerable remains of Telmessus still exist at *Mgei* or *Meis*; and those of a theatre, porticoes, and sepulchral chambers in the living rock, are among the most remarkable in all Asia Minor. (Leake, *Asia Minor*, p. 128; Fellows, *Asia Minor*, p. 243, where some representations of the remains of Telmessus are figured; *Lycia*, p. 106, foll.)

2. A small town of Caria, at a distance of 60 stadia from Halicarnassus, is likewise sometimes called Telmessus, and sometimes Telmissus. (Suid. s. v.; *Etyim. Mag.* s. v.; Arrian, *Anab.* i. 25. § 8; Cic. *de Div.* i. 41; Plin. v. 29, xxx. 2.) The Carian Telmessus has often been confounded with the Lycian, and it is even somewhat doubtful whether the famous Telmessian soothsayers belonged to the Carian or the Lycian town. But the former must at all events have been an obscure place; and that it cannot have been the same as the latter is clear from the statement of Ptolemy in Suidas, that it was only 60 stadia from Halicarnassus. [L. S.]

TELMESSUS, according to Pliny (v. 29), a tributary of the river Glaucaus in Caria, but it flowed in all probability near the town of Telmessus, which derived its name from it. [L. S.]

TELMISSICUS SINUS, a bay between Lycia and Caria, which derived its name from the Lycian town of Telmessus (Liv. xxxvii. 16; Lucan, vii. 248); but it is more commonly known by the name Glaucaus Sinus, and is at present called the *Bay of Macri*. [L. S.]

TELMISSIS PROMONTORIUM. [TELMESSIS.]

TE'LOBIS (Τηλοβίς, Ptol. ii. 6. § 72), a town of the Jaccetani in Hispania Tarraconensis, now *Martorell*. (Cf. Laborde, *Itin.* i. § 73; Srinbarne, *Lett.* 8.) [T. H. D.]

TELO MARTIUS (*Toulon*), in Gallia Narbonensis. This name is not mentioned by the geographers. It occurs in the Maritime Itin. and in the Notit. Imp. Occid., where a "procurator Baplii Teloensis Galliarum" is mentioned, which indicates the existence of a dyeing establishment there. In *Locan* (iii. 592) Telo is the name of a pilot or helmsman, and Oudendorp supposes that the poet gave the man this name because he was of the town Telo; which seems a strange conjecture. And again Silius (xiv. 443) is supposed to allude to the same town, when he says—

"Et Neptunicolæ transverberat ora Telois."

The old Roman town is said to have been at or near *Toulouzan*, where the Lazaretto now is. (*Statist. du Dép. des Bouches du Rhône*, referred to by Ukert, *Gallien*, p. 428.) [G. L.]

TELONNUM, in Gallia. The Table has a name on the route between Aquæ Bormoniæ (*Bourbon l'Archambault*) and Augustodunum (*Autun*), which name begins with *T* and ends with *onnum*. D'Anville gives good reasons for supposing that the place

may be *Toulon-sur-Arroux*; and thus the modern name may enable us to correct the reading of the Table.

[G. L.]

TELOS (Τῆλος; *Eth. Τήλιος*: *Dilos* or *Piscopia*), a small rocky island in the Carpathian sea, between Rhodus and Nisyros, from the latter of which its distance is only 60 stadia. Strabo (x. p. 488) describes it as long and high, and abounding in stones fit for millstones. Its circumference was 80 stadia, and it contained a town of the same name, a harbour, hot springs, and a temple of Poseidon. The attribute long given to it by Strabo is scarcely correct, since the island is rather of a circular form. The family of the Sicilian tyrant Gelon originally came from Telos. (Herod. vii. 153.) According to Pliny (iv. 69) the island was celebrated for a species of ointment, and was in ancient times called Agathussa. (Steph. B. s. v. Τῆλος; Scylax, p. 38; *Stadiasm. Mar. Magni*, § 272.) The town of Telos was situated on the north coast, and remains of it are still seen above the modern village of *Episcopi*. The houses, it appears, were all built in terraces rising above one another, and supported by strong walls of unhewn stone. The acropolis, of which likewise a few remains exist, was at the top, which is now occupied by a mediæval castle. Inscriptions have been found in Telos in great numbers, but, owing to the nature of the stone, many of them are now illegible. (Comp. Ross, *Hellenica*, i. p. 59, foll., *Reisen auf den Griech. Inseln*, iv. p. 42, foll.)

[L. S.]

TELPHU'SA. [THELPUSA.]

TEMA, a tribe and district in Arabia, which took their name from Tema, one of the twelve sons of Ishmael. (*Gen.* xxv. 15; *Is.* xxi. 14; *Jer.* xxv. 23; *Job*, vi. 19.) Ptolemy mentions in Arabia Deserta a town Temma (Θέμμα, v. 19. § 6). Tema is distinguished in the Old Testament from Teman, a tribe and district in the land of the Edomites (Idumæa), which derived their name from Teman, a grandson of Esau. (*Gen.* xxxvi. 11, 15, 42; *Jer.* xlix. 7, 20; *Ezek.* xxv. 13; *Amos*, i. 12; *Hab.* iii. 3; *Obad.* 9.) The Temanites, like the other Edomites, are celebrated in the Old Testament for their wisdom (*Jerem.* xlix. 7; *Obad.* 8; *Baruch*, iii. 22, seq.); and hence we find that Eliphaz, in the book of Job, is a Temanite. (*Job*, ii. 11, iv. 1.) Jerome (*Onomast.* s. v.) represents Tema as distant 5 miles (Eusebius says 15 miles) from Petra, and possessing a Roman garrison.

TE'MALA (Τημάλα, Ptol. vii. 2. § 3), a river in the Aurea Regio, in the district of India extra Gangem, probably now represented by the great river of Pegu, the *Irawaddy*. Near it was a town which bore the same name.

[V.]

TEMA'THIA. [MESSENIA, p. 341, b.]

TEME'NIUM (Τημένιον), a town in the Argeia, at the upper end of the Argolic gulf, built by Temenius, the son of Aristomachus. It was distant 50 stadia from Nauplia (Paus. ii. 38. § 2), and 26 from Argos. (Strab. viii. p. 368.) The river Phrixus flowed into the sea between Temenium and Lerna. (Paus. ii. 36. § 6, ii. 38. § 1.) Pausanias saw at Temenium two temples of Poseidon and Aphrodite and the tomb of Temenius (ii. 38. § 1). Owing to the marshy nature of the plain, Leake was unable to explore the site of Temenium; but Ross identifies it with a mound of earth, at the foot of which, in the sea, are remains of a dam forming a harbour, and upon the shore foundations of buildings, fragments of pottery, &c. (Leake,

Morea, vol. ii. p. 476; Ross, *Reisen im Peloponnes*, p. 149; Curtius, *Peloponnesos*, vol. ii. p. 383.)

TEMENOTHYRA (Τημενοθύρα, Paus. i. 35. § 7; *Eth. Τημενοθυρεός*, Coins), a small city of Lydia, according to Pausanias (*l. c.*), or of Phrygia, according to Hierocles (p. 668, ed. Wess.). It would seem to have been situated upon the borders of Mysia, since the Trimenothuritæ (Τριμενοθυρίται) — which name is probably only another form of the Temenothyritæ — are placed by Ptolemy (v. 2. § 15) in Mysia. (Eckhel, vol. iii. p. 119.)

COIN OF TEMENOTHYRA.

TE'MESA or TEMP'SA (Τεμέση and Τέμψα, Strab.; Τεμίση, Steph. B.; Τέμψα, Ptol.: *Eth. Τεμεσαίος*, Tempesanus), an ancient city on the W. coast of Bruttium, a little to the N. of the Gulf of Hipponium, or *Golfo di Sta Eufemia*. Strabo tells us that it was originally an Ausonian city, but subsequently occupied by a colony of Aetolians who had accompanied Thoas to the Trojan War. (Strab. vi. p. 255.) Many writers appear to have supposed this to be the Temesa mentioned by Homer in the *Odyssey* on account of its mines of copper (*Odys.* i. 184); and this view is adopted by Strabo; though it is much more probable that the place alluded to by the poet was Temesa in Cyprus, otherwise called Tamasus. (Strab. *l. c.*; Steph. B. s. v.; Schol. *ad Hom. Odys.* *l. c.*) We have no account of Temesa having received a Greek colony in historical times though it seems to have become to a great extent Hellenised, like so many other cities in this part of Italy. At one period, indeed, we learn that it was conquered by the Locrians (about 480—460 B. C.); but we know not how long it continued subject to their rule. (Strab. *l. c.*) Neither Scylax nor Scymnus Chius mention it among the Greek cities in this part of Italy; but Livy says expressly that it was a Greek city before it fell into the hands of the Brutians (Liv. xxxiv. 45). That people apparently made themselves masters of it at an early period of their career, and it remained in their hands till the whole country became subject to the dominion of Rome. (Strab. *l. c.*) During the Second Punic War it suffered severely at the hands, first of Hannibal, and then of the Romans; but some years after the close of the war it was one of the places selected by the Romans for the establishment of a colony, which was sent thither at the same time with that to Crotona, B. C. 194. (Liv. xxxiv. 45.) But this colony, the members of which had the privileges of Roman citizens, does not appear to have been numerous, and the town never rose to be a place of importance. Its copper mines, which are alluded to by several writers (Ovid, *Met.* xv. 706; Stat. *Silv.* i. 1. 42), had ceased to be productive in the days of Strabo (Strab. vi. p. 256). The only mention of Tempesa which occurs in Roman history is in connection with the great servile insurrection under Spartacus, when a remnant of the servile force seem to have established themselves at Tempesa, and for a time maintained possession of the town. (Cic. *Verr.*

v. 15, 16.) Its name is afterwards found in all the geographers, as well as in the Tabula, so that it must have subsisted as a town throughout the Roman Empire. (Strab. l.c.; Plin. iii. 5. a. 10; Ptol. iii. 1. § 9; *Tab. Pent.*) Pausanias expressly tells us it was still inhabited in his day; and Pliny also notices it for the excellence of its wine. (Paus. vi. 6. § 10; Plin. xiv. 6. a. 8.) The period of its destruction is unknown; but after the fall of the Roman Empire the name wholly disappears, and its exact site has never been determined. The best clue is that afforded by the Tabula (which accords well with the statements of Pliny and Strabo), that it was situated 10 miles S. of Clamptia. If this last town be correctly placed at *Amantea* [CLAMPETIA], the site of Tempas must be looked for on the coast near the *Torre del Piano del Casale*, about 2 miles S. of the river *Saruto*, and 3 from *Nocera*. Unfortunately none of the towns along this line of coast can be fixed with anything like certainty. (Cluver. *Ital.* p. 1286; Romanelli, vol. i. p. 35.)

Near Temesa was a sacred grove, with a shrine or sanctuary of the hero Polites, one of the companions of Ulysses, who was said to have been slain on the spot, and his spectre continued to trouble the inhabitants, until at length Euthymus, the celebrated Locrian athlete, ventured to wrestle with the spirit, and having vanquished it, freed the city from all further molestation. (Strab. vi. p. 255; Paus. vi. 6. §§ 7—11; Suid. v. *Εὐθύμος*.) [E. H. B.]

TEMISDIA (ἡ Τημισδία, Ptol. vi. 4. § 3), one of the districts into which ancient Persia was divided. It cannot now be determined exactly what its position was; but, as it adjoined the Mesabatae, it probably was part of a long narrow plain which extends through that province in a direction north-west and south-east. (Lassen, in Ersch und Gruber's *Encycl.* vol. xvii. p. 438.) [V.]

TEMIMICES. [BOROTIA, p. 414.]

TEMNUS (Τήμνος ὄρος), a mountain range of Mysia, extending from Mount Ida eastward into Phrygia, and dividing Mysia into two halves, a northern and a southern one. It contained the sources of the Macestus, Mysius, Caicus, and Evenus. (Strab. xiii. p. 616; Ptol. v. 2. § 13.) Hamilton (*Researches*, ii. p. 125) is inclined to believe that *Mons Temnus* is the same as the *At Dagh*, or, as it is commonly called in maps, *Morad Dagh*. [L. S.]

TEMNUS (Τήμνος; *Εἰθ. Τημνίτης*), a town of Aeolis in Asia Minor, not far from the river Hermus, situated on a height, from which a commanding view was obtained over the territories of Cyme, Phocaea, and Smyrna. (Strab. xiii. p. 621.) From a passage in Pausanias (v. 13. § 4), it might be inferred that the town was situated on the northern bank of the Hermus. But this is irreconcilable with the statement that Temnus was 30 miles south of Cyme, and with the remarks of all other writers alluding to the place. Pliny (v. 29) also seems to be mistaken in placing Temnus at the mouth of the Hermus, for although the deposits of the river have formed an extensive alluvial tract of land, it is evident that the sea never extended as far as the site of Temnus. The town had already much decayed in the time of Strabo, though it never appears to have been very large. (Xenoph. *Hell.* iv. 8. § 5; Herod. i. 149; Polyb. v. 77, xx. 25; Cic. *pro Flacc.* 18.) In the reign of Tiberius it was much injured by an earthquake (Tac. *Ann.* ii. 47), and in the time of Pliny it had ceased

to be inhabited altogether. Its site is commonly identified with the modern *Menemen*, though Texier, in his *Description de l'Asie Mineure*, looks for it at the site of the village of *Gusal-Hisar*. [L. S.]

COIN OF TEMNUS.

TEMPE (τὰ Τέμνα, contr. of Τέμνες), a celebrated valley in the NE. of Thessaly, is a gap between Mount Olympus and Ossa, through which the waters of the Peneios force their way into the sea. The beauties of Tempe were a favourite subject with the ancient poets, and have been described at great length in a well-known passage of *Æneas*, and more briefly by Pliny; but none of these writers appear to have drawn their pictures from actual observation; and the scenery is distinguished less by savage grandeur than by the sylvan beauty which Aelian and others attribute to it. (Catull. lxiv. 285; Or. *Met.* i. 568; Virg. *Georg.* ii. 463; Aelian, *V. H.* iii. 1; Plin. iv. 8. a. 15.) The account of Livy, who copies from Polybius, an eye-witness, is more in accordance with reality. This writer says, "Tempe is a defile, difficult of access, even though not guarded by an enemy; for besides the narrowness of the pass for 5 miles, where there is scarcely room for a beast of burden, the rocks on both sides are so perpendicular as to cause giddiness both in the mind and eyes of those who look down from the precipice. Their terror is also increased by the depth and roar of the Peneios rushing through the midst of the valley." (Liv. xlv. 6.) He adds that this pass, so inaccessible by nature, was defended by four fortresses, one at the western entrance at Gonima, a second at Condylon, a third at Charax, and a fourth in the road itself, in the middle and narrowest part of the valley, which could be easily defended by ten men. The pass is now called *Lybastos*, or the *Wolf's Mouth*. Col. Leake gives about four miles and a half as the distance of the road through the valley. In this space the width of the gorge is in some parts less than 100 yards, comprehending in fact no more than the breadth of the road in addition to that of the river. The modern road follows in the track of the ancient military road made by the Romans, which ran along the right bank of the river. Leake remarks that even Livy in his description of Tempe seems to have added embellishments to the authority from which he borrowed; for, instead of the Peneios flowing rapidly and with a loud noise, nothing can be more tranquil and steady than its ordinary course. The remains of the fourth castle mentioned by Livy are noticed by Leake as standing on one side of an immense fissure in the precipices of Ossa, which afford an extremely rocky, though not impracticable descent from the heights into the vale; while between the castle and the river space only was left for the road. About half a mile beyond this fort there still remains an inscription engraved upon the rock, on the right-hand side of the road, where it ascends the hill: "L. Cassius Longinus Pro Cos. Tempe munivit." It is probable from the position of this inscription that it relates to the making of the road, though some refer it to defensive works erected

by Longinus in Tempe. This Longinus appears to have been the L. Cassius Longinus who was sent by Caesar from Illyria into Thessaly. (Caes. *B. C.* iii. 34.) When Xerxes invaded Greece, B. C. 480, the Greeks sent a force of 10,000 men to Tempe, with the intention of defending the pass against the Persians; but having learnt from Alexander, the king of Macedonia, that there was another pass across Mt. Olympus, which entered Thessaly near Gonnus, where the gorge of Tempe commenced, the Greeks withdrew to Thermopylae. (Herod. vii. 173.)

It was believed by the ancient historians and geographers that the gorge of Tempe had been produced by an earthquake, which rent asunder the mountains, and afforded the waters of the Peneius an egress to the sea. (Herod. vii. 129; Strab. ix. p. 430.) But the Thessalians maintained that it was the god Poseidon who had split the mountains (Herod. l. c.); while others supposed that this had been the work of Hercules. (Diod. iv. 58; Lucan, vi. 345.)

The pass of Tempe was connected with the worship of Apollo. This god was believed to have gone thither to receive expiation after the slaughter of the serpent Python, and afterwards to have returned to Delphi, bearing in his hand a branch of laurel plucked in the valley. Every ninth year the Delphians sent a procession to Tempe consisting of well-born youths, of which the chief youth plucked a branch of laurel and brought it back to Delphi. On this occasion a solemn festival, in which the inhabitants of the neighbouring regions took part, was celebrated at Tempe in honour of Apollo Tempeites. The procession was accompanied by a flute-player. (Aelian, *V. H.* iii. 1; Plut. *Quaest. Graec.* c. 11. p. 292, *de Musica*, c. 14. p. 1136; Böckh, *Inscr.* No. 1767, quoted by Grote, *Hist. of Greece*, vol. ii. p. 365.)

The name of Tempe was applied to other beautiful valleys. Thus the valley, through which the Helorus flows in Sicily, is called "Heloria Tempe" (Ov. *Fast.* iv. 477); and Cicero gives the name of Tempe to the valley of the Velinus, near Reate (*ad Att.* iv. 15). In the same way Ovid speaks of the "Heliconia Tempe" (*Am.* i. l. 15).

(Leske, *Northern Greece*, vol. iii. p. 390, seq.; Dodwell, vol. ii. p. 109, seq.; Hawkins, in *Walpole's Collection*, vol. i. p. 517, seq.; Kriegk, *Das Thessalische Tempe*, Leipzig, 1835.)

TEMPSA. [TEMERA.]

TEMPYRA (Ov. *Trist.* l. 10. 21; in Geogr. Rav. iv. 6. Tymphira; in *It. Ant.* p. 322, Timpirum; and in *It. Hier.* p. 602, Ad Unimpara), a town in the S. of Thrace, on the Egnatian Way, between Trajanopolis and Maximianopolis. It was situated in a defile, which rendered it a convenient spot for the operations of the predatory tribes in its neighbourhood. Here the Thrausi attacked the Roman army under Cn. Manlius, on its return, loaded with booty, through Thrace from Asia Minor (B. C. 188); but the want of shelter exposed their movements to the Romans, who were thus enabled to defeat them. (Liv. xxxviii. 41.) The defile in question is probably the same as the *Kopri-lav stevd* mentioned by Appian (*B. C.* iv. 102), and through which, he states, Brutus and Cassius marched on their way to Philippi (Tafel, *de Viae Egnatiae Parte orient.* p. 34). Paul Lucas (*Trois Voy.* pp. 25, 27) regards it as corresponding to the modern *Gürschine*. [J. R.]

TENCTERI or TENCHTERI (Τένκτεροι,

Τένκτεροι, Τένκεροι, and Τένκχάιροι or Τένκχάροι), an important German tribe, which is first mentioned by Caesar (*B. G.* iv. 1, 4). They appear, together with the Usipetes, originally to have occupied a district in the interior of Germany; but on being driven from their original homes by the Suevi, and having wandered about for a period of three years, they arrived on the banks of the Lower Rhine, and compelled the Menapii who inhabited both sides of the river to retreat to the western bank. Some time after this, the Germans even crossed the Rhine, established themselves on the western bank, in the country of the Menapii, and spread in all directions as far as the districts of the Eburones and Condrusi, who seem to have invited their assistance against the Romans. This happened in B.C. 56. The Germans demanded to be allowed to settle in Gaul; but Caesar, declaring that there was no room for them, promised to procure habitations for them in the country of the Ubii, who happened to have sent ambassadors to him at that time. The Germans asked for three days to consider the matter, requesting Caesar not to advance farther into their country. But, suspecting some treacherous design, he proceeded on his march, and an engagement ensued, in which the Romans were defeated and sustained serious losses. On the following day the chiefs of the Germans appeared before Caesar, declaring that their people had attacked the Romans without their orders, and again begged Caesar to stop his march. Caesar, however, not only kept the chiefs as his prisoners, but immediately ordered an attack to be made on their camp. The people, who during the absence of their chiefs had abandoned themselves to the feeling of security, were thrown into the greatest confusion by the unexpected attack. The men, however, fought on and among their waggons, while the women and children took to flight. The Roman cavalry pursued the fugitives; and when the Germans heard the screams of their wives and children, and saw them cut to pieces, they threw away their arms and fled towards the Rhine; but as the river stopped their flight, a great number of them perished by the sword of the Romans, and others were drowned in the Rhine. Those who escaped across the river were hospitably received by the Sigambri, who assigned to the Tencteri the district between the *Ruhr* and the *Sieg*. (Caes. *B. G.* iv. 4—16; Livy, *Epit. lib.* cxxxviii.; Tac. *Germ.* 32, 33, *Ann.* xiii. 56, *Hist.* iv. 21, 64, 77; Plut. *Caes.* 21; Dion Cass. xxxix. 47, liv. 20, 21; Flor. iii. 10, iv. 12; Oro. iv. 20; Appian, *de Reb. Gall.* 4, 18; Ptol. ii. 11. § 8.) The Tencteri were particularly celebrated for their excellent cavalry; and in their new country, on the eastern bank of the Rhine, they possessed the town of Budaris (either *Monheim* or *Düsseldorf*), and the fort of Divitia (*Deutz*). In the reign of Augustus, the Tencteri joined the confederacy of the Cherusci (Liv. l. c.), and afterwards repeatedly appear joining other tribes in their wars against Rome, until in the end they appear as a part of the great confederacy of the Franks. (Greg. Tur. ii. 9; comp. Wilhelm, *Germanien*, p. 141; Reichard, *Germanien*, p. 31; Latham, *Tucit. Germ.* p. 110.) [L. S.]

TENEA (Τένέα: *Eth. Tenevdrns*), the most important place in the Corinthia after the city of Corinth and her port towns, was situated south of the capital, and at the distance of 60 stadia from the latter, according to Pausanias. The southern gate of Corinth was called the Teneatic, from its leading to

Tenea. Stephanus describes Tenea as lying between Corinth and Mycenae. (*s. v. Τένεα*.) The Teneatae claimed descent from the inhabitants of Tenedos, who were brought over from Troy as prisoners, and settled by Agamemnon in this part of the Corinthia; and they said that it was in consequence of their Trojan origin that they worshipped Apollo above all the other gods. (Paus. ii. 5. § 4.) Strabo also mentions here the temple of Apollo Teneates, and says that Tenea and Tenedos had a common origin in Tenuus, the son of Cycnus. (Strab. viii. p. 380.) According to Dionysius, however, Tenea was of late foundation. (Cic. *ad Att.* vi. 2. § 3.) It was at Tenea that Oedipus was said to have passed his childhood. It was also from this place that Archias took the greater number of the colonists with whom he founded Syracuse. After the destruction of Corinth by Mummius, Tenea had the good fortune to continue undisturbed, because it is said to have assisted the Romans against Corinth. (Strab. l. c.) We cannot, however, suppose that an insignificant place like Tenea could have acted in opposition to Corinth and the Achaean League; and it is more probable that the Teneatae were spared by Mummius in consequence of their pretended Trojan descent and consequent affinity with the Romans themselves. However this may be, their good fortune gave rise to the line:

εὐδαίμων δὲ Κόρινθος, ἐγὼ δ' εἶην Τενεάτης.

Tenea lay in the mountain valley through which flows the river that falls into the Corinthian gulf to the east of Corinth. In this valley are three places at which vases and other antiquities have been discovered, namely, at the two villages of *Chilimódi* and *Klénia*, both on the road to Nauplia, and the latter at the very foot of the ancient road Contoporia [see Vol. I. p. 201, b.], and at the village of *Athiki*, an hour east of *Chilimódi*, on the road to *Sophikó*. In the fields of *Athiki* there was found an ancient statue of Apollo, a striking confirmation of the prevalence of the worship of this god in the district. The Teneatae would therefore appear to have dwelt in scattered abodes at these three spots and in the intervening country; but the village of Tenea, properly so called, was probably at *Chilimódi*, since the distance from this place to Corinth corresponds to the 60 stadia of Pausanias.

Since one of the passes from the Argeia into the Corinthia runs by *Klénia* and *Chilimódi*, there can be little doubt that it was by this road that Agesilaus marched from the Argeia to Corinth in B.C. 391. (Xen. *Hell.* iv. 5. § 19.) In the text of Xenophon the words are *ἐκείθεν ὑπερβαλὼν κατὰ Τεγίαν ἐς Κόρινθον*, but *Τεγίαν* ought to be substituted for *Τεγίαν*, since it is impossible to believe that Agesilaus could have marched from the Argeia to Corinth by way of Tegea. Moreover, we learn from Strabo (viii. p. 380) that the well-known name of Tegea was in other cases substituted for that of Tenea. In the parallel passage of the *Agésilauos* of Xenophon (ii. 17), the pass by Tenea is called *κατὰ τὰ στενὰ*. (Leake, *Morea*, vol. iii. p. 320, *Peloponnesiaca*, p. 400; Curtius, *Peloponnesos*, vol. ii. 549, fol.)

TENE'BRIUM (*Τενέβριον ἄκρον*, Ptol. ii. 6. § 16), a promontory on the E. coast of Spain, near the mouth of the Iberus. Stephanus B. (*s. v.*) also mentions a district called Tenebria, and Ptolemy a harbour called Tenebrius, which Marca (*Hisp.* ii. 8) takes to be *Alfacha* near *Tarragona*, but which must be looked for to the SW. [T. H. D.]

TENEDOS (*Τένεδος*; *Eth. Τενέδιος*; *Tenedo*, Turk. *Bogdaha-Adassi*), an island off the coast of Troas, from which its distance is only 40 stadia, while from Cape Sigeum it is 12 miles distant. (Strab. xiii. p. 604; Plin. ii. 106, v. 39.) It was originally called Leacophris, from its white cliffs, Calydna, Phoenice, or Lyrnessus (Strab. l. c.; Paus. x. 14. § 3; Steph. B. *s. v. Τένεδος*; Eustath. *ad Hom. Il.* p. 33; Plin. l. c.) and was believed to have received the name of Tenedos from Tennes, a son of Cycnus (Strab. viii. p. 380; Diod. v. 83; Conon, *Narrat.* 28; Cic. *in Verr.* i. 19). The island is described as being 80 stadia in circumference, and containing a town of the same name, which was an Aeolian settlement, and situated on the eastern coast. (Herod. i. 149; Thucyd. vii. 57.) The town possessed two harbours, one of which was called *Bápeion* (Arrian, *Anab.* ii. 2. § 3; Scylax, p. 35, who, however, notices only one), and a temple of the Smyrthian Apollo. (Strab. l. c.; *Hom. Il.* i. 38, 452.) In the Trojan legend, the island plays a prominent part, and at an early period seems to have been a place of considerable importance, as may be inferred from certain ancient proverbial expressions which owe their origin to it, such as *Τενέδιος τέλεκος* (Steph. B. *s. v.*; Apostol. xviii. 28; Diogenian. viii. 58; comp. Cic. *ad Quint. Frat.* ii. 11), *Τενέδιος ἄνθρωπος* (Zenob. vi. 9; Eustath. *ad Dionys.* 536), *Τενέδιος ἀλλήγης* (Steph. B. *s. v.*; Plut. *Quaest. Gr.* 28), *Τενέδιον κἀνὸν* (Apostol. x. 80), and *Τενέδιος εὐνήγορος* (Steph. B. *s. v.*). The laws and civil institutions of Tenedos seem to have been celebrated for their wisdom, if we may credit Pindar, whose eleventh Nemean ode is inscribed to Aristagoras, a prytanis or chief magistrate of the island. We further know from Stephanus B. that Aristotle wrote on the polity of Tenedos. During the Persian wars the island was taken possession of by the Persians (Herod. vi. 31), and during the Peloponnesian War it sided with Athens and paid tribute to her (Thuc. l. c. ii. 2), which seems to have amounted to 3426 drachmes every year. (Franz, *Elem. Epigraph.* n. 52.) Afterwards, in B.C. 389, Tenedos was ravaged by the Lacedaemonians for its fidelity to Athens (*Xen. Hist. Gr.* v. 1. § 6); but though the peace of Antalcidas gave up the island to Persia, it yet maintained its connection with Athens. (Demosth. c. *Polyc.* p. 1223, c. *Theocr.* p. 1333.) In the time of Alexander the Great, the Tenedians threw off the Persian yoke, and, though reconquered by Pharnabazus, they soon again revolted from Persia. (Arrian, *Anab.* ii. 2, iii. 2.) During the wars of Macedonia with the Romans, Tenedos, owing to its situation near the entrance of the Hellespont, was an important naval station. (Polyb. xvi. 34, xxvii. 6; Liv. xxxi. 16, xlv. 28.) In the war against Mithridates, Lucullus fought a great naval battle near Tenedos. (Plat. *Lac.* 3; Cic. *p. Arch.* 9, *p. Mur.* 15.) In the time of Virgil, Tenedos seems to have entirely lost its ancient importance, and, being conscious of their weakness, its inhabitants had placed themselves under the protection of Alexandria Trœs (Paus. x. 14. § 4). The favourable situation of the island, however, prevented its utter decay, and the emperor Justinian caused granaries to be erected in it, to receive the supplies of corn conveyed from Egypt to Constantinople. (Procop. *de Aed.* v. 1.) The women of Tenedos are reported to have been of surpassing beauty. (Athen. xiii. p. 609.) There are but few ancient remains in the island worthy of notice. (Chandler, *Travels in Asia Minor*, p. 22; Prokesch,

Denkwürdigkeiten, i. p. 111, foll.; Hemmer, *Respublica Tenediorum*, Hafniae, 1735.) [L. S.]

COIN OF TENEDOS.

TENEDOS (*Tēvedos*; *Eth. Tēvedós*), a fortified coast-town in the west of Pamphylia, 20 stadia to the west of Attalia. (Steph. B. s. v.; *Stadiasm. Mar. M.* §§ 224, 225.) It has been conjectured that this town is the same as Olbia, the remains of which are exactly 20 stadia from Attalia, and that one of the two names was Lycian and the other Greek. (Müller, *ad Stadiasm.* p. 490.) [L. S.]

TENERICUS CAMPUS. [ΒΟΡΩΤΙΑ, p. 413, b.]

TENESIS REGIO (*Τηνεσις*, Strab. xvi. p. 770), was, according to Strabo, who alone mentions it, an inland province of Aethiopia, lying due E. of the Sabae, and not far distant from the kingdom or city of Meroe. Tenesis was governed, at least when Strabo wrote, by a queen, who was also the sovereign of Meroe. This was one of the many districts of Aethiopia assigned by rumour to the Automoli, Sembritae, or Aegyptian war-caste, who abandoned their native country in the reign of Psammethichus [SEMBRITAE]. The lake Coloe and the sources of the Astapus are by some geographers placed in Tenesis. It was an alluvial plain bounded on the E. by the Abyssinian Highlands, and frequented by elephants, rhinoceroses, &c. [W. B. D.]

TENOS (*Τήνος*; *Eth. Τήνιος*; *Tino*), an island in the Aegaeen sea, and one of the Cyclades, lying between Andros and Delos, distant from the former 1 mile and from the latter 15 miles. (Plin. iv. 12. s. 22.) It stretches from NW. to SE., and is 15 miles long according to Pliny (*l. c.*), or 150 stadia according to Scylax (p. 55). It was also called Hydrussa (*Ἰδρυσσα*, *Ἰδρύσσα*) from the number of its springs, and Ophiussa because it abounded in snakes. (Plin. *l. c.*; Mela, ii. 7. § 11; Steph. B. s. v.) The sons of Boreas are said to have been slain in this island by Hercules. (Apoll. Rhod. i. 1304, with Schol.) In the invasion of Greece by Xerxes, the Tenians were compelled to serve in the Persian fleet; but a Tenian trireme deserted to the Greeks immediately before the battle of Salamis (B. C. 480), and accordingly the name of the Tenians was inscribed upon the tripod at Delphi in the list of Grecian states which had overthrown the Persians. (Herod. viii. 82.) Pausanias relates that the name of the Tenians was also inscribed on the statue of Zeus at Olympia among the Greeks who had fought at the battle of Plataea (v. 23. § 2). The Tenians afterwards formed part of the Athenian maritime empire, and are mentioned among the subject allies of Athens at the time of the Sicilian expedition (Thuc. vii. 57). They paid a yearly tribute of 3600 drachmae, from which it may be inferred that they enjoyed a considerable share of prosperity. (Franz, *Elem. Epigr. Gr.* No. 49.) Alexander of Phrae took possession of Tenos for a

time (Dem. c. *Polycl.* p. 1207); and the island was afterwards granted by M. Antonius to the Rhodians (Appian, B. C. v. 7.) After the conquest of Constantinople by the Latins, Tenos fell to the share of the Venetians, and remained in their hands long after their other possessions in the Aegaeen had been taken by the Turks. It was ceded by Venice to the Sultan by the peace of Passarowitz, 1718. It is still one of the most prosperous islands in the Aegaeen, and the inhabitants are remarkable for their industry and good conduct. The present population is about 15,000 souls, of whom more than half are Catholics,—a circumstance which, by bringing them into closer connection with western Europe, has contributed to their prosperity.

The ancient city of Tenos, of the same name as the island, stood at the south-western end upon the same site as *St. Nicolaos*, the present capital. Scylax says that it possessed a harbour, and Strabo describes it as a small town. (Scyl. p. 22; Strab. x. p. 487; Ptol. iii. 14. § 30.) In the neighbourhood of the city there was a celebrated temple of Poseidon situated in a grove, where festivals were celebrated, which were much frequented by all the neighbouring people. (Strab. *l. c.*; Tac. *Ann.* iii. 63; Clem. *Protr.* p. 18; Böckh, *Inscr.* No. 2329, 2331.) The attributes of Poseidon appear on the coins of Tenos. There was another town in the island named Eriston (*Ἐρίστον*; Böckh, *Inscr.* 2336, 2337), which was situated in the interior at the village of *Komi*. Among the curiosities of Tenos was mentioned a fountain, the water of which would not mix with wine. (Athen. ii. p. 43, c.) The island was celebrated in antiquity for its fine garlic. (Aristoph. *Plut.* 18.) The chief modern production of the island is wine, of which the best kind is the celebrated *Malvasia*, which now grows only at Tenos and no longer at *Monembasia* in Peloponnesus, from which place it derived its name. (Tournefort, *Voyage*, &c. vol. i. p. 271, transl.; *Exped. Scientif.* vol. iii. p. 2; Fiedler, *Reise*, vol. ii. p. 241, seq.; Finlay, *Hist. of Greece under Ottoman and Venetian Domination*, pp. 276, 287; and especially Ross, *Reise auf den Griech. Inseln*, vol. i. p. 11, seq., who cites a monograph, Marcaky Zallony, *Voyage à Tine, l'une des îles de l'Archipel de la Grèce*, Paris, 1809.)

COIN OF TENOS.

TENTYRA or TENTYRIS (*τὰ Τέρρα*, Strab. xvii. p. 814; Ptol. iv. 5. §§ 6, 8; Steph. B. s. v.: *Eth. Τερρῳίτης*), the Coptic *Tentoré* and the modern *Denderah*, was the capital of the Tentyrite Nome in Upper Aegypt (Agatharch. *ap. Phot.* p. 447, ed. Bekker). It was situated in lat. 26° 9' N., on the western bank of the Nile, about 38 miles N. of Thebes. The name of the city was probably derived from the principal object of worship there—the goddess Athor (Aphrodite), being a contracted form of *Thy-ā-Athor* or abode of Athor. The hieroglyphic legend of the genius of the place contains

the name of the town, and is generally attached to the head-dress of Athor, accompanied by the sign Kali or "the land." The Tentyrite Athor has a human face with the ears of a cow (Rosellini, *Monum. del Culto*, pl. 29. 3), and her attributes so closely resemble those of Isis, that it was long doubtful to which of the two goddesses the great temple at Tentyra was dedicated. Like Isis, Athor is delineated nursing a young child named *Ekhôu*, said, in hieroglyphics, to be her son. He is the third member of the Tentyrite triad of deities.

The principal fabrics and produce of Tentyra were flax and linen. (Plin. xix. 1.) Its inhabitants held the crocodile in abhorrence, and engaged in sanguinary conflicts with its worshippers, especially with those of the Ombite Nome [OMBOIS]. Juvenal appears to have witnessed one of these combats, in which the Ombites had the worst of it, and one of them, falling in his flight, was torn to pieces and devoured by the Tentyrites. Juvenal, indeed, describes this fight as between the inhabitants of contiguous nomes ("inter finitimos"); but this is incorrect, since Ombos and Tentyra are more than 50 miles apart. As, however, Coptos and Tentyra were nearly opposite to each other, and the crocodile was worshipped by the Coptites also, we should probably read Coptos for Ombos in Juvenal. (*Sat.* xv.) The latter were so expert in the chase of this animal in its native element, that they were wont to follow it into the Nile, and drag it to shore. (Aelian, *Hist. Anim.* x. 24; Plin. viii. 25. s. 38.) Seneca (*Nat. Quæst.* ii. 2) says that it was their presence of mind that gave the Tentyrites the advantage over the crocodile, for the men themselves were small sinewy fellows. Strabo (xvii. pp. 814, 815) saw at Rome the exhibition of a combat between the crocodile and men purposely imported from Tentyra. They plunged boldly into the tanks, and, entangling the crocodiles in nets, haled them backwards and forwards in and out of the water, to the great amazement of the beholders.

So long as Aegypt was comparatively unexplored, no ruins attracted more admiration from travellers than those of Tentyra. They are the first in tolerable preservation and of conspicuous magnitude that meet the eyes of those who ascend the Nile. They are remote from the highways and habitations of men, standing at the foot of the Libyan hills, amid the sands of the western desert. But though long regarded as works of a remote era, Aegyptian art was already on the decline when the temples of Tentyra were erected. The architecture, indeed, reflects the grandeur of earlier periods; but the sculptures are ungraceful, and the hieroglyphics unskillfully crowded upon its monuments. The most ancient of the inscriptions do not go farther back than the reigns of the later Ptolemies; but the names of the Caesars, from Tiberius to Antoninus Pius (A. D. 14—161), are of frequent occurrence. Tentyra, in common with Upper Aegypt generally, appears to have profited by the peace and security it enjoyed under the imperial government to enlarge or restore its monuments, which, since the Persian occupation of the country, had mostly fallen into decay. The principal structures at Tentyra are the great temple dedicated to Athor; a temple of Isis; a Typhonium; and an isolated building without a roof, of which the object has not been discovered. With the exception of the latter, these structures are inclosed by a crude brick wall, forming a square, each side of which occupies 1000 feet, and which is

in some parts 35 feet high and 15 feet thick. Full descriptions of the remains of Tentyra may be found in the following works; Belzoni's *Travels in Nubia*; Hamilton's *Aegyptiaca*; and Richardson's *Travels along the Mediterranean and Parts adjacent*, in 1816—1817. Here it must suffice to notice briefly the three principal edifices:—

1. *The Temple of Athor.*—The approach to this temple is through a dromos, commencing at a solitary stone pylon, inscribed with the names of Demitian and Trajan, and extending to the portico, a distance of about 110 paces. The portico is open at the top, and supported by twenty-four columns, ranged in four rows with quadrangular capitals, having on each side a colossal head of Athor, surmounted by a quadrangular block, on each side of which is carved a temple doorway with two winged globes above it. These heads of the goddess, looking down upon the dromos, were doubtless the most imposing decorations of the temple. To the portico succeeds a hall supported by six columns, and flanked by three chambers on either side of it. Next comes a central chamber, opening on one side upon a staircase, on the other into two small chambers. This is followed by a similar chamber, also with lateral rooms; and, lastly, comes the *naos* or sanctuary, which is small, surrounded by a corridor, and flanked on either side by three chambers. The hieroglyphics and picturesque decorations are so numerous, that nowhere on the walls, columns, architraves, or ceiling of the temple, is there a space of two feet unoccupied by them. They represent men and women engaged in various religious or secular employments; animals, plants, public ceremonies and processions, and the emblems of agriculture or manufactures. Occasionally, also, occur historical portraits of great interest, such as those of Cleopatra and her son Caesarian. The effect of this wilderness of highly-coloured basso-relievos was greatly enhanced by the mode by which the temple itself was lighted. The sanctuary itself is quite dark; the light is admitted into the chambers through small perforations in their walls. Yet the entire structure displays wealth and labour rather than skill or good taste, and, although so elaborately ornamented, was never completed. The emperor Tiberius finished the *naos*, erected the portico, and added much to the decoration of the exterior walls; but some of the cartouches designed for royal or imperial names have never been filled up.

On the ceiling of the portico is the famous zodiac of Tentyra, long imagined to be a work of the Pharaonic times, but now ascertained to have been executed within the Christian era. Though denominated a zodiac, however by the French savans, it is doubtful whether this drawing be not merely mythological, or at most astrological, in its object. In the first place the number of the supposed signs is incomplete. The crab is wanting, and the order of the other zodiacal signs is not strictly observed. Indeed if any astral signification at all be intended in the picture, it refers to astrology, the zodiac, as we know it, being unknown to the Aegyptians. Archaeologists are now pretty well agreed that a panægyris or procession of the Tentyrite triad with their cognate deities is here represented. The Greek inscription, which, long overlooked, determines the recent date of this portion of the temple, runs along the projecting summit of the cornice of the portico. It was engraved in the twenty-first year of Tiberius, A. D. 35 (Letronne, *Inscript.* p. 97). Upon the

ceiling of one of the lateral chambers, behind the portico, and on the right side of the temple, was a smaller group of mythological figures, which has also been styled a planisphere or zodiac. This being sculptured on a kind of sandstone, was removable, and by the permission of Mehemet Ali, in 1821, was cut out of the ceiling by M. Lelorrain, and brought to Paris. It was purchased by the French government, and is now in the Imperial Museum. It is probably a few years older than the larger zodiac.

2. *The Iscium.* — "The chapel of Isis is behind the temple of Athor." (Strab. xvii. p. 814.) It stands, indeed, immediately behind its SW. angle. It consists of one central and two lateral chambers, with a corridor in front. Among its hieroglyphics appear the names of Augustus, Claudius, and Nero. About 170 paces E. of this chapel stands a pylon, with a Greek inscription, importing that in the thirty-first year of Caesar (Augustus) it was dedicated to Isis. (Letronne, *ib.* pp. 82, 84.)

3. *The Typhonium*, as it is denominated from the emblems of Typhon on its walls, stands about 90 paces N. of the great temple. It comprises two outer passage-chambers and a central and lateral adytum. A peristyle of twenty-two columns surrounds the sides and the rear of the building. On its walls are inscribed the names of Trajan, Hadrian, and Antoninus Pius. But although the symbols of the principle of destruction are found on its walls, Typhon can hardly have been the presiding deity of this temple. From the circumstance that all the other sculptures refer to the birth of Ekhon, Champollion (*Lettres sur l'Egypte*, vol. ii. p. 67) suggests that this was one of the chapels styled "Mammeisi," or "lying-in places," and that it commemorated the accouchment of Athor, mother of Ekhon. Typhon is here accordingly in a subordinate character, and symbolises not destruction, but darkness, chaos, or the "night primeval," which precedes creation and birth.

For the monuments of Tentyra, besides the works already enumerated, Wilkinson's *Ancient Egyptians and Modern Egypt and Thebes*, and the volumes in the *Library of Entertaining Knowledge*, entitled *British Museum, Egyptian Antiquities*, may be consulted; and for the zodiacs, Visconti, *Oeuvres* tom. iv.; Letronne, *Observations sur l'Objet des Représentations Zodiacales de l'Antiquité*, 8vo. Paris, 1824; or Halma, *Examen et Explications des Zodiacques Egyptiennes*, 8vo. 1822. [W. B. D.]

TENURCIO. [TINURTIUM.]

TEOS (*Tées*: *Ἐθ. Τήος*), an Ionian city on the coast of Asia Minor, on the south side of the isthmus connecting the Ionian peninsula of Mount Mimas with the mainland. It was originally a colony of the Minyae of Orchomenos led out by Athamas, but during the Ionian migration the inhabitants were joined by numerous colonists from Athens under Naucleus, a son of Codrus, Apocueus, and Damasus; and afterwards their number was further increased by Boeotians under Geres. (Strab. xiv. p. 633; Paus. vii. 3. § 3; Herod. i. 142; Scylax, p. 37; Steph. B. s. v.) The city had two good harbours, one of which is mentioned even by Scylax, and the second, 30 stadia distant from the former, is called by Strabo *Ῥεῖπαιδας* (xiv. p. 644), and by Livy (xxxvii. 27) *Geraesicus*. Teos became a flourishing commercial town, and enjoyed its prosperity until the time of the Persian dominion, when its inhabitants, unable to bear the insolence of the barbarians, abandoned

their city and removed to Abdera in Thrace. (Herod. i. 168; Strab. l. c.) But though deserted by the greater part of its inhabitants, Teos still continued to be one of the Ionian cities, and in alliance with Athens. (Thucyd. iii. 32.) After the Sicilian disaster, Teos revolted from Athens, but was speedily reduced (Thucyd. viii. 16, 19, 20). In the war against Antiochus, the fleet of the Romans and Rhodians gained a victory over that of the Syrian king in the neighbourhood of this city. (Liv. l. c.; comp. Polyb. v. 77.) The vicinity of Teos produced excellent wine, whence Bacchus was one of the chief divinities of the place. Pliny (v. 38) erroneously calls Teos an island, for at most it could only be termed a peninsula. (Comp. Pomp. Mela, i. 17; Ptol. v. 2. § 6.) There still exist considerable remains of Teos at a place called *Sighajik*, which seems to have been one of the ports of the ancient city, and the walls of which are constructed of the ruins of Teos, so that they are covered with a number of Greek inscriptions of considerable interest, referring, as they do, to treaties made between the Teians and other states, such as the Romans, Aetolians, and several cities of Crete, by all of whom the inviolability of the Teian territory, the worship of Bacchus, and the right of asylum are confirmed. The most interesting among the ruins of Teos are those of the theatre and of the great and splendid temple of Bacchus; the massive walls of the city also may still be traced along their whole extent. The theatre commands a magnificent view, overlooking the site of the ancient city and the bay as far as the bold promontory of Myonnesus and the distant island of Samos. For a detailed description of these remains, see Hamilton, *Researches*, ii. p. 11, foll.; comp. Leake, *Asia Minor*, p. 350. [L. S.]

COIN OF TEOS.

TERACA'TRIAE (*Τερακατρία*), a German tribe in Noricum, on the banks of the Danube, probably on the south of the territory occupied by the Baemi (Ptol. ii. 11. § 26.) [L. S.]

TEREDON. [EUPHRATES].

TEREN (*Τήρην*, Diod. v. 72), a river in Crete, perhaps a tributary of the Amnisus, or the modern *Aposceleu*. [T. H. D.]

TERENU'THIS (*Τερενοῦθις*, *Not. Imp.*), the modern *Terranich*, a town in Lower Egypt, was situated on the left bank of the Canopic arm of the Nile. At this point a pass through the hills conducted to the Natron Lakes, about 30 miles to the W. of the town. The people of Terenuthis farmed of the government a monopoly for collecting and exporting natron. [NITRIAE]. Ruins at the modern hamlet of *Abou-Belleu* represent the ancient Terenuthis. (Sonnini, *Voyages*, vol. i. p. 228.) [W. B. D.]

TEREPS FLUVIUS. [TADER.]

TERESES FORTUNALES, a place in the W. of Hispania Baetica (Plin. iii. 1. s. 3). [T. H. D.]

TERGESTE (*Τέρπεστον*, Strab. *Τέρπεστον*, Ptol. *Ἐθ. Tergestinus: Trieste*), a city of Venetia or Istria, situated on a bay to which it gave the name of TERGESTINUS SINUS, which forms the inner bight or extremity of the Adriatic sea towards the N. It

was very near the confines of Istria and Venetia, so that there is considerable discrepancy between ancient authors as to which of these provinces it belonged, both Strabo and Ptolemy reckoning it a city of Istria, while Pliny includes it in the region of the Carni, which was comprised in Venetia. (Strab. v. p. 215, vii. p. 314; Plin. iii. 18. a. 22; Ptol. iii. 1. § 27.) Mela on the contrary calls it the boundary of Illyricum (ii. 4. § 3). From the time that the Formio, a river which falls into the sea 6 miles S. of Trieste, became fixed as the boundary of the provinces [FORMIO], there can be no doubt that Pliny's attribution is correct. It is probable that Tergeste was originally a native town either of the Carni or Istrians, but no mention is found of its name till after the Roman conquest, nor does it appear to have risen into a place of importance until a later period. The first historical mention of it is in A. C. 51, when we learn that it was taken and plundered by a sudden incursion of the neighbouring barbarians (Caes. B. G. viii. 24; Appian, *Illyr.* 18); but from the terms in which it is there noticed it is evident that it was already a Roman town, and apparently had already received a Roman colony. It was afterwards restored, and, to protect it for the future against similar disasters, was fortified with a wall and towers by Octavian in B. C. 32. (Gruter, *Inscr.* p. 266. 6.) It is certain that it enjoyed the rank of a Colonia from the time of Augustus, and is styled such both by Pliny and Ptolemy. (Plin. iii. 18. a. 22; Ptol. iii. 1. § 27.) That emperor also placed under the protection and authority of the city the neighbouring barbarian tribes of the Carni and Catali, and, by reducing to subjection their more formidable neighbours, the Iapodes, laid the foundations of the prosperity of Tergeste. The growth of this was mainly promoted by the advantages of its port, which is the only good harbour in this part of the Adriatic; but it was apparently overshadowed by the greatness of the neighbouring Aquileia, and Tergeste, though a considerable municipal town, never rose in ancient times to a commanding position. We even learn that in the reign of Antoninus Pius the citizens obtained the admission of the Carni and Catali—who had previously been mere subjects or dependents—to the Roman "civitas," in order that they might share the burdensome honours of the local magistracy. (Orell. *Inscr.* 4040.) The inscription from which we learn this fact is one of the most interesting municipal records preserved to us from ancient times, and has been repeatedly published, especially with notes and illustrations by C. T. Zumpt (*Decretum Municipale Tergestinum*, 4to. Berol. 1837) and by Götting (*Fünfzehn Römische Urkunden*, p. 75). No subsequent mention of Tergeste is found in history under the Roman Empire; but it is certain that it continued to exist; and retained its position as a considerable town throughout the middle ages. But it is only within the last century that it has risen to the position that it now occupies of one of the most populous and flourishing cities on the Adriatic. The only remains of antiquity extant at Trieste are some portions of a Roman temple, built into the modern cathedral, together with several inscriptions (including the celebrated one already noticed) and some fragments of friezes, bas-reliefs, &c.

Tergeste is placed by the Itineraries at a distance of 24 miles from Aquileia, on the line of road which followed the coast from that city into Istria. (*Itin. Ant.* p. 270; *Tab. Peut.*) Pliny, less correctly,

calls it 33 miles from that city (Plin. l. c.). The spacious gulf on which it was situated, called by Pliny the TERGESTINUS SINUS, is still known as the *Gulf of Trieste*. [E. H. B.]

TERGOLAPE, a town in Noricum, on the road from Ovilaba to Juvavum; was situated in all probability near *Lambach*. (*Tab. Peut.*; Muchar, *Noricum*, vol. i. p. 266.) [L. S.]

TERIA (Τέρεια), is mentioned in Homer (*Il.* ii. 829) in connection with a lofty mountain, or as a mountain itself (Τυρηνός ὄρος αἰνός), and, according to Strab. (xii. p. 565, comp. xiii. p. 589), ought to be regarded as a height in the neighbourhood of Cyzicus; although others pointed out, at a distance of 40 stadia from Lampascus, a hill with a temple of the Mother of the Gods, surnamed Teria. [L. S.]

TERIAS (Τηρίας: *Fiume di S. Leonardo*), a river of Sicily, on the E. coast of the island, flowing into the sea between Catania and Syracuse. It is mentioned by Pliny (iii. 8. a. 14) immediately after the Symæthus; and Scylax tells us it was navigable for the distance of 20 stadia up to Leontini. (Scyl. p. 4. § 13.) Though this last statement is not quite accurate, inasmuch as Leontini is at least 60 stadia from the sea, it leaves little doubt that the river meant is that now called the *Fiume di S. Leonardo*, which flows from the *Lake of Lentini* (which is not mentioned by any ancient author) to the sea. It has its outlet in a small bay or cove, which affords a tolerable shelter for shipping. Hence we find the mouth of the Terias twice selected by the Athenians as a halting-place, while proceeding with their fleet along the E. coast of Sicily. (Thuc. vi. 50, 96.) The connection of the Terias with Leontini is confirmed by Diodorus, who tells us that Dionysius encamped on the banks of that river near the city of Leontini. (Diod. xiv. 14.) [E. H. B.]

TERICLAE. [TUTICLAE.]

TERINA (Τέρινα, but Τέρπεινα Lycophr.: *Ἐλ. Τερπναίος*, Terinaeus), a city on the W. coast of the Bruttian peninsula, near the *Gulf of St. Eufemia*, to which it gave the name of TERINAEUS SINUS. All writers agree in representing it as a Greek city and a colony of Crotona. (Seym. Ch. 307; Steph. B. s. v.; Scyl. p. 4. § 12; Strab. vi. p. 256; Plin. iii. 5. s. 10; Solin. 2. § 10), but we have no account of the time or circumstances of its foundation. It was regarded as the burial-place of the Siren Ligeia, a tradition which evidently pointed to the existence of a more ancient town on the spot than the Greek colony. (Lycophr. *Alex.* 726; Steph. B. s. v.) The name of Terina is scarcely mentioned in history during the flourishing period of Magna Graecia; but we learn from an incidental notice that it was engaged in war with the Thurians under Cleandridas (Polyaen. *Strat.* ii. 10. § 1)—a proof that it was at this time no inconsiderable city; and the number, beauty, and variety of its coins sufficiently attest the fact that it must have been a place of wealth and importance. (Millingen, *Numism. de l'Italie*, p. 53.) Almost the first notice of Terina is that of its conquest by the Bruttians, an event which appears to have taken place soon after the rise of that people in A. C. 356, as, according to Diodorus, it was the first Greek city which fell into their hands. (Diod. xvi. 15.) It was recovered from them by Alexander, king of Epirus, about 327 B. C. (Liv. viii. 24), but probably fell again under their yoke after the death of that monarch. It was one of the cities which declared in favour of Hannibal during the Second Punic

War; but before the close of the war that general found himself compelled to abandon this part of Brutium, and destroyed Terina, when he could no longer hold it. (Strab. vi. p. 256.) The city never recovered this blow; and though there seems to have been still a town of the name in existence in the days of Strabo and Pliny, it never again rose to be a place of any importance. (Strab. l. c.; Plin. iii. 5. s. 10.) An inscription in which its name appears in the reign of Trajan (Orell. *Inscr.* 150) is in all probability spurious.

The site of Terina cannot be determined with any certainty; but the circumstance that the extensive bay now known as the *Gulf of Sta Eufemia* was frequently called the *SINUS TERINAEUS* (Plin. iii. 5. s. 10; δ *Τερναῖος κόλπος*, Thuc. vi. 104), sufficiently proves that Terina must have been situated in its immediate proximity. The most probable conjecture is, that it occupied nearly, if not exactly, the same site as the old town of *Sta Eufemia* (which was destroyed by a great earthquake in 1638), about a mile below the modern village of the name, and near the N. extremity of the gulf to which it gives its name. Cluverius and other antiquarians have placed it considerably further to the N., near the modern *Nocera*, where there are said to be the ruins of an ancient city (Cluver. *Ital.* p. 1287; *Barrina, de Sit. Calabr.* ii. 10. p. 124); but this site is above 7 miles distant from the gulf, to which it could hardly therefore have given name. There is also reason to suppose that the ruins in question are those of a town which bore in ancient times the name of Nuceria, which it still retains with little alteration. [NUCERIA, No. 4.]

Lycophron seems to place Terina on the banks of a river, which he names OCINARUS (Ὀκινάρος, Lycophr. *Alex.* 729, 1009); and this name, which is not found elsewhere, has been generally identified with the river now called the *Savuto* (the *Sabatus* of the Itineraries), which flows by *Nocera*. But this identification rests on the position assumed for Terina; and the name of the Ocinarus may be equally well applied to any of the streams falling into the *Gulf of Sta Eufemia*.

The variety and beauty of the silver coins of Terina (which belong for the most part to the best period of Greek art), has been already alluded to. The winged female figure on the reverse, though commonly called a Victory, is more probably intended for the Siren Ligeia. [E. H. B.]

COIN OF TERINA.

TERINAEUS SINUS. [HIPPONIAES SINUS.]

TERIOLA CASTRA or TERIOLIS, a fortress in Rhaetia, mentioned only in the *Notitia Imperii*, but generally identified with the castle near *Meran*, near which many Roman remains are found. (Comp. *Pallhausen, Beschreib. der Röm. Heerstrasse von Verona nach Augsburg*, p. 86.) [L. S.]

TERMANTIA. [TERMES.]

TERMERA (τὰ Τέρμερα or Τέρμερον; *Eth.* Τέρμερες), a maritime town of Caria, on the south coast

of the peninsula of Halicarnassus, near Cape Termerium. (Herod. v. 37; Strab. xiv. p. 657; Plin. v. 29; Steph. B. s. v., who erroneously assigns the town to Lycia.) Under the Romans this Dorian town was a free city. According to Suidas (s. v.) the place gave rise to the proverbial expression *Τέρμερια κἀκὸς*, it being used as a prison by the rulers of Caria; but his remark that it was situated between Melos and Halicarnassus is unintelligible. Cramer supposes its site to be marked by the modern *Carbaglar* or *Gumishlu*. [L. S.]

TERMEKE (Τέρμεκη), a place of uncertain site, mentioned only by Ptolemy (v. 2. § 16) as situated in the extreme north of Lydia, in the district Catacecaumene, near the two sources of the river Hermus. [L. S.]

TERMERIUM. [TERMERA.]

TERMES (Τέρμες, Ptol. ii. 6. § 56), a town of the Arevaci in Hispania Tarraconensis. It is probably the same town called *Τερμησός* and *Τερμαρία* by Appian (vi. 76 and 99). The inhabitants are called *Termestini* in Livy (*Epit.* liv.) and Tacitus (*Ann.* iv. 45; cf. coins in Sertini, p. 208). Termes was seated on a steep hill, and was often besieged without success by the Romans, till at last the inhabitants, on account of their hostile disposition towards Rome, were compelled in B. C. 97 to build a new city on the plain and without walls (App. vi. 99). It lay undoubtedly on the site of the present *Ermita de nuestra Señora de Termes*, 9 leagues W. of Numantia. [T. H. D.]

TERMESUS (Τερμησός, Τερμησός, Τερμσός, Τερμσός, Τελμσός; *Eth.* Τερμησσεύς), a town of Pisidia, celebrated for its natural strength no less than for its artificial fortifications, was situated on a height of Mount Taurus, at the entrance of the defiles which are traversed by the river Catarrhactes, and formed the means of communication between Pisidia, Pamphylia, and Lycia. (Strab. xiii. p. 630, xiv. p. 666; Ptol. v. 5. § 6, viii. 17. § 34; Polyb. xxii. 18; Steph. B. s. v.; Dion. Per. 859.) A peak of the mountain rising above the acropolis bore the name of Solymus; and the inhabitants of the town itself were, as Strabo says, called *Solymi*. They were certainly not Greeks, for Arrian (i. 27) distinctly calls them *Pisidians* and *barbarians*. Their town stood on a lofty height, precipitous on all sides; and the road running close by the place was very difficult, passing through a narrow gorge, which could be defended by a small force. Alexander the Great succeeded indeed in forcing his way through it, but despairing of the possibility of taking Termessus, he continued his march. Strabo (xiv. p. 666) therefore seems to be mistaken in stating that Alexander conquered the place. The consul Manlius, after relieving Isondia, passed along the same road. (Liv. xxxviii. 15.) The town of Termessus continued to exist down to a late period, when it was the see of a Christian bishop, who also had the administration of two neighbouring places, Jovia and Eudocia. (Hierocl. p. 680.) The site of ancient Termessus has not been difficult to discover by modern travellers, and considerable remains still exist at *Karabunar Kisi*, at the foot of the height on which the ancient fortress was situated. (Leake, *Asia Minor*, pp. 133—135.) As to the coins of Termessus, which come down as far as the reign of the emperor Severus, see Sestini, p. 96. On some of these coins we read *μειζόνων* in addition to the name of the Termessians, a circumstance which confirms the

statement of Stephanus B. that there was another town of the same name in Pisidia, which was called Lesser Termessus (Τερμησσός ἡ μικρά.) [L. S.]

COIN OF TERMESSOS.

TERMETIS, a mountain of Lydia between Mounts Olympus and Imolus, is mentioned only by Pliny (v. 31). [L. S.]

TERMILAE (Τερμίλαι) is said to have been the ancient name of the inhabitants of Lydia, before the name Lydi came into use. These Termilae were believed to have come from Crete; and even in the time of Herodotus the Lydians were often called Termilae by the neighbouring nations. (Herod. i. 173, vii. 92; Paus. i. 19. § 4.) [L. S.]

TERPONUS (Τέρπωνος), a town of the Iapodes in Illyria, of uncertain site. (Appian, *B. Illyr.* 18.)

TESA (Τησα, Marcian, *Periplus* p. 23; *Tesed*, Ptol. vi. 8. § 8), a small town on the coast of Gedrosia, visited by the fleet of Nearchus. It is probably the same as the Tdoi or Tpoloi of Arrian (*Ind.* c. 29), and may be represented by the present *Tiz*. [V.]

TESEBA'RICE (Τισθαρχική, sc. χώρα, *Periplus Mar. Erythr.* p. 1, ap. Hudson, *Geogr. Min.*), is supposed to have been a portion of the district inhabited by the Troglodytes. The modern Persian name *Tres-u Bareek* closely resembles the ancient one, and is said to mean, when applied to a country, "low and flat," which designation would accord with the S. portion of the Regio Troglodytica in the level region of Aethiopia, near the mouth of the Red Sea. (Vincent, *Commerce and Navigation of the Ancients*, vol. ii. p. 89. [TROGLODYTAE.] [W.B.D.]

TESTRINA. [ABOIGINEA.]

TETIUS (Τέτιος, Ptol. v. 14. § 2), a river on the S. coast of Cyprus, probably the *Toris*. [T. H. D.]

TETRADIUM. [TYRIARUM.]

TETRANAULOCHUS. [NAULOCHEUS, No. 3.]

TETRAPHYLLA, a town of Athamania in Epeirus, where the royal treasures were kept. (Liv. xxxviii. 1.)

TETRA'POLIS. 1. Of Attica. [MARATHON.]

2. Of Doris. [DORIS.]

TETRAPHYRGIA (Τετραφυργία). 1. A town in the Cyrenaica, of uncertain site, situated above the harbour Plynus. (Strab. xvii. p. 838; Polyb. xxi. 26.)

2. A town of Cappadocia in the district Garsauria. (Ptol. v. 6. § 14.)

TETRICA MONS, a mountain in the central range of the Apennines, adjoining the territory of the Sabines. Virgil enumerates the "Tetricae horrentes rupes" among the localities of that people, and Silius Italicus in like manner closely associates the "Tetrica rupes" with Nursia. Varro also speaks of the Montes Fiscellus and Tetrica as abounding in wild goats. (Virg. *Aen.* vii. 713; Sil. Ital. viii. 417; Varr. *R. R.* ii. 1. § 5.) From all these passages it is evident that it was one of the

TEUMESSUS.

lofty and rugged chain of the Central Apennines, which extend from the *Monti della Sibilla*, southwards as far as the *Gran Sasso*, separating Picenum from the country of the Sabines; and this position is confirmed by Servius and Vibius Sequester, of whom the former calls it "Mons in Piceno asperissimus," while the latter terms it "Mons Sabinorum." (Serv. *ad Aen.* l. c.; Vib. *Seq.* p. 33.) It cannot be identified with more accuracy. The two grammarians just quoted write the name "Tetricus Mons;" but Varro, as well as Virgil and Silius, adopts the feminine form, which is not therefore one merely poetical. [E. H. B.]

TETRISIUS [TIMIZIS].

TETUS (Τῆτος), a river on the Atlantic coast of Gallia, which Ptolemy (ii. 8. § 2) places between the Staliocanus Portus and Argennus, or the outlet of the river Argennus, if that is the true reading. It is impossible to determine what river is the Tetus. D'Anville assumes the place to be the bay of Sea, which receives the rivers *Sée* and *Séisme*. Others take the Tetus to be the *Treguier* or *Trica*. (L'art. *Gallien*, p. 144.) [G. L.]

TEUCERA, in North Gallia, is placed by the Table about halfway between Nemetacum (*Arras*) and Samarobriua (*Amiens*). *Tièvre*, on the road from *Amiens* to *Arras*, represents Teucera. (D'Anville, *Notice*, &c.) [G. L.]

TEUCRI. [TROAS.]

TEUDE'RIUM (Τευδέριον), a place in the country of the Chanci Minores, on the river Amasia, in Germany (Ptol. ii. 11. § 28). Its site is commonly identified with that of the village of *Dörzen*, near *Meppen*. [L. S.]

TEUDURUM, in North Gallia, is placed in the Antonine Itinerary on a route from Colonia Trajana [COLONIA TRAJANA] through Juliaeum (*Jülich*) to Colonia Agrippina (*Cologne*). The place is *Tuddera*. The distance from *Tuddera* to the supposed site of Coriovallum is marked viii. [CORIOVALLUM.] [G. L.]

TEUGLUSSA (Τεύγλουσσα), an island mentioned by Thucydides (viii. 42, where some read *Τεύρλουσσα*), which, from the manner he speaks of it, must have been situated between Syme and Halicarnassus. Stephanus B. also mentions the island on the authority of Thucydides, but calls it Teulussa and an island of Ionia. There can be no doubt that the Scutluna mentioned by Pliny (v. 36) is the same as the Teuglussa or Teutlussa of Thucydides. [L. S.]

TEUMESSUS (Τευμησσός: *Εἰς Τευμησσόν*), a village in Boeotia, situated in the plain of Thebes, upon a low rocky hill of the same name. The name of this hill appears to have been also given to the range of mountains separating the plain of Thebes from the valley of the Asopus. [ΒΟΙΩΤΙΑ, pp. 413, 414.] Teumessus was upon the road from Thebes to Chalcis (Paus. ix. 19. § 1), at the distance of 100 stadia from the former. (Schol. *ad Euseb. Phoen.* 1103.) It is mentioned in one of the Homeric hymns (*Hymn. in Apoll.* 228) with the epithet *λεχέροισι* or grassy, an epithet justified by the rich plain which surrounds the town. Teumessus is celebrated in the epic legends, especially on account of the Teumessian fox, which ravaged the territory of Thebes. (Paus. l. c.; Anton. Lib. 41; Palaeph. *de Incredib.* 8; see *Dict. of Biogr.* Vol. I. p. 667.) The only building at Teumessus mentioned by Pausanias was a temple of Athena Telchinia, without any statue. (Besides the authorities already quoted, see Strab.

ix. p. 409; Aristot. *Rhet.* iii. 6; Plin. iv. 7. s. 12; Steph. B. s. v.; Phot. *Lex.* p. 428; Leake, *Northern Greece*, vol. ii. p. 245, seq.)

TEURIOCHAEMAE (*Τευριοχαμαι*), a German tribe, occupying the country south of the Cherusci, on the north of Mons Sudeta, in the modern *Erzgebirge* and *Voigtland*. (Ptol. ii. 11. § 23.) [L. S.]

TEURISCI (*Τευρίσκοι*, Ptol. iii. 8. § 5), a Dacian tribe near the sources of the Tyras. [T. H. D.]

TEURNIA (*Τευνπία*), a Celtic town in Noricum, on the left bank of the upper part of the river Dravus (Plin. iii. 27; Ptol. ii. 14. § 3). Its site is still marked by considerable ruins not far from the little town of *Spital*. (Comp. Orelli, *Inscript.* Nos. 498 and 5071; Eugippus, *Vit. S. Severi*, 17, 21, where it is called Tiburnia.) [L. S.]

TEUTHEA. [Dyme.]

TEUTHEAS. [ACHAIA, p. 14, a.]

TEUTHIS (*Τεύθις*: *Eth. Τευθίωνς*), a town in the centre of Arcadia, which together with Theisoa and Methydrium belonged to the confederation (*συντρίλεια*) of Orchomenus. Its inhabitants were removed to Megalopolis upon the foundation of the latter. The *Palaecastron* of *Galatis* probably represents Teuthis. (Paus. viii. 27. §§ 4, 7, 28. § 4; Steph. B. s. v.; Ross, *Reisen im Peloponnes*, vol. i. p. 114.)

TEUTHRANIA (*Τευθρανία*), the name of the western part of Mysia about the river Caicus, which was believed to be derived from an ancient Mysian king Teuthras. This king is said to have adopted, as his son and successor, Telephus, a son of Heracles; and Eurypylos, the son of Telephus, appears in the *Odyssey* as the ruler of the Ceteii. (Strab. iii. p. 615; Hom. *Od.* x. 520; comp. MYRIA.)

In the district Teuthrania a town of the same name is mentioned as situated between Elaea, Pitane, and Atarneus (Strab. l. c.; Steph. B. s. v.; Xenoph. *Hist. Gr.* iii. 1. § 6), but no other particulars are known about it. [L. S.]

TEUTHRAS (*Τεύθρας*), the south-western part of Mt. Temnus in Teuthrania (Ctesias, *ap. Stob. Serm.* p. 213, ed. Bähr), is perhaps the mountain now called *Domacii*, which the caravans proceeding from *Smyrna* to *Brusa* have to traverse. (Lucas, *Trois-Voyage*, i. p. 133.) [L. S.]

TEUTHRONE (*Τευθρώνη*), a town of Laconia, situated upon the western side of the Laconian gulf, 150 stadia from Cape Taenarum. It was said to have been founded by the Athenian Teuthras. The chief deity worshipped here was Artemis Iasoria. It had a fountain called Naia. Its ruins exist at the village of *Kotrónes*, and its citadel occupied a small peninsula, called *Skopos*, *Skopia* or *Skopópolis*. The distance assigned by Pausanias of 150 stadia from Teuthrone to Cape Taenarum is, according to the French Commission, only from 8 to 10 stadia in excess. Augustus made Teuthrone one of the Eleuthero-Laconian towns. (Paus. iii. 21. § 7, iii. 25. § 4; Ptol. iii. 16. § 9; Boblaye, *Recherches*, &c. p. 89; Curtius, *Peloponnesos*, vol. ii. p. 276.)

TEUTIBURGIUM or TEUTOBURGIUM (*Τευτοβούργιον*), a town in Lower Pannonia, near the confluence of the Dravus and Danubius, on the road from Murza to Carnacum, was the station of the praefect of the sixth legion and a corps of Dalmatian horsemen. (*It. Ant.* p. 243; Ptol. ii. 16. § 5; *Notit. Imp.*; *Tub. Peut.*, where it is miswritten Tittoburgium.) The name seems to indicate that it was originally a settlement of the

Teutones, which may have been founded at the time when they roamed over those countries, about B. C. 113. No remains are now extant, and its exact site is only matter of conjecture. (Müchur, *Norikum*, vol. i. p. 265.) [L. S.]

TEUTOBERGIENSIS SALTUS, a mountain forest in Western Germany, where in A.D. 9 the Roman legions under Varus suffered the memorable defeat, and where, six years later, their unburied remains were found by Drusus. (Tac. *Ann.* i. 60.) A general description of the locality without the mention of the name is found in Dion Cassius (lvi. 20, 21; comp. Vell. Pat. ii. 105, 118, foll.). This locality has in modern times been the subject of much discussion among German antiquaries; but the words of Tacitus seem to imply clearly that he was thinking of the range of hills between the sources of the Lupia and Amasis; that is, the range between *Lippspringe* and *Haustenbeck*. (Giefers, *De Aliosne Castello deque Varianae Cladis Loco Commentatio*, p. 47, foll.) [L. S.]

TEUTONES or TEUTONI (*Τεύτονας*), the name of a powerful German tribe, which about B. C. 113 appeared on the frontiers of Gaul at the same time when the Cimbri, probably a Celtic people, after defeating the Romans in several battles, traversed Gaul and invaded Spain. The Teutones, however, remained behind ravaging Gaul, and were joined by the Ombrones. At length, in B. C. 102, they were defeated by C. Marius in a great battle near Aquae Sextiae, where, according to the most moderate accounts, 100,000 of them were slain, while 80,000 or 90,000 are said to have been taken prisoners. A body of 6000 men, who survived that terrible day, are said to have established themselves in Gaul between the *Maas* and *Schelde*, where they became the ancestors of the Aduatici. (Liv. *Epit.* lib. lxxvii.; Vell. Pat. ii. 12; Flor. iii. 3; Plut. *Mar.* 36, foll.; Oros. v. 16; Caes. *B. G.* ii. 4, 29.) After this great defeat, the Teutones are for a long time not heard of in history, while during the preceding ten years they are described as wandering about the Upper Rhine, and eastward even as far as Pannonia. In later times a tribe bearing the name of Teutones is mentioned by Pomp. Mela (iii. 3), Pliny (xxxvii. 11), and Ptolemy (ii. 11. § 17) as inhabiting a district in the north-west of Germany, on the north of the river Albis, where according to Pliny, they dwelt even as early as the time of Pytheas of Massilia. The question here naturally presents itself whether these Teutones in the north of Germany were the same as those who in the time of Marius invaded Gaul in conjunction with the Cimbri, who in fact came from the same quarters. This question must be answered in the affirmative; or in other words, the Teutones who appeared in the south were a branch of those in the north-west of Germany, having been induced to migrate southward either by inundations or other calamities. The numerous body of emigrants so much reduced the number of those remaining behind, that thereafter they were a tribe of no great importance. That the name of Teutones was never employed, either by the Germans themselves or by the Romans, as a general name for the whole German nation, has already been explained in the article GERMANIA. Some writers even regard the Teutones as not Germans at all, but either as Slavonians or Celts. (Latham, *Epilog. ad Tac. Germ.* p. cx.) The fact that the country between the lower Elbe and the Baltic was once inhabited by the

Teutones seems to be attested by the names of *Teutenwinkel*, a village near *Rostock*, and *Teutendorf*, between *Travemünde* and *Schwartzau*. [L. S.]

TEUTONO'ARI (*Τευτονόαραι*), a German tribe mentioned by Ptolemy (ii. 11. § 17) in close proximity to the Teutones, whence it may be inferred that they were only a branch of the Teutones. (Latham, *Epilog. ad Tac. Germ.* p. cxi.) [L. S.]

THABOR (*ΑΤΤΑΒΑΡΙΟΝ*).

THA'BRACA (*Θάβρακα κολωνία*, Ptol. vi. 3. §§ 5, 21, 28, viii. 14. § 3; Mela, i. 7), also called *Tabraca* (Plin. v. 3. s. 2, 6), a maritime city of Numidia, seated at the mouth of the *Tusca*. It was the border city towards Zeugitana, and a Roman colony. (Ptol., Plin., *ll. cc.*) The surrounding country was covered with thick woods. (Juv. S. x. 194.) Thabraca was the scene of the death of Gildo. (Claud. *Laud. Stil.* i. 359.) It still retains the name of *Tabarka*. (Cf. *Itin. Ant.* pp. 21, 495, 514; Aug. *adv. Donat.* vi. 32.) [T. H. D.]

THABRASTA, a place in the Libyan Nomos (*Itin. Ant.* p. 72), identified by Lapie with *Karr Boum Adjowah*. [T. H. D.]

THABUSIUM, a fortress on the river Indus in Caria, not far from Cibiya. (Liv. xxxviii. 14.)

THAGULIS (*Θαγουλίς*, Ptol. iv. 3. § 43), or TAGULUS (*Itin. Ant.* p. 65), a town in Africa Propria, on the Syrtis Major, according to Lapie near *Alé*. Called *Tagulis* in *Tab. Peut.* [T. H. D.]

THAGURA (called Thacora in *Tab. Peut.*), a place in Numidia, variously identified with *El-Guettar* and *El-Matnamia*. (*Itin. Ant.* p. 41.) [T. H. D.]

THAGURUM (*Θαγουρου ὄρος*, Ptol. vi. 16. § 2), a mountain in Serica, stretching from the *Ottoro-corras* in a northerly direction towards the *Asmiraeen* mountains. It is in the S. part of the Mongol territory, and N. of the *Hoang-ko*. [T. H. D.]

THALA (*Θάλα*, Strab. xvii. p. 831), an important town of Numidia, with a treasury and arsenal. (Sall. J. 75. 77, 80, 89; Tac. *Ann.* iii. 21; Flor. iii. 1.) It is probably identical with *Telepte* (*Τελεπτή*, Procop. *de Aed.* vi. 6), a fortified town of Numidia, lying to the NW. of Capsa, and from which there was a road to Tacape on the Syrtis Minor (*Itin. Ant.* p. 77). Shaw (*Trav.* vol. i. p. 288, seq.) takes *Ferreana*, both from its ruins and its situation, to have been the ancient Thala or Telepte (cf. Mannert, x. 2. p. 321), but Lapie seeks it at *Haouch-el-Khima*. [T. H. D.]

THALA (*τὸ Θάλα ὄρος*, Ptol. iv. 6. §§ 12, 14, 16), a mountain in the interior of Libya, near which dwelt a tribe of the same name (*Θάλαι*, Ptol. iv. 6. § 21). [T. H. D.]

THALAMAE (*Θαλαμαί*). 1. A town of Elis, situated above Pylos on the frontiers of Achaia, and in the rocky recesses of Mount Scollis, probably near the modern village of *Sondaméri*, at the head of a narrow valley. It was here that the Eleians took refuge with their property and flocks, when their country was invaded by Philip in B.C. 219. (Xen. *Hell.* viii. 4. § 26; Polyb. iv. 75; Leake, *Morae*, vol. ii. p. 204, *Peloponnesiaca*, p. 220; Curtius, *Peloponnesos*, vol. ii. p. 38.)

2. (Also *Θαλάμην*, Ptol. iii. 16. § 22; *Εἰθ. Θαλαμύδρας*), a town of Laconia, distant 80 stadia north of Oetylus, and 20 stadia from Pephnus. (Paus. iii. 26. §§ 1, 2.) Pephnus was on the coast, on the eastern side of the Messenian gulf, and Thalamae was situated inland, probably at or near *Plataea*, upon the river *Múla*, the minor Pamisus of Strabo (viii. p. 361). Ptolemy (l.c.) also calls it

one of the inland towns of Laconia. Theopompus called Thalamae a Messenian town (Steph. B. s. s. *Θαλαμαί*), and we know that the Messenians said that their territory originally extended as far as the minor Pamisus. [LAONIA, p. 114, b.] Thalamae was said to have been founded by Pelops, and was called in the time of Strabo the Boeotian Thalamae, as if it had received a Boeotian colony. (Strab. viii. p. 360.) Thalamae is mentioned by Polybius (xii. 16). It was subsequently one of the Eleuthero-Laonian towns. (Paus. iii. 21. § 7.) In the territory of Thalamae, on the road to Oetylus was a temple and oracle of Ino or Pasiphaë, in which the future was revealed to those that slept in the temple. Even the Spartan kings sometimes slept in the temple for this purpose. The temple probably stood upon the promontory *Trachéla*, where there are some ancient remains. (Paus. iii. 26. § 1; Plist. *Agia*, 9; Cic. *de Divin.* i. 43; Hermann, *Götterl. Alterth.* § 41. 7.) (Leake, *Peloponnesiaca*, p. 178; Boblaye, *Recherches*, gc. p. 92; Curtius, *Peloponnesos*, vol. ii. p. 284.)

THALIADES. [ARCADIA, p. 193, No. 15.]

THALLI, a people of Asiatic Sarmatia, E. of the mouth of the Rha. (Plin. vi. 5. s. 5.) [T. H. D.]

THAMANAEI, a people in central Asia, belonging to the fifteenth satrapy of Dareius Hystaspes. Their exact position is uncertain. (Herod. iii. 93, 117; Steph. B. s. v.)

THAMARA (*Θαμάρ*, Euseb. and *Onom.* s. s. *Hazaron-Thamar*; *Θαμάρ*, Ptol. v. 16. § 8; *Tab. Peut.*; Tamar, *Ezek.* xlvii. 19, xlviii. 28), a town in Palestine, and one of the most southerly points in the country according to Ezekiel. According to Eusebius and Jerome it was a town and fortress one day's journey from Malatha on the way from Hebron to Ailah, and in their time was held by a Roman garrison. Robinson fixes it at *Karneh*, the site with ruins 6 miles S. of *Múla* towards the pass *es-Súfáh*. (*Bibl. Res.* vol. ii. p. 202, 2nd ed.)

THAMBES (*Θαμβης*, *Θάμβης*, or *Θάμης*, Ptol. iv. 3. §§ 16, 25), a mountain in the eastern part of Numidia, in which the river Rubricatus has its sources. [T. H. D.]

THAMNA (*Θάμνα*; *Εἰθ. Θαμνίτης*), a large village of Palestine near Lydda, on the way to Jerusalem, which gave its name to the Toparchia *Thamnitis*. (Ptol. v. 16. § 8; Joseph. *B. J.* iii. 3. v. 4; Plin. v. 14. s. 15; Euseb. *Onom.* s. v.; Steph. B. s. v.; Robinson, *Bibl. Res.* vol. ii. p. 239, seq., 2nd ed.)

THAMONDACANA. [NIGER, p. 418, b.]

THAMUDE'NI (*Θαμυδηνός*), a people of Arabia, dwelling upon the coast of the Arabian gulf, far more than 1000 stadia from about *Moula* to *Wid-jek*. (Diod. iii. 44; Agatharch. p. 59, Hudson, § 92, with Müller's note.) Ptolemy mentions the *Thamydeni* (*Θαμυδηνός*) among the inland tribes of Arabia (vi. 7. § 21), but in another passage he places them upon the coast, under the slightly altered name of *Thamyditae* (*Θαμυδίται*, vi. 7. § 4). In Pliny they are called *Thamndeni* (vi. 28. s. 32). Stephanus B. makes *Thamudae* (*Θαμυδάς*) a neighbour of the Nabataeans. The name is evidently the same as *Thamud*, a celebrated tribe in early Arabian history.

THANA or THOANA (*Θάνα*, *Θοάνα*, Ptol. v. 17. § 5; Thorma, *Tab. Peut.*), a town of Arabia Petraea, probably corresponds to *Dhána*, a village visited by Burckhardt, on the declivity of a mountain N. of

Wady-el-Ghuweir. (Robinson, *Bibl. Res.* vol. ii. p. 168, 2nd ed.)

THAPSA. [RUSICADE.]

THAPSACUS (Θάψακος), a town of considerable importance on the right bank of the Euphrates, in lat. 35° 15' N. It is mentioned very early in ancient history, and is almost certainly the same as the Tiphsh, of the Old Testament (1 *Kings*, iv. 24; in the LXX. written Θάψα), which is mentioned as the eastern boundary of the kingdom of Solomon. There is some difference among ancient writers as to the province in which it should be included. Thus, Pliny (v. 24. s. 21) and Stephanus B. (s. v.) place it in Syria; Ptolemy (v. 19. § 3) in Arabia Deserta. The reason of this is, that it was a frontier town, and might therefore be claimed as belonging to one or more provinces. At Thapsacus was the most important passage of the Euphrates in the northern portion of that river's course. As such, we read it was used by Cyrus the younger, whose army forded it, the water reaching up to their breasts, there being probably at that time no bridge. (Xen. *Anab.* i. 4. § 11.) Some years later Dareius crossed it to meet Alexander in Cilicia, and recrossed it in haste after his defeat at Issus. (Arrian, ii. 13.) Alexander, pursuing Dareius, crossed the river also at the same spot, as the historian especially notices, on two bridges (probably of boats), which were joined together (iii. 7). Strabo, who makes frequent mention of Thapsacus, considers it, on the authority of Eratosthenes, as distant from Babylon about 4800 stadia, and from Commagene 2000 (ii. pp. 77, 78, 81, xvi. p. 746); and states that it was situated just at that spot where Mesopotamia is the widest (l. c.). There is no doubt that it derived its name from a Semitic verb, meaning to pass over (Winer, *Bibl. Wörterb.* s. v.); hence another passage-place of the same name, which is mentioned in 2 *Kings*, xv. 16, but which is really in Palestine, has been often confounded with Tiphsh on the Euphrates. Pliny states that the name was changed by the Macedonian Greeks to Amphipolis (v. 24. s. 21), and Stephanus calls the Amphipolis of Seleucus Tourmeda. No trace of any of these names is now found in the country (Ritter, x. p. 1114), nor any ruins that can certainly be identified with its site. It was, however, probably near the present *Deir*. [V.]

THAPSIS (Θάψις, Diodor. xx. 23), a deep river of the Chersonesus Taurica, on which lay a royal castle. Ukert (iii. 2. p. 193) identifies it with the *Salgir*. But Köhler seeks the castle on *Mount Opuk*, 45 werste south of Kertsch. (*Mém. de l'Ac. de St. Petersb.* ix. p. 649, seq.) [T. H. D.]

THAPSUS (Θάψος, Ptol. iv. 3. § 10), a maritime city of Byzacium, in Africa Propria. It lay on a salt lake, which, according to Shaw (*Trav.* p. 99), still exists, and on a point of land 80 stadia distant from the opposite island of Lopadussa. Thapsus was strongly fortified and celebrated for Caesar's victory over the Pompeians, b. c. 46. (Hirt. *B. Af.* 28, seq.) Shaw (l. c.) identifies it with the present *Demass*, where its ruins are still visible. (Cf. Strabo, xvii. pp. 831, 834; Liv. xxxiii. 48; Plin. v. 4. s. 3, &c.) [T. H. D.]

THAPSUS, a river of Numidia, falling into the sea near the town of Rusicade, probably the present *Oued Resas* (Vib. Sequest.) [T. H. D.]

THAPSUS. [STRACUSAE.]

THARRANA, a place on the great line of road which led across the desert from the Euphrates to *Hatrae* (*Al-Hathr*). It is marked on the Tabula

Peutingeriana. It has been conjectured by Mannert (v. 2. p. 233) that the name is a mistake for Charrana, another form of Charrae; but this hypothesis seems hardly tenable. Reichard believes it is represented by the present *Araban*. [V.]

THARRAS (Θάρρας, Ptol.: Ru. at *Capo del Sero*), a city of Sardinia, mentioned only by Ptolemy (where the name is written in many MSS. and editions *Tarrae* or *Tarras*) and in the Itineraries, but which seems to have been one of the most considerable places in the island. It was situated on the W. coast, on a projecting point of land at the N. extremity of the *Gulf of Oristano*, where its ruins are still visible, though half buried in sand, and numerous minor antiquities have been discovered. From its position there can be little doubt that it was a Phoenician or Carthaginian settlement; but continued to be a considerable town under the Romans, and an inscription records the repair of the road from Tharras to Cornus as late as the reign of the emperor Philip. (De la Marmora, *Voy. en Sardaigne*, vol. ii. pp. 359, 477.) The Antonine Itinerary correctly places it 18 miles from Cornus and 12 from Othoca (*Oristano*). (*Itin. Ant.* p. 84; Ptol. iii. 3. § 2.) [E. H. B.]

THARSANDALA (Θαρσάνδαλα), a town in Thrace, between Byzantium and the wall of Anastasius, which was one of the numerous places fortified by Justinian. (Procop. *de Aed.* iv. 11. p. 305, Bonn.) According to Reichard, *Enatalcea* now occupies its site. [J. R.]

THASOS (Θάσος, sometimes Θάσσος; *Éth.* Θάσιος; *Thaso* or *Tasso*), an island in the N. of the Aegean sea, off the coast of Thrace, and distant only 3½ miles from the plain of the river Nestus or *Kara-Su*. It was distant half a day's sail from Amphipolis (Thuc. iv. 104), and 32 miles from Abdera. (Plin. iv. 12. s. 23.) It was also called *Aeria* or *Aethra* (Plin. l. c.; Steph. B. s. v.) and *Chryse*, from its gold mines (Eustath. *ad Dionys. Per.* 517), which were the chief source of the prosperity of the island. The earliest known inhabitants of Thasos were the Phoenicians, who were doubtless attracted to the island by its valuable mines, but who are said to have come thither in search of Europa, five generations before the birth of the Grecian Hercules. They were led by Thasos, the son of Agenor, from whom the island derived its name. (Herod. ii. 44, vi. 47; Paus. v. 25. § 12; Scymn. 660; Conon, c. 37; Steph. B. s. v.) Thasos was afterwards colonised in Ol. 15 or 18 (b. c. 720 or 708) by settlers from Paros, led by Telesicles, the father of the poet Archilochus. (Thuc. iv. 104; Strab. ix. p. 487; Clem. Alex. *Strom.* i. p. 144; Euseb. *Præp. Ev.* vi. 7.) There also existed at that time in the island a Thracian tribe called *Saiana*, with whom the Parian settlers carried on war, but not always successfully; and on one occasion Archilochus was obliged to throw away his shield. (Archiloch. *Fragm.* 5, ed. Schneidewin; Aristoph. *Pac.* 1298, with the Schol.) The Greek colony rapidly rose in power, and obtained valuable possessions on the adjoining mainland, which contained even richer mines than those in the island. Shortly before the Persian invasion, the clear surplus revenue of the Thasians was 200, and sometimes even 300 talents yearly (46,000*l.*, 66,000*l.*), of which Scaptis Hylis produced 80 talents, and the mines in the island rather less. (Herod. vi. 46.) Besides Scaptis Hylis the Thasians also possessed upon the mainland Galepeus and Oesyma (Thuc. iv.

107; Diod. xii. 68), Stryme (Herod. vii. 118; Saïd. s. v. *Στρυμὴν*), Datum, and at a later period Crenides. (Böckh, *Publ. Econ. of Athens*, p. 312, Engl. tr.) Herodotus, who visited Thasos, says that the most remarkable mines were those worked by the Phœnicians on the eastern side of the island between Aenyra and Coenyra opposite Samothrace, where a large mountain had been overturned in search of the gold. (Herod. vi. 47.) The Thasians appear to have been the only Greeks who worked the valuable mines in Thrace, till Histiaens, the Milesian, settled upon the Strymon and built the town of Myrcinus, about B.C. 511. (Herod. v. 11, 23.) After the capture of Miletus (B.C. 494), Histiaens made an unsuccessful attempt to subdue Thasos (Herod. vi. 28), but the growing power of the Thasians excited the suspicions of Dareius, who commanded them in B.C. 492 to pull down their fortifications and remove their ships of war to Abdera, — an order which they did not venture to disobey. (Herod. vi. 46.) When Xerxes marched through Thrace on his way to Greece, the Thasians, on account of their possessions on the mainland, had to provide for the Persian army as it marched through their territories, the cost of which amounted to 400 talents (92,800*l.*). (Herod. vii. 118.) After the defeat of the Persians, Thasos became a member of the confederacy of Delos, but disputes having arisen between the Thasians and Athenians respecting the mines upon the mainland, a war ensued, and the Athenians sent a powerful force against the island under the command of Cimon, B.C. 465. After defeating the Thasians at sea, the Athenians disembarked, and laid siege to the city both by land and sea. The Thasians held out more than two years, and only surrendered in the third year. They were compelled to raze their fortifications; to surrender their ships of war; to give up their continental possessions; and to pay an immediate contribution in money, in addition to their annual tribute. (Thuc. i. 100, 101; Diod. xi. 70; Plut. *Cim.* 14.) In B.C. 411 the democracy in Thasos was overthrown, and an oligarchical government established by Peisander and the Four Hundred at Athens; but as soon as the oligarchy had got possession of the power they revolted from Athens, and received a Lacedæmonian garrison and harvest. (Thuc. viii. 64.) Much internal dissension followed, till at length in B.C. 408 a party of the citizens, headed by Ecephantus, expelled the Lacedæmonian harvest Eteonicus with his garrison and admitted Thrasybulus, the Athenian commander. (Xen. *Hell.* i. 1. §§ 12, 32, l. 4. § 9; Dem. c. *Lept.* p. 474.) After the battle of Aegospotamos, Thasos passed into the hands of the Lacedæmonians; but it was subsequently again dependent upon Athens, as we see from the disputes between Philip and the Athenians. (Dem. de *Halon.* p. 80; *Philipp. Epist.* p. 159.) In the Roman wars in Greece Thasos submitted to Philip V. (Polyb. xv. 24), but it received its freedom from the Romans after the battle of Cynoscephalæ, B.C. 197 (Polyb. xviii. 27, 31; Liv. xxxiii. 30, 35), and continued to be a free (*libera*) town in the time of Pliny (iv. 12. s. 23).

The city of Thasos was situated in the northern part of the island, and possessed two ports, of which one was closed. (Scylax, p. 27; Ptol. iii. 11. § 14.) It stood on three eminences; and several remains of the ancient walls exist, intermixed with towers built by the Venetians, who obtained possession of

the island after the capture of Constantinople by the Turks. In the neighbourhood is a large statue of Pan cut in the rocks. No remains have been discovered of Aenyra and Coenyra; and the mines have long ceased to be worked.

Archilochus describes Thasos as an "ass's backbone overspread with wild wood" (*... ἄσ' ὀστέων ἰσοπέδῳ ἔσθ' ἄνθος, ὅλως ἀγρὸς ἐκτετατός*, *Fragn.* 17, 18, ed. Schneidewin), a description which is still strikingly applicable to the island after the lapse of 2500 years, as it is composed entirely of naked or woody mountains, with only scanty patches of cultivable soil, nearly all of which are close to the sea-shore. (Grote, *Hist. of Greece*, vol. iv. p. 34.) The highest mountain, called Mount *Ipsaris*, is 3428 feet above the sea, and is thickly covered with fir-trees. There is not enough corn grown in the island for its present population, which consists only of 6000 Greek inhabitants, dispersed in twelve small villages. Hence we are surprised to find it called by Dionysius (*Perieg.* 532) *Διὸνυσος ἄστυ*; but the praises of its fertility cannot have been written from personal observation, and must have arisen simply from the abundance possessed by its inhabitants in consequence of their wealth. Thasos produced marble and wine, both of which enjoyed considerable reputation in antiquity. (Athen. i. pp. 23, 32, iv. p. 129; Xen. *Symp.* 4. § 41; Virg. *Georg.* ii. 91.) The chief produce of the island at present is oil, maize, honey, and timber; the latter, which is mostly fir, is the principal article of export.

The coins of Thasos are numerous. The one figured below represents on the obverse the head of Dionysus, and on the reverse a figure of Hercules kneeling.

(Prokesh von Osten, *Denkwürdigkeiten*, vol. iii. p. 611, seq.; Cousinery, *Voyage dans la Macédoine*, vol. ii. p. 85, seq.; Griesbach, *Reise*, vol. i. p. 210, seq.; *Journal of Geogr. Society*, vol. vii. p. 64.)

COIN OF THASOS.

THAUBASIUM (*Itin. Ant.* p. 171; Tharbastium, *Not. Imp.*), was a frontier town of Lower Egypt, situated on the Canopic arm of the Nile, about 8 miles N. of Serapeum and the Natron Lakes. In Roman times Thaubasium was the head-quarters of a company of light auxiliary troops "II Ala Ulpia Afrorum." (Orelli, *Inscript.* no. 2552.) It is supposed to be at the modern *Cheych-el-Nedy*. (Champollion, *l'Egypte*, vol. ii. p. 71.) [W. B. D.]

THAUMACI (Θαυμακίαι; *Eth. Θαυμακίαι*), a town of Phthiotis in Thessaly, was situated on the pass called Coela, on the road from Thermopylae and the Malian gulf passing through Lamia. At this place, says Livy, the traveller, after traversing rugged mountains and intricate valleys, comes suddenly in sight of an immense plain like a vast sea, the extremity of which is scarcely visible. From the astonishment which it excited in the traveller, the city was supposed to have derived its name. It stood upon a lofty and precipitous rock. It was

besieged by Philip in B. C. 199; but a reinforcement of Aetolians having made their way into the town, the king was obliged to abandon the siege. (Liv. xxxii. 4.) Thaumaci was taken by the consul Acilius in the war with Antiochus, B. C. 191. (Liv. xxxvi. 14; comp. Strab. ix. p. 434; Steph. B. s. v. *Θαυμακία*.) *Dhomokó* occupies the site of Thaumaci; and at this place inscriptions are found containing the ancient name. Its situation and prospect are in exact accordance with the description of Livy, who copied from Polybius, an eye-witness. Dodwell says that "the view from this place is the most wonderful and extensive he ever beheld," and Leake observes that "at the southern end of the town a rocky point, overtopping the other heights, commands a magnificent prospect of the immense plain watered by the Peneius and its branches." (Dodwell, vol. ii. p. 122; Leake, *Northern Greece*, vol. i. p. 458.)

THAUMA'CIA (*Θαυμακία*; *Eth. Θαυμακιεύς*), a town of Magnesia in Thessaly, one of the four cities whose ships in the Trojan War were commanded by Philoctetes. It was said to have been founded by Thaumacus, the son of Poeas. Leake supposes it to be represented by the paleókastró of *Askiti*, one of the villages on the Magnesian coast. This Thaumacia must not be confounded with Thaumaci in Phthiotis mentioned above. (Hom. *Il.* ii. 716; Strab. ix. p. 436; Steph. B. s. v.; Eustath. *ad Hom.* p. 329. 6; Plin. iv. 9. s. 16; Leake, *Northern Greece*, vol. iv. p. 416.)

THEA'NGELA (*Θεάγγελα*; *Eth. Θεαγγελεύς*), a town of Caria, which Alexander placed under the jurisdiction of Halicarnassus, is known as the birth-place of Philip, the historian of Caria. (Plin. v. 29; Athen. vi. p. 271; Steph. B. s. v.)

THERAE (*Θῆραι*, Herod. i. 182, ii. 42; Strab. xvii. pp. 805, 815, foll.; Thebe, Plin. v. 9. s. 11), the No (*Ezekiel*, xxx. 14) or No-AMMON (*Nahum*, vv. 3, 8) of the Hebrew Scriptures; at a later period Diospolis the Great of the Greeks and Romans (*Διδωπολις μεγάλη*, Ptol. iv. 5. § 73; Steph. B. s. v.), was one of the most ancient cities of Egypt, and even, according to Diodorus (i. 50, comp. xv. 45), of the world. Its foundation, like that of Memphis, was attributed to Menes, the first mortal king of Egypt, i. e. it went back to the mythical period of Egyptian history. By some writers, however, Memphis was reported to have been a colony of Thebes. It was the capital of the nome formed by the city itself and its environs, though Ptolemy (i. c.) describes it as pertaining to the Nome of Coptos. In all Upper Egypt no spot is so adapted for the site of a great capital as the plain occupied by ancient Thebes. The mountain chains, the Libyan on the western, and the Arabian on the eastern, side of the Nile, sweep boldly from the river, and leave on both banks a spacious area, whose breadth, including the river, amounts to nearly 4 leagues, and the length from N. to S. is nearly as much. Towards the N. the plain is again closed in by the return of the hills to the Nile; but on the S., where the western chain continues distant, it remains open. The ground, therefore, on which Thebes stood was large enough to contain a city of at least equal extent with ancient Rome or modern Paris; and, according to Strabo, ancient Thebes covered the entire plain. Only a portion of it, however, was available for population. An immense area was covered with the temples and their avenues of sphinxes; and on the western side, as far as the Libyan hills, lay the monuments of the dead. On the eastern bank, therefore, the population

was generally collected; and there it was probably densely crowded, since ancient writers assign to Thebes an almost incredible number of inhabitants, and Diodorus (i. 45) describes the houses as consisting of many stories. The extent of the city is very differently stated by ancient authors. Rumours of its greatness had reached the Greeks of Homer's age, who (*Il.* ix. 381) speaks of its "hundred gates" and its 20,000 war-chariots, just as the Arabian story-tellers speak of the glories of Bagdad or Damascus under the Caliphs. Before the Persian invasion (B. C. 525) no Greek writer had visited Thebes; and after that catastrophe its dimensions had considerably shrunk, since Cambyzes is said to have burnt all such portions of Thebes as fire would destroy, i. e. all the private buildings; and under the Persian viceroys no Aegyptian city was likely to regain its original proportions. It does not appear that Herodotus ever visited Upper Egypt, and his account of Thebes is extremely vague and meagre. Diodorus, on the contrary, who saw it after its capture by Ptolemy Lathyrus, about B. C. 87, beheld Thebes in the second period of its decay, and after Alexandria had diverted much of its commerce to Berenice and the Arsinoite bay. He estimates its circuit at 140 stadia or about 17 miles. Strabo, again, who went thither with the expedition of Aelius Gallus in B. C. 24, beheld Thebes at a still lower stage of decadence, and assigns it a compass of about 10 miles. But at that time the continuity of its parts was broken up, and it was divided into certain large hamlets (*κωμήδον*) detached from one another. Neither of these writers, accordingly, was in a position to state accurately the real dimensions of the city in its flourishing estate, i. e. between 1600 and 800 B. C. Modern travellers, again, have still further reduced its extent; for example, Sir Gardner Wilkinson supposes the area of Thebes not to have exceeded 5½ English miles. As, however, during the space of 2600 years (800 B. C.—1800 A. D.) there have been very material changes in the soil from the contraction of the habitable ground, partly by the depositions of the Nile, and partly by the drifting of the sands, it is scarcely possible for modern travellers to determine how far Aegyptian labour and art may once have extended their capital. An author quoted by Stephanus of Byzantium, probably Hecataeus, runs into the opposite extreme, and ascribes to Thebes a population (7,000,000) hardly possible for the entire Nile-valley, and an extent (400 stadia, or 50 miles) larger than the Theban plain itself. (Steph. B. s. v. *Διδωπολις*.) The name of Thebes is formed from the *Tápe* of the ancient Aegyptian language, pronounced Thaba in the Memphitic dialect of Coptic, and thence easily converted into *Θῆβαι*, Thebè, or Thebes. In hieroglyphics it is written AP or APE, with the feminine article, T-APPE, the meaning of which is said to be "head," Thebes being the "head" or capital of the Upper Kingdom. Its later appellation of Diospolis Magna (*Διδωπολις ἡ μεγάλη*) answers also to the Aegyptian title Amunee or "abode of Amun,"—Ammon or Zeus, the ram-headed god, being the principal object of worship at Thebes. The name *Tápe* or Thebes applied to the entire city on either bank of the Nile; but the western quarter had the distinctive name of Pathyris, or, according to Ptolemy (iv. 5. § 69), Tathyris, as being under the special protection of Athor, who is sometimes called the President of the West. The necropolis, indeed, on the Libyan side was appropriately placed under

the guardianship of this deity, since she was believed to receive the sun in her arms as he sank behind the western hills. This quarter, again, in the age of the Ptolemies, was termed "the Libyan suburb," which was subdivided also into particular districts, such as the Memnonia (*ῥὰ Μεννονεία*, Young, *Hieroglyph. Literature*, pp. 69, 73) and Thynabunum, where the priests of Osiris were interred. (Wilkinson, *Anc. Egyptians*, vol. v. p. 387.)

The power and prosperity of Thebes arose from three sources — trade, manufactures, and religion. Its position on the Nile, near the great avenues through the Arabian hills to the Red Sea, and to the interior of Libya through the western desert, rendering it a common entrepôt for the Indian trade on the one side, and the caravan trade with the gold, ivory, and aromatic districts on the other, and its comparative vicinity to the mines which intersect the limestone borders of the Red Sea, combined to make Thebes the greatest emporium in Eastern Africa, until Alexandria turned the stream of commerce into another channel. It was also celebrated for its linen manufacture — an important fabric in a country where a numerous priesthood was interdicted from the use of woollen garments (Plin. ix. l. a. 4). The glass, pottery, and intaglios of Thebes were also in high repute, and generally the number and magnitude of its edifices, sacred and secular, must have attracted to the city a multitude of artisans, who were employed in constructing, decorating, or repairing them. The priests alone and their attendants doubtless constituted an enormous population, for, as regarded Egypt, and for centuries Aethiopia also, Thebes stood in the relation occupied by Rome in medieval Christendom, — it was the sacerdotal capital of all who worshipped Ammon from Pelusium to Axum, and from the Oases of Libya to the Red Sea.

The history of Thebes is not entirely the same with that of Egypt itself, since the predominance of the Upper Kingdom implies a very different era in Egyptian annals from that of the lower, or the Delta. It may perhaps be divided into three epochs: 1. The period which preceded the occupation of Lower Egypt by the Assyrian nomades, when it is doubtful whether Memphis or Thebes were the capital of the entire country, or whether indeed both the Thebaid and the Delta were not divided into several smaller states, such as that of Heliopolis in the N., and Abydos in the S., the rivals respectively of Memphis and Thebes. 2. The interval between the expulsion of the Assyrians by Thoutmosis, and the 21st dynasty of Tanite kings. During all this period, Thebes was unquestionably the capital of all the Nile-valley, from the Mediterranean to the island of Argo in lat. 19° 31' N. 3. The period of decadence, when the government of Egypt was centered in the Delta, and Thebes was probably little more than the head-quarters of the sacerdotal caste and the principal refuge of old Egyptian life and manners. And this threefold division is rendered the more probable by the consideration that, until the Assyrian empire became formidable, and Phœnicia important from its maritime power, Aethiopia, rather than Arabia or Syria, was the formidable neighbour of Egypt.

Under the Old Monarchy there is no trace of Egyptian dominion extending beyond the peninsula of Sinai, the northern shores of the Red Sea, or the Libyan tribes adjoining the Delta. During this period invasion was apprehended almost exclusively

from the S. The Aethiopians were no less warlike, and perhaps as civilised, as the Egyptians: the Nile afforded them direct ingress to the regions north of the Cataracts, and they were then, as the Syrians and north-eastern states became afterwards, the immediate objects of war, treaties, or intermarriages with the Pharaohs of Thebes. When the Theban state was powerful enough to expel the Assyrian nomades, it must have already secured the alliance or the subjection of Aethiopia; and the attention of its rulers was thenceforward directed to the eastern frontier of the Lower Kingdom. Accordingly we find that while only one nome in the Thebaid and one in Middle Egypt were assigned to the native militia, the bulk of the Calasirians and Hermetyians was permanently quartered in the Delta.

The greatness of Thebes commences with the 18th dynasty of the Pharaohs, and the immediate cause of it appears to have been the collective efforts of the Upper Country to expel the Assyrian shepherds from the Delta. The Thebaid and its capital were, probably, at no period occupied by these invaders; since, according to Manetho's account of the 17th dynasty, there were then two contemporaneous kingdoms in Egypt — the Delta governed by the Hyksos, and the Thebaid by native monarchs. Thoutmosis, king of Thebes, was the principal agent in the expulsion of the intruders, and his exploits against them are commemorated on the temples at Karnak. Memphis and the Delta, together with the lesser states, such as Xoïs, delivered from the invaders, thenceforward were under the dominion of the kings of Thebes. Its flourishing era lasted nearly eight centuries, i. e. from about 1600 to 800 B. C.

During this period the most conspicuous monarchs were Amenophis I., who appears, from the monuments, to have received divine honours after his decease, and to have been regarded as the second founder of the monarchy. He probably carried his arms beyond the north-eastern frontier of the Delta into Syria, and his presence in Aethiopia is recorded in a grotto at *Ibrim* near *Abossimbel*. The victories or conquests of Amenophis in the N. and S. are inferred from the circumstance that in the sculptures he is represented as destroying or leading captive Asiatic and Aethiopian tribes. Next in succession is Thothmes I., with whose reign appears to have begun the series of Theban edifices which excited the wonder of the Greeks, who beheld them almost in their original magnificence, and of all subsequent travellers. The foundations, at least, of the palace of the kings were laid by this monarch. Thothmes also, like his predecessors, appears, from the monuments, to have made war with Assyria, and to have extended his dominion as high up the Nile as the island of Argo in upper Nubia. Thothmes II. maintained or even enlarged the realm which he inherited, since his name has been found at *Gebel el-Birkel*, the Napata of the Romans, lat. 18° 30' N. At this period Aethiopia was apparently an appanage of the Theban kingdom, and its rulers or viceroys seem to have been of the blood royal of Egypt, since now for the first time, and until the reign of Seti Menephtah (Rosellini, *Mon. Reg.* tab. xxxi. — iv.), we meet with the title of the royal son or prince of Aethiopia. The records of this reign have nearly perished; the great obelisks of Karnak, however, attest the flourishing condition of contemporary art. They were erected by Nemt Amen, the sister of Thothmes II., who appears, like the Nitocris of the

Old Monarchy, to have exercised the functions of royalty. The reign of Thothmes III. is one of the most splendid in the annals of the 18th dynasty. The frontiers of Aegypt extended S. a little beyond the second cataract, and E. nearly to Mount Sinai. Thothmes III. completed in Thebes itself many of the structures begun by his predecessors, e. g. the palace of the kings, — and generally enriched the cities of the Thebaid with sumptuous buildings. He commenced the temple at Amada, which was completed by Amunoph II. and Thothmes IV; and his name was inscribed on the monuments of Ombi, Apollinopolis Magna, and Eilithya. Thebes, however, was the centre of his architectural labours, and even the ruins of his great works there have served to adorn other capital cities. In the Hippodrome of Constantinople is a mutilated obelisk of the reign of Thothmes III., which was brought from Aegypt by one of the Byzantine emperors, and which originally adorned the central court of *Karnak*. Again the obelisk which Pope Sixtus V. set up in front of the church of St. John Lateran at Rome, the loftiest and most perfect structure of its kind, was first raised in this reign, and bears its founder's titles on the central column of its hieroglyphics. The records of this reign are inscribed on two interesting monuments, — a painting in a tomb at *Gournah* (Hoskins, *Travels in Aethiopia*, p. 437, foll.; Wilkinson, *Mod. Egypt and Thebes*, vol. ii. p. 234), and the great Tablet of *Karnak*, which is strictly an historical and statistical document, and which, there can be little doubt, is the very Tablet which the priests of Thebes exhibited and expounded to Caesar Germanicus in A. D. 16 (*Tac. Ann.* ii. 60). From the paintings and the hieroglyphics, so far as the latter have been read, on these monuments, it appears that in this reign tribute was paid into the Theban treasury by nations dwelling on the borders of the Caspian sea, on the banks of the Tigris, in the kingdom of Meroe or Aethiopia, and by the more savage tribes who wandered over the eastern flank of the great *Sahara*. Thirteen expeditions, indeed, of Thothmes III., are distinctly registered, and the 35th year of his reign, according to Lepsius, is recorded. At this period the kingdom of Thebes must have been the most powerful and opulent in the world. Of the son of Thothmes, Amunophis II., little is known; but he also added to the erections at Thebes, and reared other monuments in Nubia. Inscriptions found at *Surabit-el-Kaahim*, in the peninsula of Sinai, record his name, and at *Primis (Ibrim)* he appears in a *spes*, or excavated chapel, seated with two principal officers, and receiving the account of a great chase of wild beasts.

Next in importance, though not in succession, of the Theban kings of the 18th dynasty, is Amunoph, or Amunophis III. His name is found at *Toumbos*, near the third Cataract, and he permanently extended the frontiers of the Theban kingdom to Soleb, a degree further to S. than it had hitherto reached. These extensions are not only geographically, but commercially, important, inasmuch as the farther southward the boundaries extended, the nearer did the Aegyptians approach to the regions which produced gold, ivory, gems, and aromatics, and the more considerable, therefore, was the trade of Thebes itself. Only on the supposition that it was for many generations one of the greatest emporiums in the world can we understand the lavish expenditure of its monarchs, and its fame among northern nations as the greatest and richest of cities.

And this consideration is the more important towards a correct estimate of the resources of the Theban kingdom, since its proper territory barely sufficed for the support of its dense population, and there is no evidence of its having any remarkable traffic by sea. It is probable, indeed, that the dominions of Amunophis III. stretched to within five days' journey of Axume on the Red Sea; for a scarabeus inscribed with his name and that of his wife Taia mentions the land of *Karooi* or *Kaloei*, supposed to be Coloe (Rosellini, *Mon. Stor.* iii. 1, 261; Birch, *Gall. Brit. Mus.* p. 83), as their southern limit. Thebes was enriched by this monarch with two vast palaces, one on the eastern, the other on the western bank of the Nile. He also commenced and erected the greater portion of the buildings at *Luxor*. On the walls of their chambers Amunophis was designated "The vanquisher of the Mennaboun," an unknown people, and the "Pacificator of Aegypt." From the fragment of a monolithic granite statue now in the Louvre, it may be inferred that his victories were obtained over negro races, and consequently were the results of campaigns in the interior of Libya and the S. of Aethiopia. Amunophis has a further claim to notice, since he was probably the Memnon, son of Aurora, whom Achilles slew at the siege of Troy. Of all the Aethiopian works the Memnonian statues, from their real magnitude and from the fabulous stories related of them, have attracted the largest share of attention. By the word Memnon the Greeks understood an Aethiopian or man of dark complexion (*Steph. B. s. v.*; *Agathem. ap. Gr. Geograph. Mém.*), or rather, perhaps, a dark-complexioned warrior (*comp. Eustath. ad Il. v. 639*); and the term may very properly have been applied to the conqueror of the southern land, who was also hereditary prince of Aethiopia. The statues of Memnon, which now stand alone on the plain of Thebes, originally may have been the figures at the entrance of the long dromos of crio-sphinxes which led up to the Amenopheion or palace of Amunophis. Of the eastern and northern limits of the Theban kingdom under the third Amunophis, we have no evidence similar to that afforded by the tablet of *Karnak*; yet from the monuments of his battles we may infer that he levied tribute from the Arabians on the Red Sea and in the peninsula of Sinai, and at one time pushed his conquests as far as Mesopotamia. According to Manetho he reigned 31 years: his tomb is the most ancient of the sepulchres in the *Bab-el-Melook*; and even so late as the Ptolemaic age he had divine honours paid him by a special priest-college called "The pastophori of Amunophis in the Memnoneia." (*Kerrick, Ancient Aegypt*, vol. ii. p. 246.)

Seti Menephtah is the next monarch of the 18th dynasty who, in connection with Thebes, deserves mention. Besides the temples which he constructed at Amada in Nubia and at Silsilis (*Sileleh*), he began the great palace called Menephtheion in that city, although he left it to be completed by his successors Rameses II. and III. From the paintings and inscriptions on the ruins at *Karnak* and *Luxor* it appears that this monarch triumphed over five Asiatic nations as well as over races whose position cannot be ascertained, but whose features and dress point to the interior of Libya. The tomb and sarcophagus of Seti Menephtah were discovered by Belzoni in the *Bab-el-Melook*. (*Travels*, vol. i. p. 167.) If he be the same with the Sethos of the lists, he reigned 50 or 51 years. We now come to

high, supplying the place of columns," and these are probably the pillars of this second court. He also mentions the attack of a city surrounded by a wall and this group of sculpture, still extant, identified the Memnoneium with the monument of Osyris. The third flight of stairs conducts from the Memnoneium to the temple of Amenophis III., which, according to Champollion, is the site of the steps, and the statue of the young Memnon, seated between columns and walls, is partly a reproduction of the statue of Amenophis III.

THEBAE AEGYPTI.

1140

The next object which meets the traveller's eye is a mound of rubbish, the fragments of a building once occupying the ground. It is called by the Arabs *Koum-el-Hattam*, or mountain of sandstone, and is composed of the ruins of the Amenopheion, the palace or temple of Amenophis III.—the Memnon of the Greeks. About a quarter of a mile distant from the Amenopheion, and nearer to the Nile, are the two colossal statues called *Tama* and *Chama* by the natives, standing isolated on the plain and eminent above it. The most northerly of these statues is the celebrated vocal Memnon. Their present isolation, however, is probably accidental, and arises from the subsidence or destruction of an intermediate dromos, of which they formed the portals, and which led to the Amenopheion. These statues have already been described in the *Dictionary of Biography*, s. v. MEMNON [Vol. II. p. 1028.] It may be added here that the present height of these colossal figures, inclusive of the pedestal, is 60 feet. The alluvial soil, however, rises to nearly one half of the pedestal, and as there is an inscription of the age of Antoninus Pius, A. D. 139, foll., i. e. about 1720 years old, we obtain some measure of the amount of deposition in so many centuries. The blocks from which

the name of Rameses II. and III., the latter of whom is the Sesostris of Herodotus, and who may therefore be regarded as a clearly historical personage. There can be no doubt of the greatness of Thebes under his sceptre. In this, as in many other instances where Aegypt is concerned, the monuments of the country enable us to approach the truth, while the credulity of the Greek travellers and historians in accepting the narrations of the Aegyptian priests—naturally eager, after their subjection by the Persians, to exalt their earlier condition—only tends to bewilder and mislead. Thus, for example, Diodorus (i. 54) was informed that Sesostris led into the field 600,000 infantry, 24,000 cavalry, and 27,000 chariots; and he appeals to the passage already cited from Homer to show that Thebes sent so many chariots out of its hundred gates. There is no evidence that the Aegyptians then possessed a fleet in the Mediterranean; yet Diodorus numbers among his conquests the Cyclades, and Dicearchus (*Schol. in Apoll. Rhod. iv. 272*) assigns to him "the greater part of Europe." The monuments, on the contrary, record nothing so incredible of this monarch; although if we may infer the extent of his conquests and the number of his victories from the space occupied on the monuments by their pictorial records, he carried the arms of Aegypt beyond any previous boundaries, and counted among his subjects races as various as those which, nearly 17 centuries later, were ruled by Trajan and the Antonines. The reign of Rameses was of 60 years' duration, that is nearly of equal length with his life, for the first of his victories— that recorded on the propylaea of the temple of *Luxor*, and much more fully on those of *Aboosimbel*—was gained in his fifth year. We must refer to works professedly dealing with Aegyptian annals for his history: here it will be sufficient to observe of Rameses or Sesostris that he added to Thebes the Ramesseion, now generally admitted to be the "monument of Osymandyas," upon the western bank of the Nile; that he was distinguished from all his predecessors by the extent of his conquests and the wisdom of his laws; and among his subjects for his strength, comeliness, and valour. The very pre-eminence of Rameses III. has, indeed, obscured his authentic history. To him were ascribed many works of earlier and of later monarchs,—such as the canal of the Pharaohs, between the Nile and the Red Sea; the dykes and embankments which rendered the Delta habitable; the great wall, 1500 stadia in length, between Pelusium and Heliopolis, raised as a barrier against the Syrians and Arabians; a re-partition of the land of Aegypt; the law of hereditary occupation (*Aristot. Pol. vii. 10*); and foreign conquests, or at least expeditions into Western Asia, which rendered tributary to him even the Colchians and the Bactrians. (*Tacit. Ann. ii. 60*.)

With the 21st dynasty appear the traces of a revolution affecting the Upper Kingdom. Tanite and Bubastite Pharaohs are now lords of the Nile-valley: and these are succeeded by an Aethiopian dynasty, marking invasion and occupation of the Thebaid by a foreigner. Perhaps, as Aegypt became more involved with the affairs of Asia—a result of the conquests of the house of Rameses—it may have proved expedient to remove the seat of government nearer to the Syrian frontier. The dynasty of Sethos, the Aethiopian, however, indicates a revolt of the provinces S. of the cataracts; and even after the Aethiopians had withdrawn, the Lower Kingdom re-

tained its pre-eminence. The Saite Pharaohs feared or despised the native militia, and surrounded themselves with foreign mercenaries. Greek colonies were established in the Delta; and Aegypt maintained a fleet—an innovation extremely prejudicial to Thebes, since it implied that the old isolation of the land was at an end, and that the seat of power was on the Syrian, and not on the Aethiopian frontier. The stages of its decline cannot be traced; but Thebes seems to have offered no opposition, after the fall of Memphis, to the Persians, and certainly, after its occupation by Cambyzes, never resumed its place as a metropolitan city. That Thebes was partially restored after the destruction of at least its secular buildings by the Persians, admits of no doubt, since it was strong enough in a.c. 86 to hold out against the forces of Ptolemy Lathyrus. But although the circuit of its walls may have been undiminished, it seems never again to have been filled as before with a dense population. The foundation of Alexandria was more fatal to Thebes than even the violence of Cambyzes; and its rebellion against the Macedonians was perhaps prompted by jealousy of Greek commerce and religion. The hand of Lathyrus lay heavy on Thebes; and from this epoch probably dates the second stage of its decline. From the glimpses we gain of it through the writings of the Greeks and Romans, it appears to have remained the head-quarters of the sacerdotal order and of old Aegyptian life and manners. As a Macedonian or Roman prefecture, it took little or no part in the affairs of Aegypt; yet it profited by the general peace of the world under the Caesars, and employed its wealth or labour in the repair or decoration of its monuments. The names of Alexander and some of the Ptolemies, of the Caesars from Tiberius to the Antonines, are inscribed on its monuments; and even in the fourth century A.D. it was of sufficient importance to attract the notice of historians and travellers. Perhaps its final ruin was owing as much to the fanaticism of the Christians of the Thebaid, who saw in its sculptures only the abominations of idol-worship, as to its occupation by the Blemmyes and other barbarians from Nubia and Arabia. When the Saracens, who also were iconoclasts, broke forth from Arabia, Thebes endured its final desolation, and for many centuries its name almost disappears: nor can its monuments be said to have generally attracted the notice of Europeans, until the French expedition to Aegypt once again disclosed its monuments. From that period, and especially since the labours of Belzoni, no ancient city has been more frequently visited or described.

The growth of Thebes and the additions made to it by successive monarchs or dynasties have been partly traced in the foregoing sketch of its political history. A few only of its principal remains can here be noticed, since the ruins of this city form the subject of many works, and even the most condensed account of them would almost demand a volume for itself. Ancient Thebes, as has already been observed, occupied both the eastern and western banks of the Nile; and four villages, two, on each side of the river, now occupy a portion of its original area. Of these villages two, *Luxor* and *Karnak*, are on the eastern bank, and two, *Gournah* and *Medinet-Abou*, on the western. There is some difference in the character and purpose of the structures in the opposite quarters of the city. Those on the western bank formed part of its vast necropolis; and here are found the rock-hewn painted tombs,—“the tombs

of the kings,"—whose sculptures so copiously illustrate the history, the arts, and the social life of Egypt. On this side there are also the remains of temples, palaces, and halls of assembly or judicature, with their vast enclosure of walls and their long avenues of sphinxes. But the western quarter of Thebes was reserved principally for the dead, and for the service of religion and the state, while the mass of the population was contained in the eastern. Yet the numbers who inhabited the western side of the city must have been considerable, since each temple had its own establishment of priests, and each palace or public edifice its proper officers and servants. Still we shall probably be correct in describing the eastern quarter as the civil, and the western as the royal and ecclesiastical, portion of Thebes. At present no obelisks have been discovered in the western quarter, but, with this exception, the monuments of *Gournah* and *Medinet-Abou* yield little in grandeur, beauty, or interest to those of *Luxor* and *Karnak*, and in one respect indeed are the more important of the two, since they afford the best existing specimens of Aegyptian colossal or portrait statues.

Beginning then with the western quarter,—the Memnoneia of the Ptolemaic times,—we find at the northern limit of the plain, about three quarters of a mile from the river, the remains of a building to which Champollion has given the name of *Menephtheion*, because the name of Seti-Menephthah is inscribed upon its walls. It appears to have been both a temple and a palace, and was approached by a dromos of 128 feet in length. Its pillars belong to the oldest style of Aegyptian architecture, and its bas-reliefs are singularly fine.

The next remarkable ruin is the Memnoneium of Strabo (xvii. p. 728), the tomb of Osymandyas of Diodorus, now commonly called the *Ramesseion* on the authority of its sculptures. The situation, the extent, and the beauty of this relic of Thebes are all equally striking. It occupies the first base of the hills, as they rise from the plain; and before the alluvial soil had encroached on the lower ground, it must have been even a more conspicuous object from the city than it now appears. The inequalities of the ground on which it was erected were overcome by flights of steps from one court to another, and the *Ramesseion* actually stood on a succession of natural terraces improved by art. The main entrance from the city is flanked by two pyramidal towers: the first court is open to the sky, surrounded by a double colonnade, and 140 feet in length and 18 in breadth. On the left of the staircase that ascends to the second court still stands the pedestal of the statue of Rameses, the largest, according to Diodorus (i. 49), of the colossi of Aegypt. From the dimensions of its foot, parts of which still remain, it is calculated that this statue was 54 feet in height and 22 feet 4 inches in breadth across the shoulders. The court is strewn with its fragments. How it was erected, or how overthrown in a land not liable to earthquakes, are alike subjects of wonder; since, without mechanical aids wholly beyond the reach of barbarians, it must have been almost as difficult to cast it down from its pedestal as to transport it originally from the quarries. The walls of the second court are covered with sculptures representing the wars of Rameses III., a continuation and complement of the historical groups upon the interior walls of the pylon. Diodorus (i. 47) speaks of "monolithical figures, 16 cubits

high, supplying the place of columns," and these are probably the pillars of this second court. He also mentions the attack of a city surrounded by a river; and this group of sculpture, still extant, identifies the Memnoneium with the monument of Osymandyas. A third flight of stairs conducts from the court to a hall, which, according to Champollion was used for public assemblies. A sitting statue of Rameses flanked each side of the steps, and the head of one of them, now called the *young Memnon* adorns the British Museum. The columns and walls of the court are covered with sculptures partly of a religious, partly of a civil character, representing the homage of the 23 sons of Rameses to their parent and his offerings to the gods. Nine smaller apartments succeed to the hall. One of these was doubtless the library or "Dispensary of the Mind" (*ψυχῆς λατρεῖον*) of which Diodorus (i. 49) speaks, since in it are found sculptures of Thoth, the inventor of letters, and his companion Saf, the "lady of letters" and "President of the Hall of Books." This chamber had also at one time an astronomical ceiling adorned with the figures or symbols of the Aegyptian months; but it was carried off by the Persians, and the Greek travellers, Diodorus, Hecataeus &c., knew of it only from hearsay. Of the nine original chambers, two only remain, the one just described, and a second, in which Rameses is depicted sacrificing to various divinities of the Theban Pantheon. Beneath the upper portion of the Memnoneium rock-sepulchres and brick graves have been discovered, both coeval with the Ramesian dynasty (Lepsius, *Rev. Arch.* Jan. 1845). The entire area of the Memnoneium was enclosed by a brick wall, in the double arches of which are occasionally imbedded fragments of still more ancient structures, the remains probably of the Thebes which the 18th dynasty of the Pharaohs enlarged and adorned. A dromos NW. of the Memnoneium, formed of not less than 200 sphinxes, and at least 1600 feet in length, led to a very ancient temple in a recess of the Libyan hills. This was probably a place of strength before the lowlands on each side of the Nile were artificially converted by drainage and masonry into the solid area upon which Thebes was built.

The next object which meets the traveller's eye is a mound of rubbish, the fragments of a building once occupying the ground. It is called by the Arabs *Koum-el-Hattam*, or mountain of sandstone, and is composed of the ruins of the Amenopheion, the palace or temple of Amunoph III.—the Memnon of the Greeks. About a quarter of a mile distant from the Amenopheion, and nearer to the Nile, are the two colossal statues called *Tama* and *Chama* by the natives, standing isolated on the plain and eminent above it. The most northerly of these statues is the celebrated vocal Memnon. Their present isolation, however, is probably accidental, and arises from the subsidence or destruction of an intermediate dromos, of which they formed the portals, and which led to the Amenopheion. These statues have already been described in the *Dictionary of Biography*, s. v. MEMNON [Vol. II. p. 1028.] It may be added here that the present height of these colossal figures, inclusive of the pedestal, is 60 feet. The alluvial soil, however, rises to nearly one half of the pedestal, and as there is an inscription of the age of Antoninus Pius, A. D. 139, foll., i. e. about 1720 years old, we obtain some measure of the amount of deposition in so many centuries. The blocks from which

the statues are formed are composed of a coarse, hard breccia, intermixed with agatised pebbles. (Rasaggar, *Reisen*, vol. ii. pt. 1. p. 410.) The village of *Medinet-Abou* stands about one third of a mile SW. of *Koum-el-Hattam*, upon a lofty mound formed by the ruins of the most splendid structure in western Thebes. It consisted of two portions, a temple and a palace, connected with each other by a pylon and a dromos. The temple was the work of successive monarchs of the name of Thothmes, and hence has received the name of the Thothmesion. Apparently this site found favour with the sovereigns of Aegypt in all ages, since, either on the main building or on its numerous outworks, which extend towards the river, are inscribed the names of Tirhakah the Aethiopian, of Nectanebes, the last independent king of Aegypt, of Ptolemy Soter II., and of Antoninus Pius. The original Thothmesion comprises merely a sanctuary surrounded by galleries and eight chambers; the additions to it represent the different periods of its patrons and architects. The palace of *Rameses*—the southern *Ramesion* of Champollion—far exceeds in dimensions and the splendour of its decorations the Thothmesion. It stands a little S. of the temple, nearer the foot of the hills. The dromos which connects them is 265 feet in length. The sculptures on the pylon relate to the coronation of *Rameses* IV. and his victories over the Aethiopians. A portion of the southern *Ramesion* seems to have been appropriated to the private uses of the king. The mural decorations of this portion are of singular interest, inasmuch as they represent *Rameses* in his hours of privacy and recreation.

The walls of the southern *Ramesion* generally are covered both on the inside and the out with representations of battles, sacrifices, religious processions and ceremonies, relating to the 18th dynasty. A plain succeeds, bounded by sand-hills and heaps of Nile-mud. It is variously described by modern travellers as the site of a race-course, of a camp or barrack, or an artificial lake, over which, according to Sir Gardner Wilkinson, the dead were ferried to the neighbouring necropolis. Whatever may have been its purpose, this plain is of considerable extent, being somewhat less than a mile and half in length, and more than half a mile in breadth.

The contrast between the portion of Thebes once crowded with the living, and that which was equally thronged with the dead, is less striking now, when the whole city is a desert or occupied only by a few straggling villages. But under the Pharaohs the vicinity of life and death must have been most solemned and expressive. From *Gournah* to *Medinet-Abou* the Libyan hills, along a curve of nearly 5 miles, are honey-combed with sepulchres, and conspicuous among them are the Tombs of the Kings, situated in the valley of *Bab-el-Melook*. The Theban necropolis is excavated in the native calcareous rock. The meaner dead were interred in the lower ground, where the limestone is of a softer grain, and more exposed to decomposition by wind and water. This portion of the cemetery has, accordingly, fallen into decay. But the upper and harder strata of the hills are of finer and more durable texture, and here the priest-caste and nobles were interred. The tombs of the lower orders are generally without sculpture, but filled with mummies of animals accounted sacred by the Egyptians. A favourite companion in death appears to have been

the ape; and such numbers of this animal have been found in one portion of the necropolis that it is truly containing their mummies bears the name of the "Apes' Burial Place." Upon the grave of the upper classes painting and sculpture was used in a measure hardly inferior to that used in the sepulchres of the kings. The entrance is tunnelled by them, and by the galleries and rooms which led to the various chambers. The entrances to these tombs are rectangular, and open passages which either pierce the rock in straight lines, or wind through it by ascending and descending shafts. Where the limestone is of a crumbling nature, it was supported by brick arches, and was provided for carrying off standing water. The walls of these passages and chambers were carefully prepared for the artist. Engraving portions were cut out, and their plain surface with bricks and plaster. Their entire surface was then covered with stucco, on which the pictures were designed and highly coloured. The drawings are rarely in relief, but either drawn on the surface, or cut into the stucco. They are executed in squares of chequer and arabesque work. The subjects portrayed within these frames are of a very various, ranging through religious scenes and the incidents of public or private life. The ornaments of these tombs may indeed be traced in miniature painting of the Egyptians. Within a space of between 40 and 50 feet no less than 1200 hieroglyphics are often traced, and almost with a minute delicacy unapproached even in paintings above ground, which were meant for the eyes of the living.

The Royal Sepulchres, however, form the most striking feature of the Theban necropolis. They stand in a lonely and barren valley, seeming a natural chasm in the limestone, and resembling in its perpendicular sides and oblong shape a scarp. At the lower end of this basin an entrance has been cut—there seems to be no natural mode of ingress in the rock. Forty-seven tombs were, at one time, known to the ancients. (Diodor. i. 46.) Of these twenty or twenty-one have been counted by modern explorers. Here reposed the Theban Pharaohs from the 18th to the 31st dynasty. The only tombs, hitherto discovered, complete on those of *Amunoph* III., *Rameses* Meimsem, and *Rameses* III. To prepare a grave seems to have been one of the duties or pleasures of Aegyptian royalty, and since the longest survivor of these monarchs rests in the most sumptuous tomb, it may be inferred that the majority of them died before they had completed their last habitation.

The queens of Aegypt were buried apart from the kings, in a spot about three-fourths of a mile SE. of the temple of *Medinet-Abou*. Each of them bore the title of "Wife of Amun," indicating either that their consorts combined with their proper name that also of the great Theban deity, or that, after death, they were dignified by apotheosis. Twenty-four tombs have at present been discovered in this cemetery, twelve of which are ascertained to be those of the queens. The least injured of them by the violence bears the name of *Tait*, wife of *Amunoph* III.

On the eastern bank of the Nile, the monuments are even more magnificent. The villages of *Luxor* and *Karnak* occupy a small portion only of the true Theban necropolis. The ruins at *Luxor* stand close to the river. The ancient landing place was a jetty of masonry, which

also served to break the current of the stream. The most remarkable monuments are two obelisks of Rameses III., respectively 70 and 60 feet high, one of which still remains there, while the other has been removed to the *Place de la Concorde* at Paris. Their unequal height was partially concealed from the spectator by the lower obelisk being placed upon the higher pedestal. Behind them were two monolith statues of that monarch, in red Syenite granite. These are now covered from the breast downwards with rubbish and fluvial deposit, but were, originally, including their chairs or bases, 39 feet high. Next succeeds a court, surrounded by a corridor of double columns, 190 feet long and 170 broad. It is entered through a portal 51 feet in height, whose pyramidal wings are inscribed with the battles of Rameses. On the opposite side of the court a second portal, erected by Amunoph III., opens upon a colonnade which leads to a smaller court, and this again terminates with a portico composed of four rows of columns, eight in each row. Beyond the third portico follows a considerable number of apartments, flanking a sanctuary on the walls of which are represented the birth of Amunoph, and his presentation to Amun.

A dromos of *andro-sphinxes*, and various buildings now covered with sand and dried mud, formerly connected the quarter of eastern Thebes, represented by *Luxor*, with that represented by *Karnak*. Near to the latter place a portion of the dromos still exists, and a little to the right of it a second dromos of *crio-sphinxes* branches off, which must have been one of the most remarkable structures in the city. It led up to the palace of the kings, and consisted of a double row of statues, sixty or seventy in number, each 11 feet distant from the next, and each having a lion's body and a ram's head. The SW. entrance of the palace is a lofty portal, followed by four spacious courts with intervening gateways.

The grandeur of the palace is, in some degree, lessened by later additions to its plan, for on the right side of the great court was a cluster of small chambers, while on its left were only two apartments. Their object is unknown, but they probably served as lodgings or offices for the royal attendants. In the first of the two main courts stand two obelisks of Thothmes I., one in fragments, the other still erect and uninjured. In a second court to the right of the first, there were two obelisks also: the one which remains is 92 feet high. The oldest portion of the palace of *Karnak* appears to be a few chambers, and some polygonal columns bearing the shield of Sesortasen I. To these—the nucleus of the later structures—Thothmes III. made considerable additions; among them a chamber whose sculptures compose the great *Karnak Tablet*, so important a document for Egyptian chronology.

But the Great Court is surpassed in magnificence by the Great Hall. This is 80 feet in height, and 329 feet long by 179 broad. The roof is supported by 134 columns, 13 in the centre and 122 in the aisles. The central columns are each 66 feet high, clear of their pedestals, and each 11 feet in diameter. The pedestals were 10 feet high, and the abacus over their capitals, on which rested the architraves of the ceiling, was 4 feet in depth. The columns were each about 27 feet apart from one another. The aisle-columns stood in 7 rows, were each 41 feet high, and 9 feet in girth. Light and air were admitted into the building through apertures in the side walls. The founder of the palace was Setci-Mesephthah, of the 18th dynasty; but one reign

cannot have sufficed for building so gigantic a court, and we know indeed not only that many of the historical bas-reliefs which cover the walls were contributed by his son Rameses II., but also that the latter added to the Great Hall, on its NW. side, a vast hypethral court, 275 feet in breadth, by 329 in length. This, like the hall, had a double row of columns down its centre, and a covered corridor round its sides. Four gateways opening to the four quarters gave admission into this court: and to the principal one which fronted the Nile an avenue of crio-sphinxes led up, headed by two granite statues of Rameses II.

The purpose for which these spacious courts and their annexed halls and esplanades were erected was perhaps partly religious, and partly secular. Though the kings of the 18th and succeeding dynasties had ceased to be chief-priests, they still retained many ceremonial functions, and the sacred calendar of Egypt abounded in days of periodical meetings for religious objects. At such *panegyries* the priests alone were a host, and the people were not excluded. From the sculptures also it appears that the Court of Royal Palaces was the place where troops were reviewed, embassies received, captives executed or distributed, and the spoils or honours of victory apportioned. Both temples and palaces also served occasionally for the encampment of soldiers and the administration of justice. The temperature of the Thebaid rendered vast spaces indispensable for the congregation of numbers, and utility as well as pomp may have combined in giving their colossal scale to the structures of the Pharaohs.

In the Great Hall a great number of the columns are still erect. The many which have fallen have been undermined by water loosening the soil below: and they fall the more easily, because the architraves of the roof no longer hold them upright. The most costly materials were employed in some parts of the palace. Cornices of the finest marble were inlaid with ivory mouldings or sheathed with beaten gold.

These were the principal structures of the eastern moiety of Thebes: but other dromoi and gateways stand within the circuit of its walls, and by their sculptures or inscriptions attest that the Macedonian as well as the native rulers extended, renovated, or adorned the capital of the Upper Country. The eastern branch of the dromos which connects *Luxor* with *Karnak* appears from its remains to have been originally 500 feet in length, and composed of a double row of ram-headed lions 58 in number. The loftiest of Aegyptian portals stands at its SW. extremity. It is 64 feet high, but without the usual pyramidal propyla. It is indeed a work of the Greek era, and was raised by Ptolemy Energetes I. Rameses IV. and Rameses VIII. added temples and a dromos to the city. Nor was Thebes without its benefactors even so late as the era of the Roman Caesars. The name of Tiberius was inscribed on one of its temples; and Hadrian, while engaged in his general survey of the Empire, directed some repairs or additions to be made to the temple of Zeus-Ammon. That Thebes, as Herodotus and Diodorus saw it, stood upon the site and incorporated the remains of a yet more ancient city, is rendered probable by its sudden expansion under the 18th dynasty of the Pharaohs, as well as by extant specimens of its architecture, more in affinity with the monuments S. of the cataracts than with the proper Aegyptian style. It seems hardly questionable that

Thebes was indebted for its greatness originally to its being the principal centre of Ammon-worship,—a worship which, on the one hand, connected it with Meroë, and, on the other, with the islands of the Libyan desert. The strength which the Thebaid and its capital thus acquired not only enabled it to rise superior to Abydos in the earlier period, but also to expel the Assyrian invaders from the Delta. It becomes then an interesting question which quarter of Thebes was its cradle? Did it spread itself from the eastern or the western shore of the Nile? Both Diodorus and Strabo are agreed in placing the "old town," with its Ammonian temple, on the eastern bank of the river; and this site too was the more accessible of the two, whether its population came from the left or, as it is more likely they did, from the right shore. Between *Lazur* and *Karnak* lies the claim to be considered as the site of the earliest Diospolis. Now in the former place there is no conspicuous trace of Ammon-worship, whereas the latter, in its ram-headed dromoi, abounds with symbols of it. At *Karnak*, every monument attests the presence of Ammon. Osiris indeed appears as his son or companion on the sculptures, and in some of the temple-legends they were represented as joint founders of the shrine. But Ammon was without doubt the elder of the two. We may accordingly infer that the first Thebes stood nearly on the site of the present *Karnak*, at a period anterior to all record: that it expanded towards the river, and was separated by the whole breadth of the stream and of the plain to the foot of the Libyan hills from the necropolis. Finally, that as its population became too large for the precincts of the eastern plain, a suburb, which grew into a second city, arose on the opposite bank of the Nile; and thus the original distinction between eastern and western Thebes partially disappeared, and the river, having thenceforward habitations on both its banks, no longer parted by a broad barrier the city of the living from the city of the dead.

(Konrick, *Ancient Egypt under the Pharaohs*, vol. i. pp. 149—178; Heeren, *Historical Researches, Thebes and its Monuments*, vol. ii. pp. 201—342; Champollion, *Lettres sur l'Égypte*; Hamilton, *Aegyptiaca*; Belzoni, *Travels*, &c.)

The territory of Thebes was named THEBAIS (ἡ Θηβαία, sc. χώρα, or ἡ ἀνω χώρα, the Upper Country, Ptol. iv. 5. § 62), the modern *Sais* or *Pachos*, and was one of the three principal divisions of Egypt. Its frontiers to the S. varied accordingly as Egypt or Aethiopia preponderated, the Theban Pharaohs at times ruling over the region above the Cataracts as far S. as Hiera Sycamina lat. 23° 6' N.; while, at others, the kings of Meroë planted their garrisons N. of Syene, and, at one period, occupied the Thebais itself. But the ordinary limits of Upper Egypt were Syene to S., lat. 24° 5' N., and Hermopolis Magna to N., lat. 27° 45' N. On the E. it was bounded by the Arabian, on the W. by the Libyan hills and desert. As rain seldom falls in the Thebais (Herod. iii. 10), and as its general surface is rocky or sandy, the breadth of cultivable land depends on the alluvial deposit of the Nile, and this again is regulated by the conformation of the banks on either side. For a similar cause the population of the Thebais was mostly gathered into towns and large villages, both of which are often dignified by ancient writers with the appellation of cities. But numerous cities were incompatible with the physical character of this region,

and its population must have been mainly below the estimate of it by the Greeks (see above).

The Thebais was divided into ten *nemes* (Zakari, p. 787), and consequently ten halls in the temples were appropriated to its Nomes. But the number apparently varied with the boundaries of Upper Egypt, since Pliny (v. 9) enumerates seven, and other writers mention fourteen Nomes. The physical aspect of the Thebais requires especial notice, as it differed, both geologically and in its fauna and flora, from that of Lower Egypt.

For the most part it is a narrow valley, intersected by the river and bounded by a double line of hills, lofty and abrupt on the eastern or Asian side, lower and interrupted by sandy plains and valleys on the Libyan or western. The desert on either side produces a stunted vegetation of shrubs and herbs, which emit a slight aromatic odor. The cultivable soil is a narrow strip on each side of the Nile, forming, with its bright verdure, a strong contrast to the brown and arid hue of the surrounding district. The entire breadth of this valley, including the river, does not exceed 11 miles, and sometimes is contracted by the rocky banks to the Nile even to two.

Upper Egypt belongs to Nubia rather than to the Heptanomis or the Delta. Herodotus (ii. 14) was mistaken in his statement that rain never falls in the Thebais. It is, however, rare even in the Delta. Showers fall annually during four or five days each year, and about once in eight or ten years heavy rains fill the torrent-beds of the mountains, and convert the valleys on either side of the Nile into temporary pools. That this was so even in the age of Hecataeus and Herodotus is proved by the circumstance that the lions on the cornice of the Theban temples have tubus in their mouths to let the water off.

But the fertility of the Thebais depends on the overflow of the Nile. From Syene nearly to Lepidopolis, lat. 25° 17' N., the cultivable soil is a narrow rim of alluvial deposit, bounded by steep walls of sandstone. On the Arabian shore were the pyramids from which the great temples of Upper Egypt were constructed. At Apollinopolis Magna (Edfu) the sandstone disappears from the W. bank of the river, and on the E. it extends but a little below that city. Four miles below Eilithya, the limestone region begins, and stretches down nearly to the apex of the Delta; descending on the Libyan side in terraces to the Mediterranean. At this point a greater breadth of land is cultivable, and the Arabian hills deep gorges open towards the Red Sea, the most considerable of which are the valleys that run from Eilithya in a S.E. direction to Bahariya, and from Coptos, past the purple pyramids, to Cosseir on the Red Sea. The tanks and stations for the caravans which the Theban Pharaohs and the Ptolemies constructed in these valleys are still occasionally found buried in the sand. At Lampsak the Nile-valley is nearly 5 miles wide, but is again contracted by the rocks at Gebelina, where, owing to the precipitous character of the banks, the mud fills the river and crosses the eastern desert to Bahariya.

The next material expansion of the Nile-valley is at the plain of Thebes. At this point both lines of hills curve boldly away from the river, and leave an area of more than 5 miles in length and 3 in breadth. At the northern extremity of this plain the banks again contract, and at Gournah are almost close to the Nile. Re-opening again, the

borders of the stream as far as Hermopolis Magna, the northern boundary of the Thebaid, generally extend inland on the E. side about one mile and a half, on the W. about two miles. They do not indeed observe an unbroken line, but the alluvial soil, where the mouths of the collateral valleys permit, occasionally stretches much farther into the country. Canals and dykes in the Pharaonic period admitted and retained the Nile's deposit to an extent unknown either in Grecian, Roman, or modern eras.

Seen from the river the Thebaid, in the flourishing periods of Aegypt, presented a wide and animated spectacle of cultivation and industry, wherever the banks admitted of room for cities or villages. Of the scenery of the Nile, its teeming population and multitudinous river-craft, mention has already been made in the article NILEUS. Among many others, the following objects were beheld by those who travelled from Syene to Hermopolis. At first the general appearance of the shores is barren and dreary. *Koum-Ombos*, the ancient Ombi, would first arrest attention by the brilliant colours of its temples, and, at certain seasons of the year, by the festivals held in honour of the crocodile-headed deity *Sevak*. At times also, if we may credit the Roman satirist (Juvenal, *Sat.* xv.), the shore at Ombi was the scene of bloody frays with the crocodile exterminators from Tentyra. Sixteen miles below Ombi was the seat of the special worship of the Nile, which at this point, owing to the escarped form of its sandstone banks, admits of a narrow road only on either side, and seems to occupy the whole breadth of Aegypt. Here too, and on the eastern bank especially are the vast quarries of stone which supplied the Theban architects with their durable and beautiful materials. Various landing-places from the river gave access to those quarries: the names of successive sovereigns and princes of the xviiiith dynasty, their wars and triumphs, are recorded on the rocks; and blocks of stone and monolithical shrines are still visible in their galleries. The temples of Apollinopolis Magna (*Edfu*), the hypogaeæ of Eilithya, Thebes occupying either bank, Coptos, long the seat of Aegyptian commerce with India, the temples of Athor and Isis at Tentyra, the mouth of the ancient branch of the Nile, the canal of *Jesuf* at Diospolis Parva, the necropolis of Abydos, near which runs the highroad to the greater Oasis, the linen-works and stone-masons' yards of Chemmis or Panopolis (*Ekhmin*), the sepulchral chambers at Lycopolis, and, finally, the superb portico of Hermopolis Magna, all evince, within a compass of about 380 miles, the wealth, enterprise, and teeming population of Upper Aegypt.

The vegetation of this region announces the approach to the tropics. The productions of the desert, stunted shrubs and trees, resemble those of the Arabian and Libyan wastes. But wherever the Nile fertilises, the trees and plants belong rather to Aethiopia than to the lower country. The sycamore nearly disappears: the Theban palm and the date-palm take its place. The lotus (*Nymphaea Lotus* and *Nymphaea coerulea*) is as abundant in the Thebais as the papyrus in the Delta. It is the symbol of the Upper Land: its blue and white cups enliven the pools and canals, and representations of them furnished a frequent and graceful ornament to architecture. Its bulb afforded a plentiful and nutritious diet to the poorer classes. The deserts of the Thebais, which in Christian times swarmed with monasteries and hermitages, contained the wolf, hyaena, and

jackal: but the larger carnivorous animals of Libya were rarely seen in Aegypt. (Herod. ii. 65.) In the Pharaonic times the hippopotamus was found in the Nile below the Cataracts: more recently it has seldom been found N. of them. The crocodile, being an object of worship in several of the Theban nomes, was doubtless more abundant than it is now. From both papyri and sculptures we know that the Theban landowners possessed horned cattle and sheep in abundance, although they kept the latter for their wool and milk principally; and the chariots of Thebes attest the breeding and training of horses. From extant drawings on the monuments we know also that horticulture was a favourite occupation in Upper Aegypt.

The population of the Thebais was probably of a purer Aegyptian stamp than that of the Delta; at least its admixtures were derived from Arabia or Meroe rather than from Phoenicia or Greece. Its revolutions, too, proceeded from the south, and it was comparatively unaffected by those of the Lower Country. Even as late as the age of Tiberius, A.D. 14-37, the land was prosperous, as is proved by the extension and restoration of so many of its public monuments; and it was not until the reign of Diocletian that its ruin was consummated by the inroad of the Blemmyes, and other barbarous tribes from Nubia and the Arabian desert. [W. B. D.]

THEBAE (Θῆβαι, orig. Θάβη, Dor. Θάβα: *Ἔθ.* Θῆβαιος, fem. Θῆβαίς, Thebanus, fem. Thebais), the chief city in Boeotia, was situated in the southern plain of the country, which is divided from the northern by the ridge of Onchestus. Both these plains are surrounded by mountains, and contained for a long time two separate confederacies, of which Orchomenus in the north and Thebes in the south were the two leading cities.

I. HISTORY.

No city in Greece possessed such long continued celebrity as Thebes. Athens and Sparta, which were the centres of Grecian political life in the historical period, were poor in mythical renown; while Argos and Mycenæ, whose mythical annals are full of glorious recollections, sank into comparative insignificance in historical times, and Mycenæ indeed was blotted out of the map of Greece soon after the Persian wars. But in the mythical ages Thebes shone pre-eminent, while in later times she always maintained her place as the third city of Greece; and after the battle of Leuctra was for a short period the ruling city. The most celebrated Grecian legends cluster round Thebes as their centre; and her two sieges, and the fortunes of her royal houses, were the favourite subjects of the tragic muse. It was the native city of the great seer Teiresias and of the great musician Amphion. It was the reputed birthplace of the two deities Dionysus and Hercules, whence Thebes is said by Sophocles to be "the only city where mortal women are the mothers of gods (οὗ δὲ μόνον τίκτουσιν αἱ θνητοὶ θεοὶ, *Fragn. ap. Dicaearch.* § 17, ed. Müller; *Mure, Tour in Greece*, vol. i. p. 253.)

According to the generally received tradition, Thebes was founded by Cadmus, the leader of a Phoenician colony, who called the city CADMÉIA (*Καδμεία*), a name which was afterwards confined to the citadel. In the *Odyssey*, Amphion and Zethus, the two sons of Antiope by Zeus, are represented as the first founders of Thebes and the first

builders of its walls. (*Od.* xi. 262.) But the logographers placed Amphion and Zethus lower down in the series, as we shall presently see. The legends connected with the foundation of the city by Cadmus are related elsewhere. [*Dict. of Biogr. and Myth.* art. CADMUS.] The five Sparti, who were the only survivors of the warriors sprung from the dragon's teeth, were the reputed ancestors of the noblest families in Thebes, which bore the name of Sparti down to the latest times. It is probable that the name of their families gave origin to the fable of the sowing of the dragon's teeth. It appears certain that the original inhabitants of Thebes were called Cadmeii (*Kadmeioi*, *Il.* iv. 388, 391, v. 807, x. 288, *Od.* xi. 276) or Cadmeioes (*Kadmeioes*, *Il.* iv. 385, v. 804, xxiii. 680), and that the southern plain of Boeotia was originally called the Cadmeian land (*Kadmeia γῆ*, *Thuc.* i. 12). The origin of these Cadmeians has given rise to much dispute among modern scholars. K. O. Müller considers Cadmus a god of the Tyrrhenian Pelasgians, and maintains that the Cadmeians are the same as the Tyrrhenian Pelasgians; Welcker endeavours to prove that the Cadmeians were a Cretan colony; while other writers adhere to the old traditions that the Cadmeians were Phœnicians who introduced the use of letters into Greece. (*Müller, Orchomenos*, p. 111, seq., 2nd ed.; *Thirlwall, Hist. of Greece*, vol. i. p. 111.) It is useless, however, to enter into the discussion of a subject respecting which we possess no materials for arriving at a satisfactory conclusion. It is certain that the Greeks were indebted to the Phœnicians for their alphabet; but whether the Cadmeians were a Phœnician colony or some other race must be left uncertain.

But we must return to the legendary history of Thebes. Cadmus had one son, Polydorus, and four daughters, Ino, Semele, Autonoe, and Agave, all of whom are celebrated in the mythical annals. The tales respecting them are given in the *Dict. of Biogr. and Myth.*, and it is only necessary to mention here that Ino became the wife of Athamas and the mother of Melicertes; Semele was beloved by Zeus and became the mother of the god Dionysus; Autonoe was the mother of the celebrated hunter Actæon, who was torn to pieces by the dogs of Artemis; and Agave was the mother of Pentheus, who, when Cadmus became old, succeeded him as king of Thebes, and whose miserable end in attempting to resist the worship of Dionysus forms the subject of the *Bacchæ* of Euripides. After the death of Pentheus, Cadmus retired to the Illyrians, and his son Polydorus became king of Thebes. Polydorus is succeeded by his son Labdacus, who leaves at his death an infant son Laius. The throne is usurped by Lycus, whose brother Nycteus is the father of Antiope, who becomes by Zeus the mother of the twin sons, Amphion and Zethus. Nycteus having died, Antiope is exposed to the persecutions of her uncle Lycus and his cruel wife Dirce, till at length her two sons, Amphion and Zethus, revenge her wrongs and become kings of Thebes. They fortify the city; and Amphion, who had been taught by Hermes, possessed such exquisite skill on the lyre, that the stones, obedient to his strains, moved of their own accord, and formed the wall ("movit Amphion lapides canendo," *Hor. Carm.* iii. 11). The remainder of the legend of Amphion and Zethus need not be related; and there can be no doubt, as Mr. Grote has remarked, that the whole story was originally unconnected with the

Cadmeian family, as it still stands in the *Odyssey*, and has been interwoven by the logographers into the series of the Cadmeian myths. In order to reconcile the Homeric account of the building of the city by Amphion and Zethus with the usually received legend of its foundation by Cadmus, it was represented by later writers that, while Cadmus founded the Cadmeia, Amphion and Zethus built the lower city (*τὴν πόλιν τὴν κατῶν*), and gave to the united city the name of Thebes. (*Paus.* ix. 5. §§ 2, 6.)

After Amphion and Zethus, Laius became king of Thebes; and with him commences the memorable story of Oedipus and his family, which is too well known to need repetition here. When Oedipus was expelled from Thebes, after discovering that he had murdered his father Laius and married his mother Jocasta, his two sons Eteocles and Polynices quarrelled for their father's throne. Their disputes led to the two sieges of Thebes by the Argive Adrastus, two of the most memorable events in the legendary history of Greece. They formed the subject of the two epic poems, called the *Thebais* and the *Epigoni*, which were considered only inferior to the *Iliad* and the *Odyssey*. Polynices, having been driven out of Thebes by Eteocles, retires to Argæ and obtains the aid of Adrastus, the king of the city, to reinstate him in his rights. Polynices and Adrastus are joined by five other heroes, making the confederacy known under the name of the "Seven against Thebes." The names of these seven chiefs were Adrastus, Amphiaraus, Capaneus, Hippomedon, Parthenopæus, Tydeus, and Polynices; but there are discrepancies in the lists, as we shall notice more fully below: and Aeschylus (*Sept. c. Theb.* 461) in particular omits Adrastus, and inserts Eteocles in his place. The Seven Chiefs advanced against Thebes, and each attacked one of the celebrated gates of the city. Polynices and Eteocles fell by each other's hands; and in the general engagement which followed the combat of the two brothers, the Argives were defeated, and all their chiefs slain, with the exception of Adrastus, who was saved by the swiftness of his horse Arion, the offspring of Poseidon. A few years afterwards the sons of the Seven Chiefs undertook an expedition against Thebes, to avenge their fathers' fate, hence called the war of the *Epigoni* or *Descendants*. This expedition was also led by Adrastus, and consisted of Aegialeus, son of Adrastus, Thersander, son of Polynices, Alcmaeon and Amphilochus, sons of Amphiaraus, Diomedes, son of Tydeus, Sthenelus, son of Capaneus, and Promachus, son of Parthenopæus. The *Epigoni* gained a victory over the Cadmeians at the river Glisas, and drove them within their walls. Upon the advice of the seer Teiresias, the Cadmeians abandoned the city, and retired to the Illyrians under the guidance of Laodamas, son of Adrastus. (*Apollod.* iii. 7. § 4; *Herod.* v. 57—61; *Paus.* ix. 5. § 13; *Diod.* iv. 65, 66.) The *Epigoni* thus became masters of Thebes, and placed Thersander, son of Polynices, on the Throne. (For a full account of the legends of Thebes, see Grote, *Hist. of Greece*, vol. i. c. xiv.) According to the mythical chronology, the war of the Seven against Thebes took place 20 years before the Trojan expedition and 30 years before the capture of Troy; and the war of the *Epigoni* was placed 14 years after the first expedition against Thebes, and consequently only 4 years before the departure of the Greeks against Troy. (*Clement, F. H.* vol. i. p. 140.)

There is another important event in the mythical times of Thebes, which was not interwoven with the series of the legends already related. This is the birth of Hercules at Thebes, and the important services which he rendered to his native city by his war against Orchomenus. It was stated that the Thebans were compelled to pay tribute to Erginus, king of Orchomenus; but that they were delivered from the tribute by Hercules, who marched against Orchomenus, and greatly reduced its power (Paus. ix. 37. § 2; Strab. ix. p. 414; Diod. iv. 18). This legend has probably arisen from the historical fact, that Orchomenus was at one time the most powerful city in Boeotia, and held even Thebes in subjection.

Thebes is frequently mentioned in Homer, who speaks of its celebrated seven gates (*Il.* iv. 406, *Od.* xi. 263); but its name does not occur in the catalogue of the Greek cities which fought against Troy, as it was probably supposed not to have recovered from its recent devastation by the Epigoni. Later writers, however, related that Thersander, the son of Polynices, accompanied Agamemnon to Troy, and was slain in Mysia by Telephus, before the commencement of the siege; and that upon his death the Thebans chose Peneleos as their leader, in consequence of the tender age of Tisamenus, the son of Thersander. (Paus. ix. 5. §§ 14, 15.) In the *Iliad* (ii. 494) Peneleos is mentioned as one of the leaders of the Boeotians, but is not otherwise connected with Thebes.

According to the chronology of Thucydides, the Cadmeians continued in possession of Thebes till 60 years after the Trojan War, when they were driven out of their city and country by the Boeotians, an Aæolian tribe, who migrated from Thessaly. (Thuc. i. 12; Strab. ix. p. 401.) This seems to have been the genuine tradition; but as Homer gives the name of Boeotians to the inhabitants of the country called Boeotia in later times, Thucydides endeavours to reconcile the authority of the poet with the other tradition, by the supposition that a portion of the Aæolic Boeotians had settled in Boeotia previously, and that these were the Boeotians who sailed against Troy. According to other accounts, Thebes was taken by the Thracians and Pelasgians during the Trojan War, and its inhabitants driven into exile in Thessaly, whence they returned at a later period. (Strab. ix. p. 401; Diod. xix. 53.)

Pausanias gives us a list of the kings of Thebes, the successors of Tisamenus, till the kingly dignity was abolished and a republic established in its place (ix. 5. § 16). But, with the exception of one event, we know absolutely nothing of Theban history, till the dispute between Thebes and Plataea in the latter end of the sixth century B. C.

The event to which we allude is the legislation of Philolaus, the Corinthian, who was enamoured of Diocles, also a Corinthian, and the victor in the Olympic games, B. C. 728. Both Philolaus and Diocles left their native city and settled at Thebes, where the former drew up a code of laws for the Thebans, of which one or two particulars are mentioned by Aristotle. (*Pol.* ii. 9. §§ 6, 7.) At the time when Thebes first appears in history, we find it under an oligarchical form of government, and the head of a political confederation of some twelve or fourteen Boeotian cities. The greater cities of Boeotia were members of this confederation, and the smaller towns were attached to one or other of these cities in a state of dependence. [BOEOTIA, p. 415.]

The affairs of the confederation were managed by certain magistrates or generals, called Boeotarchs, of whom there were eleven at the time of the battle of Delium (B. C. 424), two being elected by Thebes, and one apparently by each of the other members of the confederation (Thuc. iv. 91). But the real authority was vested in the hands of the Thebans, who used the power of the confederation with an almost exclusive view to Theban interests, and kept the other states in virtual subjection.

The first well-known event in Grecian history is the dispute, already mentioned, between Thebes and Plataea. The Plataeans, discontented with the supremacy of Thebes, withdrew from the Boeotian confederation, and surrendered their city to the Athenians. This led to a war between the Thebans and Athenians, in which the Thebans were defeated and compelled to cede to the Plataeans the territory S. of the Asopus, which was made the boundary between the two states. (Herod. vi. 108; Thuc. iii. 68.) The interference of Athens upon this occasion was bitterly resented by Thebes, and was the commencement of the long enmity between the two states, which exercised an important influence upon the course of Grecian history. This event is usually placed in B. C. 519, upon the authority of Thucydides (*L. c.*); but Mr. Grote brings forward strong reasons for believing that it must have taken place after the expulsion of Hippias from Athens in B. C. 510. (*Hist. of Greece*, vol. iv. p. 222.) The hatred which the Thebans felt against the Athenians was probably one of the reasons which induced them to desert the cause of Grecian liberty in the great struggle against the Persian power. But in the Peloponnesian War (B. C. 427) the Theban orator pleaded that their alliance with Persia was not the fault of the nation, but of a few individuals who then exercised despotic power. (Thuc. iii. 62.) At the battle of Plataea, however, the Thebans showed no such reluctance, but fought resolutely against the Athenians, who were posted opposite to them. (Herod. ix. 67.) Eleven days after the battle the victorious Greeks appeared before Thebes, and compelled the inhabitants to surrender their *medizing* leaders, who were immediately put to death, without any trial or other investigation. (Herod. ix. 87, 88.) Thebes had lost so much credit by the part she had taken in the Persian invasion, that she was unable to assert her former supremacy over the other Boeotian towns, which were ready to enter into alliance with Athens, and would doubtless have established their complete independence, had not Sparta supported the Thebans in maintaining their ascendancy in the Boeotian confederation, as the only means of securing the Boeotian cities as the allies of Sparta against Athens. With this view the Spartans assisted the Thebans in strengthening the fortifications of their city, and compelled the Boeotian cities by force of arms to acknowledge the supremacy of Thebes. (Diod. xi. 81; Justin, iii. 6.) In B. C. 457 the Athenians sent an army into Boeotia to oppose the Lacedæmonian forces in that country, but they were defeated by the latter near Tanagra. Sixty-two days after this battle (B. C. 456), when the Lacedæmonians had returned home, the Athenians, under the command of Myronides, invaded Boeotia a second time. This time they met with the most signal success. At the battle of Oenophyta they defeated the combined forces of the Thebans and Boeotians, and obtained in consequence possession of Thebes and of

the other Boeotian towns. A democratical form of government was established in the different cities, and the oligarchical leaders were driven into exile. (Thuc. i. 108; Diod. xi. 81.) This state of things lasted barely ten years; the democracy established at Thebes was ill-conducted (Arist. Pol. v. 2. § 6); and in B.C. 447 the various Boeotian exiles, combining their forces, made themselves masters of Orchomenus, Chaeroneia, and some other places. The Athenians sent an army into Boeotia under the command of Tolmides; but this general was slain in battle, together with many of his men, while a still larger number were taken prisoners. To recover these prisoners, the Athenians agreed to relinquish their power over Thebes and the other Boeotian cities. The democratical governments were overthrown; the exiles were restored; and Thebes again became the bitter enemy of Athens. (Thuc. i. 113, iii. 62; Diod. xii. 6.) The Thebans were indeed more anti-Athenian than were the Spartans themselves, and were the first to commence the Peloponnesian War by their attempt to surprise Plataea in the night, B.C. 431. The history of this attempt, and of the subsequent siege and capture of the city, belongs to the history of Plataea. [PLATAEA.] Throughout the Peloponnesian War the Thebans continued the active and bitter enemies of the Athenians; and upon its close after the battle of Argosotami they joined the Corinthians in urging the Lacedaemonians to destroy Athens, and sell its population into slavery. (Xen. Hell. ii. 2. § 19.) But soon after this event the feelings of the Thebans towards Athens became materially changed in consequence of their jealousy of Sparta, who had refused the allies all participation in the spoils of the war, and who now openly aspired to the supremacy of Greece. (Plut. Lys. 27; Justin, vi. 10.) They consequently viewed with hostility the Thirty Tyrants at Athens as the supporters of the Spartan power, and gave a friendly welcome to the Athenian exiles. It was from Thebes that Thasybulus and the other exiles started upon their enterprise of seizing the Peiraeus; and they were supported upon this occasion by Iaménias and other Theban citizens. (Xen. Hell. ii. 4. § 2.) So important was the assistance rendered by the Thebans on this occasion that Thasybulus, after his success, showed his gratitude by dedicating in the temple of Hercules colossal statues of this god and Athena. (Paus. ix. 11. § 6.)

The hostile feelings of Thebes towards Sparta continued to increase, and soon produced the most important results. When Agesilaus was crossing over into Asia in B.C. 397, in order to carry on war against the Persians, the Thebans refused to take any part in the expedition, and they rudely interrupted Agesilaus when he was in the act of offering sacrifices at Aulis, in imitation of Agamemnon;—an insult which the Spartan king never forgave. (Xen. Hell. iii. 5. § 5; Plut. Ages. 6; Paus. iii. 9. §§ 3—5.) During the absence of Agesilaus in Asia, Tithraustes, the satrap of Asia Minor, sent an envoy to Greece to distribute large sums of money among the leading men in the Grecian cities, in order to persuade them to make war against Sparta. But before a coalition could be formed for this purpose, a separate war broke out between Thebes and Sparta, called by Diodorus (xiv. 81) the Boeotian war. A quarrel having arisen between the Opuntian Locrians and the Phocians respecting a strip of border land, the Thebans espoused the cause of the former and

invaded Phocia. Thereupon the Phocians invoked the aid of the Lacedaemonians, who were delighted to have an opportunity of avenging the affront they had received from the Thebans. (Xen. Hell. iii. 5. §§ 3—5; Paus. iii. 9. § 9.) The Lacedaemonians made active preparations to invade Boeotia. Lysander, who had been foremost in promoting the war, was to lay siege to Haliartus, under the walls of which town Pausanias was to join him on a given day with the united Lacedaemonian and Peloponnesian forces. Thus menaced, the Thebans applied for assistance to their ancient enemies, the Athenians, who readily responded to their appeal, though their city was still undefended by walls, and they had no ships to resist the maritime power of Sparta. (Xen. Hell. iii. 5. § 16; Dem. de Cor. p. 258.) Orchomenus, however, seized the opportunity to revolt from Thebes, and joined Lysander in his attack upon Haliartus. (Xen. Hell. iii. 5. § 17; Plut. Lys. 28.) The death of Lysander under the walls of Haliartus, which was followed by the retreat of Pausanias from Boeotia, emboldened the enemies of Sparta; and not only Athens, but Corinth, Argos, and some of the other Grecian states joined Thebes in a league against Sparta. In the following year (B.C. 394) the war was transferred to the territory of Corinth; and so powerful were the confederates that the Lacedaemonians recalled Agesilaus from Asia. In the month of August Agesilaus reached Boeotia on his homeward march, and found the confederate army drawn up in the plain of Coroneia to oppose him. The right wing and centre of his army were victorious, but the Thebans completely defeated the Orchomenians, who formed the left wing. The victorious Thebans now faced about, in order to regain the rest of their army, which had retreated to Mount Helicon. Agesilaus advanced to meet them; and the conflict which ensued was one of the most terrible that had yet taken place in Grecian warfare. The Thebans at length succeeded in forcing their way through, but not without great loss. This was the first time that the Thebans had fought a pitched battle with the Spartans; and the valour which they showed on this occasion was a prelude to the victories which were soon to overthrow the Spartan supremacy in Greece. (Xen. Hell. iv. 3. §§ 15—21.)

We have dwelt upon these events somewhat at length in order to explain the rise of the Theban power; but the subsequent history must be related more briefly. After the battle of Coroneia the course of events appeared at first to deprive Thebes of the ascendancy she had lately acquired. The peace of Antalcidas (B.C. 387), which was concluded under the influence of Sparta, guaranteed the independence of all the Grecian cities; and though the Thebans at first claimed to take the oath, not in their own behalf alone, but for the Boeotian confederacy in general, they were compelled by their enemy Agesilaus to swear to the treaty for their own city alone, since otherwise they would have had to contend single-handed with the whole power of Sparta and her allies. (Xen. Hell. v. 1. §§ 32, 33.) By this oath the Thebans virtually renounced their supremacy over the Boeotian cities; and Agesilaus hastened to exert all the Spartan power for the purpose of weakening Thebes. Not only was the independence of the Boeotian cities proclaimed, and a legal oligarchy organised in each city hostile to Thebes and favourable to Sparta, but Lacedaemonian garrisons were

stationed in Orchomenus and Thespiae for the purpose of overawing Boeotia, and the city of Plataea was rebuilt to serve as an outpost of the Spartan power. (Paus. ix. 1. § 4). A more direct blow was aimed at the independence of Thebes in B. C. 382 by the seizure of the Cadmeia, the citadel of the city, by the Spartan commander, Phoebeidas, assisted by Leontiades and a party in Thebes favourable to Sparta. Though Phoebeidas appears to have acted under secret orders from the Ephors (Diod. xv. 20; Plut. *Agesil.* 24), such was the indignation excited throughout Greece by this treacherous act in time of peace, that the Ephors found it necessary to disavow Phoebeidas and to remove him from his command; but they took care to reap the fruits of his crime by retaining their garrison in the Cadmeia. (Xen. *Hell.* v. 2. § 25.) Many of the leading citizens at Thebes took refuge at Athens, and were received with the same kindness which the Athenian exiles experienced at Thebes after the close of the Peloponnesian War. Thebes remained in the hands of the Spartan party for three years; but in B. C. 379 the Spartan garrison was expelled from the Cadmeia, and the party of Leontiades overthrown by Pelopidas and the other exiles. The history of these events is too well known to be repeated here. In the following year (B. C. 378) Thebes formed an alliance with Athens, and with the assistance of this state resisted with success the attempts of the Lacedaemonians to reduce them to subjection; but the continued increase of the power of the Thebans, and their destruction of the city of Plataea [PLATAEA] provoked the jealousy of the Athenians, and finally induced them to conclude a treaty of peace with Sparta, B. C. 371. This treaty, usually called the peace of Callias from the name of the leading Athenian negotiator, included all the parties in the late war with the exception of the Thebans, who were thus left to contend single-handed with the might of Sparta. It was universally believed that Thebes was doomed to destruction; but only twenty days after the signing of the treaty all Greece was astounded at the news that a Lacedaemonian army had been utterly defeated, and their king Cleombrotus slain, by the Thebans, under the command of Epaminondas, upon the fatal field of Leuctra (B. C. 371). This battle not only destroyed the prestige of Sparta and gave Thebes the ascendancy of Greece, but it stripped Sparta of her Peloponnesian allies, over whom she had exercised dominion for centuries, and led to the establishment of two new political powers in the Peloponnese, which threatened her own independence. These were the Arcadian confederation and the restoration of the state of Messenia, both the work of Epaminondas, who conducted four expeditions into Peloponnese, and directed the councils of Thebes for the next 10 years. It was to the abilities and genius of this extraordinary man that Thebes owed her position at the head of the Grecian states; and upon his death, at the battle of Mantinea (B. C. 362), she lost the pre-eminence she had enjoyed since the battle of Leuctra. During their supremacy in Greece, the Thebans were of course undisputed masters of Boeotia, and they availed themselves of their power to wreak their vengeance upon Orchomenus and Thespiae, the two towns which had been the most inimical to their authority, the one in the north and the other in the south of Boeotia. The Orchomenians had in B. C. 395 openly joined the Spartans and fought on their side; and the Thespians had withdrawn from the

Theban army just before the battle of Leuctra, when Epaminondas gave permission to any Boeotians to retire who were averse to the Theban cause. (Paus. ix. 13. § 8.) The Thespians were expelled from their city and Boeotia soon after the battle of Leuctra [THESPIAE]; and Orchomenus in B. C. 368 was burnt to the ground by the Thebans; the male inhabitants were put to the sword, and all the women and children sold into slavery. [ORCHOMENUS.]

The jealousy which Athens had felt towards Thebes before the peace of Callias had been greatly increased by her subsequent victories; and the two states appear henceforward in their old condition of hostility till they were persuaded by Demosthenes to unite their arms for the purpose of resisting Philip of Macedon. After the battle of Mantinea their first open war was for the possession of Euboea. After the battle of Leuctra this island had passed under the supremacy of Thebes; but, in B. C. 358, discontent having arisen against Thebes in several of the cities of Euboea, the Thebans sent a powerful force into the island. The discontented cities applied for aid to Athens, which was readily granted, and the Thebans were expelled from Euboea. (Diod. xvi. 7; Dem. *de Cherson.* p. 108, *de Cor.* p. 259, *c. Ctesiph.* p. 397.) Shortly afterwards the Thebans commenced the war against the Phocians, usually known as the Sacred War, and in which almost all the leading states of Greece were eventually involved. Both Athens and Sparta supported the Phocians, as a counterpoise to Thebes, though they did not render them much effectual assistance. This war terminated, as is well known, by the intervention of Philip, who destroyed the Phocian towns, and restored to Boeotia Orchomenus and the other towns which the Phocians had taken away from them, B. C. 346. The Thebans were still the allies of Philip, when the latter seized Elateia in Phocis towards the close of B. C. 339, as preparatory to a march through Boeotia against Athens. The old feeling of ill-will between Thebes and Athens still continued: Philip calculated upon the good wishes, if not the active co-operation, of the Thebans against their old enemies; and probably never dreamt of a confederation between the two states as within the range of probability. This union, however, was brought about by the eloquence of Demosthenes, who was sent as ambassador to Thebes, and who persuaded the Thebans to form an alliance with the Athenians for the purpose of resisting the ambitious schemes of Philip. In the following year (B. C. 338) Philip defeated the combined forces of Thebes and Athens at the battle of Chaeroneia, which crushed the liberties of Greece, and made it in reality a province of the Macedonian monarchy. On this fatal field the Thebans maintained the reputation they had won in their battles with the Spartans; and their Sacred Band was cut to pieces in their ranks. The battle was followed by the surrender of Thebes, which Philip treated with great severity. Many of the leading citizens were either banished or put to death; a Macedonian garrison was stationed in the Cadmeia; and the government of the city was placed in the hands of 300 citizens, the partisans of Philip. The Thebans were also deprived of their sovereignty over the Boeotian towns, and Orchomenus and Plataea were restored, and again filled with a population hostile to Thebes. (Diodor. xvi. 87; Justin. ix. 4; Paus. ix. 27. § 10, ix. 1. § 8.) In the year after Philip's death (B. C. 335) the Theban exiles got possession of the city,

besieged the Macedonian garrison in the Cadmeia, and invited the other Grecian states to declare their independence. But the rapidity of Alexander's movements disconcerted all their plans. He appeared at Onchestus in Boeotia, before any intelligence had arrived of his quitting the north. He was willing to allow the Thebans an opportunity for repentance; but as his proposals of peace were rejected, he directed a general assault upon the city. The Theban troops outside the gates were driven back, and the Macedonians entered the town along with them. A dreadful carnage ensued; 6000 Thebans are said to have been slain, and 30,000 to have been taken prisoners. The doom of the conquered city was referred to the Grecian allies in his army, Orchomenians, Plateans, Phocians, and other inveterate enemies of Thebes. Their decision must have been known beforehand. They decreed that Thebes should be razed to the ground, with the exception of the Cadmeia, which was to be held by a Macedonian garrison; that the territory of the city should be divided among the allies; and that all the inhabitants, men, women, and children should be sold as slaves. This sentence was carried into execution by Alexander, who levelled the city to the ground, with the exception of the house of Pindar (Arrian, *Anab.* i. 8, 9; Diodor. xvii. 12-14; Justin, xi. 4.) Thebes was thus blotted out of the map of Greece, and remained without inhabitants for the next 20 years. In a.c. 315, Cassander undertook the restoration of the city. He united the Theban exiles and their descendants from all parts of Greece, and was zealously assisted by the Athenians and other Grecian states in the work of restoration. The new city occupied the same area as the one destroyed by Alexander; and the Cadmeia was held by a garrison of Cassander. (Diodor. xix. 53-54, 78; Paus. ix. 7. § 4.) Thebes was twice taken by Demetrius, first in b.c. 293, and a second time in 290, but on each occasion he used his victory with moderation. (Plut. *Demetr.* 39, 40; Diod. xxi. p. 491, ed. Weat.)

Dicaearchus, who visited Thebes not long after its restoration by Cassander, has given a very interesting account of the city. "Thebes," he says (§ 12, seq. ed. Müller), "is situated in the centre of Boeotia, and is about 70 stadia in circumference; its site is level, its shape circular, and its appearance gloomy. The city is ancient, but it has been lately rebuilt, having been three times destroyed, as history relates", on account of the insolence and haughtiness of its inhabitants. It is well adapted for rearing horses since it is plentifully provided with water, and abounds in green pastures and hills: it contains also better gardens than any other city in Greece. Two rivers flow through the town, and irrigate all the adjacent plain. There is also a subterraneous stream issuing from the Cadmeia, through pipes, said to be the work of Cadmus. Thebes is a most agreeable residence in the summer, in consequence of the abundance and coolness of the water, its large gardens, its agreeable breezes, its verdant appearance, and the quantity of summer and autumnal fruits. In the winter, however, it is a most disagreeable residence, from being destitute of fuel, and constantly exposed to floods and winds. It is then often covered with snow and very muddy." Although Dicaearchus

in this passage gives to Thebes a *circumferentia* of 70 stadia, he assigns in his verses (*Sat.* fr. 93) a much smaller extent to it, namely 43 stadia. The latter number is the more probable, as the metre was less likely to be altered; but if the number in prose is correct, it probably includes suburbs and gardens outside the city walls. Pausanias also gives an account of the character of the inhabitants, which is too long to be extended. It represents them as noble-minded and anxious to be solvent and proud, and always ready to settle their disputes by fighting rather than by the slow course of justice.

Thebes had its full share in the later calamities of Greece. After the fall of Carthage, a.c. 146, Roman is said to have destroyed Thebes (*Liv.* lvi. 30), by which we are probably to understand the sale of the city. In consequence of its having aided Mithridates in the war against the Romans, it was deprived of half its territory, which is ascribed to the gods, in order to make compensation for its having plundered the temples at Olympia, Epheus, and Delphi. Although the Romans afterwards restored the land to the Thebans, they avenged from this blow (Paus. ix. 7. § 5, 6); and now it was reduced in the time of Augustus and Tiberius that Strabo says that it was little more than a village (ix. p. 403). In the time of the Romans, Pausanias found the Cadmeia alone inhabited, and the lower part of the town destroyed, with the exception of the temples (ix. 7. § 6). In the decline of the Roman Empire, Thebes became the seat of a considerable population, probably in consequence of its inland situation, which afforded it infinitely greater security than the maritime towns less liable attacks. In the eleventh and twelfth centuries Thebes was one of the most flourishing cities in Greece, and was celebrated for its manufacture of silk. In a.d. 1040 the Thebans took the field to oppose the Bulgarian invaders of Greece, but were defeated with great loss. (Codron. p. 147, ed. Pich. p. 529, ed. Bonn.) In a.d. 1146 the city was plundered by the Normans of Sicily, who carried off a large amount of plunder (Nicetas, p. 26, ed. Paris. p. 98, ed. Bonn.) Benjamin of Tudela, who visited Thebes about 20 years later, speaks of it as still a large city, possessing 2000 Jewish inhabitants, who were very skilful manufacturers of silk and purple cloth (i. 47, ed. Asher; Finlay, *Byzantine Empire*, vol. i. p. 493, vol. ii. p. 199). The silks of Thebes continued to be esteemed even at a later period, and were worn by the emperors of Constantinople (Bibb. p. 297, ed. Paris. p. 609, ed. Bonn.) They were, however, gradually supplanted by those of Sicily and Italy; and the loss of the silk trade was followed by the rapid decline of Thebes. When the Turks the city was again reduced, as in the time of Pausanias, to the site of the Cadmeia.

II. TOPOGRAPHY.

Thebes stood on one of the hills of Mount Parnassus, which divides southern Boeotia into two distinct parts, the northern being the plain of Thebes and the southern the valley of the Asopus. The Greeks, in founding a city, took care to select a spot where there was an abundant supply of water, and a hill naturally defensible, which might be easily converted into an acropolis. They generally preferred a position which would command the adjacent plain, and which was neither immediately upon the coast nor

* Dicaearchus probably means the capture of the city by the Epigoni; secondly by the Pelopagi, during the Trojan war; and lastly by Alexander.

yet at a great distance from it. But as Boeotia lies between two seas, the founders of Thebes chose a spot in the centre of the country, where water was very plentiful, and where the nature of the ground was admirably adapted for defence. The hill, upon which the town stands, rises about 150 feet above the plain, and lies about 2 miles northward of the highest part of the ridge. It is bounded on the east and west by two small rivers, distant from each other about 6 or 7 stadia, and which run in such deep ravines as to form a natural defence on either side of the city. These rivers, which rise a little south of the city, and flow northward into the plain of Thebes, are the celebrated streams of Ismenus and Dirce. Between them flows a smaller stream, which divided the city into two parts, the western division containing the Cadmeia*, and the southern the hill Ismenius and the Amphieion. This middle torrent is called Cnopus by Leake, but more correctly Strophia (Callim. *Hymn. in Del.* 76) by Forchhammer. The Cnopus is a torrent flowing from the town Cnopia, and contributing to form the Ismenus, whence it is correctly described by the Scholiast on Nicander as the same as the Ismenus. (Strab. ix. p. 404; Nicand. *Theriac.* 889, with Schol.) The three streams of Ismenus, Dirce, and Strophia unite in the plain below the city, to which Callimachus (l. c.) appears to allude:—

Δίρκη τε Στροφία τε μελαμεινίδος ἔχουσαι
Ἰσμηνοῦ χέρα πατρός.

The middle torrent is rarely mentioned by the ancient writers; and the Ismenus and Dirce are the streams alluded to when Thebes is called διπλάμιος πόλις. (Eurip. *Suppl.* 622; comp. *Phoen.* 825. *Bacch.* 5, *Herc. Fur.* 572.) Both the Ismenus and Dirce, though so celebrated in antiquity, are nothing but torrents, which are only full of water in the winter after heavy rains. The Ismenus is the eastern stream, now called Αἰ Ιόννη, which rises from a clear and copious fountain, where the small church of St. John stands, from which the river derives its name. This fountain was called in antiquity Melia, who was represented as the mother of Ismenus and Tenerus, the hero of the plain which the Ismenus inundates. It was sacred to Ares, who was said to have stationed a dragon to guard it. (Callimach. *Hymn. in Del.* 80; Spanheim, *ad loc.*; *Pind. Pyth.* xi. 6; Paus. ix. 10. § 5; Forchhammer, *Hellenica*, p. 113.) The Dirce is the western stream, now called Πλατιότισσα, which rises from several fountains, and not from a single one, like the Ismenus. A considerable quantity of the water of the Πλατιότισσα is now diverted to supply the fountains of the town, and it is represented as the purest of the Theban streams; and it appears to have been so regarded in antiquity likewise, judging from the epithets bestowed upon it by the poets. (Ἀγνὸν ὕδωρ, *Pind. Isthm.* vi. 109, καλλιπρόος, *Isthm.* viii. 43; ὕδωρ Διρκαίων εὐπράεστον πνεύματον, *Aesch. Sept. c. Theb.* 307; καλλιπρότος, *Eurip. Phoen.* 647; Δίρκης γάμα λευκόν, *Herc. Fur.* 578.)

Though the position of Thebes and of its celebrated streams is certain, almost every point connected with its topography is more or less doubtful. In the other cities of Greece, which have been inhabited continuously, most of the ancient buildings

have disappeared; but nowhere has this taken place more completely than at Thebes. Not a single trace of an ancient building remains; and with the exception of a few scattered remains of architecture and sculpture, and some fragments of the ancient walls, there is nothing but the site to indicate where the ancient city stood. In the absence of all ancient monuments, there must necessarily be great uncertainty; and the three writers who have investigated the subject upon the spot, differ so widely, that Leake places the ancient city to the south of the Cadmeia, and Ulrichs to the north of it, while Forchhammer supposes both the western heights between the Strophia and the Dirce to have been in a certain sense the Cadmeia, and the lower city to have stood eastward, between the Strophia and the Ismenus. In the great difficulty of arriving at any independent judgment upon the subject without a personal inspection of the site, we have adopted the hypothesis of Forchhammer, which seems consistent with the statements of the ancient writers.

The most interesting point in Theban topography is the position of the seven celebrated Theban gates. They are alluded to by Homer (Θήβης ἑβος ἑπταπόλοιο, *Od.* xi. 263) and Hesiod (ἑπταπόλοι Θήβη, *Op.* 161); and their names are given by seven different authors, whose statements will be more easily compared by consulting the following table. The numeral represents the order in which the gates are mentioned by each writer. The first line gives the names of the gates, the second the names of the Argive chiefs, the third the emblems upon their shields, and the fourth the names of the Theban chiefs.

Nonnus designates five of the gates by the names of the gods and the planets, and to the other two, to which he gives the names of Electrae and Oncaea, he also adds their position. Hyginus calls the gates by the names of the daughters of Amphion; and that of Ogygia alone agrees with those in the other writers. But, dismissing the statements of Nonnus and Hyginus, whose authority is of no value upon such a question, we find that the remaining five writers agree as to the names of all the seven gates, with two or three exceptions, which will be pointed out presently. The position of three of the gates is quite clear from the description of Pausanias alone. These are the ELECTRAE, PROETIDES, and NEITAE. Pausanias says that Electrae is the gate by which a traveller from Plataea enters Thebes (ix. 8. § 6); that there is a hill, on the right hand of the gate, sacred to Apollo, called the Ismenian, since the river Ismenus runs in this direction (ix. 10. § 2); and that on the left hand of the gate are the ruins of a house, where it was said that Amphitryon lived, which is followed by an account of other ancient monuments on the Cadmeia (ix. 11. § 1). Hence it is evident that the gate Electrae was in the south of the city, between the hills Ismenius and Cadmeia. The gate Proetides was on the north-eastern side of the city, since it led to Chalcis (ix. 18. § 1). The gate Neitae was on the north-western side of the city, since it led to Onchestus and Delphi; and the river which Pausanias crossed, could have been no other than the Dirce (ix. 25. §§ 1, 3, ix. 26. § 5). The names of these three gates are the same in all the five writers: the manuscripts of Apollodorus have the corrupt word Ὀρχηρίδας, which has been altered by the editors into Ὀρχαλίδας, instead of Νήϊται, which was the reading suggested by Porson (*ad. Eurip. Phoen.* 1150), and adopted by Valckenauer. (See Unger, *Thebana Paradoxa*, vol. i. p. 313.)

* The western division contains two eminences, and the question as to which of them was the Cadmeia will be discussed below.

Of the other four gates, the Homoloides is also the same in all the five writers. Of the remaining three Æschylus does not mention their proper names, but specifies two by their locality, one as near the temple of Athena Onca, and the other as the Northern gate (Βορραῖαι πύλαι), and describes the last simply as the Seventh gate. The names of these three gates are nearly the same in the other four writers, the one near the temple of Athena Onca being called Crenææ, and in Statius Culmina Dircaea, the Northern gate Ogygiae, and the Seventh gate Hypsestæ,—Euripides, however, also giving the name of Seventh to the last-mentioned gate.

Having described the position of the Electrae, Proetides, and Neitæ, it remains to speak of the position of the other four, which we shall take in the order of Æschylus. The fourth gate was probably situated on the western side of the city, and was called Crenææ, because it was near one of the fountains of Dirce, now called Παρὰ Δίρην, situated upon the right bank of the river. Near that fountain was a hill, called by the Greeks ὄγκος, whence Athens derived the name of Onca. Accordingly Statius, in calling the fourth gate Culmina Dircaea, connects both the fountain and the hill. Nonnus, who calls this gate Oncaea, describes it at the same time as situated towards the west. It is usually stated, on the authority of Hesychius, that the Oncaean gate is the same as the Ogygian; but this identification throws everything into confusion, while the change of three letters, proposed by Forch-

hammer, brings the statement of Hesychius into accordance with the other writers. (Ὀγκας Ἀλέγει τὰς Ὀγκάδας [instead of Ὀγυγιάς] πύλας λέγει, i. e. Æsch. Sept. c. Theb. 486.)

The fifth gate was called Ogygian from Ogygia, the most ancient king of Thebes, in whose time the deluge is said to have taken place. Now there is no part of Thebes more exposed to inundation than the north of the city between the gates Neitæ and Proetides, where the torrent Strophia descends into the plain. Here we may probably place the Ogygian gate, which Æschylus calls the Northern, from its position.

The exact position of the sixth gate, called Homoloides, and of the seventh, designated by its number in Æschylus and Euripides, but by the name of Hypsestæ in the other writers, is doubtful. Forchhammer maintains that these gates were in the southern part of the city, one on either side of the gate Electrae; but none of his arguments are conclusive; and the position of these gates must be left uncertain. Pausanias relates that, after the victory of the Epigoni at Glisas, some of the Thebans fled to Homole in Thessaly; and that the gate, through which the exiles re-entered the city, when they were recalled by Thersander, was named the Homoloides, from Homole in Thessaly (ix. 8. §§ 6, 7). Forchhammer thinks that it would have been supposed that the exiles entered the city by the same gate by which they quitted it; and as the gate leading to Glisas must have been either in the southern or

eastern side of the city, the gate Homoloides must have been on the southern side, as the Proetides lay towards the east. But this is mere conjecture; and Leake supposes, with quite as much probability, that the Homoloides was on the north-western side of the city, since the Thebans would re-enter the city in that direction on their return from Homole.

The divisions of the city, and its monuments, of which Pausanias has given a full description, must be treated more briefly. The city, as already remarked, was divided into two parts by the torrent Strophia, of which the western half between the Strophia and the Dirce was the Cadmeia, while the eastern half between the Strophia and the Ismenus

was the lower city (ὁ κατωὶ πόλις), said to have been added by Amphion and Zethus. (Paus. ix. 5. §§ 2, 6.) The Cadmeia is again divided by a slight depression near the fountain of Dirce and the Cretan gate into two hills, of which the larger and the higher one to the south was the acropolis proper, and was called the Cadmeia κατ' ἄρχην, while the northern hill formed the agora of the acropolis (τῆς ἀκροπόλεως ἀγορά, Paus. ix. 12. § 3). The eastern half of the city was also divided between the Strophis and the Lameus into two parts, of which the southern consisted of the hill Ismenius, and the northern of several minor eminences, known under the general name of Amphion. (Ἀμφειὼν, Arrian, *Anab.* i. 8.) Aeschylus describes the tomb of Amphion as standing near the northern gate. (Βορβυλαὶ πύλαις τῷ μὲν κατ' αὐτὸν Διογενεὺς Ἀμφίπορος, *Sept. c. Theb.* 528.) Hence Thebes consisted of four parts, two belonging to the acropolis, and two to the lower city, the former being the acropolis proper and the agora of the acropolis, and the latter being the hill Ismenius and the Amphion.

Pausanias, leaving Potniae, entered Thebes on the south by the gate Electrae, before which he noticed the Polyandrium, or tomb of the Thebans who fell fighting against Alexander. (Paus. ix. 8. §§ 3, 4, 7, ix. 10. § 1.) The explanation of Forchhammer that Alexander laid siege to the city on the south, and that he did not return from the gate Electrae to the Proetides, as Leake supposes, seems the most probable. Accordingly the double lines of circumvallation, which the Thebans erected against the Macedonian garrison in the Cadmeia, must have been to the south of the city around the chief gates of the Cadmeia. (See Arrian, i. 7, 8.) Upon entering the city through the gate Electrae, Pausanias notices the hill Ismenius sacred to Apollo, named from the river Ismenus flowing by it (ix. 10. § 2). Upon the hill was a temple of Apollo, containing several monuments enumerated by Pausanias. This temple is likewise mentioned by Pindar and Herodotus, both of whom speak of the tripods situated in its treasury. (Pind. *Pyth.* xi. 7, seq.; Herod. v. 59.) Above the Ismenium, Pausanias noticed the fountain of the Ismenus, sacred to Ares, and guarded by a dragon, the name of which fountain was Melia, as we have already seen (ix. 10. § 5).

Next Pausanias, beginning again from the gate Electrae, turns to the left and enters the Cadmeia (ix. 11. § 1, seq.). He does not mention the acropolis by name, but it is evident from the list of the monuments which he gives that he was in the Cadmeia. He enumerates the house of Amphitryon, containing the bedchamber of Alcmena, said to have been the work of Trophimus and Agamemnon; a monument of the children of Hercules by Megara; the stone called Sophronister; the temple of Hercules (Ἡράκλειον, Arrian, *Anab.* i. 8); and, near it, a gymnasium and stadium, both bearing the name of this God; and above the Sophronister an altar of Apollo Spodius.

Pausanias next came to the depression between the acropolis and the agora of the Cadmeia, where he noticed an altar and statue of Athena, bearing the Phoenician surname of Onca (Ὀγκά), or Onca (Ὀγκά) according to other authorities, and said to have been dedicated by Cadmus (ix. 12. § 2). We know from Aeschylus that there was originally a temple of Athena Onca in this locality, which stood outside the city near one of the gates, whence the goddess was called ἀγκίστρος. Some derived the

name from a village named Onca or Oncae. (Aesch. *Sept. c. Theb.* 163, 487, 501, with Schol.; Schol. in *Euripid. Phoen.* 1069; Steph. B. s. v. Ὀγκά; Hesych. s. v. Ὀγκας; Schol. ad *Pind. Ol.* ii. 39, 48; Tzetzes, ad *Lycopteron.* 1225; Phavorinus, s. v. Ὀγκά.) Sophocles also speaks of two temples of Athena at Thebes (πρὸς Παλλάδος θελαῖς ναοί, *Oed. Tyr.* 20), in one of which, according to the Scholiast, she was surnamed Oncae, and in the other Ismenia. In the valley between the two hills, there are still the remains of an aqueduct, partly under and partly above ground, to which Dicaearchus refers (φέρειται δὲ καὶ ἀπὸ τῆς Καμβίας ὅπου ἀφ' αὐτῆς διὰ σωλήνων ἀγόμενον, l. c.)

In the agora of the Cadmeia the house of Cadmus is said to have stood; and in this place were shown ruins of the bedchamber of Harmonia and Semele; statues of Dionysus, of Pronomna, the celebrated musician, and of Epaminondas; a temple of Ammon; the place where Teiresias observed the flight of birds; a temple of Fortune; three wooden statues of Aphrodite, with the surnames of Urania, Pandemus, and Apostrophia; and a temple of Demeter Theomophorus. (Paus. ix. 12. §§ 3—5, ix. 16. §§ 1—5.)

Crossing the torrent Strophis, Pausanias saw near the gate Proetides the theatre with the temple of Dionysus (ix. 16. § 6). In this part of the city, in which Forchhammer gives the name of Amphion, the following monuments are mentioned by Pausanias (ix. 16. § 7, ix. 17. §§ 1—4): ruins of the house of Lycus and a monument of Semele; monuments of the children of Amphion; a temple of Artemis Eucleia, and, near it, statues of Apollo Boudromius and of Hermes Agoraeus; the funeral pile (πυρῶν) of the children of Amphion, distant half a stadium from their tombs; two statues of Athena Zoetia; and the monument of Zethus and Amphion, being a mound of earth. As the lower city was deserted in the time of Pausanias, he does not mention the agora; but there is no doubt that it contained one, if not more, since Sophocles speaks of several agorae (*Oed. Tyr.* 20).

Outside the gate Proetides, on the road to Chalcis, Pausanias names the monuments of Melanippes, Tydeus, and the sons of Oedipus, and 15 stadia beyond the latter the monument of Teiresias. Pausanias also mentions a tomb of Hector and one of Asphodicius, at the fountain Oedipodeia, which is perhaps the modern fountain of *St. Theodore*. On the same road was the village Teumessus. (Paus. ix. 18, ix. 19. § 1.) After describing the road to Chalcis, Pausanias returns to the gate Proetides, outside which, towards the N., was the gymnasium of Iolaus, a stadium, the heruum of Iolaus, and, beyond the stadium, the hippodrome, containing the monument of Pindar (ix. 23. §§ 1, 2). Pausanias then comes to the road leading from the Ogygian or Northern gate, to Acraephium, after following which he returns to the city, and enumerates the objects outside the gate Neitae. Here, between the gate and the river Dirce, were the tomb of Menoeceus, the son of Creon, and a monument marking the spot where the two sons of Oedipus slew each other. The whole of this locality was called the Syrna (Σύρνα) of Antigone, because, being unable to carry the dead body of her brother Polynices, she dragged it to the funeral pile of Eteocles. On the opposite side of the Dirce were the ruins of the house of Pindar, and a temple of Dindymene (ix. 25. §§ 1—3). Pausanias then appears to have returned to the gate Neitae and

followed the road which ran from this gate to Onchestus. He first mentions a temple of Themis, then temples of the Fates and of Zeus Agoraeus, and, a little further, a statue of Hercules, surnamed Rhinoceros, because he here cut off the noses of the heralds of Orchomenus. Twenty-five stadia beyond was the grove of Demeter Cabeiria and Persephone, and 7 stadia further a temple of the Cabeiri, to the

COIN OF THEBES.

right of which was the Teneic plain, and to the left a road which at the end of 50 stadia conducted to Thespiae (ix. 25. § 5, ix. 26. § 1, 6).

(Leake, *Northern Greece*, vol. ii. p. 218, seq., vol. iv. p. 573, seq.; Ulrichs, *Topographie von Theben*, in *Abhandl. der Bayer. Akad.* p. 413, seq. 1841; Unger, *Thebana Paradoxa*, 1839; Forchhammer, *Topographia Thebarum Heptapylarum*, Kilias, 1854.)

THEBAE CORSICAE. [CORSEIA, No. 2.]

THEBAE PHTHIOTIDES or PHTHIAE (Θῆβαι αἱ Πηθιωτίδες, Polyb. v. 99; Strab. ix. p. 433; Thebæ Pthiæ, Liv. xxxii. 33), an important town of Pthiotis in Thessaly, was situated in the north-eastern corner of this district, near the sea, and at the distance of 300 stadia from Larissa. (Polyb. l. c.) It is not mentioned in the *Iliad*, but it was at a later time the most important maritime city in Thessaly, till the foundation of Demetrius, by Demetrius Poliorcetes, about B. C. 290. ("Thebæ Pthiæ unum maritimum emporium fuisse quondam Thessaliæ quæstuosum et fugiferum," Liv. xxxii. 25.) It is first mentioned in B. C. 282, as the only Thessalian city, except Pellinæum, that did not take part in the Lamia war. (Diod. xvii. 11.) In the war between Demetrius Poliorcetes and Cassander, in B. C. 302, Thebes was one of the strongholds of Cassander. (Diod. xx. 110.) It became at a later time the chief possession of the Aetolians in northern Greece; but it was wrested from them, after an obstinate siege, by Philip, the son of Demetrius, who changed its name into Philippopolis. (Polyb. v. 99, 100; Diod. xxvi. p. 513, ed. Wesseling.) It was attacked by the consul Flamininus, previous to the battle of Cynoscephalæ, B. C. 197, but without success. (Liv. xxxiii. 5; Polyb. xviii. 2.) After the defeat of Philip, the name of Philippopolis was gradually dropped, though both names are used by Livy in narrating the transactions of the year B. C. 185. (Liv. xxxix. 25.) It continued to exist under the name of Thebes in the time of the Roman Empire, and is mentioned by Hierocles in the sixth century. ("Thebæ Thessalæ," Plin. v. 8. s. 15; Θῆβαι Πηθιωτίδες, Ptol. iii. 13. § 17; Steph. B. s. v.; Hierocl. p. 642, ed. Wess.) The ruins of Thebes are situated upon a height half a mile to the north-east of *Ak-Ketjel*. The entire circuit of the walls and towers, both of the town and citadel, still exist; and the circumference is between 2 and 3 miles. The theatre, of which only a small part of the exterior circular wall of the cavea remains, stood about the

centre of the city, looking towards the sea. (Leake, *Northern Greece*, vol. iv. p. 358.)

THEBAIS. [THEBAE AEGYPTI.]

THEBE (Θῆβη), a famous ancient town in Mysia, at the southern foot of Mount Placius, which is often mentioned by Homer as governed by Eetion, the father of Andromache (*Il.* i. 366, vi. 397, xxii. 479). The town is said to have been destroyed during the Trojan War by Achilles (*Il.* ii. 691; Strab. xiii. pp. 584, 585, 612, foll.) It must have been restored after its first destruction, but it was decayed in the time of Strabo, and when Pliny (v. 32) wrote it had entirely disappeared. The belief of some of the ancient grammarians (Etym. M. s. v.; Didym. *ad Hom.* *Il.* i. 336; Diac. *ad Herod. Scut.* 49; and Eustath. *ad Hom.* *Il.* ii. 691) that Thebe was only another name for Adramyttium, is contradicted by the most express testimony of the best writers. Xenophon (*Anab.* vii. 8. § 7) places it between Antandrus and Adramyttium, and Strabo, perhaps more correctly, between Adramyttium and Carina, about 80 stadia to the north-east of the former. (Comp. Pomp. Mela, i. 18; Steph. B. s. v.) Although this town perished at an early period, its name remained celebrated throughout antiquity, being attached to the neighbouring plain (Θῆβης πεδῖον, Campus Thebanus), which was famed for its fertility, and was often ravaged and plundered by the different armies, whom the events of war brought into this part of Asia. (Herod. vii. 42; Xenoph. l. c.; Strab. xiii. p. 588; Liv. xxxvii. 19.) Stephanus B. (s. v.) mentions another town of this name as belonging to the territory of Miletus in Asia Minor. [L. S.]

THECHES (Θήχης), one of the highest points of Mount Paryadres in Pontus, south-east of Trapezus, on the borders of the country inhabited by the Macrones. From it the Ten Thousand Greeks under Xenophon for the first time descried the distant Euxine. (Xenoph. *Anab.* iv. 7. § 21.) Diodorus Siculus (xiv. 29) calls the mountain *Χθρῖον ὄρος*; but it still bears its ancient name *Tekieh*. (Ritter, *Erdkunde*, ii. p. 768.) [L. S.]

THECOA. [TEKOAH.]

THEGANUSSA. [MESSENIA, p. 342, b.]

THEISOA (Θεῖσα; *Eth.* Θεσσαδρῆς). 1. A town of Arcadia, in the district Cynuria or Parrhasia, on the northern slope of Mt. Lycaeus, called after the nymph Theisoa, one of the nurses of Zeus. Its inhabitants were removed to Megalopolis upon the foundation of the latter city. Leake places it at the castle of *St. Helen* above *Lardha*. Ross discovered some ancient remains N. of *Andritzæna*, which he conjectures may be those of Theisoa. (Paus. viii. 38. §§ 3, 9, viii. 27. § 4; Steph. B. s. v.; Leake, *Morea*, vol. ii. p. 315, *Peloponnesiaica*, p. 154; Ross, *Reisen im Peloponnes*, vol. i. p. 101; Boblaye, *Recherches*, p. 151.)

2. A town of Arcadia, in the territory of Orchomenus, the inhabitants of which also removed to Megalopolis. It is mentioned along with Methydrium and Teuthis as belonging to the confederation (*συντρέλεια*) of Orchomenos. It is probably represented by the ruins near *Dimitzæna*. (Paus. viii. 27. §§ 4, 7, viii. 28. § 3; Ross, p. 115.)

THEIUM, a town of Athamania in Epeirus, of uncertain site. (Liv. xxxviii. 2.)

THELINE. [ARELATE.]

THELPUŠA (Θέλπουσα, Paus. and Coins: Τήλπουσα, Polyb., Diod., and Steph. B. s. v.; *Eth.* Θελοπούσιος, Τελφούσιος), a town in the west of Arcadia.

situated upon the left or eastern bank of the river Ladon. Its territory was bounded on the north by that of Psophia, on the south by that of Heraea, on the west by the Eleia and Tisatis, and on the east by that of Cleitor, Tripolis, and Theisaa. The town is said to have derived its name from a nymph, the daughter of the river Ladon, which nymph was probably the stream flowing through the lower part of the town into the Ladon. It is first mentioned in history in B. C. 352, when the Lacedaemonians were defeated in its neighbourhood by the Spartans. (Diod. xvi. 39.) In B. C. 222 it was taken by Antigonus Doson, in the war against Cleomenes, and it is also mentioned in the campaigns of Philip. (Polyb. ii. 54, iv. 60, 73, 77; Steph. B. s. v. Τέλπουσα; Plin. iv. 6. s. 30.) Its coins show that it belonged to the Achaean League. (Leake, *Peloponnesiaca*, p. 306.) When Pausanias visited Thelpusa, the city was nearly deserted, so that the agora, which was formerly in the centre of the city, then stood at its extremity. He saw a temple of Asclepius, and another of the twelve gods, of which the latter was nearly levelled with the ground. (Paus. viii. 25 § 3.) Pausanias also mentions two temples of some celebrity in the neighbourhood of Thelpusa, one above and the other below the city. The one above was the temple of Demeter Eleusinia, containing statues of Demeter, Persephone and Dionysus, made of stone, and which probably stood at the castle opposite to *Spithari* (viii. 25. §§ 2, 3). The temple below the city was also sacred to Demeter, whom the Thelpusians called Erinnyia. This temple is alluded to by Lycophron (1038) and Callimachus (*Fr.* 107). It was situated at a place called Onceium, where Onus, the son of Apollo, is said once to have reigned (viii. 25. § 4, seq.; Steph. B. s. v. "Ογκεϊον). Below this temple stood the temple of Apollo Oncaetes, on the left bank of the Ladon, and on the right bank that of the boy Asclepius, with the sepulchre of Trygon, said to have been the nurse of Asclepius (viii. 25. § 11). The ruins of Thelpusa stand upon the slope of a considerable hill near the village of *Vávena* (*Bávena*). There are only few traces of the walls of the city. At the ruined church of St. John, near the rivulet, are some Hellenic foundations and fragments of columns. The saint is probably the successor of Asclepius, whose temple, as we learn from Pausanias, stood longest in the city. There are likewise the remains of a Roman building, about 12 yards long and 6 wide, with the ruins of an arched roof. There are also near the Ladon some Hellenic foundations, and the lower parts of six columns. Below *Vávena* there stands upon the right bank of the Ladon the ruined church of St. Athanasius the Miraculous, where Leake found the remains of several columns. Half a mile below this church is the village of *Tumbiki*, where a promontory projects into the river, upon which there is a mound apparently artificial. This mound is probably the tomb of Trygon, and *Tumbiki* is the site of the temple of Asclepius.

Pausanias, in describing the route from Psophia

COIN OF THELPUSA.

to Thelpusa, after mentioning the boundary between the territories of the two states [Psophia] but crosses the river Arsen, and then, at the distance of 25 stadia, arrives at the ruins of a village and a temple of Asclepius Camisia, erected upon the roadside. From this place the distance to Thelpusa was 40 stadia. (Leake, *Mores*, vol. ii. p. 57, sq. 250, seq., *Peloponnesiaca*, pp. 305, 222, 226; Boblaye, *Recherches*, &c. p. 152; *Essai*, *Revue* in *Peloponnes*, p. 111; Curtius, *Peloponnes*, vol. i. p. 370, seq.)

THELUTHA, a fortress situated on an island in the Euphrates. It is mentioned by Arrianus (xxiv. 2), who states that it was used as a navy by the Persians. It is unquestionably the same as the Thilabus of Isidorus (*Stethos*, *Perth* 1), who gives a similar description of it, and places it at a great distance from another island in the same river, Anatho. Zosimus, speaking of the same river, notices a fortified island, which he calls *ὀχυρότατον* (iii. 15); probably the same place. It is doubtless represented now by an island near Colonel Chesney calls *Tellus*, *Tibus*, or *Ambo* (i. p. 53 and Map.) [T.]

THEMEOTAE (*Θεμεῖοι*, *Psol* v. 2. § 17), a people of Asiatic Sarmatia. [T. R. R.]

THEMMA. [TEMA].

THEMISCYRA (*Θεμισκύρα*), a plain in the north of Pontus, about the mouths of the rivers Is and Thermodon, was a rich and beautiful district, ever verdant, and supplying food for numbers of oxen and horses. It also produced great abundance of grain, especially paucis and millet; and the southern parts near the mountains furnished a variety of fruits, such as grapes, apples, pears, and nuts in such quantities that they were sold to waste on the trees. (Strab. ii. p. 126. xi. p. 36. foll.; Aeschyl. *Prom.* 722; comp. Apollod. ii. 3. Apollon. Rhod. ii. 370; Plin. vi. 3. xiv. 82.) Mythology describes this plain as the native country of the Amazons.

A Greek town of the name of Themiscyra, at a little distance from the coast and near the mouth of the Thermodon, is mentioned as early as the time of Herodotus (iv. 86; comp. Scylax, p. 33; *Psol* v. 2. § 1). Ptolemy (v. 6. § 3) is undoubtedly mistaken in placing it further west, midway between the Is and Cape Heraclium. Scylax calls it a Greek town, but Diodorus (ii. 44) states that it was built by the founder of the kingdom of the Amazons. After the retreat of Mithridates from Cynicus, Themiscyra was besieged by Lucullus. The inhabitants of that occasion defended themselves with great valour; and when their walls were undermined, they set fire to the town and other wild beasts, and even swarms of locusts against the workmen of Lucullus (*Appian*, *Mithrid.* 78). But notwithstanding their gallant defence, the town seems to have perished on that occasion. Strabo speaks of it as no longer existing (i. 11), and Strabo does not mention it at all. (Comp. *Psol* v. 2. *Peripol.* P. E. p. 11; Steph. B. s. v. *Kathuria*.) Some suppose that the town of Thermodon, at the mouth of the Thermodon, marks the site of ancient Themiscyra; but Hamilton (*Recherches*, i. p. 253) justly observes that it must have been situated a little further inland. Ruins of the place do not appear to exist, for those which Texier regards as indicating the site of Themiscyra, at a distance of two days' journey from the Halys, on the borders of Galatia, cannot possibly have belonged to it, but are in all probability the remains of Tarsus. [L. S.]

THEMISONIUM (Θεμισόνιον; *Eth.* Θεμισόνιος), a town of Phrygia, near the borders of Pisidia, whence in later times it was regarded as a town of Pisidia. (Strab. xii. p. 576; Paus. x. 32; Ptol. v. 2. § 26; Steph. B. s. v.; Plin. v. 29; Hierocl. p. 674; Geogr. Rav. i. 18.) Pausanias relates that the Themisonians showed a cave, about 30 stadia from their town, in which, on the advice of Heracles, Apollo, and Hermes, they had concealed their wives and children during an invasion of the Celts, and in which afterwards they set up statues of these divinities. According to the Peutling Table, Themisonium was 34 miles from Laodiceia. Arundell (*Discoveries*, ii. p. 136), guided by a coin of the place, fixes its site on the river Azanes, and believes the ruins at *Kai Hissar* to be those of Themisonium; but Kiepert (in Franz's *Fünf Inschriften*, p. 29) thinks that the ruins of *Kisel Hissar*, which Arundell takes to mark the site of Cibra, are those of Themisonium. [L. S.]

THENAE (Θεναί, Callim. in *Jov.* 42; Steph. B. s. v. 'Ομφάλιον), a town of Crete close on the Omphalian plain, and near Cnossus. If not on the very site it must have been close to the *Castello Temenos* of the Venetians, which was built A. D. 961, when the Cretans, under their Saracenic leaders, were vanquished by Nicephorus Phocas and the forces of the Byzantine emperor. (Pashley, *Travels*, vol. i. p. 224; comp. Finlay, *Byzantine Empire*, vol. i. p. 377; Gibbon, c. lii.) [E. B. J.]

THENAE (Θεναί), a maritime city of Byzacium in Africa Proper, at the mouth of a small river which fell into the Syrtis Minor, and 216 milos SE. of Carthage. (Plin. v. 4. s. 3.) By Strabo it is called ἡ Θένα (xvii. p. 831), and by Ptolemy Θάινα, or Θάινα (i. 15. § 2, iv. 3. § 11). At a later period it became a Roman colony with the name of Aelia Augusta Mercurialis (Gruter, *Inscr.* p. 363; cf. *Itin. Ant.* p. 59, also pp. 46, 47, 48, 57). Now *Thaïnâ*, or *Tény*. [T. H. D.]

THEODORIAS. [VACCA.]

THEODOROPOLIS (Θεωδωρόπολις, Procop. *de Aed.* iv. 6, 7), a town of Moesia Inferior, founded by the emperor Justinian. [T. H. D.]

THEODOSIA (Θεοδοσία, Ptol. iii. 6. § 3), a flourishing colony of the Milesians, on the coast of the Chersonesus Taurica, in European Sarmatia, with a harbour capable of containing 100 ships. (Strab. vii. 309; Arrian, *Per. P. Eux.* p. 20.) In the dialect of the natives, it was called *Ardabda* ('Αρδῆδα, Anon. *Per. P. Eux.* p. 5), which is said to have signified, in the dialect of the Taurians, "seven gods" (Pallas, i. p. 416), and at a later period *Kapha* (Κάφα, Const. Porphy. *de Adm. Imp.* c. 53); whilst by the Geogr. Rav. (iv. 3, v. 11) we find it named Theodosiopolis. It enjoyed an extensive commerce, particularly in corn (Dem. *adv. Lept.* p. 255), but appears to have been ruined before the age of Arrian, in the beginning of the second century. (Arrian, l. c.) Yet it continues to be mentioned by later writers (Polyaen. v. 23; Amm. Marc. xxii. 8. § 36; Oros. i. 2; Steph. B. s. v. &c.) Yet we should not, perhaps, allow these writers much authority; at all events the very name of the Milesian colony appears to have vanished in the time of the emperor Constantine Porphyrogenitus, under whom the site on which it stood was already called *Kaffon* (*de Adm. Imp.* c. 43; cf. Neumann, *Die Hellenen im Skythenlande*, p. 469.) Clarke imagined that he had discovered its ruins at *Stara Crim*, where there are still some magnificent remains of a

Greek city (*Trav.* ii. p. 154, sq.; cf. p. 150 and note); but the more general, and perhaps better founded opinion is, that it stood, near its namesake, the modern *Caffa* or *Theodosia*. (Cf. Raoul-Rochette, *Ant. du Bosp. Cimm.* p. 30; Dubois, v. p. 280.) For coins and inscriptions, see Köhler, *Nov. Act. Acad. Petrop.* xiv. p. 122, and *Mém. de St. Petersb.* ix. p. 649, sq.; Clarke, *Trav.* ii. 148, sq. [T. H. D.]

THEODOSIOPOLIS (also called *ARRI*), a town in the SE. of Thrace, on the road from Cypseli to Byzantium, a short distance to the E. of the source of the river Melas. Ammianus (xxvii. 4. § 12) mentions it by the latter name as one of the two chief towns of Europa, the designation in his time of the SE. division of Thrace. [J. R.]

THEODOSIOPOLIS (Θεοδοσιούπολις, Procop. *de Aed.* iii. 5), a city in Armenia Major, founded by Theodosius II. to keep the Armenians in subjection it was enlarged by the emperor Anastasius, and its fortifications were much strengthened by Justinian. (Procop. *B. P.* i. 10.) It lay S. of the Araxes and 42 stadia S. of the mountain in which the Euphrates rises, the present *Bingöl*. (Id. *ib.* 17; cf. Ritter, *Erdk.* x. p. 79, seq.) Theodosiopolis enjoyed an extensive commerce. (Const. Porphy. *de Adm. Imp.* 45.) Some writers identify it with *Arzeroum* (Ritter, *ib.* pp. 80, 271, seq.; Zeune, p. 431); but according to D'Anville (*Geogr. Anc.* ii. p. 99, sq.) it lay 35 miles E. of that place. (Cf. Chardin, ii. p. 173, sq.; Hamilton, *Asia Minor*, &c. i. p. 178; Gibbon, *Decline and Fall*, iv. p. 168, ed. Smith.) [T. H. D.]

THEODOSIOPOLIS, in Mysia. [PERPERENIA.]

THEON OCHEMA. [LIBYA, p. 179, b.]

THEOPHANUIS (Θεοφάνιος, Ptol. v. 9. § 3), a river of Asiatic Sarmatia, which fell into the Palus Maeotis, between the greater and less Rhombitea. (Cf. Amm. Marc. xxii. 8. § 29.) [T. H. D.]

THEOPOLIS. This place in Gallia, with a pure Greek name, was near Sisteron, in the department of *Basses-Alpes*, on the left bank of the Durance (*Durance*). An inscription cut on the slope of a rock in honour of Dardanus, praefect of the Praetorium of Gallia in the time of Honorius, and in honour of his mother, informs us that they made a road for this town by cutting both sides of the mountains, and they gave it walls and gates. The place is still called *Théoux*, and there are said to be remains there. (D'Anville, *Notice*, &c.) [G. L.]

THERA (Θήρα, Ion. Θήρη; *Eth.* Θηραϊός; *Santorin*), an island in the Aegean sea, and the chief of the Sporades, is described by Strabo as 200 stadia in circumference, opposite the Cretan island of Dia, and 700 stadia from Crete itself. (Strab. x. p. 484.) Pliny places Thera 25 Roman miles S. of Ios (iv. 12. s. 23). Thera is said to have been formed by a clod of earth thrown from the ship Argo, to have received the name of Calliste, when it first emerged from the sea, and to have been first inhabited by the Phoenicians, who were left there by Cadmus. Eight generations afterwards it was colonised by Lacedaemonians and Minyae under the guidance of the Spartan Theras, the son of Auteasion, who gave his name to the island. (Herod. iv. 147, seq.; Pind. *Pyth.* iv. 457; Callim. *ap. Strab.* viii. p. 347, x. p. 484; Apoll. Rhod. iv. 1762; Paus. iii. 1. § 7, iii. 15. § 6, vii. 2. § 2.) Its only importance in history is owing to its being the mother-city of Cyrene in Africa, which was founded by Battus of Thera in a.c. 631. (Herod. iv. 150, seq.) At this time Thera contained seven districts

(*Ἱέρως*, Herod. iv. 153.) Ptolemy (iii. 15. § 26) has preserved the names of two places, Eleusin or Eleusis, and Oea; and a third, called Melasene, occurs in an inscription. (Böckh, *Inscr.* no. 2448.) Like Melos, Thera aided with the Lacedaemonians at the commencement of the Peloponnesian War (Thuc. ii. 9), but of its subsequent history we have no information.

Thera and the surrounding islands are remarkable as having been the scene of active volcanic operations in ancient as well as in modern times. In consequence of the survey made by command of the English Admiralty, we now possess precise information respecting these islands, the result of which, with additional particulars, is given by Lieutenant Leycester in a paper published in the Journal of the Royal Geographical Society, from which the following account is chiefly taken. Thera, now called *Santorin*, the largest of the group, has been likened in form to a horse-shoe; but a crescent with its two points elongated towards the west would be a more exact description. The distance round the inner curve is 12 miles, and round the outer 18, making the coast-line of the whole island 30 miles: its breadth is in no part more than 3 miles. Opposite to Thera westward is Therasia, which still bears the same name. (Strab. i. p. 57, v. p. 484; Steph. B. s. v. *Θηρασία*; Ptol. iii. 15. § 26; Plin. ii. 87. s. 89, iv. 12. s. 70.) Its circuit is $7\frac{1}{2}$ miles, its length from N. to S. about 2½ miles, and its breadth a mile. About 1½ mile S. of Therasia, lies *Aspronisi*, or White Island, only a mile in circuit, and so called from being capped with a deep layer of pozzolana: the name of this island is not mentioned by the ancient writers. These three islands, Thera, Therasia, and *Aspronisi*, enclose an expanse of water nearly 18 miles in circumference, which is in reality the crater of a great volcano. The islands were originally united, and were subsequently separated by the eruption of the crater. In the centre of this basin three volcanic mountains rise, known by the name of *Kamméni* or the *Burnt*, (*καυμένη*, i. e. *καυμένη* instead of *κεκαυμένη*), and distinguished as the *Palaea* or Old, the *Nea* or New, and the *Mikra* or Little. It was formerly asserted that the basin was unfathomable, but its depth and shape have been clearly ascertained by the soundings of the English Survey. Supposing the basin could be drained, a gigantic bowl-shaped cavity would appear, with walls 2449 feet high in some places, and nowhere less than 1200 feet high, while the *Kamméni* would be seen to form in the centre a huge mountain $5\frac{1}{2}$ miles in circumference with three summits, the *Palaea Kamméni*, the *Nea Kamméni*, and the *Mikra Kamméni*, rising severally from the bottom of the abyss to the height of 1606, 1629, and 1550 feet. The rim of the great crater thus exposed would appear in all parts unbroken, except at the northern point between Thera and Therasia, where there is a chasm or door into the crater about a mile in width, and 1170 feet in depth midway between the two islands. (See Map, B.) If we now suppose the waters of the Aegæan let in, the edges of the crater, forming the inner curve of Thera and Therasia, rise above the sea from the height of 500 to 1200 feet, and present frightful precipices, of the colour of iron dross, except where their summits are capped with a deep layer of pozzolana. The *Palaea Kamméni* is 328 feet above the water; the *Nea Kamméni* 351 feet; and the *Mikra Kamméni* 222 feet.

Thera, Therasia, and *Aspronisi* are all composed of volcanic matter, except the southern part of Thera, which contains *Mount Elias*, of limestone formation, the peak of which rises 1887 feet above the level of the sea, and is the highest land in the island. This mountain must have been originally a submarine eminence in the bed of the Mediterranean before the volcanic cone was formed (Lyell, *Principles of Geology*, p. 445, 9th ed.).

The first appearance of the three *Kamméni* belongs to historical times, and has been narrated by several writers. The *Nea Kamméni*, which is the largest of the group, did not emerge till the year 1707; but the other two were thrown up in ancient times. The exact time of their appearance, however, is differently related, and it is difficult, and in some cases impossible, to reconcile the conflicting statements of ancient writers upon the subject. It appears certain that the oldest of these islands is the most southerly one, still called the *Palaea* or *Old Kamméni*. It burst out of the sea in a. c. 197, and received the name of *Hiera*, a name frequently given in antiquity to volcanic mountains. This fact is stated by Eusebius, Justin, Strabo, and Plutarch. It is related by Strabo that flames burst out of the sea for four days, and that an island was formed 12 stadia or $1\frac{1}{2}$ English mile in circumference. (Euseb. *Chron.* p. 144, *Olymp.* 145. 4; Justin, xxi. 4; Strab. i. p. 57; Plut. *de Pyth. Or.* 11. p. 399.) The unanimous statement of these four writers is, however, at variance with that of Pliny (ii. 87. s. 89), who says "that in the 4th year of the 135th Olympiad [a. c. 237] there arose Thera and Therasia; between these islands, 130 years later [a. c. 107], *Hiera*, also called *Automate*, and 3 stadia from the latter, 110 years [A. D. 3] afterwards, in the consulship of M. Junius Silanus and L. Balbus, on the 8th of July, *This*." In another passage he says (iv. 12. s. 23): "Thera, when it first emerged from the sea, was called *Calliste*. Therasia was afterwards torn away from it; between the two there presently arose *Automate*, also called *Hiera*; and in our age *This* near *Hiera*." Seneca refers apparently to the events mentioned by Pliny, when he states (*Qu. Nat.* ii. 26), upon the authority of Posidonius, that an island arose in the Aegæan sea "in the memory of our ancestors" (*majorum nostrorum memoria*), and that the same thing happened a second time "in our memory" (*nostra memoria*) in the consulship of Valerius Asiaticus [A. D. 46]. (Comp. *Qu. Nat.* vi. 21.)

According to the preceding statements there would have been five different eruptions of islands in the space of little more than 200 years. First Thera and Therasia themselves appeared in a. c. 237, according to Pliny; secondly *Hiera*, according to Eusebius, Justin, Strabo, and Plutarch, in a. c. 197; thirdly *Hiera* or *Automate*, according to Pliny, 130 years later than the first occurrence, consequently in a. c. 107; fourthly, according to Pliny, 110 years afterwards, *This*, that is in A. D. 3; fifthly, according to Seneca and other writers, who will be mentioned presently, an island in the reign of the emperor Claudius, A. D. 46.

Now it is evident that there is some gross error in the text of Pliny, or that he has made use of his authorities with a carelessness which is not unusual with him. The most surprising thing is, that he has omitted the eruptions of the islands in a. c. 197 and A. D. 46, which are guaranteed by several authorities. His statement that Thera and Therasia first appeared in the 4th year of the 135th Olympiad,

I. e. B. C. 237, is absurd, as they are mentioned by Callinus and Herodotus, and must have existed even long before the time of those writers; but if we suppose a slight error in the numerals in the text of Pliny (reading "Olympiadis cxxxv anno quarto" instead of "Olympiadis cxxxv anno quarto"), we have the very year (B.C. 197) in which Eusebius and Justin place the appearance of Thera. There can be little doubt, therefore, that Pliny's authorities referred to this event, and that it was only through carelessness that he spoke of the appearance of Thera and Therasia in that year. Thus the first statement of Pliny may be reconciled with the accounts of Eusebius, Justin, and the other writers. The appearance of the second island, to which he falsely transfers the name of Hieria from the earlier occurrence, must be placed in B.C. 67, according to the corrected chronology. This island no longer exists; and it must therefore either have been thrown up and disappeared again immediately, as was the case

in the eruption of 1650, or it was simply an addition to the ancient Hieria, of which there are some instances at a later period. It is apparently to this eruption that the statement of Posidonius, quoted by Seneca, refers. The last statement of Pliny that a new island, named Thia, was thrown up 2 stadia from Thia in the consulship of M. Junius Silanus and L. Balbus, on the 8th of July, is so exact that it seems hardly possible to reject it; but here again is an error in the date. If we take the numbers as they stand, this event would have happened in A.D. 3, or, according to the corrected numbers, in A.D. 43, whereas we know that M. Junius Silanus and L. Balbus were consuls in A.D. 19. No other writer, however, speaks of an eruption of an island in this year, which, if it actually happened, must again have disappeared. Moreover, it is strange that Pliny should have passed over the eruption of the real Thia, or *Mikra Kammēni*, which occurred in his lifetime, in the consulship of Valerius Asiaticus, and in

MAP OF THERA AND THE SURROUNDING ISLANDS.

- A. Shoal formed by the submarine volcanic eruption in 1650.
- B. Entrance to the crater.
- C. *Mount Elias*.
- D. *Mezsa-Vouno* and ruined city, probably Thera.
- E. Submarine ruins at *Kamari*, probably Oea.
- F. Ruins at *Pertosa*.

- H. Ruins, probably of Eleusis.
- I. Modern capital *Thera* or *Paira*.
- K. Promontory of *Sigro*.
- L. *Merovali*.
- M. *Epanomeria*.
- N. *C. Kolumbo*.

the reign of Claudius, A.D. 46. This event, with the difference of only a single year, is mentioned by several writers. (Senec. *Qu. Nat.* ii. 26, vi. 21; Dion Cass. ix. 29; Aurel. Vict. *Caes.* 4, *Epit.* 4; Oros. vii. 6; Amm. Marc. xvii. 7; Georg. Cedren. i. p. 197, ed. Par.) Moreover Pliny himself, in another passage (iv. 12. a. 23), says that Thia appeared in our age ("in nostro aëro"), which can hardly apply to the consulship of Silanus and Balbus, since he was not born till A.D. 23.

In A.D. 726, during the reign of Leo the Isaurian, Thera, or the *Palaea Kamméni*, received an augmentation on the NE. side. (Theoph. *Chronogr.* p. 338, ed. Paris; Cedren. i. p. 454, ed. Paris; Nicephor. p. 37, ed. Par.) There have been several eruptions in modern times, of which a full account is given by Lieut. Leicester and Rosa. Of these one of the most important was in 1573, when the *Mikra Kamméni* is said to have been formed. But as we have already seen from several authorities that an island was formed in the reign of Claudius, A.D. 46, we must suppose either that the last-mentioned island sunk into the sea at some unknown period, and made its appearance a second time as the *Mikra Kamméni* in 1573, or that there was only an augmentation of the *Mikra Kamméni* in this year. The latter supposition is the more probable, especially since Father Richard, who records it, was not an eye-witness, but derived his information from old people in the island. There was another terrible eruption in 1650, which Father Richard himself saw. It broke out at an entirely different spot from all preceding eruptions, outside the gulf, off the NE. coast of Thera, about $3\frac{1}{2}$ miles from *C. Kolumbo*, in the direction of Ios and Anydros. This submarine outbreak lasted about three months, covering the sea with pumice, and giving rise to a shoal, which was found by the English Survey to have 10 fathoms water over it. (See map, A.) At the same time the island of Thera was violently shaken by earthquakes, in which many houses were overthrown, and a great number of persons and animals were killed by the pestilential vapours emitted from the volcano. The sea inundated the flat eastern coast of the island to the extent of two Italian miles inland. The ruins of two ancient towns at *Perissa* and *Kamari* were disinterred, the existence of which was previously unknown, and which must have been overwhelmed by some previous eruption of volcanic matter. The road also, which then existed round *Cape Mesa-Vouno*, was sunk beneath the waters.

For the next 50 years, or a little longer, the volcanic fires slept, but in 1707 they burst forth with redoubled fury, and produced the largest of the three burnt islands, the *Nea Kamméni*. It originally consisted of two islands. The first which rose was called the White Island, composed of a mass of pumice extremely porous. A few days afterwards there appeared a large chain of dark rocks, composed of brown trachyte, to which the name of the Black Island was given. These two islands were gradually united; and in the course of the eruptions, the black rocks became the centre of the actual island, the *Nea Kamméni*. The White Island was first seen on the 23rd of May, 1707, and for a year the discharges of the volcano were incessant. After this time the eruptions were less frequent; but they continued to occur at intervals in 1710 and 1711; and it was not till 1712 that the fires of the volcano became extinct. The island is now about $2\frac{1}{2}$ miles in circuit, and has a perfect cone at its SE. side,

which is 351 feet high. From 1712 down to the present day there has been no further eruption.

There are several thermal and mineral springs at Thera and the surrounding islands, of which Lieut. Leicester gives an account, and which are more fully described by Landerer in the treatise entitled *Περὶ τῶν ἐν Θερᾷ (Σαρροφύρῃ) Σπηυῶν ὕδατος*, Athens, 1835. The most important are the iron springs in a bay on the SE. side of *Nea Kamméni*. There are springs on the NE. side of *Palaea Kamméni*, likewise near *Cape Ezomiti* in the south of Thera, and at other places. Fresh water springs are very rare at Thera, and are only found round *Mount Elias* springing from the limestone. The inhabitants depend for their supply of water upon the rain which they catch in the tanks during the winter.

The principal modern town of the island is now called *Thera*, or *Phira*, and is situated in the centre of the curve of the gulf. When Tournefort visited Thera, the capital stood upon the promontory *Skaro*, a little to the N. of the present capital, and immediately under the town of *Merovouli*. The promontory *Skaro* projects about one third of a mile into the sea; and upon it are the remains of a castle built by the dukes of Naxos. The chief town in the island, after the capital, is *Epanomeria*, on the NW. promontory, and directly opposite to Therasia. As space is of the utmost value in this small island, all the principal towns are built upon the very edge of the cliffs, and present a very singular appearance, perched in some cases more than 900 feet above the sea. Wood being very scarce, the houses are excavated in the face of the vast beds of pumice. In order to make approaches to the towns upon the cliffs, the inhabitants have cut zig-zag stair or roads in the sides of the precipices. The road upon the summit runs along the edge of the precipices, and, in many cases, over the habitations, which are built in the face of them. The population of the island in 1848 was about 14,000, and, including Therasia, about 14,380. In the time of Tournefort there were 10,000 inhabitants, so that the increase has been nearly a third in about 150 years. The island is carefully cultivated; and the chief production is wine, which is mostly exported to the Russian ports in the *Black Sea*.

The antiquities of the island have been explained at length by Ross and Lieut. Leicester. There are remains of an ancient city situated on the SE. point of the island, upon the summit of *Mesa-Vouno*, a mountain about 1100 feet above the level of the sea, connected with *Mount Elias* by the ridge of the *Sellada*. The mountain of *Mesa-Vouno* slopes suddenly off to the precipices on the NE. side, which rise perpendicularly 600 feet above the water and form the cape of the same name. The walls exhibit masonry of all ages, from the most ancient Cyclopean to the regular masonry of later times. The walls may still be traced, and enclose a circuit of only seven-tenths of a mile; but the houses appear to have been built terrace-fashion upon the side of the hill. Several inscriptions, fragments of sculpture, and other antiquities, have been discovered here. The name of this city has been a subject of some dispute. In an inscription found below *Mesa-Vouno*, at *Kamari*, in the church of *St. Nicholas*, the name *Oea* occurs, which, as we have already seen, is one of the two towns mentioned by Ptolemy. But in an inscription upon some steps cut out of the rock of *Mesa-Vouno* we find *Θηρα πόλις*. Ross, however, does not consider this to be a proof that

There was the name of the city, supposing that *νόδος* here signifies only the political community of the Theraeans. On the other hand, it was so usual for the islands of the Aegean to possess a capital of the same name, that, taken in connection with the inscription last mentioned, it is probable, either that Ptolemy has accidentally omitted the name of the capital, or that in his time the Theraeans had removed from the lofty site at *Messa-Vouno* to Oea upon the sea-coast at *Kamari*, where submarine ruins still exist. Upon the other or S. side of the *Cape Messa-Vouno*, at *Perissa*, there are also so many ancient remains as to lead us to suppose that this was the site of an ancient city, but no inscription has been discovered to give a clue to its name. Upon either side of the mountain of *Messa-Vouno* there are numerous tombs.

South of *Perissa* is *C. Ecomiti*, and a little to the N. of this cape there are the remains of an ancient city, which is probably the Eleusis of Ptolemy. Here are the ruins of a mole under water, and upon the side of the mountain many curious tombs. There are likewise some ruins and tombs at *C. Kolumbo*, in the NE. of the island, which Ross conjectures may be the site of *Melaenae*. The island of *Therasia* possessed a town of the same name (Ptol. iii. 15. § 28), the ruins of which were discovered by Ross opposite *Epanomeria* in *Thera*. (Besides the earlier writers, such as Tournefort and others, the reader is particularly referred to Ross, *Reisen auf den Griechischen Inseln*, vol. i. pp. 53, seq., 86, seq.; 180, seq.; and Lieut. Leycester, *Some Account of the Volcanic Group of Santorin or Thera*, in the *Journal of the Royal Geographical Society*, vol. xx. p. 1, seq.)

THERAMBOS or **THRAMBUS** (Θερμῶς, Herod. vii. 123; Θράμβος, Steph. B. s. v.; Θραμβή, Scylax, p. 26; Θραμβούλα βεράς, Lycophr. 1404), a town of the peninsula *Pallene*, in *Chalcidice* in *Macedonia*, is called a promontory by *Stephanus B.*, and is hence supposed by *Leake* (*Northern Greece*, vol. iii. p. 156) to have occupied a position very near the promontory *Canastreaum*, the most southerly point of *Pallene*; but from the order of the names in *Scylax* we would rather place it at the promontory upon the western side of the peninsula, called *Poedium* by *Thucydides* (iv. 129).

THERANDA, a town of *Moesia*, now *Trenonitza* (Geogr. Rav. iv. 15; *Tab. Peut.*). [T. H. D.]

THERAPNAE (Θεράπναι: *Éth. Θεραπναίος*), a place in the territory of *Thebes*, between this city and the *Asopus*. (Eurip. *Bacch.* 1029; *Strab.* ix. p. 409; *Leake*, *Northern Greece*, vol. ii. p. 369.)

THERAPNE. [SPARTA, p. 1029, b.]

THERASIA. [THERA.]

THERIO'DES SINUS (Θηριώδης κόλπος, Ptol. vii. 3. § 2), a gulf on the coast of the *Sinae*, between the promontories *Notium* (Νότιον), and *Satyrion* (Σατύριον). Perhaps the gulf of *Tonkin*, or that between the *Cape St. James* and the river of *Campodja*. [T. H. D.]

THERMA. [THESSALONICA.]

THERMAE (Θέρμαι, *Éth. Thermitanus*) was the name of two cities in *Sicily*, both of which derived their name from their position near hot springs.

1. The *northern* *Thermae*, sometimes called for distinction's sake *THERMAE HIMERENSES* (now *Termini*), was situated on the N. coast of the island, in the immediate neighbourhood of the more ancient city of *Himera*, to the place of which it may be considered as succeeding. Hence its history is given in the article *HIMERA*.

2. The *southern* *Thermae*, or *THERMAE SELINUNTIAE* (*Sciaccia*), was situated on the SW. coast of the island, and, as its name imports, within the territory of *Selinus*, though at a distance of 20 miles from that city in the direction of *Agrirentum*. There can be no doubt that it occupied the same site as the modern town of *Sciaccia*, about midway between the site of *Selinus* and the mouth of the river *Halicus* (*Platani*), where there still exist sulphureous waters, which are in constant use. (*Smyth's Sicily*, p. 217; *Cluver, Sicil.* p. 223.) We have no account of the existence of a town on the site during the period of the independence of *Selinus*, though there is little doubt that the thermal waters would always have attracted some population to the spot. Nor even under the Romans did the place attain to anything like the same importance with the northern *Thermae*; and there is little doubt that *Pliny* is mistaken in assigning the rank of a colonia to the southern instead of the northern town of the name. [HIMERA.] *Strabo* mentions the waters (τὰ ὕδατα τὰ ἑλινούντια, *Strab.* vi. p. 275); and they are again noticed in the *Itineraries* under the name of *Aquae Labodes* or *Labrodes* (*Itin. Ant.* p. 89; *Tab. Peut.*). [E. H. B.]

THERMAICUS SINUS. [THESSALONICA.]

THERMO'DON (Θερμῶδων: *Thermeh*), a river of *Pontus*, celebrated in the story about the *Amazons*, is described by *Pliny* (vi. 3) as having its sources in the *Amazonian* mountains, which are not mentioned by any other ancient writer, but are believed still to retain their ancient name in the form of *Mason Dagh*. (*Hamilton, Researches*, i. p. 283.) *Strabo* (xii. p. 547) places its many sources near *Phanaroa*, and says that many streams combine to form the *Thermodon*. Its course is not very long, but its breadth was nevertheless three plethra, and it was a navigable river (*Xen. Anab.* v. 6. § 9, vi. 2. § 1; *Arrian, Periplus P.E.* p. 16.) It discharged itself into the *Euxine* near the town of *Themiscyra*, at a distance of 400 stadia to the north-east of the mouth of the *Iris*. This river is very often noticed by ancient writers. See *Aeschyl. Prom.* 274, *Suppl.* 290; *Herod.* ix. 27; *Scylax*, p. 33; *Strab.* i. p. 52, vii. p. 298; *Anon. Periplus P.E.* p. 10; *Ptol.* v. 6. § 4; *Pomp. Mela*, i. 19; *Plin.* xi. 19, xxxvii. 37; *Virg. Aen.* xi. 659; *Ov. ex Pont.* iv. 19. 51; *Proper.* iv. 4. 71. and many other passages. [L. S.]

THERMO'PYLAE (Θερμοπύλαι), or simply **PYLAE** (Πύλαι), that is, the *Hot Gates* or the *Gates*, a celebrated narrow pass, leading from *Thessaly* into *Locris*, and the only road by which an enemy can penetrate from northern into southern *Greece*. It lay between *Mount Oeta* and an inaccessible morass, forming the edge of the *Maliac* gulf. In consequence of the change in the course of the rivers, and in the configuration of the coast, this pass is now very different from its condition in ancient times; and it is therefore necessary first to give the statement of *Herodotus* and other ancient writers respecting the locality, and then to compare it with its present state. In the time of *Herodotus* the river *Spercheus* flowed into the sea in an easterly direction at the town of *Anticyra*, considerably W. of the pass. Twenty stadia E. of the *Spercheus* was another river, called *Dyras*, and again, 20 stadia further, a third river, named *Melas*, 5 stadia from which was the city *Trachis*. Between the mountains where *Trachis* stands and the sea the plain is widest. Still further E. was the *Asopus*, issuing from a rocky gorge (διασφάτ),

and E. again is a small stream, named Phoenix, flowing into the Asopos. From the Phoenix to Thermopylae the distance, Herodotus says, is 15 stadia. (Herod. vii. 198-200.) Near the united streams of the Phoenix and the Asopos, Mt. Oeta approached so close to the morass of the gulf as to leave space for only a single carriage. In the immediate vicinity of the pass is the town of Anthela, celebrated for the temples of Amphictyon and of the Amphictyonic Demeter, containing seats for the members of the Amphictyonic council, who held here their autumnal meetings. At Anthela Mount Oeta roades a little from the sea, leaving a plain a little more than half a mile in breadth, but again contracts near Alpeni, the first town of the Locrians, where the space is again only sufficient for a single carriage. At this pass were some hot springs, which were consecrated to Hercules (Strab. ix. p. 428), and were called by the natives Chytri or the Pans, on account of the cells here prepared for the bathers. Across this pass the Phocians had in ancient times built a wall to defend their country against the attacks of the Thesalians, and had let loose the hot water, so as to render the pass impracticable. (Herod. vii. 200, 176.) It appears from this description that the proper Thermopylae was the narrow pass near the Locrian town of Alpeni; but the name was also applied in general to the whole passage from the mouth of the Asopos to Alpeni. Taking the term in this acceptation, Thermopylae consisted of the two narrow openings, with a plain between them rather more than a mile in length and about half a mile in breadth. That portion of Mt. Oeta, which rises immediately above Thermopylae is called Callidromon by Livy and Strabo, but both writers are mistaken in describing it as the highest part of the range. Livy says that the pass is 60 stadia in breadth. (Liv. xxxvi. 15; Strab. ix. p. 428.)

In consequence of the accumulation of soil brought down by the Spercheus and the other rivers, three or four miles of new land have been formed, and the mountain forming the gates of Thermopylae is no longer close to the sea. Moreover, the Spercheus, instead of flowing into the sea in an easterly direction, considerably W. of Thermopylae, now continues its course parallel to the pass and at the distance of a mile from it, falling into the sea lower down, to the E. of the pass. The rivers Dryas, Melas, and Asopos, which formerly reached the sea by different mouths, now discharge their waters into the Spercheus. In addition to this there has been a copious deposit from the warm springs, and a consequent formation of new soil in the pass itself. The present condition of the pass has been described by Colonel Leake with his usual clearness and accuracy. Upon entering the western opening, Leake crossed a stream of warm mineral water, running with great rapidity towards the Spercheus, and leaving a great quantity of red deposit. This is undoubtedly the Phoenix, which probably derived its name from the colour of the sediment. After crossing a second salt-spring, which is the source of the Phoenix, and a stream of cold salt water, Leake entered upon that which Herodotus calls the plain of Anthela, which is a long triangular slope, formed of a hard gravelly soil, and covered with shrubs. There is an easy descent into this plain over the mountains, so that the western opening was of no importance in a military point of view. Upon reaching the eastern pass, situated at the end of the plain

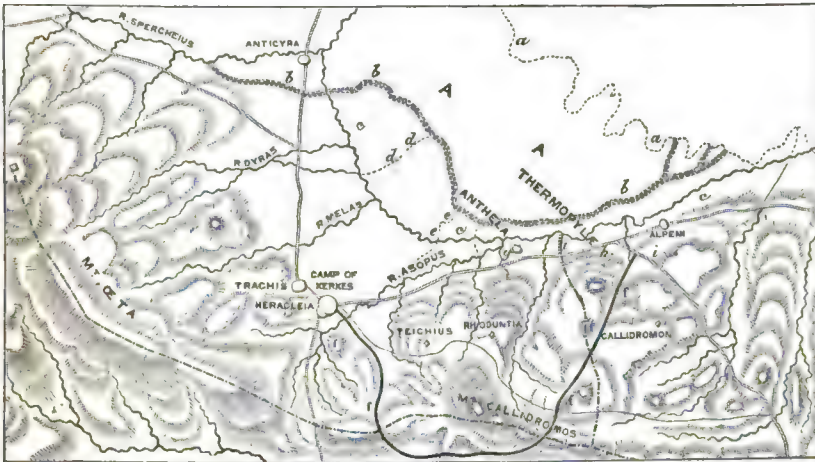

of Anthela, the traveller reaches a wide deep soil formed by the deposit of the salt-spring of the proper Thermopylae. There are two promontories of these springs, the upper or western being immediately at the foot of the highest part of the Oeta, and the lower or eastern being 200 yds. lower. From the lower source the water is conducted in an artificial canal for a distance of 400 yds. to the sea. This water emits a strong sulphureous vapour, as it issues from the mill, it pours out a great volume of smoke. Beyond the hill on each height, and in their neighbourhood as far as ponds, containing cold water; but as the water of the same composition as the hot springs, is probably also hot at its issue. Leake describes the water of these pools, like that of the principal hot source, is of a dark blue colour, the former the remark of Pausanias, that the black water ever saw was in one of the baths at Thermopylae (Paus. iv. 35. § 9.) The springs at this pass are much hotter, and have left a far greater opening than those at the other end of the plain, the opening which may be called the false Thermopylae. Issuing from the pass are foundations of a stone wall, doubtless the remains of works by which the pass was at one time fortified; and to the left a tumulus and the foundations of a circular monument. Upwards of a mile further is a dry stream, in which the torrents descending from Mt. Callidromon, are collected into one bed, and which affords the easiest and most direct passage to the summit of the mountain. This is probably the mountain path by which the Persians, under Xerxes, descended in the rear of Leonidas and his companions. This path, as well as the mountain over which it leads, is called Anopaea (ἡ Ἀνωπaea) by Strabo, who does not use the name of Callidromon. He describes the path as beginning at the foot of the Asopos, passing over the crest of the mountain, and terminating near Alpeni and the rock called Melampyrgus, and the seats of the Cereus, where the road is narrowest. (Herod. vii. 216.) The history of the defence of Thermopylae by Leonidas is too well known to require to be related here. The wall of the Phocians, which Leonidas repaired, was probably built a little eastward of the water-spring. When the Spartan king learned that Hydarnes was descending in his rear, he advanced beyond the wall into the widest part of the pass, resolved to sell his life as dearly as possible. Upon the arrival of Hydarnes, the Greeks retired behind the wall, and took up their position upon a hill at the pass (καλαυρὴς ἐν τῇ ἐσθρίῃ), where a stone lion was afterwards erected in honour of Leonidas. This hill Leake identifies with the western of the two small heights already described, as near as the position of the Phocian wall, and the narrowest part of the pass. The other height is probably the rock Melampyrgus.

Thermopylae is immortalised by the heroic defence of Leonidas; but it was also the scene of some important struggles in later times. In B.C. 279 an allied army of the Greeks assembled in the pass to oppose the Gauls under Brennus, who was marching into southern Greece with the view of pillaging the temple of Delphi. The Greeks held their ground for several days against the attacks of the Gauls, till at length the Heracleotae and Amantae conducted the invaders across Mount Callidromon by the same path which Hydarnes had followed two centuries before. The Greeks, finding their position

no longer tenable, embarked on board their ships and retired without further loss. (Paus. x. 19—22.) In B. C. 207, when the Romans were carrying on war in Greece against Philip, king of Macedonia, the Aetolians, who were then in alliance with the Romans, fortified Thermopylae with a ditch and a rampart, but Philip shortly afterwards forced his way through the pass. (Liv. xxviii. 5, 7; Polyb. x. 41.) In B. C. 181, Antiochus, who was then at war with the Romans, took up his position at Thermopylae, which he fortified with a double rampart, a ditch, and a wall; and, in order to prevent the Romans from crossing the mountains and descending upon his rear, he garrisoned with 2000 Aetolians the three summits, named Callidromum, Teichius, and Rhoduntia. The consul Acilius sent some troops against these fortresses and at the same time attacked the army of Antiochus in the pass. While

the battle was going on in the pass, the Roman detachment, which had succeeded in taking Callidromum, appeared upon the heights, threatening the king's rear, in consequence of which Antiochus immediately took to flight. (Liv. xxxvi. 15—19.) There are still remains of three Hellenic fortresses upon the heights above Thermopylae, which probably represent the three places mentioned by Livy. Appian (Syr. 17) speaks only of Callidromum and Teichius, but Strabo (ix. p. 428) mentions Rhoduntia also. Procopius relates that the fortifications of Thermopylae were restored by Justinian (*de Aed.* iv. 2).

(On the topography of Thermopylae, see the excellent account of Leake, *Northern Greece*, vol. ii. pp. 5, seq., 40, seq.; there is also a treatise by Gordon, *Account of two Visits to the Anopaea or the Highlands above Thermopylae*, Athens, 1838, which the writer of this article has not seen.)

MAP OF THERMOPYLAE AND THE SURROUNDING COUNTRY.

- h. Phocian wall.

THERMUM, THERMUS or THERMA (τὸ Θέρμα, Pol. v. 8; τὰ Θέρμα, Strab. x. p. 463; Pol. v. 7; Θέρμος, Steph. B. s. v.; *Eth. Θέρμος: Vlokho*), the chief city of Aetolia during the flourishing period of the Aetolian League, and the place where the meetings of the league were usually held and an annual festival celebrated. It possessed a celebrated temple of Apollo, in connection with which the festival was probably celebrated. It was situated in the very heart of Aetolia, N. of the lake Trichonis, and on a height of Mt. Panaetolium (*Viena*). It was considered inaccessible to an army, and from the strength of its situation was regarded as a place of refuge, and, as it were, the Acropolis of all Aetolia. The road to it ran from Metapa, on the lake Trichonis, through the village of Pamphilia. The city was distant 60 stadia from Metapa, and 30 from Pamphilia; and from the latter place the road was very steep and dangerous, running along a narrow crest with precipices on each side. It was, however, surprised by Philip V., king of Macedonia, in his invasion of Aetolia in B. C. 218. The Aetolians,

who had never imagined that Philip would have penetrated so far into their country, had deposited here all their treasures, the whole of which now fell into the hands of the king, together with a vast quantity of arms and armour. He carried off the most valuable part of the spoil, and burnt all the rest, among which were more than 15,000 suits of armour. Not content with this, he set fire to the sacred buildings, to retaliate for the destruction of Dium and Dodona. He also defaced all the works of art, and threw down all the statues, which were not less than 2000 in number, only sparing those of the Gods. (Pol. v. 6—9, 13.) A few years afterwards, when the Aetolians had sided with the Romans, Philip again surprised Thermus (about B. C. 206), when he destroyed everything which had escaped his ravages in his first attack. (Pol. xi. 4.) We have no further details of the history of Thermum. Polybius alludes, in one or two other passages (xviii. 31, xxviii. 4), to the meetings of the league held there. In the former of these passages Livy (xxxiii. 35) has misunderstood the words τῆς

τὸν Θερπυκτὸν ἀσπαστὸν to mean the assembly held at Thermopylae.

Polybius's account of Philip's first invasion of Aetolia, which resulted in the capture of Thermum, supplies us with the chief information respecting the towns in the central plain of Aetolia. Philip set out from Limnaea, on the south-eastern corner of the Ambraciot gulf, crossed the Achelous between Stratus and Conope, and marched with all speed towards Thermum, leaving on his left Stratus, Agrinium, and Thestienses (Θεστίνες), and on his right Conope, Lysimachia, Trichonium, and Phoebeum. He thus arrived at Metapa, on the lake Trichonis, and from thence marched to Thermus by the road already mentioned, passing by Pamphila in his way. He returned by the same road as far as Metapa, but from the latter place he marched in one day to a place called Acras, where he encamped, and on the next day to Conope. After remaining a day at Conope, he marched up the Achelous, and crossed it near Stratus.

The remains of the walls of Thermum show that the city was about $2\frac{1}{2}$ miles in circumference. It was in the form of a triangle on the slope of a pyramidal hill, bordered on either side by a torrent flowing in a deep ravine. The only remains of a public edifice within the walls consist of a square, pyramidal, shapeless mass of stones. (Leake, *Northern Greece*, vol. i. p. 126, &c.)

THERVINGI. [GOTHI, p. 1009.]

THE'SPIAE (Θεσπία, also Θέσπεια or Θέσπια, Hom. *Il.* ii. 498; Herod. viii. 50; Paus. ix. 26. § 6; *Éth. Θεσπιάς*, Thespiensis, fem. Θεσπιάς, Θεσπιάς: Adj. Θεσπιανός, Thespius, Thespiacus), an ancient city of Boeotia, situated at the foot of Mt. Helicon, looking towards the south and the Crisaean gulf, where stood its port-town Crenaea or Crensis. (Strab. ix. p. 409; Paus. ix. 26. § 6; Steph. B. s. v.) Thespie was said to have derived its name from Thespiea, a daughter of Asopus, or from Thespieus, a son of Erechtheus, who migrated from Athens. (Paus. l. c.; Diod. iv. 29.) The city is mentioned in the catalogue of Homer. (*Il.* ii. 498.) Thespieae, like Plataea, was one of the Boeotian cities inimical to Thebes, which circumstance affected its whole history. Thus Thespieae and Plataea were the only two Boeotian cities that refused to give earth and water to the heralds of Xerxes. (Herod. vii. 132.) Seven hundred Thespians joined Leonidas at Thermopylae; and they remained to perish with the 300 Spartans, when the other Greeks retired. (Herod. vii. 202, 222.) Their city was burnt by Xerxes, when he overran Boeotia, and the inhabitants withdrew to Peloponnesus. (Herod. viii. 50.) The survivors, to the number of 1800, fought at the battle of Plataea in the following year, but they were reduced to such distress that they had no heavy armour. (Herod. ix. 30.) After the expulsion of the Persians from Greece, Thespieae was rebuilt, and the inhabitants recruited their numbers by the admission of strangers as citizens. (Herod. viii. 75.) At the battle of Delium (B. C. 424) the Thespians fought on the left wing against the Athenians, and were almost all slain at their post. (Thuc. iv. 93, seq.) In the following year (B. C. 423), the Thebans destroyed the walls of Thespieae, on the charge of *Atticism*, the Thespians being unable to offer any resistance in consequence of the heavy loss they had sustained while fighting upon the side of the Thebans. (Thuc. iv. 133.) In B. C. 414 the democratical party at Thespieae attempted

to overthrow the existing government; but the latter receiving assistance from Thebes, many of the conspirators withdrew to Athens. (Thuc. vi. 95.) In B. C. 372 the walls of Thespieae were again destroyed by the Thebans. According to Diodorus (xv. 46) and Xenophon (*Hell.* vi. 3. § 1) Thespieae was at this time destroyed by the Thebans, and the inhabitants driven out of Boeotia; but this happened after the battle of Leuctra, and Mr. Grote (*Hist. of Greece*, vol. x. p. 219) justly infers from a passage in Isocrates that the fortifications of the city were alone demolished at this period. Pausanias expressly states that a contingent of Thespians was present in the Theban army at the time of the battle of Leuctra, and availed themselves of the permission of Epaminondas to retire before the battle. (Paus. ix. 13. § 8, ix. 14. § 1.) Shortly afterwards the Thespians were expelled from Boeotia by the Thebans. (Paus. ix. 14. § 2.) Thespieae was afterwards rebuilt, and is mentioned in the Roman wars in Greece. (Polyt. xxvii. 1; Liv. xlii. 43.) In the time of Strabo, Thespieae and Tanagra were the only places in Boeotia that deserved the name of cities. (Strab. ix. p. 410.) Pliny calls Thespieae a free town ("Eburum oppidum," iv. 7. s. 12). It is also mentioned by Ptolemy (iii. 15. § 20) and in the Antonine Itinerary (p. 326, ed. Wess.), and it was still in existence in the sixth century (Hierocl. p. 645, ed. Wess.).

Eros or Love was the deity chiefly worshipped at Thespieae; and the earliest representation of the god in the form of a rude stone still existed in the city in the time of Pausanias (ix. 27. § 1). The courtesan Phryne, who was born at Thespieae, presented to her native city the celebrated statue of Love by Praxiteles, which added greatly to the prosperity of the place in consequence of the great numbers of strangers who visited the city for the purpose of seeing it. (Dicaearch. § 25, ed. Müller; Cic. *Verr.* i. 2; Strab. ix. p. 410, who erroneously calls the courtesan Glycera; Paus. ix. 27. § 3.) The story of the manner in which Phryne became possessed of this statue, and its subsequent history, are related in the life of PRAXITELES. [*Dict. of Biogr.* Vol. III. pp. 520, 521.] In the time of Pausanias there was only an imitation of it at Thespieae by Menodorus. Among the other works of art in this city Pausanias noticed a statue of Eros by Lysippus, statues of Aphrodite and Phryne by Praxiteles; the agora, containing a statue of Hesiod; the theatre, a temple of Aphrodite Melanias, a temple of the Muses, containing their figures in stone of small size, and an ancient temple of Hercules. (Paus. ix. 27.) Next to Eros, the Muses were specially honoured at Thespieae; and the festivals of the *Ἐσπυρία* and *Μοῦσικα* celebrated by the Thespians on Mt. Helicon, at the end of every four years, are mentioned by several ancient writers. (Paus. ix. 31. § 3; Plut. *Amat.* 1; Athen. xiii. p. 561; K. F. Hermann, *Lehrbuch der griech. Alterth.* § 63, n. 4.) Hence the Muses are frequently called Thespiades by the Latin writers. (Varr. *L. L.* vii. 2; Cic. *Verr.* ii. 4; Ov. *Met.* v. 310; Plin. xxxvi. s. 4, § 39, ed. Sillig.)

The remains of Thespieae are situated at a place called *Leſka* from a deserted village of that name near the village of *Erimokastro* or *Rimokastro*. Unlike most other Greek cities, it stands in a plain surrounded by hills on either side, and its founders appear to have chosen the site in consequence of its abundant supply of water, the sources of the

river *Kanadri* rising here. Leake noticed the foundations of an oblong or oval enclosure, built of very solid masonry of a regular kind, about half a mile in circumference; but he observes that all the adjacent ground to the SE. is covered, like the interior of the fortress, with ancient foundations, squared stones, and other remains, proving that if the enclosure was the only fortified part of the city, many of the public and private edifices stood without the walls. The site of some of the ancient temples is probably marked by the churches, which contain fragments of architraves, columns, and other ancient remains (Leake, *Northern Greece*, vol. ii. p. 479, seq.; Dodwell, vol. i. p. 253.)

COIN OF THESPIÆ.

THESPRO'TI, THESPRO'TIA. [ΕΠΕΙΡΟΣ.]

THESSALIA (Θεσσαλία or Θετταλία: *Εὐθ. Θεσσαλός* or *Θετταλός*, Thessalus, *fem. Θεσσαλὴ, Θετταλὴ*, Thessalis: *Adj. Θεσσαλικός, Θετταλικός*, Thessalicus, Thessalius), the largest political division of Greece, was in its widest extent the whole country lying N. of Thermopylae as far as the Cambanian mountains, and bounded upon the W. by the range of Pindus. But the name of Thessaly was more specifically applied to the great plain, by far the widest and largest in all Greece, enclosed by the four great mountain barriers of Pindus, Othrys, Ossa and Pelion, and the Cambanian mountains. From Mount Pindus,—the Apennines or back-bone of Greece,—which separates Thessaly from Epeirus, two large arms branch off towards the eastern sea, running parallel to one another at the distance of 60 miles. The northern, called the Cambanian mountains, forms the boundary between Thessaly and Macedonia, and terminates in the summit of Olympus, which is the highest mountain in all Greece [OLYMPUS]. The southern arm, named Othrys, separates the plain of Thessaly from Malis, and reaches the sea between the Malian and Pagasæan gulfs [OTHYRS]. The fourth barrier is the range of mountains, first called Ossa and afterwards Pelion, which run along the coast of Thessaly upon the E., nearly parallel to the range of Pindus [OSSA; PELION]. The plain of Thessaly, which is thus enclosed by natural ramparts, is broken only at the NE. corner by the celebrated vale of Tempe, which separates Ossa from Olympus, and is the only way of entering Greece from the N., except by a pass across the Cambanian mountains. This plain, which is drained by the river Peneius and its affluents, is said to have been originally a vast lake, the waters of which were afterwards carried off through the vale of Tempe by some sudden convulsion, which rent the rocks of the valley asunder. (Herod. vii. 129.) [TEMPE.] The lakes of Nessonis and Boebei, which are connected by a channel, were supposed by Strabo (ix. p. 430) to have been the remains of this vast lake. In addition to this plain there are two other districts included under the general name of Thessaly, of which one is the long and

narrow slip of rocky coast, called Magnesia, extending from the vale of Tempe to the gulf of Pagasæ, and lying between Mounts Ossa and Pelion and the sea; while the other, known under the name of Malis, is quite distinct in its physical features from the rest of Thessaly, being a long narrow valley between Mounts Othrys and Oeta, through which the river Spercheius flows into the Maliac gulf.

The plain of Thessaly properly consists of two plains, which received in antiquity the name of Upper and Lower Thessaly; the Upper, as in similar cases, meaning the country near Mount Pindus most distant from the sea, and the Lower the country near the Thermaic gulf. (Strab. ix. pp. 430, 437.) These two plains are separated by a range of hills between the lakes Nessonis and Boebei on the one hand, and the river Enipeus on the other. Lower Thessaly, which constituted the ancient division Pelasgiotis, extends from Mounts Titarus and Ossa on the N. to Mount Othrys and the shores of the Pagasæan gulf on the S. Its chief town was Larissa. Upper Thessaly, which corresponded to the ancient divisions Thessaliotis and Histiaeotis, of which the chief city was Pharsalus, stretches from Aeginium in the N. to Thaumaci in the S., a distance of at least 50 miles in a straight line. The road from Thermopylae into Upper Thessaly entered the plain at Thaumaci, which was situated at the pass called Coela, where the traveller came in sight of a plain resembling a vast sea. (Liv. xxxii. 4.) [THAUMACI.]

The river Peneius, now called the *Salamvria* or *Salamvria* (Σαλαμβρία, Σαλαμβρία), rises at the NW. extremity of Thessaly, and is composed of streams collected in the valleys of Mount Pindus and the offshoots of the Cambanian mountains. At first it flows through a contracted valley till it reaches the perpendicular rocks, named the *Metéora*, upon the summits of which several monasteries are perched. Below this spot, and near the town of Aeginium or *Stagis*, the valley opens out into the vast plain of Upper Thessaly, and the river flows in a general southerly direction. At Tricca, or *Trikkala*, the Peneius makes a bend to the E., and shortly afterwards reaches the lowest point in the plain of Upper Thessaly, where it receives within a very short space many of its tributaries. Next it passes through a valley formed by a range of hills, of which those upon the right divide the plains of Upper and Lower Thessaly. It then emerges into the plain a few miles westward of Larissa; after passing which city it makes a sudden bend to the N., and flows through the vale of Tempe to the sea. Although the Peneius drains the greater part of Thessaly, and receives many tributaries, it is in the greater part of its course a shallow and sluggish river, except after the melting of the snows, when it sometimes floods the surrounding plain. Hence on either side of the river there is frequently a wide gravelly uncultivable space, described by Strabo as *ποταμόληστος* (ix. p. 430; Leake, *Northern Greece*, vol. i. p. 420). When the river is swollen in the spring, a channel near Larissa conducts the superfluous waters into the *Karajá'r* or *Μαυρολίμνη*, the ancient Nessonis; and when this basin is filled, another channel conveys the waters into the lake of *Karla*, the ancient Boebei. (Leake, iv. p. 403.) In the lower part of its course, after leaving Larissa, the Peneius flows with more rapidity, and is full of small vortices, which may have suggested to Homer the epithet

ἀργυροβλήτης (*Il.* ii. 753); though, as Leake has remarked, the poet carries his flattery to an extreme in comparing to silver the white hue of its turbid waters, derived entirely from the earth suspended in them. (*Northern Greece*, vol. iv. p. 291.)

The principal rivers of Thessaly, according to Herodotus (vii. 129), are the Peneius, Apidanus, Onochonus, Enipeus and Pamisus. The four latter rivers all flow from the S. Of these the most important is the Enipeus, now called the *Fersalitti*, which flows through the plain of Pharsalus, and falls into the Peneius near Piresiae in the lowest part of the plain. The Apidanus, now called *Vrgeid*, into which the Quarius (*Σοφῳδῆτις*) falls, is a tributary of the Enipeus. [*ENIPEUS.*] The Pamisus, now called the *Blisri* or *Piliéri*, also joins the Peneius a little to the W. of the Enipeus. The Onochonus, which is probably the same as the Onchestus, flows into the lake Boebesis and not into the Peneius. [For details, see Vol. II. p. 483, a.] The chief tributary of the Peneius on the N. is the Titaresius, now called *Elasontitiko* or *Xeraghi*, which rises in Mt. Titarus, a part of the Cambunian range, and joins the main stream between Larissa and the vale of Tempe. Homer relates (*Il.* ii. 753, seq.) that the waters of the Titaresius did not mingle with those of the Peneius, but floated upon the surface of the latter like oil upon water, whence it was regarded as a branch of the infernal river Styx. (Comp. Lucan, vi. 375.) Leake calls attention to the fact that Strabo (ix. p. 441), probably misled by the epithet (*ἀργυροβλήτης*) applied by the poet to the Peneius, has reversed the true interpretation of the poet's comparison of the Peneius and the Titaresius, supposing that the Peneius was the pellucid river, whereas the apparent reluctance of the Titaresius to mingle with the Peneius arises from the former being clear and the latter muddy. (*Northern Greece*, iii. p. 396, iv. p. 296.) The Titaresius was also called *Eurotas* (Strab. vii. p. 329) and *Horcus* or *Orcus* (Plin. iv. 8. s. 15).

The plain of Thessaly is the most fertile in all Greece. It produced in antiquity a large quantity of corn and cattle, which supported a numerous population in the towns, and especially a rich and proud aristocracy, who were at frequent feuds with one another and much given to luxury and the pleasures of the table (*ἐκεί γὰρ ὅθι πλείστη ἀνάστα καὶ ἀκολασία*, Plat. *Crit.* 15; Athen. xii. p. 564; Theopomp. *ap. Athen.* vi. p. 260; Dem. *Olynth.* p. 16). The Thessalian horses were the finest in Greece, and their cavalry was at all times efficient; but we rarely read of their infantry. The nobles, such as the Alenadae of Larissa and the Scopadae of Crannon, supplied the poorer citizens with horses; but there was no class of free equal citizens, from which the hoplites were drawn in other Grecian states. (See Grote, *Hist. of Greece*, vol. ii. p. 367.) Hence the political power was generally either in the hands of these nobles or of a single man who established himself as despot. The numerous flocks and herds of the Scopadae at Crannon are alluded to by Theocritus (*Id.* xvi. 36), and the wealth of the Thessalian nobles is frequently mentioned by the ancient writers.

Thessaly is said to have been originally known by the names of Pyrrha, Aemonia, and Aeolis. (Rhian. *ap. Schol. Rhod.* iii. 1069; Steph. B. s. v. *Αἰωνία*; Herod. vii. 176.) The two former appellations belong to mythology, but the latter refers to the time when the country was inhabited by the Aeolian

Pelasgi, who were afterwards expelled from the country by the Thessalians. This people are said to have been immigrants, who came from Thesprotia in Epeirus, and conquered the plain of the Peneius (Herod. vii. 176, comp. i. 57; Strab. ix. p. 444.) The Boeotians are said to have originally dwelt at Arne, in the country afterwards called Thessaly, and to have been expelled by the Thessalian invaders 60 years after the Trojan War. (Thuc. i. 12.) The expulsion of the Boeotians by the Thessalians seems to have been conceived as an immediate consequence of the immigration of the Thessalian invaders; but, however this may be, the name of Thessaly is unknown in Homer, who only speaks of the several principalities of which the country was composed. In the Homeric catalogue Pheidippus and Amphiaraus, who led the Greeks from Carpathus, Cos, and the neighbouring islands, are called the sons of Thesalus, the son of Hercules (Hom. *Il.* ii. 676); and, in order to connect this name with the Thessalians of Thesprotia, it was reported that these two chiefs had, upon their return from Troy, been driven by a storm upon the coast of Epeirus, and that Thesalus, the grandson of Pheidippus, led the Thessalians across Mount Pindus and imposed his name upon the country. (Vell. Pat. i. 2, 3; Steph. B. s. v. *Δῆπιος*; Polyæn. viii. 44.) There are many circumstances in the historical period which make it probable that the Thessalians were a body of immigrant conquerors; though, if they came from Thesprotia, they must have gradually dropt their original language, and learnt that of the conquered people, as the Thessalian was a variety of the Aeolic dialect. There was in Thessaly a triple division of the population analogous to that in Laconia. First, there were the Thessalians proper, the rich landed proprietors of the plain. Secondly, there were the descendants of the original inhabitants of the country, who were not expelled by the Thessalian conquerors, and who were more or less dependent upon them, corresponding to the Lacedaemonian Perioeci, but, unlike the latter, retaining their original names and their seats in the Amphictyonic council. These were the PERRHAEBI, who occupied the mountainous district between Mount Olympus and the lower course of the Peneius; the MAGNETES, who dwelt along the eastern coast between Mount Pelion and Ossa and the sea; the ACHAEANS, who inhabited the district called Phthiotis, which extended S. of the Upper Thessalian plain, from Mount Pindus on the W. to the gulf of Pagasae on the S.; the DOLOPES, who occupied the mountainous regions of Pindus, S. of Phthiotis; and the MALIANS, who dwelt between Phthiotis and Thermopylae. The third class of the Thessalian population were the Penestae, serfs or dependent cultivators, corresponding to the Helots of Laconia, although their condition seems upon the whole to have been superior. They tilled the estates of the great nobles, paying them a certain proportion of the produce, and followed their masters to war upon horseback. They could not, however, be sold out of the country, and they possessed the means of acquiring property, as many of them were said to have been richer than their masters. (Archemach. *ap. Athen.* vi. p. 264; Plat. *Leg.* vi. p. 777; Aristot. *Pol.* ii. 6. § 3, vii. 9. § 9; Dionys. ii. 84.) They were probably the descendants of the original inhabitants of the country, reduced to slavery by the conquering Thesprotians; but when Theopompus states that they were the descendants of the conquered Perrhaebians and Mag-

netes (*ap. Athen.* vi. p. 265), this can only be true of a part of these tribes, as we know that the Penestæ were entirely distinct from the subject Perrhaebians, Magnes, and Achæans. (*Aristot. Polit.* ii. 6. § 3.) The Penestæ, like the Laconian Helots, frequently rose in revolt against their masters.

In the Homeric poems the names of Perrhaebi, Magnes, Achæans, and Dolopes occur; and Achæa Phthiotis was the residence of the great hero Achilles. This district was the seat of Hellen, the founder of the Hellenic race, and contained the original Hellas, from which the Hellenes gradually spread over the rest of Greece. (*Hom. Il.* ii. 683; *Thuc.* i. 3; *Strab.* ix. p. 431; *Dicaearch.* p. 21, ed. Hudson; *Steph. B.* s. v. 'Ελλάς'). The Achæans of Phthiotis may fairly be regarded as the same race as the Achæans of Peloponnesus.

Thessaly Proper was divided at an early period into four districts or tetrarchies, named Theessaliotis, Pelasgiotis, Histiaeotis and Phthiotis. When this division was introduced is unknown. It was older than Hecataeus (*Steph. B.* s. v. 'Κράννον'), and was ascribed to Aleuas, the founder of the family of the Aleuadæ. (*Hellenic. Fragm.* 28, ed. Didot; *Harpocrat.* s. v. *Τετραρχία*; *Strab.* ix. p. 430.) This quadruple division continued to the latest times, and seems to have been instituted for political purposes; but respecting the internal government of each we have no precise information. The four districts were nominally united under a chief magistrate, called Tagus; but he seems to have been only appointed in war, and his commands were frequently disobeyed by the Thessalian cities. "When Thessaly is under a Tagus," said Jason, despot of Pheræ, "she can send into the field an army of 6000 cavalry and 10,000 hoplites." (*Xen. Hell.* vi. 1. § 8.) But Thessaly was rarely united. The different cities, upon which the smaller towns were dependent, not only administered their own affairs independent of one another, but the three most important, Larissæ, Pharsalus and Pheræ, were frequently at feud with one another, and at the same time torn with intestine faction. Hence they were able to offer little resistance to invaders, and never occupied that position in Grecian history to which their population and wealth would seem to have entitled them. (Respecting the Thessalians in general, see Mr. Grote's excellent remarks, *Hist. of Greece*, vol. ii. p. 363, seq.)

The history of Thessaly may be briefly dismissed, as the most important events are related under the separate cities. Before the Persian invasion, the Thessalians had extended their power as far as Thermopylæ, and threatened to overrun Phocia and the country of the Locrians. The Phocians built a wall across the pass of Thermopylæ to keep off the Thessalians; and though active hostilities seem to have ceased before the Persian invasion, as the wall was at that time in ruins, the two nations continued to cherish bitter animosity towards one another. (*Herod.* vii. 176.) When Xerxes invaded Greece, the Thessalians were at first opposed to the Persians. It is true that the powerful family of the Aleuadæ, whom Herodotus calls (vii. 6) kings of Thessaly, had urged Xerxes to invade Greece, and had promised the early submission of their countrymen; but it is evident that their party was in the minority, and it is probable that they were themselves in exile, like the Athenian Peisistratidæ. The majority of the Thessalians sent envoys to the confederate Greeks at the Isthmus, urging them to

send a force to the pass of Tempe, and promising them active co-operation in the defence. Their request was complied with, and a body of 10,000 heavy-armed infantry was despatched to Thessaly; but the Grecian commanders, upon arriving at Tempe, found that there was another pass across Mount Olympus, and believing it impossible to make any effectual resistance north of Thermopylæ, retreated to their ships and abandoned Thessaly. (*Herod.* vii. 172, seq.) The Thessalians, thus deserted, hastened to make their submission to Xerxes; and under the influence of the Aleuadæ, who now regained the ascendancy in Thessaly, they rendered zealous and effectual assistance to the Persians. After the death of Leonidas and his heroic companions at Thermopylæ, the Thessalians gratified their enmity against the Phocians by directing the march of the Persians against the Phocian towns and laying their country waste with fire and sword.

From the Persian to the Peloponnesian wars the Thessalians are rarely mentioned. After the battle of Oenophyta (B. C. 456) had given the Athenians the ascendancy in Boeotia, Locria, and Phocia, they endeavoured to extend their power over Thessaly. With this view they marched into Thessaly under the command of Myronides in B. C. 454, for the purpose of restoring Orestes, one of the exiled nobles or princes of Pharsalus, whom Thucydides calls son of the king of the Thessalians. The progress of Myronides was checked by the powerful Thessalian cavalry; and though he advanced as far as Pharsalus, he was unable to accomplish anything against the city, and was compelled to retreat. (*Thuc.* i. 111; *Diodor.* xi. 85.) In the Peloponnesian War the Thessalians took no part; but the mass of the population was friendly to the Athenians, though the oligarchical governments favoured the Spartans. With the assistance of the latter, combined with his own rapidity and address, Brasidas contrived to march through Thessaly in B. C. 424, on his way to attack the Athenian dependencies in Macedonia (*Thuc.* iv. 78); but when the Lacedæmonians wished to send reinforcements to Brasidas in the following year, the Thessalians positively refused them a passage through their country. (*Thuc.* iv. 132.) In B. C. 395 the Thessalians joined the Boeotians and their allies in the league against Sparta; and when Agesilaus marched through their country in the following year, having been recalled by the Spartan government from Asia, they endeavoured to intercept him on his return; but their cavalry was defeated by the skilful manoeuvres of Agesilaus. (*Xen. Hell.* vi. 3. § 3, seq.)

About this time or a little earlier an important change took place in the political condition and relative importance of the Thessalian cities. Almost down to the end of the Peloponnesian War the powerful families of the Aleuadæ at Larissæ, of the Scopadæ at Crannon, and of the Creondæ at Pharsalus, possessed the chief power in Thessaly. But shortly before the close of this war Pheræ rose into importance under the administration of Lycophron, and aspired to the supremacy of Thessaly. Lycophron overthrew the government of the nobles at Pheræ, and made himself tyrant of the city. In prosecution of his ambitious schemes he attacked Larissæ; and in B. C. 404 he gained a great victory over the Larissæans and the other Thessalians who were opposed to him. (*Xen. Hell.* ii. 3. § 4.) In B. C. 395 Lycophron was still engaged in a con-

test with Larissa, which was then under the government of Medius, probably the head of the *Aleuadae*. Lycophron was supported by Sparta; and Medius accordingly applied for succour to the confederacy of Greek states which had been lately formed to resist the Lacedæmonian power. With their assistance Medius took Pharsalus, which was then occupied by a Lacedæmonian garrison, and is said to have sold all its inhabitants as slaves. (Diod. xiv. 82.) The return of Agesilaus, and his victory over the Thessalians, probably deprived Medius and his party of their power, and Larissa no longer appears as the rival of Pheræ for the supremacy of Thessaly. Pharsalus soon recovered from the blow which it had received from Medius, and became, next to Pheræ, the most important city in Thessaly. The inhabitants of Pharsalus agreed to entrust the supreme power to Polydamas, one of their own citizens, in whose integrity and abilities all parties placed the greatest confidence. The acropolis and the whole management of the finances were placed in his hands, and he discharged his trust to the satisfaction of all parties. (Xen. *Hell.* vi. 1. §§ 2, 3.)

Meantime the supreme power at Pheræ had passed into the hands of Jason, a man of great energy and ability, and probably the son of Lycophron, though this is not expressly stated. He inherited the ambitious views of Lycophron, and meditated nothing less than extending his dominion over the whole of Greece, for which his central situation seemed to offer many facilities. He cherished even still more extensive projects of aggrandisement, and, once master of Greece, he looked forward to conquer the Persian empire, which the retreat of the Ten Thousand Greeks and the campaigns of Agesilaus in Asia seemed to point out as an easy enterprise. But the first step was his election as Tagus of Thessaly, and the submission of all the Thessalian cities to his authority. For this purpose it was necessary to obtain the acquiescence of Pharsalus, and although he might have gained his object by force, he preferred to effect it by negotiation, and accordingly frankly disclosed his schemes to Polydamas, and offered him the second place in Thessaly, if he would support his views. Polydamas asked the advice of the Spartans, and finding that he could receive from them no help, he acceded to the proposals of Jason, and induced the Pharsalians to espouse his cause. Soon after this, probably in B.C. 374, Jason was elected Tagus of Thessaly, and proceeded to settle the contingent of cavalry and heavy-armed troops which the Pharsalian cities were to furnish. He now possessed a force of 8000 cavalry and more than 20,000 infantry; and Alcetas I., king of Epirus, and Amyntas II., king of Macedonia, were his allies. (Xen. *Hell.* vi. 1. §§ 2—19; Diod. xv. 60.) He could in effect command a greater force than any other state in Greece; and from the disunion and exhaustion of the other Grecian states, it seemed not improbable that he might be able to carry his ambitious projects into effect. He had already formed an alliance with Thebes, and after the battle of Leuctra (B.C. 371) he was invited by the Thebans to join them in attacking the Lacedæmonian camp. But Jason's policy was to prevent any other power from obtaining the preponderance in Greece, and accordingly upon his arrival at Leuctra he advised the Thebans not to drive the Lacedæmonians to despair, and obtained a truce for the latter, which enabled them to secure their safety by a retreat. (Xen. *Hell.* vi. 4. § 20,

seq.) In the following year he assumed his intention of marching to Delphi at the head of a body of Thessalian troops and presiding at the Pythian festival. Great alarm was felt throughout Greece; but before the time came, he was assassinated by seven youths as he sat in public to give orders to all comers. His death was felt as a relief to Greece, and the honours paid in many of the Grecian states to his assassins prove the general fear which his ambitious schemes had excited. (Xen. *Hell.* vi. 1. §§ 28—32.)

Jason had so firmly established his power that he was succeeded in the post of Tagus of Thessaly by his two brothers Polyphron and Pelopidas; but they did not possess his abilities or energy, and they again sank into political insignificance. Pelopidas was assassinated by his brother Polyphron, who became sole Tagus. Polyphron carried his ambition with great cruelty; he put to death Pelopidas and Pharsalus, and killed or drove into exile many of the distinguished persons of this city and of Larissa. (Xen. *Hell.* vi. 4. §§ 33, 34.) At the end of a year he was also assassinated by Alexander, who was either his brother (Diod. xv. 61) or his nephew (Plut. *Pelopid.* 29.) Alexander carried on Polyphron in cruelty, and was guilty of great cruelties. The *Aleuadae* and other noble families who were chiefly exposed to his vengeance, sought their distress to Alexander, the wealthy king of Macedonia, who had recently succeeded his father Amyntas. Alexander invaded Thessaly, defeated the tyrant, and took possession of Larissa and Olynthus, which he garrisoned with his troops. (Diod. xv. 61.) It would seem, however, that the submission of his own kingdom compelled him shortly afterwards to withdraw his troops from Thessaly; since we find the Thessalian cities opposed to the tyrant, and seeking the aid of the Thebans. Accordingly, about B.C. 369, Pelopidas invaded Thessaly, and took Larissa and several other cities under his protection, apparently with the sanction of Alexander of Macedonia, with whom he formed an alliance. (Diod. xv. 67.) In the following year (B.C. 368) Pelopidas again marched into Thessaly at the head of a Theban force, to protect Larissa and the other cities against the projects of Alexander of Pheræ, who had refused aid from Athens. Alexander was compelled to sue for peace; and Pelopidas, after arranging the affairs of Thessaly, marched into Macedonia, where the young king had been lately assassinated. Pelopidas, the regent of the kingdom, was also compelled to enter into alliance with Pelopidas, and to give him several hostages, among whom was the youthful Philip, afterwards king of Macedonia. (Diod. xv. 71; Plut. *Pelop.* c. 26.) By these means the influence of Thebes was extended over the greater part of Thessaly. Two years afterwards (B.C. 366) Pelopidas obtained from the Persian court a rescript acknowledging their claims to the headship of Greece; and in the same year Pelopidas, accompanied by his nephew, visited Thessaly with the view of obtaining the recognition of their claim from Alexander of Pheræ and the other Thessalian cities. Alexander met them at Pharsalus, but when he found that they were not supported by any armed force, he asked them as prisoners and carried them off to Pheræ. The first attempt of the Thebans to rescue their countryman proved unsuccessful; and the year which they sent into Thessaly was only saved from destruction by the genius of Epaminondas, who was then serving as a private, and was compelled

by the soldiers to take the command. So greatly was Alexander strengthened in his power by this failure that all the Thessalian cities submitted to him, and the influence of Thebes in Thessaly was for a time destroyed. Subsequently a second expedition was sent into Thessaly under the command of Epaminondas, who compelled the tyrant to release Pelopidas and Ismenias, but without restoring Thebes to the commanding position which she had formerly held in Thessaly. (Diod. xv. 71—75; Plut. *Pelop.* 27—29; Cornel. Nep. *Pelop.* 5; Paus. ix. 15. § 1.) The continued oppressions of Alexander of Pherae became so intolerable that the Thessalian cities once more applied to Thebes for assistance. Accordingly in B. C. 364 Pelopidas was again sent into Thessaly at the head of a Theban army. In the first engagement Pelopidas was slain, but Alexander was defeated. (Diod. xv. 80, 81; Plut. *Pelop.* 31, 32; Cornel. Nep. *Pelop.* 5; respecting the different expeditions of Pelopidas into Thessaly, as to which there are discrepancies in the accounts, see Grote, *Hist. of Greece*, vol. x. p. 361, note, p. 391, note.) The death of Pelopidas, however, proved almost fatal to Alexander. Burning to revenge his loss, the Thebans sent a powerful army into Thessaly, which compelled him to renounce his supremacy in Thessaly, to confine himself to Pherae, and to submit to all the demands of Thebes. (Plut. *Pelop.* 35.)

After the death of Epaminondas at the battle of Mantinea (B. C. 362) the supremacy of Thebes in Thessaly was weakened, and Alexander of Pherae recovered much of his power, which he continued to exercise with his accustomed cruelty and ferocity till his assassination in B. C. 359 by his wife Thebe and her brothers. One of these brothers, Tisiphonus, succeeded to the supreme power, under the direction of Thebe; but his reign lasted only a short time, and he was followed in the government by Lycophron, another brother. (Xen. *Hell.* vi. 4. § 37; Diod. xvi. 14; Plut. *Pelop.* 35.) Meanwhile Philip, who had ascended the throne of Macedon in B. C. 369, had been steadily extending his dominions and his influence; and the Aleuadae of Larissa now had recourse to him in preference to Thebes. Accordingly Philip marched into Thessaly in B. C. 353. Lycophron, unable to resist him, invoked the aid of Onomarchus and the Phocians; and Philip, after a severe struggle was driven out of Thessaly. (Diod. xvi. 35.) In the following year Philip returned to Thessaly, and gained a signal victory over Onomarchus and Lycophron. Onomarchus was slain in the battle; and when Philip followed up his victory by laying siege to Pherae, Lycophron surrendered the city to him, upon being allowed to retire to Phocis with his mercenaries. (Diod. xvi. 37.) Thus ended the powerful dynasty of the tyrants of Pherae. Philip established a popular government at Pherae (Diod. xvi. 38), and gave nominal independence to the Thessalian cities. But at the same time he garrisoned Magnesia and the port of Pagasae with his troops, and kept steadily in view the subjugation of the whole country. An attempt made in B. C. 344 to restore the dynasty of the tyrants at Pherae gave him an opportunity of carrying his designs into effect. Not only did he garrison Pherae with his own troops, but he revived the ancient division of the country into four tetrarchies or tetradarchies, and placed at the head of each some of the chiefs of the Aleuadae, who were entirely devoted to his interests. The result of this arrangement was the entire subjection of Thessaly to Philip,

who drew from the country a considerable addition to his revenues and to his military resources. (Harpocrat. s. v. *Τετραρχία*; Dem. *Olynth.* i. § 23; Strab. ix. p. 440; Thirlwall, *Hist. of Greece*, vol. vi. pp. 12—14.) Upon the death of Philip the Thessalians were the first Grecian people who promised to support Alexander in obtaining the supremacy of Greece. (Diod. xvii. 4.) After the death of Alexander the Thessalians took an active part with the other Grecian states in attempting to throw off the Macedonian yoke, but by the victory of Antipater they were again united to the Macedonian monarchy, to which they remained subject till the defeat of Philip by the Romans at the battle of Cynoscephalae, B. C. 197. The Roman senate then declared Thessaly free (Liv. xxxiii. 32); but from this time it was virtually under the sovereignty of Rome. The government was vested in the hands of the more wealthy persons, who formed a kind of senate, which was accustomed to meet at Larissa. (Liv. xxxiv. 52, xxxv. 8, xlii. 38.)

When Macedonia was reduced to the form of a Roman province, Thessaly was incorporated with it. (Strab. xvii. p. 840.) Under Alexander Severus it formed a separate province governed by a procurator (Gruter, *Inscr.* p. 474. 4); and in the later constitution of the Empire after the time of Constantine, it also appears as a separate province under the administration of a praeses. (Not. Dig. i. p. 7; Böcking, l. p. 151; Marquardt, in Becker's *Röm. Alterth.* vol. iii. pt. i. p. 117.)

In giving an enumeration of the Thessalian tribes and cities, we will first describe the four tetrarchies already mentioned, and then take the other divisions of the country.

1. *HĒSTIAEOTIS* or *HISTIAEOTIS* (*Ἡστιαῖωτις*, *Ἠστιαῖωτις*), inhabited by the Hestiaeotae (*Ἡστιαῖοι*), was the northern part of Thessaly, of which the Peneius may be described in general as its southern boundary. It occupied the passes of Olympus, and extended westward as far as Pindus. (Plin. iv. 1; Strab. ix. pp. 430, 437, 438.) It was the seat of the Perrhaebi (*Περρῆαιοι*), a warlike and powerful tribe, who possessed in historical times several towns strongly situated upon the mountains. They are mentioned by Homer (*Il.* ii. 749) as taking part in the Trojan War, and were regarded as genuine Hellenes, being one of the Amphictyonic states (Aeschin. *de Fals. Leg.* p. 122). The part of Hestiaeotis inhabited by them was frequently called Perrhaebia, but it never formed a separate Thessalian province. The Perrhaebi are said at one time to have extended south of the Peneius as far as the lake Boebeis, but to have been driven out of this district by the mythical race of the Lapithae. (Strab. ix. pp. 439, 440.) It is probable that at an early period the Perrhaebi occupied the whole of Hestiaeotis, but were subsequently driven out of the plain and confined to the mountains by the Thessalian conquerors from Thesprotia. Strabo states that Hestiaeotis was formerly, according to some authorities, called Doris (ix. p. 437), and Herodotus relates that the Dorians once dwelt in this district at the foot of Mts. Ossa and Olympus (i. 56). It is said to have derived the name of Hestiasotis from the district of this name in Euboea, the inhabitants of which were transplanted to Thessaly by the Perrhaebi (Strab. ix. p. 437); but this is an uncertified statement, probably founded alone upon similarity of name. Homer mentions another ancient tribe in this part of Thessaly called the Aethices, who are placed by Strabo upon

the Thessalian side of Pindus near the sources of the Peneios. They are described as a barbarous tribe, living by plunder and robbery. (Hom. *Il.* ii. 744; Strab. vii. p. 327, ix. p. 434; Steph. B. s. v. *Altharia*.) The towns of Hestiaeotis were: OXYNELA, PALLA, ARGENTUM, MELIBORA, PHALORIA, ERICENTUM, PELIDNAEUM, THIOCA, ORCHALLA, SELASA, GOMPHI, PHECA or PHECADUM, ITHOME, LINDARA, PHACIUM, PHAENIUS, PHARACADON, MYLAR, MALLOEA, CYRETIAR, ERITIUM, OLOOSBON, AZORIS, DOLICHE, PYTHEIUM, ELONE subsequently LEIMONTE, EUDORIS, LAPATHUS, GOSIUS or GOSNI, CHARAX, CONDYLON, PHALANNA, OXITHE, ATRAX.

2. PELASGIOTIS (*Πελαγονίς*), inhabited by the Pelasgians (*Πελαγονῆς*), extended S. of the Peneios, and along the western side of Pelion and Ossa, including the district called the Pelasgic plain. (Strab. ix. p. 443.) The name shows that this district was originally inhabited by Pelasgians; and its chief town was Larissa, a well known name of Pelasgic cities. The towns of Pelasgiotis were: ELATEIA, MOPSIUM, METROPOLIS, GYXTON or GYXTONA, ANGURA, LARISSA, SYCURIUM, CRANXON, ANTICA, ARMENTIUM, PHEARAE, CYMOCKEPHALAE, SCOTTEIA, PALAEOPHARUS.

3. THESSALIOTIS (*Θεσσαλονίς*), the central plain of Thessaly and the upper course of the river Peneios, so called from its having been first occupied by the Thessalian conquerors from Epirus. Its towns were: PEIRIESIAE, PHYLLUS, METROPOLIS, CERICIUM, ECHYDRIUM, PHARBALUS, the most important in the district, THETTIDIUM.

4. PHTHIOTIS (*Φθιώτις*), inhabited by the Achaean Phtiotae (*Ἀχαιοὶ Φθιώται*), under which name they are usually mentioned as members of the Amphictyonic league. This district, according to Strabo, included the southern part of Thessaly, extending from the Maliae gulf on the E. to Dolopia and Mount Pindos on the W., and stretching as far N. as Pharsalus and the Thessalian plains. (Strab. ix. p. 430.) Phtiotis derived its name from the Homeric Phtia (*Φθία*, *Il.* i. 155, ii. 683), which appears to have included in the heroic times not only Helles and Dolopia, which is expressly called the furthest part of Phtia (*Il.* ix. 484), but also the southern portion of the Thessalian plain, since it is probable that Phtia was also the ancient name of Pharsalia. (Leake, *Northern Greece*, vol. iv. p. 484, seq.) The cities of Phtiotis were: Amphianaeum (Scylax. p. 25), or Amphianae (*Ἀμφιανῆ*, Steph. B. s. v.), on the promontory Pyrrha and on the Pagasaeus gulf; THEBAE, EKESTIA, PHYLLACE, ITOX, HALICA, PHYLLACH, ANTHOX, LARISSA, CREMASTE, PROCKEIA, PRAS, NANTHRACIUM, TRAUMACI, MELITARA, COMONTEIA, XYTHAE, LAMIA, PHALARA, ECHINTIS.

5. MAGNESIA (*Μαγνησία*), inhabited by the Magnesians (*Μαγνησῆς*), was the long and narrow strip of country between Mts. Ossa and Pelion on the W. and the sea on the E., and extending from the mouth of the Peneios on the N. to the Pagasaeus gulf on the S. The Magnesians were members of the Amphictyonic league, and were settled in this district in the Homeric times. (*Il.* ii. 756.) The Thessalian Magnesians are said to have founded the Asiatic cities of Magnesia on Mt. Sipylus and of Magnesia on the river Maeander. (Aristot. *op. Ath.* iv. p. 173; Canon, 29; Strab. xiv. p. 647.) The towns of Magnesia were: CERONTEIA, BOMER, GLAPHYRAE, AERONIS, PA-

GASAR, IOLCUS, DEMETRIAS, MELIA, AENEIA, HOMOLAE or HOMOLOUS, EKESTIAR, MALBORA, TRAUMACIA, CANTHANIA, BOMER, MAGNETHIA, OLIZON, MYLAR, SPALANNA, CORACAE, MATHOSE.

6. DOLOPIA (*Δολοπία*), inhabited by the Dolopians (*Δολοπῆς*), a mountainous district is in N. corner of Thessaly, lying between Mt. Iymssa, a branch of Pindus, on the one side, and Mt. Ossa on the other. The Dolopians were, like the Illyrians, an ancient Hellenic people, and members of the Amphictyonic league. They are mentioned by Homer (*Il.* ix. 484) as included in Phtia, but were governed by a subordinate chieftain of their own. Though nominally belonging to Thessaly, they were practically to have been independent; and this country was at a later period a constant subject of contention between the Aetolians and the kings of Macedonia. The only place in Dolopia of its slightest importance was CYTHICE.

7. OETAIA (*Οἰταία*), inhabited by the Oetaeans (*Οἰταῖοι*), was the mountainous district near Mt. Oeta in the upper valley of the Spercheus, and to the E. of Dolopia. The Oetaeans appear to have been the collective name of the various predatory tribes, dwelling upon the barren declivities of Mt. Oeta, who are mentioned as plundering both the Malians on the east, and the Dolopians on the south (Thuc. iii. 93-97, vii. 3.) The most important of these tribes were the Aetolians (*Αἰτωλῆς*), called Emoneans (*Ἐμωναί*) by Herodotus (ii. 749) and Herodorus (vii. 132), an ancient Hellenic Amphictyonic race. (Paus. x. s. § 1; Sappho. p. 25.) They are said to have first occupied the Dotian plain in Peloponnese; afterwards to have wandered to the borders of Illyria, and finally to have settled in the upper valley of the Spercheus, where Hypata was their chief town. (Pind. *Quaest. Gr.* 13. p. 294; Strab. i. p. 61, ii. p. 442.) Besides HYPATA, which was the only place of importance in Oetaea, we find mention of SPERCHIAE and MACRA COME by Liry (xiii. 18), and of Sothenis (*Σοθενίς*), Homos (*Ὅμος*), Cypaera (*Κύπαρα*) and Phalochia (*Φαλόχεια*) by Ptolemy (iii. 13. § 45.)

8. MALIS, the lower valley of the Spercheus, described in a separate article. [MALIA.]

COIN OF THESSALIA.

THESSALIOTIS. [THESSALIA.]

THESSALONTICA (*Θεσσαλονίκη*; *Θεσσαλονίκη*, Polyb. xiii. 4; Scymn. Ch. 625; *Θεσσαλονίκη*, Strab. vii. *Epid.* 3; *Eth.* *Θεσσαλονίκη*), a large and important city, the capital of Roman Macedonia, situated at the head of the Thermaic gulf, in the district anciently called Myrdaea.

1. SITUATION.—This is well described by Ptolemy (iv. 10) as "medio flum. Storis [scilicet Thermaic]. The gulf extends about 30 leagues in a NW. direction from the group of the Thessalian islands, and then turns to the NE, forming a noble bay to

tween *Capes Vardar* and *Karaburnu*. On the edge of this basin is the city, partly on the level shore and partly on the slope of a hill, in 40° 38' 47" N. lat., and 22° 57' 22" E. long. The present appearance of the city, as seen from the sea, is described by Leake, Holland, and other travellers as very imposing. It rises in the form of a crescent up the declivity, and is surrounded by lofty whitened walls with towers at intervals. On the E. and W. sides of the city ravines ascend from the shore and converge towards the highest point, on which is the citadel called *Ἐπαύριον*, like that of Constantinople. (A view of Thessalonica from the sea is given by Cousinry.) The port is still convenient for large ships, and the anchorage in front of the town is good. These circumstances in the situation of Thessalonica were evidently favourable for commanding the trade of the Macedonian sea. Its relations to the inland districts were equally advantageous. With one of the two great levels of Macedonia, viz. the plain of the "wide-flowing Axios" (Hom. *Il.* ii. 849), to the N. of the range of Olympus, it was immediately connected. With the other, viz. the plain of the Strymon and Lake Cercinitis, it communicated by a pass across the neck of the Chalcidic peninsula. Thus Thessalonica became the chief station on the Roman VIA EGNATIA, between the Adriatic and the Hellespont. Its distance from Pella, as given by the Itineraries, is 27 miles, and from Amphipolis (with intermediate stations; see *Act. Apost.* xvii. 1) 67 miles. It is still the chief centre of the trade of the district. It contains a population of 60,000, or 70,000, and (though Adrianople may possibly be larger) it is the most important town of European Turkey, next after Constantinople.

2. NAME.—Two legendary names, which Thessalonica is said to have borne in early times, are Emathia (Zonar. *Hist.* xii. 26) and Halia (Steph. B. s. v.), the latter probably having reference to the maritime position of the town. During the first period of its authentic history, it was known under the name of THERMA (Θέρμα, Aesch.; Θέρμη, Herod., Thucyd.; Θέρμαι, Mal. *Chronog.* p. 190, ed. Bonn), derived, in common with the designation of the gulf (Thermaicus Sinus), from the hot salt-springs, which are found on various parts of this coast, and one of which especially is described by Pococke as being at a distance of 4 English miles from the modern city. (See Scylax, p. 278, ed. Gail.) Three stories are told of the origin of the name Thessalonica. The first (and by far the most probable) is given by Strabo (vii. *Epit.* 10), who says that Therma was rebuilt by Cassander, and called after his wife Thessalonica, the daughter of Philip: the second is found in Steph. B. (s. v.), who says that its new name was a memorial of a victory obtained by Philip over the Thessalians (see Const. Porphyrog. *De Them.* ii. p. 51, ed. Bonn): the third is in the *Etym. Magn.* (s. v.), where it is stated that Philip himself gave the name in honour of his daughter. Whichever of these stories is true, the new name of Thessalonica, and the new eminence connected with the name, are distinctly associated with the Macedonian period, and not at all with the earlier passages of true Greek history. The name, thus given, became permanent. Through the Roman and Byzantine periods it remained unaltered. In the Middle Ages the Italians gave it the form of *Salonichi* or *Saloniki*, which is still frequent. In Latin chronicles we find *Salonica*. In German poems of the thirteenth century the name appears, with a Teutonic termination,

as *Salnek*. The uneducated Greeks of the present day call the place *Σαλονίκι*, the Turks *Selanik*.

3. POLITICAL AND MILITARY HISTORY.—Thessalonica was a place of some importance, even while it bore its earlier name of THERMA. Three passages of chief interest may be mentioned in this period of its history. Xerxes rested here on his march, his land-forces being encamped on the plain between Therma and the Axios, and his ships cruising about the Thermaic gulf; and it was the view from hence of Olympus and Ossa which tempted him to explore the course of the Peneius. (Herod. vii. 128, seq.) A short time (B. C. 421) before the breaking out of the Peloponnesian War, Therma was occupied by the Athenians (Thucyd. i. 61); but two years later it was given up to Perdiccas (Id. ii. 29.) The third mention of Therma is in Aeschines (*de Fals. Leg.* p. 31, ed. Bekk.), where it is spoken of as one of the places taken by Pausanias.

The true history of THESSALONICA begins, as we have implied above, with the decay of Greek nationality. The earliest author who mentions it under its new name is Polybius. It seems probable that it was rebuilt in the same year (B. C. 315) with Cassandreia, immediately after the fall of Pydna and the death of Olympias. [CASSANDREIA.] We are told by Strabo (l. c.) that Cassander incorporated in his new city the population, not only of Therma, but likewise of three smaller towns, viz. Aeneia and Cissus (which are supposed to have been on the eastern side of the gulf), and Chalastra (which is said by Strabo (vii. *Epit.* 9) to have been on the further side of the Axios, whence Tafel (p. xxii.) by some mistake infers that it lay between the Axios and Therma). It does not appear that these earlier cities were absolutely destroyed; nor indeed is it certain that Therma lost its separate existence. Pliny (l. c.) seems to imply that a place bearing this name was near Thessalonica; but the text is probably corrupt.

As we approach the Roman period, Thessalonica begins to be more and more mentioned. From Livy (xlv. 10) this city would appear to have been the great Macedonian naval station. It surrendered to the Romans after the battle of Pydna (lb. xlv. 45), and was made the capital of the second of the four divisions of Macedonia (lb. xlv. 29). Afterwards, when the whole of Macedonia was reduced to one province (Flor. ii. 14), Thessalonica was its most important city, and virtually its metropolis, though not so called till a later period. [MACEDONIA.] Cicero, during his exile, found a refuge here in the quaestor's house (*pro Planc.* 41); and on his journeys to and from his province of Cilicia he passed this way, and wrote here several of his extant letters. During the first Civil War Thessalonica was the head-quarters of the Pompeian party and the senate. (Dion Cass. xli. 20.) During the second it took the side of Octavius and Antonius (Plut. *Brut.* 46; Appian, *B. C.* iv. 118), and reaped the advantage of this course by being made a free city. (See Plin. l. c.) It is possible that the word *λευθέρας*, with the head of Octavia, on some of the coins of Thessalonica, has reference to this circumstance (see Eckhel, ii. p. 79); and some writers see in the *Vardar* gate, mentioned below, a monument of the victory over Brutus and Cassius.

Even before the close of the Republic Thessalonica was a city of great importance, in consequence of its position on the line of communication

between Rome and the East. Cicero speaks of it as *posita in gremio imperii nostri*. It increased in size and rose in importance with the consolidation of the Empire. Strabo in the first century, and Lucian in the second, speak in strong language of the amount of its population. The supreme magistrates (apparently six in number) who ruled in Thessalonica as a free city of the Empire were entitled *πολιτάρχαι*, as we learn from the remarkable coincidence of St. Luke's language (*Act. Ap. xvii. 6*) with an inscription on the *Vardar* gate. (Böckh, 1967. Belley mentions another inscription containing the same term.) In *Act. Ap. xvii. 5*, the *ἄρχοντες* is mentioned which formed part of the constitution of the city. Tafel thinks that it had a *βουλή* also.

During the first three centuries of the Christian era, Thessalonica was the capital of the whole country between the Adriatic and the Black Sea; and even after the founding of Constantinople it remained practically the metropolis of Greece, Macedonia, and Illyricum. In the middle of the third century, as we learn from coins, it was made a Roman *colonia*; perhaps with the view of strengthening this position against the barbarian invasions, which now became threatening. Thessalonica was the great safeguard of the Empire during the first shock of the Gothic inroads. Constantine passed some time here after his victory over the Sarmatians; and perhaps the second arch, which is mentioned below, was a commemoration of this victory; he is said also by Zosimus (ii. p. 86, ed. Bonn) to have constructed the port, by which we are, no doubt, to understand that he repaired and improved it after a time of comparative neglect. Passing by the dreadful massacre by Theodosius (Gibbon's *Rome*, ch. xxvii.), we come to the Slavonic wars, of which the Gothic wars were only the prelude, and the brunt of which was successfully borne by Thessalonica from the middle of the sixth century to the latter part of the eighth. The history of these six Slavonic wars, and their relation to Thessalonica, has been elaborated with great care by Tafel.

In the course of the Middle Ages Thessalonica was three times taken; and its history during this period is thus conveniently divided into three stages. On Sunday, July 29th, 904, the Saracen fleet appeared before the city, which was stormed after a few days' fighting. The slaughter of the citizens was dreadful, and vast numbers were sold in the various slave-markets of the Levant. The story of these events is told by Jo. Cameniata, who was crozier-bearer to the archbishop of Thessalonica. From his narrative it has been inferred that the population of the city at this time must have been 220,000. (*De Excidio Thessalonicensi*, in the volume entitled *Theophanes Continuatus* of the Bonn ed. of the Byz. writers, 1838.) The next great catastrophe of Thessalonica was caused by a different enemy, the Normans of Sicily. The fleet of Tancred sailed round the Morea to the Thermaic gulf, while an army marched by the Via Egnatia from Dyrrhachium. Thessalonica was taken on Aug. 15th, 1185, and the Greeks were barbarously treated by the Latins. Their cruelties are described by Nicetas Choniates (*de Andron. Comnen. p. 388*, ed. Bonn, 1835). The celebrated Eustathius was archbishop of Thessalonica at this time; and he wrote an account of this capture of the city, which was first published by Tafel (Tübingen, 1832), and is now printed in the Bonn ed.

of the Byz. writers. (*De Thessalonica a Latinis capta*, in the same vol. with Leo Grammaticus, 1842.) Soon after this period follows the curious history of western feudalism in Thessalonica under Boniface, marquis of Montferrat, and his successors, during the first half of the 13th century. The city was again under Latin dominion (having been sold by the Greek emperor to the Venetians) when it was finally taken by the Turks under Amurath II., in 1430. This event also is described by a writer in the Bonn Byzantine series (Joannes Anagnostes, *de Thessalonicensi Excidio Narratio*, in the same volume with Phranzes and Cananus, 1838).

For the medieval history of Thessalonica see Mr. Finlay's works, *Medieval Greece* (1851), pp. 70, 71, 135—147; *Byzantine and Greek Empires*, vol. i. (1853), pp. 315—332, vol. ii. (1854), pp. 182, 264—266, 607. For its modern condition we must refer to the travellers, especially Beaujour, Cousinier, Holland, and Leake.

4. ECCLESIASTICAL HISTORY. — The annals of Thessalonica are so closely connected with religion, that it is desirable to review them in this aspect. After Alexander's death the Jews spread rapidly in all the large cities of the provinces which had formed his empire. Hence there is no doubt that in the first century of the Christian era they were settled in considerable numbers at Thessalonica: indeed this circumstance contributed to the first establishment of Christianity there by St. Paul (*Act. Ap. xvii. 1*). It seems probable that a large community of Jews has been found in this city ever since. They are mentioned in the seventh century during the Slavonic wars; and again in the twelfth by Eustathius and Benjamin of Tudela. The events of the fifteenth century had the effect of bringing a large number of Spanish Jews to Thessalonica. Paul Lucas says that in his day there were 30,000 of this nation here, with 22 synagogues. More recent authorities vary between 10,000 and 20,000. The present Jewish quarter is in the south-east part of the town.

Christianity, once established in Thessalonica, spread from it in various directions, in consequence of the mercantile relations of the city. (1 *Thess. i. 8*.) During the succeeding centuries this city was the bulwark, not simply of the Byzantine Empire, but of Oriental Christendom,—and was largely instrumental in the conversion of the Slavonians and Bulgarians. Thus it received the designation of "The Orthodox City." It is true that the legends of Demetrius, its patron saint (a martyr of the early part of the fourth century), disfigure the Christian history of Thessalonica; in every siege success or failure seems to have been attributed to the granting or withholding of his favour: but still this see has a distinguished place in the annals of the Church. Theodosius was baptized by its bishop; even his massacre, in consequence of the stern severity of Ambrose, is chiefly connected in our minds with ecclesiastical associations. The see of Thessalonica became almost a patriarchate after this time; and the withdrawal of the provinces subject to its jurisdiction from connection with the see of Rome, in the reign of Leo Isauricus, became one of the principal causes of the separation of East and West. Cameniata, the native historian of the calamity of 904, was, as we have seen, an ecclesiastic. Eustathius, who was archbishop in 1185, was, beyond dispute, the most learned man of his age, and the author of an invaluable commentary on the *liber*

and Odyssey, and of theological works, which have been recently published by Tafel. A list of the Latin archbishops of Thessalonica from 1205 to 1418, when a Roman hierarchy was established along with Western feudalism, is given by Le Quien (*Oriens Christianus*, iii. 1089). Even to the last we find this city connected with questions of religious interest. Symeon of Thessalonica, who is a chief authority in the modern Greek Church on ritual subjects, died a few months before the fatal siege of 1430; and Theodore Gaza, who went to Italy soon after this siege, and, as a Latin ecclesiastic, became the translator of Aristotle, Theophrastus, and Hippocrates, was a native of the city of Demetrius and Eustathius.

5. REMAINS OF ANTIQUITY. — The two monuments of greatest interest at Thessalonica are two arches connected with the line of the Via Egnatia. The course of this Roman road is undoubtedly preserved in the long street which intersects the city from east to west. At its western extremity is the *Vardār* gate, which is nearly in the line of the modern wall, and which has received its present name from the circumstance of its leading to the river *Vardār* or *Axius*. This is the Roman arch believed by Beaujour, Holland, and others to have been erected by the people of Thessalonica in honour of Octavius and Antonius, and in memory of the battle of Philippi. The arch is constructed of large blocks of marble, and is about 12 feet wide and 18 feet high; but a considerable portion of it is buried deep below the surface of the ground. On the outside face are two bas-reliefs of a Roman wearing the toga and standing before a horse. On this arch is the above-mentioned inscription containing the names of the *politarchs* of the city. Leake thinks from the style of the sculpture, and Tafel from the occurrence of the name Flavius in the inscription, that a later date ought to be assigned to the arch. (A drawing of it is given by Cousinéry). The other arch is near the eastern (said in Clarke's *Travels*, iv. p. 359, by mistake, to be near the western) extremity of the main street. (A drawing of this arch also is given by Cousinéry and an imaginary restoration by Pococke.) It is built of brick and faced with marble, and formerly consisted of three archways. The sculptured camels give an oriental aspect to the monument; and it is generally supposed to commemorate the victory of Constantine over Licinius or over the Sarmatians.

Near the line of the main street, between the two above-mentioned arches are four Corinthian columns supporting an architrave, above which are Caryatides. This monument is now part of the house of a Jew; and, from a notion that the figures were petrified by magic, it is called by the Spanish Jews *Las Incontadas*. The Turks call it *Sweth-Maleh*. (A view will be found in Cousinéry, and a more correct one, with architectural details, in Stuart and Revett's *Athen. Antig.* vol. iii. ch. 9. p. 53). This colonnade is supposed by some to have been part of the Propylæa of the Hippodrome, the position of which is believed by Beaujour and Clarke to have been in the south-eastern part of the town, between the sea and a building called the *Rotunda*, now a mosque, previously the church *Eski-Metropoli*, but formerly a temple, and in construction similar to the Pantheon at Rome. (Pococke has a ground-plan of this building.) Another mosque in Thessalonica, called *Eski-Djuma*, is said by Beaujour to have been a temple consecrated to Venus Thermaea.

The city walls are of brick, and of Greek construction, resting on a much older foundation, which consists of hewn stones of immense thickness. Everywhere are broken columns and fragments of sculpture. Many remains were taken in 1430 to Constantinople. One of the towers in the city wall is called the Tower of the Statue, because it contains a colossal figure of Thessalonica, with the representation of a ship at its feet. The castle is partly Greek and partly Venetian. Some columns of verd antique, supposed to be relics of a temple of Hercules, are to be noticed there, and also a shattered triumphal arch, erected (as an inscription proves) in the reign of Marcus Aurelius, in honour of Antoninus Pius and his daughter Faustina.

In harmony with what has been noticed of its history, Thessalonica has many remains of ecclesiastical antiquity. Leake says that in this respect it surpasses any other city in Greece. The church of greatest interest (now a mosque) is that of St. Sophia, built, according to tradition, like the church of the same name at Constantinople, in the reign of Justinian, and after the designs of the architect Anthemius. This church is often mentioned in the records of the Middle Ages, as in the letters of Pope Innocent III. and in the account of the Norman siege. It remains very entire, and is fully described by Beaujour and Leake. The church of St. Demetrius (apparently the third on the same site, and now also a mosque) is a structure of still greater size and beauty. Tafel believes that it was erected about the end of the seventh century; but Leake conjectures, from its architectural features, that it was built by the Latins in the thirteenth. Tafel has collected with much diligence the notices of a great number of churches which have existed in Thessalonica. Dapper says, that in his day the Greeks had the use of thirty churches. Walpole (in *Clarke's Travels*, iv. p. 349) gives the number as sixteen. All travellers have noticed two ancient pulpits, consisting of "single blocks of variegated marble, with small steps cut in them," which are among the most interesting ecclesiastical remains of Thessalonica.

6. AUTHORITIES. — The travellers who have described Thessalonica are numerous. The most important are Paul Lucas, *Second Voyage*, 1705; Pococke, *Description of the East*, 1743—1745; Beaujour, *Tableaux du Commerce de la Grèce*, translated into English, 1800; Clarke, *Travels in Europe*, &c. 1810—1823; Holland, *Travels in the Ionian Isles* &c., 1815; Cousinéry, *Voyage dans la Macédoine*, 1831; Leake, *Northern Greece*, 1835; Zachariä, *Reise in den Orient*, 1840; Grisebach, *Reise durch Rumelien*, 1841; Bowen, *Mount Athos, Thessaly, and Epirus*, 1852.

In the *Mémoires de l'Académie des Inscriptions*, tom. xxxviii. Sect. hist. pp. 121—146, is an essay on the subject of Thessalonica by the Abbé Belley; but the most elaborate work on the subject is that by Tafel, the first part of which was published at Tübingen in 1835. This was

COIN OF THESSALONICA.

afterwards reprinted as "Prolegomena" to the *Dissertatio de Thessalonica ejusque Agro Geographica*, Berlin, 1839. With this should be compared his work on the *Via Egnatia*. To these authorities we ought to add the introduction to some of the commentaries on St. Paul's *Epistles to the Thessalonians*,—especially those of Koch (Berlin 1849) and Lünemann (Göttingen, 1850). [J. S. H.]

THESTIA. [THESTIENSA.]

THESTIENSES (Θεστῖαι, Pol. v. 7), are usually called the inhabitants of a town Thestia in Aetolia. But no town of this name is mentioned by the ancient writers, and it is not improbable that the town itself was called Θεστῖαι. The name occurs only in Polybius, and the exact site of the place is unknown. We only learn, from the narrative of Polybius, that it was situated in the Northern part of the upper plain of Aetolia. The name is perhaps connected with Thestius, one of the old Aetolian heroes.

THETIDIUM (Θετίδιον, Strab. ix. p. 431; Polyb. xviii. 3, 4; Θετίδιον, Eurip. *Androm.* 20; Θετίδιον, Steph. B. s. v.: *Eth. Θετίδης*), a place in Thessaly, close to Pharsalus, where Flamininus escaped at the end of the second march from Phœræ towards Scotussa, before the battle of Cynoscephalæ. It derived its name from Thetis, the mother of Achilles, the national hero of the Achæan Phthiotæ. Leake places it at or near *Magula*, on the opposite bank of the Enipeus. (*Northern Greece*, vol. iv. pp. 472, 473.)

THEUDOPIA, one of the chief towns of the Athamane in Epeirus, is identified by Leake with the modern *Thodhoriama*, a village situated near *Mount Tzamerka* in a pass which leads from the Achelous to the Arachthos. (Liv. xxviii. 1; Leake, *Northern Greece*, vol. i. p. 212.)

THEUMA, a town of Thessaly, near the frontiers of Dolopia. (Liv. xxii. 13.)

THEUPROSOPON. [PHOENICIA, p. 606, a.]

THEVESTE (Θεούστη, Ptol. iv. 3. § 30), an important town of Numidia, but which is only mentioned in the later writers. It was a Roman colony (Gruter, *Inscr.* p. 600; *Itin. Ant.* p. 27), and the place where many roads running in a S.E. direction into the Roman province of Africa, had their commencement. (Cf. *Itin. Ant.* pp. 33, 46, 47, 53, 54.) It is the town of *Tebessa*, recently discovered by General Negrier, considerable ruins of which still exist, especially the ancient walls, the circumference of which indicates a town capable of containing 40,000 inhabitants. (See Letronne, in *Rev. Archéol.* iv. p. 360, sq.; *Sur l'Arc de Triomphe de Teveste*, &c., Paris, 1847; Jahn's *Jahrbücher*, lii. p. 409.) [T. H. D.]

THIA. [THERA.]

THIANNICE (Θιαννική, Arrian, *Per. P. Euz.* p. 7), or THIANITICE (Θιαννική, Anon. *Per. P. Euz.* p. 14), a district of Asia in the Pontus Euxinus, which was separated from Colchis by the river Ophis. Its name probably should be Sannice, as the Sanni, or Tzani, were a well-known people in this region. (Cf. Mannert, iv. p. 378, vi. pt. 2. p. 421; Gail, *ad Arrian.* p. 95.) [T. H. D.]

THIAR, a town of the Contestani in Hispania Tarraconensis, between Carthago Nova, and Ilici (*Itin. Ant.* p. 401). Various identified with *San Gines* and *Oribuela*, near which latter place are many ruins. (Flores, *Esp. Sagr.* v. p. 30, vii. p. 124.) [T. H. D.]

THIBA (Θίβα; *Eth. Θίβος*), a district in Pontus, so called from an Amazon slain there by Hercules. The inhabitants were said to be soccerers, whose

breath was poisonous, and who would not perish if thrown into the water, but would float on the surface. (Eustath. *ad Dionys. Per.* 828; Steph. B. s. v. Θίβας; Plut. *Symp.* v. 7. § 1; Phylarch. *ap. Plin.* vii. 2. s. 2.)

THILSAPHATA (Amm. Marc. xxv. 8), a fortified town in the south of Mesopotamia, probably the present *Tel el Hava*, between *Musal* and the *Sejar*, in the neighbourhood of the *Tigris*. [V.]

THILUTHA, an impregnable fortress on an island in the Euphrates, near Anatho, which defied the arms of Julian (Amm. Marc. xxiv. 2). Zosimus (iii. 15) speaks of this island, and of the impregnable fortress (φρούριον ἀνυπεράβωτον) situated upon it, but without mentioning its name. It is described by Isidorus Charax (*Moss. Pers.* § 1, ed. C. Müller) as an island in the Euphrates, containing a treasury of the Parthians, and distant two schoeni from Anatho. The old editions read 'Ολαβός; but the MSS. have 'Ολαβός, which Müller has changed into Θιλαβός, and there can be little doubt of the propriety of this correction. It corresponds to the island called *Tilbus* by Chesney (vol. i. p. 57), and in his map *Telbes* or *Anatolbes*, containing ruins of very ancient buildings. (See Müller, *ad Isid. Char.* l. c.)

THINAE (Θίνα, or Θίνα, Ptol. vii. 3. § 6, vii. 27. § 12), or THINA (Θίνα, Arrian, *Per. M. Erythr.* p. 36), a capital city of the Sinæ, who carried on here a large commerce in silk and woollen stuffs. It appears to have been an ancient tradition that the city was surrounded with brazen walls; but Ptolemy remarks that these did not exist there, nor anything else worthy of remark. The ancient writers differ very considerably as to its situation. According to the most probable accounts it was either *Nandia*, or rather perhaps *Tasin*, *Tin*, or *Tetin*, in the province *Schensi*, where, according to the accounts of the Chinese themselves, the first kingdom of *Sin*, or *China*, was founded. (Cf. Ritter, *Erdbau*, ii. p. 199.) [T. H. D.]

THINO'DES (τὸ Θινώδες ἔπος, i. e. the *Sand Hill*, Ptol. iv. 5. § 18), a mountain of Egypt, belonging to the Libyan chain, on the S. borders of *Mar-marica*. [T. H. D.]

THIRMIDA, a place in Numidia, the situation of which is totally unknown. (Sall. *Jug.* 12.) [T. H. D.]

THIS. [ABYDUS.]

THISBE (Θισβη, Hom., Paus., Steph. B. s. v.: Θισβη, Strab., Xen.: *Eth. Θισβαῖος*), a town of Boeotia, described by Strabo as situated at a short distance from the sea, under the southern side of Helicon, bordering upon the confines of Thespiæ and Coroneia. (Strab. ix. p. 411.) Thisbe is mentioned by Homer, who says that it abounds in wild pigeons (καλυπτήρων τε Θισβην, *Il.* ii. 502); and both Strabo and Stephanus B. remark that this epithet was given to the city from the abundance of wild pigeons at the harbour of Thisbe. Xenophon remarks that Cleombrotus marched through the territory of Thisbe on his way to Crenis before the battle of Leuctra. (*Hell.* vi. 4. § 3.) The only public building at Thisbe mentioned by Pausanias (ix. 32. § 3) was a temple of Hercules, to whom a festival was celebrated. The same writer adds that between the mountain on the sea-side and the mountain at the foot of which the town stood, there is a plain which would be inundated by the water flowing into it, were it not for a mole or causeway constructed through the middle, by means of which the water is diverted every year into the part of the plain lying

on one side of the causeway, while that on the other is cultivated. The ruins of Thisbe are found at *Kakisia*. "The position is between two great summits of the mountain, now called *Karaminghi* and *Paleoromad*, which rise majestically above the vale, clothed with trees, in the upper part, and covered with snow at the top. The modern village lies in a little hollow surrounded on all sides by low cliffs connected with the last falls of the mountain. The walls of Thisbe were about a mile in circuit, following the crest of the cliffs which surround the village; they are chiefly preserved on the side towards *Dobrená* and the south-east. The masonry is for the most part of the fourth order, or faced with equal layers of large, oblong, quadrangular stones on the outside, the interior as usual being filled with loose rubble. On the principal height which lies towards the mountain, and which is an entire mass of rock, appear some reparations of a later date than the rest of the walls, and there are many Hellenic foundations on the face of this rock towards the village. In the cliffs outside the walls, to the north-west and south, there are many sepulchral excavations." (Leake, *Northern Greece*, vol. ii. p. 506.) Leake observed the mole or causeway which Pausanias describes, and which serves for a road across the marsh to the port. The same writer remarks that, as the plain of Thisbe is completely surrounded by heights, there is no issue for the river which rises in the Ascræa and here terminates. "The river crosses the causeway into the marsh by two openings, the closing of which in the winter or spring would at any time cause the upper part of the plain to be inundated, and leave the lower fit for cultivation in the summer; but as the river is now allowed to flow constantly through them, the western side is always in a state of marsh, and the ground has become much higher on the eastern side."

The port of Thisbe is now called *Vathy*. The shore is very rocky, and abounds in wild pigeons, as Strabo and Stephanus have observed; but there is also a considerable number at *Kakisia* itself. The Roman poets also allude to the pigeons of Thisbe. Hence Ovid (*Mét.* xi. 300) speaks of the "Thisbææ columbæ," and Statius (*Theb.* vii. 261) describes Thisbe as "Dionæis avibus circumsona." Thisbe is mentioned both by Pliny (*iv.* 7. s. 12) and Ptolemy (*iii.* 15. § 20).

THISOA. [THEISOA.]

THIUS. [MEGALOPOLIS.]

THMUIS (*Θμουίς*, Herod. ii. 168; Aristides, *Aegypt.* vol. iii. p. 610; Ptol. iv. 5. § 51), the modern *Tmai*, was a town in Lower Egypt, situated upon a canal E. of the Nile, between its Tanite and Mendesian branches. It was the capital of the Thmuite Nome, in which the Calasirian division of the Egyptian army possessed lands. At the time of Herodotus's visit to the Delta the Thmuite Nome had been incorporated with the Mendesian. Their incorporation was doubtless owing, partly to the superior size of the latter, and partly to their having a common object of worship in the goat Mendes (*Pan*), of whom *Thmu* was in the old Egyptian language (Hieronym. in *Isaiam*, xlii. 1) the appellation. In the reigns of Valentinian and Theodosius the Great (A. D. 375, foll.) Thmuis was a town of some consequence, governed by its own magistrates, and exempt from the jurisdiction of the Alexandrian prefect (Amm. Marc. xxii. 16. § 6). It was also an episcopal see, and one of its bishops, Serapion, is mentioned by Heracleianus. (*ap. Photium*, p. 65, ed.

Bekker.) Remains of the ancient city are supposed to exist at *Tel-etmai* or *Tmai*, SW. of *Mansourah*. A monolithical shrine and many sarcophagi of granite have been found there, and a factitious mound at the village of *Ternay*, raised above the level of the inundation, is probably an Egyptian work. (Cham-pollion, *Égypte sous les Pharaons*, vol. ii. p. 114.) That dykes were essential to the preservation of the city appears from the description of it by Aristides (*l. c.*), who represents Thmuis as standing upon and surrounded by flat and marshy grounds. [W. B. D.]

THOAE. [ECHINADES.]

THOANA. [THANA.]

THO'ARIS or THOA'RIS (*Θάρις* or *Θοδρις*), a small coast river in Pontus Polemoniacus (Arrian, *Periplus* P. E. p. 16; Anon. *Periplus* P. E. p. 11), is now called *Gheureh*, *Irmak*, or perhaps more correctly *Thureh Irmak*. (Hamilton, *Researches*, i. p. 279.) [L. S.]

THO'CNIA (*Θακνία*, *Θάκνεια*: *Eth. Θακνεΐς*), a town of Arcadia in the district Parrhasia, situated upon a height on the river Aminius, which flows into the Helisson, a tributary of the Alpheius. The town was said to have been founded by Thocnus, the son of Lycaon, and was deserted in the time of Pausanias, as its inhabitants had been removed to Megalopolis. It is placed by Leake in the position of *Vromosela*. (Paus. viii. 3. § 2, 27. § 4, 29. § 5; Steph. B. s. v.; Leake, *Morea*, vol. ii. p. 293.)

THOMNA. [TAMNA.]

THONITUS LACUS. [THOSPITIS.]

THORAE. [ATTICA, p. 331, a.]

THORICUS (*Θορικός*: *Eth. Θορικός*: *Theritō*), a town of Attica on the SE. coast, and about 7 or 8 miles N. of the promontory of Sunium, was originally one of the twelve cities into which Attica is said to have been divided before the time of Theseus, and was afterwards a demus belonging to the tribe Acamantis. (Strab. ix. p. 397.) It continued to be a place of importance during the flourishing period of Athenian history, as its existing remains prove, and was hence fortified by the Athenians in the 24th year of the Peloponnesian War. (Xen. *Hell.* i. 2. § 1.) It was distant 60 stadia from Anaphlystus upon the western coast. (Xen. *de Vect.* 4. § 43.) Thoricus is celebrated in mythology as the residence of Cephalus, whom Eos or Aurora carried off to dwell with the gods. (Apollod. ii. 4. § 7; Eurip. *Hippol.* 455.) It has been conjectured by Wordsworth, with much probability, that the idea of Thoricus was associated in the Athenian mind with such a translation to the gods, and that the "Thorician stone" (*Θορικός πέτρος*) mentioned by Sophocles (*Oed. Col.* 1595), respecting which there has been so much doubt, probably has reference to such a migration, as the poet is describing a similar translation of Oedipus.

The fortifications of Thoricus surrounded a small plain, which terminates in the harbour of the city, now called *Porto Mandri*. The ruins of the walls may be traced following the crest of the hills on the northern and southern sides of the plain, and crossing it on the west. The acropolis seems to have stood upon a height rising above the sheltered creek of *Frangó Limónia*, which is separated only by a cape from *Porto Mandri*. Below this height, on the northern side, are the ruins of a theatre, of a singular form, being an irregular curve, with one of the sides longer than the other. In the plain, to the westward, are the remains of a quadrangular colonnade, with Doric columns. (Leake, *Demi of Attica*,

p. 68, seq. 2nd ed.; Wordsworth, *Athens and Attica*, p. 208, seq.)

THORNAX (Θόρναξ). 1. A mountain near the city of Hermione in Argolis, between which and Mt. Pron the road ran from Hermione to Halice. It was subsequently called Coccygium, because Zeus was said to have been here transformed into a cuckoo; and on its summit was a temple of Zeus Coccygius. (Paus. ii. 36. §§ 1, 2; Leake, *Peloponnesiaca*, p. 288; Curtius, *Peloponnesos*, vol. ii. p. 463.)

2. A mountain in Laconia, on the road from Sparta to Sellasia, upon which stood a colossal statue of Apollo Pythæus. (Herod. i. 69; Paus. iii. 10. § 8; Steph. B. s. v.; Leake, *Moræa*, vol. ii. p. 534, *Peloponnesiaca*, pp. 348, 352; Boblaye, *Rech.* p. 75; Ross, *Peloponnes*, p. 190; Curtius, *Peloponnesos*, vol. ii. pp. 237, 259.)

THOSPIA (Θωσπία, Ptol. v. 13. § 19, viii. 19. § 12), the capital of the district Thespitis. [T. H. D.]

THOSPITIS (Θωσπίτις, Ptol. v. 13. § 18), a district of Armenia Major. It lay at the northern side of the LACUS THOSPITES (ὁ Θωσπίτις Ἰλμυρ, Ptol. id. § 7), through which the Tigris flowed (Plin. vi. 27. s. 31). It is perhaps the same lake called Thonitis or Thopitis by Strabo (Θωνίτις or Θωσπίτις, xi. p. 529), and Priscian (Lacus Thonitidis, *Perieg.* 913), the water of which is described by Strabo as nitrous and undrinkable. It is probably the modern *Wan*, in the district of *Tosp*, and hence called by the Armenians *Dzow Tospai*. [T. H. D.]

THRACIA (Θρηάκη, Hom.; Θρηάκη, Herod. i. 168, or Θρηάκη, iv. 99; Attic, Θράκη; *Eth.* Θρήξ, Hom.; Θρήξ, Herod. viii. 116; Attic, Θράξ; Trag. Θρήξ; Thrax, Threx, the latter form being chiefly, if not exclusively, employed of gladiators), a country at the south-eastern extremity of Europe, and separated from Asia only by the Propontis and its two narrow channels, the Bosphorus and the Hellespont.

I. NAME. — Besides its ordinary name, the country had, according to Steph. B. (s. v.), two older appellations, *Πέτρην* and *Ἀπία*; and Gellius (xiv. 6) mentions *Sithon* as another. Respecting the origin of these names, various conjectures have been made both in ancient and in modern times; but as none of them, with the exception to be presently mentioned, are of much value, it is not worth while to devote any space to their consideration.* The exception alluded to is the etymology adopted by Col. Mure (*Hist. of Lang. and Lit. of Anc. Greece*, i. p. 153, note), which is far more probable and satisfactory than any other that the present writer has seen, and which derives the name Thrace from the adjective *τραχέας*, "rugged," by the common transfer of the aspirate. Thus the name would indicate the geographical character of the various districts to which it is given; for, as we shall see, it was by no means confined to the country which is the special subject of the present notice.

II. EXTENT. — In the earliest times, the region called Thrace had no definite boundaries, but was often regarded as comprising all that part of Europe which lies to the north of Greece. Macedonia, in the south, is spoken of by Hecataeus as belonging to it (cf. Mel. ii. 2, sub fin., where the Chalcidic peninsula is described under the title of Thrace); and

Scythia, in the north, is included in it by Steph. B. (s. v. *Σκύθαι*; cf. Amm. xxvii. 4. § 3). This explains the fable reported by Andron (Tzet. *ad Lycophr.* 894), to the effect that Oceanus had four daughters, Asia, Libya, Europa, and Thracia; thus elevating the last-named country to the rank of one of the four quarters of the known—or rather unknown—world. But as the Greeks extended their geographical knowledge, the designation Thrace became more restricted in its application, and at length was generally given to that part of Europe which is included within the following boundaries: the Ister on the N. (Strab. ii. p. 129; Plin. iv. 18; Mel. ii. 2); the Euxine and the Bosphorus on the E.; the Propontis, the Hellespont, the Aegean, and the northern part of Macedonia, on the S.; the Strymon, or subsequently, i. e. in the time of Philip II. and his son Alexander the Great, the Nestus (Strab. vii. pp. 323, 330; Ptol. iii. 11), and the countries occupied by the Illyrians, on the W., where, however, the boundary was never very settled or accurately known. (Plin. and Mel. l. cc.) These were the limits of Thrace until the Romans subdued the country, when, in the reign of Augustus, it was divided into two parts, separated by the Haemus; the portion to the south of that mountain chain retaining the name of Thrace, while the part between the Ister and the Haemus received the appellation of Moesia, and was constituted a Roman province. [MOESIA, Vol. II. p. 367.] But even after this period both countries were sometimes included under the old name, which the Latin poets frequently used in its earliest and widest extent of meaning. (Cf. Heyne, *ad Virg. Aen.* xi. 659; Barmann, *ad Val. Flacc.* iv. 280; Muncker, *ad Hygin. Fab.* 138; Tzschucke, *ad Mel.* ii. 2. p. 63.) As the little that is known about Moesia is stated in the article above referred to, the present will, as far as possible, be confined to Thrace proper, or south of the Haemus, corresponding pretty nearly to the modern *Roumelia*, which, however, extends somewhat more to the west than ancient Thrace.

III. PHYSICAL GEOGRAPHY, CLIMATE, PRODUCTIONS, &c. — Many circumstances might have led us to expect that the ancients would have transmitted to us full information respecting Thrace: its proximity to Greece; the numerous Greek colonies established in it; the fact that it was traversed by the highroad between Europe and Asia; and that the capital of the Eastern Empire was situated in it,—all these things seem calculated to attract attention to the country in an unusual degree, and to induce authors of various kinds to employ their pens in recording its natural and political history. Yet the latest and most profound historian of Greece is compelled to admit that, apart from two main roads, "scarcely anything whatever is known of [the interior of] the country." (Grote, vol. xii. p. 34, note. For this various reasons may be assigned; but the principal one is the barbarous character, in all ages, of the occupants of the land, which has, at least until very recently, precluded the possibility of its exploration by peaceful travellers.* Those who have

* Those who are curious about such matters may consult Steph. B. s. v.; Eustath. *ad Dion. Per.* 322, 323; Sieckler, *Handb.* i. p. 480; Berkel *ad Steph. B.* p. 400; Tzschucke, *ad Mel.* ii. 2. p. 62; Kenrick, *Philol. Mus.* i. p. 618.

* Even one of the latest travellers there, M. Viquesnel, commissioned by the French government, and countenanced by the Turkish authorities, found it impossible to induce his guides to conduct him to a certain district which he wished to visit, although he offered to take as numerous an escort as they pleased. (See *Archives des Missions scient. et litt.* vol. i. p. 210.)

traversed it have been almost invariably engaged in military enterprises, and too much occupied with their immediate objects to have either opportunity or inclination, even had they possessed the necessary qualifications, to observe and describe the natural features of the country. What adds to the difficulty of the writer on the classical geography of Thrace is the unfortunate loss of the whole of that portion of the seventh book of Strabo which was devoted to the subject. Strabo, in several parts of his work, treats incidentally of Thrace: but this is a poor substitute for the more systematic account of it which has perished, and of which little more than a table of contents has been preserved in the meagre epitome which alone remains of it.

In modern times, several travellers have endeavoured, with various degrees of success, to explore the country; and some of them have published the results of their investigations; but it is evident from their very frequent disagreement as to the sites of the places which they attempt to identify with those mentioned in ancient writers, that as yet the necessary data have not been obtained; and the Itineraries, instead of assisting, not seldom add to the difficulty of the task, and render its accomplishment almost hopeless. Moreover, the extent of country examined by these travellers was very limited. "The mountainous region of Rhodope, bounded on the west by the Strymon, on the north and east by the Hebrus, and on the south by the Aegean, is a *terra incognita*, except the few Grecian colonies on the coast. Very few travellers have passed along or described the southern or king's road; while the region in the interior, apart from the highroad, was absolutely unexplored until the visit of M. Viquesnel in 1847. (Grote, *l. c.*)

The results of this traveller's researches have not yet, we believe, appeared in a complete and connected form. His reports to the French minister by whom he was commissioned are published in the work already referred to; but most of them are mere outlines, written on the spot from brief notes. They contain much that is valuable and interesting; but no one except their author could make full use of them; and it is to be hoped that he may be able to employ the materials so ably collected in the composition of a work that would dispel much of the obscurity that at present rests upon the country. M. Viquesnel was engaged little more than a year in Thrace, a period evidently insufficient for its complete exploration; accordingly he seems to have devoted his principal attention to its geology, especially of the mountain systems, above all in the district of Rhodope.

According to Ami Boué's chart of the geological structure of the globe, copied in Johnston's *Physical Atlas*, the three principal geological formations in Thrace are: (1) the crystalline schistous, comprehending all the granitoid rocks; this occupies the W. portion of the country, and a small district on the Euxine, immediately S. of the Haemus; (2) the tertiary, extending over the basin of the Hebrus; (3) the primary stratifications, or the transition series, including the carboniferous formations; this occupies the SE. part of the country, and a region S. of the Haemus, and W. of the tertiary formation above mentioned. Near the sources of the *Bourghaz*, Viquesnel found volcanic rocks (p. 213).

The surface of Thrace is, on the whole, decidedly mountainous, the vast plains spoken of by Virgil *Aen.* iii. 13) belonging to Moesia. From the great angle of Haemus, three chains of mountains branch

off towards the SE., and with their various ramifications occupy nearly the entire country. The most westerly of these begins at the NW. extremity of the boundary line, and soon separates into two almost parallel ranges, the Pangaeus and Rhodope, which are separated from each other by the river Nestus; the former filling up the whole space between that river and the Strymon, the latter the district E. of the Nestus and SW. of the Hebrus. Both Pangaeus and Rhodope extend down to the coast of the Aegean, and the latter is continued parallel to it as far E. as the Hebrus. The central offshoot of the Haemus branches off between the sources of the Hebrus and the Tonzus, and extends to their junction near Hadrianopolis. The most easterly chain diverges from the Haemus about 100 miles W. of the Euxine, to the W. shore of which it is nearly parallel, though it gradually approaches nearer to it from N. to S.; it extends as far as the Bosphorus, and with its lateral offshoots occupies nearly the whole country between the E. tributaries of the Hebrus and the Euxine. The central and E. ranges appear to have had no general distinctive names; at least we are not aware that any occur in ancient writers: the modern name of the most easterly is the *Sirandja-Dagh*. A continuation of this range extends along the shore of the Propontis, and is now called the *Tekir-Dagh*.

The loftiest peaks, among these mountains, belong to Rhodope, and attain an elevation of about 8500 feet (Viquesnel, p. 325); the summits of the *Sirandja-Dagh*, are 2600 feet high (Id. p. 314); those of the *Tekir-Dagh*, 2300 (Id. p. 315); the other mountains are from 2000 to 600 feet in height (Id. pp. 314, 315). The Haemus is not more than 4000 feet high, in that portion of it which belongs to Thrace. It is obvious from these measurements that the statements of some of the ancients that the summits of the Thracian mountains were covered with eternal snow (*ἄπληκτον ὕψος νιφόεσσα*, Hom. *Il.* xiv. 227), and that from the highest peak of the Haemus the Adriatic and the Euxine could be seen, are mere fancies. Strabo (vii. pp. 313, 317) points out the inaccuracy of this notion. An interesting account is given by Livy (xl. 21, 22) of the ascent of Haemus by Philip V., who shared in the popular belief in question. Livy states plainly enough his conviction that Philip's labour, which was far from slight, was thrown away; but he and his attendants were prudently silent upon the subject, not wishing, says Livy, to be laughed at for their pains. Yet Florus, who alludes to the same circumstance (ii. 12), but makes Perseus the mountain-climber, assumes that the king's object was accomplished, and that the bird's-eye view of his dominions, obtained from the mountain top, assisted him in forming a plan for the defence of his kingdom, with reference to his meditated war with Rome. Mela too repeats the erroneous statement (ii. 2).

The main direction of the rivers of Thrace is from N. to S., as might be inferred from the foregoing description of its mountain system. The Strymon forms its W. boundary. In the lower part of its course, it expands to a considerable width, and was called Lake Cercinitis, into which flowed a smaller river, the Angites (Herod. vii. 113); next, towards the E., comes the Nestus; then, in succession, the Tranus, which falls into Lake Bistonis, the Schoenus, the Hebrus, the principal river of Thrace, and lastly the Melas. All these rivers fall into the Aegean. Several small streams flow into the Hellespont and

the Propontis, of which we may mention Aegospotami, renowned, notwithstanding its insignificant size, the Arzus, and the Erginus. The rivers which fall into the Euxine are all small, and few of them are distinguished by name in the geographers, though doubtless not so unhonoured by the dwellers upon their banks: among them Pliny (iv. 18) mentions the Pira and the Orosines. The Hebrus drains at least one-half, probably nearer two-thirds, of the entire surface of Thrace; and on its banks, or on those of its tributaries, most of the level portions of the country are situated, as well as nearly all the inland towns. Its principal affluents are the Arda (in some maps called the Harpeasus), and the Suemus on the W., the Tonzus, Artiscus, and Agrianes on the E.

The Thracian coast of the Aegean is extremely irregular in its outline, being broken up by bays which enter far into the land, yet appear to be of comparatively little depth. Most of them, indeed, are at the mouths of rivers, and have probably been filled up by alluvial deposits. It was perhaps for this reason that several of them were called *lakes*, as if they had been regarded as belonging to the land rather than to the sea; e. g. Lake Cercinitis, already mentioned, which seems, indeed, to have been little more than a marsh, and in Kiepert's map its site is so represented; Lake Bistonis, east of Abdera; and Stentoris Lacus, at the mouth of the Hebrus. The gulf of Melas, formed by the northern shore of the Chersonesus and the opposite coast of what may be called the mainland, is an exception to this description of the Thracian bays. The coasts on the Propontis and the Euxine are comparatively unbroken, the only gulf of any extent being Portus Hellodae, near Anchialus, which is known in modern times, by the name of the bay of *Bourghaz*, as one of the best harbours in the Euxine, the Thracian shore of which was regarded by the ancients as extremely dangerous. [SALMYDESSUS.]

The principal promontories were, Ismarus, Serreum, Sarpedonium, and Mastusium, on the southern coast; Thynias and Haemi Extrema, on the eastern.

For an account of one of the most remarkable parts of Thrace, see *CHERONESUS*, Vol. I. p. 608.

Off the southern coast are situated the islands of Thasos, Samothrace, and Imbros; the first is separated from the mainland by a channel about 5 miles wide; the other two are considerably more distant from the shore.

The climate of Thrace is always spoken of by the ancients as being extremely cold and rigorous: thus Athenaeus (viii. p. 351) describes the year at Aenus as consisting of eight months of cold and four months of winter; but such statements are not to be taken literally, since many of them are mere poetical exaggerations, and are applied to Thrace as the representative of the north in general. The Haemus was regarded as the abode of the north wind, and the countries beyond it were believed to enjoy a beautifully mild climate. (See Niebuhr, *Ethnog. and Geog.* i. p. 16, Eng. trans.; Soph. *Antig.* 985; Eurip. *Rhes.* 440; Theophr. *de Caus.* v. 17; Virg. *Georg.* iii. 350 seq.; Ov. *Pont.* iv. 10. 41, *ib.* 7. 8; *Trist.* iii. 10; &c.). Even after making full allowance for the undoubted effect of vast forests, undrained marshes, and very partial cultivation, in lowering the average temperature of a country, it is difficult to believe that a land, the northern boundary of which (i. e. of Thrace Proper) is in the same parallel of latitude as Tuscany and the Pyrenees, and the highest mountains of which are less than 9000 feet above the

level of the sea, can have had a very severe climate. That the winter was often extremely cold, there can be no doubt. The Hebrus was sometimes frozen over; not to dwell upon the "Hebrus nivali compede victus" of Horace (*Ep.* i. 3. 3; cf. Virg. *Aen.* xii. 331, and the epigram, attributed by some to Caesar, beginning, "Thrax puer adstricto glacie dam ludit in Hebro"), Florus (iii. 4) relates that, in the campaign of Minucius in southern Thrace, a number of horsemen in his army were drowned while trying to cross that river on the ice. Xenophon states that the winter which he passed in Thrace, in the mountainous district of the Thyni, was so cold that even wine was frozen in the vessels, and that many Greek soldiers had their noses and ears frostbitten; the snow also lay deep upon the ground. And that this was not an exceptional season may be inferred from Xenophon's remarks on the dress of the Thracians, which seemed to him to have been devised with special reference to the climate, and to prevent such mishaps as those which befel the Greeks (*Anab.* vii. 4. §§ 3, 4). Tacitus (*Ann.* iv. 51) assigns the early and severe winter of Mount Haemus among the causes which prevented Poppaeus Sabinus (A. D. 26) from following up his first success over the rebellious Thracians.* Pliny (xvii. 3) says that the vines about Aenus were often injured by frosts, after the Hebrus was brought nearer to that city; the allusion probably being to the formation of the western mouth of the river, nearly opposite to Aenus, the floating ice and the cold water brought down by which would have some effect in lowering the temperature of the neighbourhood. Mela (ii. 2, init.) describes Thrace generally as agreeable neither in climate nor in soil, being, except in the parts near the sea, barren, cold, and very ill adapted for agriculture and fruit-trees of all kinds, except the vine, while the fruit even of that required to be protected from the cold by a covering of the leaves, in order to ripen. This last remark throws some doubt upon the accuracy of the writer; for the shading of the grapes from the direct rays of the sun is obviously more likely to prevent than to promote their arrival at maturity; and hence, as is well known, it is the practice in many parts of Europe to remove the leaves with a view to this object.

However this may be, it is certain that Thrace did produce wine, some kinds of which were famous from very early times. Homer, who bestows upon Thrace the epithet *αἰνῶναξ* (*Il.* xx. 485), represents Nestor reminding Agamemnon that the Grecian ships bring to him cargoes of wine from that country every day (*ib.* ix. 76); and the poet celebrates the excellence of the produce of the Maroneian vineyards. (*Od.* ix. 197, seq.) Pliny (xiv. 6) states that this wine still maintained its reputation, and describes it as black, perfumed, and growing rich with age; a description which agrees with Homer's (*l. c.*). Paul Lucas says that he found the Thracian wine excellent. (*Voy. dans la Turquie*, i. p. 25; see also, Athen. i. p. 31.) Thrace was fertile in corn (Plin. xvii. 3), and its wheat is placed by Pliny high in the scale of excellence as estimated by weight. It has, he says (xvii. 12), a stalk consisting of several coats (*Amicor*).

* M. Viquesnel states, on two occasions, that he was compelled to change his route in consequence of heavy and continuous snow-storms, in the month of November (pp. 213, 312). The wind also was extremely violent.

to protect it, as he supposes, from the severity of the climate; by which also he accounts for the cultivation, in some parts of the country, of the *tritium trimestre* and *bimestre*, so called because those varieties were reaped in the third and second month respectively after they were sown. Corn was exported from Thrace, and especially from the Chersonesus to Athens (Theoph. *de Plantis*, viii. 4; Lys. in *Diog.* p. 902), and to Rome (Plin. *l. c.*). Millet was cultivated in some parts of Thrace; for Xenophon (*Anab.* vii. 5. § 12) states that on the march to Salmysessus, Seuthes and his allies traversed the country of the "millet-eating Thracians" (cf. Strab. vii. p. 315.) The less important vegetable productions of Thrace may be briefly mentioned: a species of water-chestnut (*tribulus*) grew in the Strymon, the leaves of which were used by the people who lived on its banks to fatten their horses, while of its nuts they made a very sweet kind of bread. (Plin. xxi. 58, xxii. 12.) Roses (*Rosa centifolia*) grew wild on the Pangaeus, and were successfully transplanted by the natives (Id. xxi. 10). The mountains, in general, abounded in wild-thyme and a species of mint (Id. xix. 55). A sort of morel or truffle (*ion*) was found in Thrace (Id. xix. 12; Athen. ii. p. 62), and a styptic plant (*ischaemon*), which was said to stop bleeding from even divided blood-vessels. (Theoph. *de Plant.* ix. 15; Plin. xxv. 45.) Several varieties of ivy grew in the country, and were sacred to Dionysus. (Theoph. *de Plant.* iii. 16; Plin. xvi. 62.) Herodotus (iv. 74) states that the Scythians had hemp both wild and cultivated; and as he proceeds to say that the Thracians made clothing of it, we may fairly infer that it grew in Thrace also. "The Athenians imported their timber chiefly from the country about the Strymon, for the Thracian hills abounded in oak and fir-trees." (Niebuhr, *Lect. Anc. Hist.* i. p. 292, Eng. trans.) M. Viquesnel states that the *Strandjadagh* is covered with forests of oak (p. 314), and that in some parts of the district of Rhodope tobacco is now cultivated (p. 320).

Among the animals of Thrace, white horses are repeatedly mentioned. The famous steeds of Rhesus were "whiter than snow." (Hom. *Il.* x. 437; Eurip. *Rhes.* 304.) When Xerxes reached the banks of the Strymon in his onward march, the magi sacrificed white horses (Herod. vii. 113), which were probably Thracian, for the same reason, whatever that was, that the human victims spoken of in the next chapter were the children of natives. Xenophon states that, during a banquet given by Seuthes, a Thracian entered, leading a white horse, which he presented to his prince, with an encomium on its fleetness (*Anab.* vii. 3. § 26). Virgil speaks of Thracian horses with white spots (*Aen.* v. 565, ix. 49). Horses were no doubt plentiful in Thrace: Homer (*Il.* xiv. 227) calls the Thracians *ἵπποπλοῖ*; and cavalry always formed a large part of their armies. Thus Thucydides (ii. 98) estimates the number of horsemen in the army with which Sitalkes invaded Macedonia at about 50,000. One of the twelve labours of Hercules was to bring to Mycenae the savage mares of Diomedes, king of the Bistones in Thrace, who fed them with human flesh. (Ov. *Met.* x. 194.) Herodotus (vii. 126) states that lions were found throughout the country bounded on the N. by the Achelous and on the E. by the Nestus; a statement which is repeated by Aristotle (*H. A.* vi. ii. viii. 28); so that the part of Thrace between the Strymon and the Nestus must have been in-

habited, at least in early times, by those formidable animals. Herodotus says that they attacked the baggage-camels of Xerxes during the march of his army from Acanthus to Therme (vii. 125). Cattle, both great and small, were abundant, and seem to have constituted the chief wealth of a people who, like most barbarians, considered agriculture a base occupation. (Herod. v. 6.) The fertile valleys were well adapted for oxen, and the thyme-covered hills for sheep; and it is clear, from several passages in Xenophon, that even the wildest Thracian tribes were rich in this kind of wealth. (*Anab.* vii. 3. § 48, 7. § 53.) Aristotle informs us that the Thracians had a peculiar method of fattening swine (*H. A.* viii. 6). He attributes the smallness of their asses to the coldness of the climate (*Id.* 28). Cranes are often mentioned as belonging to Thrace. (Virg. *Georg.* i. 120; Ov. *A. A.* iii. 182; Juv. xiii. 167.) Aristotle says that an aquatic bird of the pelican kind (*πελεκάνες*) migrates from the Strymon to the Ister (*H. A.* viii. 11); and that the people in some marshy districts of Thrace were assisted in catching water-fowl by hawks; which do not seem to have been trained for the purpose, but, though wild, to have been induced by a share of the game, to second the proceedings of their human associates (*Id.* ix. 36). Eels were caught at certain seasons in the Strymon (*Id.* viii. 2, ad fin.). The tunny fishery was a source of great wealth to Byzantium. (Strab. vii. p. 320.)

The principal mineral productions of Thrace were gold and silver, most of which came from the mountainous district between the Strymon and the Nestus. There, at the southern extremity of the Pangaeus, was situated Crenides, founded by the Thasians, and afterwards called Philippi, in a hill near which, named the hill of Dionysus (Appian, *B. C.* iv. 106), were the most productive gold mines of Thrace, to get possession of which was Philip's principal object in annexing the district in question to his dominions. He is said to have derived from the mines an annual income of 1000 talents. (Diod. xvi. 8; cf. Strab. vii. p. 323.) * Strabo (xiv. p. 680) says that the wealth of Cadmus came from the mines of the Pangaeus; and Pliny refers to the same tradition when he states (vii. 57) that according to some authorities, the Pangaeus was the place where Cadmus first discovered gold-mines, and the art of melting their produce (*confuturum*). Herodotus (vii. 112) mentions silver, as well as gold, mines in the Pangaeus, which in his time were in the possession of the native tribes called Pieres, Odomanti, and Satrae. He states also (vi. 46) that the Thasians had gold mines at Scapte Hyle, near Abdera, from which they derived an (annual) revenue of about 80 talents; and that a part of the revenues of Peisistratus came from the Strymon, by which the mines on its banks are probably meant (i. 64). (See also, ix. 75; Eurip. *Rhes.* 921; Strabo (or rather his epitomiser), vii. p. 331.) According to Pliny (xxxiii. 21) gold was found in the sands of the Hebrus; and this is confirmed by Paul Lucas (*l. c.*), and by Viquesnel, who states (p. 204) that in rainy years the affluents of that river are frequented by gold-finders, who wash the sands which contain gold in grains (*en paillettes*). Thucydides was interested in gold mines and works near Amphipolis, as he himself informs us (iv. 105). Of the other minerals of Thrace we may mention the

* On these mines, see Niebuhr, *Lect. Ethnog. and Geog.* l. pp. 285, 295, Eng. trans.

opal (*paederos*, Plin. xxxvii. 46); the *Thracia gemma*, one variety of which seems to resemble the bloodstone (ib. 68); a stone which burnt in water (Id. xxxiii. 30); and nitre, which was found near Philippi (Id. xxi. 46). In addition to these, M. Viquesnel mentions fine marble, which is quarried from the mountains of *Lidja* (p. 200); excellent iron, manufactured at *Samakor* (p. 209); alum, produced at *Chaphané* (p. 213); and potter's clay, in the district of Rhodope, used by the Turks in the fabrication of earthenware (p. 319). He states also that Rhodope abounds in mineral waters (ib.), and that there are warm springs at *Lidja* (p. 212).

A few miscellaneous notes will conclude this part of our subject.

The narrow portion of Thrace between the Euxine, Bosphorus and Propontis, is sometimes called the Delta (ῥὸ Δέλτα, Xen. Anab. vii. 1. § 33, 5. § 1).

Reference is several times made to violent natural convulsions, which destroyed various Thracian cities. Thus Strabo (i. 59) says that it appeared that some cities were swallowed up by a flood in Lake Bistonia; and he (vii. p. 319), Pliny (iv. 18), and Mela (ii. 2) speak of the destruction of Bizone, on the Euxine, by earthquakes.

Livy (xi. 22) describes the region between Macedonia and the Haemus as without inhabitants (*solitudoines*).

Herodotus (vii. 109) speaks of a lake near Pistyrus (on the coast N. of Abdera), about 30 stadia in circumference, abounding in fish, and extremely salt.

Thrace possessed two highroads, "both starting from Byzantium; the one (called the King's road, from having been in part the march of Xerxes in his invasion of Greece, Liv. xxxix. 27; Herod. vii. 115), crossing the Hebrus and the Nestus, touching the northern coast of the Aegean sea at Neapolis, a little south of Philippi, then crossing the Strymon at Amphipolis, and stretching through Pella across Inner Macedonia and Illyria to Dyrrhachium. The other road took a more northerly course, passing along the upper valley of the Hebrus from Adrianople to Philippopolis, then through Sardica (*Sophia*) and Naissus (*Nisch*), to the Danube near Belgrade, being the highroad now followed from Constantinople to Belgrade." (Grote, vol. xii. p. 34, note.) Herodotus (l. c.) remarks, with evident surprise, that the King's road had not, up to his time, been destroyed by the Thracians, a circumstance which he seems to attribute to the almost religious respect with which they regarded the "great king." It may be safely inferred that people who were considered to have done something wonderful in abstaining from breaking up a road, were not great makers or maintainers of highways; and it is clear from Livy's account of the march of Manlius (xxxviii. 40, 41) along this very road (afterwards called by the Romans, Via Egnatia, q. v.), that, although it was the principal line of communication between Europe and Asia, it was at that time (B. C. 188) in a very bad condition. From this some conception may be formed of the deplorable state in which the roads of the interior and mountainous districts must have been, and in which, indeed, they still remain. (Viquesnel, p. 312.) The Thracians no doubt were well aware that their independence would soon be lost, if there were an easy access for disciplined armies to every part of their country. Such paths as they possessed were sufficient for their own purposes of depredation, of ambush, and, when overpowered, of flight.

IV. ETHNOLOGY, MANNERS, RELIGION, ETC.—

The first point to be determined here is, whether the Thracians mentioned in the ancient writers as extending over many parts of Greece, as far south as Attica, were ethnologically identical with those who in historical times occupied the country which is the subject of the present article. And before discussing the topic, it will be convenient to lay before the reader some of the principal passages in the classics which bear upon it.

It is Strabo who makes the most distinct statements on the point. He says (vii. p. 321), "Hecataeus the Milesian states that, before the Hellenes, barbarians inhabited Peloponnesus. But in fact nearly all Greece was originally the abode of barbarians, as may be inferred from the traditions. Pelops brought a people with him into the country, to which he gave his name, and Danans came to the same region with followers from Egypt, at a time when the Dryopes, Caucones, Pelasgi, Leleges, and other similar races had settlements within the Isthmus; and indeed without it too, for the Thracians who accompanied Eumolpus had Attica and Terens possessed Danis in Phocis; the Phœnician companions of Cadmus occupied Cadmeia, the Aones, Temmices, and Hyantes Boeotia." Strabo subsequently (ix. 401) repeats this statement respecting Boeotia, and adds that the descendants of Cadmus and his followers, being driven out of Thebes by the Thracians and Pelasgians, retired into Thessaly. They afterwards returned, and, having joined the Minyans of Orchomenos, expelled in their turn the Pelasgians and Thracians. The former went to Athens, where they settled at the foot of Hymettus, and gave the name of Pelasgicum to a part of the city (cf. Herod. vi. 137); the Thracians, on the other hand, were driven to Parnassus. Again (ix. p. 410) he says, speaking of Helicon: "The temple of the Muses, and Hippocrene, and the cave of the Leibethridæ nymphs are there; from which one would conjecture that those who consecrated Helicon to the Muses were Thracians; for they dedicated Pieria, and Leibethrum, and Pimpleia to the same goddesses. These Thracians were called Pierians (*Niæpes*); but their power having declined, the Macedonians now occupy these (last named) places." This account is afterwards (x. p. 471) repeated, with the addition that "the cultivators of ancient music, Orpheus, Musæus, Thamyris, and Eumolpus, were Thracians."

The difficulty that presents itself in these passages,—and they are in general agreement with the whole body of Greek literature,—arising from the confounding under a common name of the precursors of Grecian poetry and art with a race of men designated as barbarous, is well stated by K. O. Müller (*Hist. of Greek Liter.* p. 26, seq.): "It is utterly inconceivable that, in the later historic times, when the Thracians were contemned as a barbarian race, a notion should have sprung up that the first civilisation of Greece was due to them; consequently we cannot doubt that this was a tradition handed down from a very early period. Now, if we are to understand it to mean that Eumolpus, Orpheus, Musæus, and Thamyris were the fellow-countrymen of those Edonians, Odrysians, and Odontians, who in the historical age occupied the Thracian territory, and who spoke a barbarian language, that is, one unintelligible to the Greeks, we must despair of being able to comprehend these accounts of the ancient Thracian minstrels, and of assigning them a place in the history of Grecian civilisation; since it is

manifest that at this early period, when there was scarcely any intercourse between different nations, or knowledge of foreign tongues, poets who sang in an unintelligible language could not have had more influence on the mental development of the people than the twittering of birds."

Müller therefore concludes that the Thracians of the ante-historical era, and those of subsequent times, belonged to distinct races. "When we come to trace more precisely the country of these Thracian bards, we find that the traditions refer to Pieria, the district to the east of the Olympus range, to the north of Thessaly, and the south of Emathia or Macedonia: in Pieria likewise was Leibethra, where the Muses are said to have sung the lament over the tomb of Orpheus: the ancient poets, moreover, always make Pieria, not Thrace, the native place of the Muses, which last Homer clearly distinguishes from Pieria. (*Il.* xiv. 226.) It was not until the Pierians were pressed in their own territory by the early Macedonian princes that some of them crossed the Strymon into Thrace Proper, where Herodotus (*vii.* 112) mentions the castles of the Pierians at the time of the expedition of Xerxes. It is, however, quite conceivable that in early times, either on account of their close vicinity, or because all the north was comprehended under one name, the Pierians might, in Southern Greece, have been called Thracians. These Pierians, from the intellectual relations which they maintained with the Greeks, appear to be a Grecian race; which supposition is also confirmed by the Greek names of their places, rivers, fountains, &c., although it is probable that, situated on the limits of the Greek nation, they may have borrowed largely from neighbouring tribes. (See Müller's *Dorians*, vol. i. pp. 472, 488, 501.)" After referring to the accounts of the Thracians in Southern Greece, Müller adds: "From what has been said, it appears sufficiently clear that these Pierians or Thracians, dwelling about Helicon and Parnassus in the vicinity of Attica, are chiefly signified when a Thracian origin is ascribed to the mythical bards of Attica."

Colonel Mure, after referring to the foregoing view, which he designates as "plausible," goes on as follows: "But the case admits of another, and perhaps more satisfactory explanation. It is certain that, in the mythical geography, a tract of country on the frontiers of Boeotia and Phocia, comprehending Mount Parnassus and Helicon, bore the name of Thrace. [See the etymology, *ante.*] In this region the popular mythology also lays the scene of several of the most celebrated adventures, the heroes of which are called Thracians." The author then applies this explanation to the stories of Tereus and Procne, and of Lycurgus, "king of Thrace;" and proceeds thus: "Pausanias makes the 'Thracian' bard Thamyras virtually a Phocian. He assigns him for mother a nymph of Parnassus called Argiope. His father, Philammon, is described as a native of the same region, son of Apollo, by the nymph Chione, and brother of Autolycus, its celebrated robber chieftain. The divine grandsire is obviously here but a figure of his own sacred region; the grandmother Chione, as her name bears, of its now. Others call the latter heroine Leucothea. The names of these heroines are all so many varied nodes of typifying the same 'snow-white' Parnassus. This view of the 'Thracian' character of these sages becomes the more plausible, if it be remembered that the region of Central Greece, in which

the Hellenic Thrace was situated, is that from which first or chiefly, the seeds of elementary culture were propagated throughout the nation. Here tradition places the first introduction of the alphabet. Here were also the principal seats of Apollo and the Muses. In the heart of the same region was situated the Minyean Orchomenos, the temple of the Graces, rivaling Thebes herself in the splendour of her princes and zeal for the promotion of art. Among the early masters of poetry or music, not vulgarly styled Thracians, the most illustrious, Amphion and Linus, are Boeotians. Nor was this region of Central Greece less favoured in respect of its religious institutions. It was not only the favourite seat of Apollo, the Muses, and the Graces, but the native country of the Dionysiac rites, zeal for the propagation of which is a characteristic of the Thracian sages." (*Hist. of Lang. and Lit. of Ant. Greece*, i. pp. 150—153; cf. Niebuhr, *Lect. on Ethnol. and Geog.* i. p. 287.)

In thus entirely disconnecting these early "Thracians," from those of later times, we have the authority of Thucydides (*ii.* 29), who, in speaking of Tereus, the father of Sitalces, remarks: "This Tereus had no connection whatever with Tereus, who married Procne, daughter of Pandion of Athens; they did not even belong to the same Thrace. Tereus dwelt at Daulia, a city of the country now called Phocia, and which was then occupied by the Thracians." And he proceeds to show that it was not likely that Pandion would form an alliance with any one who lived so far from Athens as the country of the Odrysae.*

The consideration of the ethnological relations of the early Thracians hardly falls within the scope of this article; but since identity of name has often caused them to be confounded with the historical inhabitants of Thrace, it may be desirable briefly to discuss the subject in this place.

The view which seems to the present writer to be best supported by the evidence, and to explain most satisfactorily the ancient authors, is that which regards the mythical Thracians as members of the widely extended race to which the name of Pelasgians is usually given. It is clear from Homer that a close connection existed between the people of Southern Thrace and the Trojans, who were probably Pelasgians, and who are at the same time represented by him as agreeing, in language, religion, and other important respects, with the Greeks. Again, Homer mentions among the auxiliaries of Priam, the Caucones, who are named along with the Pelasgians (*Il.* x. 429), and the Cicones (*Il.* ii. 846). These two names bear so close a resemblance to each other as to suggest the probability of the cognate origin of the tribes so designated. Now the Cicones were undoubtedly Thracians (*Odys.* ix. 39, seqq.); while as to the Caucones, Strabo (*xii.* p. 542) informs us that they occupied part of the coast of Bithynia, and were regarded by some as Scythians, by others as Macedonians, by others again as Pelasgians. It will be remembered that Caucones are mentioned by him (*vii.* p. 321) among the earliest inhabitants of Peloponnesus. Another noticeable fact is, that in the passage of Strabo already quoted (*ix.* p. 401), he represents the Thracians and Pelasgians as acting in

* Yet subsequent prose writers, to say nothing of poets, fall into the error of making Tereus an inhabitant of Thrace Proper; and Pliny (*iv.* 18) even mentions the castle there in which the crime of Tereus was perpetrated!

concert. The same author (xiii. p. 590) points out the similarity of many Thracian names of places to those existing in the Trojan territory. Finally, the names of the places mentioned by Strabo (vii. p. 321) as common to Pieria and the southern Thracians, are evidently Greek (see Müller's *Dorians*, i. p. 501); and, as we have seen, the name Thrace itself is in all probability a significant Greek word.

These considerations appear to us to lead to the conclusion already stated, namely, that the mythical Thracians, as well as those spoken of by Homer, were Pelasgians; and hence that that race once occupied the northern as well as the other shores of the Aegean, until, at a comparatively late period, its continuity was broken by the irruption of the historical Thracians from the north into the country between the Strymon and the Euxine. The circumstance that the Greeks designated these barbarians by the name which had been borne by those whom they supplanted, admits of easy explanation, and history abounds in instances of a similar kind. But it may be doubted whether the Thracians had any general designation in their own language: they probably called themselves Edones, Densetæ, Thyni, Sætræ, and so on; but we have no evidence that they really were all branches of a common stock. Under these circumstances, it was inevitable that the Greeks should bestow upon them the name of the earlier possessors of the country; and those Thracians who were brought in contact with the more civilised race would probably adopt it. (On the foregoing question, see Niebuhr, *Lect. on Anc. Hist.* i. pp. 142, 212; *Lect. on Ethnog. and Geog.* i. p. 287; Wachsmuth, *Hist. Ant.* i. p. 44, seq.)

Respecting the historical Thracians we have tolerably full information, but not of that kind which will enable us to arrive at any very definite conclusions as to their ethnological relations. That they belonged to an extensively diffused race, whose early abodes were in the far northern regions, may be regarded as sufficiently proved by the concurrent testimony of the ancient writers. Herodotus, in a well-known passage (v. 3), says that the Thracian nation is the greatest in the world, after the Indians, and that its subdivisions, of which the Gætæ are one, have many names, according to the countries which they severally occupy. Strabo too (vii. p. 295) states that the Gætæ and the Mysi were Thracians (as to the Mysi, see also i. p. 6), who extended north of the Danube (vii. p. 296). In confirmation of his assertion that the Gætæ were ethnologically akin to the Thracians, he adduces the identity of their language (vii. p. 303). He adds (vii. p. 305) that the Daci also spoke this language. From his remark (vii. p. 315) about the Iapodes, it would seem that he regarded the Illyrians also as nearly allied to, if not actually a branch of, the Thracians. In another passage (x. p. 471) he says that the Phrygians were colonists of the Thracians; to which race also the Sarmatæ, a nation still farther towards the east, north of Armenia, were reported to belong (xi. p. 531). "The Bithyni, previously called Mysi, were so named, as is admitted by most authorities, from the Thracian Bithyni and Thyni, who emigrated to that country (i. e. Asia Minor; cf. Herod. vii. 75). And I conjecture that the Bebrycæ, who settled in Mysia before the Bithyni and Mysi, were also Thracians. The Mysians themselves are said to be colonists of those Thracians who are now called Mysi. As the Mariandyni are in all respects like the Bithyni, they too are probably Thracians." (Strab. xii. pp. 541, 542.) Justin

couples the Thracians with the Illyrians and Sarmatæ (xi. 1). In the west and south-west it is equally difficult to define the Thracian boundary: we have no Mela describes the whole of the Chalkidic peninsula as part of Thrace (cf. Thucyd. ii. 79): neither is it a doubt that they extended as far south as Olynthus, though mixed up with Macedonians, who were the preponderating race in that quarter. In his time the intrusive and undoubtedly distinct race was mingled with the Thracians near the limits, were sometimes confounded with them. The Ptolemy (iii. 4) calls the Scordisci the most savage of all the Thracians.

Of the language of the Thracians scarcely any trace exists. They were too barbarous to have any literary or artistic memorials, so that the principal guides of the ethnologist are wanting. Strabo (vii. p. 319) states that *bris*, which occurs in the denomination of several names of Thracian towns, signifies "city" or "town." This and a few other names constitute all that remains of their language.

The following is the account which Herodotus gives of the customs of the Thracians. They all their children into foreign slavery. The women who are unmarried enjoy perfect freedom in their intercourse with men; but after marriage they are strictly guarded. The men pay large sums of money for their wives to the parents of the latter. It is tattooed is considered an indispensable mark of nobility. (Cf. Strab. vii. p. 315.) Idleness is not honourable; the cultivator of the soil is regarded the meanest of men; to live by war and plunder is most noble. The only gods they worship are Ares, Dionysus, and Artemis. But their gods differ in this respect from their subjects; for they worship Hermes especially, and swear by his name, from whom they say that they are descended. When a wealthy man dies, his corpse lies in state for three days: his friends then make a great feast at which, after bewailing the departed, they slaughter victims of every kind: the body is then burnt, being sometimes been previously burnt. A funeral is raised above the grave, upon which athletic games are celebrated (v. 6—8; cf. Xen. *Hell.* i. 2, § 2). Besides these customs, which were common to all the Thracians, Herodotus mentions some which were peculiar to certain tribes; as, for instance, that which prevailed among the people to the north of the Dacotians. "Among them, each man has many wives. When any man dies, a great contest arises among his widows on the question as to which of them was most beloved by their husband; and in their relations take a very active part. He whose favour the point is decided, receives the congratulations of both men and women, and is slain upon her husband's grave by her nearest relation. The other widows regard themselves as extremely unfortunate, for they are considered to be disgraced." (Ib. 5.) Herodotus here seems to speak of polygamy as confined to a certain tribe of Thracians; but Strabo (vii. p. 297) represents this custom as general among them. In a well-known passage, Casaubon quotes from Herodotus (vii. 1) to the effect that Thracians often had as many as thirty wives, whom they employed as nurses. This practice still common in many eastern countries. Xenophon furnishes us with an illustration of the Thracian custom of purchasing wives. He says that at his first interview with Seuthes, the Thracian prince proposed to give his daughter in marriage to Xenophon; and if the Greek himself had

daughter, offered to buy her as a wife. (*Anab.* vii. 2. § 38; cf. *Mela*, ii. 2.)

The want of union among the Thracians is mentioned by Herodotus (v. 3) as the only cause of their weakness. Their tribes, like the Highland clans, seem to have been constantly engaged in petty warfare with one another, and to have been incapable of co-operating even against foreign foes, except for very brief periods, and rarely with any higher object than plunder. Until a late period (*Flor.* iv. 12. § 17) they appear to have been destitute of discipline, and this, of course, rendered their bravery of comparatively little avail. Thus we learn from Thucydides (ii. 96, 98) that, although Sitalces was the most powerful Thracian king that had ever reigned—(he seems indeed to have been subsequently regarded as a kind of national hero; *Xen. Anab.* vi. 1. § 6),—yet a large part of the army with which he invaded Macedonia consisted of mere volunteers, formidable chiefly for their numbers, and attracted to his standard by his offers of pay, or by their hope of plunder. Any one, in fact, who held out these inducements, could easily raise an army in Thrace. Thus Clearchus no sooner received supplies of money from Cyrus the Younger, than he collected a force in the Chersonesus, which, although in great part undoubtedly Thracian, was employed by him in making war upon other Thracians, until he was required to join Cyrus in Asia Minor (*Id.* i. 1. § 9, 2. § 9, &c.). So when Seuthes undertook the expedition against his so-called revolted subjects, his army was soon tripled by volunteers, who hastened from other parts of Thrace to serve him, as soon as they heard of his enterprise (*Id.* vii. 4. § 21). Such soldiers could not, of course, be depended upon for one moment after a reverse. A considerable number of Thracian mercenaries in the army of Cyrus took the earliest opportunity to desert to Artaxerxes after the battle of Cunaxa (*Id.* ii. 2. § 7).

Tacitus (*Ann.* iv. 46) informs us that the principal cause of the insurrection (A. D. 26) of the Thracians who dwelt in the elevated mountain districts (probably of Rhodope), was their dislike of the conscription, which, it would appear, the Romans had introduced into Thrace. This was a yoke to which they could not submit; they were not accustomed to obey even their own rulers, except when it pleased them; and when they sent troops to the assistance of their princes, they used to appoint their own commanders, and to war against the neighbouring tribes only. (Cf. *Liv.* xlii. 51; *Xen. Anab.* vii. 4. § 24, 7. § 29, seq.)

Thracian troops were chiefly light-armed infantry and irregular horse. (*Xen. Anab.* i. 2. § 9, vii. 6. § 27, *Memor.* iii. 9. § 2; *Curt.* iii. 9.) The bravest of the foot-soldiers in the army of Sitalces were the free mountaineers of Rhodope, who were armed with short swords (*μαχαιρόδμοι*; *Thucyd.* ii. 98). The equipment of the Asiatic Thracians is described by Herodotus (vii. 75), and as this description agrees with what Xenophon states respecting Seuthes' forces (*Anab.* vii. 4. § 4), it is no doubt substantially true of the Thracians generally. They wore caps covering their ears, made of fox-skins, cloaks, and party-coloured mantles (*ἐσφαλ*, ? = plaids); their boots, which came high up the leg, were made of deer-skin; their arms were shields, avelins, and daggers (cf. *Thucyd.* vii. 27). The Thracians in the army of Philip V. were armed with very long *rhomphaeae*, a word which some translate *javelins*, others *swords*. (*Liv.* xxxi. 39;

Plut. Paol. Aemil. 17.) Thracian soldiers fought with impetuosity and with no lack of bravery; but they, like all barbarian and undisciplined troops were incapable of sustained efforts. *Livy* (xlii. 59) describes them as rushing to the attack like wild beasts long confined in cages; they hamstringed the horses of their adversaries, or stabbed them in the belly. When the victory was gained on this occasion (the first encounter in the war between the Romans and Persens), they returned to their camp, singing loud songs of triumph, and carrying the heads of the slain on the tops of their weapons (*Id.* 60). When defeated, they fled with rapidity, throwing their shields upon their backs, to protect them from the missiles of the pursuers. (*Xen. Anab.* vii. 4. § 17.)

About the time of the Peloponnesian War, Thrace began to be to the countries around the Aegean what Switzerland has long, to its disgrace, been to the despotic powers of modern Europe, a land where men might be procured to fight for any one who could hold out sufficient inducements in the shape of pay or plunder. (*Thucyd.* vii. 27, et alibi; *Xen. Anab.* i. pass.; *Just.* xi. 1 & 9.) The chief causes of this, apart from the character of its people, appear to have been the want of any central government, and the difficult nature of the country, which rendered its savage independence tolerably secure; so that there was nothing to restrain those who might wish to seek their fortune in foreign warfare. During the period of Macedonian supremacy, and after its close, under the Roman power, Thracians are often mentioned as auxiliaries in Macedonian and Roman armies; but few of these, it is probable, were volunteers. (*Liv.* xxxi. 39, xlii. 29, 51, et al.; *Caes. B. C.* iii. 4; *Vell. Pat.* ii. 112; *Tac. Hist.* i. 68, &c.) Cicero (*de Prov. Cons.* 4) seems to imply that Thracians were sometimes hired to assassinate like the modern Italian bravos; these were perhaps gladiators, of whom great numbers were Thracians. Caligula gave the command of his German body-guard to Thracians. (*Suet. Calig.* 55.)

Another point in which the Thracians remind us of the natives of India, is mentioned by Thucydides (ii. 97) in these words: "The tribute of the barbarians and of the Greek cities received by Seuthes, the successor of Sitalces, might be reckoned at 400 talents of silver, reckoning gold and silver together. The presents in gold and silver amounted to as much more. And these presents were made not only to the king, but also to the most influential and distinguished of the Odrysae. For these people, like those of Thrace generally, differ in this respect from the Persians, that they would rather receive than give; and among them it is more shameful not to give when you are asked, than to be refused when you ask. It is true that abuses arise from this custom; for nothing can be done without presents." (Cf. *Liv.* xlii. 19, xlv. 42; *Tac. Germ.* 15.) Xenophon (*Anab.* vii. 3) gives some amusing illustrations of this practice among the Thracians.

Mention is often made of the singing and dancing of the Thracians, especially of a martial kind. Xenophon (*Anab.* vi. 1. § 5, seq.) gives an account of a dance and combat performed by some Thracians, to celebrate the conclusion of a peace between the remnant of the 10,000 Greeks and the Paphlagonians: they danced fully armed to the music of the flute, jumping up nimbly to a considerable height, and fencing with their swords: at last, one man struck another, to all appearance mortally and he fell as if

dead, though in reality not in the least injured. His antagonist then stripped off his armour, and went out singing the praises of Sitalces, while the other man was carried out like a corpse by his comrades (*cf. Ib. vii. 3. § 32, seq.; Tac. Ann. iv. 47.*)

Their music was rude and noisy. Strabo (x. p. 471) compares it to that of the Phrygians, whom, indeed, he regards as descended from the Thracians. Xenophon, in the passage last referred to, says that they played on horns and on trumpets made of raw ox-hide. Their worship of Dionysus and Cotytto was celebrated on mountain tops with loud instruments of music, shouting, and noises like the bellowing of cattle. (Strab. x. p. 470.)

Their barbarity and ferocity became proverbial. Herodotus (viii. 116) tells a story of a king of the Bisaltae, who punished his six sons for disobeying him by putting out their eyes. Seuthes, with his own hand, transfixed some of the Thyni who had been taken prisoners (*Xen. Anab. vii. 4. § 6*). Rhaecuporis invited his nephew to a banquet, plied him with wine, then loaded him with fetters, and afterwards put him to death. (*Tac. Ann. ii. 64, seqq.*) Thucydides (vii. 27, seq.) gives an instance of the ferocity of the Thracians in their massacre of the inhabitants of Mycalestus.

A truly barbarian trait in the character of the Thracians was their faithlessness, even to one another. This is especially shown in their disregard of their obligations towards the hostages whom they gave as securities for their observance of their engagements with others. Seuthes had received from the Thyni a number of old men as hostages; yet the Thyni, seeing a favourable opportunity, as they supposed, for renewing hostilities, at once seized it, apparently without a thought of the but too probable consequences of such conduct to their helpless countrymen. (*Xen. Anab. vii. 4. § 21; cf. Liv. xl. 22*). Some of the tribes inhabiting the Thracian coast of the Euxine were systematic wreckers [*SALMYDESSUS*]. Robbery, as we have seen, was considered honourable by them; and plunder was their chief inducement to engage in war. (Strab. vii. p. 318; *Cic. Pis. 34; Liv. xxvi. 25, xxxviii. 40, seq.*) Strabo (iii. pp. 164, 165), Mela (ii. 2), and Tacitus (*Ann. iv. 51*) bear witness to the bravery of the Thracian women.

The deity most worshipped by the Thracians was Dionysus, whom they, as well as the Phrygians, called Sabazius. (*Schol. Aristoph. Vesp. 9.*) The mythical stories respecting Orpheus and Lycurgus are closely connected with the worship of this god, who had an oracle on Rhodope, in the country of the Satrae, but under the direction of the Bessi [*SATRAE*]. Herodotus (vii. 111) states that the mode of delivering the answers of this oracle resembled that which prevailed at Delphi. He compares also the worship of Artemis (whose Thracian name was Bendis or Cotytto), as he had seen it celebrated by Thracian and Paeonian women, with some of the ceremonies at Delos (iv. 33). These resemblances may be accounted for on the supposition that the Thracian rites were derived from the original Pelasgian population, remnants of which may have maintained themselves amid the mountain fastnesses; as Niebuhr holds (*Ethnog. and Geog. i. p. 287*) was the case with the Paeonians, who are mentioned by Herodotus in the passage last referred to. (On the Thracian divinities, see Strabo, x. pp. 470, 471; *Soph. Antig. 955, seq.; Plin. xvi. 62; and the articles BENDIS, COTYRS, and RHŒA, in the Dict. Biog. and Myth.*)

It has sometimes been asserted that the Thracians were accustomed to sacrifice human victims to their divinities; but this appears to be either a narrow generalisation, or a confounding of them with other races; for we find no reference to such a custom any of the ancient accounts of their customs. Herodotus, it is true, states (ix. 119) that when the Persian Oeobazus fell into the hands of the Apinthei, after the taking of Sestos by the Persians, they sacrificed him to their local god Panassa; but from the next words (*τοῦτον τὸν ἄνθρωπον*) it is clear that he regarded the practice as characteristic of the Apinthei, and not as one common to all Thracians: nor is it conceivable that he would have omitted to mention so striking a custom, in his general description of Thracian customs, which has been already quoted (v. 3, seq.); nor is the practice of slaying the favourite wife as a reward for her deceased husband cannot with any propriety be called a sacrifice.

Whether indulgence in wine was regarded as a part of the homage due to Dionysus, or as a means of sensual gratification, certain it is that it was prevalent in Thrace, and frequently mixed with violent and sanguinary quarrels: "his is usum laetitiae scryphis pugnare Thracum est," says Horace, and evidence is not wanting in support of the accusation. Ammianus (xxvii. 4. § 9) describes the Odrusae as so fond of bloodshed that, at the banquets, after eating and drinking to satiety, they used to fall to blows with one another. Lucan (*Ann. iv. 48*) relates that the Thracians fought with Poppaeus Sabinus against their fellow-countrymen, indulged to such a degree in luxury and drinking that they kept no guard at night, so that their camp was stormed by their despotic brethren, who slew great numbers of them. Xenophon tells us that at his first interview with Seuthes, they drank horns of wine to each other's health, according to the Thracian custom (*Anab. vii. 2. § 10*). At the banquet which Seuthes afterwards gave to Xenophon and some other important persons, drinking seems to have been deep. Xenophon states that he had indulged freely; and he was very astonished that when Seuthes rose from the table, he manifested no signs of intoxication. (*Ib. § 26, seqq.*) The Thracians are said to have had a custom, which prevailed in England as late as the last century, of compelling all the guests to drink the same quantity. (*Callim. ep. Adon. i. p. 442.*) The Odrusian auxiliaries of Demetrius poured great quantities of wine upon the faces of their alain comrades. (*Xen. Hell. iii. 2. § 5*). It would appear from Mela (ii. 2), that some of the Thracians were unacquainted with wine, but practised a mode of producing intoxication: while feasting, they threw into the fires around which they were sitting certain seeds, the fumes of which caused a deadly kind of drunkenness. It is possible that these may have been the seeds of hemp, which, as we have seen, probably grew in Thrace, and contained a well known, a narcotic principle.

The Thracians against whom Seuthes led his forces lived in villages (*Ib. § 43*), the houses being fenced round with large stakes, within the inclosure formed by which their sheep were secured (*Ib. § 14; cf. Tac. Ann. iv. 49*).

Pliny (vii. 41) states that the Thracians had a custom of marking their happy or unhappy days, by placing a white or a black stone in a vessel at the close of each day. On any one's death, the vessel

belonging to him was emptied, the stones were separately counted, and his life pronounced to have been happy or the reverse, as the white or the black were more numerous.

V. HISTORY.—Thrace is one of those countries whose people, not being sufficiently civilised to establish a national government or to possess a national literature, cannot have histories of their own. We become acquainted with the Thracians at second hand, as it were, through the narrations of foreigners, who necessarily make them subordinate to their own countrymen; and therefore it is only in connection with foreign states that their history has been recorded. Hence it is fragmentary, and, consequently, often obscure; nor would its importance, indeed, repay the labour that might be employed in elucidating it, even if we possessed the requisite materials. Destitute of union, the Thracians, notwithstanding their numbers, their wide diffusion, their powers of endurance, and their contempt of death, exerted no perceptible influence upon the general course of history; but were reduced, in spite of their wild love of independence, to assist, as humble allies or subjects, in the aggrandisement of the more civilised or politic races with which they came in contact. These were the Greeks, the Persians, the Macedonians, and the Romans, with the successors of the last in the Eastern Empire. We shall now briefly state the leading points of their history, as connected with that of the nations just mentioned; referring the reader for details, especially as to the little that is known of their purely internal affairs, to the articles in this work which relate to the Bessi, ODRYSAE, and other prominent Thracian tribes.

We pass over the alleged conquest of Thrace by Sesostris (Herod. ii. 103; Diod. i. 53), and that said to have been effected by the Teucri and Mysi before the Trojan War (Herod. vii. 20; cf. Eurip. *Rhes.* 406, seq.), and come at once to the strictly historical periods.

The first connection of the Greeks with Thrace was through colonies planted upon its various coasts, the original object of which seems generally to have been of a commercial kind. Only an approximation to the date of most of these can be made, since the majority were established long before the commencement of authentic history. Byzantium and Selymbria, colonies of Megara, belong to the seventh century B. C., the year 675 B. C. being assigned for the foundation of the former. In 651 B. C. an unsuccessful attempt is said to have been made by settlers from Clazomenae to establish themselves at Abdera (Solin. x. 10); but that city was not actually founded till 560 B. C., and then by emigrants from Teos. (Herod. i. 168.) Mesembria, on the Euxine, was a colony of the Byzantians and Chalcedonians, who abandoned their cities on the approach of the Phoenician fleet, B. C. 493. (Id. vi. 33.) When Dicaea, Maronea, and Aenus, all on the south coast, were established, is not known; which is the case also with Cardia and Sestus in the Chersonesus. That these settlements were generally exposed to the hostility of their Thracian neighbours, there can be no doubt, though we rarely have their infant struggles so fully recorded as in the instance of Amphipolis. The Athenians sent no less than 10,000 men (B. C. 65) to found a colony there; and they succeeded in driving off the Edonians who occupied the country; but having advanced into the interior, they

were defeated at Drabescus by the natives, and compelled to abandon the country. About thirty years afterwards, however, the Athenians returned, and this time overcame all resistance. Sometimes the relation between the Greeks and the Thracians was of a more friendly description. Thus, in the time of Peisistratus, the Dolonci, who dwelt in the Chersonesus, invited Miltiades (the elder) to rule over them, as they were unable to cope with their neighbours the Apsinthii; and this led to the Athenians obtaining a firm footing in that most important and valuable district. (Herod. vi. 34, seq.) By these various means the Greeks had obtained possession of nearly the whole coast of Thrace, a considerable period before the commencement of the great contest between themselves and the Persian empire. Of the interior they appear to have known scarcely anything whatever; and although in some cases the surrounding barbarians may have been brought into subjection (Byzantium is said to have reduced the Bithynian Thracians to the condition of tributary perioeci), yet this was rarely the case. On the contrary, it is clear from Thucydides (ii. 97), that the Greeks sometimes paid tribute to the native kings. The Greeks, even when dwelling among hostile strangers, showed their tendency to separation rather than to union; and hence their settlements on the Thracian coast never gained the strength which union would have conferred upon them. Each city had a government and to a great extent a history of its own; and we must therefore refer the reader for information respecting those states to the separate articles in this work devoted to them.

The first Persian expedition to Thrace was that of Darius, who crossed the Bosphorus with his army about B. C. 513 (or 508, as some authorities hold). As the principal object of Darius was to chastise the Scythians for their invasion of Asia in the reign of Cyaxares, he took the shortest route through Thrace, where he met with no opposition. The Greeks whom he found there were required to follow in his train to the Danube: among them was the younger Miltiades, the destined hero of Marathon, who then ruled over the Chersonesus, as his uncle had formerly done, and who had married the daughter of a Thracian king. (Herod. vi. 39.)* On returning from the north, Darius directed his march to the Hellespont, and before crossing from Sestus into Asia, erected a fort at Doriscus, near the mouth of the Hebrus. (Herod. iv. 89—93, 143, 144, vii. 59.) Megabazus was left with 80,000 men to subdue the whole of Thrace, a task which he began by besieging Perinthus, which, though previously weakened by the attacks of the Paconians, made a brave but fruitless resistance. After this, Megabazus reduced the country into subjection, though perhaps only the districts near the sea. (Herod. v. 1, 2, 10.) That his conquests extended as far as the Strymon appears from Darius's grant of a district upon that river to Histiaeus, who founded there the town of Myrcinus. (Herod. v. 11.) Megabazus soon returned to Asia; and it seems probable that he took with him the greater part of his army; for if the Persians had maintained

* Instances occur in later times of the intermarriage of Greeks with Thracians: thus the wife of Sitalces was a daughter of Pythes, a citizen of Abdera (Thucyd. ii. 29); and Iphicrates married a daughter of the Thracian king Cotys. (Nep. *Iph.* 3.)

a powerful force in Thrace, the Paeonians could hardly have succeeded in making their escape from Phrygia back to the Strymon (Id. v. 98), nor could the revolted Ionians (B. C. 498) have taken Byzantium and all the other cities in that country. (Id. v. 103.) It is to this period that we must refer the invasion of the Scythians, who are said to have advanced as far as the Chersonesus, thus occasioning the temporary flight of Miltiades, who, they were aware, had assisted Darius in his attack upon their country. (Id. vi. 40.)

After the suppression of the Ionian revolt (B. C. 493), the Phoenician fleet sailed to the Hellespont, and again brought the country under the Persian dominion, Cardia being the only city which they were unable to take. (Id. vi. 33.) Miltiades made his escape from the Chersonesus to Athens, on hearing of the approach of the hostile fleet. (Id. 41.)

Next year Mardonius led an army across the Hellespont, and advanced as far as Macedonia; but his fleet having been wrecked off Mount Athos, and his land forces having suffered considerably in a war with the Thracians, who then occupied the country W. of the Strymon, he retraced his steps, and transported his shattered army into Asia (Id. vi. 43, seq.).

It was not till B. C. 480 that the vast army under the command of Xerxes crossed the Hellespont by the famous bridges which spanned the strait from Abydos to Sestos. Of his march through Thrace, Herodotus gives an interesting account (vii. 108—115); but, as he met with no opposition, we need not dwell upon these circumstances.

After the disastrous battle of Salamis, Xerxes, with an escort of 60,000 men, hastened back by the same road which he had so recently trod in all the overweening confidence of despotic power; in Thrace, his miserable troops suffered greatly from hunger and consequent disease, but do not appear to have been openly attacked. (Herod. viii. 115, seq.).

Next year (B. C. 479) was fought the battle of Plataeae in which Thracians formed part of the motley host arrayed against Greek freedom (Id. ix. 32). Artabazus led the 40,000 men, who alone remained of the Persian army, by forced marches through Thessaly, Macedonia, and Thrace. He struck through the interior of the latter country, probably for fear of the Greek cities on the coast; but he encountered enemies as much to be dreaded, and lost a great part of his army by hunger, fatigue, and the attacks of the Thracians, before he reached Byzantium.

It was now the turn of the victorious Greeks to assail their foes in their own territories. Thrace, with the exception of Doriscus, was soon cleared of the Persians. After the battle of Mycale, their fleet sailed to the Hellespont, where the Athenians laid siege to Sestos, which was taken early in the following year (B. C. 478) [SESTUS]. Eion, at the mouth of the Strymon, made a desperate resistance; but at length (B. C. 476) fell into the hands of Cimon and the Athenians, after its Persian governor had put to death all his family, and finally himself. (Herod. vii. 107; cf. Thucyd. i. 98.) Byzantium had been taken by Pausanias the year before. Thus the Persians were driven out of Europe, and the Greek settlements in Thrace resumed their internal freedom of action, though most of them, it is probable, were under the supremacy of Athens, as the chosen head of the great Greek confederacy.

During the administration of Pericles, 1000 Athenian citizens were settled in the Thracian Chersonesus, which was always the chief stronghold of

Athens in that quarter. Under the auspices of the same statesman, in B. C. 437, the Athenians succeeded in founding Amphipolis, the contests for the possession of which occupy a very prominent place in the subsequent history of Greece. [AMPHIPOLIS, Vol. I. p. 126.]

About this time flourished the most powerful Thracian kingdom that ever existed, that of the Odrysae, for the history of which see ODYSÆAR, Vol. II. pp. 463—465. At the commencement of the Peloponnesian War (B. C. 431), the Athenians entered into an alliance with Sitalces, the king of the Odrysae (Thucyd. ii. 29), who, they hoped, would enable them to subdue all opposition to their supremacy in the Chalcidic peninsula. In consequence of this alliance, Sitalces led (B. C. 429) a vast host into Macedonia, the ruler of which supported the enemies of Athens: he encountered no opposition, yet was compelled by want of supplies to return to Thrace, about a month after he had left it (Id. 95—101). But although Sitalces was an ally of Athens, this did not prevent Brasidas from having great numbers of light-armed Thracians in his armies, while commanding the Spartan forces in the neighbourhood of Amphipolis (B. C. 422).

It would occupy too much space to relate minutely the various turns of fortune which occurred in Thrace during the Peloponnesian War. The principal struggle in this quarter was for the command of the Bosphorus and Hellespont, so important, especially to the Athenians, on account of the corn trade with the Euxine, from which Athens drew a large part of her supplies. Hence many of the most important naval battles were fought in the Hellespont: and the possession of Byzantium and Sestos was the prize of many a victory. The battle of Aegospotami, which terminated the long contest for supremacy, took place to the S. of Sestos, B. C. 405. By the peace concluded next year, Athens gave up all her foreign possessions; and those in the east of Thrace fell into the hands of the Spartans and Persians. [SEE BYZANTIUM, SESTUS, &c.]

When the remnant of the 10,000 Greeks returned (B. C. 400) to Europe, they were engaged by Sestus, an Odrysian prince, to assist him in recovering the dominions which had belonged to his father, in the south eastern part of Thrace. (Xen. *Anab.* vii. par.) Having thus been reinstated in his principality, he showed his gratitude to the Greeks, by sending auxiliaries to Dercyllidas, who commanded the Spartan forces against the Persians, with whom they were now (B. C. 399) at war (Xen. *Hell.* iii. 2). Next year Dercyllidas crossed over into the Chersonesus and erected a wall across its northern extremity, as a protection to the Greek inhabitants, who were exposed to constant attacks from their barbarous neighbours (Id. 2. § 8—10). The same general successfully defended Sestus from the combined forces of Conon and Pharnabazus (B. C. 394: Id. iv. 8 § 5, seq.). But in B. C. 390 Thrasybulus restored Athenian influence in Thrace, by forming an alliance with two native princes, and by establishing democracy at Byzantium (Id. § 25, seq.); and his success was confirmed by the victory of Iphicrates over Anaxibius the next year (Id. § 34). The peace of Antalcidas, however, released all the Greek states from their connection with Athens, and virtually gave the supremacy to Sparta (B. C. 387).

Nothing of any importance happened in Thrace after this event till the accession of Philip II. to the throne of Macedonia (B. C. 359). This able but un-

scrupulous monarch at once began his career of aggrandisement towards the east. He contrived to get possession of Amphipolis (B.C. 358), and thus obtained a secure footing from which he might extend his dominions in Thrace as opportunity offered. At this time there were three native Thracian princes, probably brothers, who seem to have ruled over most of the country. According to Justin (viii. 3), Berisades and Amadocus, two of them, chose Philip as judge of their disputes; of which position he treacherously availed himself to seize upon their dominions. Though this statement is not supported, we believe, by any other ancient author, yet it is probably true; for such conduct is highly characteristic of the Macedonian monarch; and the almost entire disappearance from history of these Thracian princes soon after Philip's accession, would thus be accounted for. Cersobleptes, the third brother, who seems to have had the E. portion of Thrace, maintained a long struggle against his ambitious neighbour. In B.C. 357 he ceded the Chersonesus to the Athenians, who sent a colony to occupy it four years afterwards. [See CERSOBLEPTES, *Dict. Biog.* Vol. I. p. 674 : SESTUS.] Philip at various times marched into Thrace, and repeatedly defeated Cersobleptes, whom he at length (B.C. 343) completely subdued and rendered tributary. Next year he established colonies in the eastern part of Thrace, and acts of hostility occurred between him and Diopithes, the Athenian commander in that quarter. Philip was occupied the next three years in Thrace, and laid siege to Perinthus and Byzantium, which were in alliance with Athens, whose forces, commanded by Phocion, compelled Philip to abandon the sieges; and he soon afterwards left Thrace, to advance towards the south against the confederate Greeks. On his departure Phocion recovered several of the cities in which Macedonian garrisons had been placed.

Notwithstanding these checks, Philip had brought under his command a great part of Thrace, especially on the south coast: he had, above all, completely incorporated with his kingdom the district between the Strymon and the Nestus, and from the mines of the Pangaea, which he seized in B.C. 356, he obtained abundant supplies of the precious metals.

Philip was assassinated B.C. 336; next year his successor, Alexander the Great, marched across the Haemus to attack the Triballi; but his chief attention was bestowed upon the preparations for the Asiatic expedition, which he entered upon next year, crossing the Hellespont from Sestus.

On the death of Alexander (B.C. 323), Thrace was allotted to Lysimachus, who was soon involved in hostilities with Seuthes, a king of the Odrysae. The reader is referred to the account of Lysimachus [*Dict. Biog.* Vol. II. pp. 867—870] for details respecting his government of Thrace: the result of his various wars was that his sway was firmly established over all the countries south of the Danube, as far as the confines of Macedonia; the Greek cities on the Euxine were garrisoned by his troops; and though many of the native tribes, in the more inaccessible districts, no doubt retained their freedom, yet he had completely defeated all their attacks upon his power. In B.C. 309 he founded Lysimachia, near the northern extremity of the Chersonesus and made it his capital. Having engaged in a war with Seleucus, the ruler of Syria, he advanced to meet his antagonist in Asia, and was defeated and slain at Corupedion (B.C. 281), upon which Seleucus passed

over into Europe and took possession of Thrace. Next year, however, he was assassinated by Ptolemy Ceraunus, who was thereupon acknowledged king; but shortly afterwards a vast horde of Celts invaded the country, and Ptolemy was slain in a battle with them. Anarchy now prevailed for some years in the country: the Celts again advanced to the south in B.C. 279, and under Brennus penetrated as far as Delphi, on their repulse from which they retreated northwards, and some of them settled on the coast of Thrace.

For nearly fifty years after this time little mention is made of Thrace in history; it appears to have been annexed to Macedonia; but the rulers of that kingdom were too insecure, even in their central dominions, to be able to exercise much control over such a country as Thrace, inhabited now by races differing so widely as the Thracians, the Greeks, and the Celts, and offering so many temptations to the assertion of independence. [See ANTIGONUS GONATAS, DEMETRIUS II., and PYRRHUS, in *Dict. Biog.*]

About B.C. 247, the fleet of Ptolemy Euergetes captured Lysimachia and other important cities on the coast; and they remained for nearly half a century under the kings of Egypt. (Polyb. v. 34, 58.)

In B.C. 220, Philip V. ascended the throne of Macedonia. Under him the Macedonian power regained something of its old prestige; and had it not been brought in collision with Rome, it might have become as extensive as in former times. But Philip unfortunately directed his ambitious views in the first instance towards the West, and thus soon encountered the jealous Republic. It was not till B.C. 211 that Philip commenced his enterprises against Thrace: he then led an army into the country of the Maedi, who were in the habit of making incursions into Macedonia. Their lands were laid waste, and their capital, Iamphorina, compelled to surrender. Having made peace with the Romans (B.C. 205), he invaded Thrace, and took Lysimachia. In B.C. 200, he again attacked that country, both by sea and land; and it is evident that he did not anticipate much resistance, since he took with him only 2000 infantry and 200 cavalry. Yet with this insignificant force, aided by the fleet, he made himself master of the whole of the south coast, and of the Chersonesus. He then laid siege to Abydos, and after a desperate resistance took it (Liv. xxi. 16). This seems to have hastened the declaration of war on the part of the Romans; a war which lasted till B.C. 196, when Philip was reduced to procure peace by surrendering all his conquests, and withdrawing his garrisons from the Greek cities (Liv. xxxiii. 30). L. Stertinius was sent to see that these terms were complied with (ib. 35). But scarcely had the cities been evacuated by the Macedonian garrisons, when Antiochus the Great crossed the Hellespont, and took possession of the Chersonesus, which he claimed as a conquest of Seleucus (ib. 38). He refused to comply with the demand of the Romans, that he should withdraw his army from Europe; but left his son Seleucus to complete the restoration of Lysimachia, and to extend his influence, which seems to have been done by placing garrisons in Maroneia and Aenus.

In the war which ensued between the Romans and Antiochus (B.C. 190), Philip rendered the former good service, by providing everything necessary for their march through Thrace, and securing them from molestation by the native tribes (Liv. xxxvii. 7). Antiochus was defeated by Scipio at Magnesia, and

sued for peace, which was at length granted to him (s.c. 188) on condition of his abandoning all his dominions west of the Taurus (Liv. xxxviii. 38). The Romans gave the Chersonesus and its dependencies to their ally Eumenes (*ib.* 39). As indicative of the internal condition of Thrace, even along the great southern road, the account which Livy (*ib.* 40, seq.) gives of the march of the consul Manlius' army through the country on its return from Asia Minor, is highly interesting. The army was loaded with booty, conveyed in a long train of baggage-waggons, which presented an irresistible temptation to the predatory tribes through whose territories its route lay. They accordingly attacked the army in a defile, and were not beaten off until they had succeeded in their object of sharing in the plunder of Asia.

The possession of the Chersonesus by Eumenes soon led to disagreements with Philip, who was charged by Eumenes (s.c. 185) with having seized upon Maroneia and Aenus, places which he coveted for himself. (Liv. xxxix. 24, 27). The Romans insisted upon the withdrawal of the Macedonian garrisons (s.c. 184), and Philip, sorely against his will, was obliged to obey. He wreaked his anger upon the defenceless citizens of Maroneia, by coniving at, if not actually commanding, the massacre of a great number of them (*ib.* 33, 34). In the course of the disputes about these cities, it was stated that at the end of the war with Philip, the Roman commissioner, Q. Fabius Labeo, had fixed upon the king's road, which is described as nowhere approaching the sea, as the S. boundary of Philip's possessions in Thrace; but that Philip had afterwards formed a new road, considerably to the S., and had thus included the cities and lands of the Maronitæ in his territories (*ib.* 27).

In the same year, Philip undertook an expedition into the interior of Thrace, where he was fettered by no engagements with the Romans. He defeated the Thracians in a battle, and took their leader Amadocus prisoner. Before returning to Macedonia he sent envoys to the barbarians on the Danube to invite them to make an incursion into Italy (*ib.* 35). Again in s.c. 183, Philip marched against the Odrysæ, Dentheletæ and Bessi, took Philippopolis, which its inhabitants had abandoned at his approach, and placed a garrison in it, which the Odrysæ, however, soon afterwards drove out (*ib.* 53). In s.c. 182, Philip removed nearly all the inhabitants of the coast of Macedonia into the interior, and supplied their places by Thracians and other barbarians, on whom he thought he could more safely depend in the war with the Romans, which he now saw was inevitable (Liv. xl. 3). He had done something of the same kind a few years before (Id. xxxix. 24).

Philip's ascent of the Haemus, already referred to, took place in s.c. 181: on the summit he erected altars to Jupiter and the Sun. On his way back his army plundered the Dentheletæ; and in Macedonia he took a town called Petra. (Liv. xl. 21, seq.)

Philip died in s.c. 179, and his successor Perseus continued the preparations which his father had made for renewing the war with Rome, which did not begin, however, till s.c. 171. The Romans had formed an alliance the year before with a number of independent Thracian tribes, who had sent ambassadors to Rome for the purpose, and who were likely to be formidable foes to Perseus. The Romans took care to send valuable presents to the principal Thracians, their ambassadors having no

doubt impressed upon the senate the necessity for compliance with this national custom. (Liv. xlii. 19.)

The advantage of this alliance was soon seen. Cotys, king of the Odrysæ, was an ally of Perseus, and marched with him to meet the Romans in Thessaly, but with only 1000 horse and 1000 foot, a force which shows how greatly the power of the Odrysian monarchy had declined since the reign of Sitalces (*ib.* 51). Cotys commanded all the Thracians in Perseus's army in the first engagement with the Roman cavalry, which was defeated (*ib.* 57, seq.). When Perseus retreated into Macedonia a report was brought that the Thracian allies of Rome had invaded the dominions of Cotys, whom Perseus was therefore obliged to dismiss for their protection (*ib.* 67), and he does not seem to have personally taken any further part in the war, though he probably sent part of his forces to assist Perseus (xliv. 42). His son Bitis fell into the hands of the Romans, after the battle of Pydna (s.c. 168), which put an end to the Macedonian kingdom. Cotys sent ambassadors to Rome to endeavour to ransom his son, and to excuse himself for having aided with Perseus. The senate rejected his offers of money, but liberated his son, and gave a considerable sum to each of the Thracian ambassadors. The reason it assigned for this generosity was the old friendship which had existed between Rome and Cotys and his ancestors. The Romans were evidently unwilling to engage in a war with the Thracian people at this time; and were anxious to secure friends among them for the sake of the peace of Macedonia, which, though not yet nominally made a province, was completely in their power. They sent (s.c. 167) three commissioners to conduct Bitis and the other Thracians home; and at the same time, no doubt, to make observations on the state of that country. (Liv. xlv. 42).

After the fall of Perseus, the senate divided his dominions into four districts (*regiones*), the first of which included the territory between the Strymon and the Nestus, and all the Macedonian possessions east of the latter, except Aenus, Maroneia, and Abdera: Bisaltica and Sintice, west of the Strymon, also belonged to this district, the capital of which was Amphipolis. (*ib.* 29.) It is important to recollect that the Thrace spoken of by the Latin historians subsequently to this time does not include the territories here specified, which thenceforth constituted an integral part of Macedonia.

From the year s.c. 148, when the Romans undertook the direct government of that country, they were brought into contact with the various barbarous nations on its frontiers, and were continually at war with one or another of them. For some years, however, their chief occupation was with the Scordisci, a people of Celtic origin which had settled south of the Danube, and often made devastating incursions into the more civilised regions of the south. They are sometimes called Thracians (e.g. by Florus, iii. 4; cf. Amm. xxvii. 4. § 4), which is the less surprising when we remember that great numbers of Celts had settled in Southern Thrace, and would soon be confounded under a common name with the other occupants of the country. The history of all this period, up to the time of Augustus, is very obscure, owing to the loss of so great a part of Livy's work; enough, however, appears in other writers to show that Thrace was left almost entirely to its native rulers, the Romans rarely interfering with it except when provoked by the predatory incursions

of its people into Macedonia: they then sometimes made retaliatory expeditions into Thrace; but seem generally to have made their way back as soon as the immediate object was accomplished. The relation existing between the Romans and the Thracians, for more than a century after the conquest of Macedonia, thus bears a close resemblance to that which has long existed between our own countrymen and the Caffres.

During the years B.C. 110, 109, the Consul M. Minucius Rufus was engaged in hostilities with the Scordisci and Triballi; and, according to Florus (*l.c.*), laid waste the whole valley of the Hebrus (*cf. Eutr. iv. 27*). In B.C. 104, Calpurnius Piso penetrated into the district of Rhodope (*Flor. l.c.*). In B.C. 92, the Maedi defeated the prætor, C. Sentius, and then ravaged Macedonia (*Cic. Pis. 34; Liv. Epit. 70*). After the breaking out of the Mithridatic War (B.C. 88), mention is made in several successive years of the incursions of the Thracians into the Roman provinces, and it is probable that they were acting in concert with Mithridates, whose general Taxiles, in B.C. 86, led a vast army through Thrace, and Macedonia to the assistance of Archelaus. (*Liv. Epit. 74, 76, 81, 82*). On the final defeat of Archelaus, Sulla directed his march towards Asia through Thrace B.C. 84, and, either to punish the people for their connection with Mithridates, or because they opposed his passage, made war upon them with complete success (*Id. 83*). C. Scribonius Curio defeated the Dardani, and penetrated to the Danube, being the first Roman who had ventured into that part of Europe (B.C. 75; *Liv. Epit. 92; Eutr. vi. 2*). Curio was succeeded as governor of Macedonia by M. Lucullus (B.C. 73), who defeated the Bessi in a pitched battle on Mount Haemus, took their capital, and ravaged the whole country between the Haemus and the Danube (*Liv. Epit. 97; Eutr. vi. 10*). The Bessi were again conquered in B.C. 60 by Octavius, the father of Augustus (*Suet. Aug. 3; cf. Ib. 94; Freinsh. Suppl. cxxxv. 2*). In the years B.C. 58, 57, Piso, so well known to us from Cicero's celebrated speech against him, was governor of Macedonia; and, if we may believe Cicero, acted in the most cruel and faithless manner towards the Bessi and other peaceable Thracian tribes. (*Pis. 34, de Prov. Cons. 2, seq.*). From the latter passage it appears that although Thrace was not under the government of Rome, yet the Romans claimed the right of way through it to the Hellespont; for Cicero calls the Egnatian Way "via illa nostra militaris."

In the civil war between Caesar and Pompey, several Thracian princes furnished the latter with auxiliary forces. Why they interfered in the contest, and why they preferred Pompey to Caesar, are matters of conjecture only. Pompey had been chiefly engaged all his life in the East, Caesar in the West; and that is probably sufficient to account for the greater influence of Pompey in Thrace. (*Caes. B. C. iii. 4; Flor. iv. 2; Dion Cass. xli. 51, 63, xlvii. 25*).

At the time of Caesar's death two brothers, Rhascuporis and Rascus [*Dict. Biog. Vol. III. p. 647*] ruled over the greater part of Thrace; and when the war broke out between the triumvirs and the republican party, Rhascuporis sided with the latter, while Rascus aided the former. By this plan they hoped to be safe, whichever party might be victorious; and it is said that their expectations were realised.

When the power of Rome was at length wielded by Augustus without a rival, the relation of Thrace

to the Roman state seems to have become in many respects like that which the native princes of India long bore to the British. The Thracian kings were generally allowed to exercise, without restraint, their authority over their own subjects, and when needful it was supported by the arms of Rome. But all disputes among the native rulers were referred to the decision of the emperors, who disposed of the country as its acknowledged lords. These subject princes were expected to defend Thrace from external and internal foes; to assist the Romans in the field; to allow them to enlist troops, and in other ways to exercise the rights of sovereignty. For illustrations of these statements we must refer the reader to Tacitus, especially to the following passages: *Ann. ii. 64—67, iii. 38, 39, iv. 5, 46—51*. The few Thracian coins which are extant afford a proof of the dependent character of the Thracian kings; they bear on the obverse the effigy of the reigning emperor, on the reverse that of the native prince. [*See Dict. Biog. Vol. III. p. 653.*]

The interference of the Romans in the government of Thrace was not submitted to by the nation at large without several severe struggles. The most formidable of these occurred about B.C. 14, the fullest account of which is given by Dion Cassius (*lib. liv.*). The leader in this insurrection was Vollogaesus, a Bessian priest of Bacchus, who availed himself of his sacerdotal character to inflame the religious feelings of his countrymen. Having thus assembled a large army, he attacked, defeated, and slew Rhascuporis, a king under Roman protection; his uncle, Rhometalces, was next assailed and compelled to flee: the insurgents pursued him as far as the Chersonesus, where they devastated the country and captured the fortified places. On receiving information of these proceedings, Augustus ordered L. Piso, the governor of Pamphylia, to transport his army into Thrace, where, after a three years' war and several reverses, he at length succeeded in subduing the Bessi, who had adopted Roman arms and discipline. They soon afterwards made a second attempt to regain their independence; but were now easily crushed. (*Vell. Pat. ii. 98; Tac. Ann. vi. 10; Sen. Ep. 83; Flor. iv. 12; Liv. Epit. 137.*)

After this war, the Romans gradually absorbed all the powers of government in the country. Germanicus visited it in A.D. 18, and introduced reforms in its administration (*Tac. Ann. ii. 54*). A system of conscription seems to have been imposed upon the Thracians about A.D. 26 (*Ib. iv. 46*). The last native prince of whom we find any mention is Rhometalces II., who, in A.D. 38, was made by Caligula ruler over the whole country; and at length, in the reign of Vespasian (A.D. 69—79), Thrace was reduced into the form of a province. (*Suet. Vesp. 8; Eutr. vii. 19; cf. Tac. Hist. i. 11.*) The date of this event has been disputed on the authority of the Eusebian Chronicle, which states that it took place in A.D. 47, in the reign of Claudius; but the statement of Suetonius is express on the point. It is possible that Rhometalces II. may have died about the year last mentioned; and if Claudius refused to appoint a successor to him, this would be regarded as equivalent to incorporating the country in the Roman empire, although its formal constitution as a province was delayed; as we know was commonly the case. It is remarkable that Moesia was made a province upwards of 50 years before Thrace Proper, its first prætor being mentioned in A.D. 15. (*Tac. Ann. l. 79; cf. Ib. ii. 66; Plin. iii. 26. s. 29.*)

Thrace now shared in the general fortunes of the Roman world, on the division of which into the Eastern and Western Empires, it was attached to the former, being governed by the *Vicarius Thraciarum*, who was subordinate to the *Præfectus Prætorio Orientis*. Its situation rendered it extremely liable to the inroads of barbarians, and its history, so far as it is known, is little else than a record of war and devastation. The Goths made their first appearance there in A. D. 255; the emperor Probus, about A. D. 280, established in it 100,000 Bastarnæ. In A. D. 314, and again in 323, the emperor Licinius was defeated at Hadrianople by Constantine, who, in A. D. 334, settled a multitude of Sarmatians in Thrace, which, in 376, received another accession to its heterogeneous population, Valens having given permission to the Goths to reside in it. This gave rise to innumerable wars, the details of which are recorded by Ammianus (lib. xxii.). In 395 the devoted country was overrun by Alaric, and in 447 by the more dreadful Attila. Through all these misfortunes, however, Thrace remained in connection with the Eastern Empire, the capital of which was within its boundaries, until the year 1353, when the Turks, who had crossed over into Europe in 1341, obtained possession of the Thracian fortresses. Their leader Amurath conquered the whole country, except Constantinople, and made Hadrianople his capital. At length, in 1453, Constantinople itself was taken, and the Turks have ever since been the undisputed lords of Thrace.

VI. TOPOGRAPHY. — Under this head we shall merely collect such names as will serve to direct the reader to articles in this work, where fuller information is given.

Pliny (iv. 18: cf. Mela, ii. 2; Amm. xxvii. 4) enumerates the following as the principal Thracian tribes: Densetæ, Maedi, Bisaltæ, Digeri, Bessi, Elethi, Diobessi, Carbilesi, Bryasæ, Sapæi, Odromanti, Odryasæ, Cabyleti, Pyrogeri, Druger, Cænici, Hypsæti, Beni, Corpilli, Bottiasæ, Edoni, Seltæ, Priantæ, Dolonci, Thyni, Coelætæ. To these we may add, the Apsinthii, Bistones, Cicones, Satras, Dii, and Trausi.

Of the towns mentioned by Pliny (l. c.), these belonged to Thrace Proper: 1. On the coast (i.) of the Aegean: Oesyra, Neapolis, Datum, Abdera, Tirida, Dicaea, Maronea, Zone, and Aenus; to these must be added Amphipolis, Pistrus, Cosinthus, and Mesembria; (ii.) of the Chersonesus: Cardia, Lysimachia, Pachytæ, Callipolis, Sestus, Elæus, Coeloes, Tiristasis, and Panormus; besides these there were Alopecoonnesus and Agora; (iii.) of the Propontis: Bisanthe, Perinthus, and Selymbria; (iv.) of the Bosporus: Byzantium; (v.) of the Euxine: Mesembria, Anchialus, Apollonia, Thynias, Salmydessus, and Phinopolis. 2. In the interior: Philippopolis, Philippi, Scoutus, Topiris, Doriscus, Cypselæ, Apros, and Develtus. This is a very scanty list; but many of the principal inland towns were founded after Pliny's time: their names also were often changed. The following are some of the chief towns in the interior: Hadrianopolis, Plotinopolis, Trajanopolis, Tempyra, Nicopolis, Bercea, Iamporina, and Petra.

Besides the rivers mentioned in the course of this article, the following occur: the Bathynias, Pydaras or Atyras, Bargas, Cossinites, Compeatus, and Xerogypsus.

As to the political divisions of Thrace, Pliny (l. c.) states that it was divided into fifty *strategiæ*; but he describes Moesia as part of Thrace. According to

Ptolemy (iii. 11. § 8, seq.), its districts were Macedonia, Dentheletica, Sardica, Bessica, Drosica, Benica, Udiciesica, Salletica, Samaica, Coeletica, Sapæica, Corpillæica, Cænica, and Astica.

Ammianus (l. c.) states that in the 4th century Thrace was divided into six provinces, but of these only four belonged to Thrace south of the Hæmus: (i.) Thrace Proper (speciali nomine), including the W. part of the country; principal cities, Philippopolis and Bercea; (ii.) Haemimontus, i. e. the NE. district; chief towns, Hadrianopolis and Anchialus; (iii.) Europa, comprehending the SE. district; cities, Apri and Perinthus (Constantinople, being the capital of the whole Eastern Empire, was not regarded as belonging to any province); (iv.) Rhodope, comprising the SW. region; principal cities, Maximianopolis, Maroneia, and Aenus.

The principal modern writers in whose works information will be found respecting Thrace, have been mentioned in the course of this article. Among the other authors whom the reader may consult, we may name the following: Dapper, *Beschryving der Eilanden in de Archipel*, Amst. 1688, of which Latin and French translations were published at Amsterdam in 1703. Paul Lucas, *Voyage dans la Turquie, l'Asie, &c.* 2 vols. Amst. 1720. Choiseul, *Voyage Pittoresque dans l'Empire Ottoman*: of this work the first volume was published at Paris in 1782, the first part of the second not till 1809; the author died in 1817. A new edition, with many corrections and additions, was published in 4 vols. 8vo. at Paris in 1842. This work is devoted chiefly to the antiquities of the country; of which the plates contained in the illustrative Atlas which accompanies the book give many representations. Ami Boué's, *La Turquie d'Europe*, 4 vols. 8vo. Paris, 1840, is the most complete work yet written on the subject; its author, a man of great scientific acquirements, made two journeys in Turkey, in 1836, when he was accompanied by M. Viquessel, and in 1838. The first volume contains an elaborate account of the physical geography, geology, vegetation, fauna, and meteorology of the country; but takes little or no notice of its classical geography. A map is prefixed to it, which was a vast improvement on all that had preceded it; but it is now in its turn superseded by that of Kiepert, who has employed in its construction the materials afforded by M. Viquessel's reports already referred to. (Comp. Gatterer, *De Herodoti ac Thucydidis Thracia*, contained in the *Commentationes Soc. Reg. Gottin.* vol. iv. pp. 87—112, vol. v. pp. 57—88.

[J. R.]

THRACIA, in Asia. A district in Asia Minor on the coast of the Euxine, is sometimes called Thrace, and its inhabitants Thracians. (Herod. i. 28; Xen. *Anab.* vi. 2. § 14, et al.) This country is more commonly called Bithynia. [See BITHYNIA, Vol. I. p. 404.]

[J. R.]

THRA'CIUS BOSPORUS. [BOSPORUS.]
THRASYME'NUS LACUS [THRASIMENE.]

THRAUSTUS (Θραύστος, Xen.) or THRAE-STUS (Θραύστος), a town in the mountainous district of Acroëria in Elis, of unknown site. (Xen. *Hell.* vii. 14. § 14; Diod. xiv. 17.)

THRIA. [ATTICA, p. 328, b.]

THROASCA (Θρόασκα), a place in Carmania, mentioned by Ptolemy (vi. 8. § 14). Perhaps the modern Girost. [V.]

THRONI (Θρόνοι), a town and promontory on the SE. coast of Cyprus, distant 700 stadia from the promontory Curias. On the promontory of Throi

Pococke observed an ancient tower. (Strab. xiv. p. 682; Ptol. v. 14. §§ 2, 3; Engel. *Kypros*, vol. i. p. 99.)

THRONIUM (Θρόνιον: *Eth.* Θρόνιος, Θρονίτης, Θρονεύς). 1. The chief town of the Locri Epicnemidii, situated 20 stadia from the coast and 30 stadia from Scarpheia, upon the river Boagrius, which is described by Strabo as sometimes dry, and sometimes flowing with a stream two plethra in breadth. (Strab. ix. p. 436.) It is mentioned by Homer, who speaks of it as near the river Boagrius. (*Il.* ii. 533.) It was at one time partly destroyed by an earthquake. (Strab. i. p. 60.) At the beginning of the Peloponnesian War (B. C. 431) Thronium was taken by the Athenians. (Thuc. ii. 26; Diod. xii. 44.) In the Sacred War it was taken by Onomarchus, the Phocian general, who sold its inhabitants into slavery, and hence it is called by Scylax a Phocian city. (Diod. xvi. 33; Aesch. *de Fals. Leg.* p. 45, 33; Scylax. p. 23.) (Thronium is also mentioned by Polyb. ix. 41, xvii. 9; Enrip. *Iph. Aut.* 264; Liv. xxxii. 5, 6, xxxiii. 3, xxxv. 37, xxxvi. 20; Paus. v. 22. § 4; Lycophr. 1148; Ptol. iii. 15. § 7; Plin. iv. 7. s. 12; Steph. B. s. v.) The site of Thronium was ascertained by Meletius who found above the village *Románi*, at a place named *Paleókastro*, where some remains of the city still exist, a dedicatory inscription of the council and demos of the Thronienses. (Leake, *Northern Greece*, vol. ii. pp. 177, 178.)

2. A town in Greek Illyria in the neighbourhood of Amantia [AMANTIA], said to have been founded after the Trojan War by the Abantes of Euboea and the inhabitants of the Locrian Thronium. It was taken at an early period by the inhabitants of the neighbouring town of Apollonia, and annexed to their territory, as appears from an epigram inscribed on a dedicatory offering of the Apolloniatae at Olympia. (Paus. v. 22. §§ 3, 4.)

THRYON, THRYOESSA. [EPITALIUM.]

THULE (Θούλη, Ptol. ii. 6. § 32), a celebrated island in the Northern Ocean, discovered by the navigator Pytheas. Pytheas arrived at it after a voyage of six days from the Orades, in which it may be computed that he had accomplished about 3000 stadia. (Plin. ii. 77.) According to the account of Pytheas, he reached the polar circle, so that on this island the longest day was twenty-four hours, and there was constant day during the six summer months and constant night during the six winter ones. It was deficient in animals, and even the most necessary fruits, but produced a little corn. From the time of its discovery it was regarded as the most northerly point of the known world, although no further knowledge was obtained respecting it; and this view seems to be confirmed by its name, since in Gothic *Tiel* or *Tiule* (τέλος, goal) denoted the remotest land. (Strab. i. p. 63, ii. pp. 104, 114, iv. p. 201; Agath. i. 8; Prisc. *Perieg.* 587, sqq.; Mela, iii. 6; Plin. iv. 16. s. 30; Tac. *Agr.* 10; Virg. *G.* i. 30; Solin. c. 22, &c.; cf. Praetorius, *de Orbe Goth.* iii. 4. 3. p. 33; D'Anville, *Sur la Navig. de Pytheas*, p. 439; Rudbeck, *Atlant.* i. p. 514.) Ptolemy is the only writer who places Thule a great deal further S., though he undoubtedly had in view the island discovered by Pytheas; and according to him it would seem to have been the largest of the Shetland islands, or the modern *Mainland* (see ii. 3. § 32, i. 24. § 4, 6, 17, 20, vi. 16. § 21, vii. 5. § 12, viii. 3. § 3). Most modern geographers incline to the opinion that Pytheas meant *Iceland*; though according to others his

Thule is to be variously sought in *Norway*; in that part called *Thile* or *Thilemark*; in *Jutland*, the extreme point of which is called *Thy* or *Thyland*; or in the whole *Scandinavian peninsula* (Malte-Brun, *Geogr. Univ.* i. p. 120; Ortelius, *Theatr. Orb.* p. 103.) [T. H. D.]

THUMATA (Θουμάτα, Ptol. vi. 7. § 33; Plin. vi. 28. s. 32; Thamatha, *Not. Imp. Rom.* § 22, p. 37), a town of Arabia Felix, according to Ptolemy, and described by Pliny as distant 10 days' sail from Petra, and subject to the king of the Characeni.

THUMNA. [TAMNA.]

THUNUDROMON (Θουνούδρομον, Ptol. iv. 3. § 29), a Roman colony in Numidia. It seems to be the same place as the Tynidrumense oppidum of Pliny (v. 4. s. 4). [T. H. D.]

THURIA (Θουρία: *Eth.* Θουριδής), a town of Messenia, situated in the eastern part of the southern Messenian plain, upon the river Aris (*Pidhima*), and at the distance of 80 stadia from Pharae, which was about a mile from the coast (Paus. iv. 31. § 1). It was generally identified with the Homeric Antheia, though others supposed it to be Aepeia. (Paus. l. c.; Strab. viii. p. 360.) It must have been a place of considerable importance, since the distant Messenian gulf was even named after it (δ Θουριδής κόλπος, Strab. l. c.). It was also one of the chief towns of the Lacedaemonian Perioeci after the subjugation of Messenia; and it was here that the Third Messenian War took its rise, B. C. 464 (Thuc. i. 101). On the restoration of the Messenians by Epaminondas, Thuria, like the other towns in the country, was dependent upon the newly-founded capital Messene; but after the capture of this city by the Achaeans in B. C. 182, Thuria, Pharae, and Abia joined the Achaean League as independent members. (Polyb. xxv. 1.) Thuria was annexed to Laconia by Augustus (Paus. l. c.); but it was restored to Messenia by Tiberius. [MESSENIA, p. 345. a.] Pausanias found two cities of this name. The Thuriatae had descended from the summit of the lofty hill of the upper city to dwell upon the plain; but without abandoning altogether the upper city, where a temple of the Syrian goddess still stood within the town walls (Paus. iv. 31. § 2). There are considerable remains of both places. Those of Upper Thuria are on the hill of the village called *Paleókastro*, divided from the range of mountains named *Makryplidi* by a deep ravine and torrent, and which commands a fine view of the plain and gulf. The remains of the walls extend half a mile along the summit of the hill. Nearly in the centre of the ruins is a quadrangular cistern, 10 or 12 feet deep, cut out of the rock at one end, and on the other side constructed of masonry. The cistern was divided into three parts by two cross walls. Its whole length is 29 paces; the breadth half as much. On the highest part of the ridge there are numerous ruins, among which are those of a small Doric temple, of a hard brown calcareous stone, in which are cockle and muscle shells, extremely perfect. In the plain at *Paled Lutra* are the ruins of a large Roman building, standing in the middle of fig and mulberry grounds. Leake observes that "it is in an uncommon state of preservation, part even of the roof still remaining. The walls are 17 feet high, formed of equal courses of Roman tiles and mortar. The roof is of rubble mixed with cement. The plan does not seem to be that of a bath only, as the name would imply, though there are many appearances of the building having contained baths: it seems rather to have been the palace of some Roman

governor. As there are no sources of water here, it is to be supposed that the building was supplied by an aqueduct from the neighbouring river of *Pidhima*." (Leake, *Moraea*, vol. i. pp. 354, seq. 360; Boblaye, *Recherches*, &c. p. 105; Ross, *Reisen im Peloponnes*, p. 2; Curtius, *Peloponnesos*, vol. ii. p. 161.)

THURI (Θούριος: *Εὐθ. Θούριος*, Thurinus), called also by some Latin writers and by Ptolemy THURIUM (Θούριον, Ptol.), a city of Magna Graecia, situated on the Tarentine gulf, within a short distance of the site of Sybaris, of which it may be considered as having taken the place. It was one of the latest of all the Greek colonies in this part of Italy, not having been founded till nearly 70 years after the fall of Sybaris. The site of that city had remained desolate for a period of 58 years after its destruction by the Crotonians [SYBARIS]; when at length, in B.C. 452, a number of the Sybarite exiles and their descendants made an attempt to establish themselves again on the spot, under the guidance of some leaders of Thessalian origin; and the new colony rose so rapidly to prosperity that it excited the jealousy of the Crotonians, who, in consequence, expelled the new settlers a little more than 5 years after the establishment of the colony. (Diod. xi. 90, xii. 10.) The fugitive Sybarites first appealed for support to Sparta, but without success; their application to the Athenians was more successful, and that people determined to send out a fresh colony, at the same time that they reinstated the settlers who had been lately expelled from thence. A body of Athenian colonists was accordingly sent out by Pericles, under the command of Lampon and Xenocritus; but the number of Athenian citizens was small, the greater part of those who took part in the colony being collected from various parts of Greece. Among them were two celebrated names,—Herodotus the historian, and the orator Lysias, both of whom appear to have formed part of the original colony. (Diod. xii. 10; Strab. vi. p. 263; Dionys. *Lys.* p. 453; *Vit. X. Orat.* p. 835; *Plut. Peric.* 11, *Nic.* 5.) The new colonists at first established themselves on the site of the deserted Sybaris, but shortly afterwards removed (apparently in obedience to an oracle) to a spot at a short distance from thence, where there was a fountain named Thuria, from whence the new city derived its name of Thuri. (Diod. l.c.; Strab. l.c.) The foundation of Thuri is assigned by Diodorus to the year 446 B.C.; but other authorities place it three years later, B.C. 443, and this seems to be the best authenticated date. (Clinton, *F. H.* vol. ii. p. 54.) The protection of the Athenian name probably secured the rising colony from the assaults of the Crotonians, at least we hear nothing of any obstacles to its progress from that quarter; but it was early disturbed by dissensions between the descendants of the original Sybarite settlers and the new colonists, the former laying claim not only to honorary distinctions, but to the exclusive possession of important political privileges. These disputes at length ended in a revolution, and the Sybarites were finally expelled from the city. They established themselves for a short time upon the river Traens, but did not maintain their footing long, being dislodged and finally dispersed by the neighbouring barbarians. (Diod. xii. 11, 22; *Arist. Pol.* v. 3.) The Thurians meanwhile concluded a treaty of peace with Crotona, and the new city rose rapidly to prosperity. Fresh colonists poured in from all quarters, especially the Peloponnesus; and though it continued to be generally regarded as an Athenian colony, the Athenians in fact

formed but a small element of the population. The citizens were divided, as we learn from Diodorus, into ten tribes, the names of which sufficiently indicate their origin. They were,—the Arcadian, Achæan, Elean, Boeotian, Amphictyonic, Doric, Ionian, Athenian, Euboean, and Nesiotic, or that of the islanders. (Diod. xii. 11.) The form of government was democratic, and the city is said to have enjoyed the advantage of a well-ordered system of laws; but the statement of Diodorus, who represents this as owing to the legislation of Charondas, and that lawgiver himself as a citizen of Thuri, is certainly erroneous. [*Dict. of Biogr. art. CHARONDAS*] The city itself was laid out with great regularity, being divided by four broad streets or "plaza," each of which was crossed in like manner by three others. (Diod. xii. 10.)

Very shortly after its foundation, Thuri became involved in a war with Tarentum. The subject of this was the possession of the fertile district of the Siritis, about 30 miles N. of Thuri, to which the Athenians had a claim of long standing [Strab.], which was naturally taken up by their colonists. The Spartan general, Cleandridas, who had been banished from Greece some years before, and taken up his abode at Thuri, became the general of the Thurians in this war, which, after various successes, was at length terminated by a compromise, both parties agreeing to the foundation of the new colony of Heracleia in the disputed territory. (Diod. xii. 23, 36, xiii. 106; Strab. vi. p. 264; *Polyæn. Strat.* ii. 10.) [HERACLEIA.] Our knowledge of the history of Thuri is unfortunately very scanty and fragmentary. Fresh disputes arising between the Athenian citizens and the other colonists were at length allayed by the oracle of Delphi, which decided that the city had no other founder than Apollo. (Diod. xii. 35.) But the same difference appeared again on occasion of the great Athenian expedition to Sicily, when the city was divided into two parties, the one desirous of favouring and supporting the Athenians, the other opposed to them. The latter faction at first prevailed, so far that the Thurians observed the same neutrality towards the Athenian fleet under Nicias and Alcibiades as the other cities of Italy (Thuc. vi. 44); but two years afterwards (B.C. 413) the Athenian party had regained the ascendancy; and when Demosthenes and Euryclides touched at Thuri, the citizens afforded them every assistance, and even furnished an auxiliary force of 700 hoplites and 300 darters. (Id. *vi.* 33, 33.) From this time we hear nothing of Thuri for a period of more than 20 years, though there is reason to believe that this was just the time of its greatest prosperity. In B.C. 390 we find that its territory was already beginning to suffer from the incursions of the Lucanians, a new and formidable enemy, for protection against whom all the cities of Magna Graecia had entered into a defensive league. But the Thurians were too impatient to wait for the support of their allies, and issued forth with an army of 14,000 foot and 1000 horse, with which they repulsed the attacks of the Lucanians; but having rashly followed them into their own territory, they were totally defeated, near Laüs, and above 10,000 of them cut to pieces (Diod. xiv. 101).

This defeat must have inflicted a severe blow on the prosperity of Thuri, while the continually increasing power of the Lucanians and Brutians in their immediate neighbourhood would prevent them from quickly recovering from its effects. The city

continued also to be on hostile, or at least unfriendly, terms with Dionysius of Syracuse, and was in consequence chosen as a place of retirement or exile by his brother Leptines and his friend Philistus (Diod. xv. 7). The rise of the Brutian people about B. C. 356 probably became the cause of the complete decline of Thurii, but the statement of Diodorus that the city was *conquered* by that people (xvi. 15) must be received with considerable doubt. It is certain at least that it reappears in history at a later period as an independent Greek city, though much fallen from its former greatness. No mention of it is found during the wars of Alexander of Epirus in this part of Italy; but at a later period it was so hard pressed by the Lucanians that it had recourse to the alliance of Rome; and a Roman army was sent to its relief under C. Fabricius. That general defeated the Lucanians, who had actually laid siege to the city, in a pitched battle, and by several other successes to a great extent broke their power, and thus relieved the Thuriens from all immediate danger from that quarter. (Liv. *Epit.* xi.; Plin. xxxiv. 6. s. 15; Val. Max. i. 8. § 6.) But shortly after they were attacked on the other side by the Tarentines, who are said to have taken and plundered their city (Appian, *Sann.* 7. § 1); and this aggression was one of the immediate causes of the war declared by the Romans against Tarentum in B. C. 282.

Thurii now sunk completely into the condition of a dependent ally of Rome, and was protected by a Roman garrison. No mention is found of its name during the wars with Pyrrhus or the First Punic War, but it plays a considerable part in that with Hannibal. It was apparently one of the cities which revolted to the Carthaginians immediately after the battle of Cannae, though, in another passage, Livy seems to place its defection somewhat later. (Liv. xxii. 61, xxv. 1.) But in B. C. 213, the Thuriens returned to their alliance with Rome, and received a Roman garrison into their city. (Id. xxv. 1.) The very next year, however, after the fall of Tarentum, they changed sides again, and betrayed the Roman troops into the hands of the Carthaginian general Hanno. (Id. xxv. 15; Appian, *Hann.* 34.) A few years later (B. C. 210), Hannibal, finding himself unable to protect his allies in Campania, removed the inhabitants of Atella who had survived the fall of their city to Thurii (Appian, *Hann.* 49); but it was not long before he was compelled to abandon the latter city also to its fate; and when he himself in B. C. 204 withdrew his forces into Bruttium, he removed to Crotona 3500 of the principal citizens of Thurii, while he gave up the city itself to the plunder of his troops. (Appian, *l. c.* 57.) It is evident that Thurii was now sunk to the lowest state of decay; but the great fertility of its territory rendered it desirable to preserve it from utter desolation: hence in B. C. 194, it was one of the places selected for the establishment of a Roman colony with Latin rights. (Liv. xxxiv. 53; Strab. vi. p. 263.) The number of colonists was small in proportion to the extent of land to be divided among them, but they amounted to 3000 foot and 300 knights. (Liv. xxxv. 9.) Livy says merely that the colony was sent "in Thurinum agrum," and does not mention anything of a change of name; but Strabo tells us that they gave to the new colony the name of *COPIAE*, and this statement is confirmed both by Stephanus of Byzantium, and by the evidence of coins, on which, however, the name is written *ΘΟΡΙΑ*. (Strab. *l. c.*; Steph. Byz. s. v. *Θοῦριαι*;

Eckhel, vol. i. p. 164.) But this new name did not continue long in use, and Thurii still continued to be known by its ancient appellation. It is mentioned as a municipal town on several occasions during the latter ages of the Republic. In B. C. 72 it was taken by Spartacus, and subjected to heavy contributions, but not otherwise injured. (Appian, *B. C.* i. 117.) At the outbreak of the Civil Wars it was deemed by Caesar of sufficient importance to be secured with a garrison of Gaulish and Spanish horse; and it was there that M. Coelius was put to death, after a vain attempt to excite an insurrection in this part of Italy. (Caes. *B. C.* iii. 21, 22.) In B. C. 40 also it was attacked by Sextus Pompeius, who laid waste its territory, but was repulsed from the walls of the city. (Appian, *B. C.* v. 56, 58.)

It is certain therefore that Thurii was at this time still a place of some importance, and it is mentioned as a still existing town by Pliny and Ptolemy, as well as Strabo. (Strab. vi. p. 263; Plin. iii. 11. s. 15; Ptol. iii. 1. § 12.) It was probably, indeed, the only place of any consideration remaining on the coast of the Tarentine gulf, between Crotona and Tarentum; both Metapontum and Heraclea having already fallen into almost complete decay. Its name is still found in the Itineraries (*Itin. Ant.* p. 114, where it is written "Turios;" *Tab. Peut.*); and it is noticed by Procopius as still existing in the 6th century. (Procop. *B. G.* i. 15.) The period of its final decay is uncertain; but it seems to have been abandoned during the middle ages, when the inhabitants took refuge at a place called *Terranova*, about 12 miles inland, on a hill on the left bank of the Crathis.

The exact site of Thurii has not yet been identified, but the neighbourhood has never been examined with proper care. It is clear, from the statements both of Diodorus and Strabo, that it occupied a site *near to, but distinct from*, that of Sybaris (Diod. xii. 10; Strab. *l. c.*): hence the position suggested by some local topographers at the foot of the hill of *Terranova*, is probably too far inland. It is more likely that the true site is to be sought to the N. of the *Coscile* (the ancient Sybaris), a few miles from the sea, where, according to Zannoni's map, ruins still exist, attributed by that geographer to Sybaris, but which are probably in reality those of Thurii. Swinburne, however, mentions Roman ruins as existing in the peninsula formed by the rivers Crathis and Sybaris near their junction, which may perhaps be those of Thurii. (Swinburne, *Travels*, vol. i. pp. 291, 292; Romanelli, vol. i. p. 236.) The whole subject is very obscure, and a careful examination of the localities is still much needed.

The coins of Thurii are of great beauty; their number and variety indeed gives us a higher idea of the opulence and prosperity of the city than

COIN OF THURII.

we should gather from the statements of ancient writers.

[E. H. B.]

THURIUM. [ΒΟΡΟΤΙΑ, p. 412, b.]

THYAMIA. [ΦΙΛΙΥΣ, p. 602, b.]

THYAMIS (Θύαμις), a river of Epeirus, flowing into the sea near a promontory of the same name. (Ptol. iii. 14. §§ 4, 5.) It formed the northern boundary of Thesprotia, which it separated from Cestrine, a district of Chaonia (Thuc. i. 46; Strab. vii. p. 324; Paus. i. 11. § 2; Cic. *ad Att.* vii. 2, *de Leg.* ii. 3; Plin. iv. 1.) It is now called *Kalamis*, apparently from the large reeds and aquatic plants which grow upon one of its principal tributaries. Its ancient name seems to have been derived from the *θύα* or juniper, which, Leake informs us, though not abundant near the sources of the river, is common in the woody hills which border the middle of its course. The historian Phylarchus related (*op. Athem.* iii. p. 73) that the Egyptian bean, which grew only in marshy places and nowhere but in Egypt, once grew for a short time upon the banks of the Thyamis. (Leake, *Northern Greece*, vol. i. p. 103, vol. iv. p. 97.)

THYANUS (Θύανος), a mountain lying to the S. of Argos Amphilocheium, identified by Leake with *Spartorini*. (Thuc. iii. 106; Leake, *Northern Greece*, vol. iv. p. 251.)

THYATEIRA (τὰ Θυάτρεα; *Εθ. Θυάτρεπρος*), a considerable city in the north of Lydia, on the river Lycus, and on the road leading from Sardes in the south to Germa in the north. It was anciently called *Pelopeia*, *Euhippa*, and *Semiramis*. (Plin. v. 31; Steph. B. s. v. *Θυάτρεα*.) Strabo (xiii. p. 625) calls it a Macedonian colony, which probably means only that during the Macedonian period it was increased and embellished, for Stephanus B., admitting that it previously existed under other names, relates that Seleucus Nicator gave it the name of Thyateira or Thyateira on being informed that a daughter (*Θυάτρεα*) was born to him. But whatever we may think of this etymology, it seems clear that the place was not originally a Macedonian colony, but had existed long before under other names, and at one period belonged to Mysia. After the time of Antiochus Nicator, however, it became an important place, and is often noticed in history. When the two Scipios arrived in Asia on their expedition against Antioch as the Great, the latter was encamped near Thyateira, but retreated to Magnesia. (Liv. xxxvii. 8, 21, 37.) After the defeat of the Syrian king, the town surrendered to the Romans. (Liv. xxxvii. 44; Polyb. xvi. 1, xxxii. 25; comp. Appian, *Syr.* 30; Strab. xiii. p. 646; Plin. *Smith.* 15; Ptol. v. 2. § 16; *It. Ant.* p. 336.) In Christian times Thyateira appears as one of the seven Churches in the Apocalypse (ii. 18); in the Acts of the Apostles (xvi. 14) mention is made of one Lydia, a purple-seller of Thyateira, and at a still later period we hear of several bishops whose see it was. In the middle ages the Turks changed the name of the town into *Adhisser*, which it still bears. (*Arch. Doc.* p. 114.) Sir C. Fellows (*Asien*

Mis. p. 22), who calls the modern place *Adhis*, states that it teems with relics of an ancient opulent city, although he could not discover a trace of the site of any ruin or early building. These consist chiefly of fragments of pillars, many of which have been changed into well-tops or troughs. (Camp. Arundell, *Seven Churches*, p. 188, *ibid.*; *Woods and Spots*, vol. i. p. 253; Lucas, *Troas* p. 192, &c.; Prokesch, *Denkschriften* ii. 188 *folg.*) [L.S.]

THYIA (Θυία), a place in Phocia, where the Delphians erected an altar to the winds, derived its name from Thyia, a daughter of Cepheus or Caelius, and the mother of Delphus by Apollo. (Hesod. vii. 178; *Dict. of Biogr.* art. *THYIA*.)

THYMBRA (Θυμβρα or Θυμβρα), a town of Troas, in the vicinity of Ilium. (Hom. *Il.* i. 68; Steph. B. s. v.; Plin. v. 33.) Strabo (*ibid.* p. 324) speaks of it only as a plain traversed by the river Thymbrus. The valley of Thymbra and the hill it, called *Callicolone* (Hom. *Il.* xx. 53, 151; *Smith.* l. c.), are said still to retain their ancient name. (Prokesch, *Denkschriften*, i. p. 145, *ibid.*) The town of Thymbra must have perished at an early period; but its name remained celebrated in respect to Apollo, who had had a temple at Thymbra subsequently called *Thymbræus* (Θυμβραεύς; Var. *Ant.* iii. 85; Eurip. *Rhesus*, 224; Steph. B. s. v. *Θυμβρα*). [L.S.]

THYMBRARA (Θυμβραρα), a place near Sardis, not far from the small river Pactolus, at which the contingents of the Persian army furnished by its inhabitants of Asia Minor used to assemble. (Xen. *Cyrop.* vi. 2. § 11, vii. 1. § 45; Steph. B. s. v.) Some are inclined to identify this place with *Darbarna*, mentioned by Diodorus Siculus (xv. 84); but this latter place could hardly be said to be situated on, or even near the Pactolus. [L.S.]

THYMBRES, a tributary of the Saccus in Phrygia (Liv. xxxviii. 18), is no doubt the same as the Tembrugius of Pliny (vi. 1) and the Tymbus in the Argonautica bearing the name of Orpheus (713), where the river is described as abounding in fish. [L.S.]

THYMBRIA (Θυμβρία), a small town of Caria, only 4 stadia east of Myrs on the banks of the Maeander; in its neighbourhood there was a so-called *Charonium*, or cave from which poisonous vapours issued. (Strab. xiv. p. 636.) [L.S.]

THYMBRIUS (Θυμβριεύς; *Εθ. Thymbriεύς*), a town of Phrygia, at a distance of 10 paradeses to the west of Tyriaeum (Xenoph. *Anab.* i. 2. § 11, Hierocl. p. 673; *Conc. Constantin.* iii. p. 505.) Fabius Sequester (p. 25, ed. Oberlin) mentions a forest Thymbra in Phrygia, which seems to have been near the town of Thymbrium. [L.S.]

THYMBRIUS (Θυμβριεύς), a small river of Ionia in the neighbourhood of Ilium; it was a tributary of the Scamander, and on its banks stood the town of Thymbra (Strab. xiii. p. 398; *Ensch.* of *Hom.* *Il.* x. 430.) There still exists in that district a small river called *Timbriek*, which, however, does not flow into the Scamander, but into a bay of the sea; if this be the ancient Thymbra, the plain of Thymbra must have been at a considerable distance from Ilium. For this reason, Col. Leake is inclined to identify the Thymbrius rather with the *Leucurus* Sc., which still is a tributary of the Scamander or *Menderes Su* (*Asia Minor*, p. 299.) [L.S.]

THYMEXA (Θυμexα), a place on the coast of Paphlagonia, at a distance of 90 stadia from *As-*

COIN OF THYATEIRA.

Arrian, *Peripl. P. E.* p. 15; Anonym. *E.* p. 6.) Ptolemy (v. 4. § 2) mentions the name of Thymaena, and states that it called Teuthrania. [L. S.]

ATE'RION (*Θυμάριον*, Hanno, *Peripl.* ed. by Scylax (p. 23) *Θυμάρπιος*, the aginian colony planted by Hanno on the coast of Mauretania, 26 miles south-west of the Sinus Emporicus. There is no further it. It has been variously identified with *Larache*, and *Tangier*, but perhaps most with the first. [T. H. D.]

INIAS, a bay on the south-west coast of the south-west of the bay of Schoenus, and *Aphephrosidism* and *Posidium*. (Pomp. 6: Plin. v. 29.) [L. S.]

OETADAE. [ATTICA, p. 325, b.]

I (Plin. iv. 11. s. 18, v. 32. s. 43; *Θυολ*, 28), a people in the SE. part of Thrace, the Agrianes and the mountains which separate waters from the Euxine. At a very

od, a portion of the tribe, along with the ce of the Bithyni, emigrated to Asia Minor, ey occupied the district afterwards called

; but part of which seems originally to n named more directly from the Thyni, find the names *Θυμάρη* *Θυμάρη* (Memnon.

Θυμάρη (Scymn. 727, and 236), *Θυμάρη* s. p. 315), and Thynia (Amm. xxii. 8. §

specting the Asiatic Thyni, see also Strabo, 5. xii. p. 541; and the article BITHYNIA.

e Thyni who remained in Europe scarcely e is taken by the ancient historians. When

n and the remnant of the 10,000 Greeks the service of Seuthes, one expedition in

hey were employed had for its object the ion of the Thyni, who were said to have

Teres, an ancestor of Seuthes (*Anab.* vii. 2). Xenophon gives them the somewhat

d character of being the most warlike of all especially by night; and he had personal

ice of their fondness for nocturnal fighting; ing encamped in their villages at the foot of

ountains, to which the Thyni had retired on

proach of Seuthes and his forces, he was d by them on the next night, and narrowly

being burnt to death in the house in which taken up his quarters (*ib.* 4. § 14, seq.).

s attack having failed, the Thyni again fled nountains, and soon afterwards submitted to

u. Xenophon visited the country of the Thyni winter (*ib.* 6. § 31), which he describes as

xtremely severe, there being deep snow on the , and so low a temperature, that not only

but even wine in the vessels was frozen; and of the Greeks lost noses and ears through

ce. (*ib.* 4. § 3.) [J. R.]

Y'NIAS (*Θυμάρη*), a small island in the Eux-

a distance of one mile from the coast of Thy-

Bithynia; its distance from the port of Rhod

is probably mistaken in believing that the island contained a town of the same name. (Comp. Strab. xii. p. 543, where it is called Thynia; Marcan. p. 69; Steph. B. s. v.; Orph. *Argon.* 717, where it bears the name Thyneis.) The modern name of the island is *Kirpeh*. [L. S.]

THY'NIAS (Mela ii. 2. § 5; Plin. iv. 11. s. 18; *Θυμάρη*, Strabo vii. p. 319, xii. p. 541; Scymn. 727; Arrian. *Per. P. Eux.* p. 24; Anon. *Per. P. Eux.* p. 15; Ptol. iii. 11. § 4; Steph. B. s. v.), a promontory on the Thracian coast of the Euxine, N. of Salmydessus, which was probably at one time in the territories of the Thyni, although Strabo (vii. p. 319) speaks of the district as belonging to the people of Apollonia. Pliny (l. c.) mentions a town of the same name, which in some maps is placed a little to the south of the promontory, on the site of the modern *Inada* or *Inisada*; but which, according to Dapper (*de l'Archip.* p. 515), is still called *Thinnio*. [J. R.]

THYNOS or TYNOS, a town mentioned only by Pliny (v. 22) as situated between Mopous and Zephyrium in Cilicia. [L. S.]

THYRAEUM (*Θυράιον*; *Eth. Θυράϊος*), a town of Arcadia in the district Cynuria, said to have been founded by Thyraeus, a son of Lyacon. It is placed by Leake at *Palamdi*. (Paus. viii. 3. § 3, 35. § 7; Steph. B. s. v.; Leake, *Peloponnesiaca*, p. 240.)

THYRAEUM. [MEGALOPOLIS, p. 310, a.]

THYREA, THYREATIS. [CYNURIA.]

THYREATES SINUS. [CYNURIA, p. 727, a.]

THYREUM. [THYRIUM.]

THYRGONIDAE. [ATTICA, p. 330, a.]

THYRIDES (*Θυρίδες*), a promontory of Laconia, on the western coast of the Taygetic peninsula, now called *Cape Grosso*. It is of a semicircular form, nearly 7 miles in circumference, and rises from the sea to the height of 700 feet. There are many apertures and clefts in the rocks, the abodes of innumerable pigeons, and from the window-like form of these holes the whole promontory has received the name of Thyrides. Strabo describes it as a *πρόσθιος κρημνός*, "a precipitous cape beaten by the winds," distant 130 stadia from Taenarum (reckoning from the northern point of Thyrides); Pausanias, as a promontory (*ἀκρὰ*), situated 70 stadia from Taenarum (reckoning from the southern point of the promontory). Pausanias likewise calls it a promontory of Taenarum, using the latter word in its widest sense, to signify the whole peninsula of *Mani*. According to Strabo, the Messenian gulf terminated at this promontory. Pliny (iv. 12. s. 56) mentions three islands of the name of Thyrides in the Asinaean gulf. (Paus. iii. 25. § 9; Strab. viii. pp. 360, 362; Leake, *Morea*, vol. i. p. 302, seq.; Boblaye, *Recherches*, &c. p. 91; Curtius, *Peloponnesos*, vol. ii. p. 281.)

THYRIUM, or THY'REUM (*Θυρίον*, Pol. iv. 25; *Θυρίον*, Pol. iv. 6; *Θυρίον*, Pol. xxviii. 5; *Θυρίον*, Anth. Graec. ix. 553; *Eth. Θυρίεβς*, Thyriensis), a city in Acarnania, the exact site of which is unknown. It placed by Pouqueville in the interior near the sources of the Anapus; and his authority is followed by K. O. Müller and others. This, however, is evidently a mistake. Cicero tells us (*ad Fam.* xvi. 5) that in sailing from Alyzia to Lencas, he touched at Thyrium, where he remained two hours; and from this statement, as well as from the history of the events in which Thyrium is mentioned, we may infer that it was situated on or near the Ionian sea, and that it was the first town on the coast S. of the canal

which separated Leucas from the mainland. It is placed by Leake in the plain of *Zavardha*, but no ruins of it have been discovered. Its name does not occur in Strabo. Thyrium is first mentioned in B.C. 373, when its territory was invaded by Iphicrates. (*Xen. Hell.* vi. 2. § 37.) Xenophon describes it as a place of importance; and it appears as one of the chief cities of Acarnania at the time of the Roman wars in Greece, when its name frequently occurs. At this period Thyrium was one of the places at which the meetings of the Acarnanian League were usually held. [ACARNANIA.] It was one of the many towns whose ruin was occasioned by the foundation of NICOPOLIS, to which its inhabitants were removed by order of Augustus. (*Pol.* iv. 6, 25, xvii. 10, xxii. 12, xxviii. 5; *Liv.* xxxvi. 11, 12, xxxviii. 9, xliii. 17; *Anth. Graec.* l.c.; Leake, *Northern Greece*, vol. iv. p. 16.)

COIN OF THYRIUM.

THYRSUS or TYRSUS (*Θύρσος* *ῥοτάμης*, *Ptol.*: *Θύρσος*, *Paus.*: *Tyrso*), the most considerable river of Sardinia, which still retains its ancient name almost unaltered. It has its sources in the mountains in the N.E. corner of the island, and flows into the *Gulf of Oristano* on the W. coast, after a course of above 75 miles. About 20 miles from its mouth it flowed past Forum Trajani, the ruins of which are still visible at *Fordungianus*; and about 36 miles higher up are the *Bagni di Benetutti*, supposed to be the *Aquae Lesitanae* of Ptolemy. The itineraries give a station "ad Caput Tyrsi" (*Itin. Ant.* p. 81), which was 40 M.P. from Olbia by a rugged mountain road: it must have been near the village of *Buduo*. (*De la Marmora, Voy. en Sardaigne*, vol. ii. p. 445.) Pausanias tells us that in early times the Thyrsus was the boundary between the part of the island occupied by the Greeks and Trojans and that which still remained in the hands of the native barbarians. (*Paus.* x. 17. § 6.) [E. H. B.]

THYSDRUS (*Θύσδρος*, *Ptol.* iv. 3. § 39), the oppidum Tusdritanum or Thysdritanum of Pliny (v. 4. a. 4), a city of Byzacium, in the Roman province of Africa, lying midway between Theneae and Thapsus, and west of the promontory Brachodes. It was here that the emperor Gordianus first set up the standard of rebellion against Maximin (*Herodian.* vii. 4, seq.; *Capitol. Gord.* c. 7, seq.), and it was from him, probably, that it derived its title of a Roman colony. We find the name variously written, as Tusdra, by Hirtius or whoever was the author of the history of the African War (*B. Afr.* 26, 27, &c.), and Tusdrus, in the *Itin. Ant.* (p. 59). Now *El Jennem* or *Legem*, with extensive ruins, especially of a fine amphitheatre in a tolerably perfect state. (*Shaw, Travels*, vol. i. p. 220, seq.) [T. H. D.]

THYSSA'GETAE (*Θυσσαγῆται*, *Herod.* iv. 22), a numerous people of Asiatic Sarmatia, living principally by the chase. They dwelt to the north-east of a great desert of 7 days' journey, which lay between them and the Budini. Stephanus B. (s. v.) erroneously places them on the Maotia, apparently from misunderstanding Herodotus. They are called

Thysagetae by Mela (i. 19) and *Plin.* (v. 12 a. 26), and Thyssagetae by Valerius Maximus (v. 140). [E. H. B.]

THYSSUS (*Θύσσης*), a town of Oenoe in Macedonia, situated on the W. or S.W. of the peninsula of Acte or Mt. Athos. Its exact position is uncertain, but it appears that Thyssa or Oenoe occupied the central part of the W. or S.W. end of the peninsula, and that one of them may be *Thysa* (*Zogrifus* or *Dhokhisiari*, and the other *Thysa* (*Herod.* vii. 22; *Thuc.* iv. 109, v. 35; *Strab.* vii. p. 331; *Plin.* iv. 10. a. 17; *Leake, Northern Greece*, vol. iv. pp. 149—153.)

TIARANTUS (*Τιαραντός*, *Herod.* iv. 40), a town in Scythia, flowing into the *Ister* from the S. Its next identifies it with the *Syl.* (iv. p. 185; *Strab.* iii. 2. p. 184). [E. H. B.]

TIARIULIA. [TRAI JULIENSIS.]

TIASA. [LACONIA, p. 110, a.]

TIASUM (*Τιασσός* or *Τιασσός*, *Plin.* v. 5. § 1) a town in Dacia, in the neighbourhood of the *Fl. Tisza*. [E. H. B.]

TIBARANI, a tribe of Cilicia, about 100 miles in the vicinity of Pindemion, which was subdued by Cicero during his proconsular administration of that country, but is otherwise unknown. (*Cic. ad Fam.* xv. 4.) [E. H. B.]

TIBARENI (*Τιβάρηνοι*), a tribe at the *Eufrates*, occupying the country between the *Eufrates* and the *Mezopotamia*, on the east of the *Eufrates*. They are mentioned as early as the time of Herodotus (iii. 94), and were believed to be of Scythian origin. (*Schol. ad Apoll. Rhod.* i. 5. 1010; *Xen. Anab.* v. 5. § 2; *Strab.* v. 35; *Steph. B. l. c.* *Τιβάρηνοι*.) Strabo (xi. p. 527) describes them as inhabiting the mountainous tracts of the Montes Moschici and Colchici, and names *Ortyra* as their principal town. (*Comp. Xen.* i. 10; *Plin.* vi. 4.) They appear to have been a brave and happy people, who performed all their duties in a joyous manner. (*Schol. ad Apoll. Rhod.* i. 5. 1010; *Steph. B. l. c.*; *Anon. Periplo.* p. E. p. 12; *Plin.* vi. 4.) Their arms consisted of round helmets, small shields, and short spears with long points. (*Herod.* vii. 78.) Xenophon and his army spent three days in travelling through the desert. (*Xen. L. c.*, vii. 8. § 25; *Diod. Sic.* xiv. 96; *Strab.* vii. p. 129, vii. p. 309, vii. p. 540, vii. p. 555.) [E. H. B.]

TIBERIANACUM, in North Gallia, is placed in the Antonine Itin. between Juliers and Colonia Agrippina (*Cologne*), viii. from Juliers and x. from Colonia. D'Anville and others fix Tiberianacum at *Berghem*, at the passage of the river *Rhine*, which flows between Juliers and *Cologne*. (Comp. place Tiberianacum at *Tarven*, south of *Berghem*, near the bridge is. D'Anville adds "that a place situated in the direction between Juliers and *Berghem* is called *Stein-Stras*, that is to say, *Lapis Stani* (*Stone Street*), just as in our province of *Normandie* the *Chemin Perré*." (D'Anville, *Nom. de la Gaule*, p. 544.) [E. H. B.]

TIBERIAS (*Τιβεριάς*, *Joseph. Ant.* vii. 16; *B. J.* ii. 8, iii. 16; *Steph. B. l. c.*; *Plin.* vi. 26. § 16), the principal town of Galilee, on the S.W. end of the sea of Tiberias or Gennesareth. It was situated in the most beautiful and fertile part of that state (*Joseph. Ant.* xviii. 2. § 1) and was adorned with a royal palace and a temple. (*Joseph. Vit.* 12, 13, 64.) It was built by the

etrarch Herodes Antipas, in honour of the Roman emperor Tiberius, from whom it derived its name. (Joseph. *l. c.*) It is stated to have been 30 stadia from Hippo, 60 from Gadara, and 120 from Scythopolis (Joseph. *Vit.* 65); distances which are not much at variance with that of Joliffe, who states that it is 20 miles English from Nazareth and 90 from Jerusalem. (*Travels*, p. 40.)

From the time of Herodes Antipas to that of the reign of Agrippa II., Tiberias was probably the capital of the province (Joseph. *Vit.* 9), and it was one of the four cities which Nero added to the kingdom of Agrippa. (Joseph. *Ant.* xi. 8. § 4.) In the last Jewish War, Tiberias, from its great strength, played an important part (Joseph. *B. J.* ii. 0); as, after Sepphoris, it was held to be the most important place in Galilee (Joseph. *Vit.* 65), and was very strongly fortified. (*B. J.* iii. 10. § 1.) The inhabitants derived their sustenance in great measure from their fisheries in the adjoining sea. (Joseph. *Vit.* 12.) On the destruction of Jerusalem, and for several centuries subsequently, Tiberias was famous for its academy of learned Jews. (Lightfoot, *Hor. Hebr.* p. 140.)

In the immediate neighbourhood of Tiberias were the celebrated hot springs of Emmaus (Joseph. *J.* ii. 21, *Ant.* xviii. 2.) [EMMAUS.] It is not certain whether Tiberias occupied the site of Chinnereth, though Hieronymus thinks so (*Onom. s. v. Chinnereth*); it seems more likely that this place belonged to the tribe of Naphtali. (Josh. xix. 35; Reland, *Palæst.* p. 161.) Nor is there any better reason for identifying it, as some have done, with Hammath (Joseph. xix. 35) or Rakkah, which was a Rabbinical notion. (Cf. Hieron. *Megil.* fol. 701; Lightfoot, *Chorograph. Cent.* cap. 72—74.) The modern name of Tiberias is *Tabarieh*; it is not, however, built actually on the site of the old town, though close to its ruins. When Joliffe was there, it had a population of 11,000 (*Travels*, pp. 48—58.) It was nearly destroyed by an earthquake on New Year's Day, 1837, since which time it has never been completely rebuilt. (Russeger, iii. p. 132;auss. p. 356; Robinson, iii. p. 500.) [V.]

TIBERIAS MARE (Ἀλμὴ Τίβερίας, Pausan. v. § 4; Ptol. v. 16. § 4; Ἀλμὴ ἡ Τίβερίων, Joseph. *J.* iv. 26), the principal lake or sea of Palestine in the province of Galilee. It was bordered on the side by the tribes of Issachar and Zabulon, and the E. by the half-tribe of Manasseh. The waters were fresh (Joseph. *B. J.* iii. 35) and full of fish (Joseph. *B. J.* iv. 26; *Matth.* iv. 15; *Luke*, v. 1, &c.), and its size is variously estimated, by Josephus (*l. c.*), to have been 140 stadia by 40 broad, and by Pliny, to have been 16 M. P. long and 6 M. P. broad (v. 15). It was traversed in a direction NW. and SE. by the river Jordan. (ORDANES; PALÆSTINA.) This sea is known by many different names in the Bible and profane history. Its earliest title would seem to have been innereth (*Numb.* xxxiv. 11; *Josh.* xiii. 27; *LXX. Ἰννερέθ*). From this form has probably arisen the second appellation of Gennesareth (ἡ Ἀλμὴ Γεννησαρὲς, *Matth.* xiv. 34, &c.; *ὕδωρ Γεννησαρ*, *1 Maccab.* ii. 67; ἡ Ἀλμὴ Γεννησαρ, Joseph. *B. J.* iv. 26; *Γεννησαρῖτις*, Joseph. *Ant.* xviii. 3; Strab. p. 755; Genasara, Plin. v. 15.) A third appellation it has derived from the province with which it was most nearly connected, viz. the sea of Galilee (θάλασσα τῆς Γαλιλαίας, *Matth.* iv. 18; *Mark.* vii. 31, &c.; and with a double title, θάλασσα

τῆς Γαλιλαίας, τῆς Τίβερίδος, John vi. 1). Pliny, in describing the same localities, speaks of a town called Tarichaea, from whence also he says the adjoining lake was sometimes named (*l. c.*; cf. also Strab. xvi. p. 764). The present name is *Bahr-al-Tabarieh*. (Pococke, ii. p. 103; Thevenot, p. 387; Hasequist, i. p. 181; Robinson, iii. pp. 499—509, &c.) [V.]

TIBERIO'POLIS (Τιβεριόπολις), a town in Phrygia Major, in the neighbourhood of Eumenia. (Ptol. v. 2. § 25; Socrat. *Hist. Eccles.* vii. 46.) Its site is yet uncertain, but Kiepert (in Franz, *Fünf Inschriften*, p. 33) is disposed to regard the extensive ruins near Suleiman as the remnants of Tiberiopolis. Hamilton (*Researches*, i. p. 127, foll.), probably more correctly, regards them as the ruins of Blaundos. (Comp. Arundell, *Discoveries*, i. p. 81, foll.) [L. S.]

TIBERIS (ὁ Τίβερις; *Tevere*, *Tiber*: the former Tibris, Tybris, and Thybris are chiefly poetical, as is *Θύβρις* also in Greek: the Latin poets use also Tiberinus as an adjective form, as Tiberinus pater, Tiberinum flumen, &c., and thence sometimes Tiberinus by itself as the name of the river), one of the most important rivers of Central Italy. It has its sources in the Apennines above Tifernum, but in the territory of Arretium (Plin. iii. 5. s. 9), on the confines of Etruria and Umbria, and flows at first in a southerly direction, passing by the walls of Tifernum, which derived from it the name of Tiberinum (*Città di Castello*), and afterwards within a few miles of Perugia on the E., and within a still shorter distance to the W. of Tuder (*Todi*). From thence it still preserves a general S. direction, notwithstanding considerable windings, till it receives the waters of the Anio (*Teverone*), a few miles from the walls of Rome, from which point it has a general SW. course to the sea at Ostia. Pliny estimates the upper part of its course at 150 miles, to which must be added about 35 more for the lower part, giving as a total 185 miles (Plin. *l. c.*; Strab. v. p. 218); but this estimate is below the truth, the whole course of the river being about 180 geogr. or 225 Roman miles. During the whole of its course from Tifernum to the sea the Tiber formed in ancient times the eastern boundary of Etruria, separating that country from Umbria in the upper part of its course, afterwards from the territory of the Sabines, and, in the lower part, from the mouth of the Anio downwards, dividing it from Latium. (Strab. v. p. 219; Plin. *l. c.*) It receives numerous confluent or tributaries, of which the most important are, the TINIA, an inconsiderable stream which joins it from the E. a little below Perugia, bringing with it the waters of the more celebrated Clitumnus; the CLANIS, which falls into it from the right bank, descending from the marshy tract near Clusium; the NAR, a much more considerable stream, which is joined by the VELINUS a few miles above Interamna, and discharges their combined waters into the Tiber, a few miles above Oriculum; and the ANIO, which falls into the Tiber at Antemnae, 3 miles above Rome. These are the only affluents of the Tiber of any geographical importance, but among its minor tributaries, the ALLIA on its left bank, a few miles above the Anio, and the CREMERA on the right, are names of historical celebrity, though very trifling streams, the identification of which is by no means certain. [See the respective articles.] Two other streams of less note, which descend from the land of the Sabines and fall into the Tiber between Oriculum and Ere-

tum, are, the *HIMELLA* (*Aia*) and the *FARFARUS* or *FABARIS* (*Farfa*).

The Tiber is unquestionably, in a merely geographical point of view, the most important river of Central Italy, but its great celebrity is derived from its flowing under the walls of Rome, or rather through the heart of the city, after this had attained to its full extension. The detailed account of the river in this part of its course must be sought in the article *ROMA*: we need here only mention that after flowing under the Milvian Bridge [*Pons MILVIUS* or *MULVIUS*] the river makes a considerable bend to the W. so as to approach the foot of the Vatican hills, and leave, on the other side, between its left bank and the nearest ridge of hills, a broad tract of plain, early known as the *Campus Martius*, the whole of which was eventually included within the imperial city. A short distance lower down, but still within the walls of the city, its stream was divided into two by an island known as the *INSULA TIBERINA*, and reported by tradition to have been formed by alluvial accumulations within the period of Roman history. It is remarkable that this is the only island of any consideration in the whole course of the river, with the exception of that called the *INSULA SACRA*, at its mouth, formed by the two arms of the river, and which is undoubtedly of late growth, and in great part of artificial formation.

The Tiber was at all times, like most rivers which are supplied principally by mountain streams, a turbid, rapid, and irregular river, that must always have presented considerable difficulties to navigation. The yellow and muddy hue of its turbid waters is repeatedly alluded to by the Roman poets ("flavum Tiberim," *Hor. Carm. i.* 2. 13; "suo cum gurgite flavo," *Virg. Aen. ix.* 816; &c.), and the truth of Virgil's description, "Vorticibus rapidis et multa flavus arena," (*Aen. vii.* 31), must be familiar to every one who has visited Rome. In the upper part of its course, as we learn from Pliny, the river was with difficulty navigable, even for small boats; nor did its first tributaries, the *Tinia* and *Clanis* contribute much to its facilities in this respect, though their waters were artificially dammed up, and let off from time to time in order to augment the main stream. (*Plin. iii.* 5. s. 9.) But from the point of its junction with the *Nar*, the Tiber became navigable for larger vessels, and even from an early period extensive supplies of various kinds were brought down the river to Rome. (*Liv. ii.* 34, v. 54; *Cic. de Rep.* ii. 5; &c.) In the more flourishing period of the city the navigation of the Tiber was of course enormously increased; and vast supplies of timber, stone, and other materials for building, as well as corn and provisions, were continually introduced by means of the river and its tributaries. (*Strab. v.* p. 235.) Corn was brought down the Tiber even from the neighbourhood of *Tifernum*, when the upper part of the stream was navigable. (*Plin. Ep. v.* 6.) It seems also to have been used as an ordinary mode of travelling, as we are told that in A. D. 20, *Piso*, the murderer of *Germanicus*, proceeded from *Narnia* to Rome by descending the *Nar* and the Tiber. (*Tac. Ann. iii.* 9.) At the present day the river is navigated by boats of large size as far as the confluence of the *Nera*, and small steamers ascend as far as *Borghetto*, a few miles from *Otricoli*.

But it was from Rome itself to the sea, a distance of 27 miles by the river (*Strab. v.* p. 232), that the navigation of the Tiber was the most important. Pliny speaks of it as in this part of its course na-

vigable for the largest vessels ("quolibet magnarum navium ex Italo mari capax"), and as becoming the receptacle of merchandise from every part of the world. The latter statement may be readily admitted; but the former is calculated to astonish any one acquainted with the river in its present condition yet it is partly confirmed by the distinct statement of *Strabo* (v. p. 232), that the larger class of merchant vessels used to ride at anchor in the open sea off the mouth of the river, until they had been lightened of a part of their cargoes, which they discharged into barges, and afterwards proceeded up the river to Rome. *Dionysius* gives the same account, with the exception that vessels which exceeded 3000 amphorae in burden were unable to enter the river at all, and forced to send their cargoes up by barges. (*Dionys. iii.* 44.) But all kinds of rowing vessels, not excepting the largest ships of war, were able to ascend the river (*ib.*); and thus we find the younger *Cato* on his return from *Cyprus* proceeding at once in his galley to the *Navalis* within the walls of Rome. (*Plut. Cat. Mæ.* 39.) We learn also from *Livy* that the ships of war which had been taken from *Persus* king of Macedonia, though of unusual size ("inuitatæ autè magnitudinis"), were carried up the river as far as the *Campus Martius* (*Liv. xiv.* 42); and even the gigantic vessel constructed for the purpose of bringing the obelisk that was set up in the *Circus Maximus*, was able to ascend as far as the *Vicus Alexandri*, within three miles of Rome (*Ammian. xvii.* 4. § 14). The chief difficulties that impeded the navigation of the river in the time of *Strabo* were caused by its own accumulations at its mouth, which had destroyed the port of *Ostia*. These were afterwards in great measure removed by the construction of an artificial port, called the *Portus Augusti*, commenced by *Claudius*, and enlarged by *Trajan*, which communicated by an artificial canal or arm with the main stream of the river. (The history of these works, and the changes which the mouths of the Tiber underwent in consequence, are fully given in the article *OSTIA*.) The importance of the navigation of the Tiber led to the formation of distinct bodies or corporations in connection with it, called *Navicularii* and *Levicularii*, both of which are frequently mentioned in inscriptions of imperial times (*Preller, p.* 147).

Another disadvantage under which the Tiber laboured, in common with most rivers of mountain origin, arose from the frequent inundations to which it was subject. These appear to have occurred in all ages of the Roman history; but the earliest recorded is in B. C. 241, immediately after the close of the first Punic War (*Oros. iv.* 11), which is said to have swept away all the houses and buildings at Rome in the lower part of the city. Similar inundations, which did more or less damage to the city are recorded by *Livy* in B. C. 215, 202, 193, and again in 192 and 189 (*Liv. xxiv.* 9, xxx. 38, xxxi. 9, 21, xxxviii. 28) and there is little doubt that it is only from the loss of the detailed annals that we do not hear again of the occurrence of similar catastrophes till near the close of the Republic. Thus we find a great inundation of the Tiber noticed as taking place in B. C. 54 (*Dion Cass. xxxix.* 61), which is alluded to by *Cicero* (*ad Q. Fr. iii.* 7), and several similar inundations are known to have occurred in the time of *Augustus*, in B. C. 27, 23 and 22, of which the first is probably that alluded to by *Horace* in a well-known ode. (*Hor. Carm. i.* 2. 13; *Orell. Excurs. ad l. c.*; *Dion Cass. liii.* 20.)

33, liv. 1.) Great attention was bestowed by Augustus upon the subject, and he first instituted magistrates with the title of *Curatores Tiberis*, whose special duty was to endeavour to restrain the river within due bounds, to preserve the embankments, &c. (Suet. *Oct.* 37.) These officers received increased powers under Tiberius, and continued down to the close of the Empire. We frequently meet with mention in inscriptions of the "*Curatores alvei Tiberis et riparum*," and the office seems to have been regarded as one of the most honourable in the state. (Dion Cass. lvi. 14; Orell. *Inscr.* 1172, 2284, &c.; Gruter, *Inscr.* pp. 197, 198.) But it is evident that all their efforts were ineffectual. In the reign of Tiberius so serious was the mischief caused by an inundation in A. D. 15 that it was proposed in the senate to diminish the bulk of the waters by diverting some of the chief tributaries of the stream, such as the Nar, Velinus and Clanis. (Tac. *Ann.* i. 76; Dion Cass. lvi. 14.) This plan was, however, abandoned as impracticable; and in A. D. 69 another inundation took place, which appears to have caused still more damage than any that had preceded it (Tac. *Hist.* i. 86). It is strange that in face of these facts Pliny should assert that the Tiber was so confined within artificial banks as to have very little power of outbreak, and that its inundations were rather subjects of superstitious alarm than formidable in themselves. (Plin. iii. 5. s. 9.) During the later ages of the Empire indeed we hear but little of such outbreaks of the Tiber, but this is very probably owing only to the scanty nature of our records. One great inundation is, however, recorded as doing great mischief in the reign of Trajan, another in that of Macrinus, and a third in that of Valerian. (Dion Cass. lxxviii. 25; Vict. *Cæs.* 34, *Epi.* 13.) One of the most destructive of all is said to have been that of A. D. 590, which added to the various calamities that at that time almost overwhelmed the city. (*Hist. Miscell.* xviii. p. 583; Greg. Turon. x. 1.) At the present day the lower parts of Rome are still frequently flooded by the river, for though the soil of these parts of the city has unquestionably been raised, in some places many feet, the bed of the Tiber has undoubtedly been also elevated, though probably in a less degree. The whole subject of the inundations and navigation of the Tiber, and the measures taken in ancient times in connection with them, is fully illustrated by Preller in an article entitled *Rom und der Tiber in den Berichte der Sächsischen Gesellschaft* for 1848 and 1849.

The Tiber appears to have been in ancient times occasionally frozen, at least partially; a circumstance to which the Latin poets repeatedly allude. But we must not construe their rhetorical expressions too strictly; and it is clear from the terms in which Livy notices its being frozen over in the extraordinary winter of B. C. 398, that such an occurrence was of extreme rarity. ("Insignis annus hieme gelida ac nivosa fuit, adeo ut vias clausas, Tiberis innavigabilis fuerit, Liv. v. 13.") St. Augustin also alludes to such a winter (apparently the same noticed by Livy), "ut Tiberis quoque glacie duraretur," as a thing unheard of in his times. (Augustin, *Civ. Dei*, ii. 17.)

It was a tradition generally received among the Romans that the Tiber had been originally called *Albula*; and that it changed its name in consequence of Tiberinus, one of the fabulous kings of Alba, having been drowned in its waters. (Liv. i. 3; Dionys.

i. 71; Vict. *Orig. G. Rom.* 18.) Virgil, however, who calls the king Thybris, assigns him to an earlier period, prior to the landing of Aeneas (*Aen.* viii. 330). Hence the river is not unfrequently called by the Roman poets *Albula*. (Sil. Ital. vi. 391, viii. 455, &c.) It had naturally its tutelary divinity or river-god, who, as we learn from Cicero, was regularly invoked in their prayers by the augurs under the name of *Tiberinus* (Cic. *de N. D.* iii. 20). He is frequently introduced by the Roman poets as "pater Tiberinus" (Enn. *Ann.* i. p. 43; Virg. *Aen.* viii. 31, 72; &c.) [E. H. B.]

TIBIGENSE OPPIDUM, a town in Africa Propria, apparently the Thigiba (*Θυγίβα*) of Ptolemy (iv. 3. § 29; Plin. v. 4. s. 4). [T. H. D.]

TIBILIS, a town in the interior of Numidia, 54 miles from Cirta having hot mineral springs (*Aquae Tibilitanae*) (August. *Ep.* 128; *Itin. Ant.* p. 42), commonly identified with *Hammam Meskutin* in the mountains near the river *Seibonse*; but, according to D'Arzac and the map of the province of Constantine (Par. 1837), it is *Hammam-el-Berda*, somewhat more to the N. [T. H. D.]

TIBISCUM (*Τίβισκος*, Ptol. iii. 8. § 10), a town of Dacia, on the river Tibiscus. By the Geogr. Rav. it is called *Tibis* (iv. 14), and in the *Tab. Peut.* *Tiviscum*. Its ruins exist at *Kacaran*, at the junction of the *Temesz* (Tibiscus) and *Bistra* (cf. Ukert, iii. 2. p. 616). [T. H. D.]

TIBISCUS (*Τίβισκος*, Ptol. iii. 8. § 1), a tributary river of the Danube in Dacia. We also find it called *Tibissus* (*Inscr.* Grut. p. 448. 3) and *Tibisia* (Geogr. Rav. iv. 14). Several authors identify it with the *Tisianus* or *Tysia* (the modern *Theiss*), with which, indeed, Ptolemy seems to have confounded it, as he does not mention the latter (Mannert, iv. p. 203; Sickler, i. p. 196; cf. Ukert, iii. 2. p. 603). But Forbiger, after Reichard, identifies it with the *Temesz*; his grounds for that opinion being that Jordanes (*Get.* c. 34) and the Geographer of Ravenna (l. c.) mention the *Tysia* and *Tibisia* as two distinct rivers, and that the site of the ancient town of *Tibiscum* appears to point to the *Donetz* (*Handb. d. alt. Geogr.* iii. p. 1103, note). It is probable that the *Pathissus* of Pliny (iv. 12. s. 25) and *Partiscus* of Ammianus Marcellinus (xvii. 13. § 4) are the same river, though some identify them with the *Tisianus*. [T. H. D.]

TIBISIS (*Τίβις*), a large river of Scythia, which Herodotus describes as rising in Mt. Haemus, and flowing into the *Maris* (iv. 49). It is identified by some with the *Kara Loos*.

TIBULA (*Τίβουλα*, Ptol.), a town of Sardinia, near the N. extremity of the island, which appears to have been the customary landing-place for travellers coming from Corsica; for which reason the *Itineraries* give no less than four lines of route, taking their departure from Tibula as a starting-point. (*Itin. Ant.* pp. 78—83.) It is very unfortunate therefore that its position is a matter of great uncertainty. That assigned to it by Ptolemy would place it on the site of *Castel Sardo* on the N. coast of the island, and only about 18 miles from *Porto Torres*, but this is wholly incompatible with the statements of the *Itineraries*, and must certainly be erroneous. Indeed Ptolemy himself places the *Tibulates*, or *Tibulatii* (*Τίβουλαδριοι*), who must have been closely connected with the town of that name, in the extreme N. of the island (Ptol. iii. 3. § 6), and all the data derived from the *Itineraries* concur in the same result. The most probable posi-

tion is, therefore, that assigned it by De la Marmora, who fixes it on the port or small bay called *Porto di Lungo Sardo*, almost close to the northernmost point of the island, the Errebanium Prom. of Ptolemy. (De la Marmora, *Voy. en Sardaigne*, vol. ii. pp. 421—432, where the whole question is fully examined and discussed.) [E. H. B.]

TIBUR (ἡ Τιβούρηνος or Τιβουρήνιος πόλις, Polyb. vi. 14; ῥὰ Τιβούρα, Strab. v. p. 238; ῥὰ Τιβούρ, Ptol. iii. 1. § 58; ἡ Τιβούρ, Steph. B. p. 564; *Etā. Tiburs*, Liv. vii. 9; Virg. *Aen.* xi. 757; Hor. S. i. 6. 108; Tac. *Ann.* xiv. 22, &c.; Tiburtinus, Cic. *Phil.* v. 7; Prop. iv. 7. 85; Plin. *Ep.* vii. 29, &c.; Tiburnus, Stat. *Silv.* i. 3. 74; Prop. iii. 22, 23; now *Tivoli*), an ancient and celebrated town of Latium, seated on the Anio, to the NE. of Rome, from which it was distant 20 Roman miles (*Itin. Ant.* p. 309; cf. Mart. iv. 57; Procop. *B. G.* ii. 4). Tibur lies on an offshoot or spur thrown out from the northern side of what is now called *Monte Ripoli*, at a level of between 800 and 900 feet above the sea. This ledge extends across the bed of the Anio to *Monte Catillo* on its north bank, thus forming a natural barrier over which the river leaps into the valley below, from a height of about 80 feet, and forms the celebrated waterfall so frequently mentioned by the ancient writers (Strab. l. c.; Dionys. H. v. 37; Hor. *Od.* i. 7. 13, &c.). The town lay principally on the cliff on the left or southern bank, where it is half encircled by the Anio. It is probable that at a remote period the waterfall was lower down the river than it is at present, since there are tokens that the stream once washed the substructions of the terrace on which the round temple is built; especially a broken wheel embedded in the cliff at a height of 150 feet above the abyss called the *Grotto of Neptune*. The awful catastrophe in A. D. 105 recorded by the younger Pliny (*Ep.* viii. 17), when the Anio burst its banks and carried away whole masses of rock—*montes* he calls them—with the groves and buildings upon them, must have produced a remarkable change in the character of the fall. We may gather, from some descriptions in Propertius (iii. 16. 4) and Statius (*Silv.* i. 3. 73), that previously to that event the Anio leaped indeed from a high rock, but that its fall was broken towards its lower part by projecting ledges, which caused it to form small lakes or pools. From the time of Pliny the cataract probably remained much in the same state down to the year 1826, when the river again swept away a number of houses on the left bank, and threatened so much danger to the rest that it was found necessary to divert its course by forming a tunnel for its waters through *Monte Catillo* on the right bank. This alteration spoiled the romantic points of view on the side of the grottoes of Neptune and the Sirens; but the fall is still a very fine one. Scarcely inferior to it in picturesque beauty are the numerous small cascades, called *Cascatelle*, on the western side of the town. These are formed by water diverted from the Anio for the supply of various manufactories, which, after passing through the town, seeks its former channel by precipitating itself over the rock in several small streams near what is commonly called the villa of Maecenas. Nothing can be finer than the view of these cascades from the declivities of *Monte Peccatore*, whence the eye ranges over the whole of the *Campagna*, with Rome in the distant background.

The country around Tibur was not very fertile

in grain; but it was celebrated for its fruit-trees and orchards ("pomosi Tiburis arva," *Cul. R.* l. i. 347, ed. Lugd. 1548; cf. Propert. iv. 7. 81: "Pomū Anio quā spumifer incubat arvis"), and especially its grapes and figs (Plin. xiv. 4. s. 7. r. 19), its stone, now called *travertine*, was much used at Rome for building, whither it was easily conveyed by means of the Anio, which became *travertine* at Tibur (Strab. l. c.). Vast remains of *travertine* may still be seen on the banks of that river (*Viaggio Ant.* i. 112). Of this material were constructed two of the largest edifices in the world, the Colosseum and the Basilica of St. Peter. The air of Tibur was healthy and bracing, and this was one of the recommendations, together with its beautiful scenery, which made it a favourite retirement of the wealthy Romans. Besides its salubrity, the air was said to possess the peculiar property of blackening ivory (Sil. It. xii. 229; Mart. viii. 28. 12). Tibur was also famed for its pottery (Sen. *Ep.* 119).

The foundation of Tibur was long ascribed to one of the Sabinians (Plin. xvi. 87). According to Livius of Halicarnassus (i. 16), it was one of the cities founded by the Siculi when they had possession of Italy; in proof of which statement he adduces the fact that in his own time part of the town was still called *Sicclion*; a name which would also indicate its having been one of the chief cities of that people. Another legend affirmed that the Siculi were expelled by Tiburtus, Coras and Catillus II. sons of Catillus I. The last was the son of Aspronius, the celebrated Theban king and prophet, who perished about a century before the Trojan War. Catillus migrated to Italy in consequence of a war with his father. Tiburtus, or Tiburnus, the eldest of his three sons, became the eponymous hero of the newly founded city; for such it may be called, since the Siculi dwelt only in unwall'd towns, which were subsequently fortified by the Greek colonies of Italy. According to Cato's version of the legend, Tibur was founded by Catillus, an officer of Evander (Solin. i. 2). From these accounts we may infer all events infer the high antiquity of Tibur. Its story of its Greek origin was very generally adopted by the Roman poets, whence we find it designated as the "*moenia Catili*" by Horace (*Od.* i. 18. l. 4; *Id.* ii. 6. 5; Virg. *Aen.* vii. 670; Ov. *Fast.* ii. 77; *Amor.* iii. 6. 45; Stat. *Silv.* i. 3. 74; Sil. It. v. 225, viii. 364). Tibur possessed a small commanding territory, the limits of which, however, we are unable to fix, all that we know respecting it being that the towns of Empulum and Sessula, besides one or two others, at one time belonged to it. But these places lay in what is called the *Vallis de Sordano*, to the NE. of the town, the name of which is probably connected with the Sicclion of Dionysius. Empulum is identified with the present *Anguillara*, a place about 4 miles distant from Tibur. Sessula probably lay 2 or 3 miles beyond Empulum, in the same direction. The boundary between the Tiburtine territory and that of the Sabines was very uncertain. Augustus adopted the Anio as the limit, yet considerable uncertainty seems to have prevailed even subsequently to the assumption of that boundary. Thus according to Tacitus (*Ann.* xiv. 22), the territory of Tibur extended beyond the Anio, and included Sablaqueum, the modern *Sabazia*, which is commonly assigned to the Aequi. Originally Tibur with its territory seems to have belonged to the Sabines. Pliny enumerates Tibur among the *Sabinæ towns* (iii. 12. s. 17).

We know nothing of the history of Tibur except in connection with that of Rome. The first occasion on which we find it mentioned is in the time of the decemvirate, B. C. 446, when M. Claudius, the infamous tool of the decemvir Appius, went into exile there (Liv. iii. 58). It does not appear, however, as taking any active part in affairs till B. C. 357; in which year the Tiburtines shut their gates against the Roman consuls C. Sulpicius and C. Licinius Calvus, who were returning from a successful expedition against the Hernici. There appear to have been previous disputes and complaints between the Tiburtines and Romans, and the latter seized the opportunity to declare war (Liv. vii. 9). But hostilities were suspended for a time by an incursion of the Gauls, who crossed the Anio and advanced to within 3 miles of Rome. This invasion of the Gauls was assisted by the Tiburtines; and therefore, after the barbarians had been repulsed by the prodigious valour of Manlius Torquatus, the consul C. Poetelius was sent against them with an army in the following year. But the Gauls returned to the assistance of the Tiburtines; and, to meet this emergency, Q. Servilius Ahala was named dictator. The Gauls again advanced close to the walls of Rome, and a great battle was fought just outside the Porta Collina, in the sight of all the citizens. After a desperate conflict, the barbarians were defeated and fled to Tibur for refuge. Here they were intercepted by the consul Poetelius, who drove them into the city, as well as the Tiburtines who had come to their aid. For this achievement a triumph was awarded to Poetelius, which we find recorded in the *Fasti Capitolini* as well as by Livy. This triumph, however, excited the ridicule of the Tiburtines, who denied that the Romans had ever met them in a fair and open field: and in order to wipe out this affront, they made, in the following year, a nocturnal attempt upon Rome itself. But when day dawned and two armies, led by the two consuls, marched out against them from different gates, they were scarcely able to sustain the first charge of the Romans (Liv. vii. 11, 12). Yet the war continued for several years. In B. C. 350, the consul M. Popilius Laenas devastated their territory (ib. 17), and in the following year Valerius Poplicola took Empulum, one of their dependent cities (ib. 18; cf. EMPULUM). Sasula also yielded in 348 to the arms of M. Fabius Ambustus; and the Tiburtines would have lost all the rest of their territory had they not laid down their arms and submitted to the Roman consul. The triumph of Fabius is recorded in the *Fasti* and by Livy (ib. 19). Yet a few years later we find the Tiburtines joining the Latin league against the Romans; and even after the overthrow of the Latins they allied themselves with the Praenestini and Veliterni to defend Pedum (Id. viii. 12). In B. C. 335, the consul L. Furius Camillus, attacked and completely defeated them under the walls of that place, in spite of the efforts of the inhabitants, and then took the town by escalade. All Latium was now subdued, and we do not again hear of the Tiburtines taking up arms against Rome (ib. 13). For this exploit Camillus not only obtained a triumph, but also an equestrian statue in the forum, a rare honour in that age. In the *Senatusconsultum* subsequently drawn up for the settlement of Latium, Tibur and Praeneste were treated with more severity than the other cities, except Velitrae. They were deprived of part of their territory, and were not admitted to the

Roman franchise like the rest. The cause of this severity was not their recent insurrection, the guilt of which they shared with the rest of the Latin cities, but their having formerly joined their arms with those of the Gauls (ib. 14). Thus Tibur remained nominally free and independent, so that Roman exiles might resort to it (Polyb. vi. 14). Hence we find the tibicines taking refuge there when they fled from the rigour of the censors (B. C. 310), who had deprived them of the good dinners which they were accustomed to enjoy in the temple of Jupiter; an event more important than at first sight it might seem to be, since, without the tibicines, neither sacrifices, nor several other important ceremonies, could be performed at Rome. On this occasion the rights of the Tiburtines were respected. The senators sent ambassadors to them as to an independent city, to request their assistance in procuring the return of the fugitives. The Tiburtines, like able diplomatists, took the pipers by their weak side. They invited them to dinner and made them drunk, and during the night carted them in waggons to Rome, so that when they awoke in the morning sober, they found themselves in the Forum (Liv. ix. 30). The story is also told by Ovid with his usual felicity (*Fast.* vi. 665, sqq.). Other instances might be adduced in which Tibur enjoyed the privilege of affording an asylum. That of M. Claudius, before alluded to, was of course previous to the conquest of Latium by the Romans; but we find Cinna taking refuge at Tibur after the murder of Caesar (App. B. C. i. 65); and Ovid (*ex Ponto*, i. 3, 81, sq.) notes it as the most distant land of exile among the ancient Romans.

It was at Tibur that Syphax, king of Numidia, expired, in B. C. 201, two years after being captured in Africa. He had been brought thither from Alba, and was destined to adorn the triumph of Scipio; a humiliation which he escaped by his death (Liv. xxx. 45). Some centuries later Tibur received a more interesting captive, the beautiful and accomplished Zenobia. The former queen of the East resided near the villa of Hadrian, in the unostentatious manner of a Roman matron; and at the time when Trebellius Pollio wrote her history, the estate still bore her name. (Poll. XXX. Tyr. 26.)

In the Barberini palace at Rome is preserved a bronze tablet on which is engraved the following fragment of a *Senatusconsultum*: *Propterea . quod . scibamus . ea . vos . merito . nostro . facere . non . potuisse . neque . vos . dignos . esse . qui . faceretis . neque . id . vobis . neque . rei . poplicas . vestrae . otiose . esse . facere*. This monument, first acquired by Fulvio Orsini, and left by him to Cardinal Farnese, is published by Gruter (*Inscr.* ccccxc. 12). The tenour seems to show that the Tiburtines had been accused of some grave offence from which they succeeded in exculpating themselves; but, as there is nothing to fix the date of the inscription, various opinions have been entertained respecting the occasion of it. As the style seems to belong to about the middle of the 7th century of Rome, Nibby (*Dintorni*, iii. p. 172) is of opinion that the document refers to the social war; that the Tiburtines had cleared themselves from the charge of taking part in that league, and were in consequence admitted to the Roman franchise, at the same time with many other Latin and Etruscan cities. This conjecture is by no means improbable. If, however, Tibur received the franchise before the civil wars of Marius and Sulla, the latter must have taken

it away when he deprived the rest of the municipal cities of it, with the exception of Anagnia (Cic. *pro Dom.* 30), but it was probably regained on the abdication of the dictator. The treasure deposited at Tibur in the temple of Hercules was appropriated by Octavian during his war against Lucius Antonius, when so many other temples were plundered at Rome and in its neighbourhood. (App. *B. C. v.* 24.) From this period we have no notices of Tibur till the time of the Gothic war in the 6th century of our era. During the siege of Rome by Vitiges, Belisarius placed 500 men in it, and afterwards garrisoned it with Isaurians. (Procop. *B. G. ii.* 4.) But under his successor Totila a party of the Tiburtines having introduced the Goths by night into the city, the Isaurians fled, and the Goths murdered many of the inhabitants with circumstances of great cruelty (*ib.* iii. 10.) Great part of the city must have been destroyed on this occasion, since it appears further on (c. 24) that Totila having retired to Tivoli, after a vain attempt upon Rome, rebuilt the fortress.

At present there are but few traces of the boundaries of the ancient city; yet there are certain points which, according to Nibby (*Dintorni*, iii. p. 186, seq.), enable us to determine the course of the walls with some degree of accuracy, and thus to estimate its circumference, at all events during the time of its subjection to the Romans. These points are determined partly by the nature of the ground, partly by existing remains, and partly by positive testimony. The nature of the ledge upon which the town is built shows that the walls must have traversed the edge of it towards the N. and E.; and this assumption is confirmed by some remains. The two temples commonly known as those of the Sibyl and of Drusilla in the quarter called *Castro Vetere*, and the evident pains taken to isolate this part, indicate it to have been the ancient acropolis or arx, and probably the Sicelion of Dionysius. On the W. the boundary is marked by some remains of the walls and of the gate opening on the road to Rome. On investigating this track, we find that it inclined inwards towards the church of the *Annunziata*, leaving out all that part now occupied by the *Villa d'Este* and its appurtenances. From that church it proceeded towards the modern gate of *Santa Croce* and the citadel built by Pope Pius II. on the site of the ancient amphitheatre. Thence to the Anio two points serve to fix the direction of the walls: first, the church of *S. Clemente*, which was certainly outside of them, since, according to the testimony of Marzi, some sepulchral stones were discovered there; second, the church of *S. Vincenzio*, which was certainly within them, as vestiges of ancient baths may still be seen at that spot. From the fortress of Pius II. the wall seems to have proceeded in an almost direct line to the Anio between the church of *S. Bartolommeo* and the modern gate of *S. Giovanni*. It did not extend to the opposite bank, as a small sepulchre of the imperial times has recently been discovered there, at the spot where the tunnel for diverting the Anio was opened; where also were found remains of an ancient bridge. Thus the plan of the city, with the abatement of some irregularities, formed two trapeziums joined together at their smallest sides. The arx also formed a trapezium completely isolated, and was connected with the town by a bridge on the same site as the present one of *S. Martino*. The circumference of the city, including the arx, was about

8000 Roman feet, or $1\frac{1}{2}$ miles. The remains of the wall which still exist are of three different epochs. The rarest and most ancient consist of trapezoidal masses. Others, near the *Porta Romana* or *del Colle*, are of opus incertum, and belong to the time of Sulla. The gate itself, though composed of quadrilateral masses, is of the style of the gates of Rome of the age of Justinian. From the nature of the place and the direction of the ancient roads, Tibur must have had five gates; namely, three towards the W., one towards the S., and one towards the E., without counting that which communicated with the citadel; but with the exception of the *Reatina*, where the aqueduct called *Anio Verus* began, their names are unknown, and even with regard to that the reading is doubtful. (Front. *Aq.* p. 30.)

The ancient remains existing at *Tivoli*, to call them by the names under which they commonly pass, are, the temple and portico of Hercules, the temples of Vesta and Sibylla, the *thermae* or baths, the two bridges and the little tomb recently discovered, the temple of *Tuscia*, the villas of *Maecones*, of *Varus*, &c.

Tibur was famed for the worship of Hercules, and hence the epithet of *Herculean*, so frequently applied to it by the Roman poets (Prop. ii. 32. 5; Sil. It. iv. 224; Mart. i. 13. 1, &c.; cf. Stat. *Silv.* iii. 1. 183.) The temple of that demigod at Tibur was, with the exception of the vast temple of Fortune at Praeneste, the most remarkable presented by any city in the neighbourhood of Rome. Thus Strabo (l. c.) mentions the *Heraclaeum* and the waterfall is the distinguishing features of Tibur, just as he alludes to the temple of Fortune as the principal object at Praeneste. And Juvenal (xiv. 86, seq.) censures the extravagance of Cretorius in building by saying that his villas at Tibur and Praeneste outdid the fanes of Hercules and Fortune at those places. The name of *Heraclaeum* used by Strabo of the former, as well as the term *réveres* applied to it by Stephanus Byzantinus, show that it embraced a large tract of ground, and as Augustus is said to have frequently administered justice in its porticoes (Suet. Oct. 72), they must have been of considerable size. It possessed a library, which, however, in the time of the Antonines appears to have fallen into decay. (A. Gell. *N. A.* xix. 5.) We have already seen that it had a treasury. There was also an oracle, which, like that at Praeneste, gave responses by means of sortes. (Stat. *Silv.* i. 3. 79.) Some antiquaries seek this vast temple behind the tribune of the present cathedral, where there are some remains of a circular cella composed of materials of a rhomboidal shape, thus marking the transition in the mode of building which took place about the age of Augustus from the opus incertum to the opus reticulatum. But it would be difficult to regard these vestiges as forming part of a temple 150 feet in circumference; nor was it usual to erect the principal Christian church on the foundations of a heathen temple. Nibby therefore (*Dintorni*, iii. p. 193), after a careful investigation, and a comparison of the remains at *Palestrina* with those of the so-called villa of *Maeconas* at *Tivoli*, is inclined to regard the latter, which will be described further on, as belonging to the celebrated temple of Hercules. It is probable, however, that there were several temples to that deity at Tibur, just as there were at Rome. The principal one was doubtless that dedicated to Hercules Victor Tiburs; but there was also one of Hercules Saxanus, which will be described by

and by; and the remains at the cathedral may have belonged to a third. It is pretty certain, however, that the Forum of Tibur was near the cathedral, and occupied the site of the present *Piazza dell' Orto* and its environs, as appears from a Bull of Pope Benedict VII. in the year 978, referred to by Ughelli in his *Italia Sacra* (t. i. p. 1306), and copied by Marini (*Papiri Diplomatici*, p. 316). In this Bull, the object of which was to determine the rights and jurisdiction of the bishop of *Tivoli*, many places in the town are mentioned by their ancient names; as the Forum, the Vicus Patricius, the Euripus, the Porta Major, the Porta Obscura, the walls, the postern of Vesta, the district of Castrum Vetus, &c. The round temple at the cathedral belonged therefore to the Forum, as well as the crypto-porticus, now called *Porto di Ercole* in the street *del Poggio*. The exterior of this presents ten closed arches about 200 feet in length, which still retain traces of the red plaster with which they were covered. Each arch has three loopholes to serve as windows. The interior is divided into two apartments or halls, by a row of twenty-eight slender pillars. Traces of arabesque painting on a black ground may still be seen. The mode of building shows it to be of the same period as the circular remains.

In that part of the city called *Castro Vetere*, which Nibby identifies with the arx, are two temples, one round, the other oblong, both of which have been variously identified. The round one, a charming relic of antiquity, is commonly regarded as the temple of the Sibyl. We know that the tenth and last of the Sibyls, whose name was Albunea, was worshipped at Tibur (Varro, ap. Lactant. *de Falsa Rel.* i. 6; cf. *δεκάτη ἡ Τιβουρρία ἀρόματι Ἀλλουβαία*, Suid. p. 3302 Gaisf.); and Horace evidently alludes to her when he speaks of the "domus Albunee resonantis" at that place. (*Od.* i. 7. 12.) It can scarcely be doubted therefore that she had a fane at Tibur. But Nibby is of opinion that the epithet of "resonantis," which alludes to the noise of the waterfall, is inapplicable to the situation of the round temple on the cliff; for though it immediately overhung the fall, before the recent diversion of the stream, the cataract, as before shown, must in the time of Horace have been lower down the river. This objection however, may perhaps be considered as pressing a poetical epithet rather too closely; nor is there anything to show how far the fall may have been removed by the catastrophe described by the younger Pliny. Some writers have ascribed the temple to Vesta, an opinion which has two circumstances in its favour: first, we know that Vesta was worshipped at Tibur, from inscriptions recording the Vestal virgins of the Tiburtini; secondly, the temples of Vesta were round, like the celebrated one near the Roman forum. Unfortunately, however, for this hypothesis, the Bull of Pope Benedict before referred to shows that the district of Vesta was on the opposite side of the river. Hence Nibby (*Dintorni*, iii. p. 205) regards the building in question as the temple of Hercules Saxanus. We know that round temples were sometimes erected to that deity, as in the Forum Boarium at Rome; and the epithet of Saxanus is applicable to the one in question, from its being seated on a rock. It may be observed, however, that Saxanus is not a usual derivative form from Saxum; and on the whole it may perhaps be as satisfactory to follow the ancient tradition which ascribes the temple to the Sibyl. It is of the style called peripteral, or hav-

ing columns all round. These were originally eighteen in number, but only ten now remain, of which seven are isolated and three are built into the wall of a modern structure; but in such a manner that the sides towards the cell are visible. The columns are of *travertino*, of the Corinthian order, and channelled: hence the temple bears considerable resemblance to that in the Forum Boarium at Rome. According to the Bull before quoted, it was, in the 10th century, a church dedicated to the Virgin Mary.

The same was the case with the adjoining temple, which was dedicated to S. George. This building is also principally of *travertino*. It has four columns in front, now hidden by modern houses, and six at each side, five of which are built into the walls of the cella to the extent of two-thirds of their circumference. Hence it was of the style called *prostylos tetrastylus pseudo-peripteros*. The columns are of the Ionic order. From an inscription found near it, some writers have inferred that the temple was dedicated to the worship of Drusilla, the sister of Caligula: but the style of building is considerably earlier, and belongs to the age of Sulla. Others have called it the temple of the Sibyl. Professor Nibby (*Dintorni*, iii. p. 210) started a novel hypothesis, and regarded it as the temple of Tiburtus, or Tiburnus. It is certain that the eponymous founder of the city enjoyed divine honours in it, as we see from Horace ("Tiburni lacus," *Od.* i. 7. 13) and Statius ("illa recubat Tiburnus in umbra," *Silo.* i. 3. 74). But these expressions refer to a sacred grove or *τέμενος*, probably with a shrine, or perhaps merely an altar, and therefore situated, in all likelihood, in the outskirts of the town, and not in a narrow crowded place like the arx. And we must here point out a little inconsistency into which the learned professor has fallen: for whilst he objects to the round temple being called that of Vesta, on the ground that it was not within hearing of the waterfall, when that was in its ancient state, yet he regards the square one, which immediately adjoins it, as the temple of Tiburnus, because it was close to the cataract. On the whole, therefore, we must for the present content ourselves with one of the ancient names for this building, or else, which may perhaps be the safer course, leave it altogether unidentified.

The catastrophe of 1826 brought to light the remains of a bridge; and another still more perfect one was discovered in 1832, in the progress of the works for diverting the course of the river. At the same time the workmen came upon a small tomb, between the Via Valeria and the banks of the river, containing several skeletons and monumental stones. Among these was a cenotaph to Senecio, who was consul for the fourth time A. D. 107, and several inscriptions. Under this tomb was an ancient aqueduct, intended to distribute the waters of the Anio among the adjacent villas.

There are no other remains in the town except some fine opus reticulatum et lateritium, near the church of S. Andrea. At this spot were discovered, in 1778, some large and handsome columns with Corinthian capitals, and also the pedestal of a statue to Fur. Maecius Gracchus, with an inscription connecting it with some embellishment of the baths. Hence we may conclude that the *thermae* were situated here.

Outside the city, on the Via Constantiana, is the building known as the temple of Tussis, for which appellation, however, no authority exists. Externally it is of an octagon form, but round inside.

Nibby holds that it is not anterior to the 4th century of our era, its construction resembling that of the villa of Maxentius on the Via Appia. There are traces of painting of the 13th century, showing that then, if not previously, it was a Christian church. A little further on we come to an inscription which records the levelling of the Clivus Tiburtinus in the time of Constantius and Constans. The name of the latter is purposely effaced, no doubt by the order of Magnentius. This monument was discovered in 1736, and re-erected by order of the magistrates of Tibur at the same spot where it was found.

The delightful country in the vicinity of Tibur caused many villas to be erected there during the latter period of the Republic and under the first Caesars, as we see from the writings of Catullus, Horace, Propertius, Statius, and other poets. Of these villas, however, of which we shall mention only the more interesting, there are but few remains, and scarcely any that can be identified with certainty. The most striking are those commonly called the villa of Maecenas on the SW. side of the town, near the *Cascatelle*. Ligorio was the first who called this building the villa of Maecenas; but there is no authority for the assumption. It was probably founded on a wrong conception of a passage in Horace (*Od.* iii. 39. 6, seq.), which is also quoted by Mr. Cramer (*Italy*, vol. ii. p. 60) under a misapprehension that it contains an allusion to a residence possessed by Maecenas at Tibur, instead of to his town-house on the Esquiline. The plan of this building published by Marques and Uggeri is correct. It was founded on gigantic substructions, the magnitude of which may be best observed on the N. side, or that towards the valley of the Anio. It is an immense quadrilateral edifice, 637½ feet long, and 450 broad, surrounded on three sides by sumptuous porticoes. The fourth side, or that which looks towards Rome, which is one of the long sides, had a theatre in the middle of it, with a hall or saloon on each side. The porticoes are arched, and adorned on the side towards the area with half columns of the Doric order. Behind is a series of chambers. An oblong tumulus now marks the site of the house, or, according to Nibby, who regards it as the temple of Hercules, of the Cella. The pillars were of travertine, and of a beautiful Ionic order. One of them still existed on the ruins as late as 1812. This immense building intercepted the ancient road, for which, as appears from an inscription preserved in the Vatican, a vault or tunnel was constructed, part of which is still extant. Hence it gave name to the *Porta Scura*, or *Obocura*, mentioned in the Bull of Benedict, which it continued to bear at least as late as the 15th century.

To our apprehension, the plan here laid down is rather that of a palace or villa, than of a temple, nor do we perceive the resemblance, insisted on by Nibby, to the temple of Fortune at Praeneste. It is not probable that the chief fane of Hercules, the patron deity of Tibur, should have been erected outside the town, nor would it have been a convenient spot for Augustus to administer justice, as we have mentioned that he did in his frequent retirements to Tibur, in the porticoes of the temple of Hercules. The precincts of the Forum would have been more adapted to such a purpose. But if that emperor so much frequented Tibur, evidently the favourite among all his country retreats (Suet. *l. c.*), he must have had a suitable residence for his reception. Might

not this villa have been his palace? Nibby himself observes that the style of building is of the Augustan, or transition, period; and a subject would scarcely have ventured to occupy the highroad with his substructions. But we offer this notion as a mere conjecture in favour of which we can adduce nothing but its probability.

Catullus had a paternal estate in the neighbourhood of Tibur; and the pretended site of his house is still pointed out in the valley by *Monte Catillo*. It is evident, however, from his address to his farm (*Carm.* 42), that it was more distant from the town, and lay at a point where the boundary between the Sabine and the Tiburtine territory was uncertain. He himself wished it to be considered as in the latter, probably as the more fashionable and aristocratic situation; but his ill-wishers persisted in asserting that it was Sabine. Horace had also a residence at Tibur, besides his Sabine farm; and, according to his biographer, it was situated near the grove of Tiburnus (Suet. *Vit. Hor.*); but whether it was at the spot now pointed out, near the hermitage of *S. Antonio*, on the road from *Tiroli* to the *Cascatelle*, is very problematical, the remains there being, according to Nibby (*Distoria*, iii. p. 221), of a period anterior to that of Horace. Nibby would identify them as belonging to the villa of Sallust, who, if we may trust the *Declamatio in Sallustium* (c. 7) falsely ascribed to Cicero, had a residence at Tibur. But this is mere conjecture. Equally uncertain is the site of the villa of Vopiscus, a poet of the age of Domitian, of which Statius has left us a pretty description (*Silo*, i. 3). The grounds seem to have extended on both sides of the river, and from certain particulars in the description, Nibby (*Distoria*, iii. p. 216) imagines that he has discovered the spot near the place commonly assigned to the villa of Catullus and the grove of Tiburnus, in the valley between *M. Catillo* and *M. Peschiaratore*. The Cynthia of Propertius, whose real name was Hostia (Appul. *Apol.* ii. p. 405, ed. Bosscha), lived and died at Tibur (Prop. iii. 30, iv. 7. 85, &c.); so that scarcely any place was more associated with the domestic life of the Roman poets. The situation of the villa of Quintilius Varus, a little farther on the same road, is rather better supported than most of the others. Horace alludes to the estate of Varus at Tibur, which appears to have lain close to the town (*Od.* i. 18. 2). A tract on the declivity of *Monte Peschiaratore*, opposite to the *Cascatelle*, bore the name of *Quintibolo* as far back as the 10th century, and the little church at this spot is called *La Madonna di Quintibolo*, an appellation which may possibly have been derived from the family name of Varus. Here are the remains of a magnificent villa, in which marble pavements, columns, capitals, statues, consular coins, &c., have been discovered, and especially, in 1820, two beautiful marble Fauns, now in the Vatican. Just below this villa is the *Ponte Acquaria*, which, as well as the surrounding district, takes its name, literally "the golden water," from a beautifully clear spring which rises near it. This bridge was traversed by the primitive Via Tiburtina. One arch of it still remains, constructed of large blocks of travertine. Near it is another bridge of bricks of the imperial times, as well as a modern one of the 15th century, but none of these are at present in use. On the other side of the river, which is crossed by a rude wooden bridge, the road ascends the Clivus Tiburtinus in returning towards the town. Porticoes of

the pavement are in complete preservation. Under a rock on the right is an ancient artificial cave, called by the local antiquaries *Il Tempio del Mondo*, but which was probably either a sepulchre, or one of those caves consecrated by the ancients to the rustic tutelary deities. This road joins the Via Constantia before mentioned, leading up to the ruins of the so-called villa of Maecenas.

Outside the *Porta S. Croce* is a district called *Carciano*, a corruption of the name of Cassianum which it bore in the 10th century, derived from a magnificent villa of the gens Cassia which was situated in it. In the time of Zappi, in the 16th century, a great part of this building was extant. The splendour of this residence is attested by the numerous beautiful statues found there, many of which were acquired by Pope Pius VI. and now adorn the Vatican. In the neighbourhood of Tibur are also the remains of several aqueducts, as the Anio Vetus, the Aqua Marcia, and the Aqua Claudia. The ruins of the sumptuous villa of Hadrian lie about 2 miles S. of the town. A description of it would be too long for this place, and it will suffice to say that, in a circuit of about 8 miles, it embraced, besides the imperial palace and a barracks for the guard, a Lyceum, an Academy, a fac-simile of the Poecile at Athens and of the Serapeum at Alexandria, a vale of Tempe, a Tartarus, a tract called the Elysian Fields, a stream called the Euripus, numerous temples, &c. (Cf. Nibby, *Viaggio Antiquario*, vol. i.; *Analisi della Corta de' Dintorni di Roma*, v. viii.; Gell, *Topography of Rome and its vicinity*, ed. Bunbury; Ant. del Ré, *Antichità Tiburtine*; Cabrale and F. del Ré, *Della Villa e de' Monumenti antichi della Città e del Territorio di Tivoli*; Santo Viola, *Storia di Tivoli*; Keller, *De vetero cum novo Tibure comparato*; concerning the villa of Hadrian, Piero Ligorio, *Pianta della Villa Tiburtina*; Fea, *ap. Winckelmann*, ii. p. 379.) [T. H. D.]

TIBURES or TIBURI (*Τειβοῦρον* in gen., Ptol. ii. 6. § 37), a branch of the Astures in Hispania Tarraconensis, whose principal town was Nemetobriga. [T. H. D.]

TICHIS (*Tech*), a river of Gallia Narbonensis, placed by Mela (ii. 5) in the "Ora Sardonum" [SARDONES]. The Tichis is the Tecum of Pliny (iii. 4). The *Tet* and the *Tech*, two small rivers, cross the territory of *Rousillon* from west to east. The Tichis is named Illiberis or Illeris by other writers. [ILLIBERIA.] [G. L.]

TICHIUM. [TEICHIMUM.]

TICHIUSSA (*Τειχιούσσα*), is mentioned twice by Thucydides (viii. 26, 28) as a fortified place in Caria in the territory of Miletus. Stephanus B. speaks of it under the name of *Τειχιούσσα*, and Athenæus knew it under the name of *Τειχιούς* (viii. p. 351.) It seems to have been situated on the north coast of the bay of Iassus. [L. S.]

TICHOS or TEICHOS. [DYME.]

TICINUM (*Ticavor*; *Eth.* Ticinensis; *Pavia*), a city of Gallia Transpadana, situated on the river Ticinus, from which it derived its name, about 5 miles above the junction of that stream with the Padus. According to Pliny it was founded by the two tribes of the Laevi and Marici, at the period of the first Gaulish immigrations into this part of Italy. (Plin. iii. 17. s. 21.) But it is remarkable that no mention is found of any town on the site during the operations of P. Scipio against Hannibal in B.C. 218, though he must have crossed the Ticinus in the immediate neighbourhood of the spot where the

city afterwards stood. It is probable, indeed, that in this, as in many other cases, the rise of a town upon the spot was mainly owing to the existence of a convenient passage across the river. There seems no reason to doubt that under the Roman government Ticinum had grown up into a considerable municipal town before the close of the Republic, though its name is not noticed in history. But it is mentioned by all the geographers, and repeatedly figures in history during the Roman Empire. It is included by Ptolemy among the cities of the Insubres, and would naturally be so reckoned, though not of Insubrian origin, as soon as the river Ticinus came to be considered as the boundary of that people. (Strab. v. p. 217; Plin. iii. 17. s. 21; Ptol. iii. 1. § 36.)

The earliest mention of Ticinum in history is on occasion of the death of Drusus, the father of Germanicus, when we are told that Augustus advanced as far as Ticinum to meet his funeral procession. (Tac. *Ann.* iii. 5.) Its name is also repeatedly mentioned during the civil wars of A.D. 69, when its position on the great highroad that led from the foot of the Alps to join the Aemilian Way at Placentia, rendered it an important post. It was the scene of a serious sedition among the troops of Vitellius, while that emperor halted there. (Id. *Hist.* ii. 17, 27, 30, 68, 88.) At a later period it was at Ticinum that the emperor Claudius (the second of the name) was saluted with the imperial title, while he was commanding the garrison of the city. (Vict. *Caes.* 33, *Epit.* 34.) It was there also that Constantius took leave of his nephew Julian, whom he had just raised to the rank of Caesar. (Ammian. xv. 8. § 18.) From these frequent notices of Ticinum it seems probable that it had already risen under the Roman Empire into a flourishing municipal town, and derived importance from its position, the great highroad which formed the continuation of the Aemilian Way from Placentia to the foot of the Alps passing through Ticinum, until the increasing importance of Mediolanum, which became the second capital of Italy, made it customary to proceed through that city instead of following the direct route. (*Itin. Ant.* pp. 283, 340, 347.)

But though Ticinum was undoubtedly a considerable town under the Roman Empire, it was not till after the fall of that empire that it rose to the position it subsequently occupied. In A. D. 452, indeed, it had sustained a great calamity, having been taken and devastated by Attila (Jornand. *Get.* 42); but the Gothic king Theodoric, being struck with the importance of its position, not only raised it from its ruins, but erected a royal palace there, and strengthened the city with fresh fortifications, until it became one of the strongest fortresses in this part of Italy. It consequently bears an important part in the Gothic wars, that people having made it their chief stronghold in the north of Italy (Procop. *B. G.* ii. 12, 25, iii. 1, iv. 32, &c.), in which the royal treasures and other valuables were deposited. At the time of the Lombard invasion, it offered a prolonged resistance to the arms of Alboin, and was not taken by that monarch till after a siege of more than three years, A. D. 570 (P. Diac. *Hist. Lang.* ii. 26, 27). It thenceforth became the residence of the Lombard kings, and the capital of the kingdom of Italy, and continued to hold this position till A. D. 774, when Desiderius, the last of the Lombard kings, was compelled to surrender the city to Charlemagne, after a blockade of more than 15 months.

From this time Ticinum sank again into the condition of an ordinary provincial town, which it has retained ever since. Before the close of the Lombard period we find that it was already designated by the name of *Papia*, from which its modern appellation of *Pavia* is derived. Paulus Diaconus calls it "Ticinus quae alio nomine *Papia* appellatur" (P. Diac. ii. 15); and the anonymous Geographer of Ravenna gives the same double appellation (Geogr. Ravenn. iv. 30). The most probable explanation of this change of name is that when Ticinum became admitted to the rights of a Roman municipium its inhabitants were enrolled in the Papian tribe, a fact which we learn from inscriptions (Gruter, *Insacr.* p. 1093. 7; Murat. *Insacr.* p. 1087. 1, p. 1119. 4), and that in consequence of this the city came to be known as "Civitas *Papia*," in contradistinction to Mediolanum, which belonged to the Ufentine tribe. (Aldini, *Antiche Lapidi Ticinesi*, pp. 43—60.)

The modern city of *Pavia* contains no remains of antiquity except a few sarcophagi and inscriptions. These confirm the municipal condition of the city under the Roman Empire, but are not in themselves of much interest. [E. H. B.]

TICINUS (*Ticuros*: *Ticino*), a considerable river of Northern Italy, and one of the most important of the northern tributaries of the *Padus*. It has its sources among the high Alps, in the Mons *Adula* or *Mont St. Gothard*, and, where it first emerges from the Alpine valleys forms an extensive lake, called the *LACUS VERBANUS* or *Lago Maggiore*. Where it issues from this again it is a deep, clear, and rapid stream, and flows through the level plains of *Lombardy*, with a course of above 60 miles, passing under the walls of Ticinum (*Pavia*), and discharging its waters into the *Padus* or *Po*, about 3 miles below that city. (Strab. iv. p. 209, v. p. 217; Plin. ii. 103. s. 106, iii. 19. s. 23.) Throughout this lower part of its course (from the *Lago Maggiore* to the *Po*) it is navigable for vessels of considerable burden; but the extreme rapidity of the current renders the navigation inconvenient if not dangerous. Its banks are low and marshy, the river being bordered on each side by a belt of thickets and marshy woods. This character of its banks is noticed by Claudian (*de VI. Cons. Hon.* 194), while Silius Italicus alludes to the beautiful clearness of its waters. (Sil. Ital. iv. 82.)

The Ticinus appears to have been recognised at an early period as the boundary between the Insubrians and their neighbours the Libicii and Laevi (Liv. v. 34, 35). From its geographical position it must always have presented a formidable barrier to any invader advancing into Italy after having crossed the Cottian, Graian or Pennine Alps, and for this reason its banks have been the scene of many successive battles. Even in the first descent of the Gauls into the plains of Northern Italy, we are told that they defeated the Etruscans in a battle near the river Ticinus (Liv. v. 34). But much the most celebrated of the contests which were fought on its banks was that between Hannibal and P. Scipio in B.C. 218, shortly after the descent of the Carthaginian general into Italy. The precise scene of this action cannot, however, be determined; but it appears to have been fought on the W. or right bank of the Ticinus, at a short distance from the *Padus*, and probably not far from the site of Ticinum or *Pavia*. Livy marks it more distinctly as being within 5 miles of a place called *Victumvii* (?); but as no other mention of this obscure name occurs, this lends us no assistance.

(Liv. xxi. 45.) The narrative of Polybius is far from clear and has given rise to considerable discussion. Scipio, who had hastened from Pise into Cisalpine Gaul, on hearing that Hannibal had actually crossed the Alps and descended into the plains of Italy, advanced to meet him, crossed the *Padus* by a bridge constructed for the occasion, and afterwards crossed the Ticinus in like manner. After this, Polybius tells us, "both generals advanced along the river, on the side facing the Alps, the Romans having the stream on their left hand, the Carthaginians on their right" (iii. 65). It is clear that this is not consistent with the statement that the Romans had crossed the Ticinus*, as in ascending that river they would have had the stream on their right, unless we suppose "the river" to mean not the Ticinus but the *Padus*, which is at least equally consistent with the general plan of operations. Hannibal was in fact advancing from the country of the Taurini, and no reason can be assigned why he should have turned so far to the N. as to be descending the Ticinus, in the manner supposed by those who would place the battle near *Vigerone* or *Borgo S. Siro*. If we are to understand the river in question to be the Ticinus, the words of Polybius above quoted would necessarily require that the battle should have been fought on the left bank of the Ticinus, which is at variance with all the other particulars of the operations, as well as with the probabilities of the case. The battle itself was a mere combat of cavalry, in which the Roman horse was supported by a portion of their light-armed troops. They were, however, defeated, and Scipio at once retreated to the bridge over the *Padus*, leaving a small body of troops to break up that over the Ticinus. These troops, 600 in number, were cut off and made prisoners by Hannibal, who, however, gave up the attempt to pursue Scipio, and turned up the stream of the *Padus*, till he could find a point where he was able to construct a bridge of boats across it. (Pol. iii. 65, 66.) The account of Livy (which is based mainly upon that of Polybius, though he must have taken some points, such as the name of *Victumvii*, from other sources) agrees with the above explanation, though he certainly seems to have transferred what Polybius relates as occurring at the bridge over the Ticinus to that over the *Padus*. It appears also by his own account that there was considerable discrepancy among his authorities as to the point at which Hannibal eventually crossed the *Padus*. (Liv. xxi. 45—47.) It may therefore on the whole be assumed as probable that the battle was fought at a short distance W. of the Ticinus, and not close to the banks of that river: the circumstance that Scipio had encamped on the banks of the Ticinus just before, and advanced from thence to meet Hannibal will explain why the battle was always called the "pugna ad Ticinum" or "apud Ticinum."

Two other battles were fought in the same neighbourhood before the close of the Roman empire: one

* Polybius, indeed, does not distinctly say that the Romans crossed the Ticinus, but it is implied in his whole narrative, as he tells us that the consul ordered a bridge to be built over the Ticinus with the purpose of crossing that river, and afterwards relates their advance without further allusion to it (iii. 64, 65). But after narrating the defeat and retreat of Scipio, he says that Hannibal followed him as far as the bridge on the first river, which can be no other than the Ticinus. (Ib. 66.)

in A.D. 270, in which the Alemanni, who had invaded Italy, were finally defeated by the Emperor Aurelian (Vict. *Epit.* 35): the other in A.D. 352, between the rival emperors Magnentius and Constantius. (*Ib.* 42.) [E. H. B.]

TIERNA (called by Ptol. *Δίερα*, iii. 8. § 10), a town of Dacia on the Danube, opposite to the castle of Zernes (*Old Orsova*) in Moesia. In inscriptions we find it called Statio Tsiernensis (Murat. p. 332. 3; Griselin, i. p. 265); in the Digest (*de Cens.* i. 8), Colonia Zernensium; and in the *Not. Imp.* (c. 3), Trans Diernis. [T. H. D.]

TIFATA (τὰ Τίφατὰ ὄρη, Dion Cass.: *Monte di Maddaloni*), a mountain ridge on the borders of Campania and Samnium, only about a mile from the city of Capua. It is one of the last outlying masses of the Apennines, and is a long, narrow ridge of no great elevation, but above 12 miles in length from E. to W., and presenting a bold and steep mountain front towards the Campanian plain, upon which it looks directly down. The name was derived according to Festus from the woods of evergreen oak with which it was covered, "Tifata" being equivalent to "iliceta," though whether it was an Oscan or old Latin word, we are not told. (Fest. s. v. *Tifata*.) It is first mentioned during the war between the Samnites and Campanians which immediately preceded the First Samnite War. On that occasion the Samnites in the first instance occupied the ridge itself with a strong force, and afterwards drew out their main army into the plain below, where they soon defeated the Campanians in a pitched battle. (Liv. vii. 29.) Livy calls it on this occasion "Tifata, imminentes Capuae colles," and elsewhere "montem imminuentem Capuae" (xxvi. 5), which well describes its character and situation. It was this opportune position with regard to Capua and the surrounding plain, that caused it to be selected by Hannibal as a post where he established his camp in B. C. 215, and from whence he long carried on his operations against the various cities of Campania. (Id. xxiii. 36, 37, 39, 43, xxvi. 5; Sil. Ital. xii. 487.) At a later period it was in the plain at the foot of Tifata that Sulla defeated the Marian general Norbanus, B. C. 83; and in gratitude for this victory, he consecrated a considerable tract of territory to Diana, the tutelary goddess of the mountain. (Vell. Pat. ii. 25.) We hence learn that that divinity had a celebrated temple on Tifata, and the "Dianae Tifatinae fanum" is noticed also in inscriptions found at Capua. From one of these we learn that the consecrated territory was again assigned to the goddess by Vespasian. (Orell. *Inscr.* 1460, 3055.) As the Tabula marks a station "Ad Dianae" near the W. extremity of the ridge, it is probable that the temple was situated in that neighbourhood. (*Tab. Peut.*) From the same authority we learn that Jupiter, who was worshipped on so many of the highest points of the Apennines, had a temple also on Tifata, to which it gives the name of Jovis Tifatini. It is placed in the Tabula at the E. extremity of the ridge. (*Tab. Peut.*) Again in B. C. 48 the fastnesses of this mountain ridge afforded a shelter to Milo when driven from Capua. (Dion Cass. xlii. 25.) This is the last time its name is mentioned in history, and it is not noticed by any of the geographers: in the middle ages the name seems to have been wholly forgotten; and the mountain is now called from a neighbouring village the *Monte di Maddaloni*. But the descriptions of Livy and Silius Italicus leave no doubt of

the identification. It is indeed, from its proximity to Capua and the abruptness with which it rises from the plain, one of the most striking natural features of this part of Campania. [E. H. B.]

TIFERNUM (Τίφερον) was the name of two cities or towns of Umbria, which were distinguished by the epithets Tiberinum and Metaurense (Plin. iii. 14. s. 19).
